IT is a dismal proverb that a green Yule makes a fat church-yard. Dismal, because it is so pleasant to slip unawares into the very heart of the winter; to pass beyond Christmas, and find ourselves standing in the first days of the new year without those stinging reminders in the agony of which "June is twice June;" or, at least, seems so to the chilled and shuddering imagination.

Nothing ever better described the Italian climate than to say that roses bloom in February. They do. You may see them, in Rome, upon the grave of Shelley, in the still February mornings, under the old wall of the city. "It might make one in love with death," he wrote of Keats's grave, "to think one should be buried in so sweet a place."

Yet the Roman winter is not all sunny. The season is rather like that of a green Yule. There are weeks of damp, gloomy days—half rainy and misty—under which the solemn old city becomes more deeply and sternly solemn. Even the galleries are chilly then; the statues are doubly cold; and, by contrast, the lovely landscapes of Claude are never so alluring, hanging like warm bits of summer upon those winter walls. The traveler goes up from the cheerless streets into those hushed rooms. A surly *guardiano* opens the doors, like a grim watch-dog in faded livery. Sometimes he follows you at a little distance, as if to see that you do not put a square acre of canvas in your pocket, or smuggle out a Venus under your coat.

Pax vobiscum, Guardiano! you shall have *due*, yes, *tre paoli*—two, or even three pauls (two shillings)—if only you will retire to your den, and leave us alone with Claude and Salvator, with Titian and Raphael.

Yes, those are the days for Claude! Then your eye clings to him. His pictures open upon peace and beauty, like windows that look into Arcadian summer. Tranquil days at home, wherever home may be; happy hours that have been, or might have been; songs, and walks, and shady rambles; delicate lines of hills and winding streams; broad, open, sunny repose! These are the glimpses you get on dark winter days in Rome, as you stroll through the galleries and look at Claude's pictures.

And the victory is of the same kind as that of warm, pleasant days in our climate, stretching on from the autumn into the winter—such as led us this last year, just ended, from Thanksgiving to Christmas. For, after all, moisture and warmth are full of life; and cold is uncompromising death. Even the winter rain tinkling upon the window is yet a sort of song—a sign of life; but the stone silence of snow and ice, if it be beautiful, is fearful. The moral heroism of Kane and his companions, which resisted the silence, is quite as remarkable as the physical endurance that braved the cold of the North. Youth, love, beauty, poetry, enthusiasm, are all typified in the summer and flowers. The glory of winter is an inverted splendor; it is the bright but deadly magnificence of Dis.

Of course there is much to be said for skating and sleighing and mulled wine; for the great sparkling and flaming Yule-log, and the happy faces in which it is reflected. And, upon the whole, the old argument is the best one: the family circle around the family hearth triumphantly conquers winter; and, in a land where there are few pictures, is as good as Claude.

There shall be music and games and talk. Yes, but there must also be books—good books for the winter evenings. And what shall they be?

Here are two, very different. It will do us all good to read them both: Carlyle's Frederick the Great, and Dr. Sanger's History of Prostitution.

It is too late to sneer at Carlyle's style of saying what he has to say; and when you have ascertained that he has something to say, it is useless to quarrel with the manner. Thomas Carlyle is now sixty-three or four years old, and he will hardly change his style. That it is racy, strong, picturesque, pathetic, melodious, witty, and sparklingly satirical; that, upon the whole, it displays the variety, the resources, and the power of the English language, no thoughtful reader will be in haste to deny. That it is entirely unlike other styles in the language, and the model styles—such as Milton's, Addison's, Gibbon's, Sir Thomas Browne's, Bacon's, and Jeremy Taylor's—is very plain; and it is equally clear that it is somewhat colored, not spoiled, by some German styles.

But what is style, in the literary sense, but an original man's way of saying what he has to say? And what determines that but his temperament, his imagination, his education, and his earnestness? The first and chief demand the reader can make upon his author is, that he shall say what he has to say in the strongest and clearest manner. Could Milton have pleaded the cause of unlicensed printing more appropriately than in his stately and sonorous periods? Could Bacon have stated the simple truths of his essays better than in his simple music? Could Addison have chatted of social manners more fitly than in his colloquial clearness? Could Sir Thomas Browne have believed "because it was impossible" more delightfully than in his quaint and garnished manner? or Charles Lamb with more dainty tenderness have mingled the

pathos, the wit, and the delicate wisdom of his Elia?

In all these cases the style was the man. It was the expression of the thought according to the characteristics of the thinker. In every case—except the two last, between whom there was a deep intellectual sympathy—the style is entirely distinct, yet entirely simple, natural, and agreeable.

Now, would any body like to have Milton write as Browne did, or Goldsmith like Dr. Johnson? Could there have been any balder affectation?

Carlyle is quite as original a thinker as any Englishman of this century. He has a great deal to say upon a great many subjects, and he says it in a manner entirely his own. He may be extravagant in his own way, as Charles Lamb was in his, but that is part of the charm. A kind of enthusiastic extravagance, in what is really striking, degenerates into mannerism, but it is still not without a charm. Carlyle, for instance, gives a force to the figure of Dryasdust, by his persistent iteration, which he could not do if he named him more rarely. Moreover, as a rich, full, magnificent, descriptive style, there are few that can compare with Carlylese. The profound appreciation of character, the delicate sympathy with it, the hearty admiration and Titanic partiality for whatever pleases him; his confidence in honesty and his utter horror of incapacity and bombast—and the results of the same habits in his studies making his scholarship broad and accurate—his quick humor and colossal wit, and his marvelously picturesque presentations of scenes and events, isolate him among all his contemporaries in literature, very much as Michael Angelo was isolated among the artists.

People complain that his style is not as "pure" and "simple" as when he wrote the Life of Schiller and the early Essays; and undoubtedly it has very much changed. But so does the style of every author change, and necessarily. It grows, and deepens, and gets richer with more years and wider experience. Let any man read the opening pages of the Life of Frederick containing the picture of the old King sauntering upon the terraces of San Souci, and ask himself whether the portrait could be half so effective if it had been touched in with the limpid brevity of Addison, or even the imperfect earlier hand of Carlyle himself. The man *is* the style, after all, if he only be a man. And though every thing seems to be imperfect, surely we may allow that the style of Carlyle is not more so than any other entirely different manner.

The book itself is only half completed. The first of the two published volumes carries us through the early history of the Brandenburg family; and the stalwart historian throws the most grotesque and vivid lights upon the driest and darkest details. If any old forgotten German ancestor had a point of interest or beauty, it starts into life upon the page like a dust-buried diamond brushed to light by the foot of a wanderer in a tomb. This first volume is a lurid phantasmagoria of times and people that seemed to have died forever out of human interests. But they live one little moment more. They pass and float and fade in all their heroic or foolish proportions, the long line of Brandenburgs, from the youth who, in a dim century, descended from the mountain-castle in Southern Germany, down to the greatest of the race, the hero of the history.

The second volume is occupied with the reign of the father of Frederick the Great. It is intensely interesting, and skillfully elucidates the confusion of European politics during the early part of the last century. The memoirs of Frederick's sister, and the memoirs of every body else, are pressed into the service, and the old century is shown in all its details, its little interweavings of human interests, as we may not hope to see it elsewhere.

But Carlyle is wayward as a giant. He has long since declared that he likes capable men; his capable men apparently meaning, in the judgment of many, men who can do whatever they set themselves to do. Hence his overwhelming hero worship. But this must not be confounded with a worship of mere success. Carlyle, at least, must believe that the end and the man were both honest and both of service to the world, or he does not spare his sneer. What can surpass, for instance, the ludicrous contempt with which he smears Napoleon in the beginning of the first volume? He makes him a sheer melodramatic hero strutting upon a stage—and the secret of the contempt is, that Carlyle evidently believes Napoleon to have been a charlatan of genius—a man skillfully and successfully pursuing his own personal aggrandizement.

We do not mean that Carlyle may not often be mistaken. It is conspicuous enough in this book. All his energy and power and splendor—all his sarcasm, irony, and wit—can not make the father of Frederick the Great a great King, a good man, a wise parent, or a valuable citizen of the world. Carlyle talks much about "a King," and the necessity of "governing" and "being governed;" but there was not a single kingly quality in this Frederick. He had nothing which thousands of his subjects must not have had; while thousands of his subjects doubtless had, in addition, those qualities without which firmness is pig-headedness. Frederick's father was a petty despot—an insolent martinet: a boozing booby, led by the nose by dexterous knaves, and all according to Carlyle's own showing. He outraged his son beyond human endurance, and then, when the son tried to run away from him, wanted to hang him; and did hang one of his friends, a young soldier who, so far as appears, was a thousand-fold better fitted to be King of Prussia than the actual King.

In fact, there was never a more disastrous commentary upon the whole business of kingship than in Carlyle's picture of Frederick Wilhelm. If *that* is the sort of thing that so stout an admirer of kings as Carlyle has to present as a specimen, it will not be very hard to believe that the best argument is ludicrously poor. If Squire Western had been crowned King of Prussia he would have made a more respectable figure than the foolish, squat, ignorant, muddle-headed boor who stole men six feet high wherever he could find them, and threw dinner-plates at the head of his daughter.

That he succeeded in breaking the spirit of his son, the hero of the book, is clear enough. He made him a cold, selfish man. In his next volumes Carlyle will show us the harvest that sprang from this parental planting. The great event in his life, thus far, is his friendship with Voltaire. He is a good soldier, who has learned hypocrisy by hard treatment, and he is the friend of Voltaire.

The writing of the lives of kings, when it is done by such masterly hands as Carlyle's, is a profound service to mankind; for it shows us whether, to use a rough phrase, they pay for their keeping.

But there is another book which we may well

read and ponder in the winter evenings and the summer evenings, and all other days and evenings, until we feel such a sympathy that some help shall arise. It is not a story of heroes nor of heroines. It is not a romance or a biography; but as dismal a history as was ever written—the record of unutterable shame and woe and despair. And yet over that woe and despair Christ stretched his protecting hands, and bade those who had sinned to go and sin no more. Why is it, then, that Christian society thinks the sin too dreadful to be even spoken of? Why does it say to the sinner, with a shudder, "You are the one hopelessly lost?"

Dr. Sanger, in his "History of Prostitution," which is an official report to the Board of Alms-House Governors of the City of New York, has discussed calmly, soberly, and wisely the great question which no parent is justified in disregarding as too peculiar or delicate. The story is startling and sickening. There is a general feeling, indeed, that nothing can be done, for the sin is of deliberate choice. But the most careful statistics, both here and in other countries, show how great is this mistake. Not a quarter of the unfortunates can be said, in any sense, to have preferred their ghastly profession. And the testimony of the women, as recounted by the Doctor, is mournful beyond imagination.

He does not propose to abolish, but to regulate, the great evil. And there is one regulation, not of the law, but of the Gospel, of which we are all capable. That is, a greater charity, a tenderer sympathy, for these unfortunates. There is no justice in the peculiarly vindictive condemnation which attends their offense. For upon what ground of morals, decency, or reason shall a woman who falls from her adoring love for an unworthy man be lost forever to honor and sympathy and human fellowship, while he passes on as untouched by social scorn as if he were not as blackly guilty as any criminal who ever lived?

This unequal judgment springs from the hereditary treatment of women by men as subsidiary and inferior. The woman exists for the man, according to this theory. *His* honor is compromised by the infidelity of a woman whom he practically owns; and as a terrible warning and preventive, men agree to condemn the sin of women as they have never condemned their own.

Let Dr. Sanger's book open our eyes to this great wrong. Let us understand why, if a daughter is to be cast out and lost for an offense, a son is not to be punished in the same way for the same offense. Let us seriously consider for how much of the crime that poisons the moral and physical health of society men are not directly responsible.

This history is one of the most important additions to the moral statistics of society. It is prepared in such a way that it can not fail to occasion discussion and consideration of the great question. It is a matter too grave to wink out of sight. It is too sober to be treated as "impossible to discuss." Why not talk about it before terrible and loathsome diseases, insanity, and death are brought into our own home circles, as well as afterward? Such social venom asks only silence and darkness. Give it them, and it will take care of its own propagation, and spread its own consuming blight.

THE Easy Chair is delighted to hear once more from its old friend Mumm—Mr. Mumm, the distinguished lecturer:

"DEAR EASY CHAIR,—This winter has been very favorable to your favorite amusement, the lecturing system. Not only has the weather been open, but so have the purses and the minds of our fellow-citizens. Never was the Lyceum more vigorous. It has burst out in new effulgence after the partial and temporary eclipse of last winter, and runs over the country like a fire over the prairie, illuminating, let us hope, and warming.

"The Lyceum, I think, now stands alone, and asks no favors. It has educated both speakers and hearers. The smallest towns show the degree of their energy and prosperity by the encouragement they give to it. If it sinks in one town—in Jonesville, for instance—it reappears in Smithtown. People will go somewhere—to hear singing, to dance, to see the elephant, and also to hear lectures.

"And under this universal interest the Lyceum itself has changed. It has become the arena for broad and general and vital discussion. So long as he is not partisan, or personal, or unfair, the lecturer may treat any topic of universal interest, and as boldly as he will. What he says will not always please nor persuade; but every honest hearer is glad to know there is one place in which it is allowed to express individual convictions. They will often seem to many to be heresies; but the same many will remember that Martin Luther, and the Master whose great doctrine of the individual conscience he taught, were both accounted heretics; and one was excommunicated, and the other, by the same spirit, put to death.

"In fact the Lyceum has grown to be the Chapel of Ease to the Church—a chapel in which honesty of life and nobility of principle are strenuously and eloquently urged—a chapel which clergymen of all persuasions enter as a lay-church, and enlarge their parishes by the number of the earnest, generous souls they touch. The lines of a false, unnatural separation among men are worn away by the attrition of humane sympathies. The clouds of foolish and unjust prejudice are dispelled, and a sweeter charity and a better life are necessarily the flower and fruit of such seed.

"Indeed, I have sometimes thought that your old friend Solomon Gunnybags would believe that the era of the political Lyceum had come, if he could have heard some of the lectures I have heard on my off nights during the winter—I mean, that there has been such a statement of principles which must necessarily affect the political action of thinking men that Mr. Gunnybags might have suspected the speaker of some such intention.

"I did not. I always acquitted him. I no more suspected the lecturer of delivering a political speech because he stated and enforced certain fundamental truths of human action, than I suspect my excellent pastor of political preaching when he takes for his text the golden rule.

"It seems to me that other lecturers must have discovered what I have—that the audience requires something more than soap bubbles, however large they may be blown. That used to be the great thing. To blow a huge beautiful bubble—put into it all the wind you could muster—dandle it on the end of your pipe for an hour before the eager eyes of the audience—then puff it into their faces at the end, and send them home half bewildered with a damp sensation of faded rainbow rhetoric—that was the thing. It could not last. The rogues found out that east wind was east wind whether

you put it in a glittering globe of soap-suds or not, and it did not satisfy. This winter shows that it did not satisfy.

"I think the lecturers hereabouts are a little shy of the West. They seem to think there is great uncertainty in trains and accommodations. Some of them have been caught upon the prairies in terrific winter tempests, and, in fact, would prefer the summer for Western travel. Besides, most of them have other work than lecturing, and they can not run away for so long a time.

"I do not find that the old favorites wear out—although new ones are discovered. It is, perhaps, because they have kept pace with the demands of their audiences. You see it is no light task for a man to follow the Hon. John Doe and be followed by the Reverend Richard Roe. People inevitably compare, and the orator knows it. He knows that he owes his best work both to the audience and himself, and he tries to give it. As long as he succeeds he is safe.

"And yet, if any reader of yours fancies that it is altogether a halcyon business to peddle lectures round the country, let him try it. Let him, for instance, be invited to the good sized town of ——. No! why should I exasperate a whole town by calling its name? No matter; let him go there, and arrive by the noon train. The day shall be grim and gloomy. Two or three seedy hacks and omnibuses are at the station. A silent, severe man approaches you as you stand, with your traveling-bag in hand, waiting for your committee.

"'Is this Mr. Mumm?'

"'That is my name, Sir.'

"'How do you do, Mr. Mumm?'

"'How do you do, Sir?'

"'Have you any baggage, Mr. Mumm?'

"'Only this bag, Sir.' And by this time the profound gloom of the day, concentrated in the severe man's manner, has depressed your spirits irretrievably.

"The omnibus walks into the town, for the roads are muddy or frozen. The town looks blighted and dismal. You wonder what on earth they have lectures for.

"'How many lectures have you had, Sir?'

"'Three, Sir. Yours is the fourth.'

"Profounder silence falls upon the scene; and in a melancholy frame of mind you are dumped at the hotel door. One glance reveals every thing.

"The Germans have hotels 'to' every place and thing under the sun; to the City of Rome, of Frankfort, of Paris; to the Good Citizen, the Red Lion, the Pair of Suspenders. This is simply 'the Hotel to Dirt.' You know just what your bed is, though you have not entered the house. You see the dirty white counterpane, the soft pillows, and 'smells so, pah!' *Who slept in that bed last?* Just Heavens, what an awful thought! Two or three wild Erin-go-braghs are rushing about the hall, which is white, deadly, dirty white. Two or three lazy, greasy fellow-beings are slouched into the hall seats, and stare at you. The landlord is unshaven and half cross—as cross as a landlord dares to be. You order a fire in your room, and the committee departing, you are left to grapple with the tavern alone.

"Your room is very small, and a vicious black stove is roaring savagely as you enter, hurrying to heat up so that you can not stand it. You do not look at the bed—why should you? It is the same old bed. Like remorse, it attends all your journeyings. Like a conscience, it is always there. The tavern bed—the pillows stuffed with hasty pudding. The tavern bed—and who slept in it last?

"The table rocks on its legs; the vicious stove, having bolted all the wood, and made itself and the room very feverish and uncomfortable, suddenly falls into an alarming syncope. It grows cold visibly. There is no wood. There is no bell-pull. Why should there be? There are no accessible waiters.

"You descend and persuade somebody to bring some wood, and begin again. The gong for dinner makes Pandemonium of the 'establishment,' and you rush with the rest to the table. Oh dear! 'Fair Greece, sad relic of departed worth! Immortal—'

"Do you 'agnize' a third-rate tavern dinner? Much pork and pickle—much red arm of dowdy Erin-go-braghs of all sexes. Clatter, dump, bang, and the rapid fellow-citizens around you have reached the mince-pie neck and neck.

"But why should I make you an Uneasy Chair by telling the tale farther. Depend upon it every lecturer earns his money. Don't grudge it to us, generous Lyceums! Don't forget that when we take the early train next morning we have to hear ourselves and our performances criticised terribly. Jones thinks us 'most a splendid speaker;' but then his neighbor, Smith, 'opines' that we don't use such beautiful language as the Reverend Peeled Willow, who lectured last Friday evening. Jenkins doesn't consider it so funny as Drole's lecture on Attic Salt, and Brown would like something a little more solid.

"These things are not considered in the contract. But they count. They might easily count out a sensitive man.

"Good-by, dear Easy Chair. You won't mind my querulousness. You know how glad I am of the Lyceum, and what I think it is doing for the country. Your obedient,

"MUMM."

THE Easy Chair is permitted to share its appreciation of the following elegiac verses with the public. They are in memory of George Steers, and express the sincere regrets of a worthy man. Their literary character is peculiar; and their solemn dedication to the New York Yacht Club will probably induce some of the members of that sporting body to shorten sail a little. At least so hopes the author, and the Easy Chair cries Amen!

TO THE NEW YORK YACT CLUB.

MR. N. P——, ESQ., SECRETARY.

GENTLEMEN to you these lines . I . send
To Cherish the memory of Your departed Friend
Forget not—I entreat you while in this world of strife
How sudden Dear George was deprived of this life

With You and I—It may even be exactly So
So let us try and be prepared to go
The Yact . Men I . would also exhort
To prepare themselves for the Hevenly Port

One word to You all I . would Kindly Say
Beware of Sailing for Pleasure on the Sabbath day
I number of Yacts I have seen, I . must Say
Pass . by Fort Scuyler on the sabbath day

My friends to You the enclosed lines I send
Hoping of Course they will not you offend
And if they will do you or any one good
It . will repay this . Long Island farmer called Wedgewood
B. Homer.

To the memory of George Steers, who was killed on the road as He was coming to my house at Little Neck, Sept. 25, 1856.

By a Long Island Farmer.

While sitting lonely in my deserted room
With a sad mind and spirit clad in gloom
Reflecting on the loss of one such dear friend to me
So sad so sudden that Constrained me to write to his memory

This sad accident struck me with such surprise
The effect therefrom I can hardly reilize
So kind so pleasant so agreeable the other day
But now it seems from this earth He's called away

The last sabbath of his life He told me of his Father dear
And of his good actions and kindness far and near
And what his parent did in his lifes short span
Deeds that entitled him to be called an honest man

I. told him I thought it would oftimes restrain a man from Sin
In reflecting and thinking his good parents eye was on him
So by those restraints he would do just and right
The same as if his beloved parent was in sight

How delighted I was with his Conversation
So kind so humble in such an exalted station
He listened so attentively to a simple fact
Of a wicked sailor conversion by a young lady. giving him a tract

He took one of my tracts to read Called the Conversation in a boat
Between two sailors as she lay afloat
Both belonging to the Repulse 74 of the British Nation
About the most Important of all matters their Souls Salvation

He was so Interested with this tract I. heard it Said
That He lay and read it even in his bed
I hope and pray by his reading and Meditation
He was prepared for his Change and a Blest habitation

Ah. little did I think, when I heard him read about Lawyer Shepherds funeral
To be called on the next sabbath to attend his own burial
O what is life when attended with such sad fatality
But calls for each one of us to remember our own mortality

We are poor mortals of a few. years, Short Span
We are born and live and die this befals man
What is the result of our plans upon this earth
We are soon Cut down and Covered up with earth

Before our beloved Friend was called to his rest
His name for his Ingenuity was famous east and west
Altho brought up and reared in humble Stations
He modeled the Vessels that beat all Nations

His fame increased from day to day
Since the famous victory of the yact America
For my part I venerated him at that time with honest pride
For the victory gained by her on the American side

Then that splendid steamer Queen of the West
Which surpassed for speed all of the rest
So gracefully on Eries waters She did go
So fairylike She made a splendid Show

Then the famous yact Julia was built some time after
Which sailed as if she sometimes flew on the water
Which gained the contest. I believe in every fair trial
And I. believe. it is admitted without any denial

The next great Wonder was the Noble Adriatic
Her. lines so true her construction so systematic
When I. visited and viewed her some time ago
Astonishment filled me before I got half through

And the next great Wonder that I went to see
Was the Celebrated War steamer called the Niagara
. As I view her and was shown by Him each part
I was struck with astonishment at his noble art

He also showed me the Construction of her noble bow
How it was kneed and braced and bolted through
And as we viewed her and paced her decks so wide
I remarked. to him her bows could stave in an Enemys broadside

But of that plan and War I hope In Our day
Of this noble Ship and Ourselves we will not have that to say
But of Her and all others of her Kind
I hope will be employed in benefitting mankind

If nothing happens when in Europe she appears
The world will resound with the name of her builder George Steers
And America will be rewarded by her fame.
Which will make us all venerate her builders name

For a humble man O what a Monument
Does this Magnificent Steamship represent
The magnitude of her in my humble mind
Convinces me as one of the best reared by Mankind

What Signifies all Egypt monument of Stone
In benefitting mankind what have they all done
By their Construction and History we can plainly [see?]
That their Builders was in the most abject Slavery

But to be a benifit to all mankind
This seems the greatest in my humble mind
And by his works left amongst uss it to me appears
That we all as a nation should venerate George Steers

A man of such genius from an humble station
What a sad loss to Our growing and Mighty Nation
But we must submit to the decree of Our Gracious Lord
And leave our labours at his Sacred Word

I hope and pray. from his labours He does rest
And is permitted a habitation with the Blest
I hope and trust his family may reconciled be
And submit with humility to the divine decree

Altho her adored husband lies beneath the sod
Yet Our Lord has declared He will be the widows God
And a Father to the Children of the Fatherless
And in sincerely trusting Him she will be blessed

To his beloved Children I will say one Word
Always Obey your parent in the Lord
Remember your departed Father who was so kind
And always your kind mother mind

If you do this and Your Heavenly Father seek
For He has promised in his Word to reward the meek
You in your generation will be blessed
And will be rewarded by and Everlasting rest

Remember in all your trials what patient Job. did Say
How the Lord gave and the Lord has taken away
And in all his troubles He did bless his Holy name
And for the Consolation He received try and do the same

And to all the rest of the family I would say
I hope they will all have peace of mind in the same way
So when they all arrive on Canaan. Immortal Shore
They may all meet their beloved George one more

Wedgewood B. Homer.

October 1, 1856.

OUR FOREIGN GOSSIP.

Every where in this old world there is a dreary face upon things at this opening of the year. The railway trains are shooting indeed farther and faster across the plains of France and the steppes of Russia; and in England their differences are settled, and the North Western and Great Northern are equitably dividing spoils. The looms of Lyons are clashing with swift silken music all through the tall, smoky houses that rise upon the Rhone banks; the Rouen spindles are humming, and the Norman barns are full; great sheets of canvas are pouring white gleams to the eye of every passer

upon the Mediterranean waters, and of every dweller in every bay; the stock of a Suez canal is subscribed in the Paris banking houses; peaceful gunpowder blasts are bellowing and echoing in the half-made Alpine tunnels; a half crazed, tipsy Prussian King has yielded to a live King of daring and promise (if we may believe his record); an iron bridge spans the great canal of Venice, and another is lifting its black hulk from the Tuileries garden to the nether bank of the Seine; Mario is singing, never so sweetly; Paris idlers are listening dreamily to Greek dramas lightened with a Paris buskin, and a Paris choir; Scottish Macbeth is married by French interpretation to the passion of Gaul; never was more quiet in the streets, or yet such store of hackney cabs, such careless buyers of Christmas bonbons; where, then, lies the dreariness?

In signs that are back of these. Signs that declare themselves not so much to the eye or to the ear as to a secret consciousness. Poor Turkey, with all the Oriental calmness of feature, is tottling upon uneasy foot; her protective Christian allies being so many dogmatic and capricious masters, making her beautiful capital a mere spittoon in which to cast their juiceless, foul quids of difference; compelling her to tolerate the vagabond Greek Christians who lie and thieve, and unsettle Crete, and plague the Mufti; disordering all the hopes and serenity of the calm but liberal-minded Ottomen (such few as there are), who hoped for gradual and placid growth into assimilation with the West; and kindling the worst of Mohammedan fanaticism, which flames out in barbarities upon the Red Sea, in Egypt, and along the Mediterranean shores.

The Ionian Isles are not yet mollified with the dulcet tones of Gladstone, but listen surlily while the debauched kingdom of Greece makes signs of beckoning from the shore.

The Montenegrins are turbulent, and among their rocky fastnesses keep good a kind of boastful, predatory Christianity, which has the banner of Austria at its back, and the red-breeched soldiers of the Sultan in front.

The new King of Prussia stands in a sense overwhelmed by the current of his own liberalism; the Russian conservatives, taking silent counsel with the dowager Queen, are hatching plots, while the Radicals, who saw and furthered the bloody work of 1848, are more bold and talkative.

In Russia itself all breath is not given to Imperial flattery—there are those in the Church and in the ranks of nobles who fret and smart under the threatened reforms of Alexander, and hope they may end like the flash reforms of the Pope Pius.

Throughout Italy there is a low buzz of movement, of which little waifs of sound, when the wind is fair, reach even to Paris. The other day it was the story of certain medals circulating, on which was stamped the effigy of Emanuel as King of Italy; another day it was the story that Mazzini had waived his Republican desire, and joined interests with the liberal Sardinians; another day, how the men of Milan had all abandoned the use of tobacco, that so they might cut off so much from the Austrian revenue (the Government holding monopoly of its manufacture and sale).

Again, in Tuscany, there are stories of how the Grand Duke is drawing closer his relations with Austria, as if there might be quick need to both.

At Rome they have the Mortara bugbear and the terrible democratic threat of a new railway to Civita Vecchia. In Naples and Sicily there is always enough to create expectancy of dreadful things to come.

Then in France, all about us, but most of all by reason of the untalking Press, we feel somehow that the hammer of despotism is driving the rivets so sharply and hard that the plates may be cracking though we hear only the hammer-strokes.

In England, Mr. Bright and his friends are stirring a loud cry about reform, and the old-fashioned Liberals, outridden upon their own hobbies, are falling back into the place of respectable conservatives; while the Tories are toying with the Radicals to keep their places good.

And the hopeful ones will straightway ask, what is there so very dreary in all this? Is it not the buzzing in the hive of opinions that foretells the outcoming of a new brood? Very likely; but for all that, or rather by reason of that, hearts and hopes are dreary with doubts and a strange unrest. At present there is shelter and a dull peace; the shelter may be cramped and the peace ignoble, but the change which destroys the one and oversets the other must carry wars and death in its train.

If Italy emerges, at length, from that long, doleful, dungeon sleep of hers to life and mental activity and freedom, it must needs pass through the delirium of battle-fever.

How many brave ones shall bite the dust before those long-drilled troops of Austria will yield? How much red blight fall on these streets of Paris before the 400,000 of the army will forget the man who feeds and who pampers them?

Again: it is dreary and disheartening to think what small increase of fitness for administrative action and self-control has been won by the peoples of either France or Germany or Italy in these ten years past. Not for fifty years past have they been so zealously kept away from such sources of information as would fill them with healthful political food. Indeed, it is something doubtful if the increased loom-working and field-working, and the working upon luxurious gewgaws, has not made the millions more of machine men less thoughtful and earnest than they were ten years gone.

Yet again: the look is dreary, because in Italy, where just now the stir is greatest and the hopes hottest, the intervention of France and Russia, and Sardinia (as a distinct nation) looks more like a new parcelment of European territory than any guarantee for Italian independence. And in France the fever heat, which such prosecutions as that of Montalembert is ripening, prompts a fear (if the overturn comes) of the opposite extreme of agrarian license.

Yet here we are, quiet as yet, looking out upon the river that flows under the palace walls—full of its winter rains, indeed, but placid of surface, and bringing down great barges full of wines, and wood, and wheat from the east country.

The theatres are filled to overflowing. At the Vaudeville the *Dame aux Camelias* has been revived with its wonted success; and this leads us to say that its author, the younger Dumas, narrowly escaped with his life, a day or two since; his carriage being dashed in pieces by a runaway horse, in the neighborhood of the Champs Elysées. The elder Dumas is reported quite ill and still in Russia. His famous Chateau of Monte Christo

was sold, not long since, to a well-known American dentist, for the sum of seventy-five thousand francs. Dumas is said to have expended upon it no less than four hundred thousand.

A new comedy, *Le Luxe*, the work of Jules Lecomte, has latterly drawn full houses to the French Theatre; and as it turns upon the extravagance and baseless pretensions which belong nowadays as much to our side of the water as to this, we venture to give a glimpse of its plot and current:

The scene opens in the Casino of Wiesbaden: Madame de Barges is a wealthy Parisian widow, possessing title and freedom, with remains of beauty, and still larger remains of coquetry. Rupiéra is a Brazilian marquis, rich to repletion, and amusing himself, among other ways, by gallant attentions to the sprightly Countess de Barges.

There is, besides, a Madame Morel, with her daughter Esther. The Morel father is by no means rich, but is simply director and manager of a large railway company; and his nephew, Lauvray by name (also in this time at Wiesbaden), is chief engineer of the same railway, and the affianced suitor of Miss Esther.

The father, like the honest man that he is, keeps by his office and work, while the wife, with her head full of the notion of commanding attentions for her daughter, wastes the poor husband's means incontinently, and apes the style and luxuries of the wealthy De Barges. She even goes so far, in the heat of her summer's campaign, as to pledge her own little private estate in consideration of an advance of a large sum from a certain Farju, who is the sharper of the play, and the main intriguer in the plot. He is no vulgar pickpocket, but elegant, shrewd—his antecedents all unknown—watching his chances, and conciliating the Morels, in view of obtaining the concession of a great contract from the railway over which the father, Morel, presides.

Esther, being pretty, and, by the mother's instruction, provocative in her advances, engages the attention of the Marquis de Rupiéra. Lauvray, disgusted by her action, and by the wanton extravagance of the mother, which he knows to have no sufficient basis, retires and leaves the field open.

The Countess de Barges is incensed at the loss of her lover, and in womanly way contrives graceful vengeance. She is master of all tongue-craft; and there follows delicious raillery of the Morels, irony full of stinging innuendo, and less pointed Morel retorts. Yet always the claws that might scratch are concealed in immaculate kid. Nothing the French relish better than such stage fights as these, if gracefully managed: keenest sarcasm sheathed in most courteous of phrases; most amiable of smiles, while the tongue is distilling only gall: our matter-of-fact language can not compass the half of such things.

Rupiéra, in the course of a mountain promenade with mother and daughter, has the good fortune to rescue the latter from imminent danger of falling down a precipice.

The good mother can not tell of the matter loudly or boastfully enough. The elegant Marquis is chagrined by her bourgeois vehemence. The Countess de Barges is still more chagrined by the noisy triumph of Mademoiselle Morel.

She encounters them at the Casino; she challenges the Marquis (still in attendance upon the rescued girl) to a hand at *écarté*.

The Brazilian declines except his fair companion will join his fortune in the game. Esther, encouraged by a glance from the ambitious mother, and nerved by her hate of the Countess, sits down to the play.

The Countess deploys all her force. The little company Rupiéra-Morel is a loser to the tune of twenty thousand francs, making ten thousand for the daughter of our good, quiet railway manager, who is intent upon his business.

Thenceforward the play bounds forward to an end. Sheriffs (we should call them such) are in the Morel house, with ominous slips of paper in their hand; scandal provoked and published by the intriguer Farju (still intent upon winning, by black mail if need be, his railway contract); the miserable extravagances and pretensions of the summer have wrought ruin; Lauvray has married a reserved daughter—wiser than Esther—of the discomfited Morel; and very little hope comes to the family, or has reason to come, from the subsequent marriage of Esther with Rupiéra.

The moral of the play is—Mind who your associates are; and don't spend more money than you have.

And besides this—Luxury is for the rich; the poor had best content themselves without it.

Apropos of plays, and of playwrights, Madame Ristori has latterly written a very characteristic letter to the editor of the *Arpa* of Bologna, one of the best known journalists of Italy.

We translate a portion: "To encourage authors and to secure to their labor applause, reputation, and pecuniary reward, is my aim, as it should be the aim of every actor. For the maintenance of elegant taste in the public there may be need to reproduce, from time to time, classic works; but an actor's first duty is to the authors of the times in which he lives—to illustrate their labors, to give expression to their silent language, and to prove to the future that we do not content ourselves simply with honoring the past, but enrich our time with always new glories. Actors and authors should join together to give expression to the national genius.

"In this faith I devote myself to the work, and I remunerate to the utmost of my power all who commit to me the fruit of their labors. I engage to give myself fully to any worthy creation—to contend with its author for his rights, and to share with him his triumphs.

"Until better days come, when literary piracy shall have ceased, I will employ all legal means to secure justice and the author himself, or the poor shall have the benefit of any damages that may be decreed. My only aim is to create, through fear of prosecution, that respect for literary property which ought to spring from a sentiment of honor and a love for art."

A bit of good pay for not over-large literary work we may mention here (it comes to us as rumor rather than well-authenticated fact), that M. Méry, a very clever Latin scholar as well as *feuilletoniste*, has latterly completed, at the instance of the publisher Fontaine, all the broken lines of Virgil's Æneid, and the emendated copy *faite à la main*, has passed into the hands of some grand Russian Seigneur, covetous of autographs as well as curiosities, for the sum of three thousand francs.

We have had latterly a libel suit engaging much attention in Paris, since it has called up incident-

ally, if not directly, the whole question of the merits or demerits of the Homeopathic system of medical treatment.

A young physician, M. Gallard by name, wrote in the *Union Medicale*, of October, 1857, a review of a Homeopathic treatise, in which, after very serious and very pointed ridicule of the Hahnemann system, he indulges in this language:

"Homeopathy can no longer be considered a doctrine, still less a science. It is a mere trade, pursued to the injury of both science and of humanity. And if there be an epoch, when one could apply the method of Hahnemann without being an ignoramus or a miserable charlatan, it surely is not the epoch in which we live."

The plaintiffs, being the principal members of the Central Homeopathic Association of Paris (represented by Emile Ollivier as advocate), find in the language cited an attempt to impair the consideration in which they are held by the public, and they claim fifty thousand francs damages.

M. Ollivier in his speech, although not denying to the defendant his right to attack the science as a science, alleges that the language above cited is a wanton libel upon the character of its upholders; and goes on to give a history of the discoveries, or alleged discoveries of Hahnemann, ranking him next to Leibnitz and Newton; shows that all other medical science is a mere delusion; cites Sydenham, "*Ars garrulandi potius quam sanandi;*" and Boerhaave—the great Boerhaave—who at his death ordered all his medical books to be collected and burned save one, which he declared contained all that was of any value in medical science. Of course the book was guarded with religious care, and on examination was found to contain simply these few words of advice: "Keep your head clear, and feet warm, and let the doctors alone!"

And he quotes Bichat, who said that the "practice of medicine was unworthy of a reasonable man;" and Broussais, who affirmed that it was "more harmful than useful to humanity."

All this gives him room for a pleasant eulogy of the Organon of Hahnemann, affirming the plausibility and successes of his system, defending at length its leading principles, and closes with a bit of humor about the Abderitans and Hippocrates.

It seems that Democritus, who lived in Abdera, and who had lost his eyes by overmuch study, and whose philosophy was above the comprehension of his townsfolk, was counted by them insane; and they sent for Hippocrates begging he would administer hellebore, which was the recognized cure for fools.

Hippocrates spent a day in earnest conversation with him upon the mountain where he lived, and returning at night he said, "Oh, Abderitans, it is not Democritus who needs the hellebore."

So, said M. Ollivier, if Monsieur Gallard will only study as he should study the works of Hahnemann, and—who knows?—perhaps he shall some day declare to his masters and brethren, "Oh, my masters, it is not these Homeopaths who need the hellebore!"

M. Andral, being advocate for the defendant, attacks the new science in very gay humor. He quotes Hahnemann, where he declares bark (quinine) to be one of the most powerful of remedies. "I find," he says, "that a single drop of the tincture, so diluted as to contain only one quadrillionth part of a grain, is often too powerful a dose."

He gives an instance where a physician (M. Behier?) meets with a homeopath who is preparing one hundred and fifty of his little globules of aconite.

"Suppose I were to swallow them all upon the spot?" says the physician. "You would be a dead man," says Homeopath.

Whereupon the physician seizes them, swallows all, and dines after it exceedingly well, and finds his digestion as usual.

The experience of some of the most distinguished physicians of Paris is cited, who have tried the homeopathic remedies both upon sick and well subjects, without any perceptible effects. At the same time it is admitted that, in certain cases of acute disease or of nervous disorders, cures may be effected not by reason of the operative agency of the pills themselves, but by reason of the repose and faith of the patient—that alone being needed.

M. Trousseau administered homeopathic remedies without any effect; to other patients he administered, under cover of false name, pills of ordinary size made simply of bread crumbs: these last proved of greater efficiency than the pillules of the homeopaths—which would seem to show that faith even takes quicker hold of large pills than of small ones, supposing them equally worthless.

In the year 1856 one of the halls devoted to cholera patients in the Hôtel Dieu, at Marseilles, was placed in charge of a homeopath of ability and reputation. In eight days' time twenty-one patients died out of twenty-six. During the same week, in an adjoining hall where the allopathic treatment was pursued, fourteen only died out of a total of twenty-five.

In the year 1855 the French Academy of Medicine devoted three days to a discussion of the system of Hahnemann, and concluded by declaring it altogether false, contradictory, and dangerous.

"Therefore," says M. Andral, "if the Court condemn my client, they condemn with him the leading academies of Europe. If the illustrious savants whom the state has given to my client for instructors are the victims of superannuated prejudices, if Hahnemann alone is right and the twelve plaintiffs are his prophets, surely the Court may well pardon my young client the crime of having followed the instruction of his masters, and of repeating their words of rebuke."

The complaint, therefore, should be dismissed. No one of the plaintiffs is subject of personal attack; it is they who make their own defamation, when they apply the title of charlatan to themselves. "I leave my client," he says, in conclusion, "under the protection of those brave words of Pascal, which the counsel for the plaintiff has most fortunately brought to my recollection—'If it be a wrong to fail in respect for truth, it is another wrong to fail in scorn of falsehood.'"

At our writing the decision is in reserve.

If there is a great deal of noisy bravado about many of our French war-chiefs, there is also a great deal of honest and hearty simplicity. Instance this letter, which Marshal Vaillant has just now written to a country blacksmith bearing the same name, and who had addressed him in hope of learning something about the career of the brave ones of his family. Only fancy what other reply would have been made to such inquiry, from such source, by a British Colonel Horne!

"You have addressed to me," says the Marshal, "a good letter, and the person who wrote it must

be a good-hearted man. I should be very proud of his relationship, though I do not know if we shall be able to make it apparent. My father, whom I had the misfortune to lose in 1823, was secretary of the district of Dijon, and afterward secretary-general of the prefecture of the Cote-d'Or in 1815; he was elected representative during the Cent-Jours, then deprived of his place at the prefecture, imprisoned as Bonapartist, etc. I was then in the army of the Loire. My father died poor, but esteemed by all; I do not know that he had a single enemy. I do not resemble him in any thing: he was thin, and I am stout; he was mild, and people find me cross; in fact, he had as many good qualities as they say I have faults, and I believe they are not mistaken. My father, who brought up a large family, was married to a Mademoiselle Canquoin. A brother of my mother died at Genlis (Cote-d'Or), an excellent man, whom we constantly regret. I have no child, and this is the greatest sorrow that God has given me. I was born at Dijon on the 6th December, 1790. I scarcely recollect my mother. We were poor, very poor. We were carefully and tenderly brought up, but in the midst of privations of every sort. My nurse still lives at Dijon. God has not made any being more devoted than she, who received us as infants, and tended us with a love which I can not express; she has refused twenty offers of marriage to live with us, who, however, gave her trouble enough. I entered the Polytechnic School at the age of sixteen, and I left it to enter the engineers. The grade which has given me most pleasure was that of corporal at the Polytechnic School. I was in the Russian campaign of 1813, and was made prisoner at its conclusion. I was at Waterloo. I was wounded at the defense of Paris in 1815. I had a leg torn by a shell at the siege of Algiers, in 1830. My chiefs said that they were pleased with me at the siege of Anvers, in 1832. Such, Sir, is my history, nearly complete. I shall be most happy if you find in it some proofs of a similarity of origin between your family and mine. I pray you to receive the assurance of my esteem.

"MARSHAL VAILLANT."

QUITE other biographic matter, but still as thoroughly French, we may give in mention of some of those frail, dancing ones who, in years past, have given fame to the pretty Garden Mabille or the Salle Valentino. Does the visitor to Paris twelve or more years gone—student of medicine or student of the humanities—remember the stout, laughing, graceful, black-eyed Queen Pomaré?

Well, she was the daughter of a fair player at the Circus of the name of Sergent. Two of her sisters held honorable professions of governesses or teachers in private families; but in an evil hour Elise went astray and lost herself in the bewitching mazes of the dance at Mabille. Her grace and her witty repartees made her famous. It was in the time of the old Pritchard and Society Island discussions; and thus, in some way, Elise caught the title of Queen Pomaré. It kept by her till her death.

Eugene Sue, in those days engaged upon his "Mysteries of Paris," had need for information in regard to the life of these gay courtesans, and bethought himself of the wit and cleverness of the Queen Pomaré; and how much we may be indebted to her for the life of many of his most tempting descriptions will probably never be known. Certain it is that he felt himself largely in her debt; and at her death—for she was Queen only for a short reign, passing away with some sure-working pulmonary affection—the works of Eugene Sue, being author's copies, and bearing on their opening pages testimony of his indebtedness, were found upon her library shelf.

A little grave-yard tablet, with "Elise Sergent, Æ. 28," written on it, is altogether silent about the brilliant reign of the black-eyed Queen Pomaré.

How many other funereal tablets in the world, tablets in churches—tablets in church-yards, simple, and touching, and true, so far as they go—yet giving no hint of that kingly or queenly march which the dead one made in sin!

Rose Pompon was another of the divinities of Mabille not many years back; who has strangely put aside a large budget of her little "economies," and upon the revenue of them is now living a humble and comparatively honest life.

Hermosa, another queen of the dance, and a gipsy by birth and by nature, brought a richer and more captivating brilliancy to the throne of Mabille than had ever been known there. Brazilian dukes and Dutch bankers of Amsterdam fell prostrate before her. But there came a time when even the splendid sovereignty she wore lost its charm. A dim, dread sense of her castaway condition seems to have found its way into her gipsy heart; and suddenly her triumphs were abandoned, before yet she had lost the bloom from the cheek or the sparkle of her eye; and she retired to a convent adjoining Paris, where, in simplest serge, and with rosary mummery, and, we dare say, honest expressions of penitence, she died, not long since, a pattern *religieuse*.

But these are the exceptions upon that sad list. Worse fates befall the *Rigolette*, and the *Frisette*, and the *Sauterelle*. The least unfortunate may hope for some place as tobacconist, or matron of second-rate *table d'hôte*, or proprietor of little three-legged, clandestine, gambling stool, where water-carriers and street-porters play at *écarté* for five sous the point.

Others, wearied with life and haggard with want, hang around theatre doors for stolen mites of charity, or show their pinched faces in dark and dismal conciergeries of the foul houses of the Rue de la Harpe, or, still worse, glare at you from under the load of a *chiffonnier's* basket of filth, or lie, more foully dying, on the beds of *l'Hôpital du Midi*.

A TRUCE now to Paris, while we take you to the rooms of the British Association in London. A Mr. J. Spotswood Wilson has communicated a paper on "The General and Gradual Desiccation of the Earth and Atmosphere," which must be of fearful omen for all good hydropathists and water-drinkers.

Mr. Wilson draws attention to the fact that those who had traveled in continental lands, especially in or near the tropics, had been forced to reflect on the changes of climate that appear to have occurred. There were parched and barren lands, dry river channels, and waterless lakes, and not unfrequently traces of ancient human habitations, where large populations had been supported, but where all was now desolate, dry, and barren. After quoting largely from the works of various travelers and writers (among the latest of whom was Dr. Livingstone), and giving interesting descriptions of dried up rivers and desolated tracts of country in Australia,

Africa, Mexico, and Peru, which had formerly been inhabited by man, Mr. Wilson concluded that there was a gradual solidifying of the aqueous vapors, and consequently of water, on the face of this terrestrial world, which he inferred was approaching a state in which it will be impossible for man to continue an inhabitant. Yet, he added, we should feel satisfied with the prospect that the term of our occupation is not yet half expired. Races preceded us in the chain of existence, and there was no reason to suppose that others would not follow. Indeed, some of those that are destined to succeed seemed to be already in existence, and have their home in the icy sea, where they enjoy a climate which exceeds man's endurance. Various considerations lead to the conclusion that the fitness of the earth for man may extend to a period much longer than that in which it has been occupied by him; nor will that term end till after the Polar bear, the walrus, and the narwal have become inhabitants of the tropics.

Sir Roderick Murchison says it is certainly not a pleasant idea to think that our race was to go out of existence—that it was to die through thirst.

In which judgment we are disposed to think that unscientific readers will thoroughly agree *with* him.

And now again, in a certain Lyceum meeting at Leeds, or, more properly, before what is called the Literary and Philosophical Society, the Earl of Carlisle has been reading an old lecture upon America, being the fruit of his observations at the time of his travel in that country, ten years or more ago. He adds to it there in Leeds these rather unfavorable addenda:

"With reference to the lecture which he had had the gratification to read to them, he must be permitted to say that almost every thing that of late he had heard or read concerning the United States since the period of his visit had not, he was obliged to confess, on the whole tended to increase or improve his admiration of the people. He could not certainly feel inclined to see his own countrymen exchange its form of government and institutions for those which they possessed in the great republic of America. There were some things, no doubt, which we might advantageously copy from that country; but still, till their character, condition, and conduct were immensely changed, he did earnestly hope that the people of this country would remain English and not become American. He was aware that what he had taken the liberty to say would be subjected to some suspicion, because it was not to be concealed that it came from one of the terrible aristocracy, to whose account, we had heard from high authority, were to be laid all the wars of this country since the revolution of 1688. He believed the truth was very nearly the reverse. When he was in the United States he came to the conclusion that the American people were far more inclined to war than the English, and of the English people he believed the class least likely to be willingly hurried into war was the aristocracy."

And in the same strain, a shrewd Scotch peer, the Duke of Argyle, in commenting upon the late speeches of Mr. Bright, and upon the question of reform generally, holds this language:

"I turn to that great country sprung from our own, which exists upon the other side of the Atlantic, and I tell you, without fear, that it is the testimony of the best and most intelligent citizens of the United States that I have met with in this country, that in many respects, although the power of the Union is as great as it ever was, although they believe, and I, to a great extent, also believe, in the doctrine of the destiny of the American people being ultimately a great and a glorious one, they will tell you that the existing condition of that country is in many respects, as regards moral character, a period of transition and decline. They will tell you that there is less and less possibility of getting the highest characters to take an interest in public affairs; that there is less and less freedom of opinion for all those opinions which are unpopular with the masses; and, last of all, that there is even a sensible and visible decline in that which used to be the great characteristic of the Anglo-Saxon race—a respect for the authority of the law. Well, then, looking at these examples upon the one side and upon the other, we are all interested in asking the question, Are we passing under any decline? Are we, or are we not, advancing? And I look to such great meetings as these, and I find in them the answer."

It is well to see the worst that our this-side neighbors may say about us; and in this belief we excerpt yet further mention of a more heated stamp from the columns of the *Patrie* newspaper:

"This restless and encroaching democracy," say our French friends, "which wants to thrust itself in every where—which forces, with its guns loaded, the passages of the Sound, which trammels in China the proceedings of our negotiators, which in 1855 offered up prayers for the triumph of Russia, which intervenes even brutally in all our affairs, and almost in every instance to oppose the interests of civilization—this democracy, we say, has brought forward against us a new principle, called the Monroe doctrine, in virtue of which she pretends to interdict us from every kind of intervention in the seas and coasts of the whole of America. It seems like a dream to hear such principles insisted on every day in the journals of the Union, and even in the official notes of the Government. It is, nevertheless, in virtue of this theory that Spain was, and is still, threatened with seeing Cuba taken from her, and that so many filibustering attempts have been made for that purpose. It is in order to drive England from the American coasts that the Clayton-Bulwer treaty is loudly disavowed at present, and propositions have been made to Congress to cancel it. If this Monroe doctrine were admitted, even tacitly, by the great states, our West India colonies would speedily be menaced, for there would soon be no security for European interests in the seas of the New World. There is in this conduct something more than ingratitude—there is a sovereign want of foresight; as M. de Talleyrand said, it is worse than a crime—it is a blunder. The great American Republic owes every thing to Europe: her increasing population, her capital, her mechanical progress, and even her existence. But for the 350,000 emigrants who every year leave our shores, each of them taking on an average 400 francs, without reckoning on their labor, her development would soon be cut short. Without English capital, which carries out the majority of her undertakings, she would have neither canals, nor railways, nor manufactures. But for the piracy which she carries on with impunity of our modes of proceeding, and of our inventions, she would be neither a manufacturing nor a great maritime nation. And as a return for so many services rendered, she nevertheless does not hesi-

tate to sacrifice our most precious interests to her slightest convenience; and she has already exhibited the sad spectacle of a whole nation repudiating the faith of private engagements, and thus inflicting ruin on Europe for the satisfaction of a few bankers."

And upon this fiery spurt of Gallic rhodomontade we will take breath for another month.

Editor's Drawer.

NOTHING richer than the correspondence for the present month have we had these many years in which we have opened and shut this Drawer of ours. It is genial and joyous, as the world is to the good; it will drive dull care away from him who has no other trouble than too much to do; it will make a sad heart glad unless a sore conscience gripes, and for that there is no salve in this Drawer. Again we say to the merry men of America—If a thing is good for you, it is good for every body; and the world will hear it, if you send it here.

"The Rev. F. H. Quitman, D.D.," writes a correspondent, "was pastor of the Lutheran Church at Rhinebeck, in your State. He was the father of the late General Quitman, of Mississippi. He occasionally preached in the neighborhood of his station, on one of which occasions a characteristic incident is mentioned of him. When he arrived at the place he was informed that a man whose name was *Finger*, living in the vicinity, had been speaking harshly of him, and endeavoring to injure his character. The Doctor said nothing, but went into the church and preached. After sermon he addressed the audience thus:

"'I have been informed that a man of this vicinity' [and the man was present] 'has been engaged in circulating false reports about me, and trying to destroy my usefulness among my people; but finding that the Devil has had a *Finger* in the pie, it is not worthy of further attention, for he is a liar and the father of lies!'

"The effect produced was such as he desired."

They may call him a Mayor, but he is an ass for all that, who figures as the magistrate in the following veritable incident, furnished by a correspondent of the Drawer:

"The worthy Mayor of a Southern city, well known to a host of admiring and warm friends, had 'a casé' before him in the person of an individual taken up on suspicion of offering a counterfeited note of hand of a well-known firm for sale. He could not prove its genuineness, and was committed to jail until information could be had from the parties. When it came it was entirely satisfactory; the note was good, and the young man's character was thus put beyond doubt. The Mayor had him brought to his office, and thus addressed him:

"'Young man, it is my duty to congratulate you on being so fortunate, for had the note been a counterfeit you certainly would have been sent to the Penitentiary; you may go, and let it be a lesson to you.'

"The young man demurred to the *sentence*, it being proved that the note came directly into his hands from the makers of it, and he insisted that he had been badly treated by being put in prison for several days, and his character aspersed.

"'Not at all,' says our worthy dignitary; 'you have had a fair investigation, and it is very fortunate for you that the note proves to be a genuine one; for assuredly you would have been sent to the Penitentiary if it had proved a counterfeit. Now *go and sin no more!*'

"He went—and our aforesaid Mayor can not be made to see the transaction in any other light than as a fortunate thing for the young man that the note was genuine!"

The Rev. Dr. ——— sends the following note, which sufficiently explains itself:

"*To the Editor of the Drawer.*

"Dear Sir,—Your anecdote in a late Monthly about the 'Rev. Dr. ———' and the lunatic, in the Chapel of the Georgia Lunatic Asylum, is almost too good a story to be disturbed. Strict conformity to fact, however, would, I believe, amend the version a little, and show more fully the orthodoxy and zeal of the lunatic on the subject of capital punishment.

"When the speaker called on the sinner to look to Christ with the eagerness with which a criminal under the gallows would look to a courier from the Governor hastening to him with papers of pardon, the lunatic, abruptly and earnestly, interrupted him with the remark, 'I hope they will have the man hung before the messenger arrives.'

"It is needless for one who has the very best experimental reason to know the fact, to say, that, for the moment, the preacher 'had the wind taken out of his sails' very considerably. 'Dr. ———.'"

The Drawer's compliments to the "Doctor," and would be happy to hear from him again.

"At the late election in this State," says a Wisconsin correspondent, "Judge L—— and Colonel B—— were the opposing candidates for Congress in the third district. Judge L—— is one of the most popular and eloquent speakers in the West, but is notoriously fond of the *good things* of this world, especially of good brandy. A few days since, at a meeting of the candidates in Portage, Judge L—— was addressing, in his peculiarly sarcastic manner, a mixed audience of Democrats and Republicans, when some shaft hurled at his opponent raised a feeble hiss from the opposing party in the further part of the hall. The Judge, who seldom allows an interruption of the kind to pass unrebuked, threw himself into an attitude, his hand behind his ear, and, bending forward, whispered, 'Where is that snake?' A voice from the crowd instantly answered, '*It is in your boots, Judge!*'

"Silence was broken, and the 'meetin' let out."

The Cincinnati bar, a few years ago, counted among its ornaments F——, who was one of the most eccentric and brilliant fellows that ever addressed a court or jury. His warm imagination, classical scholarship, and sparkling wit rendered his oratory most attractive to all classes of listeners. But unfortunately his great social qualities led him into habits of dissipation which eventually destroyed him.

He was once trying a case in which his opponent, Colonel ——, closed his remarks by saying that F——'s case was deficient as to certain essential evidence, and roared out, in a most boisterous manner, "Who testified to such a thing? Who? Who? Who?" The Colonel took his seat with an apparent consciousness of having annihilated F——'s case. F—— arose to reply. He said that the gentleman's words had carried him back in imagination to the days of his youth. They had brought

to remembrance the green valleys and beautiful hill-sides of his old New England home, where his boyhood's brightest recollections clustered around the village singing-school with its charming array of bright-eyed girls. "Yes, gentlemen of the jury, they have vividly brought before my mind's eye one particular occasion, when we held a public exhibition of our musical talents and invoked the aid of the village brass band. The first hymn commenced with the words,

'Who shall let the King of Glory in?'

We all stood up, ready to sing; the leader of the band put his mouth to his great brass horn, with its pipes all twisted and curled up like a gridiron, and gave such a blast on the first word, '*Who*,' that the end of his instrument rolled over and over until it was straightened into a brass tube as long as a fishing-pole, and from that day to this I never knew what became of that 'Who' until the Colonel brought it into the court-room this afternoon!"

"A CERTAIN artist friend of mine, who shall be nameless, but who is well known for his exquisite illustrations for engravers, one day had a visit from a well-known writer who was deaf—so much so as to be obliged to use an ear-trumpet. In the course of the conversation, which was relative to business, an engraver, who was famed for his offensive breath, had to be called in, and the conversation proceeded between those two. Presently the ear-trumpet was at the writer's ear, and the engraver pouring in his words thick and fast. M——, the artist, looking complacently on for a few moments, turned to those present, with a benignant smile, and said, 'Isn't it good that he can't smell in his ear?'"

"I WAS one day conversing with a party among which was an old lady, who, though intelligent, was as remarkably matter-of-fact as Wordsworth is said to be. The conversation fell upon sweet or Carolina potatoes, and their similarity of taste, when raw, to chestnuts. As a specimen of exaggeration, I went on to say that, a few years ago, a Yankee had taken advantage of this fact by buying up all the shells of the previous year, stuffing them with sweet potatoes, and selling them for chestnuts. The old lady listened to this, and then, to the astonishment of the relater and his hearers, having swallowed the whole story for gospel, answered, 'And so he did, eh? Yes, and made money, I've no doubt. Well! well! The enterprise of these New Englanders is really astonishing.'"

EVERY body remembers M'Donald Clarke, who was so well known in New York, a few years since, as the "Mad Poet." During the last years of his life Clarke was made free of the Astor House table, and oftentimes this errant man of genius could be seen accepting its hospitalities when other doors were closed on his fallen fortunes. Every one knew Clarke by sight; and one day, while quietly taking his dinner, two Southerners, seating themselves opposite, commenced a conversation intended for the ears of Clarke. One said:

"Well! I have now been in New York two months, and have seen all I wish to see with one exception."

"Ah!" said the other, "what is that?"

"M'Donald Clarke, the great poet," responded No. 1, with strong emphasis.

Clarke raised his eyes slowly from his plate, and, seeing the attention of the table was on him, stood up, placing his hand over his heart, and bowing with great gravity to the Southerners, said:

"I am M'Donald Clarke, the great poet."

The Southerner started in mock surprise, gazed at him in silence for a few moments, and then, amidst an audible titter of the company, drew from his pocket a quarter-dollar, and laying it before Clarke, still looked at him without a smile. Clarke raised the quarter in silence and dignity, bestowed it in his pocket, drew thence a shilling, which he deposited before the Southerner with these words:

"Children half price."

The titter changed to a roar, and the Southerners were missing instanter.

THE Colonel was an addition to any company, especially the special one who were going from Wheeling to St. Louis at that special time. Somebody who had his well-being at heart said to the old man:

"Colonel, ain't you rather afraid to drink so much whisky?"

"Gentle-men," said the Colonel, "it isn't at all my style. I never drink whisky at home, and I am only doing it now out of consideration for the Captain."

"For the Captain?" queried half a dozen voices.

"Yes, gentle-men, for the Captain. The Captain has stated to me that the water in the river is very low—scurce, very. Do you think, gentle-men, that I would, under the circumstances, use any of the precious fluid, perhaps preventing the boat getting down the river? I understand my duty to the Captain too well."

THIS, from a new correspondent, is as good as new:

"Many of the old residents of Illinois will remember Knowlton, now dead, a lawyer of considerable celebrity. I have heard him say that he was never 'taken down' but once. It happened in this wise: He had a suit before a magistrate in his county, who was a shoemaker, and dispensed justice from his *bench* with a dignity worthy of a higher place. K. called at the shop a little before the hour fixed for the trial of the case to have a friendly chat; and while there he yielded to temptation, and perpetrated some joke upon the old fellow, as he had often done before. He was astounded when Crispin, laying aside his lap-stone and adjusting his spectacles, remarked that he was about to enter up a fine of five dollars for contempt of court. K. remonstrated. Court was not in session; the fine was absurd. But the worthy J. P., in a very impressive manner, said to him: 'Mr. Knowlton, you will understand that this Court is a proper *subject of contempt* at all times!' K. paid his fine; and that decision, as applied to Justice Courts, continues to be good law in Illinois to this day."

WE were seated around the table in one of the large *cafés* of New Orleans, enjoying the feast of reason and the flow of something else. W——, an *attaché* of one of the daily papers, had made some remark, when a seedy-looking individual stepped up to the table with—

"That is true, Sir, and reminds me of—"

"Who in thunder," broke in W——, "spoke to you?"

"True again, Sir," answered our seedy friend. "Allow me to explain." And explain he did and would, ending off by telling a story so very apropos, and in such a humorous way, that we were obliged to laugh at our "ringer-in." W—— told him to sit down, and offered to call for a drink—an offer which, you may be assured, was not rejected. The stranger, who evidently had been a gentleman once, though now sadly in decay, and ready, as he had shown, to do any thing impudent, even to receive a kicking, for the sake of a drink, went on with a sparkle of wit and humor that kept us thoroughly alive. And now, changing his mode and speaking more directly to W——, whom he evidently knew, he commenced the recital of an incident of his life connected with the loss of his child.

"One touch of Nature makes the world akin."

W—— had but recently passed through the same affliction. He listened; the tears coursed down his cheeks; he drank in the words of the half vagabond; and then, with a long sigh, he stretched his hand across the table. "Stranger," he said, "I don't know who you are, and I don't care; but you're the most splendid instance of a rose growing out of a dunghill I ever saw. Give us your hand!"

Judge S——y, of New Haven, Connecticut, has a hopeful Samuel of a son. One Sabbath morning the Judge and his son were sitting on the piazza of "The Cataract House," at Niagara, and the following conversation took place:

"Well, Sam," asked the Judge, "what are you going to do this morning?"

"I guess I'll stroll into a church if I can find one," was the reply. "Where will *you* go, father?"

"Hem! I think of taking a walk. But first I will hunt up my umbrella, which I mislaid last night in the confusion of arrival."

So they both separated. Samivel, upon a short reflection, thought he would step into the bar-room and indulge in a short imbibe. Judge of his surprise, on entering the room, in finding his worthy father at the same trick. It is perhaps needless to add that, after that, the most *perfect confidence* was maintained between father and son.

The Judge was a regular attendant at the Episcopal Church; but not so with his young hopeful. One Sabbath Sam appeared at the dinner-table with an exceedingly rubicund tinge spread o'er his nose.

"Where did you go to church?" asked his father.

"To the Second Methodist Church," replied Sam.

No more was said. The next Sabbath Sam appeared with the same peculiarity upon his nasal organ. In reply to the same question as before the same answer was given—"Second Methodist Church." It seems that the Judge kept a demijohn in his office, and Sam had a way of spending his Sabbaths in company with this demijohn. One time, when his nose had assumed an alarmingly red hue, the "state of the case" flashed upon the mind of the Judge, so he resolved to put an end to such doings. How he went to work the sequel will show. The next Sabbath Sam repaired to his wonted place of worship, and found the faithful demijohn sealed up, and a card attached, having on it these words: "*The Second Methodist Church is closed for repairs.*" Thus ended his attendance at the Second Methodist Church.

Our Cincinnati friend who sends the following well-told story is mistaken in supposing it has not been in print; but as he tells it well, we find a place for it in the Drawer:

"A short time ago, as the steamer —— was plodding its tedious way down to Louisville from this city, avoiding snags, and picking its way through that portion of the stream where the skillful eye of the pilot told him that most dew had fallen the night previous, it became necessary to take on a fresh supply of fuel, stock on hand becoming quite low, on account of auxiliary efforts made when last aground. Accordingly the pilot received orders to 'make the next wood-pile,' which was soon espied a few points 'off the larboard.' As they drew near the destined reinforcement the attention of the passengers was attracted to a person (evidently of the 'genus homo' denominated Yankee) sitting cross-legged upon the near end of a huge log, spirting tobacco-juice and whittling a piece of soft pine—so deeply absorbed in the latter artistic occupation that he paid no attention to the mighty fabric plowing toward him, but kept 'rite on' plying his ponderous clasp-knife, strewing the thin curling shavings around him fast and thick, apparently busied in some deep 'kalkilashun:' conning over his last swop; or, maybe, carving out the destiny of some Western empire yet to be founded. While thus economically entertaining himself he was the centre of remarks made by four young New Yorkers, who, smoking and joking, had endeavored to amuse each other and pass away the monotonous hours with but poor success.

"'I say, Nat,' says one, 'that's a fine working planing-machine! you'd best buy the patent for "old Empire," and take it back with you; 'twould be your fortune.'

"'Ay, ay! and I wonder when he gets through his contract,' cried another; 'he must be stout of heart.'

"'Stout of heart or no,' says Hanck, the first speaker, 'I bet you a dozen of "Longworth's Sparkling" that I will scare him into a white tremble as soon as we land.'

"'Agreed!' rejoined Nat; 'here's my hand upon it!'

"'Now, boys!' says Hanck, 'I want you all to follow me as soon as the boat touches the bank!' to which they all assented, eager to see the fun, and learn how Hanck was to quail the heart of the "knight of the blade." No sooner, therefore, had the plank been thrown out than Hanck, with coat buttoned to the throat and a stout stick in hand, leaped ashore, followed promptly by his companions, and striding rapidly to his victim, caught him by the collar, crying, 'Ha, ha! my old cove, I've caught you at last! I've been looking for you for three weeks back, you rascal!' The Yankee, like lightning, changed his knife from right hand to left, and drew the former, clenched, from between Hanck's eyes, who, turning a somersault and clearing the bank, *landed* some four feet out *in the stream;* while he of the knife, quietly turning to the three astonished companions, inquired, 'Is there any other gentleman present been looking for me for three weeks back?'"

Quite so queer a customer as Squire Hobbs has rarely been found in the Drawer or out of it. As

a specimen of the coarse humor of the bench in the Southwest, we may present the Justice in the words of our correspondent, who writes:

"About fifteen years ago there was, in one of the northern beats of our county (Tallahatchie, Mississippi), a Justice of the Peace, whose ideas of justice and law were intuitive, and not obtained from the writings of the fathers of the profession. He held his courts and made his decisions just as the occasion required and as the case 'mought be' (to use one of his favorite expressions), and never wanted an authority to support his legal deductions. His name was John Hobbs, but more frequently dignified with the sobriquet of 'Uncle,' a title with which most old men at that day were dubbed.

"On one occasion Tom Griffiths sought at the hands of Uncle Johnny, 'jestis' in the collection of an open account which he held on one Bill Coxe, a 'jubous' character, and not at all respectable. In fact, he had frequently been summoned before the honorable Justice's Court on charges of a similar nature, and had become a great *eye-sore* to the Court. When the case of Griffiths *vs.* Coxe came on for a hearing, Griffiths was ready to maintain the issue, and Coxe was fully as ready, on his part. Griffiths swore positively to the correctness of his account, and Coxe swore just as positively that he didn't owe him a 'red.' So matters stood, to the great annoyance of Uncle Johnny and to the confusion of Justice. Uncle Johnny, who was never long *nonplused*, raised himself up, and with a voice and manner that showed him to be a prodigy of shrewdness and judicial acumen, exclaimed, throwing his head one side and slowly closing one eye,

"'It strikes me very forcerbly that one o' ye has sworn an infernal lie! And *I* believe it's you, Bill Coxe, you infamous rascal! I'll give judgment agin you in this case, and you've got another case a comin' on to-day, and I'll give that un 'gin you, too, you botheration! You ain't never right, and I won't put up with you any longer.'

"And so the judgments were entered, and haven't been disturbed to this day. Uncle Johnny acted on a well-established principle of law, that 'when a state of things is once shown to exist, it is presumed to continue till the contrary is made to appear.'

"On another occasion two disputants got into loud words in his Hall of Justice, and disturbed his judicial proceedings. He frequently called out 'Silence in Court!' but they were too much engaged to pay him any attention. His Honor slowly threw aside the 'ermine,' and walked up to where they stood, and, without saying another word, knocked them both down. Then he turned around and resumed his seat, muttering, 'I reckon you'll mind me next time, won't ye?'

"The old *sage* is now dead; but his name will be remembered by the people of this county for some time to come."

"Opposite my office in this city" (New Orleans), writes a Crescent City correspondent, "is a cigar-store. A few days ago a hearse was passing, with a solitary carriage behind it, and four young men in the carriage. Upon reaching the cigar-store one of the young men stopped the carriage and went in to get supplies for the company, the hearse going on. As there was some delay in making change, the hearse was a considerable distance ahead when they were ready to start. The young men jumped in and cried out, 'All ready, Jack. Catch the hearse as soon as you can.'

"'I'll do it,' said Jack. 'Massa told me to keep up wid de funeral, if I killed de horses.'"

THE PATTER OF LITTLE FEET.

Up with the sun at morning,
Away to the garden he hies,
To see if the sleepy blossoms
Have begun to open their eyes;
Running a race with the wind,
His step as light and fleet,
Under my window I hear
The patter of little feet.

Anon to the brook he wanders,
In swift and noiseless flight,
Splashing the sparkling ripples
Like a fairy water-sprite.
No sand under fabled river
Has gleams like his golden hair;
No pearly sea-shell is fairer
Than his slender ankles bare;
Nor the rosiest stem of coral,
That blushes in ocean's bed,
Is sweet as the flush that follows
Our darling's airy tread.

From a broad window my neighbor
Looks down on our little cot,
And watches the "poor man's blessing"—
I can not envy his lot.
He has pictures, books, and music,
Bright fountains, and noble trees,
Flowers that blossom in vases,
Birds from beyond the seas;
But never does childish laughter
His homeward footstep greet;
His stately halls ne'er echo
To the tread of innocent feet.

This child is our "speaking picture,"
A birdling that chatters and sings,
Sometimes a sleeping cherub
(Our other one has wings);
His heart is a charmèd casket,
Full of all that's cunning and sweet,
And no harp-strings hold such music
As follows his twinkling feet.

When the glory of sunset opens
The highway by angels trod,
And seems to unbar the city
Whose builder and maker is God,
Close to the crystal portal,
I see by the gates of pearl
The eyes of our other angel—
A twin-born little girl.

And I ask to be taught and directed
To guide his footsteps aright,
So that I be accounted worthy
To walk in sandals of light;
And hear, amid songs of welcome,
From messengers trusty and fleet,
On the starry floor of heaven
The patter of little feet.

A San Franciscan sends to the Drawer a letter, in which he says:

"The authorities of her Britannic Majesty who exert themselves in administering justice homeopathically to the colonists of Vancouver Island, must be supremely 'appy, if hignorance is bliss.' This is no libel, as the following fully attest:

"Two men, who came hither, attracted by the gold discoveries, after falling in with each other, fell out. Pistols were drawn, and he who sported the sobriquet of 'Tip' killed Collins, his antagonist. Tip left suddenly for parts unknown to the officials, and forthwith a jury was impanneled to hold an

inquest. The old inhabitants were summoned, and but one Californian, who had seen something of life, was on the panel. The others were all antiquated. After the evidence was heard, the foreman wrote out the verdict in these exact words:

In re Tip *versus* Colins
verdict manslaughter
THOMAS ATKINSON, *foreman.*

"In vain the Californian for an hour urged another form, and after great persuasion prevailed on the jury to send in a verdict in a regular manner. They did not want any of his ridiculous Yankee verdict, saying who shot and how he was shot; all the town knew that. They were to ascertain the crime committed, and it was manslaughter; and that was needed of them, but no more. He, however, worried them out, and they had to yield to reform, and the above antiquated verdict was forthwith handed over for the Drawer."

"Governor James Douglas is the dignified Governor of Her Majesty's colony, and chief factor of the iniquitous Hudson's Bay Company. He can not divest himself of the difference of the two functions though united in one person. Some time ago a ship captain spoke disrespectfully of the Hudson's Bay Company, whose exorbitance of charges is the great drawback to the prosperity of the colony. The old Governor sent for the offender, and, in his capacity of 'Vice-Admiral,' informed him that he had been guilty of *sedition* in his disrespectful language, and he should be punished. The captain argued to the 'learned court' that it was not 'sedition,' and wound up by applying for a subpœna, as he could prove his innocence and loyalty by good and respectable citizens.

"'A subpœna,' quoth the learned admiral, 'is a serious matter; I seldom issue a subpœna except in the most urgent matters. I must consider this application; it is a very serious affair indeed, and I wish you would not press it.'

"But the captain did press it. Alarmed at the seriousness of the affair, 'Call to-morrow,' said the Governor, and that was the last the captain had heard of sedition. The subpœna got the Governor."

SAID Tom, t'other day, "Will you please to explain
How impudent rogues ope the 'door of success,'
While the wise and the skillful attempt but in vain?
The reason for it I have oft tried to guess."

"Oh! 'tis simple enough," I quickly replied.
"You'll please understand that each venturesome ass
Has ready the means of admittance inside;
For the key that unlocks the 'great temple' is *brass!*"

FROM the rice-fields of Georgia we have a notice of "the last firelock:"

"It was rice harvest, and Steve, the field guard, suggested, a day or two since, the advantage to my larder of a few loads of powder and lead intrusted to him. O. K., old man!

"Now Steve is a diminutive servant, usually seen with a gun of great length, which I am happy to believe was the last article on the flint and steel order, or so I guessed when it was placed, shining and bright, into his hands years ago.

"'Well, Steve, all right out?'

"'All right, Sir.'

"'How with the birds?'

"'One or two, Sir!'

"'Why, old man, I've heard of one or two hundred in as many shots!'

"'Yes, Sir; but my gun is too heavy for them. She shoots past them when I load her.'

"'Oh, old man!'

"'Fact, Sir. She can't shoot small loads. If she'd go when they are thick, in the mornings, I'd get 'em; *but she won't go off till the sun gets hot!*'"

THE Navy does not often come to our aid, but it brings something new and rich when it does come, as in the following from Baltimore:

"Shortly after the War of 1812–'13, at an examination of Midshipmen on one of our Naval Stations, a certain youth (now an officer of eminence in the service) was handled rather roughly by the examining board. He had his points all well arranged, yet a certain testy old commodore thought to bring him 'hard up.' He was determined to test his abilities to the utmost.

COM. "'Well, Sir, if your ship was on a lee-shore, what would you do with her?'

MIDDY. "'I would put her about, Sir, and beat off.'

COM. "'Yes, but supposing she wouldn't stay, what would you do then?'

MIDDY. "'Wear her, Sir.'

COM. "'Well, Sir, we will now presume the ship to be so situated that you had not sea-room sufficient, and could not possibly wear; in that event, Sir, how would you act?'

MIDDY. "'I'd club-haul, Sir.'

COM. "'But, Sir (very blandly), the ship is in such a situation, from my previous questions, and near proximity to the shore, the manœuvre could not be by any means successful, what then, Sir?'

MIDDY. "'Then, Sir (rather out of temper), I'd up helm and beach her, then throw up my commission, and resign, for I wouldn't command such a ship, and no other should after I had done with her.'"

The answers were so pertinent and well-timed, he of course readily passed the board, greeted by a smile of approbation from the more lenient members.

FROM Tennessee a legal gentleman, from whom the Drawer will be happy to hear again, writes as follows:

"On one of the Eastern circuits our Judge was well-versed in the law, upright, and liked a joke. An important will case, involving some fifteen thousand dollars, was before the court for trial. Able counsel were employed on both sides. The plaintiffs were trying to break the will, on the grounds that undue coercion was used by the testator's wife over him, he by his will manumitting several slaves, as the heirs held, against his own wish. All went along smoothly for a time, when Sam Roberts, attorney for plaintiffs, asked witness if he had heard the deceased say any thing about making a will?

"'Yes.'

"'Well, what did you hear, Mr. Jackson?'

"'I heard him say he wanted to set his negroes free, and—'

"'You may stand aside,' hastily interrupted Sam.

"The witness stood bewildered; the bar was convulsed with laughter; witness glanced up and down uneasily, till at last his Honor summoned enough gravity to tell the witness that his evidence was not as Mr. Roberts wanted, and that he might stand aside.

"During the progress of the same trial Sam was caught again. He was attempting to show by a witness that the deceased did not want to make a will.

"'Mr. Wilson,' says Sam, 'did you ever hear Horton say any thing about a will?'

"'Yes, Sir.'

"'Well, what was it, Mr. Wilson?'

"'He said he did not want to make a will.'

"'Did he give any reasons?'

"'Yes, Sir.'

"'Well, what were they? Give us his own words.'

"'Well, I will. He said he did not want that rascal of a lawyer, Roberts, coming over there with a bale of sacks to take away his money.'

"Poor Sam was dumbfoundered; the bar fairly roared; when the Judge, either from a spirit of fun, or because he did not hear, requested the witness *to repeat;* then the merriment was universal. It is needless to add that the will stood."

We have often heard of the ruling passion strong in death; and here we have a letter from a friend in Rhode Island that gives us an example of the same principle, not in death but in debt, and we copy it:

"The now retired John B——, once senior partner of the respectable firm of B—— and Co., of this city, during his business career was unfortunate enough to sell quite an amount to one Jones, on time, of course. Now Jones was an exceedingly polite man; in fact, as it afterward proved, that weakness was about the only capital he ever did have. Shortly after the purchase Jones failed, in the direst sense of the term, showing nothing to satisfy his creditors, among whom was Mr. B—— aforesaid. Notwithstanding Jones's misfortune he continued the use of his favorite weapon—saluting Mr. B—— as often as they met with all the airs of a Brummel. When Mr. B—— could endure this no longer, he met Jones one day, and, taking him by the button-hole, said, 'Jones, you owe me a large sum, and your politeness annoys me. Walk into my store and I will give you a receipt in full, on condition that you never speak to me again.'

"Imagine B——'s feelings when Jones struck the old attitude—hat extended in the left hand, right hand on his heart—saying, 'Couldn't think of it, Mr. B——. I would not forego that pleasure for four times the amount!'"

A St. Louis (Missouri) correspondent writes: "Herewith is sent to the Drawer what the writer supposes to be the real and only solution to the 'enigma' touching the prayer of Sir Hilary, published, with various attempted solutions of it, in *Harper's Magazine* for November. All those attempted solutions fail in the first condition of the enigma; namely, that the words to be discovered are those of *a prayer—i. e.*, a solemn adjuration to Heaven. The *Home Journal's* correspondent, who proposes '*Beau ciel*,' comes nearest to the mark; but there are *three syllables* in those words: moreover, the aspect of nature on that day would not suggest the application of the word '*beau*,' or beautiful, to the skies; and, again, '*beau ciel*' is only an expression of admiration, and in the writer's application of them to the 'blue eyes that weep' they are turned into a knightly compliment instead of a prayer. '*Bon Ciel*,' in the sense of an appeal to the goodness of Heaven, would be perfectly applicable, except for the surplus syllable. The writer who suggests '*Heart's-ease*' has a pretty thought; but it is not likely that Sir Hilary rushed to battle with only a fanciful and invented conceit for his address to Heaven. The same of the classical suggestion of your fair New Hampshire correspondent. It is ingenious and handsome; but, to adopt it, we must suppose the good knight, instead of planning and preparing for battle, to have been conning a pretty puzzle by way of orison. All the rest are only a *play of words*, not admissible or possible to the subject. The supposed 'allegorical solution,' attributed to the author of the enigma, does not justify the suggestion that the word '*Knighthood*' affords the key. That is not a prayer; we can imagine it as an *exclamation* of a chivalric soldier as he wielded his sword and thought of the valiant deeds it was to perform. The allegorical drawing, however, is not a solution of the enigma; it is a repetition of it in picture, and when one is explained both are. We are not to suppose that the writer of the enigma intended to put to Sir Hilary's lips a pun or play upon words; but a devout, spontaneous call on High, and that it is the writer himself who discovers the particular applicability of the words to the different scenes and characters of the awful drama to be enacted. In that supposition the solution here offered embraces all the conditions proposed in the enigma, whether as versified or pictured: 1. A prayer devout and fitting—the concentration of all prayer; 2. It is strictly of two syllables, and those sufficient to carry to Heaven, at such a moment, all holy aspirations of the soul; 3. The two divided, each has a special and significant application (not contemplated by the praying soldier, but discovered by the bard); the first to survivors of the battle; the second to those who should fall; and both, united, to the mourners who should follow. In this sense the enigma is interesting and beautiful; in any other, it might almost be called irreverent."

SIR HILARY'S PRAYER AT AGINCOURT.

The true Solution of the Enigma.

The Christian Knight Sir Hilary's prayer
  At Agincourt, is of two words;
All the brief moment he can spare,
  As for the awful fight he girds.

And those the words that in the heart
  Of Christian knight would first arise;
The first that to his lips would start
  As upward turned his reverent eyes.

"Bon Dieu!" is good Sir Hilary's prayer
For all who in this day have share.

Bon! to the ones who through the day
  Shall live to see to-morrow's sun;
Dieu! to the ones who midst the fray
  Shall find their lives and duty done.

Bon Dieu! Those tender ones in pity hold
Who through this long night, drear and dark and cold,
Weeping, shall kneel beside their loved ones slain,
Or frantic, seek them midst the mire and rain.
'Tis Thou alone, great Ruler of the Skies,
Can soothe their hearts and dry their streaming eyes.

W. C. J.

Philadelphia, *December* 3, 1858.

Perceiving that you have again brought to the notice of the public the riddle of Sir Hilary of Agincourt, I send you a solution, written some years since, which I then thought, and still think, to be the true one:

When England's kings, of Norman race,
  Reclaim'd their fiefs of yore,

Its tongue the barons held as base,
In French they spoke and swore.

To all who fought and won the day,
The rank of *Pár** was given;
While those who fell in battle lay
Beneath the *blue* of heaven.

Then many a pair of soft blue eyes
Bewail'd the warrior's fate:
When did not woman's tears and sighs
On hapless valor wait?

Parbleu, then sworn in hour of strife,
In lieu of prayer, would prove
Sir Hilary true, in death as life,
To Heaven, to arms, and love.

BOSTON, *December* 3, 1858.

I send herewith two guesses at "Sir Hilary's Prayer." The first appeared in the Boston *Daily Advertiser* for October 5, 1846; the other in the Boston *Transcript* a few days after. Both are by the same hand; but the former seems entitled to the preference.

I can not but think that your Boston correspondent of the November Number has misapprehended the intention of the wood-cut he refers to. It is evident enough that the word "Knighthood" answers only one of the four requirements of the enigma. It is of "two syllables," it is true, but any other dissyllable would have that merit. The cut is simply an illustration of the verses, I take it, not a solution of the enigma.

I.

Sir Hilary fought at Agincourt,
Yet ere that dreadful fray,
His lips untaught, 'mid ruder sport,
'Mid jousts in camp and brawls at court,
The Church's forms to say,
Two syllables ejaculate;
Yet these *to God* commit his fate;
If, 'neath that fate he bite the sod,
These too commend his soul *to God*.

And who that shall recall in thought,
Though brave and proud they battle sought,
How few who round young Harry fought
Against the odds that D'Albret brought,
Their morrow's life most dearly bought,
Doubts that, if men e'er needed aught,
They needed *aid* that day.

And ah! for those, ere day was done,
Hurled into night ere set of sun,
To whom, no hallowed grave allowed,
The evening mist gave scanty shroud,
Swollen by the morrow's noontide heat,
The wolf's and vulture's loathsome meat;
God send them the cold, quiet shade
In church-yards by the *yew*-tree made.
And to those English maidens true,
Whose cheeks of bloom and eyes of blue
O'erflow with tears nor forced nor few—
The fallen hero's fittest due—
He bids in that same word *Adieu!*

Another Guess.

II.

Sir Hilary plunged into the fight;
Yet first he breathed two words—"*Good night!*"
To all who see to-morrow's light
He prays that *good* befall;
For all who die without the sight,
That the cold, quiet cloud of *night*
May serve for funeral pall;
To every maid whose eye o'erflows
For warrior falling 'mid his foes,
That a *good knight* console her woes.

* In Norman-French *Pâr* signified both *peer* and *pair*.

NEW YORK, *November* 12, 1858.

MR. DRAWER,—Having noticed in your last November Number several fanciful attempts to solve Praed's well-known charade, it occurred to me that you might be disposed to give an equally wide circulation to the following, which was furnished by me to the *Albion* of October 30, 1852. I think this answer carries conviction with it. While conceding all the honor to New England which her efforts deserve, it must be admitted that she has expended more ingenuity in polishing the shafts from her poetical quiver than in aiming them aright. New York is content with striking the target, and chronicles the fact in unpretending prose.

W. H. S.

The two syllables uttered by Sir Hilary were, *Aide, Dieu!*—"Help, Lord!" This is the prayer. *Aid* is undoubtedly needed for the small band of young and brave who are to march out to fight at dawn; the *dew* (Dieu) will fall in a cold and quiet cloud on the bodies of the slain; and *Adieu* (with which Aide-Dieu will, even when spoken with no inordinate rapidity, be almost identical in sound) is not unlikely on such an occasion to have been addressed

To those whose sunbright eyes
Weep when a warrior nobly dies.

To the Editor of the Drawer.

MIDDLETOWN, CONNECTICUT, *November* 8, 1858.

A circle of your readers here, in common with thousands of others evidently, were reaggravated into exhausting their wits by fruitless attempts to solve Praed's enigma of "Sir Hilary fought at Agincourt," etc., which, with several answers (none of them satisfactory), you published in your "Drawer." I am almost gray in consequence of tough old Sir Hilary—for he has been a stumbling-block to me for many years—and I long ago thought "Restrain" the best solution; though as Praed uses substantives for the subjects of his other capital enigmas, it is not likely that a verb is the proper answer for this one.

For the benefit of your Boston correspondent, who says that "'Knighthood' is undoubtedly the author's solution" (it doesn't fit in the slightest particular!), and for those of your readers who may be inclined to give him credit, I copy Praed's enigma to which 'Knighthood' *is* the correct solution:

Alas! for that forgotten day
When chivalry was nourished,
When none but friars learned to pray,
And beef and beauty flourished!
And fraud in kings was held accurst,
And falsehood sin was reckoned,
And mighty chargers bore my First,
And fat monks wore my Second!

Oh! then I carried sword and shield,
And casque with flaunting feather,
And earned my spurs in battle-field,
In winter and rough weather;
And polished many a sonnet up
To ladies' eyes and tresses,
And learned to drain my father's cup,
And loose my falcon's jesses.

But dim is now my grandeur's gleam;
The mongrel mob grows prouder;
And every thing is done by steam,
And men are killed by powder;
And now I feel my swift decay,
And give unheeded orders,
And rot in paltry state away,
With sheriffs and recorders.

There is another of Praed's enigmas, and the only one besides "Sir Hilary" which I have not

guessed, that puzzles me terribly. I copy it for you in case you see fit to print it:

"I graced Don Pedro's revelry,
All dressed in fire and feather,
When loveliness and chivalry
Were met to feast together;
He flung the slave who moved the lid
A purse of maravedis;
And this that gallant Spaniard did
For me and for the Ladies.

"He vowed a vow, that noble knight,
Before he went to table,
To make his only sport the fight,
His only couch the stable,
Till he had dragged, as he was bid,
Five score of Turks to Cadiz:—
And this that gallant Spaniard did
For me and for the Ladies.

"To ride through mountains where my First
A banquet would be reckoned,
Through deserts where, to quench their thirst,
Men vainly turn my Second;
To leave the gates of fair Madrid,
To dare the gates of Hades;
And this that gallant Spaniard did
For me and for the Ladies."

A FAIR correspondent of the Drawer sends the following, with the answer. It is a very clever

ENIGMA.

I.

When tyrants sought to crush the rights
Of man we first arose,
And in the name of Freedom's God
Struck terror in our foes;
But though the patriot welcomed us,
His gallant heart elate,
Full many a joyous home our power
Left cold and desolate.

Feared by the coward, by the brave
We ever welcomed are;
Honored, when gentle peace takes place
Of fierce, relentless war.
And yet our strength can prostrate lie,
Our power all be riven,
By breath of balmy summer air
And gentle dew of heaven.

II.

But still more marvelous, I ween,
Than what has yet been said
Is this, we never rise in might
Till you remove our head!!
While perfect, we are mortal make;
Though beautiful and bright—
Decapitated, messengers
Of truth, and life, and light.

The mightiest spirits of the world
Were awed beneath our power;
The meanest hind that walked the earth
Used us within an hour.
Now gay and joyous, bringing peace
And comfort in our train;
Anon, with gloom and bitterness,
Filling the heart with pain.

We travel quickly through the air,
We glide beneath the sea,
Die trembling 'neath a maiden's breath,
Live through eternity.
Who have us not are looked upon
As beings most forlorn;
And those who have us often wish
They never had been born. M. C. B.

"IN an interior county of Ohio," writes a correspondent, "we once had a judge of considerable humor. At one time John Smith was on trial for grand larceny. He had stolen goods from the store of Peter Jones. The theft was clear; but our law requires that the property stolen should be worth more than $35 to constitute grand larceny, which is a Penitentiary offense. If the property is worth less than $35 it is petit larceny, and punished by jail imprisonment, etc. Whether Smith should escape the Penitentiary depended upon the value of the stolen goods, and the proof showed that the goods, at wholesale prices, were worth less than $35, but at retail prices they were worth more than the $35. The judge, in his charge, left the jury to consider the fair value of the goods. After the jury had been out for several hours they returned into court, and said to the judge that they could not agree unless he charged them whether they should estimate the goods at the wholesale or retail price. Thereupon the judge drew himself up and enlightened them thus: 'Well, gentlemen, considering the way the rascal came by the goods, I don't think the Court can afford to wholesale them to him.' The doors of the Penitentiary opened accordingly.

"IN Columbiana County, Ohio, the Common Pleas Court was composed of a President Judge, who was a lawyer by profession, and three Associates, who were not lawyers. In the absence of the President Judge one of the Associates, who was a Dutchman, often delivered the opinions of the Court. At one term several important criminal cases had been tried and verdicts of guilty rendered, and several prisoners were in jail awaiting the determination of motions for new trials in their cases, which the Court had under advisement, and which, if overruled, would result in sentencing them to the Penitentiary. Several important civil causes were also pending on demurrers, which had been ably argued, and the Court had under consideration. The Court had been adjourned for several days, during which recess it was supposed the Court had been gravely considering these several cases. On Tuesday of the week following adjournment the Court met. The President Judge was, however, absent. It was supposed that he had left his written opinions in these several important cases with the Associates, and that these learned opinions would be read by one of the Bench as the opinion of the Court. The court-house was crowded with the friends of the several prisoners, with a large bar, and an audience larger than could be seated. The hum died away, for it was known that both liberty and property depended on the decisions of this Court. After a short pause the Dutch Associate drew forward his chair. Said he, 'Misther Clark, de motions for new trial ish all overruled, and de demurrers ish all sustained. De prisoners ish all sentenced to Penitentiary for dree years. Make de endries vorthwith, for in von hour dis Court vill pe on a steampoat.' Several of the sovereigns went to the Penitentiary *vorthwith* accordingly."

"JOYNER," writes a Southern correspondent, "is the gravest looking man in Alabama. He is, in fact, gravity personified. No man can see a trace of humor in his countenance, save the unexpected jerk of a muscle which draws down the left corner of his mouth just as he begins to speak. This motion I believe to be always indicative of the choicest story-telling powers, and most certainly it is not deceptive in Joyner.

"Not only can he *tell* a good story, but his dramatic talents and creative genius give him materials for original jokes which, but for his apparent sincerity of purpose and great skill in not being at the right place when struck at, would long since have prevented him from being the delight of his friends. He relates the following account of the narrowest escape he ever had.

"During the Jacksonian contest he, with a numerous company of friends, was standing at the door of a bar-room in —— County, waiting for news from the election. Suddenly General B——, a violent Jacksonian Democrat, appeared down the street riding at full speed toward the locality occupied by the excited company. Another moment and all but Joyner heard with satisfaction the news of the great victory. The bar-room was immediately invaded, and, amidst shouts and *tigers*, Joyner sought and obtained an introduction to General Jones.

"'How are you, Mr. Joyner,' said General Jones, at the same time giving him a grip that would have made any *other* man repent the embrace.

"Joyner released his hand, and with sincerity prominent in every lineament of his visage, deferentially addressed the impetuous Democrat:

"'General Jones, am I right in supposing the principles of the Democratic party to be the principles of that party?'

"'To be sure,' dubiously retorted the General.

"'Well, then,' replied Joyner, 'I am correct in supposing the principles of the Democratic party to be the principles of the Democratic party; and, Sir, according to this admission, *if* the principles of the Democratic party *are* the principles of the Democratic party, why, then, the principles of the Democratic party *must be* the principles of the Democratic party!'

"The savage glance of General Jones could discover not the slightest trace of mischief, and, with an effort to control himself, he replied,

"'How is that, Mr. Joyner? I don't know that I understood you. Please be a little more *definite*.'

"'I now feel convinced,' resumed Joyner, 'that the principles of the Democratic party are the principles of the *Democratic party;* and Sir, *if* the principles of the Democratic party *are* the principles of the Democratic party, why, then, the principles of the Democratic party *must be* the principles of the Dem—'

"Suddenly, amidst roars of laughter, General Jones attempted to lessen the distance between himself and Joyner, at the same time drawing a long blade from some capacious pocket.

"Joyner had, however, watched his quivering countenance and retreated at the right moment, making rapid circulatory movements among the by-standers, till some one effectually checked the pursuit.

"Joyner was by no means out of danger, however; for General Jones went quietly out of the door and took post on the outside, awaiting the appearance of his victim.

"'Look here!' said some friend of Joyner; 'you'd better not go out there, for the old fellow is going to knock you down, *certain!*'

"Now Joyner had on a hat that could not possibly be mistaken, and his great desire at this moment was to get rid of it.

"'Joe,' said he, to an old acquaintance who had come in since the retreat of General Jones—'Joe, let me see your hat.'

"Joe unsuspectingly gave up his hat, which was quickly adjusted to the trembling head of Joyner, who insisted on an exchange for a little while. Joe good-humoredly put on the hat, and moved toward the fatal door.

"The natural consequences followed instantaneously. His head met a huge fist passing the doorway just as he attempted to go out, and in a moment he lay sprawling and bleeding on the street, with General Jones expostulating for the great wrong he had done him.

"Joe was utterly *unable* to fight, and General Jones was no longer in a warlike mood. So Joyner once more escaped destruction, and the next day all shook hands over a bottle of porter."

Squire Bowman, who holds his magisterial court four times a year in District No. —, in —— County, Kentucky, is a decided "character;" and Pat Napier (a blood relation of Sir Charles, I suppose) is a character too, and the acting constable in this district. It is of Pat whom we are to tell this story. On a certain court day Squire Bowman desired to have some witnesses called into court, and he told Pat to go to the door and call them in. But Pat was busy about personal matters, and gave no attention to his honor's command. The order was repeated, and still our constable heeded it not. "Mr. Napier," lustily yelled the indignant squire, "I'll fine you five dollars for contempt of court!"

"Jist hold on a minit, Squire! hold on a minit before you enter that fine," said Pat, marching briskly toward the door.

The Squire, thinking he had gone to call the witnesses, "held on."

"*Oh, yes! oh, yes! Court is now adjourned!*" cried Pat, at the top of his voice. And striding back to the Squire with a grin and a victorious air, says, "Now, Squire, fine me ef you can. I've adjourned your court, and there is no sich thing as a Squire fining a feller after court is dismissed."

If Pat ever called "them" witnesses we haven't heard of it!

A bright little fellow, about three years old, being very anxious to go to Sabbath-school, his mother allowed him to go with an elder brother. The next Sunday his brother was absent from home, but Willy insisted on going alone. The church being very near, his mother consented. As he was going down the steps she asked him if he was sure he would know the way home. He said, "Oh, yes." And then, stopping a moment, he cried out, "But, see here, mother, when we come out the boys are all in a crowd, and get mixed up, and how will I know which is Willy?"

Another one was looking at some pictures, one of which he took to his mother to ask what it was. She told him it was Jonah, whom the print represented in the hands of the men at the side of the ship, and that the sailors were going to throw him into the sea. He sat down, looking at it very intently for a long time.

"What are you doing, Henry?" asked his mother.

"I am waiting," said he, "to see the men pitch him over."

Little Frank, who had recently lost his mother, and whose father shortly after married again to a

lady with a blue bonnet, says in his prayers, "God bless papa and mamma—*not my new blue bonnet mamma.*"

"The father of little Tommy," in Philadelphia, sends to the Drawer some of the sayings and doings of his little son, but they are not smart enough to be printed. In the mean time, to encourage the proud father, we feel willing to express the belief that Tommy, if he keeps on growing, will be a man before his mother.

"The students of our Law Department," writes a Southern correspondent, "were required to attend the county courts as much as possible, in order to learn the practical workings of the profession. On one occasion we were particularly required, as we had been summoned as witnesses in an action for horse-racing. The race itself was a poor affair, but the suit that followed it was rich 'in the first degree.' The court-room was crowded. Judge Q——, who considered himself a Mansfield in legal lore, presided, and, by his peculiar view of the *law* in the question involved, brought the trial to a speedy termination. In the examination of the witnesses it was proven—satisfactorily to him—that one of the horses became unmanageable and ran outside the track. At this point the Judge arose from his seat, and, with great gravity, said:

"'The court decides that it was no race in the eye of the law, because one of the horses bolted the track before he arrived at the goal.'"

A little girl returning from church, where a strange minister had officiated, said:

"Mother, I wish Mr. W—— hadn't preached today; he ain't a good preacher like Mr. B——."

"Why not?" asked mother.

"Because he talks so loud. I couldn't go to sleep. *Mr. B—— lets me sleep all the time!*"

In a portion of Virginia sorely afflicted by the drought, and on a "Quarter" plantation which had been remarkably overlooked by the partial showers of the summer, there lives, as overseer or manager, an eccentric worthy who has a way of his own for doing things. As the drought grew intenser, he was more and more despondent, and when at last the grateful rain was given his joy was proportionally great, and as the rains continued to descend his spirits rose into a state of jubilant exaltation. The next day his employer received from him a note, of which the following is a veracious extract:

"Sir,—Since Nature has washed her face and hands, and put on a bran-new garment, and sent down showers of fat, which have caused the little hills to rejoice on every side, *we ought to sow turnips.*"

"In a late number of your valuable and interesting *Magazine*," says a Maryland correspondent, "I found a flight of Fancy purporting to have escaped from the brain of Tom Paine: a little curious incident stands connected with that same. Fifty-four years ago it appeared in print, but in what form or shape I have now no recollection. It passed away, and I saw nothing of it since until I met with it in your *Magazine*, as just noticed.

"A year or so ago my young grandson was trying to form some Valentines to send to the young ladies of his acquaintance, and asked me to assist him. Among those he wished to compliment was the daughter of a professional gentleman of wealth, who is a fancy artist and architect, and had erected a *Phan*-tastical castle on one of the sylvan heights of the romantic Patapsco, and gave it the name of *Fairy Knowe*. The spirit of Tom Paine's 'Castle in the Air' strongly came over me, though, as I have said, more than half a century had elapsed since I had read or seen it, and the following lines were given birth to. Senex."

FAIRY KNOWE.

TO MISS JENNIE ——.

In the Land of Romance, where the Muse often roves,
By Fancy's omnipotent power,
'Mid myrtles and osiers and orange-tree groves
I have built me a beautiful bower.
'Tis founded on coral, from ocean-bed won,
By hands which in ocean-caves dwell;
The walls are of beams drawn down from the sun
By gnomes with their magical spell.
The columns around it of moonshine are made,
With pearls are the doors made secure;
Of lightning condensed is the dome overlaid,
The windows are adamant pure.
'Tis garnished with mirrors of qualities rare,
Which only chaste beauty disclose,
With caskets of jewels, surpassing compare,
And couches which tempt to repose.
Luscious fruit in the forests perpetually grow,
Which change as the seasons go round;
Rich nectar in streamlets continually flow,
Ambrosia eke doth abound.
The flowering shrubs which enamel the glade
A fragrance delicious distill;
And from birds rich in plumage, which sport in the shade,
Soft music enchantingly trill.
This wonderful Fane lacks a Queen as its soul,
Enjoyment and life to impart;
Will you, Fairy Nymph, assume its control,
And rule o'er its master's lone heart?
For all this Magical Mansion were vain
With all its dominions so fair;
Its splendor and riches no happiness gain
Without a Titania to share!

In a court-room in North Mississippi a man was on trial for larceny. His sanity was doubted, and the District-Attorney thought it best to prove it, and put the following question to one of his leading witnesses:

"Do you think the prisoner can distinguish between *right* and *wrong;* can tell the difference between *good* and *bad?*"

Witness. "I think he can, Sir; for I saw him take a drink of whisky, and he said it was *good whisky;* and, from this circumstance, I should infer that he could 'tell the difference between *good* and *bad.*'"

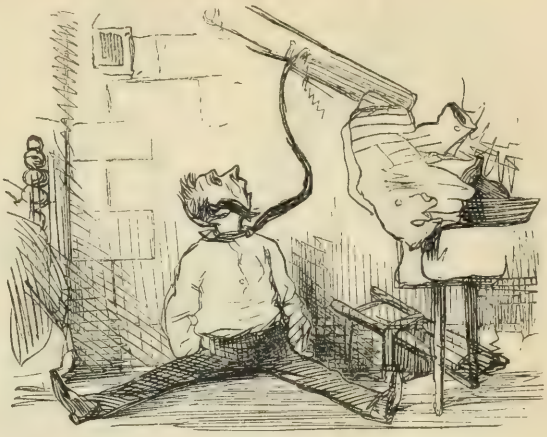
The bar enjoyed a hearty laugh over the novelty of the answer, in which his Honor freely participated, and the proof was accepted.

In the "Kingdom of Calhoun County, Illinois," a dead body was found, with the head severed from the trunk, and a bloody axe on the ground hard by. The coroner's jury, on mature deliberation, returned their verdict, of which the following is a literal copy:

"KERENERS VERDICK.

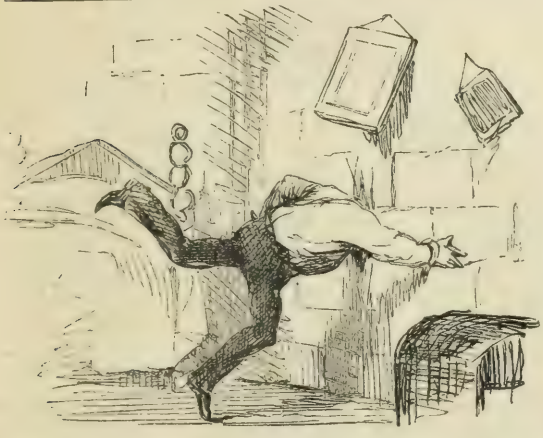
"wee the jurors Finde the deseesed cum To his deth by the Hands of som Pursen unnon with unlawfull *weeping* naimly a ax

"p S we The jurors Beleav that He was Beehedded By the saim ax."



The original is on file, and copied by a faithful correspondent of the Drawer.

Noodles's Attempts at Suicide.

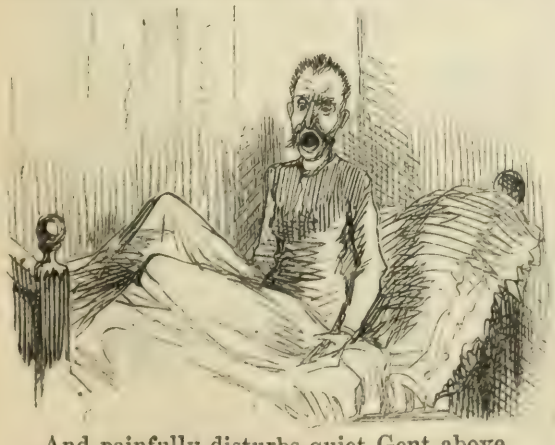


[A MODERN PATENT MEDICINE ADVERTISEMENT.]

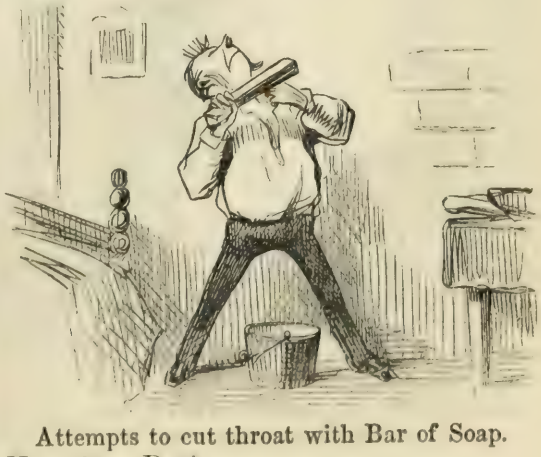
Noodles, being tired of life, tries hanging.

Failing to accomplish his purpose in this,

Tries dashing brains out against paper imitation of Granite Wall.



Head penetrates wall. Is slashed at by Gent from Arkansas.



Narrow escape. Prepares to blow brains out.

Another failure—misses the mark,

And painfully disturbs quiet Gent above.

Attempts to cut throat with Bar of Soap.

Boot-black fortunately enters with Boots.

Noodles rushes down stairs—out of house—

Into Drug Store—demanding, from Small Boy, "Pint Laudanum, to kill rats."

Boy vanishes. Noodles frantically seizes bottle of something.

Swallows contents. Experiences a glorious reaction—instead of Death, Life!

Swallowed bottle Dr. Dipps's Eradicator. Saved! Once more himself!

Presents the Doctor with Certificate certifying to his Miraculous Cure.

Ever after, when depressed, drinks a bottle of Dr. Dipps, and Shoots his own Daguerreotype.

Fashions for February.

Furnished by Mr. G. Brodie, 300 *Canal Street, New York, and drawn by* Voigt *from actual articles of Costume.*

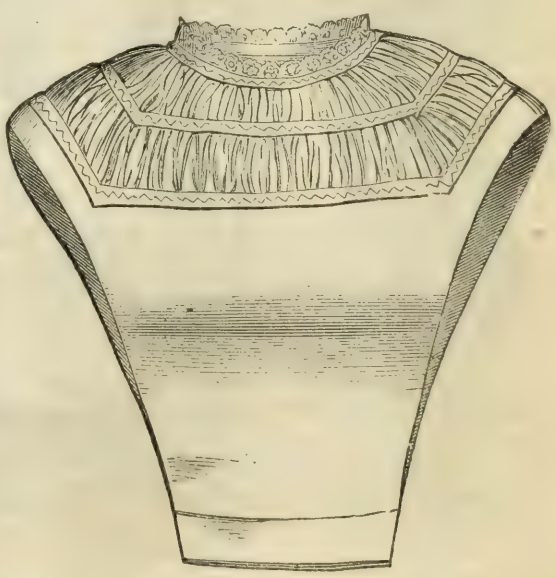
Figure 1.—Promenade Dress.

FIGURE 2.—HOME TOILET.

THE PROMENADE DRESS is of chocolate-colored taffeta; the body half-high and closely fitting, with a short apparent basque, and one skirt. The sleeves, which are very full, are gathered upon a triple plait, running the whole length to the shoulders; of these plaits the centre one is double the width of the others, and trimmed with buttons. The drapery of the sleeve, which reaches to the elbow, falls open so as to show the sleeve. The basque and corsage are trimmed with a reversed box-plaiting, which is graduated, and carried down the front of the skirt. A similar ornament runs quite around the skirt, at a distance of about eight inches from the bottom.

The HOME TOILET, which we present above, consists of a cassock dress of striped poplin, with a plaided plastron, and the skirt *en tablier*. The hooks which confine the dress are concealed under a passamenterie, which may be made either by plaiting ribbons to match, or may be composed of strips of the material of the dress. In this dress the skirt and body are cut in one piece—both front and back—all the fullness being in the bottom of the skirt. The sleeves are closed at the wrist, but are full at the elbows, and are ornamented so as to correspond with the body. Gores are taken out, in order to give them the required form.

The chaste design for a FICHU, which is very appropriately styled "The Madonna," requires no special verbal explanation.



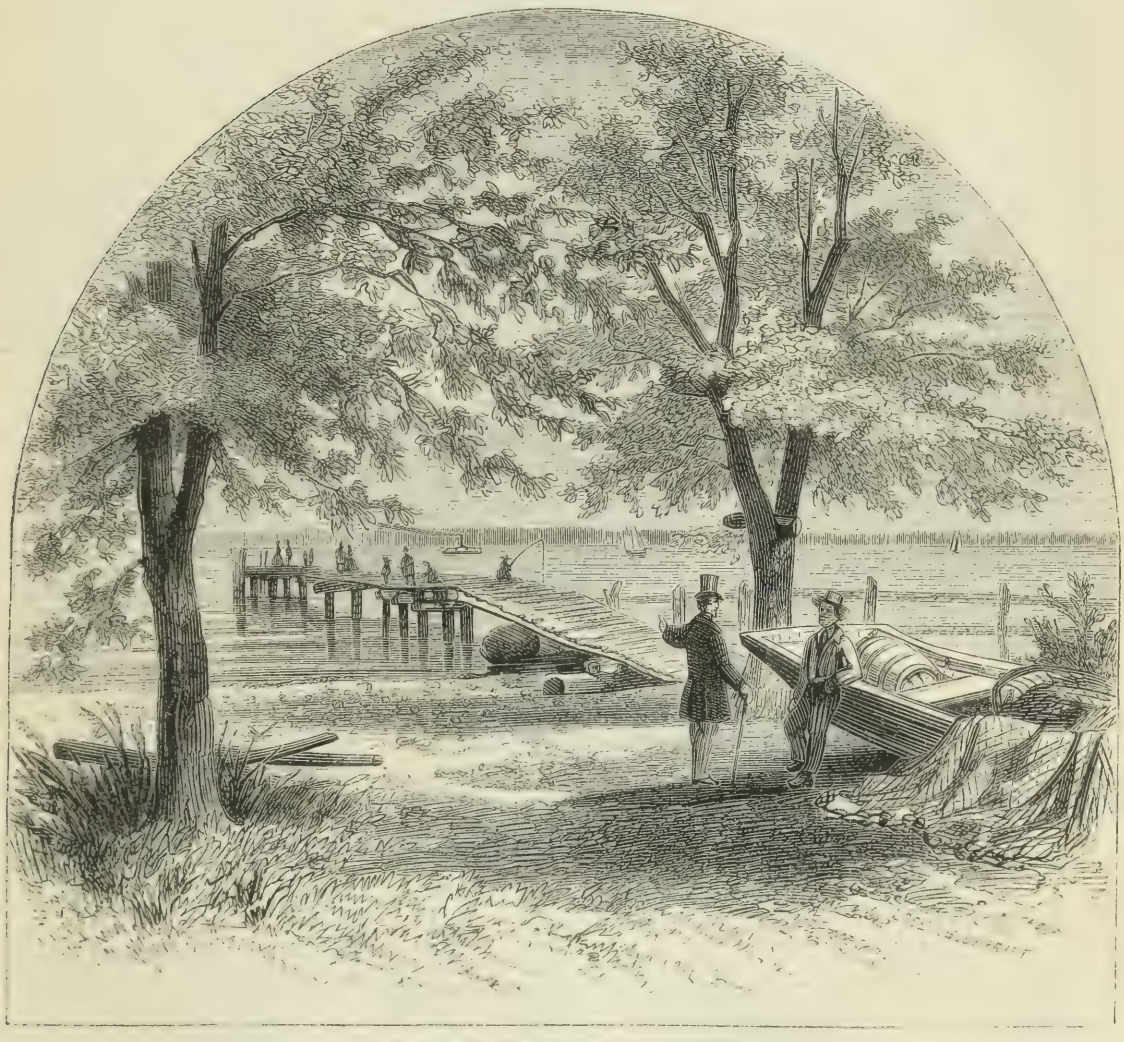


FIGURE 3.—MADONNA FICHU.

HARPER'S
NEW MONTHLY MAGAZINE.

No. CVI.—MARCH, 1859.—Vol. XVIII.

THE LANDING-PLACE, MOUNT VERNON.

MOUNT VERNON AS IT IS.

OCTOBER in Virginia is a most delicious season. The first mellow tints of autumn then begin to tone down the rich and brilliant greens of summer, and the atmosphere, soft and balmy, is in harmony with the visible aspects of nature. A few blossoms yet linger, a few birds yet flit among the branches, though silent and sedate in contemplation of their southern flight. The luscious grape hangs in clusters in garden and forest; the apple-boughs bend with treasure in the orchards, and along the hedges the persimmon-tree displays its beautiful globes of astringent juice. The bee yet lingers in sunny places, and the grasshopper chirps in the field; and every where the reflecting spirit hears the low, solemn requiem of Nature over all her beautiful children, as she then begins to disrobe them for the tomb.

It was on one of those beautiful autumnal days in '58 that I made the last of my several pilgrimages to the home and tomb of Washington on the Virginia bank of the Potomac, accompanied by a young kinswoman who had never before been south of New York. We went to Mount Vernon, not as casual visitors with the crowd, but as welcomed guests of the proprietor; and for two days and nights we enjoyed true Virginian hospitality under that venerable and venerated roof, which sheltered Washington and all he held most dear, from youth to age, and where the great and good of many lands always found an open hand and generous cheer.

Entered according to Act of Congress, in the year 1859, by Harper and Brothers, in the Clerk's Office of the District Court for the Southern District of New York.

The chief object of my visit was to see Mount Vernon as it is, before the gentle hands of our patriotic countrywomen, now extended to arrest the ravages of decay, shall transform the objects upon which Washington's eyes once looked with delight, from melancholy vestiges of former symmetry and beauty to their original shape and brightness; and also to preserve and disseminate, by means of pencil and graver, portraitures of such objects, as they now appear. To that purpose alone this simple record of what I saw is devoted; and I leave to the historian and rhetorician the task of telling in eloquent language the consecutive story of the past of Mount Vernon.

It was on one of the earlier days of October, when almost summer heats were prevailing in Virginia, that we left Alexandria in the boat that conveys visitors to Mount Vernon twice a week while the navigation of the Potomac is open; and with a score of other people on a similar errand we landed, toward noon, upon a rude and picturesque wharf at the entrance to a shaded dell whose furrow comes down from the tomb of the great patriot to the river brink. This wharf is upon the spot from which, in Washington's time, the flour and tobacco, the chief productions of the Mount Vernon estate, were shipped in vessels for England or the British West Indies. These were so excellent in quality and so full in quantity that it is said any barrel of flour that bore the brand of "George Washington, Mount Vernon," was exempted from the customary inspection in the latter ports. Washington was a fisherman, also, for gain, and every year many barrels marked with his brand, and filled with shad or herring, were shipped from this spot for foreign ports. From this landing-place there is a fine view of the Potomac and the Maryland shore opposite.

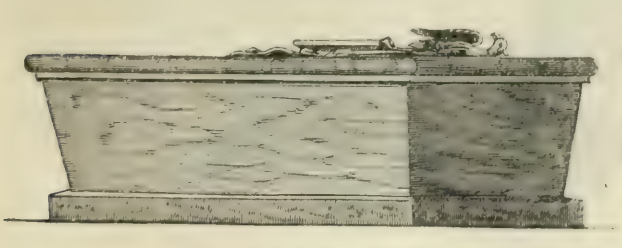
We had observed a young man walking nervously about the boat, distributing small handbills among the passengers, bearing at the head, in large letters, the striking injunction:

"☞ HAVE YOUR LIKENESS TAKEN AT THE TOMB OF THE FATHER OF HIS COUNTRY!"

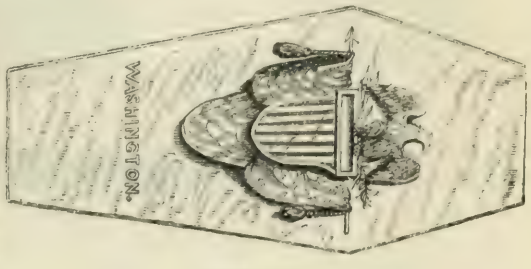
To this was added:

"Visitors to this consecrated spot are informed that they can have their likenesses taken in a beautiful and durable manner, with the Tomb of Washington for a background, and delivered them on the return trip of this boat, for the same price that a likeness without the tomb would cost. Hundreds of visitors have been delighted with these Gems of Art during the last year, and not a single one has expressed the least dissatisfaction."

The distributor was earliest in leaving the boat; and with a tin box filled with the implements of his calling, he led the way up the dell by a dilapidated plank walk that lay along the margin of a choked brook. He far outstripped his fellow-passengers in the ascent, for the hope



THE TOMB OF WASHINGTON.

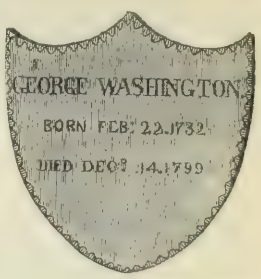


RUINS OF THE OLD FAMILY VAULT, MOUNT VERNON.

of winning dollars at the end of the race gave wings to his feet. When near the brow of the wooded slope we caught glimpses through the shrubbery of a small white building. We found it to be a rough board shanty, bedaubed with lime, and standing within a few yards of that once *consecrated*, but now *desecrated*, spot where repose the remains of the great Hero and Sage. It had been erected for the accommodation of the daguerreotypist; and there, with a large placard hanging upon the outside calling attention to his craft, he stood ready to ply the implements of his profession. Oh, how every sentiment of respect and reverence for the illustrious dead—every emotion born of a true American spirit—rose up in severe rebuke of this disgraceful traffic in the vestibule of that temple wherein the good and true of all nations would delight to pour their orisons! I thought of a scene in old Jerusalem, when, in another temple, the tables of the "money changers and the seats of those who sold doves" were overturned, and I wished for the authority to purge this spot of all worshipers of Mammon. I could not even forgive the proprietor of Mount Vernon, whose good-nature permitted this desecration.

The *new* tomb of Washington is in a secluded hollow at the upper entrance to the deep-wooded dell, along the margin of which lies the pathway from the river. The spacious vault is built of brick, with an arched roof. It is entirely overgrown with shrubbery, brambles, and vines, which give it an antiquated appearance. Its iron door opens into a vestibule, also built of brick, in which, seen through a picketed iron gate, stand two marble sarcophagi, containing respectively the remains of Washington and his wife. Over the vault door, upon a stone panel, are cut the words: "I AM THE RESURRECTION AND THE LIFE; HE THAT BELIEVETH IN ME, THOUGH HE WERE DEAD, YET SHALL HE LIVE!" The vestibule is twelve feet in height. The gateway is

WASHINGTON'S COFFIN.



THE LID.

flanked by brick pilasters, surmounted by a stone coping, which covers a Gothic arch. Over this arch is a white marble tablet inscribed: "WITHIN THIS INCLOSURE REST THE REMAINS OF GENERAL GEORGE WASHINGTON."

The marble coffins in the vestibule were made and presented by John Struthers, of Philadelphia. That of Mrs. Washington is perfectly plain, with a simple inscription. The other is plain, except the lid, on which is represented, in relief, the American shield suspended over the flag of the Union. The latter is hung in festoons; and the whole is surmounted, as a sort of crest, by an eagle with open wings perched upon the superior bar of the shield. Each coffin consists of an excavation from a solid block of Pennsylvania marble.

This vault and inclosure were erected many years ago, in pursuance of instructions given in the following clause in Washington's will: "The family vault at Mount Vernon requiring repairs, and being improperly situated besides, I desire that a new one, of brick, and upon a larger scale, may be built at the foot of what is called the Vineyard Inclosure, on the ground which is marked out, in which my remains, and those of my deceased relatives (now in the old vault), and such others of my family as may choose to be entombed there, may be deposited."

The old vault referred to was upon the brow of a declivity, in full view of the river, about three hundred yards south of the mansion, on the left of the present pathway from the tomb to the summer-house on the edge of the lawn. It is now an utter ruin. The door-way is gone, and the cavity is partly filled with rubbish. Therein the remains of Washington lay undisturbed for thirty years, when an attempt was made by some Vandal to carry them away. The inesecure old vault was entered, and a skull and some bones were taken; but these comprised no part of the remains of the illustrious dead. The robber was detected, and the bones were recovered. The new vault was then immediately built, and all the family remains were placed in it. Mr. William Strickland, of Philadelphia, who designed the composition on the lid of Washington's coffin, and accompanied Mr. Struthers when the remains of the patriot were placed in it, in 1837, has left a most interesting account of that event. On entering the vault they found every thing in confusion. Decayed fragments of coffins were scattered about, and bones of various parts of the human body were seen promiscuously thrown together. The decayed wood was dripping with moisture. "The slimy snail glistened in the light of the door-opening. The brown centipede was disturbed by the admission of fresh air, and the mouldy cases of the dead gave a pungent and unwholesome odor." The coffins of Washington and his lady were in the deepest recess of the vault. They were of lead, inclosed in wooden cases. When the sarcophagus arrived the coffin of the chief was brought forth. The vault was first entered by Mr. Strickland, accompanied by Major Lewis (the last survivor of the first executors of the will of Washington) and his son.—When the decayed wooden case was removed the leaden lid was perceived to be sunken and fractured. In the bottom of the wooden case was found the silver coffin-plate, in the form of a shield, which was placed upon the leaden coffin when Washington was

RUINS OF THE CONSERVATORY AND SERVANTS' QUARTERS.

THE SUMMER-HOUSE.

first entombed. "At the request of Major Lewis," says Mr. S., "the fractured part of the lid was turned over on the lower part, exposing to view a head and breast of large dimensions, which appeared, by the dim light of the candles, to have suffered but little from the effects of time. The eye-sockets were large and deep, and the breadth across the temples, together with the forehead, appeared of unusual size. There was no appearance of grave-clothes; the chest was broad, the color was dark, and had the appearance of dried flesh and skin adhering closely to the bones. We saw no hair, nor was there any offensive odor from the body; but we observed, when the coffin had been removed to the outside of the vault, the dripping down of a yellow liquid, which stained the marble of the sarcophagus. A hand was laid upon the head and instantly removed; the leaden lid was restored to its place; the body, raised by six men, was carried and laid in the marble coffin, and the ponderous cover being put on and set in cement, it was sealed from our sight on Saturday the 7th day of October, 1837. . . . The relatives who were present, consisting of Major Lewis, Lorenzo Lewis, John Augustine Washington, George Washington, the Rev. Mr. Johnson and lady, and Mrs. Jane Washington, then retired to the mansion."

On the east side of the tomb, beneath neat marble monuments, lie the remains of Mrs. Eleanor Parke Lewis and her daughter, Mrs. M. E. Conrad. The former was the grand-daughter of Mrs. Washington, and adopted daughter of the General. In front of the tomb are two stately obelisks of marble. The one on the right commemorates the eminent Judge Bushrod Washington, nephew of the General, who inherited Mount Vernon; the one on the left, John Augustine Washington, a nephew of the Judge, and father of the present proprietor of the estate. These are all the family monuments that stand by the tomb of the Patriot.

From the tomb we made our way to the lawn in front of the mansion by a dilapidated plank walk that skirted the brow of a very steep hill. I stopped and sketched the ruins of the old vault on the way, and went down a winding path to a cold spring, from whose clear fountain Washington, no doubt, had often drank. From the spring a path much obstructed by shrubbery leads to the deer-park, a pretty opening between the

MOUNT VERNON—WEST FRONT.

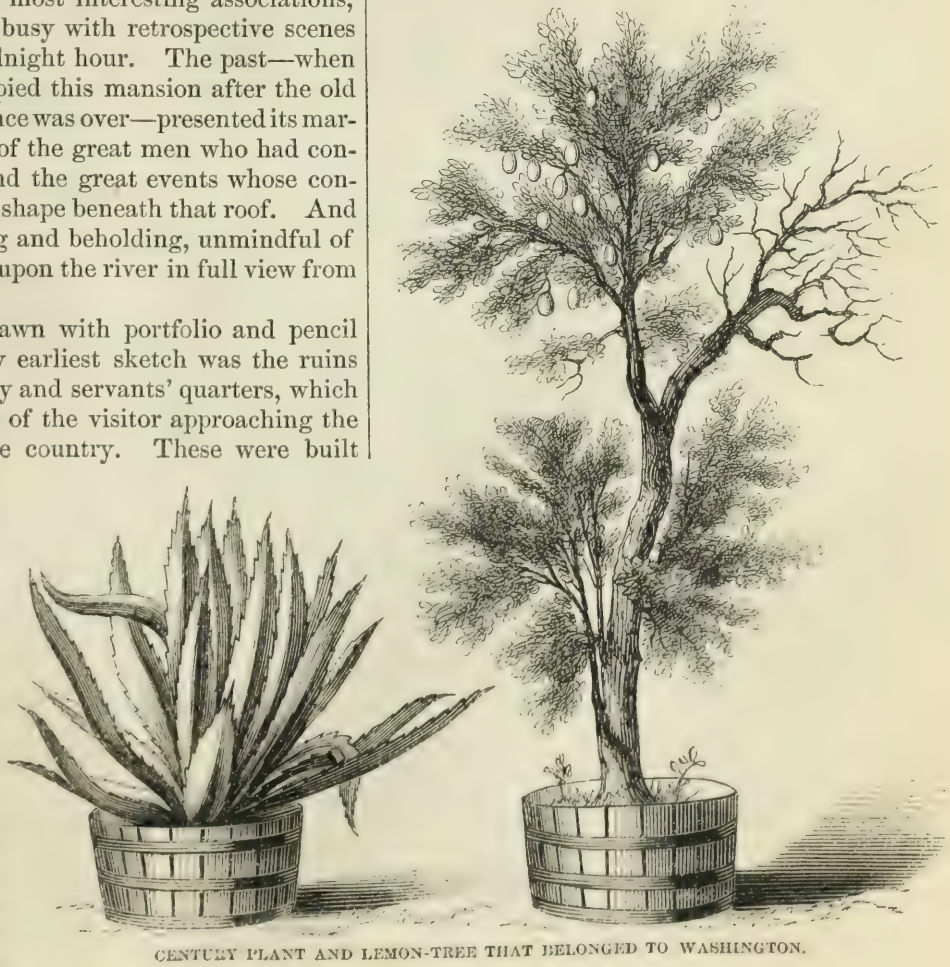
base of the wooded declivity and the river, where Washington kept several tame deer for his pleasure.

By a flight of rough steps, where we met a well-dressed and intelligent little colored boy with canes cut from the forests on Mount Vernon for sale, we ascended to the lawn at a corner of a noble summer-house, which is so fallen into decay on one side that it is dangerous to attempt to enter it. Under this summer-house is a deep, dry well, used before ice-houses were known as a cool place for meat, butter, etc. The wall is broken away, and the visitor can peer into its depths without difficulty.

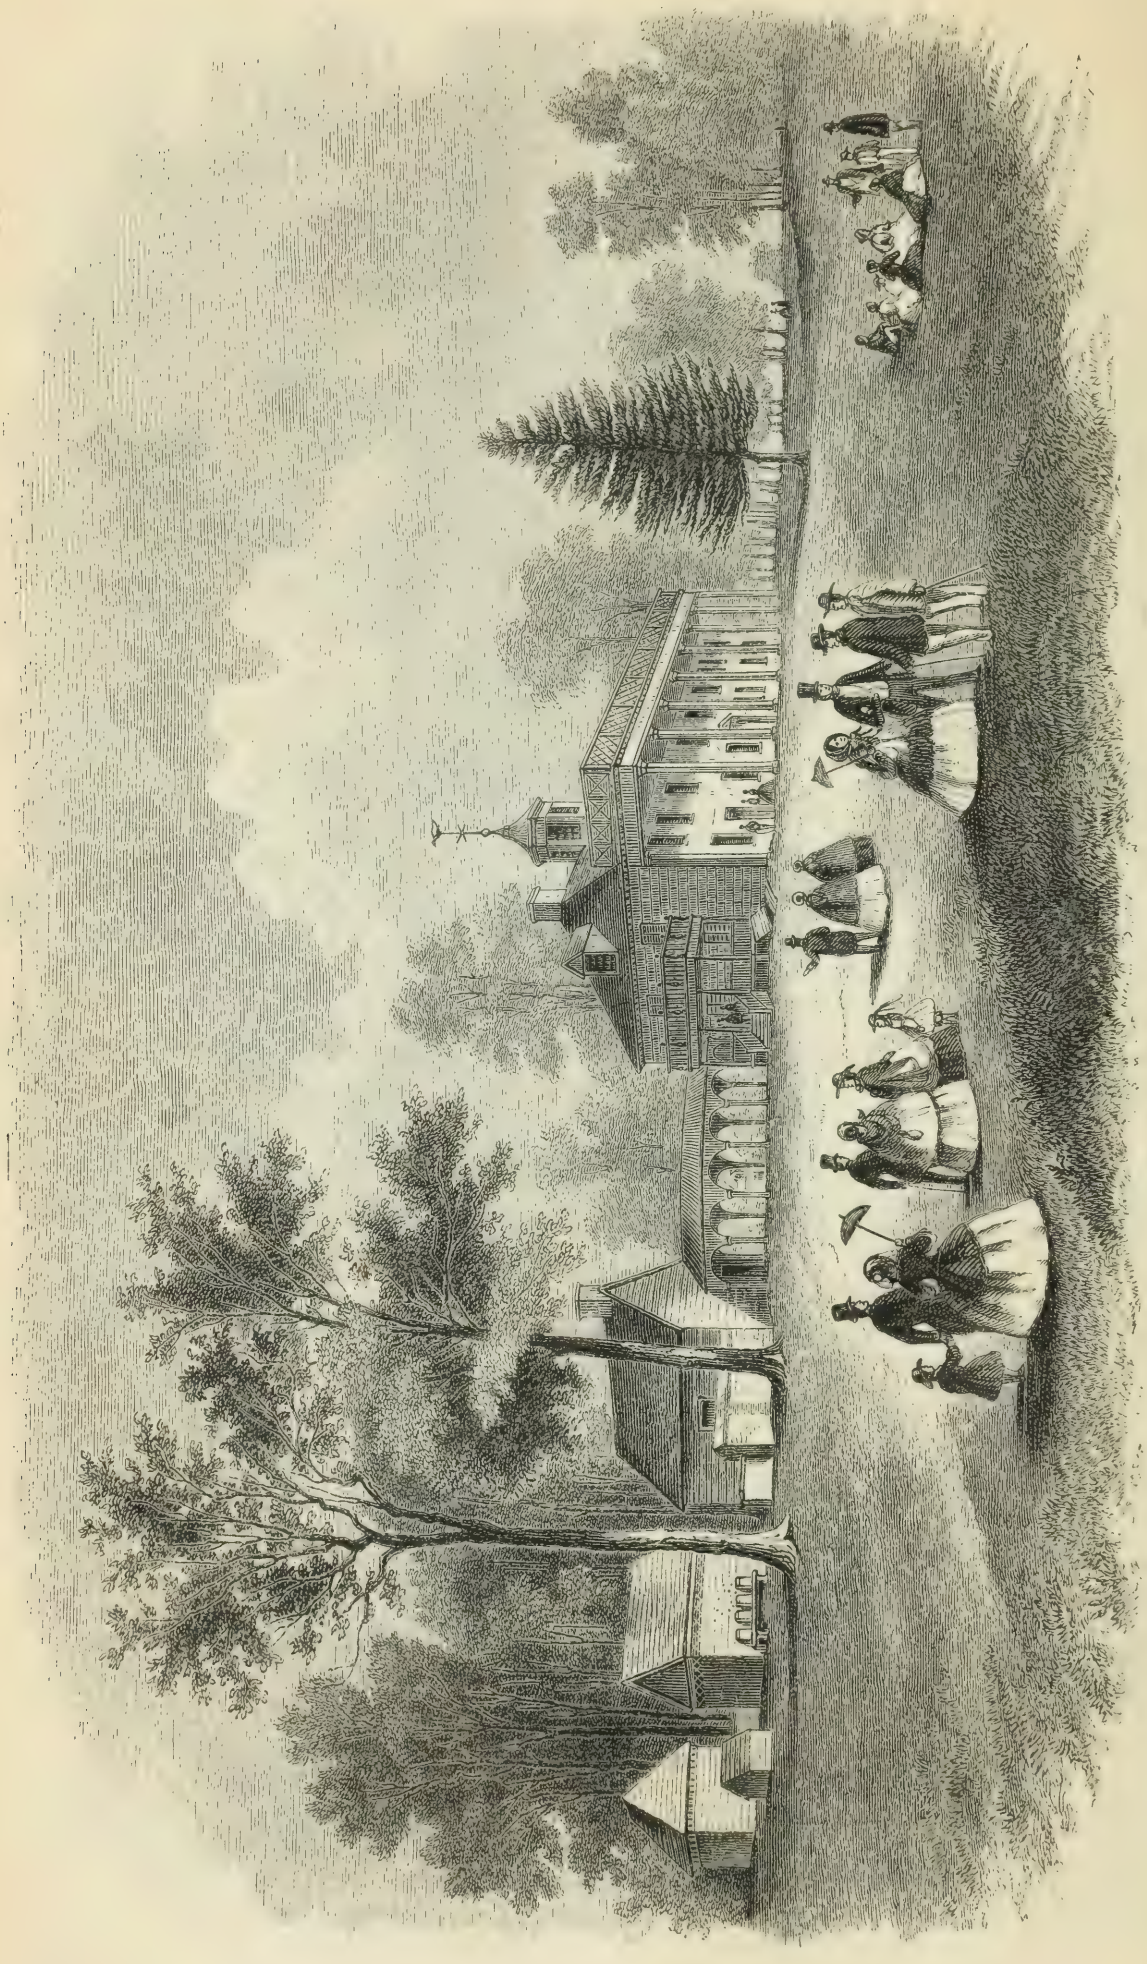
We rested a while in the cool shadow of a large holly-tree, and then went to the mansion to meet the proprietor. We were disappointed. My letter informing him when he might expect us had not reached him, and he and his family were a hundred miles away. They were expected home the next day; so we sauntered about the grounds and through the rooms thrown open to visitors during the two hours that the boat remained waiting at the wharf, and then returned to Alexandria. The boat stopped a short time at Fort Washington on the Maryland shore, to allow the passengers to visit that fortification and the grounds around it; but the pleasure of the visit was marred by the descent of a sudden but gentle shower. At three o'clock we were at Alexandria, where we met Mr. Washington at dinner, and accompanied him in his carriage to Mount Vernon the same evening. His family were detained in the country, but we enjoyed the hospitalities of his house with a freedom that made our stay there exceedingly pleasant.

The public road between Alexandria and Mount Vernon—a distance of nine miles—is a very pleasant one, with cultivated fields spreading out on every side; but after leaving it, at a spacious level, upon which stand some of the grand, old trees of the primeval forest that cast broad shadows in Washington's time, the road that winds through the wooded ravines and up the timbered slopes of the old Mount Vernon estate, leading to the mansion, was rough and gullied, for the rains make sad havoc with smooth paths in that light alluvium.

It was just at sunset when we entered the great gate near the ruins of the ancient conservatory, and drove up the carriage-way on the west front of the mansion, where we were received by Nathan, the chief house-servant, whose polite attentions are remembered by the thousands of stran-



WASHINGTON'S ICE-HOUSE.

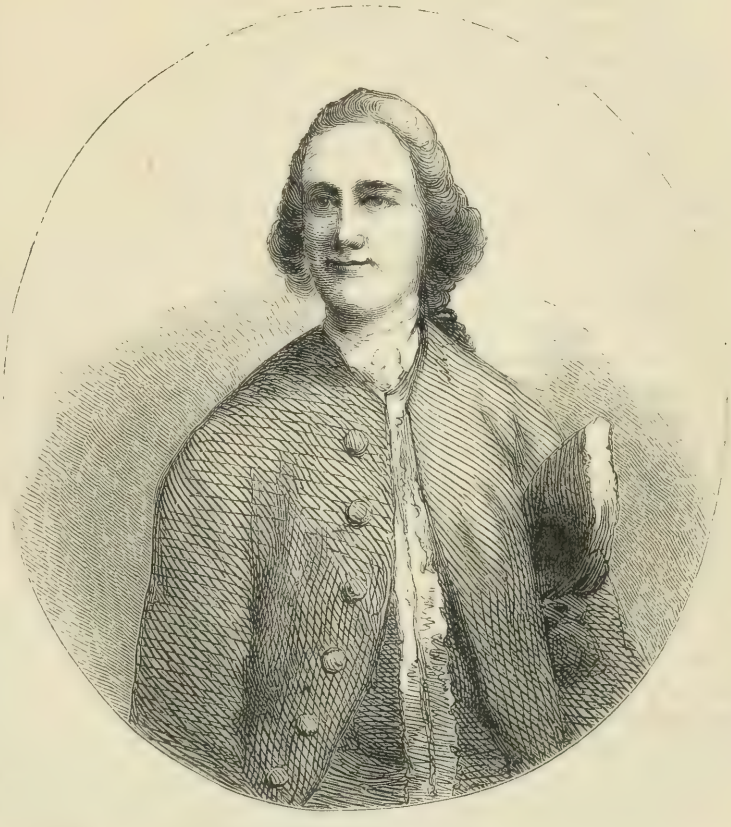


gers who visit Mount Vernon during the warm season.

Host and visitors were wearied with the day's journeyings, and all retired at an early hour. But I could not sleep. The window of my chamber looked out from beneath the great piazza upon the broad waters of the Potomac, and the shores of Maryland beyond, which lay sleeping in the light of the full moon. That chamber—all the chambers, the mansion, and the grounds—are so clustered with the most interesting associations, that thought was busy with retrospective scenes until after the midnight hour. The past—when Washington occupied this mansion after the old war for independence was over—presented its marvelous procession of the great men who had congregated there, and the great events whose conception had taken shape beneath that roof. And there I lay musing and beholding, unmindful of the dancing light upon the river in full view from my pillow.

I was out at dawn with portfolio and pencil in hand; and my earliest sketch was the ruins of the conservatory and servants' quarters, which first meet the eye of the visitor approaching the mansion from the country. These were built by Washington. He was fond of flowers and rare plants and shrubbery, for they pleased his eye and gratified his taste in an uncommon degree. In that conservatory he had collected many exotics, and a large number of these were yet preserved with great care when the buildings were destroyed by fire on the 16th of December, 1835—the same day when more than five hundred buildings, and property valued at more than twenty millions of dollars, were wasted by the same element in the city of New York. The fire originated in a defective flue connected with the conservatory, and that building, and the quarters of the servants adjoining, were laid in ruins in the course of an hour. Only a few of the rare plants that belonged to

CENTURY PLANT AND LEMON-TREE THAT BELONGED TO WASHINGTON.



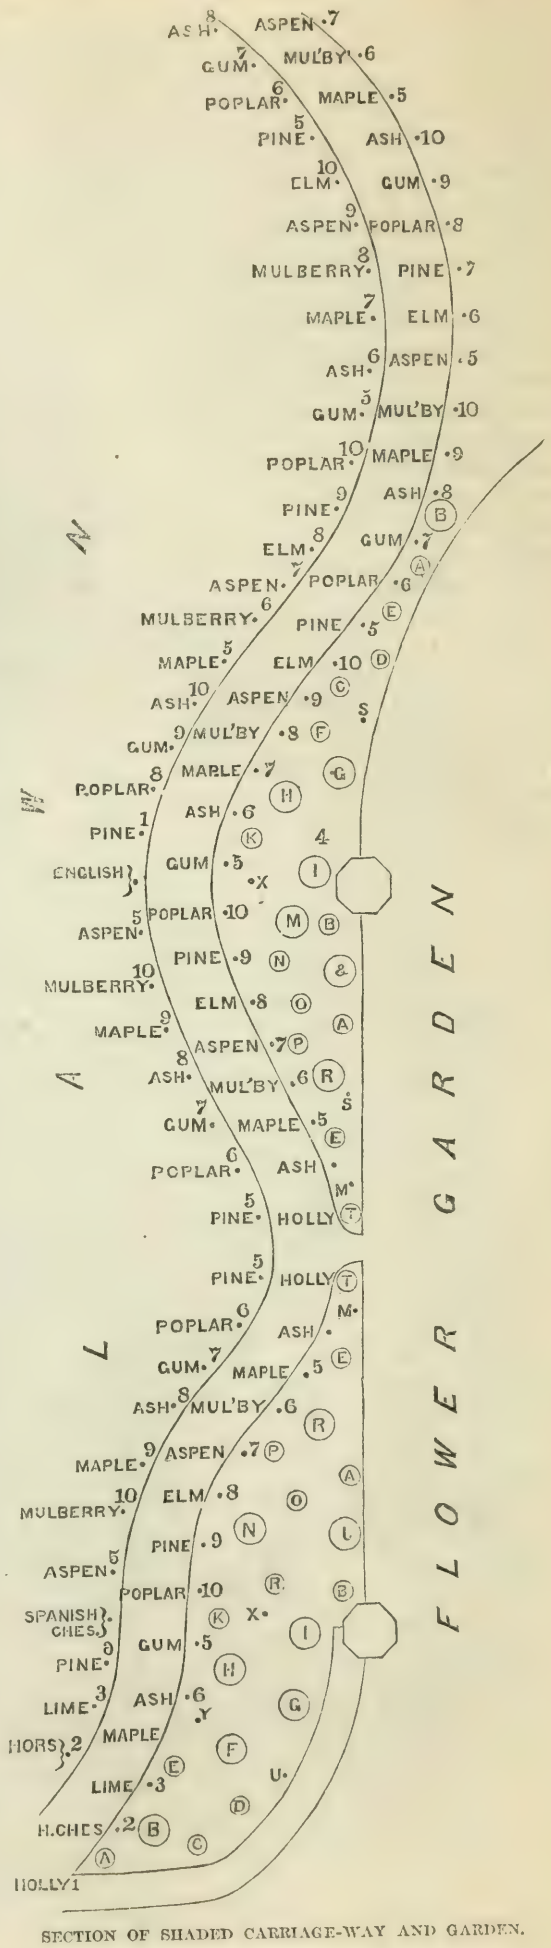
MANSION, LAWN, AND OUT-HOUSES, MOUNT VERNON.

Washington were saved. Of these, a fine century plant that has never bloomed, a sago-tree, and a lemon-tree, are yet preserved in the flower garden to which the conservatory was attached. The ruins have been left undisturbed, and present a melancholy aspect.

On the right of the carriage entrance to the mansion is an ice house, built by Washington, and still used. It is well preserved, and to the highly imaginative mind its form suggests the idea of a tomb It is affirmed that a sentimental young lady was once seen, with an embroidered kerchief pressed to her eyes, weeping softly at the door of the ice-house, under the impression that she was standing at the tomb of Washington!

After breakfast I sketched the mansion from the summer-house, and recalled the scene of the previous day, when visitors were strolling over the lawn in front. I have never seen this view delineated before. It includes a large portion of the lawn, which slopes to the

LAWRENCE WASHINGTON



ANCIENT ENTRANCE TO MOUNT VERNON.

brow of the steep, wooded declivity on the river bank, with some of the out-buildings, and the sweeping arcade which connects the kitchen with the mansion. These out-buildings and arcade, and a portion of the mansion, including the piazza, were erected by Washington, after he came into possession of the estate by the will of his half-brother, Lawrence Washington, who inherited it from his father. It was called the estate of Hunting Creek, from a fine stream and estuary of that name that washed its northern border.

Lawrence Washington was an English naval officer, and served under Admiral Vernon in his operations against the Spanish ports on the shores of Central American waters. Because of his admiration of his commander, he called this eminence upon his estate, whereon he built a modest mansion, *Mount Vernon*, and from that the whole domain received its title. Within that early mansion George Washington spent many of his youthful days; and there he formed that intimacy with the Fairfax family, one of whose fair members his brother Lawrence had married, which opened to him his earlier pathway to fame, and continued until the kindling of the war for independence that sundered many a holy tie.

In July, 1752, Lawrence Washington died, and George, at the age of twenty, had the care of his estate as chief executor, his little daughter Jane, sole scion of his house and heart, being the only immediate heir. Her death left the entire estate to George pursuant to the provisions of her father's will, and to that mansion in the spring of 1759, when the garlands of military fame were upon his brow, the future Liberator of America carried from the home of her widowhood, near the banks of the York, his bride, the sweet little Martha Custis. Concerning this home he wrote to a friend in London, "No estate in United America is more pleasantly situated. In a high and healthy country; in a latitude between the extremes of heat and cold; on one of the finest rivers in the world—a river well stocked with various kinds of fish at all seasons of the year, and in the spring with shad, herring, bass, carp, sturgeon, etc., in great abundance. The borders of the estate are washed by more than ten miles of tide-water; several valuable fisheries appertain to it; the whole shore, in fact, is one entire fishery."

With a handsome fortune of his own, increased by a very large one brought by his wife, Washington at once enlarged the mansion, erected new and more numerous out-houses, and improved and beautified the grounds. I have before me the original drawings made by him, to direct his overseer in laying out the vegetable and flower garden, and the spacious, level lawn westward of the mansion. A copy of this, with sections and a fac-simile of Washington's memorandum of the names and position of the trees to be planted, which he carefully noted in his drawings, are here given. Many of the trees thus planted are still flourishing; and the two gardens are kept in the same form as when Washington left

596

FAC-SIMILE OF WASHINGTON'S MEMORANDUM.

them. The diagram, giving a section of the carriage-way and garden, is the one referred to in Washington's memorandum, of which a fac-simile is given.

The ancient entrance to Mount Vernon was due west from the mansion, about a mile distant, and the pleasant road that passed through the shaded dells and over fine timbered hills, was connected with the carriage-way of the lawn. Now the direction is somewhat altered, and that road, neglected because little used, is quite impassable with vehicles. We walked to the site of that old gateway toward noon. Recent rains had gullied the roads in several places, and in others piled heaps of pebbles in it; and yet, with all this desolation, the scenery was picturesque and sometimes beautiful. It was a warm, cloudless day, and the walk was delightful. Near the old highway we came to the remains of the porter's lodges at that ancient entrance. The chimney of one of them is entirely gone, and the walls of the other are tottling. They are built of pressed clay, sun-dried like the bricks of Egypt. With a little care and expense these may be restored to the condition in which they were left sixty years ago.

On returning toward the mansion we stopped to talk with an old mulat-

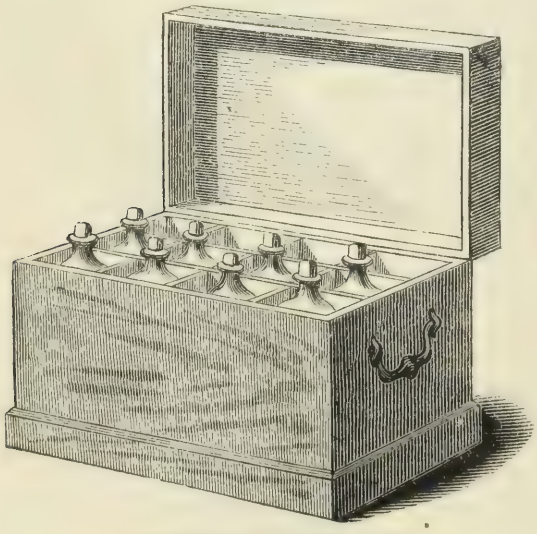
to, who was making a plow in front of a shop adjoining the ruins of the conservatory. He was a very intelligent man. He has lived at Mount Vernon over fifty-seven years, and is now in the seventy-second year of his age. He was raised in the Washington family, and his master, Judge Washington, set him free at his death. Westford (his name) now owns a plantation on Little Hunting Creek, where his children reside, and there he expects to go when Mount Vernon shall pass out of the possession of the Washington family. Westford well knew Billy—Washing-

WASHINGTON'S SAGO PALM.

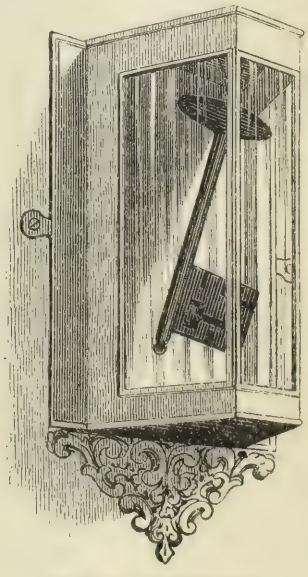
ton's favorite body-servant during the Revolutionary War. Billy was made free by Washington's will, with a liberal pension and a home for life at Mount Vernon. His means for high life had a bad effect upon him, and Billy became a *bon vivant*. Delirium tremens finally seized him with its terrors. Westford sometimes relieved him of the paroxysms by bleeding. One morning, about thirty years ago, Westford was sent for to bleed Billy. The blood would not flow. Billy was dead, and the last but one of Washington's favorite servants passed from earth forever. The other (a woman) died at Arlington a few years ago, where I saw her one evening at family worship.

Westford told us much of interest about Mount Vernon and its associations connected with his own experience, but I can not repeat his narratives here. We left him with an engagement to meet him the next morning before breakfast, for the purpose of delineating his likeness with a pencil. I found him prepared, having on a black satin vest, a silk cravat, and his curly gray hair arranged in the best manner, "For," he said, "the artists make colored people look bad enough anyhow." He wrote his name upon the drawing, a fac-simile of which is appended to the portrait on a succeeding page.

In the afternoon we strolled in the gardens, and I sketched the lemon-tree and century plant and the sago palm, already mentioned. The lemon-tree is about fifteen feet in height, and had about a dozen fine specimens of fruit upon it. It begins to show signs of decay. The *Agave* and the sago are flourishing. The latter stands at the junction of two avenues, fringed with box and tall shrubbery, in front of the ruins of the conservatory. At the end of each garden is a seed-house of octagon form, built by Washington. These, with water-closets of similar form nearer the mansion, are falling into almost hopeless decay.



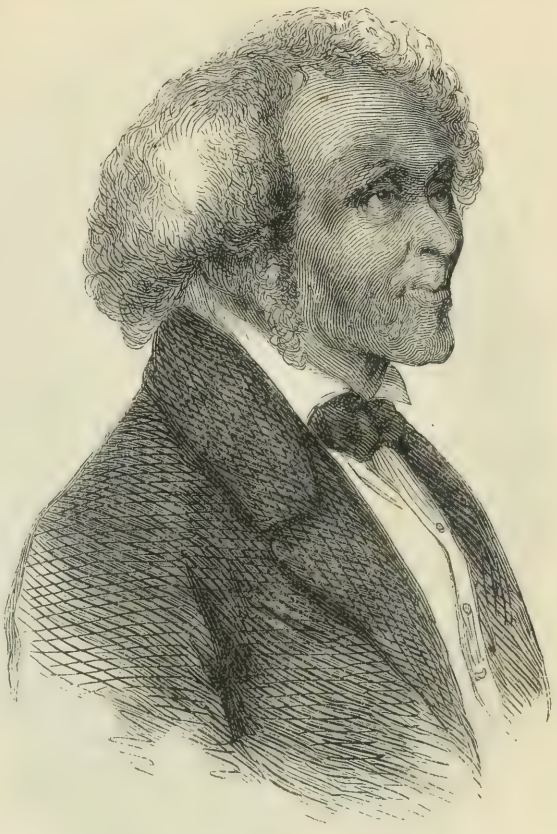
Besides the books in the library there are but few things in the mansion at Mount Vernon that belonged to Washington. In the library is the original plaster-cast made from Washington's living face in October, 1785, by Houdon, an eminent French sculptor, who was employed, through Mr. Jefferson (then American minister in Paris), by the Legislature of Virginia, to



SEED-HOUSE.

make a full-length marble statue of him. That statue, considered the best likeness of Washington ever made, stands in the rotunda of the capitol at Richmond. In the first volume of Jefferson's writings there are many interesting facts concerning it.

Over the fire-place in the library, upon a bracket, is a marble bust, cabinet size, of M. Necker, the eminent Minister of Finance, or Controller-General of France, when the French Revolution broke out in 1789. On the pedestal is an inscription, giving the name of a West India gen-

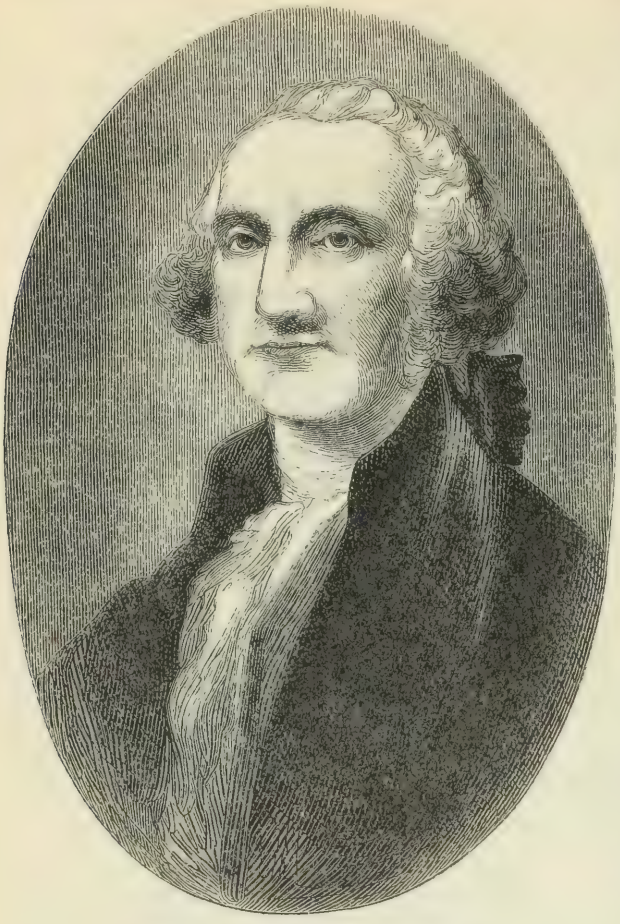


WASHINGTON'S LIQUOR-CHEST.

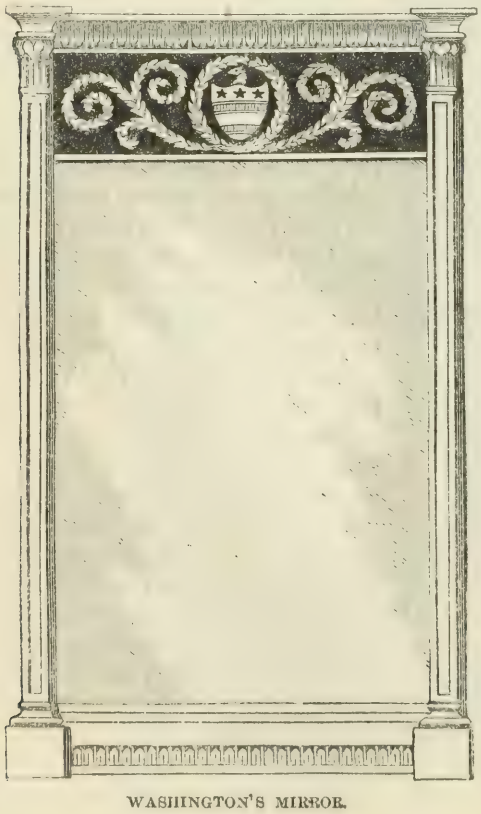
KEY OF THE BASTILE.

tleman, who presented it to Washington. This room is now used as a dining-room, and in a closet adjoining I was shown a liquor-case, made of mahogany, that was used by Washington. It contains twelve white glass flasks, thirteen inches in height, and was convenient in size to be used when traveling. It is believed that he carried it with him during the campaigns of the Revolution.

In the great passage, from which a heavy staircase leads to the chambers, may be seen Washington's spy-glass. His pocket-telescope, that he used during the war, was presented to General Jackson while he was President of the United States. In a glass case firmly secured to the wainscot of the passage is the key of the Bastile —that notable state prison in Paris, which was pulled down by the infuriated populace in 1789, when the French Revolution was kindling. That strong prison was a royal castle, completed by Charles the Fifth, of France, in 1383, for the defense of Paris against the English. As a state prison, it was regarded by the populace as the stronghold of tyranny; and when it was demolished, its governor and other officers were beheaded. Lafayette was at that time Commander-in-chief of the National Guards, and ordered and assisted in the demolition of the Bastile. The great iron key to its dungeons was placed in his hands, and in March following he sent it to Washington, through Thomas Paine, then in



LOUIS THE SIXTEENTH.

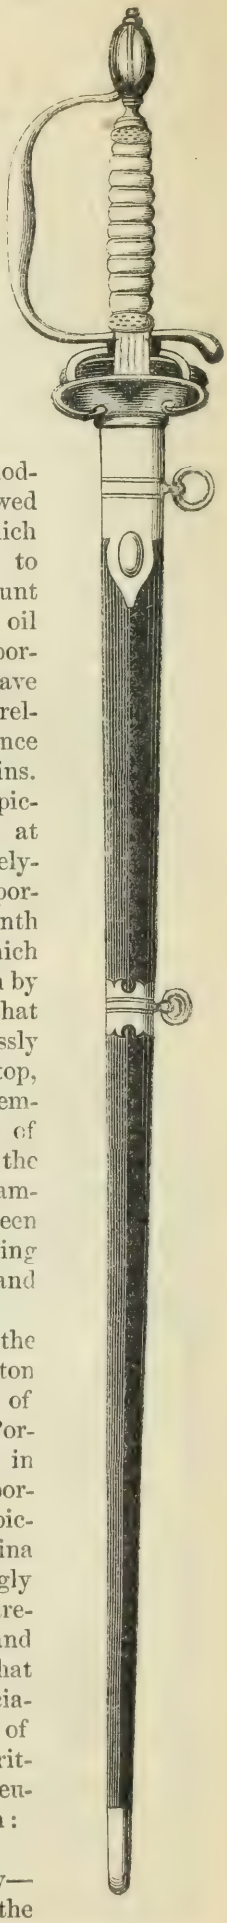


London, with a pencil sketch representing the destruction of the building. These were accompanied by a letter, in which Lafayette said: "Give me leave, my dear General, to present you with a picture of the Bastile, just as it looked a few days after I ordered its demolition, with the main key of the fortress of despotism. It is a tribute which I owe as a son to my adopted father—as an aid-de-camp to my general—as a missionary of liberty to its patriarch." To this Washington replied: "I have received your affectionate letter of the 17th of March by one conveyance, and the token of the victory gained by liberty over despotism by another, for both which testimonials of your friendship and regard I pray you to accept my sincerest thanks. In this great subject of triumph for the New World, and for humanity in general, it will never be forgotten how conspicuous a part you bore, and how much lustre you reflected on a country in which you made the first displays of your character." The drawing yet hangs beneath the old key, in the same relative position in which they were left by Washington.

In the great passage and the adjoining rooms are a few engravings

PITCHER PORTRAIT OF WASHINGTON.

that belonged to Washington. These are Andromache bewailing the Death of Hector; The Death of Montgomery; The Death of Warren; two Hunting Scenes; four Landscapes; The Defense of Gibraltar, four Views; Descent from the Cross; and a St. Agnes. These are all more or less injured by some tiny destroyers that are daily making the high lights still stronger, so that all the pictures now appear snowy. If their destructive progress shall not be speedily arrested, those relics of the great Patriot's household ornaments will be lost forever. With characteristic modesty, Washington allowed no picture of scenes in which he was a participant to adorn the walls of Mount Vernon. Some fine oil paintings and family portraits that were there have been distributed among relatives; that of Lawrence Washington alone remains.



WASHINGTON'S MIRROR.

The most interesting picture of the collection at Mount Vernon is a finely-engraved, full-length portrait of Louis the Sixteenth in his state robes, which was presented to Washington by the King. The gilt frame that contains it was made expressly for the occasion. At the top, surrounded by appropriate emblems, are the royal arms of France, and, at the bottom, the arms of the Washington family; and in the corners are seen the monograms of the King and President—L.L. XVI., and G. W.

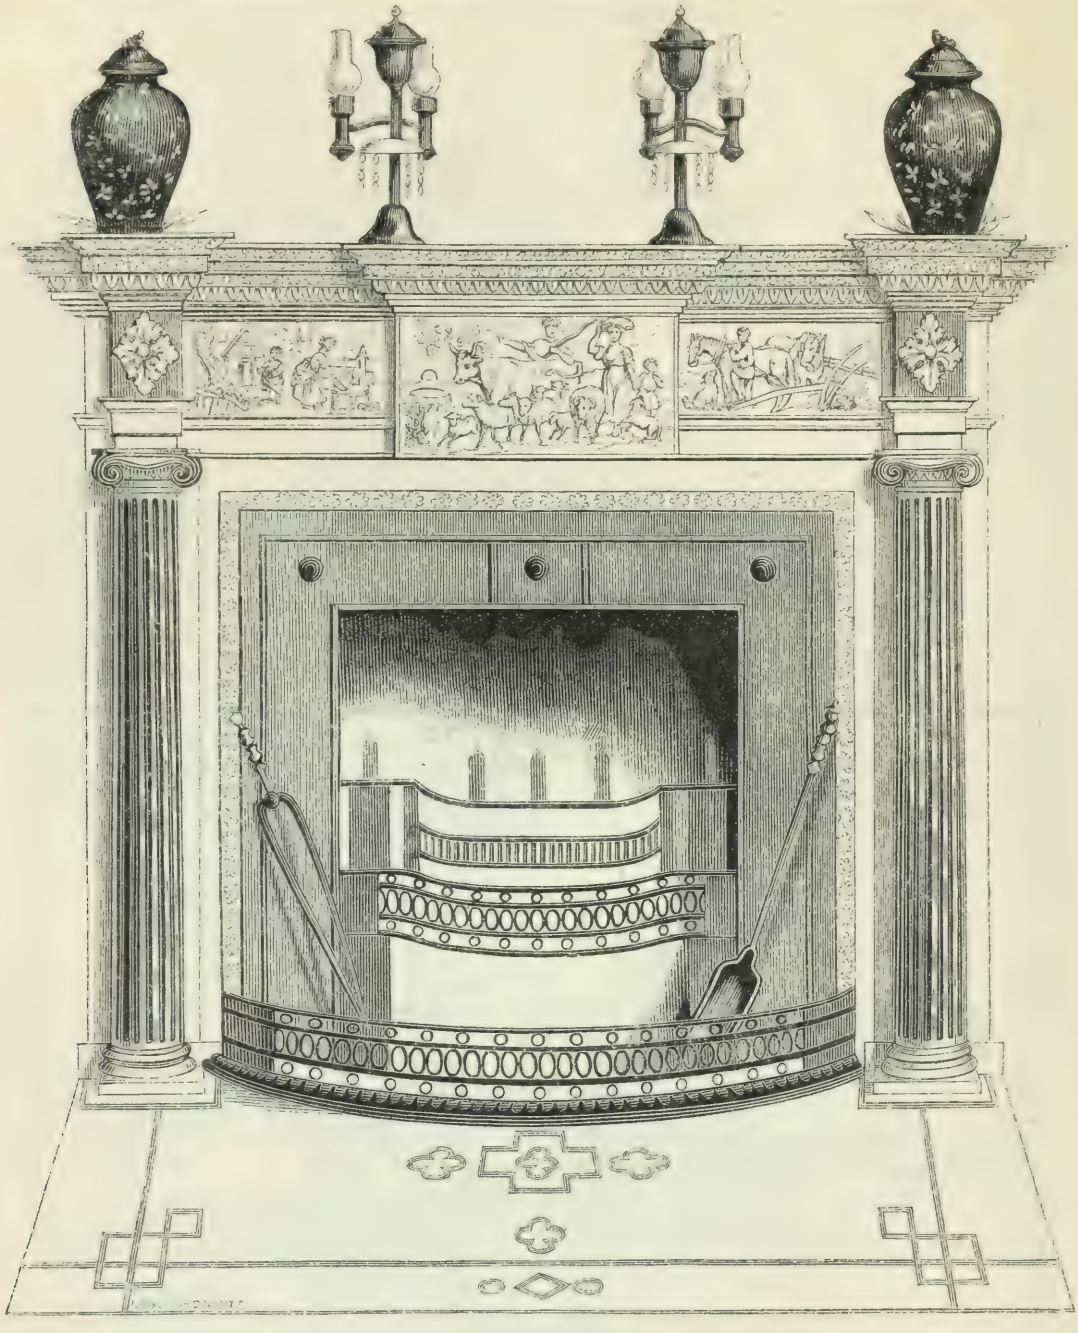
In a small room adjoining the large hall in which Washington entertained his friends is one of the celebrated "Pitcher Portraits" of the first President, in a deep gilt frame. These portraits, copied from Stuart's picture and printed upon china pitchers, are now exceedingly rare. This one has been carefully cut from the pitcher and framed; and upon the paper that covers the back, some appreciating pen, supposed to be that of an English gentleman, has written the following admirable eulogium, in the epitaphic form:

"WASHINGTON:
The Defender of his Country—the Founder of Liberty—the Friend of Man. History and

DRESS-SWORD.

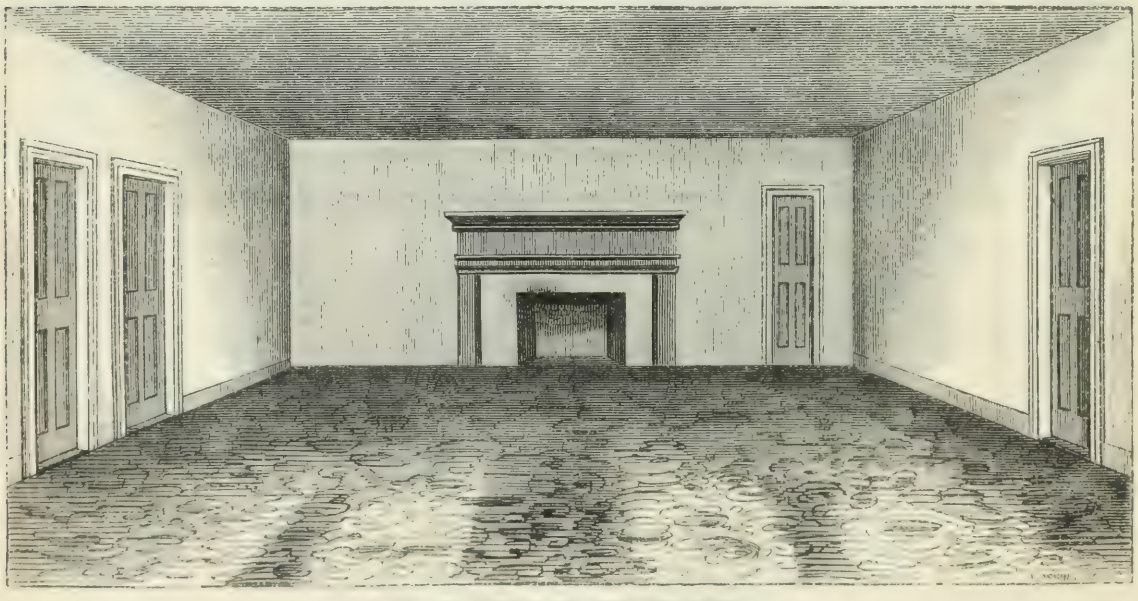
CHIMNEY-PIECE—THE RIGHT SIDE.

Tradition are explored in vain for a Parallel to his Character. In the Annals of Modern Greatness he stands alone; and the noblest names of antiquity lose their Lustre in his Presence. Born the Benefactor of Mankind, He united all the qualities necessary to an illustrious career. Nature made him great; he made himself virtuous. Called by his country to the defense of her Liberties, he triumphantly vindicated the rights of humanity, and on the Pillars of National Independence laid the foundation of a great Republic. Twice invested with supreme magistracy, by the unanimous voice of a free people, he surpassed in the Cabinet the Glories of the Field, and vol-



CHIMNEY-PIECE—THE CENTRE.

untarily resigning the Sceptre and the Sword, retired to the shades of Private Life. A spectacle so new and sublime was contemplated with the profoundest admiration, and the name of Washington, adding new lustre to humanity, resounded to the remotest regions of the earth. Magnanimous in Youth, glorious through Life, great in Death; his highest ambition, the Happiness of Mankind; his noblest Victory, the conquest of himself. Bequeathing to posterity the inheritance of his fame, and building his monument in the hearts of his countrymen, he lived the Ornament of 18th Century, he died regretted by a mourning World."



In the same room is a mirror with a gilt frame of elaborate workmanship, and bearing the arms

CHIMNEY-PIECE—THE LEFT SIDE.

CHIMNEY-PIECE.

ROOM IN WHICH WASHINGTON DIED.

of the Washington family; and in another room, across the passage, is another, quite plain, with the same armorial bearing at the top, traced in gold upon a black ground. In the latter room was the Spanish dress-sword worn by Washington when he was President of the United States, and which appears in Stuart's full-length portrait of him, at that time. It has a finely gilt hilt, and black leather scabbard, gilt mounted. On one side of the blade are the words RECTE FACE ICE—"Do what is right;" on the other, NEMINE TIMEAS—"Fear no man."

In the great hall, whose deep cornice and spacious ceiling are richly ornamented with delicate stem and leaf tracery, and other devices in stucco of low relief, is a superb chimney-piece, made of the finest Sienite and Parian marbles. It was manufactured in Italy, and presented to Washington in 1785, by Samuel Vaughan, a wealthy English gentleman, who was a great admirer of the Patriot. Upon the three tablets of the frieze, under the mantle, are sculptured in very high relief, in white marble, pleasant domestic scenes in agricultural life. Copies of these are here printed, and perfectly interpret their own meaning to the reader. The immense grate will hold several bushels of coals. The hearth is of white marble inlaid with ornaments of polished maroon-colored tile. The whole presents a most pleasing picture to the eye. The dark-blue vases upon the shelf, covered with paintings of flowers, and the bronze candelabra upon each end, were tenants of the same places when Washington received his guests in that spacious hall; and we see the fire-place and its ornaments as his friends saw them in the last century.

The room wherein the latest scene in the eventful life of Washington occurred, was the last subject for my pencil while at Mount Vernon. It was the room in which he died; the room wherein, on the fourteenth of December, 1799, was presented that sublime spectacle of the calm, heroic, child-like departure of the spirit of one of the greatest and best men the world ever saw, for

"The bosom of its Father and its God."

Nothing remains within that hallowed chamber that belonged to Washington. Its architecture has not been changed. Empty, it presents the same appearance as at the time of his death. Two doors open from it into adjoining chambers, and one to a stair-case that leads to the garret. The whole aspect is one of extreme plainness. As I stood alone in that chamber, delineating its simple outlines, these words of Wallace came vividly to my memory:

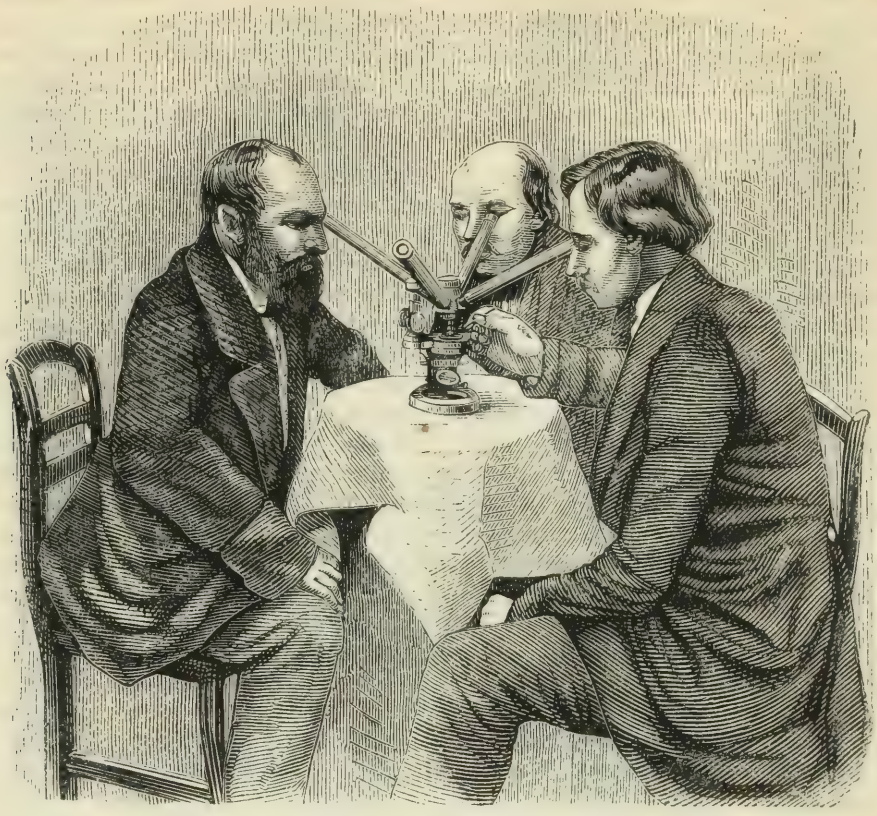
"There is an awful stillness in the sky
When, after wondrous deeds and light supreme,
A star goes out in golden prophecy.
There is an awful stillness in the world,
When, after wondrous deeds and light supreme,
A hero dies with all the future clear
Before him, and his voice made jubilant
By coming glories, and his nation hush'd
As though they heard the farewell of a God—
A great man is to earth as God to Heaven."

Thus, in a few words and with a few pictures, I have endeavored to give an outline portraiture of the Mount Vernon mansion and its surroundings, as it is. Around it lie many cultivated acres; but upon every thing there are tokens of decay, which plead eloquently in the ears of the countrymen of Washington in behalf of the noble efforts now put forth by the women of the land, to stay the destroyer's hand, restore Mount Vernon to its ancient form, and strength, and beauty, and to preserve it as a legacy above price for generations yet to come. I know that not one hour is to be lost, if we would possess what the Father of his Country closed his eyes upon, for many things are ready to crumble into dust; and I earnestly hope that before the blossoms of this opening spring shall send forth their perfume from the garden so carefully planted by the illustrious patriot, the hearts of those women who are working for such a noble end will be made glad by full success. England raised a monument over the amputated leg of one of her heroes; will not this people hasten, with the enthusiasm of cairn-builders, each with his or her mite, to testify like reverence for the home and tomb of one who was more than hero, more than sage—who was "First in War, first in Peace, first in the hearts of his countrymen?"

CROTON WATER AND ITS INHABITANTS.

"I DON'T believe a word of it." "Perhaps you don't; but it's quite true, nevertheless." "You be hanged, Peter; I've read the old story of the Brahmin a hundred times, and we all know that such stories are two-thirds nonsense. Dirty water has its inhabitants; but good clean water, Croton, for instance, is a solitude. You'll not convince me, except by actual demonstration, that I drink fish at the rate of a million to a drop, or murder monsters by the hundred thousand when I take a little brandy and water."

"What will it take to convince you, Mr. Johnson? I tell you I have seen the thing with my own eyes, and if you will believe your two organs I will find the way to make you see the same."



"Wouldn't believe if I saw it? Yes I would. But I don't believe I can see it. Don't think it can be shown."

"I'll bet you the price of a microscope, Mr. Johnson. Let us go down to Pike's and make the purchase. Then, if I don't convince you, I'll pay for it and it's yours, and *vice versa*."

"Agreed, my boy. That's fair enough."

And this was the way by which I came to buy a microscope.

My friend Mr. Johnson, an elderly citizen of comfortable means, and who extracts a reasonable amount of comfort out of his means, occasionally drops in to pass an evening with me, and when he comes, our talk is apt to be on the Atlantic telegraph, or the last new steamer, or whatsoever may be the topic of the day. The old gentleman is a great stickler for his

NACHET'S MULTIPLE MICROSCOPE.

country, America; his city, New York; its institutions, of which he considers the Croton Aqueduct and the Central Park the chief glories; and his friends, whom he praises behind their backs and abuses before their faces. On this particular evening we had talked of the wonders of the microscopic world, and the old gentleman had yielded his unqualified assent to every statement and proposition that I had made. He had even related some extraordinary stories of the revelations of the microscope which surpassed my own knowledge; but when I told him that I had seen animalcules by thousands in Croton water, he started up in indignation and denied the statement point blank. "No, Sir," with an emphasis on the Sir which sufficiently expressed his determination to defend the great institution against any such insinuations. He had used Croton for fifteen years, and he eschewed filters as inventions of the devil. Accordingly he listened in impatience to my suggestions until the bet was offered, and that he accepted with a sly twinkle of the eye that told me his assurance of winning. It is sufficient to add that since that Mr. Johnson has paid for the microscope, and I think he seems to be getting apoplectic. His health is considerably shattered, and I believe it is owing to his determination never to allow a filter to be introduced into his house. The consequence is that he drinks no water at home, and the ultimate consequence of this is that he drinks a great deal too much claret and hock. For we have not yet found any animalcules in either of these beverages.

We procured a microscope. It was not large, neither was it very expensive. We agreed that forty dollars was sufficient to risk on the experiment, and for this we procured an instrument that was ample for all our purposes.

Before proceeding to the main object of this article, which is to afford to others some of the information and amusement on the subject of the microscope and its revelations which we have derived for ourselves, I can not forbear relating the first experience of my old friend in its use.

We were neither of us remarkably experienced in the manipulation of the instrument, or in placing water on the stand in proper position to be examined. We had the microscope on the table, and the gas drop-light burning brightly near the reflector. Dinner had been removed but an hour before, and a pitcher of Croton, drawn without filtering, stood on the table. We had filled the small glass box once and again, and examined it, but there was nothing visible except the sparkle of the light through its clear crystal, and the old gentleman was chuckling with the utmost glee over my failure.

"Let me look again, Peter," said he, at length; "I want to see that element in the microscope. Isn't it superb?" And he fixed his left eye to the eye-piece, while he covered the other with his right hand, and I could see the delight of his eyes manifest on every line of his jocund face while he gazed in silence at the bright circle in the depths of the instrument. I think we had not gotten the focus exactly right for the bottom of the water, and his eye pressing on the top of the instrument probably

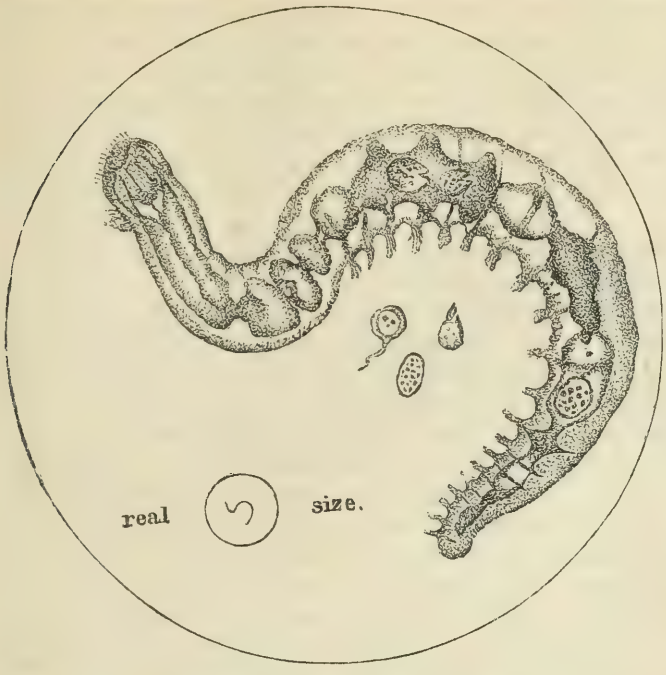


FIGURE 1.—LURCO, THE GLUTTON.

depressed it a little, for I saw a sudden pallor rush over his face even before he sprang up with a cry of astonishment and then sank back in his large chair, panting, but scarcely breathing.

I fixed my eye instantly on the instrument and saw the object of his horror. Well he might be astounded, for the *Lurco*, or Glutton, as I have since learned to know him, is no object for the admiration of a water drinker. He looked like a sea-serpent, swelling and contracting, exhibiting his various colors and rings of hideous beauty, and all the while driving the water into his capacious mouth in what seemed a mill-race stream.

"Wh—wh—what is it?" gasped my friend.

"I don't know, I'm sure. One of the Stygian animals, I imagine, and the Croton must be a branch of that famous river. Do you think we've been drinking any like him at dinner to-day?"

"Heaven forbid! Give me some brandy, Peter," and the old man bolted such a dose that I am sorry to say he could not see single, even with one eye, again that evening.

The microscope of the present day is a great improvement on the instrument of a few years ago. Few aids to science have been as rapidly and greatly improved as this. From the simple magnifying-glass, which was held in the hand, the transition to two or more, arranged in proper order, was of course very easy and natural. But after the making of the compound microscope, there was found a limit to its power from the refraction of light, caused by its passage through the lenses. To overcome this difficulty was the great triumph of modern optical instrument makers, and the invention of achromatic (or colorless) glasses deserves far higher rank than it has received in the eyes of the world.

Without pausing to weary those readers who are familiar with the subject, it may be not out of place to explain very briefly the character of these glasses to such of our readers as have not had the opportunity of understanding them.

No one who has used a magnifying-glass of the most common description can have failed to observe frequently on the edges of magnified objects a rainbow appearance of colors. This is the effect of the refraction of light, with which all are familiar, as illustrated in the prism. In using a very high power this refraction would naturally become so great as to obscure the outlines of large objects, and wholly confuse and render invisible those which were smaller. The manufacture of a glass which should not produce this effect was desirable for telescopic as well as microscopic purposes. The desired end was reached by constructing compound lenses composed of flint and crown glasses ground to fit each other. The refracting and dispersing power of these glasses being unequal, the light which passes through the

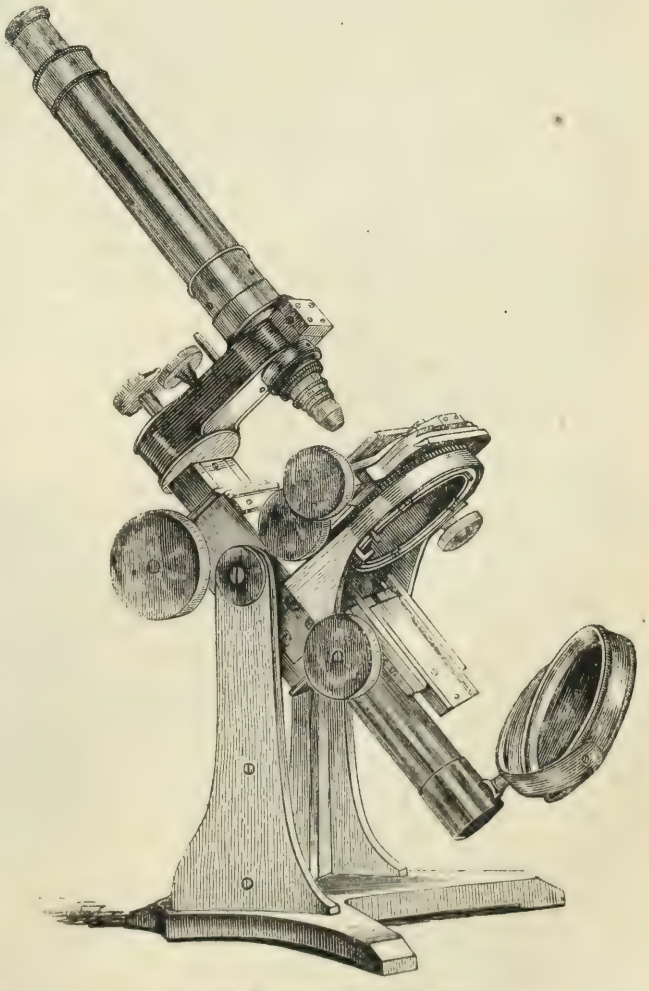

FIGURE 2.—ROSS'S MICROSCOPE.

lens thus composed may be said to be refracted by the one and replaced by the other, so that it comes out of the lens in as perfect a combination of colors as it entered. This is the simplest explanation that can be given without going into mathematical and scientific details, which are out of place in an article of this kind.

It is obvious that, in making these glasses, much skill is required, and a risk of breaking or not fitting is frequently run, which greatly increases the expense. It is, therefore, to these that the increased expense of instruments is to be attributed; but at the same time, it is to these that we owe the vast improvements and discoveries of modern times in the microscopic world.

The invention of achromatic glasses opened, of course, new fields for the microscopist, and the addition of various hitherto unknown parts to the instrument followed. Thus an achromatic condenser between the mirror and the object-stand gave new beauty to objects with additional force of light; and as the magnifying power was now largely increased, it of course became necessary to add finer adjustments to all parts of the instrument. Ross's great compound microscope (Figure 2) is the result of all these improvements, and although it is hardly to be regarded as superior to all others, it is at least worthy notice and illustration as a magnificent specimen of a modern instrument.

Nachet's multiple microscope is constructed on similar principles, with the addition of a prism in the centre, which allows various eye-glasses to be directed toward it and fixed on the object, the image of which is (so to speak) dispersed through the various sides of the prism to the various observers. A better idea of the practical advantages of this arrangement may be had from the illustration given near the commencement of this article than any amount of description could afford.

It was one of Mr. Ross's smaller instruments that we procured for our Croton investigations, and with its aid we found wonders enough.

It is a great error which the common style of exaggeration in writing on such subjects has brought about, and which great numbers of people believe, that all water contains animalcules, and that every drop of water is filled with animal life.

So far is this from the truth that, in ordinary clear water taken from the middle of a well or from the centre of a spring, there is but little chance of finding animal life; and any creature discovered by the microscope in such water must be regarded as an estray from the mossy sides of the spring, or the chinks of the stones, and of the bucket in the well. But it is equally true that in the moss at the sides of the clearest spring myriads of animalcules live, and a drop of water scraped with the green ooze from the old oaken bucket overflows with animal organizations in the highest state of activity: and after a variety of practice in waters of all kinds, we are able to say that we have not yet found a half pint of fresh water in any part of the country in which there were not more or less of the animalcules represented in Figure 3; and in most water, after standing a few days, they were countless.

But of course the most crowded residences of the animalcule world are in standing water and exposed streams, on which the sun shines. And although Croton water is more free from them than a cistern of rain-water, yet it contains more than ordinary well-water by a thousand fold. There is scarcely any form of animalcule known to inhabit fresh water which we have not found in the Croton, with the aid of this small microscope.

Having procured an instrument, as before related, we found the necessity very soon manifest of some tools by way of assistants in examination of "the invisible world." Most of these are sold with the instrument, so that the purchaser will procure all that he needs for ordinary purposes in the box which contains the microscope. The glazier will supply him with strips of glass cut into convenient forms for holding objects, and he will learn to lay two pieces of glass together, with a hair or a thread between, when he desires to examine a drop of water, which capillary attraction will then keep stationary. Small glass tubes (such as my friend Johnson abuses for the purposes of sherry which he has previously spoiled with ice and sugar and fruit) will come into use for picking up drops of water, the finger pressing on one end to drive out the air and draw in the water at the other. These and numerous inventions in the way of watch-glasses and vials of various shapes, will suggest their own uses as they did to us. As it is the object of this article to teach the curious how to use the microscope, as well

FIGURE 3.—ANIMALCULES.

a, *a*, contractile cavities; *b*, *b*, mouth; *c*, *c*, animals swallowed. The dotted lines represent the current created in the water when the animals are feeding.

as to relate the results of our hunting expeditions in drops of Croton, I shall not further apologize for the method I pursue in relating my own progress from day to day in using the instrument.

I have already related the first discovery that we made. The Lurco (Figure 1) is by no means a rare animal in the Croton, and grows to a size very distinctly visible to the naked eye, even reaching the length of a sixth of an inch, and in extraordinary cases, where preserved for examination and supplied with its favorite food, it has grown to exceed half an inch. It is at all times a fine specimen for microscopic examination, being translucent, and exhibiting clearly the working of its very few and simple internal organs. Its chief food is an animalcule known as the Monoculus, which is a shell-fish, as we shall hereafter explain. But the lurco, although a very delicate animal, consisting of a jelly-like substance, swallows and digests an incredible quantity of the testaceous small fry, without so much as waiting to have them opened. In point of fact, he relishes them with all the keenness of a New Yorker eating soft-shell crabs.

FIGURE 4.—CYCLOPS QUADRICORNIS.

The lurco resembles a common caterpillar in external appearance, having tufts of hair in place of legs or fins, and hairs surrounding his voracious mouth, which he moves rapidly and fiercely. He swallows his prey alive, whatever its nature, and being transparent, the microscope reveals the imprisoned wretches in one or more of his many stomachs, making vain efforts to escape from the throat, down which new victims come rapidly. The animal has several stomachs, a ring of muscle separating each from the next. At times, as he grows old, his color changes, and a rich brown tint variegates his accustomed pure white.

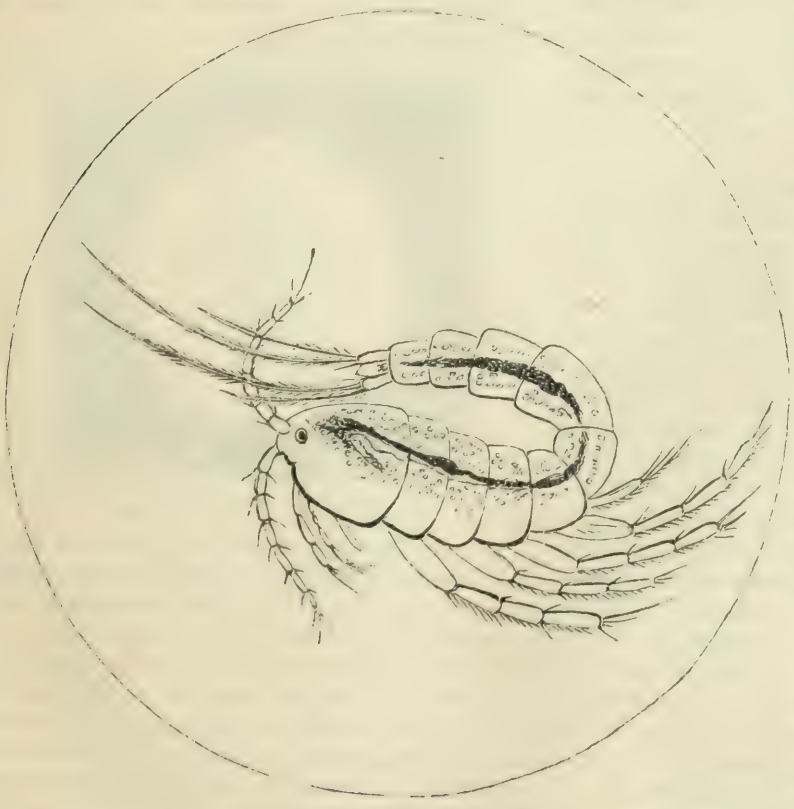

FIGURE 5.—CYCLOPS MINUTUS.

Even while looking at him a stranger dashed across the field of vision, who, when we learned how to catch and examine him, proved to be one of the most common inhabitants of the Croton as it runs from the faucet. It was the water-flea, known to science as the *Cyclops quadricornis* (Figure 4). This animal, when full-grown, is distinctly visible to the na-

ked eye, although none of his limbs can be detected without the aid of a glass. He inhabits ponds of stagnant water, as well as clear springs, and may be found in great abundance among the green slime on the surface of such fountains as disgrace the parks of New York. He moves with great rapidity, dashing across the field of the microscope so fiercely as to give but little opportunity for examining him when he is alive and in good health. It is only when expiring on a plate of glass from which the water is nearly dried, or when judiciously caught between two glass plates, that he can be examined with ordinary instruments. The female carries her eggs about with her in two large sacks, one on each side of the tail, looking like bunches of grapes. The body of the cyclops is protected by a scaly armor, the scales moving freely both forward and to the sides. The name of the animal is derived from its single eye, usually of a crimson color, and exceedingly beautiful. The whole appearance of the cyclops, when examined with the eye of a person alive to the beauties of nature, is graceful and most truly beautiful. The rapid motion of its feet or arms produces a whirlpool in the water near its mouth, and brings minuter animals within reach to become its food. These animals are found with ease; and in warm weather, by reversing the filter for a single instant and collecting the flow in a glass, more or less of them may be caught in the water. They will be recognized by their jumping or plunging movement, which has given them the common name of water-fleas.

The variety found under the general family name of cyclops is quite large; and of these none are more beautiful than the *Cyclops minutus* of Müller, of which an illustration is given, from a drawing by Dr. Goring. The actual length of this animalcule was one 250th of an inch. We found none of this variety in Croton until the fall weather; and then, in October, we found many of them and few of the others.

These animals abound in salt as well as fresh water, and some inhabit only the open sea. Thousands of them may be taken in a single cup of water on the shore of any inlet where the eel-grass, or other drift, lies thick. The rapidity of their increase is beyond that of almost any other known animal. The progeny of a single female of the variety *Quadricornis* has been estimated to reach, in one year, the enormous number, 4,442,189,120. They feed upon smaller animals, and in turn are the food of larger. The antennæ and fin-like feet with which they are furnished enable them to keep up a swift whirling motion in the water, which brings their prey into the vortex and within their reach. The feeding process is easily studied, since they do not interrupt it when placed on the stand of the microscope, unless their quarters are too confined. Frequently, in clear water, will be found drifting the translucent shells of these beautiful creatures, from which the animal has disappeared.

In close connection with the cyclops we find in Croton water the animal before referred to as the monoculus. The misnomer is apparent on a close inspection of the insect, however, and his two eyes are remarkably beautiful. He is now known as the *Lynceus Sphericus*

FIGURE 6.—MONOCULUS, OR LYNCEUS SPHERICUS.

(Figure 6). This animal is incased in a shell, which appears to open like an ordinary bivalve, but in fact the shell is one, and the back so thin as to allow a spring sufficient to open it. The animal, armed with feelers, a sharp beak, antennæ, and feet or arms, opens his shell, and proceeds, as the cyclops has been described, to create a whirlpool, one edge of which is within his open shell, into which the smaller animalcules are swept. The translucency of the lynceus makes him a subject of great interest to examine, especially because of the heart-like pulsations which are visible in the dark spot in or near the centre of his body

Another animal, resembling the lynceus in some respects, has the right to the name monoculus, for he has but one eye. He is also an inhabitant of Croton, where I have found him at all times in the summer.

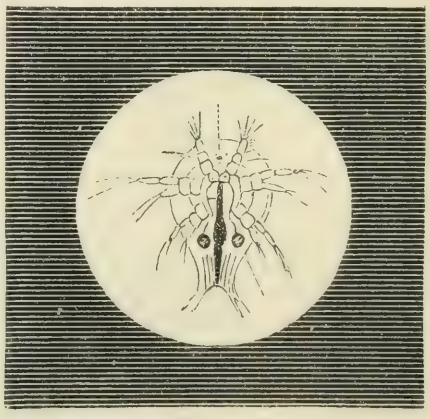

FIGURE 7.—THE SATYR.

One of the first experiments which I made with New York water was in an evening when some friends were in the house, who were nearly as skeptical as had been Mr. Johnson. I went out to the fountain in Washington Parade Ground, carrying a small open-mouthed vial. It was a summer evening, and there was something of a crowd around the fountain. A policeman overhauled me as I was stepping over the chain, but I persevered and dipped my vial

of water at the edge of the fountain, scraping it along the stones, by way of catching any stray animals that might loiter thereabouts.

"What are yo doin' there? Be out o' that!" exclaimed Charlie, who by this time had run around to my side of the fountain.

"It's catching animalcules I am," said I, with just enough of the brogue to win his affection.

"And what's thim? There's a law agin fishin' in the fountains."

"Bless yer sowl, these arn't fish; they's little animals as lives in the water, and you can't see them. There's as many as forty thousand iv them in this bit of a vial now."

"Holy Vargin! Why, I was just now a-drinkin' as much of it out of the fountain; and do you mane to say I drinked forty thousand of them alimankles? What's a man to do, anyhow?'

"Let 'em alone and they won't do you any harm; but if you take any whisky or liquor it'll disturb 'em in your stomach, and there'll be a divil of a row there."

"And how long first?"

"Maybe a couple of days or so; but ef I was you I wouldn't drink any thing for a week at the least, barrin' it was a little weak tay."

"Saint Patrick and all the saints! and this hot weather too! Blessed be Ireland where there ain't nothin' of the sort at all, at all, and where the whisky's as good as the water, and the water's as good as the whisky."

By this time I was at the gate and we separated. I saw in the police returns of the next day that one of the fifteenth ward policemen was found drunk on his beat, and I had reason to fear that my friend had preferred to drown the animalcules and his anxiety together.

Let us note in passing that the word animalcule is an English word, and the plural is animalcules, the *cules* being pronounced as one syllable. Occasionally the Latin word *animalcula*, and its plural *animalculæ*, are used, but the English form is preferable. This explanation may relieve some doubts.

Returning with my fountain water I placed a drop of it between two plates of glass, and found it teeming with animal life. My own surprise was as great as that of my friends. Hundreds, not to say thousands, of little round drops of light seemed rushing hither and thither, while occasionally a well-defined animal, apparently half an inch in length, would dash across the field of vision.

Upon subjecting the same water to a higher power, equivalent to a magnifying of nearly four hundred diameters, or one hundred and sixty thousand surfaces, the small drops of light were resolved into forms of life, and we saw the minutest animal known to human investigations. This is the *Twilight Monad*. Its appearance is not unlike the *polliwog* in shape, being a round body with a single projection at the side or mouth, known as a cilium. The cilia are the hair-like arms, feet, fins, legs, or other limbs of which most animalcules are possessed, and which are their means of motion and locomotion. The name is from the Latin *cilium*, an eyelash, and the eyelashes are accurate resemblances of the cilia of most animalcules.

The size of the monad, when full grown, is one 24,000th of an inch in diameter. They have been found of twice this size, in rare instances, that is, one 12,000th of an inch long. The number of these minute animals in a single drop of water may well be pronounced incalculable. No phrases that have been used by the most enthusiastic writers who have described the vast population of the animalcule world can convey any approximate idea of the numbers of these hosts. If the reader will with pencil and paper make the calculation for himself, he will find that in the space occupied by a drop of water, one-tenth of an inch in diameter, there is ample room for more than seventeen hundred millions of the monads to live and rove at will. A drop one-fourth of an inch in diameter would accommodate a population equivalent to the whole number of the human race on the face of the globe, and give them, perhaps, as much comparative space unoccupied as is now found on the earth's surface! To this we may add that many drops of water are as thickly populated as this. The thin oily scum on the surface of the fountain, which shines with rainbow tints in the sunlight, is in fact a layer of millions of millions of these tiny creatures.

I placed some clear water of the Croton which had been boiled, in a clean vial, and broke into it a few stems of the broom from a clothes' wisp. In four days the vial was crowded with monads in numbers that surpassed estimate, but of which it is safe to say that the two-ounce vial contained more than the entire number of the human race that have lived on the earth from the days of Adam to the present time. As to their origin, whence they were produced, a question on which infidels have based much false reasoning, and much talk about original life, spontaneous production, and similar ideas, it is not my purpose here to write. It is enough, once for all, to say that it is very easy to imagine the eggs or larvæ of animalcules as transferred in the sap of plants through whose minutest channels they would be carried as men floating in the Amazon, than it is to imagine or account for life without cause or parentage. Doubtless the eggs of animalcules are thus conveyed through all vegetable and animal juices, and remain for years or centuries unaffected until the circumstances which God orders bring them into life for His purposes.

The reader wishes to know how these animals are measured, and he doubts the possibility of determining a size so small as the one 24,000th of an inch. Before speaking of other Croton residents it may be well to pause here and explain the *micrometers* which are in use by microscopists.

Lewenhoeck, an early observer, used a system of comparison. He gathered grains of sand

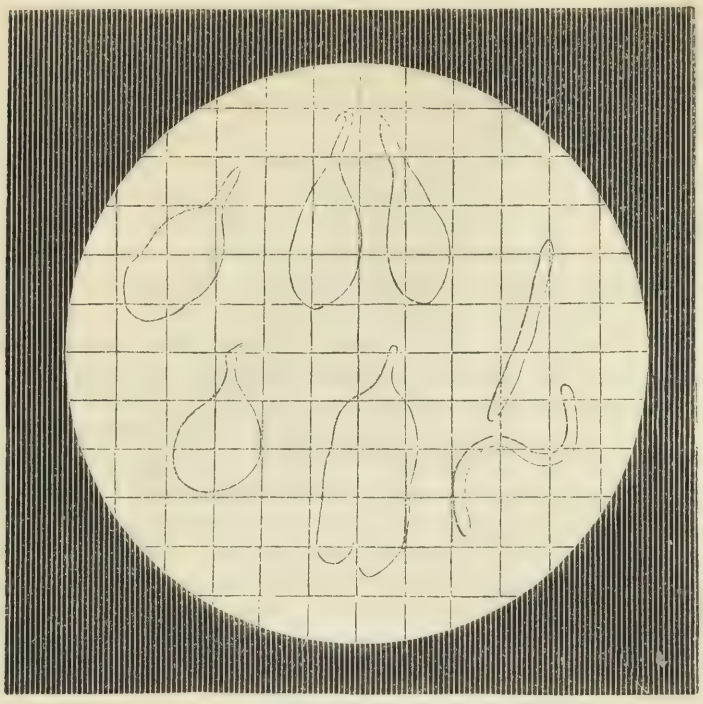

FIGURE 8.—MICROMETER SCALE.

Another plan, which is perfectly accurate, is illustrated in Figure 9. A spider's web, *a a*, *b b*, or filament of Dr. Woolaston's wire, is drawn across the field of vision, and made firm, so that in looking at the object the eye shall see the black line of the web or wire also crossing the field. The stage of the microscope moves with a micrometer head-screw, Figure 10, which the reader, of course, understands. If the thread of the screw be one 100th of an inch,

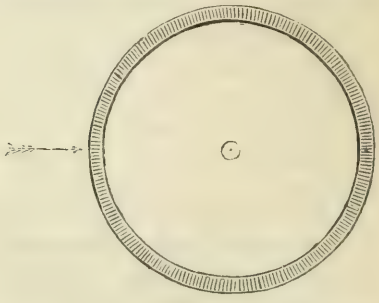

FIGURE 10.—MICROMETER HEAD SCREW.

which, when subjected to microscopic examination, were of the same size, and he arranged these against each other in a row till he found how many made a quarter of an inch. If a hundred, then one of them was one 400th of an inch in diameter, and he placed one in his field of vision by the side of an object and guessed at its size by comparison.

This method was, of course, but an approximation to correct measurement. The gradually increasing demands of science have made an accurate system necessary, and this has been reached by modern art.

By a fine adjustment of a diamond, guided by micrometer screws, lines are drawn on glass plates with astonishing minuteness. So complete is this art in its results that plates are now made on which parallel lines are drawn one 25,000th of an inch apart. These plates are in common use with the lines at this distance apart. The objects when viewed over such plates present the appearance indicated in Figure 8.

An objection to them is found in the fact that the glass on which the lines are drawn must necessarily be out of focus when the object to be examined lies on or under it.

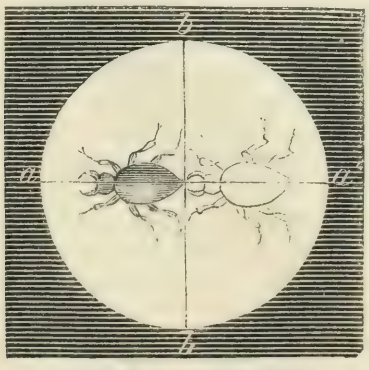

FIGURE 9.—A MICROMETER.

a single turn of the head will advance the stage that distance, and a tenth of a turn will advance it the one 1000th of an inch. It is very easily seen, therefore, that by turning the screw until the animalcule, or object under examination, shall be moved from head to tail or side to side across the web, or across one side of the web, its exact size will be determined. This arrangement is sometimes made in the French instruments so that at each 100th of a turn of the screw a sharp click is audible, and the observer, with eye fixed on the instrument and band on the head of the screw, counts the clicks until he has measured the length of the object.

The principle on which the glass scales before mentioned are engraved is similar to this. The glass is placed in an instrument where it is firmly held. A diamond is suspended over it by equally firm machinery, and the glass moves under the diamond so as to receive the line on its surface. By a micrometer screw the glass is then advanced one 1000th, or one 10,000th, or any other portion of an inch, the diamond descends, and the glass moves to receive a second line.

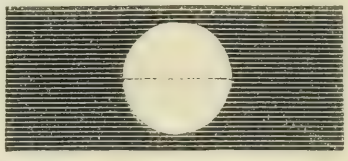

FIGURE 11.—NOBERT'S GLASS (REAL SIZE).

An illustration of the minuteness of this work was given by Mr. Nobert, a Prussian artist, at the World's Fair in London, in 1851. This consisted of ten bands of parallel lines, each band consisting of a large number of lines, drawn across a plate of glass. The figure herewith given represents the real size of the strip of glass, and the black line across it includes the ten bands, which, to the naked eye, appear

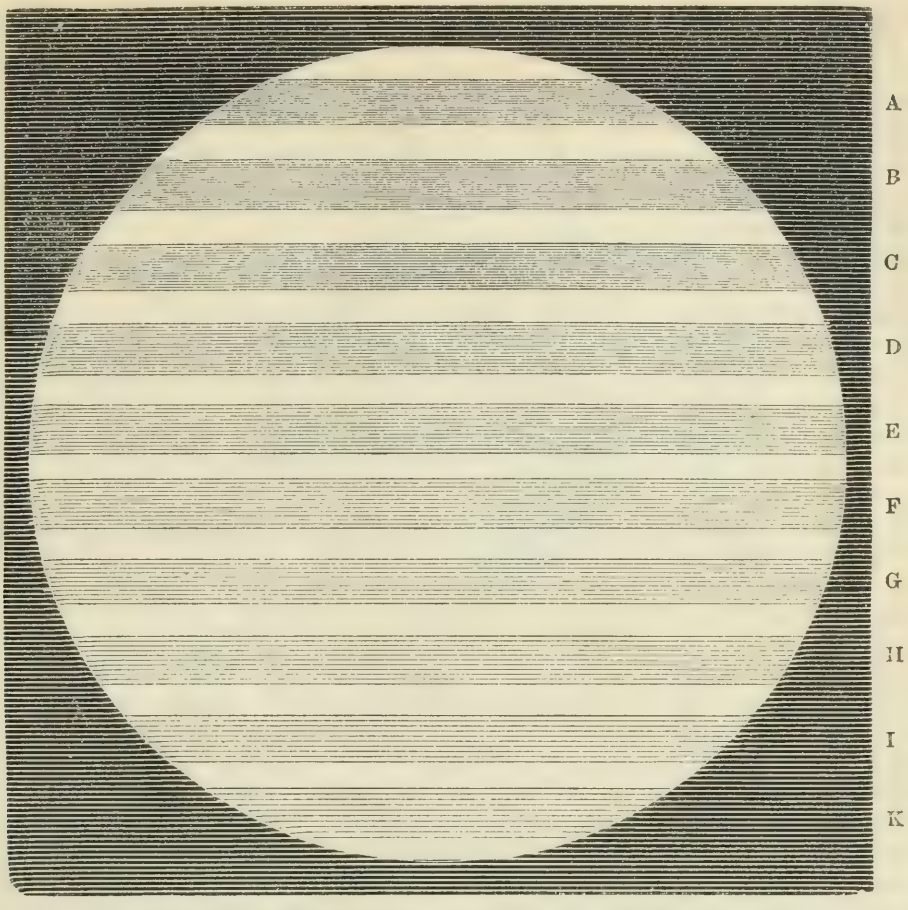

FIGURE 12.—NOBERT'S GLASS (MAGNIFIED VIEW OF THE LINE).

like one line. But these ten bands contain parallel lines with different spaces between. The appearance of the black line in the small figure when seen in the microscope is represented in the above illustration (Figure 12). The reader will bear in mind that this magnified view is not the whole white space in the real size, but only a spot in the centre, of *the width of the black line*, and no more. In other words, the ten ribbons in the large view are the black line in the real size view.

Now the spaces between these lines are as follows: In the upper band, A, there are 43 lines, of which there would be 11,265 in an inch, while in the lowest, or K, there are 128 lines, of which there would be 49,910 to the inch. The following list shows the number of lines to the inch in each of these bands:

	Lines.		Lines.
A	11,265	F	24,309
B	13,142	G	28,433
C	15,332	H	33,153
D	17,873	I	38,613
E	20,853	K	49,910

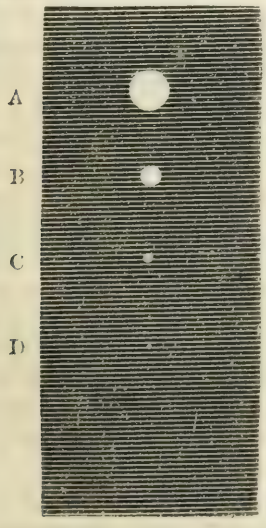

FIGURE 13.—A GLASS PLATE.

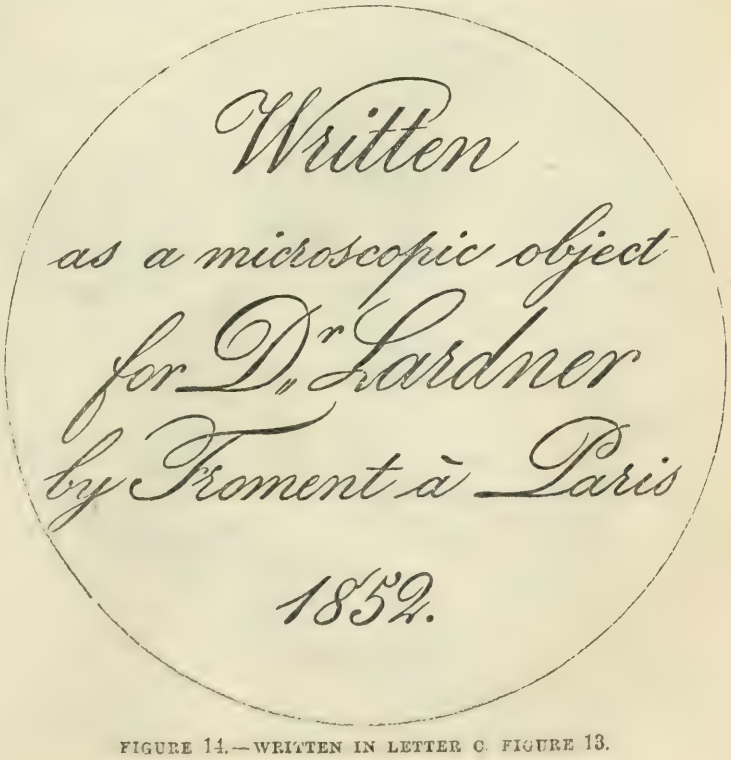

FIGURE 14.—WRITTEN IN LETTER C. FIGURE 13.

The practical value of a plate of this kind is as a test of the magnifying power of lenses. Thus, a lens which will separate the lines in the band A, while it leaves each of the other bands one line, is less powerful than one which will make the lines visible in B, or so on with reference to each series of lines.

While on this subject we may add a still more astonishing illustration of the skill of modern artists, aided by the microscope. Figure 13 represents a plate, on which the spaces A, B, C, D, are severally in diameter the 6th, 12th, 30th, and 70th of an inch.

M. Froment, of Paris, wrote for Dr. Lardner in less than five minutes, in a circle the 40th of an inch in diameter, less than the size of the space C, a sentence which, when magnified 120 times in length and of course the same in breadth, or 14,400 times in its surface dimensions, presented the appearance given in the last illustration, Figure 14. And M. Froment exhibited at the World's Fair, in 1851, the figures and drawings shown in the illustration, Figure 15, engraved in the space of one 30th of an inch, just equal to the spot at C, in Figure 13.

FIGURE 15.—ENGRAVED IN LETTER C, FIGURE 13.

We may now return to our "muttons"—to wit, our Croton acquaintances, the monads.

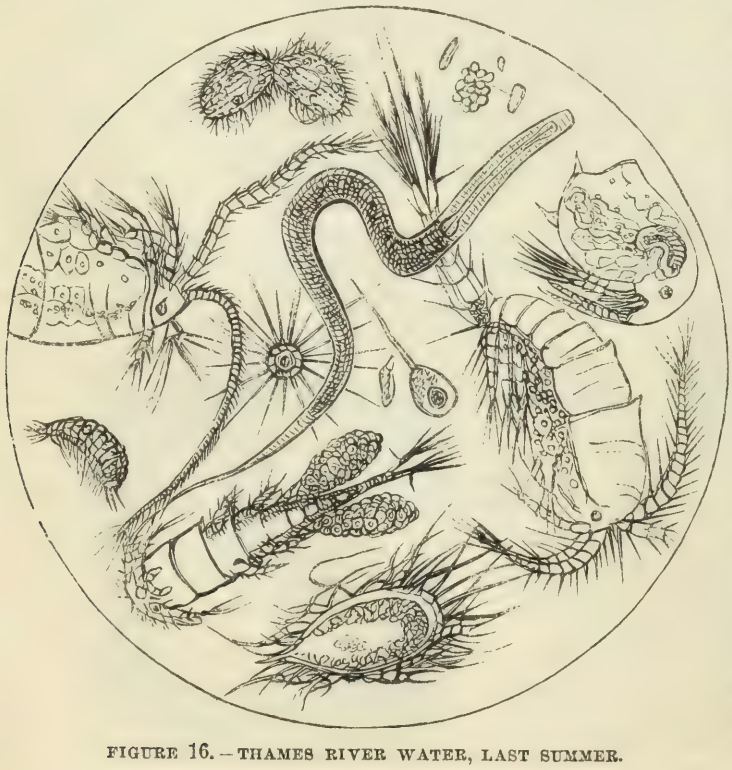

FIGURE 16.—THAMES RIVER WATER, LAST SUMMER.

These poor little wretches seem created for the food of the larger animals. The monoculus devours them by thousands. The cyclops makes destructive work in their ranks, and thus the business of the strong preying on the weak is carried down to the minutest orders. Monads feed monoculi, and monoculi in turn fill the maw of the lurco. The lurco is seized by the minnow or the young trout, and the pickerel devours the trout to fatten himself for man, the lord of creation.

But the vial of Croton from the Washington Parade Ground fountain was by no means destitute of other specimens of the animalcule tribe. In fact, a portion of it became a mass of them after standing a few minutes. This was the sediment which accumulated in the bottom of the vial, and which I lifted by putting a glass tube down into the vial, with a finger pressed on the top, and removing the finger when the end of the tube rested on the bottom of the glass. The water thus obtained in the tube, lifted out and transferred to the space between two plates of glass separated at the edges by a piece of paper, was the habitation of thousands of animalcules. The illustration which is given of Thames water (Figure 16) during the last summer's hot weather answers for an accurate illustration of Croton in the Parade Ground fountain. Every one of these animals was here,

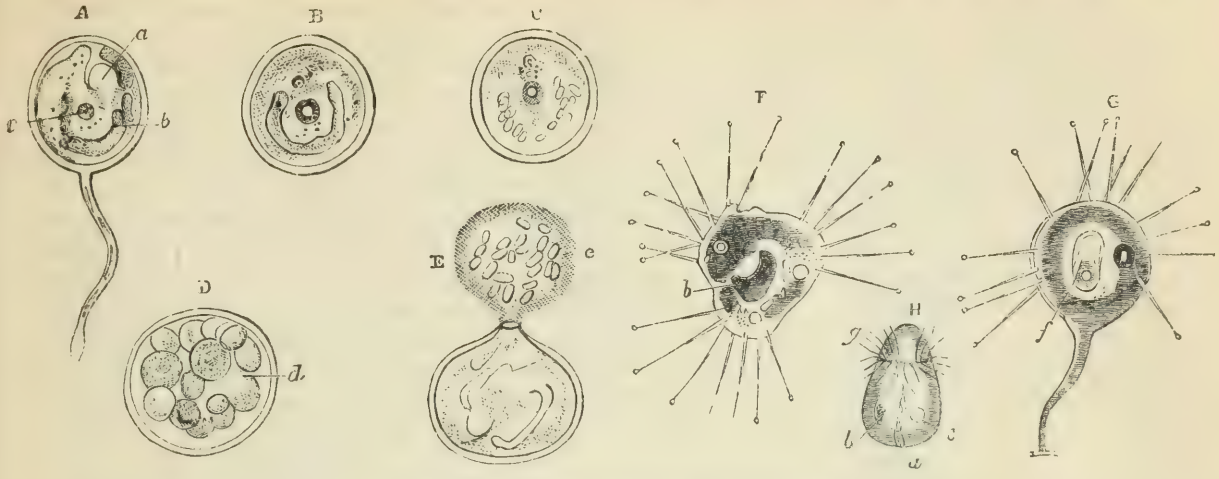

FIGURE 17.—METAMORPHOSIS OF VORTICELLA.

A, Full-grown and surrounded by a case made of its own gelatine; *a*, circlet of cilia; *b*, nucleus; *c*, contractile vesicle; B, the same separated from its stalk; C, D, more advanced; E, burst open and discharging a mass containing spores; F, G, H, further developments; *a*, *b*, *c*, as in A.

in a high state of activity. But not these alone. Other varieties without number abounding in the water made it appear like a living mass.

The vorticella (Figure 17) in all his metamorphoses, the trichoda lynceus (Figure 18), changing his shape from day to day—these and countless other varieties, which we have no space to describe, abound in the water we drink, and are swallowed by millions in New York throats.

Several varieties are found of the rotifer—most beautiful, and perhaps the most interesting of the animalcules. These animals derive their name from the appearance of one or more wheels revolving rapidly on their heads. For a long time they were supposed to have appendages which actually performed revolutions at incredible speed; and it was a subject of wonder to students of natural history that such a part of the body of an animal could have any connection, by nerves or otherwise, with other portions of the same animal.

Increased power and achromatic glasses resolved this apparent wheel into a great number of cilia, arranged in circles, and which moved in succession with great rapidity, so as to cause the apparent circular motion.

The object of these cilia is, as we have described in other cases, to cause a flow of the water into the animal's mouth, and this brings with it the food on which he preys. A large portion of the animalcule world get their living in this same manner.

Hitherto we have not found in the Croton many specimens of the *Rotifer vulgaris* (Figure 19), but enough to be assured of their residence in its waters, and of the probability that, under

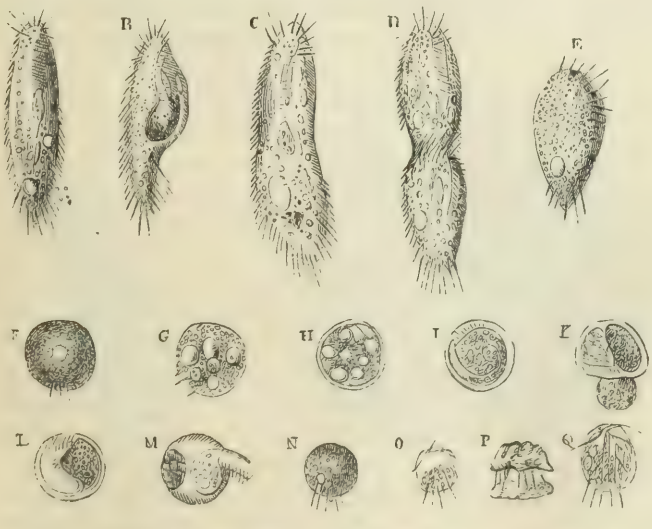

FIGURE 18.—METAMORPHOSES OF THE TRICHODA LYNCEUS OF MULLER.

A, Larva; B, same after swallowing one of his own kind, shown at M; C, full-grown; D, process of increase by fissure; E, one-half after fissure; F, the same become spherical and motionless; G, appearance after fifteen days; H, still later; the others are developments of the same animalcule.

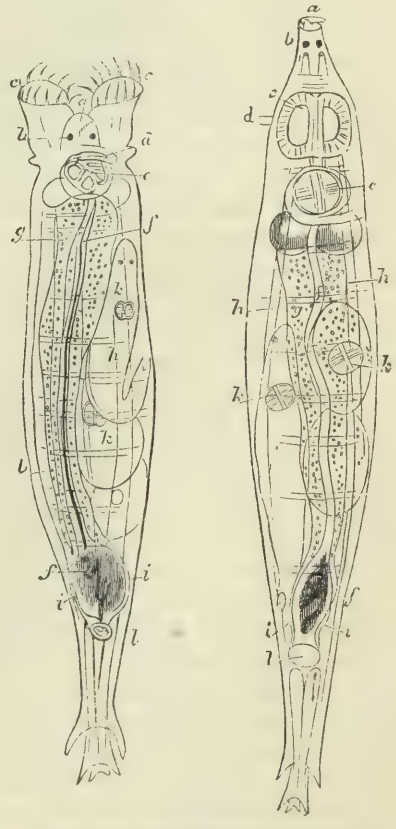

FIGURE 19.—COMMON ROTIFER.

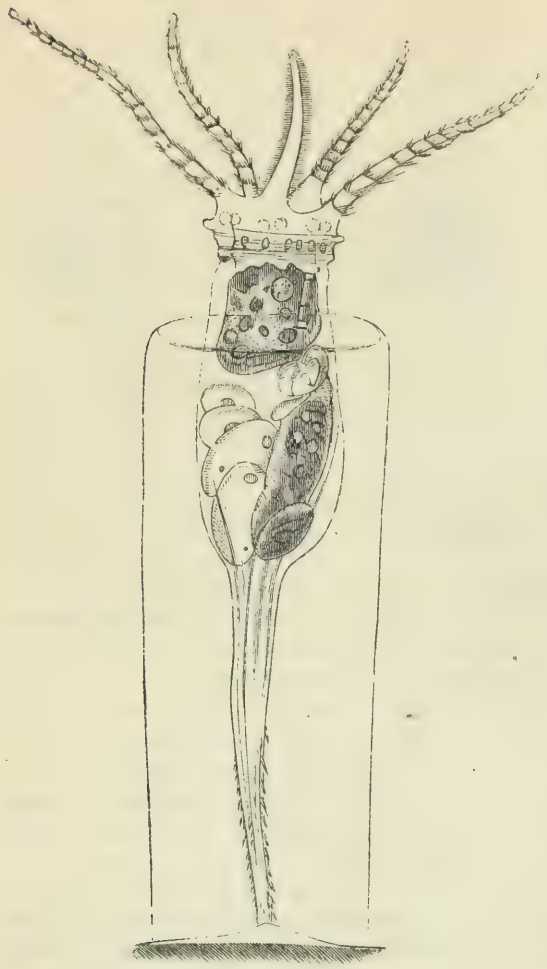

FIGURE 20.—CROWN WHEEL ROTIFER.

favorable circumstances, he may be found in vast quantities. It is probable that, in the large reservoirs, where the water is exposed to the sunshine, this variety will be found abundant. We have found single specimens, and sometimes two or three, in a drop of water.

The rotifer vulgaris is a translucent, almost transparent animal, who may be described as the type of the entire class. The illustration gives an idea of the animal when extended to his full length. In a quiet or torpid state he shuts himself up like a telescope, and appears like a small ball. His tail is composed of three joints, apparently sliding over each other, and each is forked at the end like the tail of a fish. The head, or the end which answers to the head, is also capable of being drawn within the covering of the neck or body, and when projected is at first a conical-shaped object, which suddenly develops the two circles of cilia, one on each side, which commence a rapid motion, giving to the inexperienced eye all the appearance of two coach wheels in revolution.

The animal usually attaches itself by the tail to some stationary object, or to something heavier than himself. To find this place he moves along from point to point by a progression like that of the worm known as the inch worm or the measuring worm, to which superstition, in some places, assigns the business of measuring the length of one's coffin around one's hat. No such superstition could be connected with our beautiful friends the rotifers, who might measure their lengths during their entire lives and yet not reach the breadth of a coffin head. At the same time they do sometimes cast loose and move with incredible velocity, as do most of the animalcules; and it is probable that the smaller the animal the swifter his relative motion. The monads and other animals of the smallest kind move with a speed which is lightning-like in proportion to their own size, so

FIGURE 21.—BELL-SHAPED ANIMALCULE, OR VORTICELLA NEBULIFERA.

A, ordinary form; B, spiral stalk contracted; C, bell closed; D. E, F, increase by division.

that they pass through space several hundred times their own length within a fraction of a second of time.

The crown wheel rotifer, Figure 20 (*Stephanoceros Eichornii*), we have not yet found in Cro-

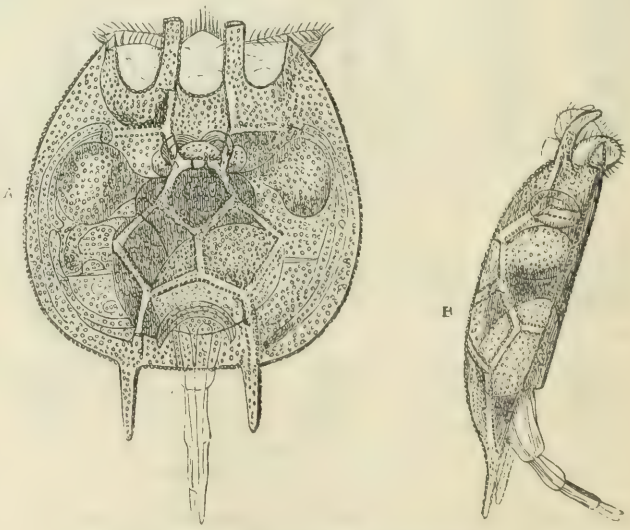

FIGURE 22.—NOTEUS QUADRICORNIS.

A. Dorsal view. B. Side view.

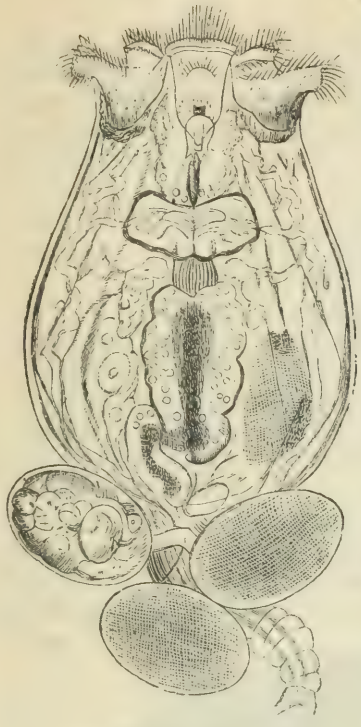

FIGURE 23.—A ROTIFER.

ton, though he probably exists there. He may be mentioned, in passing, as one of the most beautiful varieties.

The bell-shaped, Figure 21, the trumpet-shaped, and others which by some are not classed as rotifers, abound in the New York water; and in some days the queer-looking *Noteus quadricornis*, Figure 22, who folds his tail over on his back and shuts it up like the blade of a jack-knife, is seen roving swiftly in pursuit of his prey.

Exquisite groups of the rotifers, of the form represented in Figure 23, are frequently found, lying apparently fastened by their tails to a common centre. In one instance we counted twenty-six radiating from a common point, all working fiercely with their cilia, so that the surrounding water resembled the whirlpool of Niagara, in which timber and drift-wood of all kinds floated and was thrown hither and thither. The description is no exaggeration, as the microscopist well knows.

One of the most beautiful and interesting specimens that we have found is the bell-shaped animalcule (Figure 21). He is sometimes seen alone and adrift, but more frequently in groups of from half a dozen to thousands. Small pieces of half-decayed wood, bits of leaves and stems, are often covered with masses of them. They are, in appearance, little bells, or, more exactly, globes for solar lamps or gas, nearly perfect globes, with an opening at the end surrounded with cilia. They are attached to long, slender, hair-like stems, which possess the capability of sudden contraction into spiral coils. The animal, on touching any foreign substance with his cilia which injures or disturbs him, suddenly flies back, drawn by this spiral contraction, and closes his mouth. But only for an instant, when he again resumes his search for food. The exquisite beauty of these animalcules is not to be described or illustrated. They vary from one 300th to one 600th of an inch in diameter.

Not unlike them is the tree animalcule, which is usually found in dense clusters, attached to one spiral muscle, which is also capable of great expansion and contraction. All these are abundant in Croton.

Eel-shaped animalcules are very numerous. Some of them find their life in active motion, while others lie nearly torpid, or move but slowly. The former move with indescribable contortions, tying themselves in knots, jerking head and tail like whips, rolling as if in convulsions, constantly acting as if they suffered the agony of damned souls. It is too painful for ordinary nerves to watch these exhibitions, which, nevertheless, examination has shown to be only the ordinary life of the animal. If one should

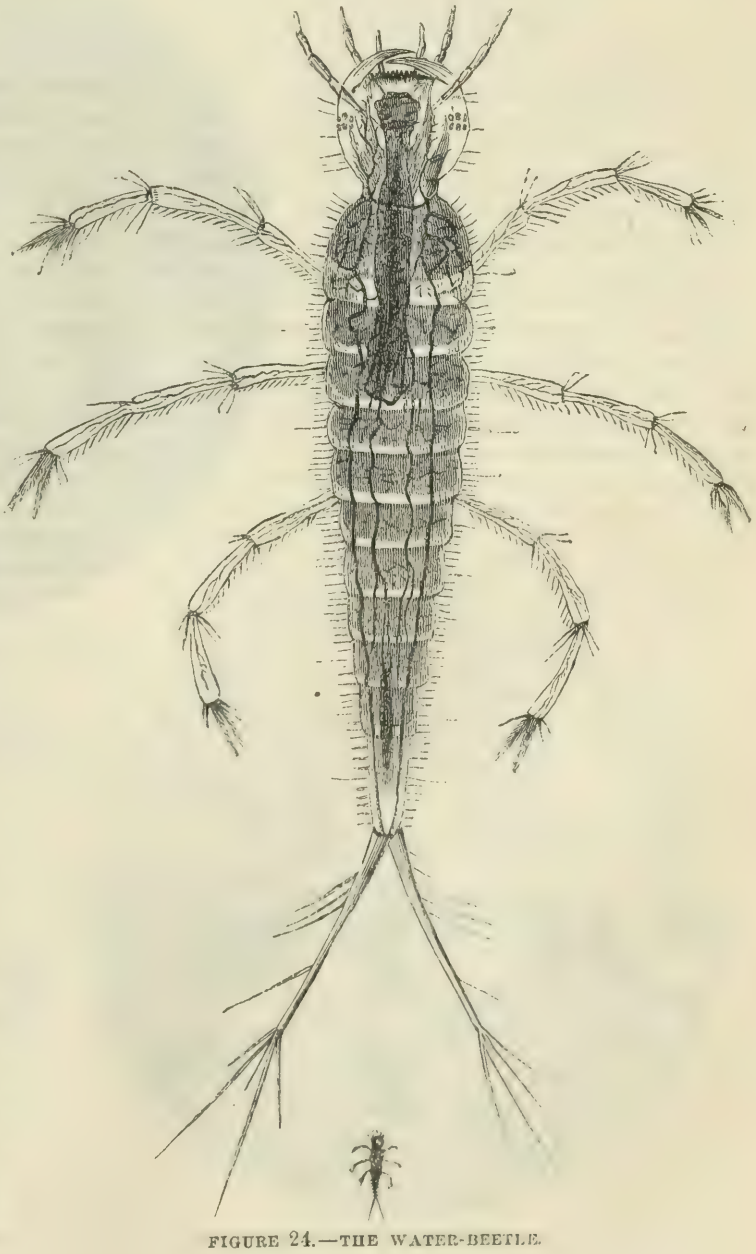

FIGURE 24.—THE WATER-BEETLE.

FIGURE 25.—ENGLISH CISTERN WATER.

imagine a man who, during his entire existence, was occupied in going through the most rapid contortions of the gymnast, nor resting one instant, day or night, standing on his head, doubling himself into all sorts of knots, jerking with St. Vitus's dance and all the diseases that produce muscular motions, he may have an idea of the life of these animals. They are colorless, translucent, and jelly-like. The larger ones have color, and occasionally their stomachs and internal organization are visible in large specimens. A vial of Croton in which a few particles of bread were crumbled showed, in four days, immense numbers of these animals.

Mr. Johnson had become tolerably accustomed to the animalcules before many weeks, and I do not know that he would not have taken to his Croton, with all his ancient gusto, but for a discovery made on a certain evening which shocked him beyond all he had before seen.

He was examining a small glass box of water in which there were an unusually large number of the monoculi (lynceus), when, as he expressed it, a monster suddenly advanced his head into the microscopic field and "before my very eyes, Sir, he seized the monoculus I was examining, and with an apparatus of pincers and jaws and piercers and tweezers,

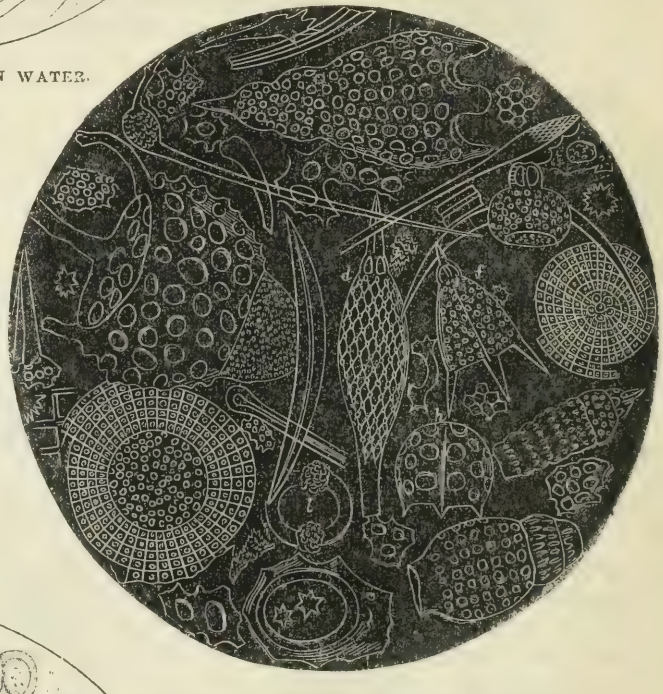

FIGURE 27.—FOSSIL PLANTS AND ANIMALS, IN ENGLISH CHALKS.

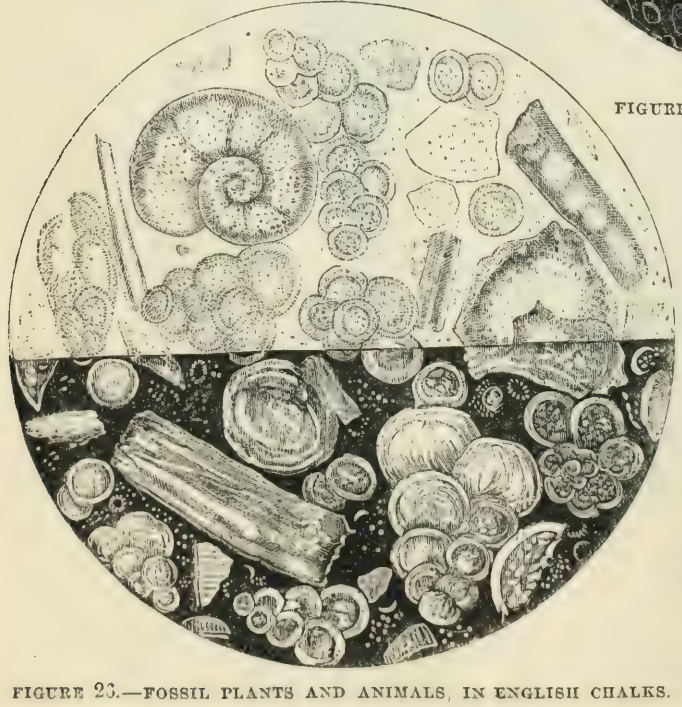

FIGURE 26.—FOSSIL PLANTS AND ANIMALS, IN ENGLISH CHALKS.

such as I never before saw or dreamed of, he immolated the poor devil before my very eyes!"

Well might Mr. Johnson be overcome. The water-beetle, Figure 24, is no trifler. It is more ferocious than the tiger, and armed with more deadly weapons than any known animal. His method of attack is fierce, and results usually in triumph even over larger and stronger animals. He seizes the monoculus, pierces him in several places, and then sucks the juices from his body. Others he destroys by violent attacks.

Most of the animalcules that we have represented are inhabitants of fresh water all the world over. The eye

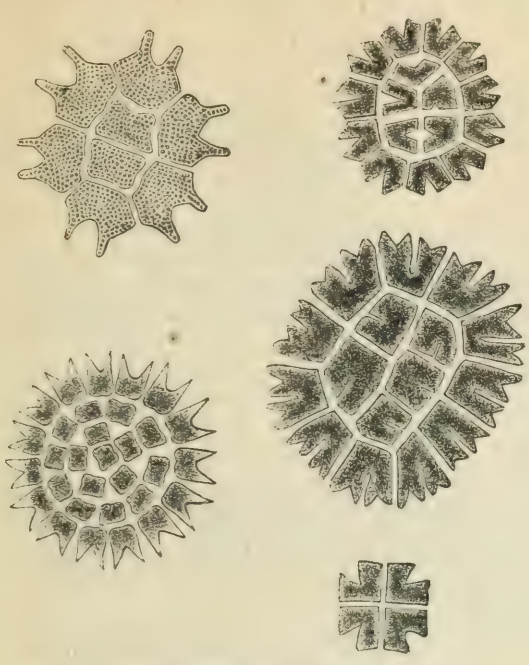

FIGURE 28.—PEDIASTRUM.

readily sees in the animals shown in Figure 25 —which is a representation of English cistern water, taken last summer near London—many of the near relatives of our American species. Nor is it only in modern times that we find them. The ancient rocks, the relics of the formative periods, show them in fossil state, as the drawings which Dr. Carpenter has had made from English chalks, subjected to microscopic examination, abundantly testify (Figures 26, 27). And we remark, in passing, that if any one desires to pursue this investigation, and is tempted by this article to read or to investigate for himself, he can find no work so complete for his aid as Blanchard and Lea's edition of Dr. Carpenter's work on the Microscope and its Revelations. The student will find in it all the directions that he needs and abundance of illustration.

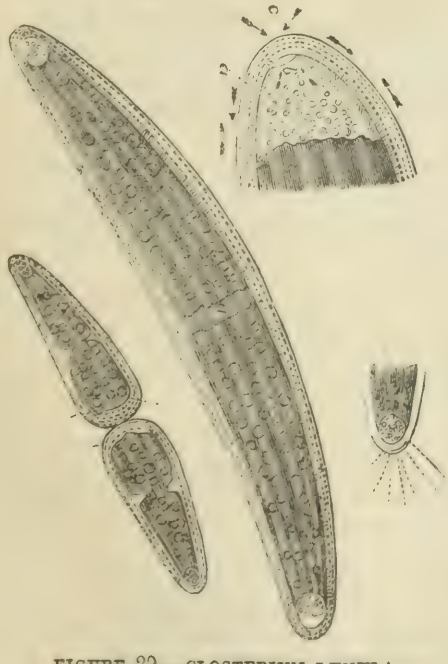

FIGURE 29.—CLOSTERIUM LUNULA.

What boy has not, in a hot summer day, entered the still aisles of an old forest and strolled along until he came upon a place where the water rests in pools and the dead leaves of the last autumn lie black and rotting on the bottom? The water is remarkably clear, but it is full of dead limbs and drifting leaves, long stems of luxuriant vegetation, grass and vine, while here and there, moving through its transparent depths, the boy sees the water-snake, the terrapin, frogs, tadpoles, and other dwellers in the forest swamp.

Nothing in the world affords a better illustration of the appearance of water in the field of the microscope. We have described a few of

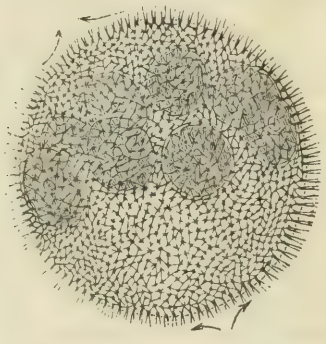

FIGURE 30.—VOLVOX GLOBATOR, PLANT OR ANIMAL?

the living inhabitants which the eye detects. These are seen moving about among masses of vegetable matter, some fresh and green and sparkling, others old, decayed, and dead, looking like twisted branches of trees, or dead and decayed leaves, or sometimes like vast patches of bark, and trunks of saplings, and old stumps of forest monarchs. Turning back the filter of the Croton, and catching in a glass the first rush of the water let on, which brings with it the vegetable and animal collections of the filter, the observer will have an ample treasure for an evening's or a week's examination. Allowing the water to settle, and lifting with a small tube some of the sediment, the microscope will show in this wonders to which no illustration will do justice. Long stems of

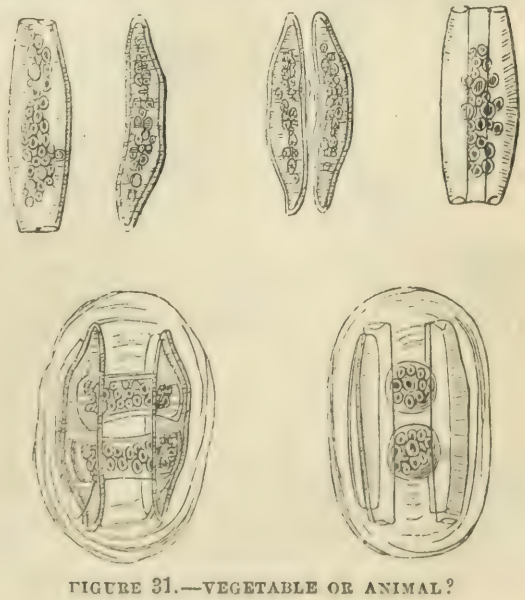

FIGURE 31.—VEGETABLE OR ANIMAL?

jointed plants, bright green, and looking like the ordinary reed or cane, reach across the field. Decayed leaves and stems and seeds of plants, many of which are only microscopic plants, huge masses of drift-wood in heaps that go rolling and plunging along with the least motion of the drop of water, while among them the animalcules, now resembling sea-monsters, play in fearless sport or feed undisturbed by the commotions that surround them and to which they seem accustomed. To the rotifer the transfer of his drop of water to the glass box of the instrument is no more of a phenomenon than is to a man the change of the world in its orbit from hour to hour.

A few of these plants we illustrate from Dr. Carpenter's drawings. The *Pediastrum*, Figure 28, is one of the lowest forms of vegetation. Objects which are invisible to the naked eye, present, under the microscope, this star-like appearance of beauty. The *Closterium*, Figure 29, is one of the plants which borders closely on animal life. The arrows around an enlarged view of the end indicate the course of a current of water which is visible, and which is steady and constant as is respiration in animals. But the volvox, Figure 30, is more like an animal, rolling swiftly around, seldom stationary, and exhibiting signs of intelligence which render it impossible for the new observer to believe him, what the old microscopists have consented to call him, a mere vegetable; and the same remark applies to an object which is sometimes found in myriads in the Croton, moving slowly backward and forward, multiplying by division, as represented in Figure 31. The palmoglœa (Figure 32), is a plant consisting of only one cell.

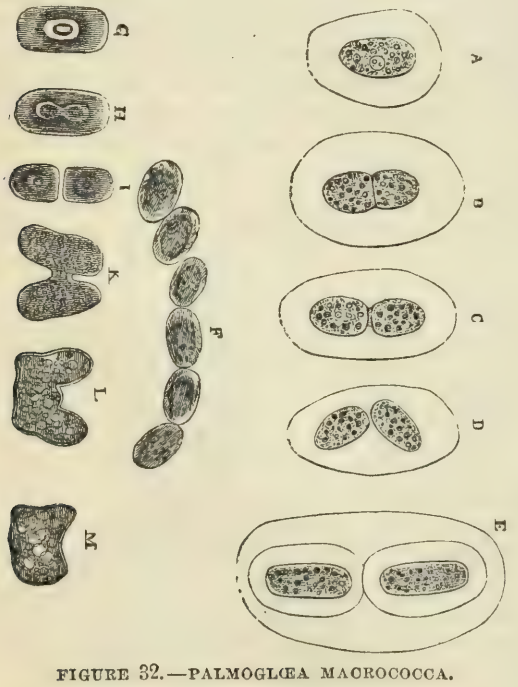

FIGURE 32.—PALMOGLŒA MACROCOCCA.

We add that Mr. Johnson's health has been better during the winter months, owing to the fact that we found no animalcules in Croton in very cold weather, and the old gentleman in consequence punished the hock less severely.

JOY TO THE BRIDE.

A SIMPLE thing! Two wedding cards,
Opened most carelessly to-day,
Told that my cousin Lillian
Had changed to "Mrs. Simon Gray."

'Twas a great match, the gossips said;
And all the dear five hundred vied,
With wedding-gifts and cheer, to bring
Joy and good wishes to the bride.

Joy to the bride? I flung the fair,
Enameled falsehood far away.
Give joy to her that she had wed
A money-chest, like Simon Gray?

Joy to the bride, that life must be
Henceforth to her a gilded lie?
Joy, that her woman's heart must ache
In solitude for sympathy?

For what avail her broad saloons,
Draped with their gorgeous tapestry;
If in the heart's closed corridors
Flutter the shrouds of memory?

And what avail the paintings rare
That mock her from those gilded walls,
When she can see but one sad face
Painted on memory's spectral halls?

One face, forever frowning down
The feeble falsehood, that could dare
Turn from a heart that loved her well
To wed a life she could not share.

E'en as the pictures on his walls,
He bought her for his state and pride;
And ostentatiously parades
The purchase-money of his bride.

Fair Lillian! False Lillian!
So fervently I love you yet,
That I could wish the present glare
Might blind you from each dark regret,

But that I know 'tis vain:—the heart
Will turn and ache for sympathy;
Raise those blue eyes, and meet thy lord's
Mute look of blank stolidity.

What priest of God gave to that man
For thee the sacred nuptial ring?
And placed his hand on thine, and gave
God's blessing to so foul a thing?

What father, with the frosts of age
Writing their lessons on his brow,
Could give away a youth like thine
To such a false, unholy vow?

What mother—shame on womanhood,
Made sacred by maternal cares—
Could, with these instincts in her heart,
Thus cruelly devote thy years?

Out on them all! Out on the age!
That deifies this gilded pride
And knows no other worth!—For one,
I send no greetings to the bride.

BALBOA CARRIED ON SHIPBOARD.

VASCO NUNEZ DE BALBOA.

THE two hemispheres of the earth, projected on a plane, appear as if a globe might have been split in twain and folded back, so similar are they in their general configuration. The want of more exact resemblance might readily be accounted for from the distortion inevitable in such a vast and violent rupture. Each of the two northern continents has a continent suspended from it, like a huge stalactite dropped into the southern ocean, each connected by a narrow ligament that seems wholly inadequate to the support of such a ponderous mass. South America and Africa, in their relative position to the northern continents and general configuration, match each other in a way that accident could not have effected; while the land in the Pacific, which should correspond to Australia, instead of being in one mass is broken up into innumerable islands. In both hemispheres the mass of land is north of the equator, while below the equinoctial line the earth droops to a point. These two narrow ligaments—the Isthmus of Suez and of Darien—present singular barriers to navigation, forcing the explorer into forbidding regions, and around capes wrapped in almost perpetual storms. The former neck of land was, apparently, always easy of transit, while the latter, until recently, has been beset with great difficulties and dangers.

The Isthmus of Darien (we mean by this the whole strip of land from Mexico to the southern continent) has been an object of deep interest from the first discovery of the Western World, and to-day, more than ever, is the centre of common attraction. In fact, it seems to be the only apple of discord between us and the Old World, and it would not be strange if it finally involved us in a long and wasting war. Since the acquisition of California and New Mexico the impression has become fixed in the mind of the American people, and is deepening every day, that we must have control of that Isthmus. Great wagon-roads, and even a railroad across the continent, will not answer our purpose; for the snow, drifting from the rugged sierras into the deep cañons and over the vast plains, would make these modes of transit very unreliable for nearly five months in the year. These considerations, together with the steady extension of our territory southward, are gradually fixing the belief that "manifest destiny" points to our occupation of the entire continent in that direction.

From the first organization of our Government our southern boundary has been a floating one; and is it reasonable to suppose that now, when enterprise and emigration are more active than ever, that this territorial line is all at once to become stationary, and serve as a wall of iron, against which our increasing bands of adventurers, as well as peaceful emigrants, are to roll up and retire disheartened and vanquished? We are not speaking of the right or wrong of such a course, but of the certainty of our pursuing it. We have only to take the history of our encroachments southward for the last fifty years as a scale to show us where we will be fifty years hence. Louisiana, Florida, Texas, California, and New Mexico are mere finger-boards to the man of reflection and judgment, pointing the way we are going.

But the possession of these great transit routes

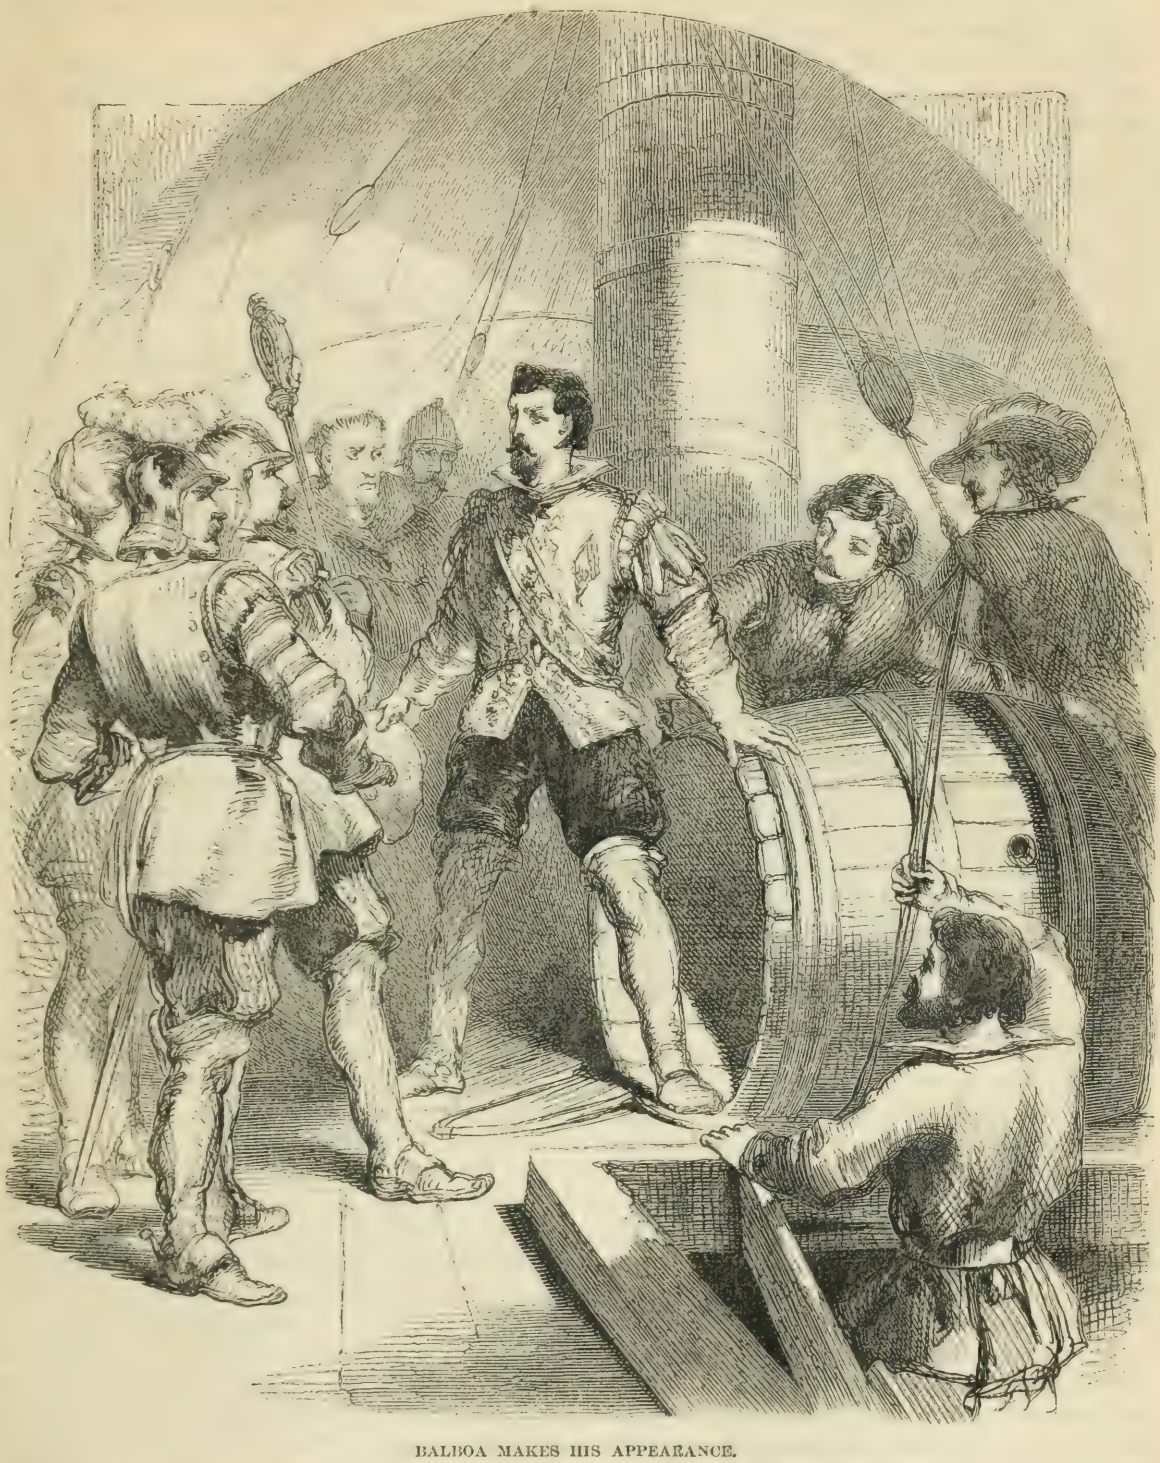
involves the possession of the avenues leading to them. The road, without the gateway, is useless; the control of the one involves that of the other; and when actual ownership of the Isthmus is secured, the possession of those islands that would bar the entrance to it must necessarily follow. Hence, consult and negotiate as diplomatists will, whether good or evil will come of it, we are destined to have the way to our vast possessions on the Pacific. One transit route is already in use, and a second is surveyed.

Of this Isthmus—an object of such deep interest to Columbus and his followers, and occupying such a prominent place in the eyes of the civilized world at present—we design to give some account. It has witnessed exhibitions of daring, of patience, endurance, and suffering, that entitle it to the regard of the historian.

Columbus, after his first discovery of the New World, continued to make repeated voyages, pushing his adventurous ships still farther westward, filled with the first grand idea—the discovery of a western route to the East Indies—that had sent him sailing over an unknown sea toward the setting sun. The fame of his discoveries soon covered the sea with similar expeditions; but all were governed by personal ambition or thirst of gold. Bastides had reached the farthest point west along the northern shore of South America, penetrating to the Gulf of Darien. But Columbus, on his fourth voyage, struck the eastern and southern point of the Bay of Honduras, and coasted along down toward the southern continent, carefully probing the Isthmus as he went, to find some break in the barrier which he believed to shut out an ocean beyond. If he had followed the direction of an Indian, he would have gone northward and discovered the rich country of Mexico. But he cared not for gold and riches. Fired by a nobler ambition, he refused all opportunities to amass wealth, and intent only on girdling the world with his ships, felt his way on till he nearly reached the farthest point of Bastides's exploration. For the first time he then abandoned all hopes of penetrating to the Indies in that direction, and reluctantly retraced his steps. He was succeeded by others more rapacious of power and more greedy of gold.

Columbus had left a colony, with his brother as Governor; but before he recommenced his voyage he was compelled to take them on board, in order to rescue them from the Indians. His report of the vast wealth that was buried in these hitherto unknown regions naturally turned the attention of adventurers thither.

The first two who established colonies were Ojedo and Nicuessa, rivals in the enterprise.



Ojedo, after numerous hardships and narrow escapes, at length despaired of reaching the river of Darien, and established a colony at Uraba, calling it St. Sebastian. Nicuessa, after undergoing incredible trials, struck the coast farther up, and finally concluded to establish a colony at a place which he called Nombre de Dios, nearly opposite the present city of Panama.

In 1510 the Bachelor Martin Fernandez de Enciso set out in search of the colony founded by Ojedo, who had returned with his fortunes wrecked. Arriving at Carthagena, he found a brigantine containing the remnant of that colony, which had been left in charge of one destined to figure largely in the future history of the Western World. This was no less a personage than Francisco Pizarro. Ojedo had given instructions to the colonists to leave if they did not hear from him in fifty days. The time having expired, they prepared to depart; but the miserable craft in their possession was not large enough to hold them all, and so they waited till sickness and famine should reduce them to the required number. This did not take long, and they soon set sail, and had reached this port on their return.

There was likewise an adventurer on board of Enciso's vessel whose name was also to have a world-wide renown. This was Vasco Nuñez de Balboa. Little did these two young men—one the illegitimate son of a peasant girl, and now the disheartened leader of a few famished colonists returning to their homes, and the other a penniless adventurer and an absconding debtor—dream, when they met in the lonely harbor of Carthagena, of the destiny that awaited them.

Balboa was of a noble though poor family; but his poverty did not prevent him from leading a dissolute and reckless life, which involved him in such pecuniary embarrassments that, to escape from trouble at home, he embarked with Bastides in search of fortune in the New World. Returning from a voyage along the northern coast of South America he stopped at Hispaniola, and set up as a farmer. Again becoming inextricably involved in debt, he determined to escape to sea and join the Bachelor Enciso in his expedition. But his creditors watched him so closely that he at first despaired of success. At length, however, he hit on a scheme that foiled the vigilance of his enemies. Causing himself to be headed up in a provision cask, he ordered his men to carry it on board Enciso's ship. When the vessel was far out to sea he kicked the head out, and crawling forth, stood on deck a gallant-looking cavalier as one would wish to have by his side in a daring expedition. Tall, well-formed, handsome, and fearless-looking, he bore himself more like a leader than a follower. Strong and active, he was dreaded as a swordsman and admired as a cavalier. Enciso was at first enraged at the deception practiced on him, and at the free and fearless bearing exhibited by Balboa, and declared that he would leave him on the first desert island he came to. But, on farther reflection, he thought that such a strong and dauntless man should not be lightly thrown away in an expedition fraught with unknown perils, and where one good sword might be the salvation of all. It was not long before he had occasion to congratulate himself on this decision.

Pizarro concluded to return with him, and the whole set sail for St. Sebastian. Entering the port, the Bachelor's ship stranded on the

BALBOA MAKES HIS APPEARANCE.

rocks, and in a few minutes horses, swine, and all the supplies for the colony were swallowed up in the waves, and he and the crew escaped with difficulty to the brigantine of Pizarro. Disheartened, he knew not whither to turn. At this critical juncture Balboa presented himself before him, and told him that when he was with Bastides on this coast they discovered an Indian village on the western bank of a river called by the Indians Darien. The country around it, he said, was fertile, and filled with gold, and he offered to conduct him there.

The Bachelor's hopes immediately revived, and hoisting sail he steered thither. Arriving at the place, he dispersed the Indians who opposed his landing, took possession of the village and provisions, and collected gold ornaments to the value of 50,000 dollars. Overjoyed at this unexpected turn to his fortune, the Bachelor determined to found a settlement there, and called it Santa Maria de la Antigua Darien.

The first act of Enciso was an arbitrary one, and immediately gave birth to an opposition which finally overthrew him. He prohibited, on pain of death, all private traffic with the Indians for gold. Balboa, who had never forgotten the threat to abandon him on a desert island, fanned the discontent which this prohibition created, and very artfully removed all illegality from the increasing revolt by declaring that the Bachelor had no control over this territory, it being embraced in that taken possession of by Ojedo,

of which the unfortunate St. Sebastian was the capital. Enciso was therefore deposed, and Balboa, one Zamudio, and another, were elected alcaldes. This arrangement not working well, the people determined to vest the authority in one person.

While discussing whom to select they heard, to their astonishment, the firing of cannon across the gulf. They replied with cannon, and in a short time the wild and desolate waters of the bay were enlivened by two sails standing across to their side. It was Colmenares, in search of Nicuessa, whom we left establishing a colony at Nombre de Dios. Colmenares, on being told of their difficulties in selecting a Governor, advised them to send for Nicuessa, in whom the proper authority to rule these domains had been vested by the King. They gladly accepted this proposition, and he sailed for Nicuessa. He found the settlement, but it was reduced to the lowest stages of suffering. Of all Nicuessa's gallant, hopeful band only sixty squalid, famine-struck wretches remained. The appearance of the ships of Colmenares was like life from the dead to them. Nicuessa, who was plunged in the profoundest melancholy, shed tears of joy when he heard that he was elected Governor of Darien, and the revulsion of his feelings was so great as to wholly overcome him.

The sudden elevation from such depths of misery was too much for his weak head. In talking with the envoys sent from Darien with Colmenares he assumed a lordly tone, and agreed entirely with Enciso that the colonists had no right to traffic for gold with the natives. The envoys immediately set sail for Darien, and, assembling the people, reported this, with many other things that Nicuessa had said, and much that he did not say, which so exasperated them that when the new Governor arrived, a few days after, they had resolved that he should not land. As he approached the shore he saw a multitude, headed by Balboa, assembled, as he supposed, to do him honor. He immediately prepared to land, when he was hailed by the public attorney, and forbidden to set foot on shore. At first he was thunder-struck; then he attempted to reason with them, but in vain. Next day, being allowed to land, he was seized and made prisoner, and but for the strenuous exertions of Balboa would doubtless have fallen a sacrifice to the vengeance of the settlers. He was released, but was compelled to re-embark and put to sea. His ill-fated vessel was never heard of more.

The struggle for the mastery was now between the Bachelor and Balboa. The former was tried, condemned, and his goods confiscated. His friends, however, interceded for him, and he was released and dispatched to Spain. Balboa, too shrewd to let him go alone, persuaded Zamudio, his fellow alcalde, to accompany him, in order that he might meet his charges on the spot, and also tell what great things he himself had done. Knowing the ship was to stop at Hispaniola, he sent a large amount of gold to the royal treasurer there, who was a great favorite of the King, and had been invested by him with large powers.

Wielding now the sole authority, Balboa began to cast about him to discover the gold that was said to abound in that region. It is a little singular that the very depredations he made on the Indians inland, and the sordid love of gold exhibited by his followers, led to the discovery of the Pacific Ocean and the vast results that followed. He first sent Pizarro, with six men, to explore the province of Coyba, about thirty leagues distant. They had, however, advanced scarcely a tenth of the way up the banks of the river when they were set upon by the Indians, with the Caçique Zemaco at their head, and, after severe fighting, compelled to flee.

Not hearing from Nicuessa, Balboa sent two brigantines to bring away the remnant of the colonists at Nombre de Dios. In coasting along they picked up two Spaniards, dressed in skins like Indians. They were deserters from the ships of Nicuessa, who had been kindly treated by Careta, caçique of Coyba, and now returned that kindness by offering to conduct the Spaniards to his village, where, they said, was immense booty.

Balboa was delighted with this information; and taking one hundred and thirty men, set off for the place. He was received kindly, and after a friendly interview, pretended to take his leave. But in the night he returned, and, falling unexpectedly upon the village, took Careta and all his family, together with many of his followers, prisoners. Careta complained bitterly of this treatment; asked if his kindness deserved such a return; and repeated his protestations of friendship. He promised to reveal the riches of the land; and, finally, as proof of his sincerity, offered Balboa one of his daughters, a young and beautiful creature, as a wife.

Balboa, who saw the importance of having this powerful chief for his friend—doubtless also influenced by the appearance of the lovely maiden who stood trembling before him—made peace, and promising to help him against his enemies, took the young princess and departed. She remained faithful to him, and always regarded herself as his wife, though never married after the Spanish custom. She gradually acquired great influence over him; and though she afterward saved his life, his fondness for her helped him to his final ruin.

In order to keep his word with Careta, Balboa took eighty men, and sailing to Coyba—the province of Ponca, the enemy of the former chief—landed, and driving the Indians to the mountains, laid waste their lands. He next made a friendly visit to the province of Comagre, which consisted of a vast and beautiful plain, stretching away from the base of a high mountain. The chief of this territory had three thousand men under his command; but instead of resisting Balboa he came forth in grand display to meet him, escorted by his seven sons, and followed by his chiefs and a multitude of warriors.

Saluting him graciously the chief conducted

BALBOA AND THE INDIAN PRINCESS.

his visitor with barbaric ceremony to his village, and supplied him with comfortable quarters and as many attendants as he wished. This tribe was advanced in civilization far beyond any which the Spaniards had hitherto seen. The palace of the chief was 450 feet long and 240 broad; the foundations consisted of pieces of heavy timber, while the superstructure was composed of strips of wood curiously and beautifully woven together. Besides the living rooms there were apartments for provisions and stores, and a cellar for the various spirituous liquors which the Indians distilled from corn, roots, and palm-juice. In a distant part of the building was a large hall, used as a mausoleum for the ancestors and relatives of the caçique. The bodies of these had been dried by fire to prevent putrefaction; then wrapped in cotton cloths, in which were interwoven, in rich profusion, pearls, precious stones, and pieces of gold, and finally strung around the walls on a cotton cord. The whole of this large edifice was surrounded by a strong stone wall.

The eldest son of the chief was a modern Red Jacket, a Tecumseh in the loftiness of his spirit and his disdain of any thing sordid and low. Seeing the avarice of the Spaniards he brought 4000 ounces of gold, all wrought into ornaments, and sixty slaves captured in war. After reserving a fifth for the crown, Balboa ordered the residue to be distributed equally among his followers. In the division disputes arose as to the weight of different pieces of gold, and two of the soldiers in the heat of the strife drew their swords on each other. The young chief immediately stepped forward, and, with a look of haughty scorn, dashed the scales to the floor and scattered the glittering ornaments over the porch, exclaiming, "Why do you quarrel about such trash as this? If it is for gold alone you invade our homes, and lay waste our provinces, and undergo such perils, listen while I tell you that beyond those mountains" (pointing to the south), "is a great sea on which sail vessels like your own. The streams that flow into it are filled with gold; the people who live along the coast drink and eat from vessels of gold."

Balboa, who till now had stood aloof, apparently an indifferent spectator of the scene, suddenly became an intent listener; and after the young chief had finished took him one side, and questioned him long and anxiously of the ex-

QUARREL FOR THE GOLD.

traordinary statements he had just made, and of the way to reach that unknown sea and country. The interview to Balboa was deeply interesting, and opened a wondrous future before him. The youthful chief did not disguise from him the difficulties and dangers of the route. Ravines and rivers, steep mountains and tangled forests, fierce and wandering cannibals who eat their captives, and above all, tribe after tribe of powerful Indians, who would dispute every step of his passage, would have to be encountered, so that at least a thousand men would be necessary to undertake the enterprise. Balboa pressed him so closely, and interrogated him so carefully, that the prince evidently thought that he mistrusted him, and to cut short at once all inquiries necessary to establish the truth of his statements, offered to accompany him on the expedition.

Becoming satisfied that there was a vast ocean and a new world beyond those mountains, he gazed on them long and intently, and his imagination kindled with the boundless prospect that opened before him. That distant mountain leaning so calmly against the blue sky was the dividing line between the needy adventurer and the great discoverer, and he resolved at all hazards to place his feet on its summit. The magnitude of the results that should follow the successful prosecution of this scheme transformed him from the reckless plunderer into the thoughtful explorer.

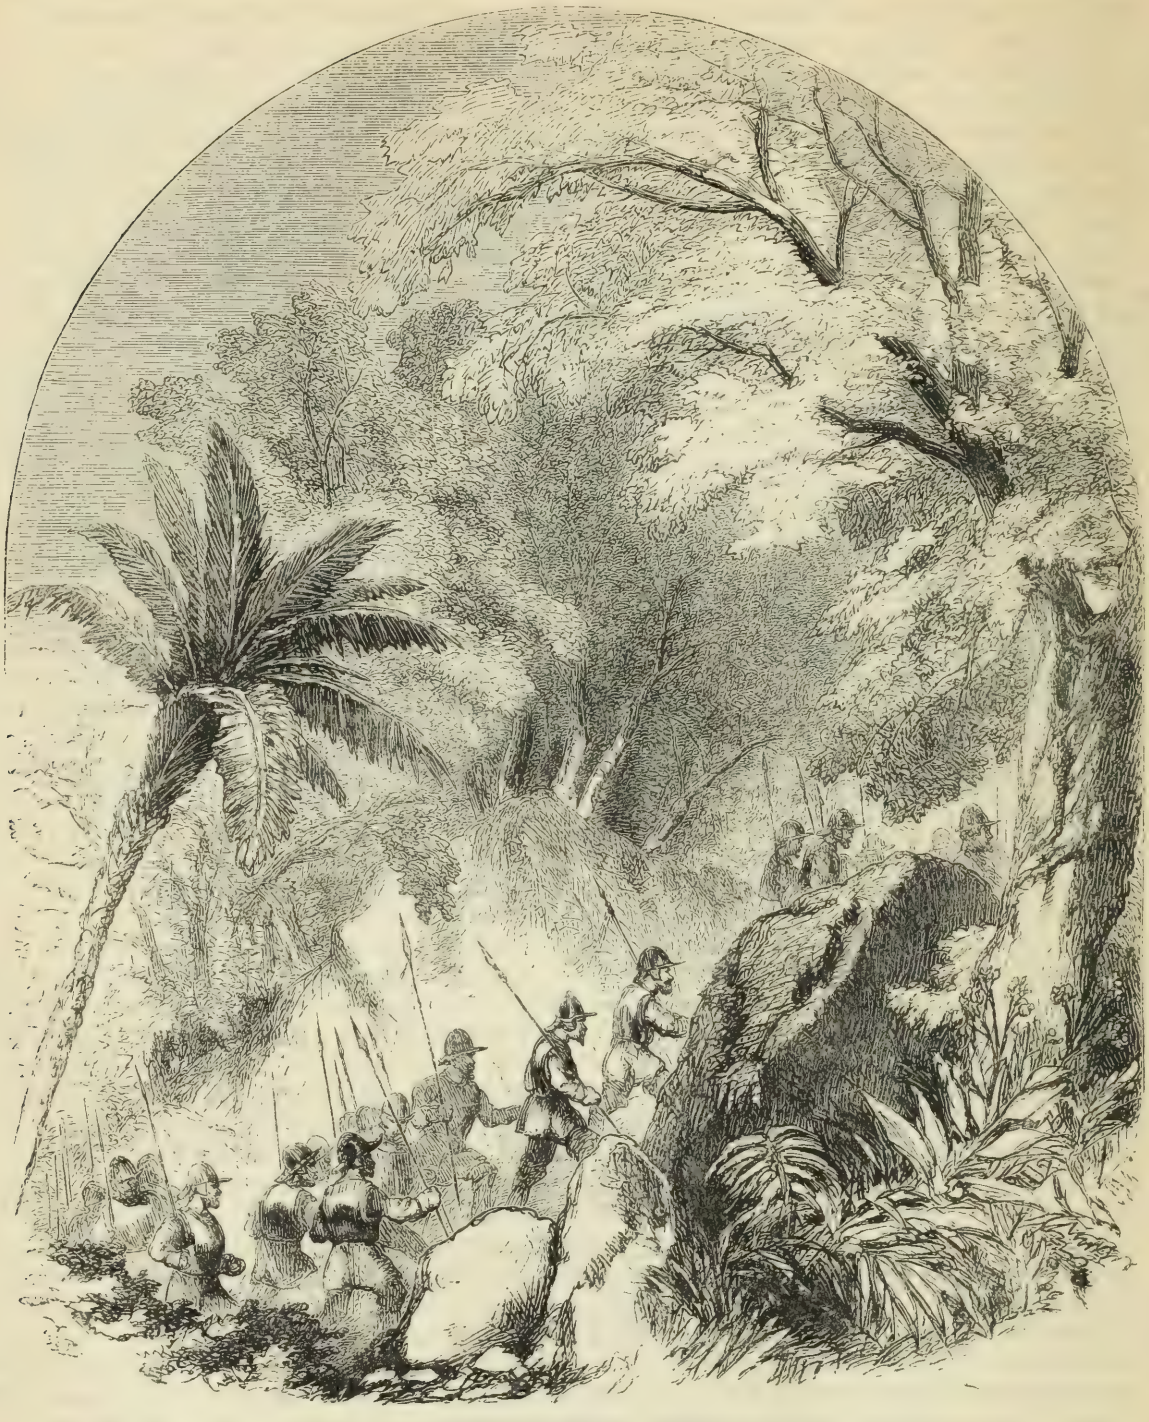
He immediately returned to Darien, resolved to bend all his energies to the accomplishment of this one absorbing idea. A few days after his return Valdivia arrived from Hispaniola, bringing some provisions, but not sufficient for the wants of the colonists. Balboa immediately sent him back for more; and at the same time dispatched a letter to Diego, the brother of Christopher Columbus, Governor of Hispaniola, recounting the exciting news he had heard, and begging him to prevail on the King to send him the thousand men necessary to carry out his enterprise.

Irritated by the idle life he was compelled to pass while waiting for the slow return of this vessel, he took one hundred and seventy men and started for the province of Dobayba, where rumor said there was a great temple filled with treasures. This temple proved a fabulous one, and though he foraged several provinces the expedition on the whole was barren of success. The most remarkable thing he encountered on his route was a tribe of Indians whose territory embraced a region of shallow lakes and marshes. The trees growing out of these were of immense size, and the tropical foliage was so thick that, once having entered within, objects were no longer visible. These constituted the only habitations of the Indians, into which they entered by ladders, drawing the ladders after them.

In the mean time a grand conspiracy was formed among the Indians to utterly sweep away the Spanish settlement. At first the principal chief engaged in it—his old enemy Zemaco—sent, in apparent friendship, forty Indians to cultivate, for Balboa and the colonists, the fields bordering on the settlement. These were to fall

on Balboa when he came out to view the work, and kill him. But Balboa always made his visitations clad in complete armor, and mounted on a richly-caparisoned war-horse—an object of greater terror to the ignorant natives than the tiger of the mountains—which so dismayed them that they had not the courage to make the attempt. Failing in this, they determined to gather together five thousand chosen warriors and a hundred canoes, and assail the Spaniards by sea and land. The conspiracy would, in all probability, have proved successful had not one of the conspirators revealed the plan to his sister—one of Balboa's captives. She was possessed of extraordinary beauty, and consequently had been treated by him with great affection and kindness. The struggle between regard for her people and affection for her lover was strong and painful, but the latter finally triumphed; and Balboa was able, through her disclosures, to capture the leaders, all of whom were put to death. This sudden and terrible vengeance awed the Indians into submission, and checked all farther exhibitions of hostility.

Week after week passed by, and Balboa's eye was vainly strained oceanward to descry the solitary vessel on which all their hopes were suspended. Some feared she had gone to the bottom; others hinted that Valdivia had escaped with the gold sent by him to Hispaniola. Balboa chafed under this delay and uncertainty, and his imagination portrayed such disastrous results to himself from Enciso's efforts with the King that he could not endure the suspense any longer, and he resolved to repair at once to Spain and confront his accuser. The colonists, however, would not consent to his departure, for they felt the need of his strong arm and powerful influence. After much discussion two commissioners were sent in his place, bearing letters and gold to the King.



Soon after, however, discontent sprung up, and they began to quarrel among themselves. At first the people clamored against a favorite of Balboa, and then against himself. A man named Alonzo Perez having put himself at the head of the disaffected, Balboa threw him into prison. His adherents, enraged at this high-handed act, armed themselves for his deliverance. The followers of Balboa did the same, and for a while it seemed as if this little colony, shut up between the sea and the wilderness, would be desolated by civil war. Better counsels, however, prevailed; and although disturbances afterward broke out, peace was restored by Balboa's withdrawing himself from the place, under the pretense of going on a hunting expedition. He knew his departure would be the signal for a common plunder of the treasury, followed by quarrels among the colonists as to the division of the spoils. It turned out as he expected; and they were very glad to receive him back again as their leader.

At this critical juncture Valdivia sailed into the harbor, bearing with him a commission of Captain-General to Balboa from the royal treasurer of Hispaniola, whose susceptible heart the gold of the former had touched. Balboa did not stop to inquire whether this official possessed the power to grant his commission. It was enough for him that he had it. He, however, used his power leniently, pardoning all the mutineers. His exultation at his success soon received a check by heavy tidings that came from Spain. The Bachelor Enciso had succeeded; Balboa was condemned; the King was indignant, charging him with the death of Nicuessa; and he was soon to be recalled to answer for his conduct.

All this information, however, was private, not official. He was still Captain-General, and though he could no longer expect the thousand men he needed to cross the Isthmus, he determined at once to assemble what force he could, and make the attempt. He could but perish; while to return to the enraged King, with so little accomplished to offer by way of expiation, and so little power to back him, was certain ruin, if not death. Instead of being disheartened, this daring man summoned all his energies to the one great object before him. With tidings of a new ocean and new countries teeming with gold to lay at the feet of his monarch, his pardon would be certain, and his future renown secure. At all events it were far better that his bones should lie bleaching on the slopes of Darien than that his body should be subjected to the indignity of the executioner.

He immediately called for volunteers, and out of all who offered themselves he selected only 190 men—the most daring, the most resolute, and the most devoted to him of that band of hardy adventurers. Most of these had been inured to the climate and exposures by frequent expeditions. A few, however, were newly arrived, whom he allowed to join him. These he armed to the teeth. Before setting out he assembled them together and calmly and clearly set forth the hazardous nature of the expedition; adding, that if they succeeded at all, great privations, hardships, and suffering must be endured. But these men had looked death too often in the face to be swerved from an enterprise which, if successful, promised such glorious results. It was an age of wonders; and to their excited imaginations nothing seemed too marvelous for belief. He also took several blood-hounds with him, which were a great terror to the Indians. One of these, named Leonico, the constant companion of Balboa, was a savage animal, and would pull down Indians in battle like a tiger. A number of friendly Indians also accompanied him to show the way, and assist in carrying burdens and clearing a path through the forest.

Having completed all his plans, he took with him one brigantine and ten canoes, and on the 1st of September, 1513, gave the signal to launch. The mysterious nature of the expedition, the uncertainty that hung over it, and the strange sea it might open, and the new and strange beings it might discover, surrounded it with the deepest interest. The inhabitants assembled on the shore, and gathered in excited groups around

MARCH THROUGH THE FOREST.

the soldiers; and when at length the little fleet floated away, cheer after cheer arose from the land, and the blessing of Heaven was implored on their enterprise. Soon the last canoe disappeared around the winding shore, and the settlement relapsed into its wonted quietness. Steering northwest, Balboa reached in safety the dominions of his friend Careta,* by whom he was received with great kindness. Here he left his brigantine and canoes, and nearly half his men in charge of them.

Having fixed the 6th of September as the day on which he should set out for the mountains, he assembled his followers and solemnly invoked the aid of God in his undertaking. The soldiers all kneeled around him while he prayed, the Indians looking on in astonishment. Every thing being ready, they took an affectionate leave of their comrades, and to the sound of the bugle filed away into the forest, and commenced their mysterious and toilsome march. Through the woods matted with interlacing vines, up rocky ravines and across rapid streams, though weighed down with their heavy armor and oppressed by a tropical sun, the adventurers toiled patiently on. At noon a bugle note, echoing far away through the solitude, called in the stragglers, who, unslinging their weapons and flinging themselves on the ground, were glad of a short respite from their labors.

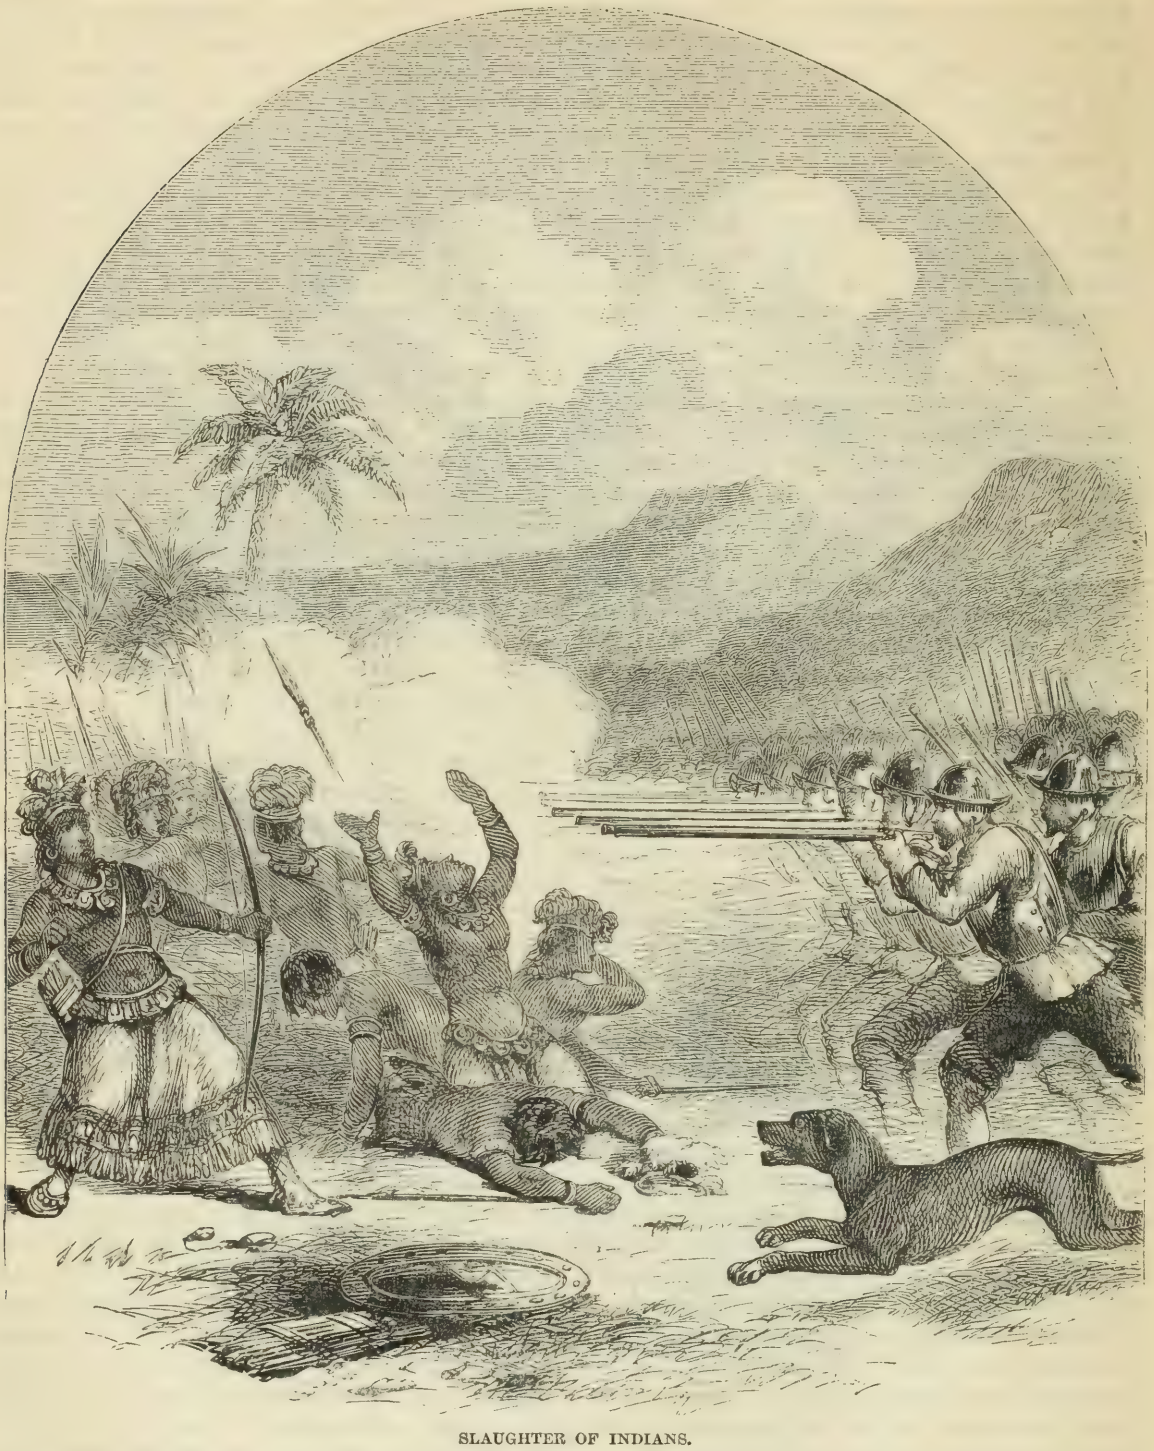
That night they encamped in a dense forest.

* Probably near the present village of Carreto, about twenty miles from the mouth of Caledonia River, the route taken by Strain.

The next day they reached the village of Ponca, the enemy of Careta, whom Balboa had recently so severely punished. Not a living thing, however, remained in the dwellings—all having fled in affright to the mountains. The severe toil of these two days proved too much for those not accustomed to such expeditions, and many fell sick. To give them time to recruit, Balboa determined to halt here several days. He was influenced to this course also by the desire to find Ponca, and make a treaty of friendship with him, so as to secure guides across the mountains.

At length he discovered the retreat of the chief, and after much solicitation prevailed on him to deliver himself up. By his kindness and winning manners he soon gained the confidence of Ponca, who gave him all the information in his power. He confirmed the statement of the young chief, that there was a mighty sea beyond the mountains, and pointing to a lofty, naked summit, said that from there the ocean could be seen. He gladly exchanged his gold for trinkets, such as counterfeit rings, copper chains, and glass ornaments. The gift of an axe completed his delight, and the two became sworn friends.

Having procured fresh guides, and sent back the sick to Coyba, Balboa, with his eye on that mountain, now more than all the world besides to him, recommenced his painful march. As they penetrated toward it the ground became more broken and stony, the streams more rapid and difficult, and the forest more tangled. Encumbered with their heavy armor, the hardy soldiers would fall on their faces and groan aloud. Balboa, instead of complaining, spoke words of encouragement, endeavored to arouse them by the prospect with which a few more hours of patient endurance would reward their sight, and, toiling like a common soldier, inspired all by his noble example. Hunger was added to their other difficulties, so that in four days they did not advance over forty miles. They then emerged into a more open country, over which ruled a warlike chief named Quaraqua.



Hearing of the approach of the strangers, this chief advanced, richly appareled, at the head of his army, and demanded of Balboa why he invaded his dominions, bidding him retire, otherwise he would not leave one of his men alive.

Seeing that his threats only provoked derision, he ordered a charge, not doubting that he could sweep the little band before him from the face of the earth. Shouting savage defiance, swinging two-handed wooden swords, as hard and as heavy as lignum-vitæ, over their heads, brandishing their wooden lances and darts, and hurling stones from their slings, the naked multitude came rushing madly on. Ordering his arquebusiers, whom he had placed in front, to fire, Balboa, at the same time, let slip his blood-hounds. These, with a savage cry, sprang forward on the terrified Indians, while the sound of the fire-arms, which they had never before heard, seemed to them thunder and lightning. The havoc of this first discharge, together with the sulphurous smell and clouds of smoke, completed their terror, and they fled in every direction. The Spaniards, with the loud war-cry of "Santiago!" rushed forward, and hewed down the naked forms before them as the reaper cleaves the grain. Dissevered heads rolled away from the bleeding trunks; limbs slashed off at a single blow, and huge slices of flesh, lay scattered around in every direction. It was no longer a conflict but a slaughter; and when this little band of less than a hundred paused from weariness, Quaraqua and 600 of his warriors lay mangled and dead on the ground. Many more were taken prisoners, among whom were several effeminate-looking men, dressed like women, in white cotton robes. These the Spaniards, from some cause or other, supposed the chief had kept for the basest purposes, and they gave them to the dogs, who tore them in pieces. The prisoners, whether they were glad to see these unnatural wretches punished for their crimes, or because they thought their death acceptable to the Spaniards, sought out and brought forward others similarly dressed, who met the same terrible fate. Balboa then advanced upon the village, in which was found a quantity of gold and precious stones. Reserving one-fifth for the crown, he divided the remainder equally among his followers.

He had now brought his daring little band to the very foot of the mountain from the top of which he was to find the realization or disappointment of all his hopes. Was there indeed a new ocean to be seen from that spot? or would it prove like the fabulous temple of Dobayba which he had suffered so much to find? These were questions he often and anxiously put himself. Although his sick and wounded required a short halt before he proceeded, his eagerness would brook no delay, and he resolved that the next day should solve the problem.

Bidding his followers seek their repose early, so as to be able to start with the first streak of dawn, he sat down and watched the stars as they came out one by one and flashed down upon that naked summit, on which his palpitating heart lay and refused to come to him. What thoughts crowded his heart—what gorgeous visions floated through his excited imagination—as he gazed on the goal of his efforts now sure to be won! So felt Columbus as he lay at anchor amidst the drifting sea-weed, and waited for the revelations of the morning. Never before did the hours pass so wearily to Balboa as on that night. The gorgeous tropical sky above him; the camp fire burning brightly in the forest; his swarthy captives huddled together a little farther off, with the sentinel pacing his steady rounds in their presence; that bold little band, in the heart of that unknown wilderness, sleeping quietly on the threshold of such great discoveries, presented a strange spectacle. But Balboa thought only of the morrow.

With the first gleam of light in the east he aroused his followers, and the loud, cheerful notes of the bugle echoed far and wide through the forest. It was found that several of his band who had been wounded the day before, and others

SLAUGHTER OF INDIANS.

worn down by fatigue and hunger, were unable to move, and they were left behind, to their great sorrow. It was with sinking hearts that these saw, after all their toils and sufferings, their companions file away without them, leaving them on the very threshold of the object of all their efforts. Only sixty-seven men remained of all his band to accompany him.

Although the ascent was difficult, impeded by fallen timber and precipices, yet the men, exhausted and famished as they were, felt new strength at the prospect before them, and sprang cheerfully forward. A little before noon they emerged from the forest and stood at the foot of the bald peak, from which the guides said the sea could be seen. Here Balboa ordered his followers to halt, while he, in full armor, ascended all alone the barren rock. *His* eyes must first behold the wondrous spectacle.

What a lifetime of emotion he passed through in the short interval he occupied in reaching that solitary summit! As the horizon kept broadening and deepening the higher he ascended, he almost shrunk from the final step which was to decide his fate. The blood coursed more rapidly through his veins, and his full heart throbbed with a more painful effort, as down, down sunk the eastern sky before his steadily-ascending footsteps, until at length it met a deep blue line. A sudden movement, a few hurried steps, and there lay the vast Pacific heaving calmly below him, and losing itself in the distant horizon. One glance at its broad bosom—one look at the green islands and greener savannas, and rushing streams

DISCOVERY OF THE PACIFIC.

at his feet—and he sunk on his knees and gave vent to his overpowering emotions in devout thanksgivings to his Maker for having allowed him, of so little experience and honor in the world, to be the first to discover this new sea and land.

His followers below, silent and thoughtful, had watched with intense interest their leader as he slowly toiled up the steep ascent. They were hardly less excited than he when they saw him pause on the top, his tall form penciled distinctly against the clear blue sky. Their painful suspense was ended when they saw him drop on his knees and lift his hands toward heaven in prayer; and a low, deep murmur ran through their ranks.

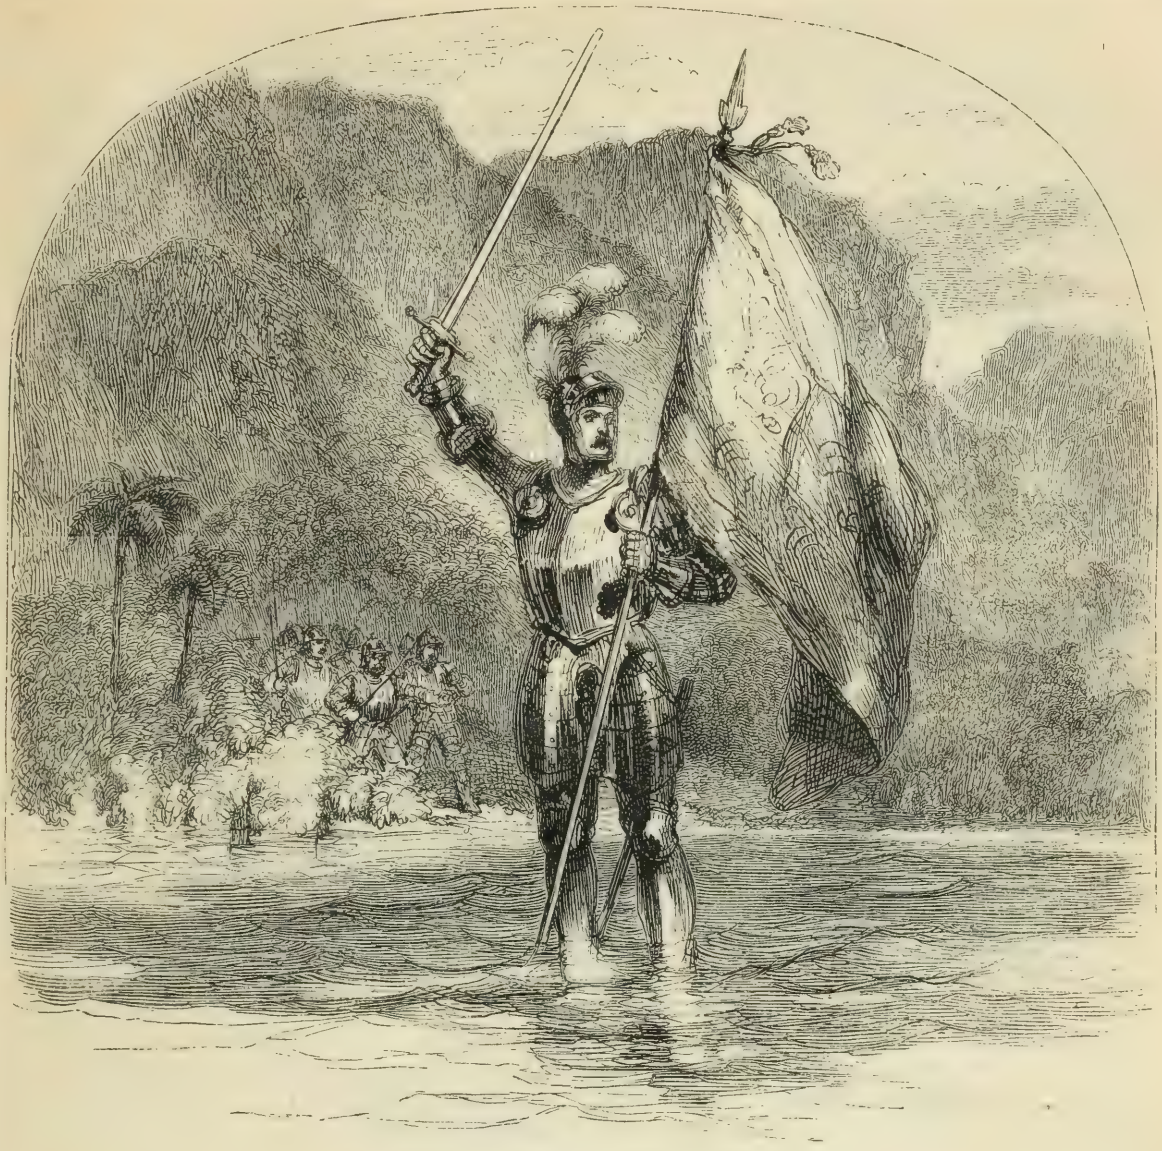
Slowly Balboa arose, and casting one more glance on that slumbering ocean, turned and waved to his followers to come up. With a loud shout they dashed forward, each vying with the other to be the first to see what lay beyond. Not greater emotion swelled the hearts of the Crusaders when, from the last height that overlooked Jerusalem, they caught the first glimpse of the Holy City, lying like a beautiful vision at their feet, and the deep murmur, "Jerusalem! Jerusalem!" ran through the trembling host, than filled the bosoms of these bold adventurers as they gazed off upon the new ocean and new world below them. At the wondrous spectacle they also fell prostrate and offered up thanksgiving to God. A priest among them lifted up his voice and chanted "*Te Deum Laudamus.*" The whole band joined in, and "*Te Deum Laudamus*" swelled up from the top of Darien and floated away on the western breeze toward the unknown sea. All then arose and embraced Balboa, swearing to follow him even to death. Young Pizarro was there also, and as he stood and looked off on the strange scene, did the dim vision of his future conquests pass before him? and then was born within him the great resolve that finally brought the wealth of Peru to his feet. What a spectacle that little band presented, grouped together on that far, strange summit; and what a great epic was there enacted, away from the civilized world!

Balboa, having addressed his followers, proceeded to erect monuments as evidence of his discovery. The soldiers, returning to the forest, cut down a tall tree, and making it into a cross, erected it on the highest point; Balboa

also piled up huge heaps of stones, carved his name and the names of his followers on the trees, and omitted no precaution which should place his discovery beyond all dispute or future claim of others. The Indians looked on all this in silent wonder, and little dreamed what it meant when Balboa stretched out his hands and took possession of the Pacific Ocean—sea and land—in the name of his King. The sun was stooping toward the Pacific when the excited band began to descend the eastern slope toward the sea.

After leaving the more barren and rugged region they came to the province of a chief called Chiapes. This proud chief, scorning the small force that invaded his territories, led forth his warriors to drive them back. But Balboa, as he had done two days before, ordered his arquebusiers to fire, and let loose his blood-hounds. The thunder and lightning of the guns, and the sulphurous smell of the smoke, which the west wind blew full in their faces, so paralyzed the Indians with terror that they ceased all resistance, and many, unable even to flee, fell helpless on the earth. Balboa arrested the slaughter, and took many prisoners. Arriving at the village he sent his guides in search of the chief, Chiapes. Having found him, they told him that the Spaniards were invincible, and persuaded him to come forward and make peace. He did so, bringing with him 400 pounds' weight of wrought gold, for which Balboa gave in return hawks' bells, beads, and other trinkets, with which the chief considered himself richly paid.

Balboa remained here a few days to recruit his troops, and send back to Quaraqua for those sufficiently restored to join him. These had remained in camp, filled with grief and vexation at their inability to accompany their companions. They had seen the little band—a mere black speck on the summit—and had watched with the intensest interest their departure down the farther side. Their disappointment gave way to unbounded surprise at the report of the messengers sent to conduct them forward. Excitement and anxiety to proceed caused many to declare themselves fit to march who otherwise would have remained behind; and they toiled up the steep ascent forgetful of their wounds and weakness. As they reached the summit and looked off on the new ocean, their astonishment knew no bounds; and they hurried on to rejoin their leader, who now appeared to them as something beyond an ordinary mortal.



When they reached the main camp Balboa made preparations to advance to the sea. Taking with him only twenty-six Spaniards, and accompanied by Chiapes to direct his course, he pushed through the wilderness, and at length stood on the beach of a large bay, to which he gave the name of St. Michael.

The tide was out, and they waited till its return. At length they caught the sheen of the water as it came rippling over the shallow sea bed; and when it reached their feet, they stooped down and tasted it to see if it really were salt-water like the Atlantic. Balboa then arranged the Indians and Spaniards along the beach, and unrolling a banner, and holding it in one hand and his drawn sword in the other, he advanced into the water till it reached his knees. He then waved his banner, stretched out his sword, and in the name of his sovereign took possession, in the most pompous style, of all the sea, islands, and territory between the tropics, even to the poles, swearing to defend them for all time, even to the day of judgment. His followers joined in the solemn oath, and returned thanks to God for the great favor he had vouchsafed them.

Returning to Chiapes he increased his force to eighty men, and crossing a large river, entered the territory of King Coquera. The latter offered battle; but, overwhelmed like the other chiefs, came in, begging for peace and bringing with him a large quantity of wrought gold, for which the usual trinkets were given in return. Returning again to Chiapes he rested a while. Being informed by the chief that farther on was a larger gulf extending far inland, he determined to explore it.

It was now October—the stormy season—and Chiapes remonstrated with him, telling him that at this time the waters of the bay were in great commotion, swept by huge waves, and filled with whirlpools in which canoes could not live. Undaunted by these representations, Balboa ordered nine canoes, or dug-outs, to be made from the trunks of trees, and set forth. The chief's prediction proved true; the wind rose, the sea made fast, and soon those frail vessels were hurled like feathers over the billows. Consternation and despair seized every one, for certain death seemed to stare them in the face. All would doubtless have perished, had not the Indians lashed the canoes together, two and two, to keep them from being overturned. Tossed about till evening, they at length succeeded in reaching a low rocky island. Landing here, they fastened their canoes to some trees, and prepared to pass the night.

Ignorant of the tremendous tides of the Pacific, they were aroused from their slumber by the deafening roar of the sea as it came thundering over the island, and roaring away through the deep clefts of the rocks. The wind was high and boisterous, the night dark, and as they saw the bursting foam leaping nearer and nearer with every wave, their hearts were appalled with terror. Higher and higher rose the sea, till it swept the island from end to end. Indians and Spaniards stood huddled together, cowering before the storm, powerless to act, and expecting every moment to be swept away to sea together. But when the water had risen to their waists, the wind lulled, and the tide having reached its highest point, began to subside. All night long they stood shivering in their places, afraid to stir, and scarce able to hear each other's voices amidst the roar of the waves. When daylight returned and the island was again left dry, they sought their canoes. They found them bottomside up, stranded amidst the rocks where the retiring waves had left them. Such as could be repaired were tied

BALBOA TAKES POSSESSION OF THE PACIFIC.

up with bark ropes, and the holes stopped with sea-weed. Balboa then resolved to set sail again, but his followers remonstrated against such a hopeless enterprise. Borne up by a superstitious belief that he was an instrument in the hands of God, and could not fail, he appealed by turns to their ambition and to their faith in the God who had protected them thus far, and who assuredly would not desert them now. Balboa could be both preacher and orator; he soon brought his listeners over to his views, and they set sail. All day long the battered canoes, laden to the water's edge, labored over the heavy seas momentarily threatening shipwreck; until at length saved, as the Spaniards believed, by a miracle, they reached the coast in the province of a chief named Tumaco.

Though the men were weak and famished with hunger, Balboa, with the strongest of them, set out for the village, hoping to take it by surprise. But the wary chief was advised of his approach, and had his warriors drawn up to receive the invaders. At the first discharge of fire-arms, which lighted up the surrounding forest with a sudden glow, they fled with frightful yells to the woods, leaving their provisions and booty behind them.

The next day Balboa sent out some friendly Indians to find the chief and bring him in. The latter refused to come, but sent his son Tumaco as a mediator. Him Balboa sent back, laden with trinkets, to his father, who was so delighted that he presented himself before the Spanish leader with 614 pounds of gold and 240 large pearls, together with many smaller ones. The pearls were reduced in value in consequence of the oysters having been roasted for eating and also to enable them to open the shell easily.

Balboa questioned this chief closely of the surrounding country. The latter told him that there was a land to the south abounding in gold. Turn which way he would the rich land of Peru rose before him. We may be well assured that Pizarro noted carefully all those marvelous rumors.

The chief gave him a canoe of state, the oars of which were inlaid with pearls, to continue his explorations along the coast. Keeping close inshore, he at length reached the farthest extremity of the land, where the surf of the Pacific rolled unobstructed on the sandy beach. As they stood grouped together on the shore, the Indians pointed to an island in the distance which, they said,

INDIAN CHIEF TORN BY DOGS.

was governed, with smaller ones that surrounded it, by a powerful chief, and abounded in immense pearls. Balboa longed to visit it, but the guides told him that it would be impossible in this stormy season. Giving to this group the name of Pearl Islands, he reluctantly retraced his steps, resolved the next year to return and take possession of them.

Making another expedition in a different direction, he captured a chief, Faochan, who presented him with twenty pounds of gold and two hundred pearls; the latter, however, were of inferior value.

It was now the 4th of November, and Balboa resolved to make his way back by a different route to Darien. He therefore took an affectionate leave of the son of Tumaco and of Chiapes. The latter embraced him and shed tears as he turned away. Balboa had great power over all the chiefs who came in contact with him, attaching them warmly to him by his timely presents and winning manners. With guides and slaves to carry his baggage, he now boldly struck into the mountains, and began his toilsome march back.

In a short time he entered the province of Pacra, the dreaded tyrant of the surrounding region; but before he reached his village his men and the Indians suffered intolerably from thirst. The Indians luckily discovered a spring of water in a ravine, at which they refreshed themselves, and then pushed on for the home of Pacra. The latter, hearing of his approach, fled with his chiefs to the mountains. The Spaniards found in his house fifty pounds of gold. To all the entreaties of Balboa to leave his retreat Pacra for a long while returned a peremptory refusal. At length, however, he yielded, and presented himself in camp.

His appearance did not belie the rumors circulated against him; for he was a misshapen, deformed creature, with a countenance on which was traced ferocity and every bad passion of our nature. He had taken and ravished the daughters of four kings of Darien, and was charged with other crimes and most disgusting vices. Balboa's allies stoutly demanded his death, and he finally gave him to the blood-hounds, who tore him in pieces. Here the party remained for a whole month to recruit, and wait for the return of the men who had been left in the village of Chiapes, to whom he sent messengers to join

BALBOA BORNE ON A LITTER.

him. A strange chief conducted them in, loaded with presents. As he delivered them to Balboa he took the latter by the hand and invoked the blessing of the Great Spirit on his head.

Every thing being now ready, Balboa again set out at the head of his little band. He soon reached a barren country ruled by two poor kings, whom he forced to conduct him forward. There was no path; for three days they floundered through quagmires, broken ravines, and tangled forests, and finally entered the village of a chief, who had fled with all his tribe. He, however, soon came in bringing gold, but no provisions. The suffering from hunger now became extreme; but there was no hope left for them except to press forward. At length they reached the province of Pocorosa. He fled at their approach; but soon returned, bringing fifteen pounds of gold and some slaves. Balboa remained here for some time to recruit his broken-down followers. The next king, Tubanama or Tumanama, he was informed, was a powerful, warlike chief. Fearing to meet him with his men broken down with fatigue, Balboa picked out sixty of the strongest of his followers, and pushing resolutely on over every obstacle, accomplished two days' journey in one, and entering the village by night took the King and eighty women of his palace prisoners. With the women, as they generally did with captives, the Spaniards made themselves free. To the palace was attached a house 360 feet long and 150 wide, made of trees thatched with stalks of plants. Here the King was accustomed to muster his troops.

Marching forward from this place, they found the difficulties of the way to increase, while provisions became still more scarce. It was now that the very booty they had accumulated became a curse to them. Many sunk under their sufferings; others went crazed; some of the Indians also gave out and died in those inhospitable solitudes. It was a piteous sight to see those once brave cavaliers with each arm round an Indian's neck lifted carefully, painfully along, over fallen trees, across frightful ravines, and up rugged ascents. The long straggling file continued to stagger on, almost against hope, cursing the day that their cupidity tempted them into this terrible wilderness only to die.

At length Balboa, who had hitherto appeared impervious to fatigue or hunger—who, always leading his men into battle, seemed to bear a charmed life—whom nothing could daunt and nothing conquer — also sunk under these protracted sufferings. A fever seized him, and this bold leader became as helpless as a child, and, slung in a piece of cloth, was borne along on the shoulders of those who were still able to travel. Slowly and sadly the wan and famished band toiled onward, until at last, to their great joy, they reached the friendly province of Comagre. They found that the old King was dead; but his son, who had been baptized by the name of Carlos, received them gladly and supplied all their wants. He gave twenty pounds of gold to Balboa, who in return presented him with some carpenters' tools, axes, and a shirt and soldier's coat, which seemed to fill up the measure of his ambition. He also made him a speech before he left, exhorting him to retain his friendship, and es-

pecially to gather large quantities of gold by the time he returned.

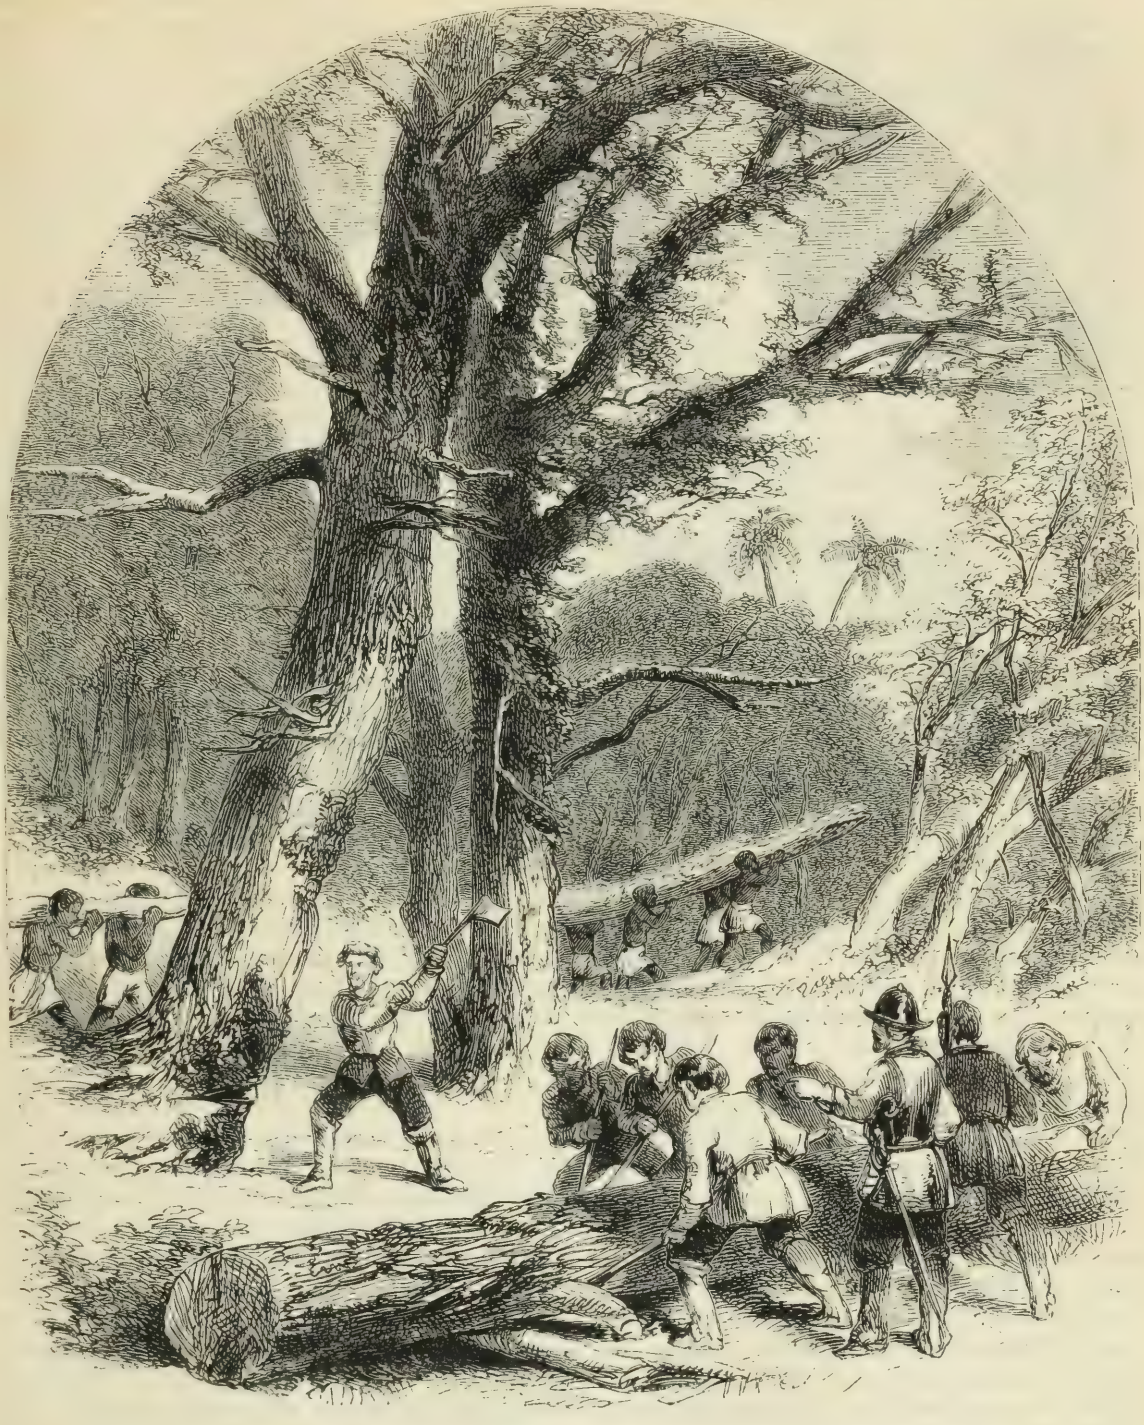
Moving on to Ponca, he found four men who had been sent from Darien to inform him that vessels had arrived from Hispaniola laden with provisions. Taking with him twenty men, he hastened on by long journeys to Careta, and embarking in the brigantine he had left there, set sail for Darien, where he arrived in the middle of February, or, according to other authorities, the eighteenth day of January, having been absent since the first day of September. His arrival, and the astonishing news he brought, together with the account of the gold and pearls on the way, threw the colonists into the highest excitement, and they crowded round him, eager to catch every word that fell from his lips. His strange adventures were for a long time the only topic of conversation.

Having sent back for his remaining followers, he set apart a fifth of all their treasures for the crown, and divided the residue equally among those who had accompanied him and those who had remained behind. When the inhabitants saw the golden vessels and ornaments and heaps of pearls, their imaginations fixed no limits to the wealth they believed to be concealed in those primeval forests.

Balboa's first object was to conciliate his sovereign. To effect this he dispatched an old friend, one of his companions in his recent discoveries, bearing the fifth set apart for the crown, together with a magnificent present of pearls from himself. He also sent letters to the King, giving an account of his discoveries. But while he had been toiling amidst the forests of Darien, and by his energy and daring opening a new world to his country, his enemy had steadily undermined him at home. A new Governor, Don Pedrarias de Avila, had been dispatched with a fleet of fifteen sail, equipped to carry an expedition which was to make new discoveries. This fleet was on the broad bosom of the Atlantic when the vessel containing Balboa's messenger sailed into the Spanish port.

The news he bore caused scarcely less excitement in Spain than the report of the first discovery of the New World by Columbus. The King, overjoyed at this new accession of territory, and at the prospect of such exhaustless treasures, deeply regretted his severity toward Balboa, and, as some reparation for it, appointed him Adelantado, or Admiral of the South Seas, and Governor of the provinces of Panama and Coyba.

While these events were passing Balboa devoted all his energy to the welfare of the colony.

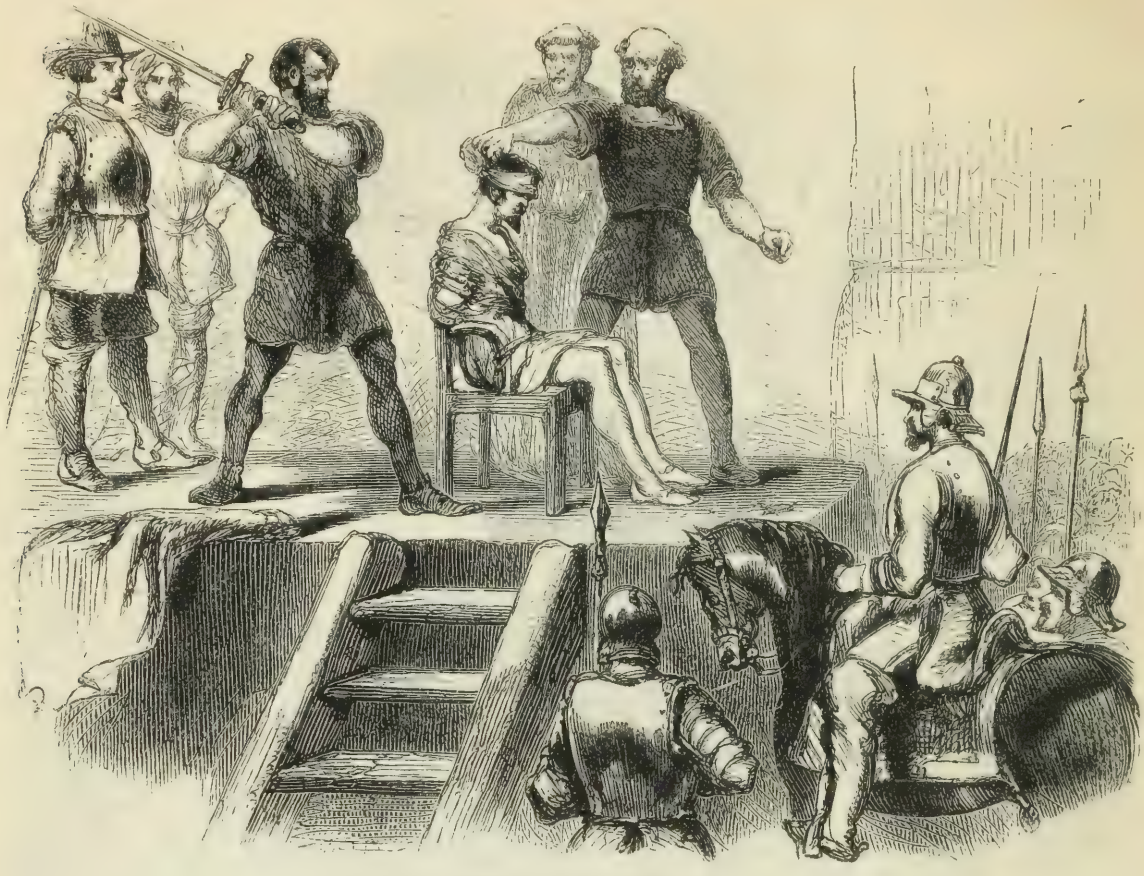


At length, in June, the fleet bearing the new Governor swept into the harbor. Pedrarias, who had pictured Balboa as a fierce, resolute man, feared he might have some difficulty in getting possession of the government; and so he would if the latter had yielded to the solicitations of his followers. He, however, cheerfully submitted to the royal authority, and frankly revealed all his plans and narrated all he had done. Having obtained what he wanted, Pedrarias assumed his true character, and ordered Balboa to be arrested and put on trial. He was acquitted; which exasperated Pedrarias still more, and he subjected him to ceaseless annoyances.

At length the King's commission for Balboa arrived at Darien. The Governor at first resolved to suppress it; but afraid of the future consequences to himself of such conduct, he at length delivered it up, on condition that Balboa should not actually enter on the government of the territories placed under his control without his permission—thus making the title an empty one.

A long series of persecutions and of disasters to the colony followed. The bishop who accompanied the Governor from Spain at length healed the breach, by effecting a contract of marriage between Balboa and a daughter of the Governor. What Pedrarias had denied to his rival he cheerfully granted to his future son-in-law, and Balboa immediately began to put in execution his long cherished plan of transporting vessels across the mountains and launching them on the Pacific, so as to extend his explorations there.

Carrying out his project he proceeded to Acla, a little port west of Darien, and with two hundred men felled the timber for four brigantines. With incredible labor he transported them, and all the anchors and rigging, over the mountains to the banks of the River Valsa, that flowed into the Pacific. Under the tremendous efforts to lift these heavy loads up the steep ascents, over precipices and mountain torrents, many of the workmen perished. It was a strange spectacle in those far solitudes to behold the timbers for vessels slowly moving up the mountain-side on men's shoulders, and exhibits the wonderful energy and endurance of the Spanish race at that time. But scarcely had they begun to lay the timbers before they discovered they were so worm-eaten, from having been cut in the vicinity of salt water, as to be utterly worthless. Not disheartened, Balboa ordered trees to be cut on the bank of the river. But just as the timbers were ready to be put together, a heavy freshet arose and swept them all away. The flood also cut the workmen off from their usual supplies of provisions. Famine set in, and but for the Indians all would have perished. The water having at length subsided, they set to work again, and soon two brigantines were afloat, and moving down through the forest, passed out into the broad Pacific. Balboa's first cruise was to the Pearl Islands. After a short exploration along the coast, he set himself to work to finish other brigantines so as to carry sufficient force for a more extended expedition.



In the mean time he sent a man named Garavito to Darien to ascertain the state of matters there. This person professed to be a great friend of Balboa; but the latter, in a dispute a short time before about his Indian beauty, used some expressions that offended him, and turning traitor he told the Governor that Balboa had no intention of fulfilling his contract of marriage, being wholly devoted to his Indian mistress. All

PROCURING TIMBER FOR THE BRIGANTINES.

the Governor's suspicious jealousies and enmities were at once aroused, and he began to devise some plan to get Balboa into his power. He knew that the latter, with his brave and devoted followers around him, and his brigantines afloat on the Pacific, could be taken by no force he was able to send against him. He therefore concealed his designs, and invited Balboa to meet him in friendly consultation at Acla. Balboa cheerfully accepted the invitation, and leaving his followers to guard his brigantines, accompanied the messengers who bore the request over the mountains.

These, however, were so won by his kindness, and grieving that so gallant a man should fall into the net spread for him, at length revealed the whole plot. Balboa was thunder-struck at the announcement; but instead of returning at once to his band, and hoisting his flag bidding defiance to the Governor—till he could get his case before the King, where he was sure of protection—he, relying on the rectitude of his conduct, and pushed on by a blind fate, proceeded to Acla, where he was immediately arrested and thrown into prison. Pedrarias had him arraigned on a charge of treason, pretending that his intention was, so soon as he had men and vessels sufficient on the Pacific, to cut off all allegiance to the crown. There is little doubt he *would* have rejected the authority of Pedrarias—broken off his contract of marriage—and sailed away with his Indian beauty, till Pedrarias was

EXECUTION OF BALBOA.

removed—for he had already heard that a new Governor was appointed. But that he designed to cast off allegiance to Spain was a senseless charge, for he was more ambitious of distinction at home than for plunder.

The trial was hurried through in the little colony of Acla, instead of being transferred, as it should have been, to the tribunals of Spain. Balboa was condemned, and the day of his execution fixed. When the fatal morning arrived, he was led forth, preceded by a crier proclaiming him a traitor to the crown. "It is false!" indignantly exclaimed Balboa; "never did such a crime enter my mind. I have ever served my King with truth and loyalty, and sought to augment his dominions."

The execution took place in the public square, and Balboa having partaken of the sacrament, walked calmly up the scaffold. The fatal blow was given, and the trunkless head rolled away from the body.

Thus in 1517, in the prime of his life, being only forty-one years of age, perished this intrepid explorer. If the little band awaiting his return on the Pacific had known what was about to transpire, they would have descended with their old war-cry of "Santiago!" on that weak settlement, and swept the Governor with his adherents into the sea. Columbus narrowly escaped the same fate, and was spared only to meet a worse one in the neglect and injustice of the sovereign he had enriched, and whose reign he had made illustrious.

Thus perished the first civilized man that crossed the Isthmus of Darien. This narrow neck of land has witnessed strange scenes since then, and probably there is no other portion of the earth, of similar extent, which has witnessed so much daring endurance and human suffering.

TWILIGHT.

IT was a pleasant afternoon in early June, and in a cool, comfortable apartment, in a quiet, unpretending-looking house, just on the outskirts of one of our pretty New England villages, three persons were gathered together for an early tea. We have said that the room was cool and comfortable; but perhaps its most distinguishing characteristic was its air of primitive neatness and old-fashioned simplicity. The furniture was sufficient, but plain; every thing necessary to comfort, but nothing for ornament, luxury, or fashion; no tapestry carpets, yielding softly beneath the noiseless tread; no tasseled and fringed drapery curtains; no luxurious divans; no graceful tabourets or ottomans; no piano or harp; no mirrors; no gas-fixtures; no bronze and gold; no quaint old china. The plain walls, unrelieved by a single picture, were covered with a neat paper, of alternate stripes of darker and lighter shades of dove-color; the carpet, unfaded and spotless, was a small, neat pattern of green and dove-color; the stiff, cane-seated chairs held their straight backs against the wainscot, in prim and exact regularity; an unyielding-looking sofa, in mahogany and hair-cloth, unsuggestive of ease or comfort, stood upon the hearth, with arms akimbo, and toes turned out, and back to the fire-place, like some sturdy Englishman in

after-dinner meditation; and in an opposite corner stood a long, narrow, eight-day mahogany clock, with a great white, moonfaced dial-plate, like a coffin set up on end, with the pale, unspeculative face of its occupant looking placidly out of the upper window, and pleasantly numbering off on its attenuated fingers the hours and moments yet remaining to the living.

But if the room could boast of no superfluities the same could not be said of the table, which, covered with a snowy white cloth, and furnished with the whitest of granite-ware, was literally piled with a profusion of domestic produce and home-made delicacies, which, seldom or never admitted to city tea-tables, are the pride and delight of rural house-keepers. Long golden bars of "diet-bread" piled up, cob-house fashion, balanced thick wedge-like slices of dark, rich-looking "loaf-cake," clammy with fruit and redolent of cloves; delicate "flapjacks" lay, zealously perspiring under a sense of their own goodness, and a melting crust of powdered sugar and spice, opposite to hot rolls, white and feathery in their yeasty lightness; slices of cold boiled ham, cut by no Vauxhall pattern, smiled in calm self-possession, as if they knew "the fat was *so* white and the lean was *so* ruddy;" custards, with their rich golden surfaces concealed by a thick brown coat of grated nutmeg (which would shock the fastidious taste as a work of supererogation), were supported on either side by pellucid honey welling from the comb, and fragrant home-made butter; cool, crisp radishes raised their meek green heads above the transparent glass, through which they gleamed like scarlet gold-fish in the pure iced water below, and "seasoned apple-sauce" and preserved quinces turned corners with cheese and olives.

But we are lingering too long over this appetizing table, while the *dramatis personæ* are waiting to be introduced. At the head of the table sat a mild, pleasant-looking woman, of middle life, rather short and stout, dressed in a dove-colored silk gown and close Quaker cap and handkerchief. This was Mrs. Cobb, the mistress of the establishment, and widow and sole relict of the late lamented John Cobb, a very respectable hardware dealer and estimable member of the Society of Friends. Mrs. Cobb, his widow, was a model of propriety: she wore only the drabbest of gowns, the closest of close caps, and the stiffest of black satin bonnets; she used the Quaker phraseology with unflinching pertinacity, and thee'd and thou'd with a friendly disregard for all grammatical rules, which would have made Lindley Murray gnash his teeth in anguish. Yet there was *something*—an undescribable something—it might have been a shade *less* of the leaden immobility of feature, and rigid, statue-like repose of manner, said to be the result of that strong self-control which is one of the early and most admirable lessons of that sect, which suggested that, though every way worthy, Mrs. Cobb was not "to the manner born."

And it was so; Mrs. Cobb had been born of "the world's people," and as Betsy Appleton, the only and indulged child of wealthy parents, she was a sprightly, gay, pretty girl: but destiny, chance, or propinquity (or whatever power it may be which rules the matrimonial affairs of this world), had fixed her affections on John Cobb, a handsome and worthy young Friend; and the predilection being fully returned, in spite of the opposition of the parents on both sides, or rather in consequence of it—for opposition is the aliment of rebellious love—she married him, and turning her back to the world's vanities, was admitted to the religious sect to which her husband belonged, and henceforward, as Paul said of himself, that "after the most straitest sect of his religion he lived a Pharisee," so did Mrs. Cobb in her daily round fulfill all the requirements of Quaker law. Nor was there any insincerity, any leaven of hypocrisy, in all this; for Mrs. Cobb's love had so ennobled and dignified its object that the consequence was obvious and natural—her mind became the reflection of his, she thought what he thought, she believed what he believed. He was too wise to be deceived, and too good to err. He was to her church and priest, pope and prophet; she followed his lead unquestioning, sure that the way *must* be right if John Cobb went before! Nor was this a light and transient sentiment, fading with the years which gave it birth; not so, for the love of youth had stood the test of time; she had loved and obeyed him in health, she nursed him through sickness, and honored him in death. She still quoted him, as precedent and authority, on all occasions, continually volunteering the information that "*husband* thought, *husband* said, *husband* did, *husband* did not," until one of her young neighbors roguishly observed she believed Aunt Betsy Cobb really thought there never was but one husband in the world, and *she* had had him!

But stern Death, which severs so many strong, sweet ties, had taken the husband from his devoted and appreciative wife. John Cobb was dead and Aunt Betsy reigned in his stead, or rather, she *would* have reigned if she had known how; but like many gentle-hearted but unreflecting women, her unlimited trust in another had weakened her own powers. She had so accustomed herself to lean upon another she was unable to stand alone; and when the strong prop was removed she drooped like a flowering vine torn from its trellis. Firmly believing that "husband" knew every thing, that whatever he thought, or said, or planned, or did, was ever the "wisest, discreetest, best," she had never concerned herself about out-of-door matters. "Sure thee knows best, John Cobb," or, "I'd do just as thee thinks right thyself, husband," was the most cogent advice or opinion she had ever given him; and in her bereavement she found herself utterly unfit to meet the demands made upon her. She could not keep accounts, she could not calculate the price of a load of wood or hay; the cleaning out of the well and the re-shingling of the wood-shed were awful mysteries which she shrunk from undertaking. She was sadly at a loss how to direct the planting

of her garden or the mowing of "the homestead lot;" and when the county commissioners, contemplating the opening of a new street where the store of the late John Cobb stood, called on her to obtain her estimate of its value, she was at her wit's end. Feeling her own weakness, conscious of her own inability to defend herself from imposition and wrong, she took a suddenly exaggerated view of her own danger and the peculant propensity of mankind in general, and felt herself a prey to unlimited encroachments and cheating without measure or end. In this dread emergency there came to her aid her uncle, Mr. Lemuel Wood, her mother's brother, a kind-hearted, worthy, but rather eccentric old bachelor.

There has been *one* individual put on record who made a fortune by attending to his own affairs. It may be so, but certainly that man was not Lemuel Wood; for he had a decided penchant for helping others, while his own affairs (if he had any) were left to take care of themselves. He came to the widow's aid, and being of a quiet temper and a cheerful, trusting spirit, he reassured and comforted her, helping her wisely and well, bringing her triumphantly through the commissioners' business, paying her taxes, buying her stores, and shoveling her paths, literally and figuratively; in short, taking upon himself the whole burden of the out-door department with such zeal and judgment that his grateful niece felt she could not live without him; and thus, as time wore on, gradually and imperceptibly to both of them, he had become a fixture in the house and the nominal head of the family, speaking of *our* garden and *our* house with exactly the same sense of ownership that Mrs. Cobb herself had. This was the person who now sat in the post of honor at table opposite to her, and aided her in her hospitable attentions to their guest. He was a short, rather stout-built man, a little beyond middle life, with a fair, broad, ruddy face, sandy whiskers, and laughing brown eyes.

The third person in the trio was Miss Alice Gracie, a young lady from the city, a newly-arrived guest, or rather a new boarder. Since John Cobb's final withdrawal from business by the hand of Death had somewhat lessened the annual income of the property, his widow had decided upon taking one or more lady boarders, partly, perhaps, in hopes of female companionship, and still more, because her forte being the culinary department, she naturally wanted some one to enjoy and praise its results. "Husband" had, unknown to himself or his wife, become a little epicurean in his habits, and as to please him was to please herself she had become a great proficient in the cooking line; and as we all love to do what we are conscious we do best, so her soups and her sauces, her cakes and confections, had become matters of serious importance to her. Husband had had good taste; he had always praised with judgment or suggested with discrimination; but Uncle Lem, though his gastronomic performances were often great in their way, was not appreciative or refined. He came to table to satisfy his hunger—for he was healthy and hearty—not to ruminate and pronounce judgment on the food set before him. He ate and drank thankfully, and doubtless he gave praise, for he was a good man; but his sense of his indebtedness rose to a higher source of good than Aunt Betsy. But what was the comfort in cooking for a man who did not know if the cranberry sauce was made with loaf sugar or brown, who could not distinguish between allspice and mace, and did not clearly know crumb sauce from drawn butter!

So Mrs. Cobb had decided to take a boarder, and Miss Gracie, a young lady governess, whose city pupils had gone with their parents on the summer tour in search of health and amusement, which fashion now so imperiously demands, having leisure to rest and recruit herself, had preferred the rural quiet and home-comforts which Mrs. Cobb's house seemed to offer, to the more showy, more expensive, and less substantial accommodations of a fashionable watering-place. She had just arrived, and it was for her refreshment after her day's ride that this early and profuse meal had been prepared.

"*Do* thee take another cup of tea, Alice," said the hostess, lifting up the tea-pot as she spoke. "Sure thee *needs* it after thy long ride; and do take some more of the griddles, will thee? Thee hain't got any thing on thy plate hardly. Uncle Lem, won't thee pass the rolls to Alice Gracie, if thee pleases, and give her a little more of that ham near thee. *Do* thee try it, Alice. I think thee'll find it good. Husband used to say he never ate any ham only at home. I always boil mine five hours, and *then* I put it into the oven after that. Why, thee don't eat any thing! I'm afraid thee don't like our country fare. I wish I had some fruit for thee, but our berries haven't come yet. Try a bit of the cake, do; thee need not be afraid of it, it's home made. Sure thee must get up a better appetite, or I shall not take board of thee, that's a sure thing. Uncle Lem, pass the radishes, please. Why, Alice, thee ought to be downright hungry after thy long ride. Now take another cup of tea, *won't* thee? There's plenty in the pot, hot and strong. Husband used to say the last cup was always the best, hottest, and strongest. Uncle Lem, pass the cream, please."

Here the voluble hostess discovered that the water-pot needed replenishing, and turning her head in the direction of an open door communicating with the kitchen, she called aloud, "Twilight! Twilight!" But no answer being made to this call, she gently murmured, "Trial!" and called again, "Ruthy! Ruthy! is *thee* there?"

This had the effect of "calling up," as toast-givers term it, a tall, lank, grim-looking, elderly maiden, sallow in complexion generally, and sallowest under the eyes—as if she had been preserved in brandy many years, and then dried off without washing—with very little hair, and that little of a decidedly pepper-and-saltish expression.

She was dressed in a large-flowered, many-hued calico, with a thick white collar; and held in her hand a half-grown blue-yarn stocking, dependent from three needles—the fourth one being projected from her head in front, after the very unique and fanciful fashion in which the unicorn is wont to wear his horn when he is seen in public fighting with the lion for the British crown. Standing just outside the threshold, she leaned one hand against the side of the door-way and thrust her horned head into the room, and asked the unnecessary question, "Did you call?"

"Yes, Ruthy," said Mrs. Cobb, mildly; "I wanted Twilight; does thee know where she is?"

"Out in the garden, I guess; she mostly always is—shall I call her?" said the grimly Ruth.

"No, no; you needn't," here interposed Uncle Lem; "don't you call her; let her run, poor thing! I guess the fresh air won't do her a mite of hurt—

'All the world over, chicken and child,
Grow the better for running wild!'"

"*Don't* thee, Uncle Lem; be quiet, *will* thee, please! No, Ruthy, thee need not call her; I only wanted a little more water in the pot; thee can bring it thyself; and when Twilight comes in thee may tell her I wanted her."

"And much good that'll do, I guess!" muttered the Unicorn; but she brought the water, and then asked, in a sort of grim obligingness, if any thing else was likely to be wanted.

"No, thank thee, Ruthy; that will do; that is all, thank thee."

When the kind little hostess had twice in vain offered Miss Gracie every several article of food on the table, and had satisfied herself by actual experiment that no amount of urging would induce her to eat more, she rose from the table, saying, "I suppose, Alice, thee'll like to see thy room? I will show it to thee now. Uncle Lem, will thee take up Alice Gracie's trunk, please?"

"Oh! do not you take that trouble," said Miss Gracie, kindly; "it is very heavy, I am afraid."

"Oh! it's no trouble, that isn't," said Mr. Wood, laughing, and lifting the trunk with ease; "and if it *was*, why,

'A man who can not fetch and carry
Is neither fit to hang or marry.'"

"*Don't* thee, Uncle Lem, *please*," mildly suggested the widow; and preceded by her hostess, who carried her carpet-bag, and followed by Uncle Lem and her trunk, Miss Gracie went up to take possession of her chamber.

She found it, like the rooms below, cool, airy, and scrupulously neat, but very plainly furnished. It had four windows, a good closet, a commodious wardrobe, and bureau. The bed-linen was delicately nice, and the wash-stand abundantly furnished. Alice was used to boarding-houses, and her practiced eye took in all these advantages at a glance; and she thought, when she had unpacked her books and her writing-desk, and had put her dressing-case and trinket-boxes on the table, with a few flowers on the bureau, the room would look quite home-like and pleasant, and she could be very comfortable there.

In the mean time her good little landlady was running glibly on: "I'm so glad thee likes thy chamber, Alice; I hoped thee would. I guess we'll put thy trunk on these two chairs—that'll be handy for thee. Uncle Lem, open the blinds of that window, won't thee? the sun has gone from there now, I guess. Alice, thee'll find these drawers all empty for thee, and here's plenty of napkins on the stand, and if thee wants more, see here—there's plenty more in this little drawer; and here's fresh water for thee—why, no, there is not, either; and I told Twilight to be sure and put some. Careless girl! I dare say she forgot it—she *is a trial!*"

"No, she ain't, neither," said Uncle Lem. "No more of a trial than *all* gals are; all gals are trials to somebody—you was a trial yourself, Betsy, at her age. *I* remember when you was a *real* trial."

"Well! maybe thee's right," said Mrs. Cobb, with a mingled smile and sigh; "but I'm sober enough now, and I do wish Twilight was not so careless—if she would only *think* a little more."

"Poor thing! I guess thinking wouldn't add much to her comfort; and besides, Betsy, I guess that

'A wise old head on a gal's young shoulders
Would sooner *shock* than *please* beholders.'"

"Well! I guess thee's right there, Uncle Lem;" said Mrs. Cobb, laughing.

"Right? to be sure I am; and now give me the pitcher and I will go and get the water."

"No, indeed you need not," said Miss Gracie; "I do not want any at present; I shall not use it."

"Oh! don't you mind me, Miss Gracie; exercise is good for me, it'll make me grow—

'It's good for the pump, and good for me,
The more we're worked the better we'll be.'"

"I hope, Alice, thee won't mind Uncle Lem's queer ways," said Mrs. Cobb, as he left the room, pitcher in hand; "he can't help it, it comes as natural to him as his breath; and when thee knows him better thee'll like him; I know thee will, for he is real kind-hearted and obliging."

Here Mr. Wood came up again with the water. "And now," he said, "I am going down to the village; can I do any thing for you?"

Alice thanked him; but she had no commissions, and he departed.

"And now, Alice," said Mrs. Cobb, "I shall leave thee too; I have some little matters to attend to. Be sure and make thyself at home here; if thee wants *any thing*, just open thy door and call Twilight, and if she is not there, Ruthy or I shall be sure to hear thee; and don't thee *want* for *any thing* in this house."

Alice thanked the kind little woman, and said she thought she would unpack her trunk, and then, as the evening was so fine, she would walk in the garden. Left alone, Alice busied herself a few moments in unpacking her carpet-bag and dressing-case, and then, deciding she was too tired to unpack her trunk, she sauntered to one of the windows and took a survey through its closed blinds.

The window commanded a distant view of some fine hills, and a nearer view of the garden and of the back-yard, which was perfectly neat and orderly. A long wood-pile, commencing just under the window where Alice stood, ran nearly down to the garden boundary; behind it was a long whitewashed wall; and between this wall and the wood-pile was a narrow passage of about three feet in width, left probably for the convenience of placing or removing the logs. At the extreme end of this narrow passage-way (which Miss Gracie noticed could not be seen from any part of the house but the very window at which she stood) her eye rested upon a diminutive little figure, doing—what? Alice could not make out, though she looked long and earnestly.

The child, or girl—for Alice was at fault what to term her—was so muffled and concealed by the old loose sack she wore that no suggestive outline betrayed, by the sharpness of its angle or the roundness of its contour, the age of the wearer, and the face was equally puzzling. It was a face of rare and remarkable beauty—a fresh complexion of clear, brilliant brunette; large, magnificent dark eyes, softened by long silken lashes which swept the crimson cheek; soft, shining black hair, whose loose silken ringlets the wind had tossed into a mass of confusion; and a small mouth, whose mobile expression displayed teeth of dazzling whiteness, but small and even as kernels of new corn in the row. But the eyes, in their mingled fire and softness, had a depth of tenderness, a maturity of thought and feeling almost womanly; while the expression of the small rosy mouth, with its dimpling smiles, was soft and even infantile in its sweetness. What *was* she doing?

A large sheet of wrapping paper was fastened to the wall, and the little one, with something she held in her hand, was apparently drawing upon the paper; but *what* Miss Gracie could not see, as the surface of the paper did not come within her range of vision, though the child's face did. Wholly absorbed in her occupation, whatever it might be, the little one went on. At times she would pause, as if at a loss how to proceed, casting up her eyes, as if she sought inspiration; —then again, as though the needed inspiration had come, with eager smile, and many an unnecessary flourish of the little sun-browned hand, and many a strange contortion of the rose-bud mouth, the young artist would proceed; then pausing again, with head thrown back, and look askant, she would survey the work with an amusing air of satisfied criticism, and rubbing the little benumbed wrist, stiff with its evidently unwonted labor, she would re-commence; sometimes pressing her hands over her eyes as if in abstract reflection, or as if trying to recall some lost idea, then a smile of joy irradiating her face as if the momentous difficulty had been suddenly solved; and when some apparently successful stroke had been made, or some particularly happy effect had been produced, she would clasp her hands joyfully together—or mutely clap her elbows upon her sides, like a victorious game-cock about to crow forth his triumph and delight.

What could the girl be doing? Miss Gracie's curiosity was excited, and leaving her chamber she went into the yard, and passing quietly down in front of the wood-pile to the other end, where the removal of some of the logs had lowered it sufficiently for her to see across it, she had, while unseen herself, a full view of the little performer and her work. To her surprise she found it was not artistic, but literary; the child was writing, not drawing, as she had supposed. On the sheet of yellow paper, traced in charcoal, with all that seemingly superfluous care and labor, were four well-known lines of doggerel rhyme, probably familiar in every New England kitchen, written in letters of all shapes and sizes. The following is a copy:

"ANN TWILITE HEAR SHE LIZ
NUBBUDDY LAFS AN NUBBUDDY CRIS
WARE SHEZE GORN AN HOW SHE FAIRS
NUBBUDDY NOSE AN NUBBUDDY CARES"

But the "cares" of poor little Twilight were not destined to be ended then and there; for as Alice, bending forward to obtain a better view, leaned her hand lightly on the wood, one of the logs suddenly gave way under the slight pressure and fell to the ground with a loud crash. At the unexpected sound the little girl, whose back had been turned toward the intruder, suddenly started, and, in turning to run away, came in contact with a projecting end of the wood, which catching her clothes, she fell heavily. In one moment Miss Gracie, passing round the barrier of logs, went to the assistance of the little girl, exclaiming, kindly and compassionately,

"My poor child! are you hurt?"

"No, marm!" said the child, who had already regained her feet, but, afraid to pass the intruder, was standing and rubbing the little round arm, which showed a severe abrasion of the skin; "I ain't *hurt* none, I guess; but you scart me awfully."

"I am sorry for that," said the young lady, smiling. "But are you sure you are not hurt? Let *me* see."

"Oh! that ain't nothing—that ain't; I don't mind it not a mite;" said the little girl, who stood as if prepared to fly, blushing, and stealing from beneath her long silken lashes bashful, wistful glances at the kind inquirer.

"And so," said Alice, "I suppose you are the little girl I have heard them call Twilight?"

The girl nodded, "That's what folks calls me."

"It is a pretty name," said Alice, "but rather an odd one; I do not think I ever heard it before."

To this no answer seemed required, and evidently Twilight thought so, for she did not offer any; but glancing shyly up at the face of her new acquaintance, it seemed to occur to her that it was now *her* turn to investigate; and she said, suddenly,

"I guess you're the new boarder that's coming to live with Aunt Betsy—ain't you?"

"I believe I am," said Miss Gracie, kindly.

"Well, and you're a lady—ain't you?" was the next inquiry.

"I hope so," said Miss Gracie, smiling at the earnest simplicity of the question.

"Oh, I guess you be; Ruthy said she guessed so, 'cause you'd got such a real nice trunk."

Alice Gracie laughed. It was the first time she had ever imagined her claims to gentility were derivable from her trunk; and the thought crossed her mind that, if her social position were to be inferred from her amount of baggage, few persons would give her the title which Twilight had.

"And you," she said, turning again to the child, "you are Mrs. Cobb's niece, I suppose."

"Me?" said Twilight, "why—no indeed; I guess I ain't."

"Oh! then you are Mr. Wood's niece, are you?"

"Why—no marm, I ain't," said Twilight, laughing merrily; "I ain't niece to neither of 'um; I ain't nubbody's niece. What made you think I was?"

"Because you said Aunt Betsy—and so I concluded you were niece, of course."

Twilight looked amused.

"Why, no; I ain't," she repeated. "I ony calls her Aunt Betsy 'cause she's a Friend—*Quakers* some calls 'um, but she calls 'um Friends—and so she tells Ruthy and I to call her Aunt Betsy; and so I call Uncle Lem Uncle Lem, 'cause mostly every body does. But I ain't nothing to 'um ony their bound gal. They took me out of the work-'us—that's all I am to 'um."

"And where are your parents, my poor child?"

Twilight did not speak; but the changing color, the drooping of the eyelid, and the trembling of the red lip, warned Alice not to pursue that inquiry.

"And who did *that*, I wonder?" she said next, pointing to the paper on the wall, and kindly wishing to divert the girl's attention from her last unfortunate question.

"Me!" said Twilight, with a quick, bright flush on her face, and a pretty air of mingled pride and bashfulness, as one who modestly owns to some grand achievement; "I done it!"

"Indeed! and what is it?"

"Why, it's po'try—and it's real pretty. Can you read it—*can* you?" she said, advancing with a look of eager inquiry—"Can you read it?"

"Oh yes, I can read it," said Miss Gracie, glancing at the paper.

"Can you—can you? and is it *writing—real writing*—such as letters has in 'um?" said Twilight.

"Why, no—not exactly," said Miss Gracie. "It is more like printing, such as you see in books; these are printing letters, not writing hand."

The little girl's countenance fell. "I thought it was writing," she said, falteringly, and stopped.

"But what did you write it for, my dear?"

"'Cause I wanted to learn to write; and 'cause—"

"But what made you choose those lines? Will you tell me?"

"'Cause I think they are just like me," said Twilight, hesitating; "I ain't got no folks, nor nobody to care for me; and I think they are real jolly—don't *you?*"

Jolly! those wretched lines of miserable doggerel! whose expression of utter desolation and abandonment almost redeems them from vulgarity, and half raises them to the dignity of pathos. *Jolly!* surely Mark Tapley himself could scarcely have found a better illustration of his favorite word.

"But, Twilight," said Miss Gracie, who was deeply interested in the little friendless stranger—"but, Twilight, do you not know that if you—"

Here the voice of Ruth called sharply from the house for Twilight; and hastily snatching down the paper, folding, and concealing it in the crevice between two logs, Twilight darted by Miss Gracie and ran to answer the summons, and Alice pursued her way into the garden.

The following day was Sunday; and Miss Gracie, who really loved the country, had taken a long early morning walk, and attended divine service morning and afternoon. On her return from church in the afternoon, finding her room warm, she took her books and went down stairs, intending to sit and read on the piazza at the back of the house, but she found it already occupied. At the southern end, where the afternoon sun, glancing round the corner of the house, traced a broad angle of sunlight on the floor, lay old Tiger, the house-dog, enjoying the Sabbath stillness, although one half-opened eye told of the faithful and unslumbering watch he still kept over the premises. At the other, and more shady end of the piazza, sat Mr. Lemuel Wood, taking the Sunday afternoon nap which was part and parcel of his week's religion; for, like many worthy but uncultivated persons, he entertained an almost superstitious reverence for the sacred day, although he did not exactly know how to spend its hallowed hours. He conscientiously "remembered the Sabbath day;" but not knowing how to "keep it holy," he took refuge in obeying the rest of the commandment—"in it thou shalt do no work"—this he could understand and obey. To keep his ever-active hands and energies idle was a cross to him, but he did it. He would have stopped thinking too, if he could, but that he could not do; and as his busy brain seemed to increase its activity in proportion to the enforced idleness of his hands; and as "all next week's work" would rise up tempting him, so, when the public services of the day were over, he was wont to seek refuge in sleep. And if, as we are told, "the motive makes the deed," surely we may trust that for him rest was acceptable worship.

He now sat leaning back in his great armchair, which was reared up on its hind legs and tipped back against the house, while his lower

limbs, by some curious and apparently painful distortion, were twisted round the front legs of the chair, his huge feet resting upon the side rungs. He had thrown his ample red bandana handkerchief over his bald head, drawing it down over his face far enough to protect his eyes and nose from the impertinent investigation of the too-curious flies, but leaving the lower part of the face free for the necessary operations of breathing and snoring. He had laid aside his Sunday coat, and, with his thumbs hooked into the arm-holes of his vest, and his short plump fingers just meeting over his rotund figure, he looked the very personification of indolent comfort.

Half-way between the man and dog—on the wooden steps which led to the garden and yard—sat Twilight; and here too might be traced the influence of Sunday. Her person and clothing were scrupulously neat; there was no attempt at dress—for the child's poor means evidently forbade that—but the abundant silky black hair, which had the purple brilliancy of the raven's wing, had been combed and brushed till its undulating surface caught the light like burnished steel; its soft, wavy curls had been gathered back from her fair, rounded temples, and secured on either side by a small knot of carnation-colored ribbon, so minute that it looked almost like a chance-dropped blossom amidst the shining curls. Her dress was of the simplest kind, and of a coarse dark stuff; its sober hue, and quaint, old-fashioned make, were plainly suggestive of Aunt Betsy's friendly hand; but the pretty coquettish grace with which it was worn—*that* was as surely Twilight's own. A pin or two here, and a plait there, and the coarse fabric had yielded to the lithe form it clad; and the heavy folds fell round her hoopless, crinolineless little figure with an easy grace a city belle might have attempted in vain. In her lap she held a few gathered wild-flowers of the most common kinds—butter-cups, violets, dandelions, clover-tops, whiteweed, and the different grasses; and upon the step above her, and formed of the same simple materials, was a wreath she had just constructed.

Miss Gracie's eye was caught at once by the graceful arrangement of the flowers, and the simple but almost artistic combination of colors.

"Did *you* make that?" she said, pleasantly, drawing near the steps; "it is very pretty!"

"No, it ain't; that ain't nothing," said Twilight, blushing deeply, and sweeping with a sudden motion of her little sunburnt hand all the flowers into her lap as she spoke—"That ain't nothing; ony I hadn't nothing else to do."

"Oh! I am sorry you have broken up that pretty wreath," said Alice. "I should have liked it upon my dressing-table. I love flowers dearly, and I am sure you do, or you could not make such a pretty wreath."

Twilight smiled and nodded her head, but she did not speak.

"They are very beautiful, and very curious and wonderful too," said Miss Gracie, drawing out a clover blossom from the mass in her young companion's lap, and holding it up admiringly before her; "and we ought to be very thankful to the kind Friend whose love gave them to us, had not we?"

Twilight looked at her with a timid, wondering look, but did not speak.

"You can tell me who gave you all those beautiful flowers, can't you?" continued Alice, seriously.

"Nubbody didn't give 'um to me," said Twilight. "I went and picked 'um for myself."

"Yes, I know; you *picked* them yourself, I dare say; but I mean, who gave them for you to pick?"

"Well, nubbody didn't; they wasn't nubbody's flowers: I got 'um out in the lane; nubbody don't never give 'um to me; they don't grow in nubbody's garding; them don't—them's wild-flowers."

"Yes; but I mean, who makes them, in the land and garden too—don't you know?"

"Why, nubbody don't make 'um," said Twilight, laughing; "I guess they couldn't; they grows."

"But who is it that *makes* them grow, Twilight?"

"Well," said the little girl, reflecting, "I guess, if *any* body does, it's Uncle Lem and me, for he goes and makes the holes and I pop in the seeds; and we had a real good time doing of it, didn't we, Uncle Lem? Oh! he's asleep, I guess; ain't he?" said she, glancing over her shoulder at the silent figure in the corner.

Miss Gracie looked in that direction, too. Uncle Lem did not speak or move; but from a slight nervous twitching of the uncovered portion of his face, she judged his sleep was not so profound as he wished it to appear.

There was a short silence; for, strangely puzzled by the child's manner, comparing the stupid ignorance of her answers with her remarkably intelligent face, Miss Gracie sat curiously contemplating her, and wondering if it were possible this could be the simulation of a clever but roguish child; and the little girl, evidently thinking the conversation had come to a natural termination, had quietly taken up her flowers again. But as Alice met the gaze of the full, soft eye, and noted the sweet, truthful expression of the whole face, she felt ashamed of her suspicion; and drawing nearer again, she said,

"Twilight, you said just now you had nothing to do. Have you no Sunday lesson to learn?"

"Me!" said the girl, looking up at her in surprise at the question. "No, I guess I hain't."

"Do not you have Sunday lessons usually, my dear?"

"No, indeed; never."

"And why not, I wonder? I suppose you know how to read; do not you?"

"Well," said Twilight, reddening, "I can read *some*."

"I hope so, indeed. Such a nice, tall girl as you are ought to be able to read pretty well."

"Well, I don't," said Twilight, sadly; "I used to."

"But you ought to be able to read better. You have not forgotten what you have learned, I hope?"

Twilight did not answer; she hung her head and blushed.

"Will you tell me why it is that you do not read as well as you used to do?"

"'Cause."

"That is no answer at all, Twilight. Can't you give me a better one than that?"

"'Cause I could read in Taffy's book," she said, at last. "He teached me to read in his book."

"And you can not read so well in any other book?" said Alice. "Is that it?"

Twilight nodded; and from the far-off corner of the piazza came the low-murmured words:

"There's many a one, if the truth were known,
Can read no Bible except his own."

Alice turned round, but Mr. Wood's singular attitude remained unchanged.

"But, Twilight," continued Miss Gracie, "if you can not read very well, can not you say some little hymns? I dare say you have been taught to repeat some hymns."

"No," said Twilight, "I hain't."

"Well, then," persisted Miss Gracie, "you can, at least, say your prayers, I hope?"

Another shake of the little drooping head.

"Speak, my child," said the young lady; "do not shake and nod your head in that way. That is not polite or pretty. Tell me: can not you say your prayers?"

"No, marm," said the girl, sadly and timidly. "I guess I hain't got none."

Alice was shocked.

"Twilight," she said, "I am surprised at this! Surely you can say 'Our Father'—can't you?"

"Why, yes," said Twilight, "to be sure, I s'pose I *can* say *that*."

"I thought so," said Alice, encouragingly. "Well, then, let me hear you say that — will you?"

"Say *what?*"

"Why, say 'Our Father.'"

"'Our Father,'" repeated the child, smiling.

"Very well; go on. What next?" said Miss Gracie.

But Twilight hesitated.

"'Our Father who art in heaven,'" suggested Alice; and "'Our Father who art in heaven,'" repeated Twilight, with parrot-like repetition; and again she made a full stop.

"Go on, child!" said the young teacher, somewhat impatiently. "What comes next?"

"Our mother," faltered the child.

"For shame, Twilight!" said Miss Gracie, now fully convinced the girl was deceiving her. "You know better, you careless girl!—you *do*—you *must* know better. You know very well that there is no mother in heaven."

"There *is*—there *is!*" exclaimed Twilight, suddenly springing up and facing her young teacher, with stamping foot, and clenching hand, and writhing lip, while her dilating eyes seemed to flash actual fire, and her round cheek crimsoned with rage. "Oh! there *is*—there *is;* I *know* there is! Taffy said so; Taffy knowed; he seen her hisself, of'en and of'en, and I seen her picter, too! You're a real ugly, bad, wicked woman to say so; and I don't like you—I don't love you—and I won't talk to you!"

And flinging violently away from Miss Gracie's detaining hand, she fled like a young Ate down the garden, and disappeared; leaving Alice standing mute and motionless on the steps, confounded at this unexpected termination of her missionary efforts.

A prolonged "w-h-e-w!" from the end of the piazza caused Miss Gracie to turn in the direction of Uncle Lem. That worthy individual, having suffered his chair to transmigrate, like the soul of Indur, from the biped to the quadruped condition, was now sitting bolt upright, and wide awake, with his great open palms resting on either knee, and looking at her with a puzzled expression.

"Spunky! ain't she?" he said, at last, in answer to Alice's look of mute appeal. "But, you see,

'When all the ground is covered with weeds,
It's late in the day to be sowing good seeds.'"

"Very true," said Alice, walking gravely up to him. "But how came the weeds there, Mr. Wood? You have heard our conversation, I conclude?"

"Wa'al, yes, I guess I did—most on't. You see I was only sort of cat-napping."

"I thought so. And now tell me: is it possible that, in this Christian land, a child can have grown up to that girl's age such a little heathen?"

"Wa'al," said Uncle Lem, moving uneasily and apologetically in his chair; "wa'al, I don't know 'bout the *heathen;* she don't *act* much like one, any way—Twilight don't."

"Perhaps not; but her ignorance is heathenish—is not it, Mr. Wood?"

"Wa'al, may be it is; I can't say. But I run of a notion you didn't understand each other. You see, I take it that Twilight come of outlandish folks—furriners, you know."

"And what does that prove, Mr. Wood?"

"Wa'al, nothing, as I knows of; that is, it don't just *prove nothing.* But I've an idee, in a general way, that them furriners, mostly allers, is Papishes and Romanites."

"Roman Catholics? Perhaps so. But what of that? Roman Catholics, though they may differ very widely from us in belief, are still Christians."

"Wa'al, I don'no but what they are; I don't say they *ain't.* But didn't you ever chance to hear or know that them sort of folks mostly allers calls our Lord's mother 'Queen of Heaven,' and sometimes 'Mother of Heaven?'"

"So they do; you are right," said Alice, catching at this very possible solution of the matter. "I never thought of that before. I dare say that was what she meant, poor little

thing! and I may have shocked her sense of reverence quite as much as she did mine. Thank you for the hint, Mr. Wood. I will go and seek her, and try to explain to her, poor little girl!"

And passing down the steps, all strewn with the wild flowers which Twilight had scattered in her hasty flight, Miss Gracie walked thoughtfully down the garden. At the extreme end she heard a passionate sobbing; and there, prostrate on the green turf under the apple-trees, lay poor little Twilight, with her face buried in the fresh grass. Before Miss Gracie could make up her mind how to address her the child's quick ear caught the sound of her steps, and, rising, she came directly toward her. But oh! what a change in that young face! The storm of passionate anger had been washed away by a more passionate sorrow. Pale even to the lips, with a look of settled woe pitiful to behold, she came to Alice's side, and lifting up those soft eyes, now trembling through tears, like violets heavy with rain-drops, she said, with humble, penitent manner, and a voice which faltered in its low, pleading tones,

"Please, marm, to forgive me; I spoke real bad to you. I oughter been ashamed to speak to you so; and I'm real sorry—please, will you forgive me?"

"My dear child," said Miss Gracie, placing her hand kindly on the girl's shoulder, as she spoke.

"No, no!" interrupted Twilight, withdrawing herself nervously from the caressing hand; "I *ain't* a dear child—I *know* I ain't—I'm an awful wicked, bad gal! I was ugly to you—I know I was—*real* ugly—I always am when I haves a tantrum. Miss White used to say I was. But I'm real sorry, and I won't never speak so to you agin, if I can help it—ony—please marm, don't say *that* agin, 'cause it hurts me so *here*, I can't hardly breathe."

And she laid her hand upon her poor, little throbbing heart as she spoke.

"You see, marm," continued the child, drawing nearer to Alice, and speaking in a low, confiding tone, "most other gals has folks; some haves father and mother both; some haves one, and some haves t'other; but they mostly all on 'um has somebuddy—*ony me*. I ain't got neither, nor nobuddy. But Taffy said my folks had gone to heaven; and *he said*, if I was good, real good, somebuddy there—maybe 'twas the King, or the President maybe—would be like to hear on't, and send for me to come and see my folks. And I *have* been just as good as ever I knowed how; and I thought maybe they'd send for me to come next Thanksgiving Day—folks does, you know—and *now*—and *now*, you see—I've been, and went, and had one of my tantrums; and somebuddy or uther will be sure to tell him; and then I know he'll say, 'She's an ugly gal, and cross—we don't want her here;' and he won't ask me to Thanksgiving, and I shan't see my folks."

And again the passionate, despairing sorrow rained down her sweet young face.

"Listen to me, Twilight," said Alice, who now comprehended the true nature of the case; "you did not understand me. When I spoke of your 'Father in Heaven,' I did not mean your earthly father, I meant God; but you were thinking of your father and mother who are dead, and gone to heaven, where I trust you *will* one day be sent for to meet them."

"Do you—do you?" said the child, the glad light of hope breaking over her pale face; "do *you* believe it too? Oh! I am so glad," and catching Alice's hand she covered it with eager kisses.

"But, Twilight," said Miss Gracie, "when I spoke of our 'Father in heaven' I meant God! Do you know who He is?"

"No," said Twilight, hesitatingly, "not much, I guess. I've heerd tell a little about him; but that was a good while ago, and I don't remember much about it."

"He is the great King you spoke of just now," said Alice, thinking this the quickest way to the heart of her little listener; "and it is He who will one day send for you to come and see your dear father and mother."

"You don't!" said Twilight. "Why! and do you know him, then?"

"I know more of him than you do, my poor child," said Miss Gracie, reverently; "and I think I can teach you how to serve and please Him."

"Can you?" said the eager child. "Oh! do, do; and I'll do a'most any thing in the world for you if you will."

"Very well," said Alice, smiling, "I will try. And now, first sit down here and talk with me a little while. I want to know why you have not been to church to-day?"

"Me! to church?" said Twilight, in evident surprise at the question. "Why, I never goes."

"Never go to church?"

"Why: no, never."

"But why not?"

"Why," said Twilight, looking up with an amused smile, "how should *I* go to church? who would take *me?* You know Aunt Betsy, she's a Friend. Well, she goes to Friends' meeting; and Friends' meeting-house is way out of the village—'most two miles t'other side of Piper's Mills; and so she allers rides. The Popeses they keep a team, and they allers calls for her and takes her with them. I couldn't go with *them*, I guess. Catch 'um asking *me* to ride in their carry-haul! I *should* laugh!"

"But Mr. Wood, he goes to the Brick Church. Why not go with him?"

"'Cause he never asked me to; and I guess he wouldn't let me if I asked him. I did ask Ruthy a good many times to lem'me go with her. I knowed I couldn't go Sunday mornings, 'cause Ruthy gets the dinner ready, and then she goes, and I stay by and see to it; but I asked her to lem'me go some afternoon; but she said no—I couldn't be spared. But that warn't the *true* reason, I know."

"And what *was* the true reason, Twilight?"

"Well! she didn't want to be seen walking and setting with me, and have folks a-saying she wasn't fit for no better company than a work'us gal! and I don'no as I should nuther, if I was her. But twice, when Ruthy staid at home 'cause she'd the toothache, I slipped out unbeknownst to her, and run down to the church. I didn't darst to go in, 'cause I didn't know any body, but I went into the grave-yard when nobody wasn't looking, and set on old Tim Goddard's grave, that's close up under the windows; and I heard 'um sing and play the music ever so plain. Oh! wasn't that real jolly?"

Again that strangely inappropriate word. *Jolly* for a little girl to sit on a pauper's grave and listen to psalm singing! And as Miss Gracie looked at the neglected child, and thought of the little desolate creature creeping noiselessly into the church-yard, and sitting as an outcast among the graves, listening by stealth to the music of the sanctuary, from which her pariah-caste excluded her, the tears rose to her eyes, and she mentally resolved that, by the grace and help of the merciful "All-Father," she would try to lead this little stray lamb of Christ's fold back to the "still waters and green pastures" to which she belonged.

"Twilight," she said, after a moment's silent self-communing, "I should like to take you to church with me."

"Sakes alive!" said Twilight. "Why! Miss Gracie, marm! if I ain't fit company for our Ruthy I am a deal unfitter for you. Why, you *forget* I am a work-'us gal, and you a lady!"

"I do not think any thing of *that*, Twilight. If you are only a good girl *now*, there is no disgrace in your having been in the Work-house."

"*Ain't there*, though?" said Twilight. "Well! I thought there *was*, 'cause whenever I go to the village for Aunt Betsy, and the free school is out, the boys calls out 'Work'-us gal! work'-us gal!' and then I run just as tight as I can clip it."

"They are very wrong to do it, Twilight; and when they do, it is more of a disgrace to them than to you. But we will not talk about them; I have something more to say to you. If you really want to learn to read and write I will teach you; I have taught a great many little girls. Do you wish to learn?"

For one moment surprise kept Twilight speechless, and then, bursting into contrite tears, she sobbed out,

"And I was ugly to *you!*"

"Never mind that," said Alice. "You did not understand me. I know you will not speak so again."

"Never! never!" sobbed the little girl. "But stop one minit, marm. Them little gals as learn of you is rich ones, isn't they?"

"The children of rich parents you mean? Yes."

"And yours is a pay school, ain't it?"

"Yes!" said Miss Gracie, wishing to see what the child intended. "Yes! I am paid for teaching them."

"Then I can't come, marm. Thank you just the same for being willing to teach me; but I haven't got a red cent. I had a quarter of a dollar once; Uncle Lem giv it to me last Fourth of July—he's real good to me—but I ain't got *that* now."

"And what did you buy with it, Twilight?"

"Well!" said Twilight, hesitating and blushing; "I didn't buy nothing with it."

"And where is it, then?"

"Well, I gave it to the little beggar gal, 'cause she said her mother was sick. But that wouldn't be nothing to you if I had it; and I ain't got nothing else in the world—ony *one* thing—and Taffy told me never to give that away; and so I can't; and I wouldn't, if he hadn't told me."

"But, Twilight," said Miss Gracie, "I do not wish you to pay me any thing. If you will try to learn, and are a good girl, that is all the pay I want."

"Really—really, sartin true?" said Twilight, again catching Alice's hand, and kissing it repeatedly. "Oh! won't I be good? Try me, try me; I do so want to learn. Taffy used to say, 'Be a good gal, and try to learn to read and write, and be a lady;' but when I told Miss White she laughed at me, and said, small chance of that, she guessed."

A short consultation upon ways and means was then held. It appeared that Aunt Betsy usually took a nap from three o'clock till five in the afternoon, during which time Twilight was at leisure; and it was settled she should come into Miss Gracie's room every day at that hour, and receive instruction. To make all secure, Alice informed Aunt Betsy of the plan, and the good Quakeress did not object; only saying, "Sure! it's very good of thee, if thee's *willing* to take the trouble; but I guess thee'll find her a *trial.*" So the lessons commenced the next day.

During the week Alice looked over her own wardrobe, and selected a printed muslin dress, which she altered for Twilight, and bought her a simple straw hat, trimming it with one of her own discarded ribbons; and when the next Sunday afternoon came, and the delighted girl was dressed, with her soft, burnished, black curls dancing round her fresh young face, she certainly did look pretty enough to justify the very innocent pleasure with which she surveyed herself, peeping into the little, foot-square looking-glass in her small bedchamber. The first verdict in favor of her improved appearance was rendered by the grimly Ruth:

"Why, Twilight," she said, turning upon her with a suddenness which made the sensitive child start—"Why! my gracious! if you don't look real ladyfied! I wouldn't a known you, hardly! You look real genteel; I declare you do; and your gown ain't half as smart as mine is, nuther!"

"Thank you, Ruthy," said Twilight, with her soft, silvery laugh, and she hurried down to the piazza to exhibit herself to Uncle Lem.

Mr. Wood deliberately raised the silken vail

which concealed his slumberous beauties, and holding it suspended, like a crimson cloud above his head, by a thumb and finger at the two corners, he took a full and calm survey of the flushed and excited little girl.

"Smart as a new sixpence!" he said at last. "Why, Twilight, you do look good enough to kiss!"

"Do I?" said the delighted girl, and bending down, with childlike innocence, she presented her fresh, glowing young cheek to the laughing lips of the old man, who, though rather taken by surprise, gave her a very hearty and fatherly salute; bidding her always to mind and be as good as she looked, and he guessed she would do. Then, as she turned away, he muttered, half inaudibly,

> "Time, and chance, and a favoring sky,
> Can turn a grub to a butterfly!"

But the little transformed grub did not hear him; she was already out of hearing. Skipping across the piazza to the other end, where her sole playmate, "old Tige," basking in the sun, was calmly enjoying his afternoon siesta, she knelt down before him, lifted his broad, rough head in both her hands, looked for a moment full and steadily into his honest, intelligent, but sleepy eyes; gave him a significant nod, which set all her soft curls flying about her face; then, replacing his big head back on his huge paws as she found it, she gave it one affectionate pat, and walked demurely into the parlor, where Miss Gracie was waiting for her.

Alice received her with a pleasant smile, and a quiet "Are you ready, Twilight?" unembellished by one word of admiration or praise; and they set out at once upon their walk. Upon the way Miss Gracie tried to lead the thoughts of her little companion in a religious direction, and to awaken in her some sense of the service in which they were about to engage. Twilight listened to her in respectful attention, but as she made no answer Miss Gracie was unable to judge whether her remarks were comprehended or not. They reached the church; and as they crossed the porch Twilight fell modestly back, and laying a gently-detaining hand upon Alice's arm, asked, nervously and breathlessly,

"Where must *I* go?"

"With me, of course," said Alice; and, taking her blushing companion by the hand, she walked quietly up to her own seat and placed Twilight beside her.

It must be confessed that, for a few moments, Alice watched her young proselyte in some anxiety; and she was gratified and surprised, though she couldn't forbear smiling, at the child's quiet, lady-like demeanor. No idly-wandering glances, no impertinent stare, betrayed the eager curiosity of a vulgar mind; calm, grave, and self-possessed, Twilight seemed to melt into the time and place, as if church-going had been her daily habit. When the services commenced—and, fortunately for our young heroine, they were of a simple, practical nature, taken from the New Testament history—she listened with earnest eyes and avaricious ears, which seemed to devour every word; and Alice, watching her absorbed attention, was reminded of the thirsty desert, when first it receives into its bosom the genial and revivifying rain, which is to array it in beauty and gladness and teach it to "blossom as the rose." The music, too, seemed deeply to interest her; but for Alice, the closing wonder was the greatest.

When the last hymn was given out—and it was that sweet hymn of Heber's, "I would not live always"—the congregation, as is not unusual in rural districts, all rose, and from various parts of the house many who could sing joined with the choir. The first verse was half sung when Miss Gracie became aware of a voice close at her side, low, soft, and trembling, but sweet and rich as the breath of violets, which, gradually gaining confidence and volume, swelled out into freer harmony. Trembling with apprehension, Alice dared not turn round. She was a teacher of music, and was herself no indifferent performer; and as the soft, mellow tones swelled gradually higher and clearer she held her breath in nervous anxiety, for she feared the young singer, embarrassed by the notice she was evidently drawing upon herself, must falter, and might possibly break down. But still, pure and clear as liquid amber, higher and higher, triumphantly ascended the rich, golden harmony; and as Alice, listening, heard each note rendered with a truth and fidelity rare even in more experienced vocalists, her apprehension gradually gave way, and at last she ventured to steal one glance at the singer. That look reassured her—no fear for Twilight! for there was no self-consciousness about her. Wholly absorbed in the music, with her soft, dark eyes fixed upon the organ-loft, and the rapt expression of a St. Cecilia on her young face, she was singing, as the wild bird sings, because the irrepressible flood of music within her could no longer be restrained.

When the hymn was ended she gave a quiet little sigh of contented enjoyment, and left the church with Miss Gracie. Together they walked in silence for some time; and then, when the throng had lessened, and they were comparatively alone, Alice ventured to say, quietly,

"I did not know that you could sing, Twilight."

"Didn't you?" said Twilight, carelessly, as if it were a matter of no importance either way.

"But I have never heard you singing about the house," said Alice.

"No, indeed!" said Twilight. "I guess Aunt Betsy wouldn't like that—Friends *don't*, you know; and so I ony sing when I'm in the lane, and sometimes when I'm weeding in the garden. Uncle Lem, he likes singing, but he don't like *my* songs; he likes 'Hail Columby,' and such like; but he says my songs Taffy learned me are all 'Bosh!'"

"But when did you learn the hymn you sung in church?"

"Oh! that song? Why! they sung it both

them two times I sat out under the window, you know."

"And have you never heard it since?"

"No; but I've sung it to myself lots of times; I think it's real pretty."

And then passing on to the rest of the service, she asked question after question till her kind teacher was half bewildered. The wondrous tale of "Redemption's birth" had taken strong hold of her fancy and affection. Happier in that one respect than other and more favored children, the wonderful Bible narrative had never been hackneyed to her ear by wearisome and senseless repetition; she had never been called upon to parse from its hallowed pages, or to translate its quaint phraseology; and it came to her warm, fresh heart and fervent imagination with all the charm of a fairy tale, but heightened and dignified by its solemn reality. And so intense was her interest, and so eager her inquiries, that Alice knew not which to wonder at most, the acute intelligence of her remarks or the simplicity of her questions.

From that time, too, the daily lessons went on uninterruptedly; but Alice, who had become nearly as much interested in them as Twilight was herself, was struck with the apparent inequality of her powers. She had a quick, almost intuitive perception, and a strong, retentive memory; but her chief delight was in her writing lessons. To learn to write seemed to be a passion with her, and her nervous, trembling desire to learn sometimes defeated its object.

One day she brought Miss Gracie a letter, and stood by her while she read it.

"Oh, can't you read complete!" she said, as Alice folded up the letter. "Oh! I wish I could read a letter all myself. *Do* you think," she said, in trembling eagerness, "I ever will?"

"Yes, indeed," said Alice, kindly; "I am sure you will. You are coming on very fast indeed; and when I go back to the city I will write a letter to you all for yourself, and send it by the post. I will write it very plain, and I am sure you will be able to read it yourself."

Twilight said, "Thank you." But the kindly-meant promise did not seem to give her the pleasure her teacher had expected it would; for she knew that, to most young persons, the first letter received by mail, and bearing their own superscription, is an important and gratifying event.

In reading, Twilight's progress was unaccountably slow; she spelled with readiness, but it seemed difficult for her to learn to distinguish the proper sound of the letters; and one day, when she had been unusually puzzled with the pronunciation of a word, Miss Gracie suddenly remembered what Mr. Wood had said about her belonging to Papists and foreigners. She had taken the idea at the time that he meant to say she was the child of Irish parents; but now the circumstance recurred to her with a new significance, and she said, rather abruptly:

"How very oddly you do pronounce some words, Twilight! I should almost think you were a little foreigner."

"Well," said the child, blushing deeply as she spoke, "I guess I be."

"Are you really? Oh, then, that accounts for it. And what are you?"

"I guess," said Twilight, hesitatingly, and with a timid, uneasy glance at the face of the inquirer, as if furtively noting the effect of her communication—"I guess I'm a Welshman."

There was something in this absurd answer so utterly at variance with the sweet face and the low, trembling tones of her who made it, that for one moment Miss Gracie's strong sense of the ridiculous prevailed, and she laughed in spite of herself. But one glance at the blushing and tearful face of poor little Twilight touched a tender chord; and regaining her gravity by a great effort, she said, pleasantly:

"My dear child! I could not help laughing at the droll blunder you made. How can a little girl be a Welshman?"

Twilight gave a sigh of relief which seemed to say, "Is *that* all?" but she did not speak.

"Don't you see," said Alice, "you may be a Welsh *child*, or a Welsh *girl*, or a Welsh *woman*, if you please; but not a Welshman. But what made you think that you were a Welsh any thing?"

"Because," said Twilight, "I suppose I am what Taffy was; and whenever he went down into the yard all the work-'us boys used to sing out, 'Taffy was a Welshman, Taffy was a thief!' But he wasn't a thief, Miss Gracie, sarten true he wasn't; he was a real honest, dear, good old man! *He was now!*" said she, with tearful earnestness.

"I dare say he was," said Miss Gracie, "or he would not have taught you to be so good a girl. But what relation was he to you? Was he your father?"

"Oh no!" said Twilight, "he wasn't my father, I know."

"Your grandfather, then? or your uncle, perhaps?"

"Well, I don't know what he was to me," said Twilight. "He might be my uncle; maybe he was; I don't know. But I know he was real good, and I loved him first-rate, and no mistake." And she returned to her lesson.

A few days later, at the usual hour, Twilight made her appearance at Miss Gracie's door to say Mr. Wood wanted her to go to the village for him. "I must go," she said; "and it's ugly in me not to be more ready to do what he wants, for he is always good to me. But I sha'n't be gone long; I shall kite down there and back just as tight as ever I can go."

As she left the room, Alice, who had the valuable habit of using odd moments, took a French book from her shelf, and began to read aloud, as she did some part of every day, to keep herself in practice. She was still reading, and was not aware any one had entered the room, when a quick aspiration close to her ear made her start, and she turned round to meet the flushed face, and eager, wide eyes of Twilight, who was looking over her shoulder.

"Why! why! *can you read like that?*" cried the excited child, bending forward with clasped hands and tearful face. "Why, that's Taffy's talk; that's like Taffy's book; *I* can read *that!*"

And catching up the book which Alice laid down, she read a sentence or two with tolerable fluency, and a pure Parisian accent.

"Oh, how good it sounds!" she said, kissing the book as she laid it down again. "I did not know any body had such books ony Taffy."

It was now Alice's turn to be surprised. "Why, Twilight," she said, "and so you are a French girl after all, and not a bit of a '*Welshman!*'"

"Am I?" said Twilight; "I did not know it. And was Taffy French too?"

"I dare say he was. But suppose, instead of your lessons to-day, you sit down there and tell me all you can remember about yourself and Taffy."

"Oh!" said Twilight, taking the seat indicated to her, "I remember a great, great, long time ago—we used to live in a town where there was lots of houses, and Taffy had a shop down stairs, and he had music things and books, and gentlemen used to come and play, and buy the music things. And there was Taffy, and Marie, and I; and Marie used to wash me, and dress me, and put me to bed. And there was somebody else, too," said she, reflectively, "somebody dressed all in white in a great big chair—I think it must have been my mother. And, one day, when I was playing, Taffy came and took me up and carried me into a dark room; and *she* was there—oh, so white, and her eyes shut, and her head on the chair *this* way. And Taffy he set me on her lap, and she kissed me, oh, ever so many times; and she cried, and Taffy and Marie cried, and so I cried, too, 'cause they all cried. And then—all in a minute Marie screamed out, and Taffy caught me up and carried me away, and I never saw *her* again. And I asked Taffy about it once a good while after, and he said it *was* ma chère mère, and that she *died then.* And then, after a good while, Marie was sick, very sick—and she died too. I can remember more about that, 'cause I was older, you know. And when they put her into the ground, Taffy took me with him; and he went and bought some flowers and let me put them on mamma's grave and on Marie's too. And then Taffy took care of me, and he used to brush my hair 'cause Marie was dead, you know. And he used to teach me to read in his book; but he did not show me how to write, 'cause his hand was lame—something ailed his arm, I guess. And one night there was a fire, and we was burned out, and Taffy was hurt, and they come and took me and him to the ospittle, and we staid there a spell, and Taffy he warn't no better. And then they took and sent us to the work-'us, and after we'd been there a spell Taffy grew badder and badder. And one night when he was real bad I sot on his bed and cried; and he told me not to cry for he was going to see mamma and Marie; and then I cried worse agin, 'cause I wanted to go too, and 'cause he said I mustn't. And then he gave a picter and a letter (I told you about them, how he said I must keep them as long as I lived); and he said I must read the letter very of'en 'cause ma chère mère writ it for me. I s'pose he forgot I couldn't read it, and I didn't say nothing, 'cause I didn't want to sorrow him and he so sick. And then Miss White, the matron, she come in, and said how I must go away and go to bed; and I didn't want to quit Taffy, and I cried and had a tantrum and acted real bad—I felt so. And then Taffy he called me, and he spoke weak and slow—but he said if I'd be a good gal, and go then, he would tell my mother, and maybe I would be sent for to come too; and so I went to bed, but I cried all night; and next day they said Taffy was dead!—and oh, Miss Gracie—they wouldn't let me go when they laid him in the ground, nor tell me where they put him, for I wanted to go and put some flowers on him as he and I done for mamma and Marie. I was seven years old when Taffy died, and I staid at the work-'us and did chores for Miss White, and lugged round the children, and run of errands, till the committee-men said I was old enough to be put out; Miss White wanted to keep me, but they said no. And then Aunt Betsy she wanted a gal, and she took me, and I've been here most a year now."

"And have you got the letter and picture still, Twilight?" said Alice, as the girl paused.

"Got 'um? why! yes, indeed! Why, I wouldn't part with 'um for nothing!" said Twilight. "Do you want to see 'um?—Maybe—maybe"—she said, as if a new idea had struck her, "maybe you can read it to me—do you think you could?"

"Why, Twilight! have you never read it yet?"

"How could I?" said the poor girl, mournfully. "You know I can't read writing; *that's* why I so terribly want to learn to write; I want to know what my mother says."

"But could nobody read it to you?"

"I don't know," said Twilight. "They *might;* but there was ony one gal at the work-'us who could read, and she was a real wicked, bad gal—Miss White said so herself. Why!" said Twilight, fixing her pure, innocent eyes upon Miss Gracie's face with a look of holy horror, "she *lied and cuss'd*—ony think! and I didn't want *her* to read my dear mother's letter—should you?"

Again Alice was struck with the contrast between the native delicacy of the child's instincts and the low, coarse, work-house language she had been taught to use.

"So I waited, and waited," she continued, "and one day, after I came here, I got Ruthy a letter from the post-office and I asked her if she could read it, and she said, "Yes, to be sure she could;" and so I thought of it two days, and then I asked her if she would read a letter for me; and she said yes. But when I got it, and give it to her, she couldn't read a word of it; she said it warn't no words at all; that it was all *bosh!* and she flung it back to me, and said I'd as good put it right in the fire, for it wasn't no good at all!" and Twilight's voice trembled and her eyes flashed at the remembered insult.

"Will you bring it now and let *me* try to read it to you?" said Alice.

"Yes indeed," said the delighted child. "I'll go and get it; and you'll see if my mother wrote ony scrabble, won't you?"

In a few moments she returned with a small package done up in brown paper, and reverently unfolding it, she took out a morocco case, somewhat worn, but not much soiled considering how long it had been in the hands of the busy little maid of all work.

"I always kiss it good-night, and good-morning," she said, with a loving smile, as she handed it to Alice.

Miss Gracie opened the case, which contained two delicately-painted French miniatures, and started in surprise; the two pictured faces within were so like, so wonderfully like, the little innocent face looking up into hers! On the reverse side was a curiously-formed cipher, probably the combined initials of the wedded pair, woven in their hair. Not more curiously and intimately were the threads of raven black and glossy brown blended together than the several lineaments of the two originals had been blended in their transmission to their beautiful child; there could be no doubt that these were indeed the parents of little Twilight.

"That's mamma," said she, bending down to kiss the picture. "Is not she jolly?"

"*Jolie! très jolie! charmante!*" said Miss Gracie, smiling, as she for the first time comprehended the sense in which Twilight had so often used that before inexplicable word.

"And now for the letter," said Twilight. "Will you try if you can read it? It is rumpled some; 'cause, as I couldn't read it, I sometimes lay it on my heart at night; for I thought maybe some of the good would come out of it at night (as the sweet smell comes out of the flowers in the garden when it's dark there) and make me good."

"This letter," said Miss Gracie, "is addressed to Mademoiselle Antoinette Elise de la Tour!"

"Yes," said Twilight, quietly, "*that's me.* Taffy used to call me so; and sometimes '*petite* Toinette.' And that's why they call me Ann Twilight, and Twilight—that's English for *Toinette*, you know."

"The letter is in French," said Alice. "Shall I read it to you so, or in English?"

"Just as mamma writ it," said Twilight, sinking on her knees, and with her soft eyes and her clasped hands upraised, as a devotee might kneel to listen to some oracle-breathing saint.

The letter we shall venture to translate:

"My darling Antoinette, my Orphan Angel, my Henri's Child,—I am dying, my sweet one. I must leave you in a strange land; and you, my little deserted one, are too young to understand your loss, or to know why I weep as I clasp you to my heart. But I have little time and less strength, and I must hasten on. My faithful Eustaphie and Marie reminded me (and I bless them for the considerate thought) that the time may come when my now unconscious child will be old enough to understand what I write; and for your sake I make this last effort to communicate with you. My beloved one, your father was Antoine Henri de la Tour, second son of Etienne de la Tour, banker, Rue de ——, Paris.

"Having business which called him to America, I persuaded him to let me accompany him, and we embarked at Havre in the *Susanne*, Captain Thibaud, with you our only child, Pierre Eustaphie, my husband's valet, and his wife Marie, your attached bonne. On the passage our vessel came in collision with another, and was wrecked. In the suddenness of the alarm, and the darkness, many lives were lost. Your father was among them. I was saved by the devotion of Eustaphie, and you by your faithful Marie. When I regained my consciousness they put my baby in my arms, and told me she was fatherless. Ah! why did not the cruel sea which ingulfed my husband take to its cold rest his wife and child? But the wise God willed otherwise—may He make me more submissive! The vessel which took us off was bound for America, but not to the port to which we had been destined. They landed us here. Marie and I could speak no English—Eustaphie but little; and in my terror, my anguish, and my consequent illness, I have forgotten the name of the mercantile house with which my husband had just connected himself. Strangers and friendless in a foreign land, we subsisted for a while upon the sale of such articles of value as I had on at the time of our shipwreck. Eustaphie has now obtained a situation in a music store; his small earnings are our support. I have written home, but no answer has yet been returned. Perhaps it is not time—I am too impatient. If I could live to see you, my darling, safe in the care of your family I could die content; but I am failing too fast for that. The picture of your parents and this letter is all your poor mother can leave to her darling child; these, and the blessing of her who is ready to perish, are your only portion. I leave you in the care of our humble but faithful friends. If you ever regain your friends and home you will have ample means to repay their devotion. I leave *them* to *you*, my child; never forget the debt! But if doomed to exile and poverty, I leave *you* to *them;* I know they will share their all with you, and you must give them the love and duty due to your lost parents. And now, my precious one, farewell! He who supported the trembling wing of the lone dove, and guided her in safety over the whelming waters where no dry land appeared, can keep my little one; and to His care I commit you.

"Your dying mother,

"Claire Elise de la Tour."

Carefully stitched to the top of this letter were the marriage certificate of Antoine Henri de la Tour and Claire Elise de Larny and the registry of the baptism of their child Antoinette Elise de la Tour; and below was written, in a stiff, coarse hand, unlike the delicate but trembling characters of the letter itself, the date of Madame's death, and place of burial. As Miss Gracie saw the careful solicitude with which these faithful servants had thus preserved to the orphan child all they could of evidence of her home and family, tears rose to her eyes. But before she had time to speak, the mild, pleasant voice of Aunt Betsy called up from the foot of the stairs—

"Twilight, Twilight! has thee forgot the tea-table? I guess thee don't know it's 'most six o'clock." And Twilight, catching up her treasures, hurried away.

Miss Gracie was rather glad of the interruption, as she wanted to be alone and think before she conversed with Twilight upon the subject. When she did she was pleased to find that all the child's thoughts were retrospective, and not *pro*spective. She talked with reawakened tenderness of her parents, of "Taffy" and Marie, and recalled a thousand little tokens of their

care and love; but not one word of the future prospects to which the letter might lead. The few years which elapsed since those sad events which her mother's letter made known had been a *lifetime* to her, and she spoke of them as things before the Flood—never seeming to realize that any one connected with her could be surviving still. This view Alice was careful not to dissipate; for although she had herself strong hopes of one day restoring the little girl to her family, she was too prudent to awaken hopes which might never be realized.

After a few days' reflection Miss Gracie's course was decided upon. The first step was to remove Twilight from her lowly station, and give her some of the advantages of education to which her birth entitled her; and Alice wrote to the Principal of the school where she had herself completed her education—an estimable woman, with whom she had ever maintained a friendly intercourse. She told her the outlines of Twilight's story, and inquired the lowest terms upon which she could be received as a pupil—Alice herself being answerable for the payment of the bills should the friends of the lost child not be found.

A few days brought an answer: Mrs. Illersly was much interested in the little girl's history; and if she would converse with the pupils in French, and give them the French accent, she would receive her for a sum merely nominal. Alice was delighted. The next thing was to seek an interview with Mrs. Cobb and Mr. Wood, to inform them of the discovery she had made, and to ask their consent and co-operation in her plans. Aunt Betsy was yielding and quiet, as usual. She said "Sure!" and "Thee don't say so!" She was sorry to part with the handy, pleasant-tempered child; but Ruthy would like an older girl, and perhaps it *would* be less of a *trial.* Uncle Lem was more demonstrative—tears, which his manliness would fain have concealed, told how the little, lonely, gentle child had crept into his great, warm heart; but he advocated her removal.

"It's all right," he said to Alice; "she is of *your* sort, not *ours;* she belongs to such as you, and I see you took to each other from the very first:

> 'Like loves like, and love likes love;
> Eagle mates eagle, and dove seeks dove!'

Yes; she ought to go. I see it all; it's all right; and it's human nature, too," said he, trying to turn it off with a laugh that would not come—"human nature, all the world over.

> 'No matter what old hen may hatch the duck's eggs,
> They'll run to the water as soon as they've legs.'"

And now Miss Gracie ventured to tell Twilight the arrangements she had made, confining her communications to the advantages of an education, and carefully avoiding to excite any future hopes beyond the results of that. With the liberal aid of Aunt Betsy and Mr. Wood, and the skillful fingers of Twilight herself, a suitable wardrobe was procured; and when Alice left Aunt Betsy's she took her young charge with her, and making a circuit to M——, she left Mademoiselle de la Tour with Mrs. Illersly.

When Miss Gracie returned to the city she found the father of her young pupils—the gentleman in whose family she resided, and upon whose aid and advice she had confidently counted—was still absent at the South, and she had to wait two months for his return. He advised an application to the French consul, and procured her an interview. The consul entered warmly into Miss Gracie's view of the case, and engaged to write out and make the necessary inquiries in France. He suggested the propriety of sending out copies of the letter and certificates, and also a daguerreotype of the pictures. This was reasonable, and Miss Gracie went to Mrs. Illersly's to procure them. She found Twilight well, and perfectly happy. Mrs. Illersly spoke in the kindest terms of her little pupil; and "*chère Antoinette*" was already the pet of teachers and scholars.

But all this caused some detention; and then, men of business do not hurry themselves as impulsive women expect they will. The consul was courteous and kind, but spring had opened before the letters were actually sent off. Alice spent her summer vacation at Mrs. Illersly's, with Twilight; and she was delighted with her protégée's growth and improvement. Hers was the pleasure of some enthusiastic florist, who, having removed a stinted flower from the roadside, sees it blooming in his garden in stateliness and beauty; and she returned to the city to await, in feverish impatience, the expected letter from France.

In the autumn Alice received a letter from Mrs. Illersly. Twilight was seriously indisposed—a sudden and violent inflammation of the lungs. She had called in medical advice, and would write again. The next day the accounts were more favorable—the complaint seemed yielding to treatment, and the physician saw no cause for apprehension. Alice's heart yearned to hasten to her darling; but she was not quite mistress of her own time, and besides, the consul had informed her the letters from France might be daily expected, and she concluded to wait for them, hearing daily from Mrs. Illersly.

At the end of a week came an alarming letter. A new disease—rapid pulmonary consumption, which Twilight had inherited probably from her unfortunate mother, and the seeds of which had possibly been long dormant in her system—had developed itself, and her physician had serious fears for the result. Antoinette requested her friend to come to her.

Alas! the same hour which brought these sad tidings brought also the long-desired letters from France. The grand parents and uncle of Twilight had been found, and rapturously acknowledged her claims. The letters of Madame de la Tour had never been received, and her family had supposed the little girl, with both her parents, had perished at sea. They now placed ample funds at the consul's disposal, and requested the child might be furnished with every thing requisite to her station, and sent out to them un-

der the charge of responsible persons, as soon as possible. A graceful letter of warm thanks to Miss Gracie was inclosed in the one to the consul.

Ah! with what a heavy heart did Alice read this long-desired letter, and then hasten with sad forebodings to Mrs. Illersly's! She found that Mr. Wood and Mrs. Cobb had been sent for, and were there before her. Uncle Lem was walking with troubled restlessness up and down one of the lower rooms, his usually joyous face pale and anxious. He shook Alice's hand, and tried to speak, but vainly; the usually ready words would not come, and turning away he resumed his troubled walk. Aunt Betsy was established in the sick room as head-nurse, a post for which her soft speech and quiet gentle ways admirably fitted her; and as Alice entered the chamber her close cap and dove-colored dress glided quietly from the easy chair where Twilight reclined just as she had so often described her young mother.

Every precaution had been taken to prepare Twilight for the arrival of Alice, but the delight of the sensitive girl almost destroyed her remaining strength; and she lay, panting and smiling, breathless and exhausted, in the loving arms which supported her, while Alice weeping, rained down kisses on her pale brow and lips. But at last this strong emotion passed away, and she became able to converse with her friend.

"How long ago is it, Miss Gracie," she said, "since you came first to Aunt Betsy's?"

"More than a year," said Alice, sadly, as she mentally compared the slight, spirit-like thing she held clasped to her heart with the little, active, healthy, sun-burned child of a year ago!

"Only a year?" said Twilight, musingly. "Only one year ago!" she continued. "Do you remember that first Sunday when I was so rude to you? and our talk in the garden, when I told you I hoped the Great King would send for me? Is that only one year ago?—and I was *then* a little ignorant child; I did not know what I talked about! And *now!* ah! dear Miss Gracie, this change is *your* work; you taught me to know and love the Great King—to understand *who* should be his messenger—and not to fear him. Dear friend!" she said, passing her arm caressingly round Alice's neck, and glancing anxiously at her face as she spoke, "I think His messenger is very near me now, and I want you to help me make ready for the long journey."

For a moment Alice's heart stood still in mortal terror; then, strengthened by a strength not her own, she said, in low, clear tones, whose calmness surprised even herself,

"What God wills is best; His will, not ours, be done!"

"Oh! I'm so glad to hear you say that," said the dying girl; "I can say and feel so, too, *now*. But I must tell you how silly I have been. Since I came here I have read and thought so much about France, beautiful France, my father's and mother's land—that I have wanted to be rich—oh, very rich—and go there—you and I together—and see all the places my mother used to know and live in. But it is best as it is. You know, if I went to France, it would not be *home*—my friends are not there; but in *heaven* I shall find home and friends too. My father, my mother, Taffy, and Marie—and you will come too, one day, dear friend, and then we shall be parted no more! Oh! it is better as it is!"

"I fear you are talking too much, my darling," whispered Miss Gracie.

"Am I? I will not then," said Twilight, sweetly. "Will you sing to me, and I will try to sleep."

And nestling lovingly as a little child in Alice's arms, she closed her eyes, while Alice, with an effort few could make, sung, with untrembling tones, Twilight's favorite hymn, "I would not live always."

For a fortnight the two young friends walked side by side, in close, loving communion through the shadow of the dark valley—the good, brave heart of Alice supporting and cheering the young sister of her adoption; and then all that was earthly of Little Twilight was laid in the grave; and with one of those wonderful coincidences which are stranger than fiction, her childish hope was fulfilled, the messenger of the Great King called for her the night preceding Thanksgiving Day. Alice remained until the last sad duties were over, and then returned, grave but calm, trusting and submissive, to her city pupils.

Some time later, by the orders of the French consul, a white stone marked the resting-place of the little emigrant. It bore the name and age of Mademoiselle Antoinette Elise de la Tour. Above was the sculptured emblem of a sky-lark, soaring heavenward from the low grass; and below were the words which Alice Gracie's loving heart had suggested:

TWILIGHT HAS PASSED INTO THE PERFECT DAY!

SINGLE LIFE AMONG US.

WHETHER man is the only creature of God who presumes to live unmated we have neither as naturalists nor as spirit-seers sufficient sight or insight to enable us to say with certainty. Agassiz, in his submarine explorations, may have found some stray dolphin or turtle that shows no signs of any connubial dispositions, but even that great naturalist would be thought to be telling a fish story, wholly out of the scientific line, if he should declare such isolation to be so chronic a condition as to prove enduring celibacy. Audubon may have noted some stray eagle soaring over forests and among mountain-tops without visible mate, and scorning all the little flutterings and screamings from the neighboring eyries that hint to him that gentle fancies among birds—as with us, their betters—may nestle beneath stately feathers. Who knows, however, but that the airy solitary is a faithful widower, more fond by far of the memory of the deceased mate, who was cut off by a ruthless shot, than of the delights of any second

love. The argument from analogy is decidedly against the idea that celibacy prevails or exists in any order of creatures below our humanity. As to the superior existences, the denizens of the spiritual world, we do not, like some of our friends, presume to speak from personal acquaintance and daily conversation. We have found not a few persons, however, free from any such hallucinations, yet taking comfort in Swedenborg's fancy that all souls that had here below been congenially mated would there continue the union, and all those who are worthy of love, but have dwelt here in loneliness, will there find some congenial spirit, while the seer condemns to eternal seclusion the heartless souls that have never loved, because they are wholly unloving. For our own part, while holding by the Holy Writ that declares there will be no marrying in heaven, we can not but believe that something of that elective affinity of souls that draws manly wisdom into such congenial communion with feminine sensibility belongs to the immortal nature, and shows itself among the cherubim and seraphim, the knowing spirits and the loving spirits on high. In this faith we cherish good hopes for the better social condition hereafter of a few of our bachelor friends, and a great many of our kind-hearted old maids.

When we stand in our own lot and look upon our own kind, whatever we may think of higher or lower spheres, we can not disguise from ourselves the truth that celibacy is a very conspicuous and an increasing fact among us. Statistics show that, with the increase of refinement and expenditure, the number of unmarried persons of ripe years increases; and we are startled by the revelation on every side that, while modern thought is wholly reversing the old ascetic idea that celibacy is the most honorable condition, as bringing the soul nearest God and his highest spiritual gifts and offices, modern practice is enlarging the celibate order; and never in the palmy days of convents of monks and nuns were there so many bachelors and maids as now. It will not be amiss to consider some of the causes of the existence and increase of single life among us.

We must not neglect the most obvious source of celibacy, nor forget that some persons, by physical temperament or organization, are shut out of the marrying list. Some have physical deformities or infirmities that may be an insuperable hinderance. Some are too little attractive by nature to win ready attachment; and certainly, so far as the prospects of woman are concerned, it must be conceded that personal beauty is a great element in deciding her social destiny. Yet even beauty may be overruled by other influences, and a certain vivacity of temperament gives many a girl of ordinary personal charms a fascination in men's sight far beyond that of the model face and figure that so often claim sovereignty by their own queenly right. There is certainly in temperament itself a marvelous marrying power; and many men and women who have no visible fascinations carry with them a certain attraction that might well make the superstitious believe in philters and witchcraft. Conspicuous homeliness may, indeed, justly be named among the causes of celibacy, especially of female celibacy. Yet if we are asked candidly to express our opinion as to the average good looks of the married and single, we must in truthfulness allow that old maids are about as good-looking as their married friends; and more than this we must say, in painful honesty, that if we were obliged to designate the very plainest faces within our circle of privileged acquaintance, we must make the selection from the connubial ranks. In fact we doubt much if it would be possible, even with Hogarth's genius, to sketch any varieties of human homeliness that could not be illustrated from the features of our married acquaintance, both men and women. What is very comforting, however, is the truth that some of the plainest people are the pleasantest, and like ugly old mugs of baked clay, are brimful of sparkling juices. It may be that some of the intellectual and social traits that keep people single have a basis in physical temperament, and the prudes and coquettes of either sex may owe somewhat to a slow or quick pulse the coldness that shuts them up within themselves, or the volatility that prevents their fixing their flighty fancies upon a constant object. We leave, however, to our medical friends the more thorough consideration of physiological hinderances to marriage, and pass to such as are more directly social. We will only say, for the comfort of our masculine readers, that no amount of natural awkwardness or ungainliness need discourage them in their matrimonial prospects; for so little has mere beauty in a man to do with winning feminine favor, that the pet belle is far more likely to be fascinated by a manly will and commanding intellect in a very rough exterior than by any model Adonis with a complexion as fair and skin and character as soft as her own.

It is society that makes or mars matches in the main, for young people tend very readily to love and marriage when left to their own affinities. The social law at once calls their inclinations before its stern tribunal, putting to the young romancers two momentous questions: first, how they expect to support a family; and, secondly, how they expect to keep their social position or to elevate it. The first question is universal with all who have any forethought, and is, in fact, the bread question in matrimony, and is so important that wise Thomas Buckle declares that the average number of marriages is in proportion to the price of bread. With bread, however, many other things are thought needful, and in all communities at all beyond the rude necessities of backwoods life, the cost of the modest comforts of housekeeping is such as to put a mighty check to the matrimonial visions of hosts of young men, or to adjourn them to an indefinite future. The costliness of living acts upon the susceptibility of youth, and the affections are so forewarned in the school of prudence as to close their gates against the dear invasion, and lead multitudes either to absent themselves from

female society, or to enter it with the feeling that, as a matter of course, they are to be but lookers-on as at a show of fruits which the spectator must not touch nor take. In one point of view, the costliness of living presses with great severity upon young people in this country, by raising the general standard of expectation without by any means raising proportionately the average of means. The great mass of young people who go to school together form very nearly the same opinions as to the essentials and comforts of life, while there is the widest difference in their ability to gratify their wishes. With girls who, as such, are especially sympathetic and imitative, there is great proneness to assimilate manners and expectations, so that the daintiest and most favored school-girl is far more likely to give her fastidious tastes to her poorer companions than to borrow from them any love of republican simplicity. The consequence is that in America, especially so far as our women are concerned, the standard of average expectation rises far beyond the standard of wealth, and society is full of young ladies whose tastes are wholly out of keeping with their domestic condition and prospects. Their evident desire for a delicate way of life at once alarms the unpretending class of suitors, and discourages the very habits of thrift and self-reliance that might make them helpers of worthy young husbands through years of modest frugality to years of peaceful independence. It is somewhat appalling to look into our public schools and see the thousands of white-handed, finely-dressed girls, and to ask how many of them can find husbands who can properly provide them with the silks, velvets, and jewels which they are in the habit of looking upon as things to be had as a matter of course. Too many of them have wholly unrepublican ideas of true social dignity, and cherish the foolish notion that labor is not genteel, and prefer to coquette with some fop who has not brain nor pluck enough to earn his salt, rather than to smile upon some manly young fellow whose hard hand is ready and able to work out a worthy lot for a wife, and in the end adorn industry with grace and refinement. We must set down a false feminine fastidiousness as a very prominent cause of celibacy, and no person of common observation can fail to remember signal instances of girls who do not wish to live single, but who have, merely from some absurd social prejudice, refused men who have by character and energy won a position that any woman might honor.

We are not leaving out of account, in these financial and social estimates, the law of elective affinity which must regulate the choice of a companion for life; and we surely believe that not a few people remain unmarried because they can not love any one whom they can win. It is very kindly taken for granted, and often with much truth, that the best portion of old bachelors are such because they were crossed in love, or else death nipped their hope before its bloom. It is said of the more interesting single women that they were too fastidious, and did not like those who loved them. It may be said of vast numbers of noble women that, from misfortune or seclusion, they have never met with manly natures congenial with their own, and, rather than mate with clowns or dotards, they prefer to be alone in what, comparatively speaking, is to them single blessedness. When once the opinion, moreover, gains currency that certain persons are not in the marrying line, but are predestined celibates, the expectation not only acts upon others so as to discourage advances, but acts also upon the parties themselves, who quietly accept their destiny as much as if a ghostly ecclesiastic had given the black vail or cowl that makes wedlock impossible. We all soon fall into the habitudes of our profession, so that use becomes a second nature; and nothing but sheer routine keeps a large percentage of bachelors and a considerable proportion of maidens in their single file.

Conviction, moral or intellectual, or both, undoubtedly keeps many persons unmarried, in order that they may pursue favorite studies without distraction, or devote themselves to some holy charity or faith without hinderance. Thus, in all ages, a portion of the noblest minds have been priests and vestals of God and humanity. We find such examples not only on the lists of recluses who have given up home and the world for the cloister and the altar, but in the ranks of heroes and heroines who are above the world while among its people—friends of the orphaned, guides of the benighted—in fact, fathers and mothers to hearts and homes that have never opened to them the charms of wedded love, or bound them by the claims of son or daughter. We are not, indeed, ready to say with our Oxford recluses and Roman devotees that single life is the highest spiritual state, yet we must confess that, when we think of the best specimens of this condition within our knowledge or observation, we shake a little in our predilections for marriage; and, although not yielding our ground, we do take sides most cordially with the noble men and women who are single from a love higher than any that yet calls them to wedlock, against the vulgar herd who marry merely for the sake of marriage, and who presume to make their grossness or time-serving the reason for decrying the manly dignity and womanly delicacy that they are incapable of understanding; while they speak of old bachelors, and especially old maids, as among the monstrosities of nature and the wrecks of humanity.

These hints as to the influence of nature, society, and opinion upon single life do, we are aware, leave one great element unnamed—an element of contingency which it is very hard to define. Time and chance happen to all, and a certain luck has much to do alike with marrying and not marrying. Many husbands and wives might find it hard to explain precisely what brought them together; and every honeymoon, quite as much in its origin as in its duration, partakes somewhat of the mystical character of the planet from which it is named. Single blessedness is often equally mystical, and takes its vo-

taries quite as much by surprise as their friends; for often the very persons who seem under Cupid's witching guidance find themselves cloistered in Diana's cold and stately shrine. How we came to be married, or how we came to be single, is generally far less clear than the undoubted fact that we are married or are single. Over single life the same indefiniteness continues to the end; and of no unmarried men, and of few unmarried women, can it be said with certainty that they can never be induced to change their condition. The greater, therefore, is the need of so ruling life as to be equal to either fortune, and of so educating our sons, and especially our daughters, as to fit them not merely for one contingency, but for all reasonable contingencies, and to train them up to be worthy and interesting men and women, whether they take the marriage vow or not.

Here we come to our practical point — the proper education of our people, in view of the possibility, and also under the probability, of celibacy. We can say with all decision that it is a great wrong to educate children with the idea that life is a failure apart from marriage. We speak now especially of our daughters, who are likely to suffer most from this error, and either to be importuned into an improper match or else spend their days with the sad conviction that their whole career is a disappointment, and they have never really begun to live. It is best, indeed, for them in due time to be well married, but far better for them to be well single than ill married. The culture that makes them true women best prepares them for either lot, whether to win the love of a congenial husband or to live unmarried in usefulness and dignity. Nothing can be much worse than to urge a daughter into a union against her tastes and affections, for the sake of escaping the name of old maid; and, to us, the girl who gives a man her hand without her heart comes very near deserving a far worse name than that. Let our daughters be educated as women, as our sons are educated as men, not for one relation, but for all the relations of life; and, whatever their lot, they will be far more useful and happy. If they are trained merely to be men-catchers, their vocation ends when it is clear that they have or have not caught their game, and they must trust to accident or to a forgiving Providence to give them some new incentive in place of that which is lost. Far too many noble women, whose natures are worthy of a better lot, allow themselves to fall into the miserable error of thinking that they have missed their destiny in failing to marry, and perhaps bring on the very listlessness, the aimless indolence, which they fear. The true woman can never miss her destiny while loyal to her soul, her position, and her God. If one path is closed, another will open to her; and if truthfulness and self-respect move her to reject such overtures of marriage as are made to her, she has a brave purpose that can never leave her without influence, and genial affections that can never leave her lonely and unblessed. We insist upon the importance of having our daughters so taught and disciplined that they can pass their time with comfort and efficiency without a husband and an establishment, and, if need be, can maintain themselves with dignity and cheerfulness by a culture that wins bread, and good name, and a courtesy and grace that will never fail to win for them friends. We have little liking, indeed, for masculine women; and if we are looking for beard and pantaloons, we prefer to look for them to men. Nor have we any fondness for those women whose speech is bearded and pantalooned, while their chins are smooth and their garments unequivocal. It is not such independence that we commend as a safeguard against the ills of celibacy, but quite the reverse; for we believe that woman is happier far in single life by keeping a true woman's heart, in all its delicacy, tenderness, and helpfulness, than by trying to unsex herself in the poor attempt to be a man, and revenge masculine neglect by masculine impudence. The Amazon who mutilated her bosom to be a match for man in the use of weapons did not understand her warfare, and might have prevailed more readily by keeping her sex and its ways. She, too, who asks no marriage vows of man, but only claims his just sympathy and deference, prevails far more readily with a woman's girdle than an Amazon's breast-plate.

Starting thus with the principle that education should aim to bring out all the faculties and affections of a true humanity, without staking the whole hope upon the contingency of marriage, we may now ask, what is the proper course for those to pursue who have cause to regard themselves as on the list of confirmed celibates? We advise them not only to be resigned to their position, but to make the best of it, in full faith that every condition in life—surely every honest one—is full of compensations and privileges. We do not deny that celibacy has its privations, and we can quite as little deny that it has peculiar privileges. In fact, its very privations may be so used as to open into privileges; for, obviously, the time not engrossed by married cares may be sacredly given to noble objects of friendship and charity; and the affections not tempted to idolize an earthly love may be all the more free for the love of God and humanity. Of course the danger is that a limited sphere will narrow the mind; and too many single people there are who make no effort to supply the place of married interests by other occupations of an elevating character. Too many old bachelors abandon love and take to their bank-book and bill of fare—not to name baser indulgences—for their solace; while not a few old maids sharpen their noses and their tongues at once by scenting out other people's infirmities, and cutting up their neighbors' characters. We are not unobservant of such unamiable specimens of celibacy; yet we do not by any means regard them as fair types of the whole class, but, on the contrary, we have rather a liking for old bachelors, on the whole, and a decided fondness for old maids. We believe that most of these, of either sex, seek some-

thing to love and something to do other than their own sweet self, and that the best of them are the blessing of the whole circle of kindred and friends—a light to the Church as well as to the hearth-stone.

The unmarried, as being such, generally have more time at their command, and therefore are freer to give it to voluntary pursuits or studies. They may thus meet a want most difficult of all to meet in this busy country, the want of a class of persons whose leisure enables them to cultivate the refined tastes and humane interests that are so likely to be crowded out by pressing family cares. We know that a certain degree of pecuniary independence is necessary to enable a single man or woman to do all that a true culture dictates for the social circle; yet how often do we find a person with very moderate income becoming the centre of a genial and intellectual circle, bringing the treasures of art and literature to enrich the whole coterie or village! So a true-hearted bachelor becomes one of the intellectual priesthood of society, and many a maiden sister wears her modest robes with the inspiration and self-sacrifice of a priestess without waiting for ghostly hands to give her consecration. The good done for others reacts upon the doer, and the time well spent relieves the spender of a heavy burden while weaving the thread into rich tissues of enduring beauty and worth. Let this truth be remembered by the unmarried, whatever their condition, whether able to dignify leisure by beautiful tastes or called to cheer a homely lot by faithful service, that they may thus pass the hours without killing them, and win lasting goods from vanishing opportunities. There are cases, indeed, of great hardship, in which unmarried persons, especially women, are painfully dependent upon others, and are tempted to regard themselves as doomed to drudge for daily bread. But even such cases are less frequent than cases of wives and mothers fearfully overtasked by large families of children and stinted means, and it must be remembered, moreover, that the maiden sister or aunt in a family who is apt to think herself a burden is a decided help, and may be a constant comfort if she can only rise above her morbid repining and be a sister of consolation to the whole household.

Heart is quite as rich a capital as time, and unmarried people must take good care of this treasure. They are not to renounce but to refine, quicken, and exalt their social affections to keep them true. They must use or abuse their social nature, and unless used it is abused, or unless sweetened by free air and exercise it will sour in its own stagnation. Hence it is that unmarried people are apt to take one of two directions, and be sweeter or sourer than their neighbors. If they do not take a kindly turn, they become selfish and fault-finding from the absence of the instinctive parental affections that move us whether we choose or not. If they do take a kindly turn, they become genial, friendly, and self-sacrificing, adorning the household and the sanctuary with the sweetest specimens of helpfulness and devotion. With woman, we think that on the whole the better spirit prevails, and although not forgetful of certain appalling specimens of the female celibate, we believe that Christendom is nearer heaven, not farther from it, by the spirit and work of the goodly company of old maids.

There is one portion of the heart which is supposed to be closed both within them and against them, but which we claim for them by the sacred right of our common humanity. We mean that portion which makes man and woman companionable, and allows no society to be complete without the mingling of masculine and feminine affinities. It is not only foolish but inhuman to regard the sociality of man and woman as limited to the conjugal and parental relation, or to try to shut out from the unmarried the charm of that mutual delight which masculine and feminine minds take in each other's company. Bachelors are generally sound on this subject, and the best specimens of them make up for their isolation by frequenting the best society, and enjoying the friendship and conversation of interesting and gifted women. There is sometimes a disposition to shut unmarried women out of the same privilege, and not a few scheming mothers and daughters are utterly impatient of any attentions from agreeable men toward those who, however much their superiors, are rudely set aside as old maids, and accused of preposterous attempts at making their market, because they have sense enough to use their own minds. Unmarried women of culture, especially, enjoy the society of intellectual and genial men, and the liking is generally mutual. Let it be so, and it will be found that society gains vastly by the combination that secures a new and elevating element beyond the sway of crude and greedy girls and their match-making mammas. Let daughters and mothers have a fair chance at their appropriate game. Yet let it not be forgotten that the world is larger than their little field of artillery, and that the human heart has some aspirations that do not end in wedding-cake and the plain gold ring. We like to see unmarried women take their full social rights and mingle freely in general society, instead of flocking together like a parcel of geese, under the charge of some sentinel gander. In fact it is not well for either sex to be clannish, and they who are not humanized in the wholesome school of marriage should be jealous of narrowing their humanity by any partial or belittling cliques. We confess, for instance, to a certain alarm at encountering a line of old maids drawn up as if in battle array, and believe that many a modest man has been repelled from addressing the maiden whom he fancies, from fear of the grim body-guard of aunts who keep watch over the prize. Let them not keep together but separate, and cherish all free and fair tastes and associations. Let unmarried women mingle genially in what belongs to their sex and their humanity; let them have friends among the old

and young, the married and single, the other sex and their own. Especially let them know and love little children, and so not fail of woman's best charm by failing of the tenderness of woman's affection for childhood. Let them take part in church affairs as teachers of the young, helpers in the charities of the parish, friends of moral and spiritual culture; and so, if they do not bear the name, they will do the work of that order of deaconesses which some sanguine devotees and theologians are trying to raise up in the modern church. As things now are, it is clear that every thriving parish owes much to the little knot of faithful women who give to the sanctuary most of the love that has with them no claimant in husband or child; and many of the Christians who, from their reading, reflection, and zeal are the best friends and comforters of the ministry, are of the same unaffianced class.

We are aware that our remarks turn more upon the destiny of women than men thus far; for single life is more of a feature in the former than the latter, and a single man outside of his home is not different from his married neighbor, while a woman's whole career is changed by her celibacy. But we desire very much to avoid any strain of remark that tends to band single women together as a class or caste by themselves, much less to make a kind of profession of them. We dislike the growing habit of ranking women by themselves as a class, in opposition to men or in contrast with them, and much prefer to regard our humanity as one, whether male or female, and favor all ideas and movements that tend toward harmony. Especially do we dislike the disposition to group single women together, and make a sort of caste or profession of old maids. They like this separation quite as little as we do, and are no more fond of being labeled, and dressed, and paraded by themselves, than we are fond of seeing the show. We especially dislike the grim centurions of this movement, who are trying to gather a phalanx of strong-minded spinsters under their lead. We like them, however, probably far better than the sensible kind of single women do, for these excellent spirits are not separatists but cordial liberals—earnest to have their own place in their own sex, and in all its sacred relations to our common humanity. Our opposition to such narrow caste distinctions extends to all measures for setting unmarried persons by themselves, and thus exaggerating their peculiarities by exclusive associations instead of integrating their minds by large sympathies. Therefore we do not like nunneries and monasteries, but prefer to have the single brothers and sisters humanized by closer affinity with our common lot, instead of being made more odd and ghostly by being kept by themselves. We are also distrustful of the attempt to establish Protestant nunneries or beguinages for the protection and dignity of the unmarried—although we are convinced that no institution would be more useful than a home for unprotected women, where small means might procure a decent livelihood, and even poverty might have a measure of comfort and usefulness. But we would not have such institutions confined to one condition of life, or shut out in any way from free fellowship with all true humanity. The unmarried woman is too often, indeed, left alone without fortune or friends, and Christianity should now, as of old, be her protector; but the protection should not be a virtual proscription by shutting her up in a caste instead of opening to her a truer fellowship with humanity.

Something will ere long be done to give truer position and appreciation to our unmarried women, and with too much reason Catholicism derides our modern civilization for neglecting to supply the place of the old nunneries by new retreats. In some cases our modern luxury plays into the hands of Rome; and while the belle of the family marries and exhausts the family purse by her outfit, the less favored daughter is sent to the convent to save the ancestral name from being degraded by alliance with a penniless purse or plebeian blood. We look not to any shrewd policy or clannish institution to meet the wants of unmarried women, much less to any backward steps in the path of mental emancipation. God's providence is calling us forward, and as soon as we truly appreciate woman's worth, and give her the sympathy and respect that she deserves, the true sphere will not be refused to her, and new social arrangements will follow new moral and intellectual convictions. It may then appear more clearly than now, not only that woman can submit to celibacy as a sacrifice to be dutifully borne, but in conspicuous cases welcome it as a privilege to be coveted; and that those of the sex, perhaps an elect few, whom Providence has selected as our Muses or Minervas, our Sybils or our Saints, may, without renouncing their independence, find a better lot than to be shut in caves, or temples, or convents.

WHAT WAS IT?

A MYSTERY.

IT is, I confess, with considerable diffidence that I approach the strange narrative which I am about to relate. The events which I purpose detailing are of so extraordinary and unheard-of a character that I am quite prepared to meet with an unusual amount of incredulity and scorn. I accept all such beforehand. I have, I trust, the literary courage to face unbelief. I have, after mature consideration, resolved to narrate, in as simple and straightforward a manner as I can compass, some facts that passed under my observation in the month of July last, and which, in the annals of the mysteries of physical science, are wholly unparalleled.

I live at No. — Twenty-sixth Street, in this city. The house is in some respects a curious one. It has enjoyed for the last two years the reputation of being haunted. It is a large and stately residence, surrounded by what was once a garden, but which is now only a green inclosure used for bleaching clothes. The dry basin of what has been a fountain, and a few fruit-

trees, ragged and unpruned, indicate that this spot, in past days, was a pleasant, shady retreat, filled with fruits and flowers and the sweet murmur of waters.

The house is very spacious. A hall of noble size leads to a vast spiral staircase winding through its centre; while the various apartments are of imposing dimensions. It was built some fifteen or twenty years since by Mr. A——, the well-known New York merchant, who five years ago threw the commercial world into convulsions by a stupendous bank fraud. Mr. A——, as every one knows, escaped to Europe, and died not long after of a broken heart. Almost immediately after the news of his decease reached this country, and was verified, the report spread in Twenty-sixth Street that No. — was haunted. Legal measures had dispossessed the widow of its former owner, and it was inhabited merely by a care-taker and his wife, placed there by the house-agent into whose hands it had passed for purposes of renting or sale. These people declared that they were troubled with unnatural noises. Doors were opened without any visible agency. The remnants of furniture scattered through the various rooms were, during the night, piled one upon the other by unknown hands. Invisible feet passed up and down the stairs in broad daylight, accompanied by the rustle of unseen silk dresses and the gliding of viewless hands along the massive balusters. The care-taker and his wife declared they would live there no longer. The house-agent laughed, dismissed them, and put others in their place. The noises and supernatural manifestations continued. The neighborhood caught up the story, and the house remained untenanted for three years. Several parties negotiated for it; but somehow, always before the bargain was closed, they heard the unpleasant rumors, and declined to treat any further.

It was in this state of things that my landlady —who at that time kept a boarding-house in Bleecker Street, and who wished to move farther up town—conceived the bold idea of renting No. — Twenty-sixth Street. Happening to have in her house rather a plucky and philosophical set of boarders, she laid her scheme before us, stating candidly every thing she had heard respecting the ghostly qualities of the establishment to which she wished to remove us. With the exception of one or two timid persons—a sea-captain and a returned Californian, who immediately gave notice that they would leave—every one of Mrs. Moffat's guests declared that they would accompany her in her chivalric incursion into the abode of spirits.

Our removal was effected in the month of May, and we were all charmed with our new residence. The portion of Twenty-sixth Street where our house is situated — between Seventh and Eighth Avenues—is one of the pleasantest localities in New York. The gardens back of the houses, running down nearly to the Hudson, form, in the summer time, a perfect avenue of verdure. The air is pure and invigorating, sweeping, as it does, straight across the river from the Weehawken heights, and even the ragged garden which surrounded the house on two sides, although displaying on washing-days rather too much clothes-line, still gave us a piece of green sward to look at, and a cool retreat in the summer evenings, where we smoked our cigars in the dusk, and watched the fire-flies flashing their dark-lanterns in the long grass.

Of course we had no sooner established ourselves at No. — than we began to expect the ghosts. We absolutely awaited their advent with eagerness. Our dinner conversation was supernatural. One of the boarders, who had purchased Mrs. Crowe's "Night Side of Nature" for his own private delectation, was regarded as a public enemy by the entire household for not having bought twenty copies. The man led a life of supreme wretchedness while he was perusing the volume. A system of espionage was established, of which he was the victim. If he incautiously laid the book down for an instant and left the room, it was immediately seized and read aloud in secret places to a select few. I found myself a person of immense importance, it having leaked out that I was tolerably well versed in the history of supernaturalism, and had once written a story, entitled "The Pot of Tulips," for *Harper's Monthly*, the foundation of which was a ghost. If a table or a wainscot panel happened to warp when we were assembled in the large drawing-room, there was an instant silence, and every one was prepared for an immediate clanking of chains and a spectral form.

After a month of psychological excitement, it was with the utmost dissatisfaction that we were forced to acknowledge that nothing in the remotest degree approaching the supernatural had manifested itself. Once the black butler asseverated that his candle had been blown out by some invisible agency while in the act of undressing himself for the night; but as I had more than once discovered this colored gentleman in a condition when one candle must have appeared to him like two, I thought it possible that, by going a step farther in his potations, he might have reversed this phenomenon, and seen no candle at all where he ought to have beheld one.

Things were in this state when an incident took place so awful and inexplicable in its character that my reason fairly reels at the bare memory of the occurrence. It was the 10th of July. After dinner was over I repaired, with my friend Dr. Hammond, to the garden to smoke my evening pipe. Independent of certain mental sympathies which existed between the Doctor and myself, we were linked together by a secret vice. We both smoked opium. We knew each other's secret, and respected it. We enjoyed together that wonderful expansion of thought; that marvelous intensifying of the perceptive faculties; that boundless feeling of existence when we seem to have points of contact with the whole universe; in short, that unimaginable spiritual bliss, which I would not surrender for a throne, and which I hope you, reader, will never—never taste.

Those hours of opium happiness which the Doctor and I spent together in secret were regulated with a scientific accuracy. We did not blindly smoke the drug of Paradise, and leave our dreams to chance. While smoking we carefully steered our conversation through the brightest and calmest channels of thought. We talked of the East, and endeavored to recall the magical panorama of its glowing scenery. We criticised the most sensuous poets, those who painted life ruddy with health, brimming with passion, happy in the possession of youth, and strength, and beauty. If we talked of Shakspeare's "Midsummer Night's Dream," we lingered over Ariel and avoided Caliban. Like the Gebers, we turned our faces to the East, and saw only the sunny side of the world.

This skillful coloring of our train of thought produced in our subsequent visions a corresponding tone. The splendors of Arabian fairy-land dyed our dreams. We paced that narrow strip of grass with the tread and port of kings. The song of the *Rana arborea* while he clung to the bark of the ragged plum-tree sounded like the strains of divine orchestras. Houses, walls, and streets melted like rain-clouds, and vistas of unimaginable glory stretched away before us. It was a rapturous companionship. We each of us enjoyed the vast delight more perfectly because, even in our most ecstatic moments, we were ever conscious of each other's presence. Our pleasures, while individual, were still twin, vibrating and moving in musical accord.

On the evening in question, the 10th of July, the Doctor and myself found ourselves in an unusually metaphysical mood. We lit our large meerschaums, filled with fine Turkish tobacco, in the core of which burned a little black nut of opium, that, like the nut in the fairy tale, held within its narrow limits wonders beyond the reach of kings; we paced to and fro, conversing. A strange perversity dominated the currents of our thought. They would *not* flow through the sun-lit channels into which we strove to divert them. For some unaccountable reason they constantly diverged into dark and lonesome beds, where a continual gloom brooded. It was in vain that, after our old fashion, we flung ourselves on the shores of the East, and talked of its gay bazaars, of the splendors of the time of Haroun, of harems and golden palaces. Black afreets continually arose from the depths of our talk, and expanded, like the one the fisherman released from the copper vessel, until they blotted every thing bright from our vision. Insensibly we yielded to the occult force that swayed us, and indulged in gloomy speculation. We had talked some time upon the proneness of the human mind to mysticism and the almost universal love of the Terrible, when Hammond suddenly said to me:

"What do you consider to be the greatest element of Terror?"

The question, I own, puzzled me. That many things were terrible, I knew. Stumbling over a corpse in the dark; beholding, as I once did, a woman floating down a deep and rapid river, with wildly-lifted arms and awful, upturned face, uttering, as she sank, shrieks that rent one's heart, while we, the spectators, stood frozen at a window which overhung the river at a height of sixty feet, unable to make the slightest effort to save her, but dumbly watching her last supreme agony and her disappearance. A shattered wreck, with no life visible, encountered floating listlessly on the ocean, is a terrible object, for it suggests a huge terror, the proportions of which are vailed. But it now struck me for the first time that there must be one great and ruling embodiment of fear, a King of Terrors to which all others must succumb. What might it be? To what train of circumstances would it owe its existence?

"I confess, Hammond," I replied to my friend, "I never considered the subject before. That there must be one Something more terrible than any other thing, I feel. I can not attempt, however, even the most vague definition."

"I am somewhat like you, Harry," he answered. "I feel my capacity to experience a terror greater than any thing yet conceived by the human mind. Something combining in fearful and unnatural amalgamation hitherto supposed incompatible elements. The calling of the voices in Brockden Brown's novel of 'Wieland' is awful; so is the picture of the Dweller of the Threshold in Bulwer's 'Zanoni;' but," he added, shaking his head gloomily, "there is something more horrible still than these."

"Look here, Hammond," I rejoined; "let us drop this kind of talk for Heaven's sake. We shall suffer for it, depend on it."

"I don't know what's the matter with me to-night," he replied, "but my brain is running upon all sorts of weird and awful thoughts. I feel as if I could write a story like Hoffman to-night, if I were only master of a literary style."

"Well, if we are going to be Hoffmanesque in our talk I'm off to bed. Opium and nightmares should never be brought together. How sultry it is! Good-night, Hammond."

"Good-night, Harry. Pleasant dreams to you."

"To you, gloomy wretch, afreets, ghouls, and enchanters."

We parted, and each sought his respective chamber. I undressed quickly and got into bed, taking with me, according to my usual custom, a book, over which I generally read myself to sleep. I opened the volume as soon as I had laid my head upon the pillow, and instantly flung it to the other side of the room. It was Goudon's "History of Monsters"—a curious French work, which I had lately imported from Paris, but which, in the state of mind I was then in, was any thing but an agreeable companion. I resolved to go to sleep at once; so turning down my gas until nothing but a little blue point of light glimmered on the top of the tube, I composed myself to rest once more.

The room was in total darkness. The atom of gas that still remained lighted did not illum-

inate a distance of three inches round the burner. I desperately drew my arm across my eyes, as if to shut out even the darkness, and tried to think of nothing. It was in vain. The confounded themes touched on by Hammond in the garden kept obtruding themselves on my brain. I battled against them. I erected ramparts of would-be blankness of intellect to keep them out. They still crowded upon me. While I was lying still as a corpse, hoping that by a perfect physical inaction I would hasten mental repose, an awful incident occurred. A Something dropped, as it seemed, from the ceiling, plumb upon my chest, and the next instant I felt two bony hands encircling my throat, endeavoring to choke me.

I am no coward, and am possessed of considerable physical strength. The suddenness of the attack instead of stunning me strung every nerve to its highest tension. My body acted from instinct, before my brain had time to realize the terrors of my position. In an instant I wound two muscular arms around the creature, and squeezed it, with all the strength of despair, against my chest. In a few seconds the bony hands that had fastened on my throat loosened their hold, and I was free to breathe once more. Then commenced a struggle of awful intensity. Immersed in the most profound darkness, totally ignorant of the nature of the Thing by which I was so suddenly attacked, finding my grasp slipping every moment by reason, it seemed to me, of the entire nakedness of my assailant, bitten with sharp teeth in the shoulder, neck, and chest, having every moment to protect my throat against a pair of sinewy, agile hands, which my utmost efforts could not confine—these were a combination of circumstances to combat which required all the strength and skill and courage that I possessed.

At last, after a silent, deadly, exhausting struggle, I got my assailant under by a series of incredible efforts of strength. Once pinned, with my knee on what I made out to be its chest, I knew that I was victor. I rested for a moment to breathe. I heard the creature beneath me panting in the darkness, and felt the violent throbbing of a heart. It was apparently as exhausted as I was, that was one comfort. At this moment I remembered that I usually placed under my pillow, before going to bed, a large, yellow silk pocket-handkerchief, for use during the night. I felt for it instantly; it was there. In a few seconds more I had, after a fashion, pinioned the creature's arms.

I now felt tolerably secure. There was nothing more to be done but to turn on the gas, and, having first seen what my midnight assailant was like, arouse the household. I will confess to being actuated by a certain pride in not giving the alarm before; I wished to make the capture alone and unaided.

Never loosing my hold for an instant, I slipped from the bed to the floor, dragging my captive with me. I had but a few steps to make to reach the gas-burner; these I made with the greatest caution, holding the creature in a grip like a vice. At last I got within arm's-length of the tiny speck of blue light, which told me where the gas-burner lay. Quick as lightning I released my grasp with one hand and let on the full flood of light. Then I turned to look at my captive.

I can not even attempt to give any definition of my sensations the instant after I turned on the gas. I suppose I must have shrieked with terror, for in less than a minute afterward my room was crowded with the inmates of the house. I shudder now as I think of that awful moment. *I saw nothing!* Yes; I had one arm firmly clasped round a breathing, panting, corporeal shape, my other hand gripped with all its strength a throat as warm, and apparently fleshly, as my own; and yet, with this living substance in my grasp, with its body pressed against my own, and all in the bright glare of a large jet of gas, I absolutely beheld nothing! Not even an outline—a vapor!

I do not, even at this hour, realize the situation in which I found myself. I can not recall the astounding incident thoroughly. Imagination in vain tries to compass the awful paradox.

It breathed. I felt its warm breath upon my cheek. It struggled fiercely. It had hands. They clutched me. Its skin was smooth, just like my own. There it lay, pressed close up against me, solid as stone—and yet utterly invisible!

I wonder that I did not faint or go mad on the instant. Some wonderful instinct must have sustained me; for, absolutely, in place of loosening my hold on the terrible Enigma, I seemed to gain an additional strength in my moment of horror, and tightened my grasp with such wonderful force that I felt the creature shivering with agony.

Just then Hammond entered my room at the head of the household. As soon as he beheld my face—which, I suppose, must have been an awful sight to look at—he hastened forward, crying,

"Great Heaven, Harry! what has happened?"

"Hammond! Hammond!" I cried, "come here. Oh! this is awful! I have been attacked in bed by something or other, which I have hold of; but I can't see it—I can't see it!"

Hammond, doubtless struck by the unfeigned horror expressed in my countenance, made one or two steps forward with an anxious yet puzzled expression. A very audible titter burst from the remainder of my visitors. This suppressed laughter made me furious. To laugh at a human being in my position! It was the worst species of cruelty. *Now*, I can understand why the appearance of a man struggling violently, as it would seem, with an airy nothing, and calling for assistance against a vision, should have appeared ludicrous. *Then*, so great was my rage against the mocking crowd that had I

the power I would have stricken them dead where they stood.

"Hammond! Hammond!" I cried again, despairingly, "for God's sake come to me. I can hold the—the Thing but a short while longer. It is overpowering me. Help me. Help me!"

"Harry," whispered Hammond, approaching me, "you have been smoking too much opium."

"I swear to you Hammond that this is no vision," I answered, in the same low tone. "Don't you see how it shakes my whole frame with its struggles? If you don't believe me convince yourself. Feel it—touch it."

Hammond advanced and laid his hand in the spot I indicated. A wild cry of horror burst from him. He had felt it!

In a moment he had discovered somewhere in my room a long piece of cord, and was the next instant winding it, and knotting it about the body of the unseen being that I clasped in my arms.

"Harry," he said, in a hoarse, agitated voice, for, though he preserved his presence of mind, he was deeply moved, "Harry, it's all safe now. You may let go, old fellow, if you're tired. The Thing can't move."

I was utterly exhausted, and I gladly loosed my hold.

Hammond stood holding the ends of the cord that bound the Invisible, twisted round his hand, while before him, self-supporting, as it were, he beheld a rope laced and interlaced, and stretching tightly around a vacant space. I never saw a man look so thoroughly stricken with awe. Nevertheless his face expressed all the courage and determination which I knew him to possess. His lips, although white, were set firmly, and one could perceive at a glance that, although stricken with fear, he was not daunted.

The confusion that ensued among the guests of the house, who were witnesses of this extraordinary scene between Hammond and myself—who beheld the pantomime of binding this struggling Something—who beheld me almost sinking from physical exhaustion when my task of jailer was over—the confusion and terror that took possession of the by-standers, when they saw all this, was beyond description. Many of the weaker ones fled from the apartment. The few who remained behind clustered near the door, and could not be induced to approach Hammond and his Charge. Still incredulity broke out through their terror. They had not the courage to satisfy themselves, and yet they doubted. It was in vain that I begged of some of the men to come near and convince themselves by touch of the existence of a living being in that room which was invisible. They were incredulous, but did not dare to undeceive themselves. How could a solid, living, breathing body be invisible? they asked. My reply was this. I gave a sign to Hammond, and both of us—conquering our fearful repugnance to touching the invisible creature—lifted it from the ground, manacled as it was, and took it to my bed. Its weight was about that of a boy of fourteen.

"Now my friends," I said, as Hammond and myself held the creature suspended over the bed, "I can give you self-evident proof that here is a solid, ponderable body which, nevertheless, you can not see. Be good enough to watch the surface of the bed attentively."

I was astonished at my own courage in treating this strange event so calmly; but I had recovered from my first terror, and felt a sort of scientific pride in the affair which dominated every other feeling.

The eyes of the by-standers were immediately fixed on my bed. At a given signal Hammond and I let the creature fall. There was the dull sound of a heavy body alighting on a soft mass. The timbers of the bed creaked. A deep impression marked itself distinctly on the pillow, and on the bed itself. The crowd who witnessed this gave a sort of low, universal cry, and rushed from the room. Hammond and I were left alone with our Mystery.

We remained silent for some time, listening to the low, irregular breathing of the creature on the bed, and watching the rustle of the bedclothes as it impotently struggled to free itself from confinement. Then Hammond spoke.

"Harry, this is awful."

"Ay, awful."

"But not unaccountable."

"Not unaccountable! What do you mean? Such a thing has never occurred since the birth of the world. I know not what to think, Hammond. God grant that I am not mad, and that this is not an insane fantasy!"

"Let us reason a little, Harry. Here is a solid body which we touch, but which we can not see. The fact is so unusual that it strikes us with terror. Is there no parallel, though, for such a phenomenon? Take a piece of pure glass. It is tangible and transparent. A certain chemical coarseness is all that prevents its being so entirely transparent as to be totally invisible. It is not *theoretically impossible*, mind you, to fabricate a glass which shall not reflect a single ray of light—a glass so pure and homogeneous in its atoms that the rays from the sun shall pass through it as they do through the air, refracted but not reflected. We do not see the air, and yet we feel it."

"That's all very well, Hammond, but these are inanimate substances. Glass does not breathe, air does not breathe. *This* thing has a heart that palpitates. A will that moves it. Lungs that play and inspire and respire."

"You forget the strange phenomena of which we have so often heard of late," answered the Doctor, gravely. "At the meetings called 'spirit circles,' invisible hands have been thrust into the hands of those persons round the table—warm, fleshly hands that seemed to pulsate with mortal life."

"What? Do you think, then, that this thing is—"

"I don't know what it is," was the solemn re-

ply; "but please the gods I will, with your assistance, thoroughly investigate it."

We watched together, smoking many pipes, all night long by the bedside of the unearthly being that tossed and panted until it was apparently wearied out. Then we learned by the low, regular breathing that it slept.

The next morning the house was all astir. The boarders congregated on the landing outside my room, and Hammond and myself were lions. We had to answer a thousand questions as to the state of our extraordinary prisoner, for as yet not one person in the house except ourselves could be induced to set foot in the apartment.

The creature was awake. This was evidenced by the convulsive manner in which the bedclothes were moved in its efforts to escape. There was something truly terrible in beholding, as it were, those second-hand indications of the terrible writhings and agonized struggles for liberty, which themselves were invisible.

Hammond and myself had racked our brains during the long night to discover some means by which we might realize the shape and general appearance of the Enigma. As well as we could make out by passing our hands over the creature's form, its outlines and lineaments were human. There was a mouth; a round, smooth head without hair; a nose, which, however, was little elevated above the cheeks; and its hands and feet felt like those of a boy. At first we thought of placing the being on a smooth surface and tracing its outline with chalk, as shoemakers trace the outline of the foot. This plan was given up as being of no value. Such an outline would give not the slightest idea of its conformation.

A happy thought struck me. We would take a cast of it in plaster of Paris. This would give us the solid figure, and satisfy all our wishes. But how to do it? The movements of the creature would disturb the setting of the plastic covering, and distort the mould. Another thought. Why not give it chloroform? It had respiratory organs—that was evident by its breathing. Once reduced to a state of insensibility, we could do with it what we would. Doctor X—— was sent for; and after the worthy physician had recovered from the first shock of amazement, he proceeded to administer the chloroform. In three minutes afterward we were enabled to remove the fetters from the creature's body, and a well-known modeler of this city was busily engaged in covering the invisible form with the moist clay. In five minutes more we had a mould, and before evening a rough *fac-simile* of the Mystery. It was shaped like a man. Distorted, uncouth, and horrible, but still a man. It was small, not over four feet and some inches in height, and its limbs betrayed a muscular development that was unparalleled. Its face surpassed in hideousness any thing I had ever seen. Gustave Dorè, or Callot, or Tony Johannot never conceived any thing so horrible. There is a face in one of the latter's illustrations to "*Un voyage ou il vous plaira*," which somewhat approaches the countenance of this creature, but does not equal it. It was the physiognomy of what I should have fancied a ghoul to be. It looked as if it was capable of feeding on human flesh.

Having satisfied our curiosity, and bound every one in the house over to secrecy, it became a question what was to be done with our Enigma? It was impossible that we should keep such a horror in our house; it was equally impossible that such an awful being should be let loose upon the world. I confess that I would have gladly voted for the creature's destruction. But who would shoulder the responsibility? Who would undertake the execution of this horrible semblance of a human being? Day after day this question was deliberated gravely. The boarders all left the house. Mrs. Moffat was in despair, and threatened Hammond and myself with all sorts of legal penalties if we did not remove the Horror. Our answer was, "We will go if you like, but we decline taking this creature with us. Remove it yourself if you please. It appeared in your house. On you the responsibility rests." To this there was, of course, no answer. Mrs. Moffat could not obtain for love or money a person who would even approach the Mystery.

The most singular part of the transaction was, that we were entirely ignorant of what the creature habitually fed on. Every thing in the way of nutriment that we could think of was placed before it, but was never touched. It was awful to stand by, day after day, and see the clothes toss and hear the hard breathing, and know that it was starving.

Ten, twelve days, a fortnight passed, and it still lived. The pulsations of the heart, however, were daily growing fainter, and had now nearly ceased altogether. It was evident that the creature was dying for want of sustenance. While this terrible life-struggle was going on I felt miserable. I could not sleep of nights. Horrible as the creature was, it was pitiful to think of the pangs it was suffering.

At last it died. Hammond and I found it cold and stiff one morning in the bed. The heart had ceased to beat, the lungs to inspire. We hastened to bury it in the garden. It was a strange funeral, the dropping of that viewless corpse into the damp hole. The cast of its form I gave to Doctor X——, who keeps it in his museum in Tenth Street.

As I am on the eve of a long journey from which I may not return, I have drawn up this narrative of an event the most singular that has ever come to my knowledge.

HARRY ESCOTT.

[NOTE.—It is rumored that the proprietors of a well-known museum in this city have made arrangements with Dr. X—— to exhibit to the public the singular cast which Mr. Escott deposited with him. So extraordinary a history can not fail to attract universal attention.]

THE SILENT SPECTRE.

'TWAS an Egyptian custom, in the ages that are gone,
That at each festive board should sit a shrouded skeleton;
And, little as we dream of it, the custom still goes on.

For though, amid his warriors, the Tyrant sits on high,
And quaffs, upon his purple throne, to their last victory,
Still near him sits the Skeleton—dumb-tongued Conspiracy.

The Poet, too, who toils for all—whose heart eschews delights—
Who lives laborious days, and gives to solemn thought his nights—
Sees the grim Skeleton—the world with scorn his love requites.

The Beauty, in her flush of bloom, whose bright and perfect charms
Enslaves the panting heart of youth, and e'en the aged warms,
Thinks on that ghastly Skeleton—Old Age and shriveled arms.

The Merchant, 'mid his cringing clerks, that wait upon his eye,
Whose very heart is cased in gold, has still that Spectre nigh—
A grinning, scornful, mockery—friend-freezing Bankruptcy.

The Mother with her darling child, whose budding charms begin
To show the opening of a flower fairer than all her kin,
Still trembles at the Skeleton—the child may die, or sin!

And not one living child of earth can from its presence fly;
It enters with us at our birth, is with us when we die;
For within us dwells the Skeleton—unseen by human eye.

Oh Conscience! silent spectre, awful presence of the Past!
Thou terror of the Future, whose gaze makes midnight ghast!
Thou loiterer with the lounger, and thou rider with the fast!

Thus the old Egyptian custom of a Skeleton alway
Sitting vailed at every festive board, as a check upon the gay,
Has been from the Creation, and will last to Judgment Day.

MY "INTIMATE ENEMY."

I FELT a thrill of delight when the last good-by was spoken, and the coach rolled from the door bearing all my family away on a pleasure-tour and leaving me sole occupant of our house for three or four blessed weeks. It was not often I could be so entirely alone.

I opened the windows to let in the June sky, which had grown calm in assured possession of the day after the happy flutter of sunrise, and sank into an arm-chair to think, or dream, or sleep, just as it chanced, but certainly to enjoy. I could faintly hear the whir of the domestic machinery in the other part of the house, but no wheel nor band connected it with my deserted tenement; I hadn't got to oil them to keep them going, nor look out lest my fingers got ground off. There was nothing in the wide world for me to do but to entertain my company—and such company!

They were there from the blissful skies, as though last night's stars had put on the invisible glove and dropped to see what I was about, but betrayed by their divine stillness; they fluttered out from the beautiful elm that seemed scarce to know whether to be a tree or a vine, shooting up very proud and grand away from the common earth, then yearning back again with tremulous, pendent branches; they came from the air that was like a presence; from the books that contained the attar of so many souls within their weird brown covers; from the living, breathing roses all throbbing and crimson, and the voiceless japonicas pallid with suppressed fragrance; from the birds that were singing a Gloria, and the winds that were faltering a Kyrie; from every thing animate and inanimate save and except Bertha Mills, my "intimate enemy," who stood within the door-way presently, extinguishing the morning.

"My darling Marian!"

While she is kissing me and caressing my hair with her small fingers, let me give a short pen-and-ink sketch of her, mentally holding her at arm's-length, and pinching her somewhat in my grasp. She is very pretty, undoubtedly, with a small, well-formed figure; an abundant flow of flaxen curls all over her neck and bosom; dimpled, colorless cheeks; a pair of pale-blue eyes, which do not often meet yours in unconscious frankness; broken, ill-tempered eye-brows; a mouth almost offensively full, but hiding the prettiest of teeth; a nose beautiful enough to put in marble; and a voice of velvet when she chooses. Add to this, my Cousin Bertha is no fool. The girl is selfish and treacherous, I know, holding her off so and looking through her. She is not capable of a single act of pure, disinterested friendship, though there is a sort of warmth somewhere in her nature—a warmth that will scorch what it touches. But why should I blame her for being incapable of living or dying for a friend? If that immortal stream that starts westward from the Ontario were coaxed and frittered away into all the dear little brook-channels, and sweet pools, and charming fish-ponds, we would scarce wonder at missing the headlong thunder of Niagara. And so, if some internal system of pipes converts all my Cousin Bertha's embryo affections into gas before they have time to condense into sentiments and acts, it isn't her fault surely. And we are exceedingly intimate; call each other "my dear," "my love," and all the sweet little hypocritical names women use to each other; write charming little notes; and dress alike, though I am brown and she fair; Bertha will—she has no taste, the girl, though she manages to look well in all my browns, and crimsons, and flame-colors.

Well, on that June day I embraced her with a slight scringe, and, seating her in my arm-chair, threw myself down upon the floor, out of reach of her arms, with my hands clasped around my knees.

"My sweet Marian!" she said; "how will you live here alone? I can't comprehend! What will you do?" putting such a look of pity into her face as made me want to box her ears.

"Bertha Mills, if you dare to pity me, Miss—"

"Not for worlds, Regina! but what will you do?"

"Oh, curl my hair, and pinch my cheeks, and practice attitudes. I can sink into a chair almost as gracefully as you. See!"

"How absurd! but won't you be afraid nights?"

"No. I am not beautiful enough to tempt desperate and despairing lovers, nor rich enough to stand (or lie) in danger of burglars, nor wicked enough to fear the devil in full canonicals; and I like to be alone, an' it please you."

"It doesn't please me now, you queer thing! I've come in full of news and don't mean to go till I've imparted. The new minister, 'long looked for but come at last,' was at our house yesterday, and such—"

"Short sentences, if you please, and no rhapsodies."

"Well, he's a bachelor, and charming! Papa spoke of you—you're one of his hobbies, you know—and Mr. Lynde, that's his name, proposed calling. So you need not be surprised to find yourself invaded at any moment by this general of the church militant. He's the most delightful singer, dear! We sung 'Though the sinner,' and ever so many pieces yesterday."

"I shall be very happy to see him."

"Oh, you shall! I expect you'll talk him into believing you a saint, with that sweet tongue of yours; you naughty coquette!"

"Bertha Mills! if you ever call me a coquette again I'll—I'll captivate the first man you fall in love with."

"If you can!" she laughed saucily back from the door which she shut hard, but threw a sweet good-by, and a sneer with it, in at the window.

You are welcome to your minister, Bertha Mills! What I want is to be let alone by all flesh. But how dare she speak in presence of the company here! and talk of music, too, so near my orchestra! within hearing and touch of

the melodious agonies of Byron, and Milton's Gregorian chant; where Longfellow's songs only want a touch to set them ringing, and the Brownings stand ready to cast their nude clarion thoughts into your startled soul! You and Mr. Lynde may sing your songs; but for me,

"I pant for the music which is divine,
My heart in its thirst is a dying flower;
Pour forth the sound like enchanted wine!
Loosen the notes in a golden shower!"

Nay, not Dante! I can't have the trouble to bow myself before him now. Tennyson, lull me into Elysium with your lotos song! Lying upon the veranda that night with my eyes blind to all the earth, and conscious only of the skies whose purple distance sucked my soul away into it presently; searching that vast river whose vastness is only rendered greater by the golden sands over which it rolls; lying thus, awed, oppressed, lost, I was conscious how dear the earth is, and could feel the throb of Columbus's heart when he fell upon his face and kissed the tender, upholding, home-like earth that dawned upon his strained eyes after the ocean and sky eternity were past. A little child was with me, such a child as I can love—not one of your selfish, nestling, kissing things, but a shy little one whose eyes are not mirrors but inhabited worlds, and whose soul is astir before its time, troubling her with mysterious thoughts and fancies in the early twilight. I took her small face between my hands and turned it upward.

"What is it, Pansie?"

"Is God there?" she asked.

"Yes."

"Where?"

"Oh, every where. What we see isn't the whole of God, but only a sweep of his garments. Perhaps the Milky Way there across might be a girdle, and the solar system a jeweled breast-plate, or only a rose upon His bosom."

"Are we on God's bosom, Marian?"

"Yes, dear, or in it. It throbs and sends the worlds spinning through his veins. Do you suppose any little speck or globule of blood in this wee hand of yours knows or can understand you?"

"Are we in God's veins, Marian?"

"Yes, little one; in an artery, I think. Don't you feel the throb? don't you feel near the heart?"

"Is that what shakes me so sometimes?" asked the child in a whisper.

"Yes, love; don't fear, it's God's heart beating."

"I want to go to sleep, Marian; don't you?"

"Yes, Pansie, I want to go to sleep."

But there was no sleep for us, but callers; so the bell said, whose imperious ring betrayed my Uncle Thomas's hand, which presently clasped mine. And there were Aunt Anne, and Bertha, and a stranger behind.

"Mr. Lynde, Marian."

Looking up in the dim light of the hall, I saw a dark face with clear gray eyes, and masses of careless black hair thrown back from a wide, strong forehead which had not preyed upon a puny frame, but was royally upborne. He greeted me with grave kindness, and when we were under the chandelier gave me a look that made me feel as though my soul were in a glass case of uncommon clearness, but became commonplace, and proper, and polite immediately, reassuring me of opacity by his questions, and greatly delighting my Uncle Thomas, whose delight is in lions, and whose lions often turn out to be only Snug the joiner.

If, as philosophers say, all bodies attract in proportion to their quantity of matter, then were my Uncle Thomas Mills a very attractive person; as it is, my body and soul recoil from him, though I dare say he is a very good sort of man. He considers himself a philosopher indeed; not one of your gassy Platonists, but a genuine Baconian; to the truth of which estimate the dinner-table gives ample testimony, positively, and his own person punningly. As to my Aunt Anne, any one with eyes could read her at a glance; sitting there in an economical gray dress, with a procession of daisies marching precisely through the middle of her white cap-ribbon, suggestive of Sunday-school picnics, and her features arranged in proper order for the evening, from which order not an earthquake could move them.

She is a good woman by the yard-stick, geometrically holy, as conscientious as a rectangled-triangle and as three-cornered, too. I don't believe she ever did a wicked thing in all her life, and don't doubt that when I run against her opinions in any way, and commit something that is an enormity on her retina, she forgives me, as the Bible tells her to do, and prays for my conversion. Nevertheless my Aunt Anne does not attract me to religion.

"Seeing no light here, we thought you might have gone to bed," said my uncle; "but I was determined to rout you out."

"Marian was star-gazing, were you not, dear?" asked Bertha, sweetly, sitting down upon a tabouret beside me, with her arm across my lap, making a very pretty tableau for Mr. Lynde opposite.

"Star-gazing!" repeated my uncle, contemptuously.

"The sky is unusually fine to-night," interposed Mr. Lynde. "You were gazing, Miss Marian, and dreaming, perhaps?" and his eyes smiled rather than his lips.

"I was wondering, Sir, if God didn't still think it good."

"Marian is a romantic thing," said my uncle, apologizingly; "but with all her nonsense she knows some things pretty well. She'll soon outgrow her star-gazing and rhyming;" and he laughed indulgently toward me, looking very lenient and superior.

"One need not be what you call romantic to be moved by the beauty and sublimity of nature," said the minister, earnestly. "All nature hints at Divinity. If we looked upon things thoughtfully, every new day and every new night

would be a miracle to make us adore the Worker."

"Oh, if you take it so," returned my uncle, somewhat uneasily, "if you take it so, every thing is a miracle, I suppose; but people get accustomed to them and don't mind."

"Too much accustomed, I fear," was the reply.

"My dear Sir," said my uncle, "if great things did not become familiarized by repetition, existence would be unbearable. Suppose, now, my wife should look upon every sunrise as a miracle, what would become of my breakfast?"

This was unanswerable, and the minister retreated from his fortress, laughing.

"I wish disagreeable things could become so familiarized," said Bertha, as a voice and step we knew sounded at the gate. One of her admirers had found out her retreat and followed her.

"Oh, there's Warren!" smiled my uncle, with a mischievous look toward Bertha. "He's a very wealthy and well-connected young man," to the minister. "He traces his descent directly from an English earl."

"Yes," said Bertha, scornfully, "and he'll be sure to tell Mr. Lynde of it in less than ten minutes."

Sure enough, after a few minutes of commonplace talk, during which the young gentleman complimented Bertha profusely, it just chanced that he mentioned his family.

Bertha turned toward Mr. Lynde with sparkling eyes. "Mr. Warren," she said, "can trace his family back through all its changes till he comes to a sponge; which is a great way, though you mightn't think."

Mr. Warren, who, to do him justice, was good-natured, though not worth mentioning otherwise, took her attack in good part, proposing to subdue her ferocity by music, which, unlike the untamed of old, she was to furnish herself. He had brought her a new song. Would she try it?

Bertha had good taste in those matters, and never waited to be coaxed; so she went immediately to the piano, and sang his song, and sang it very sweetly.

I went to hear Mr. Lynde preach the next Sunday. So did every one else, I think, in our good town. I believe, too, they all wanted to go again. I am sure I did. And yet he was not one of your flowery speakers, who crowns his hearers with lotos-blooms, and throws garlands upon graves, but a good man who knew in his soul that the moments are golden. His eyes had the upward look of one who is used to climbing difficult heights, looking ever at the goal; and yet I felt certainly that he never crushed even the tiniest flower under his firm tread. His sermon fired me, and I went home trembling, and when safe alone wept myself calm. After this baptism of fire and water Mr. Lynde was sacred to me.

"Dear me! wasn't he stupid?" cried Bertha, coming to see me the next day. "And do you know he's going to live with us? To think of papa's taking boarders! But he will. I only hope Mr. Lynde won't try to convert me. I thought at first, dear, that I should adore him; but I don't believe he'll be one of my flames."

"Certainly not, Bertha. Mr. Lynde is a good man, and your flames always smell of brimstone."

Nevertheless, when Bertha, who often let me think for her, found that I looked up to and admired the new minister, and that, although averse to general society, I marked those days with white on which I conversed with him, she began to think it worth her while to notice him. My family returned, and Mr. Lynde became a frequent visitor; but our pleasant intercourse was at an end. Bertha was always there; and if we spoke together she came between us with a flower to look at, or a pretty word to say, or a song to sing, or she would throw herself at my feet, with her clinging arms around me, crushing all disposition to speak with their soft pressure. Bertha had a pretty, childish way with her which always pleases men who seldom realize the truth that a woman who pretends to be a child is invariably an actress. She asked Mr. Lynde's advice so sweetly that he failed to remember how seldom it was followed. She was by turns so gentle, so merry, so serious, and, altogether, so charming, that I didn't wonder to see his eyes follow her, and his grave lips smile when she spoke. I gradually withdrew from them, feeling that I was not needed; and I could see after a while that Mr. Lynde's manner cooled toward me, and that he seemed to have got the impression that I was eccentric and somewhat dangerously independent. I knew where he got these impressions, but, after choking a little, determined not to contradict them. I felt, indeed, a strong inclination to vex him into scolding me. It would be so nice to get him angry with me that I might be penitent and be forgiven. If he would but chide me as gently as he did Bertha sometimes, when she would drop the lids over her blue eyes, and let her curls almost hide her downcast face, then, when he had finished, look up with an arch smile and a soft "Are you very angry with me?" which made him forget his gravity at once.

"Bertha is making a fool of herself, trying to get Mr. Lynde," said my uncle to me, confidentially. "Warren would suit her tastes much better, besides being far richer than Mr. Lynde can ever be. But that girl is an inveterate coquette!" and he laughed; "she can't rest nor let a man alone till he's on his knees to her."

Mr. Mills understood his daughter, evidently.

"Do you think Mr. Lynde likely to take that orthodox and most ministerial position before my cousin?" I asked, smiling, but with a sinking heart. I couldn't bear such a good man to be made a fool of.

"Well, I hardly know," was the hesitating answer. "He's certainly very fond of her, but then he treats her as a child, and, perhaps, looks upon her as one."

"But she is not a child, uncle, and he knows it."

"Well, Marian, I will leave them to manage it themselves. Her mother would be delighted, I know, but I'd much rather Bertha would have Warren. But I came near forgetting. Bertha wants you to come over there to tea. Your aunt has gone to the sewing-circle, and she's alone. Will you come?"

I went.

"Will you come into my room, young ladies?" asked Mr. Lynde after tea. "I believe it is the pleasantest room in the house at this time of day."

"We'll not let you write," said Bertha, leading the way. "We'll examine his papers, Marian, and see if there are any stray rhymes among them. I suspect him of being a poet."

"It is a wonder I am not with such an inspiration near me," he said, smiling; "but I must resign all claims to that distinction."

"Here's just the paper to write poems on," said my cousin, taking up a quire of Bath post as thick and glossy as lily leaves; "only it isn't lined. It's only your fanatics, like Marian, who use unruled paper; for me, I want a true-blue line of precedent to set my ideas on."

How pretty Bertha looked that day, with her dress the color of an autumn mist with a sunbeam dissolved in it, and that sprig of evergreen in her hair. She had taken it from my bosom when I came in. I gave her a flower.

"Crown yourself with this, Bertha, and give me my arbor vitæ," I said; "it doesn't suit you."

"And why not?" asked Mr. Lynde, with a searching glance in my face.

"The evergreens are nature's fanatics," I said—"green in season and out of season; and Bertha blooms only in orthodox times and ways. Here's an aster would no more blossom in spring than my cousin would laugh in church when you were preaching;" and I wound it into her curls as she stood in a single stray sunbeam, looking so beautiful she hurt me.

"I hope you wouldn't do that either," he said, smiling, yet coloring.

"Indeed I might, Sir, if any thing comical happened. I could laugh more easily in church than any where else."

"Not if your deeper feelings were aroused," he replied, gravely. "If one goes there conscious of eternity she will feel no disposition to trifle;" and he turned to put some books upon a shelf.

Here was the displeasure I had wished for, but I scarcely felt it as delightful as I had anticipated. Indeed, I could have wept if it had not been for Bertha's exulting smile. I turned the leaves of a book blindly, trying to hide my burning cheek. So he judged me. Bertha's deeper feelings were aroused forsooth, and I was the trifler. Well, perhaps it was so. Her deeper feelings were awake, indeed, quite to the dregs. I preferred trifling.

"I must go, dear," I said, recovering myself. "I have an engagement this evening. I am sorry, but must go."

Must I, really? Bertha was so sorry. She would get my bonnet if I would have it, but it was too bad! and she went with great alacrity to fetch my things.

The door had scarcely closed upon her when I was aware that Mr. Lynde stood by me in the window. I would not appear to see him, but kept my eyes fixed upon the sunset.

"Marian!" he said, softly.

I turned to him quickly. He was standing beside me with tears in his eyes, and with such a tender face that my heart leaped.

"Forgive me, dear; I didn't mean to wound you. I know you better than to mean what I said!" and he held out his hand to me. What right had I to be angry with one so much older and better than I? How was I worthy that he should ask me to pardon him for giving a deserved reproof? I bent my head till my lips touched his hand, and then turned hastily to take my bonnet from Bertha, who entered at that moment. A single fierce ray darted from her eyes, but they melted in a moment, and she led me to the door, holding my hand and kissing me good-by.

After that Bertha was always between me and every thing; clinging, and kissing, and watching me till I longed to fling her off, but could not. She was my cousin, and our families were always together, and any trouble between us would communicate itself to the rest. Then, what pretext had I? Bertha was wary and left me nothing to tell, and all my coldness could not offend her. I knew the girl's art and her object, and yet she made me believe, at last, that Mr. Lynde was at some pains to be able to regard me with Christian charity, but that she was the light of his eyes. It was evident enough that he liked her in a frank way. He liked to talk with her, to look at her, to hear her sing, and she gave him enough of all.

"I wouldn't believe a grave man could say such sweet things," she said to me once; "but Mr. Lynde can compliment more prettily than Warren, who does nothing else."

"The charm is in your loving heart, dear," I said, with a smile that belied my own heart.

"Nonsense, Marian! I don't care so much for him; though I like to make him serve me, I don't deny." She gave her curls a toss, and a little laugh rippled over her lips.

I knew that Bertha wanted me to think him in love with her, and that she had a very curious way of telling the truth sometimes, and so made allowances.

One evening she came in, and came up directly, as usual, to my room. I saw that she was greatly elated, and with a sinking presentiment kept to my writing.

"I am in haste to finish this," I said; "don't bother me." I bent my head low over the paper. She shouldn't see my face if she told me any thing.

"Oh, I won't bother you, darling; only let

me sit beside you:" and she came and leaned upon my lap. Of course this did not bother me in the least.

I put my pen away impatiently.

"Oh, I'm glad you're done," she said, "for I'm in a talking and walking mood. Get your things and let us go out. You won't? You naughty Marian! You ought to be very grateful to me for coming. Such a time as I had! Mr. Lynde coaxed me full fifteen minutes to stay and sing to him, or else let him walk with me; but I was determined to have you to-night, you dear, ungrateful Marian!"

"Poor Mr. Lynde!" I said, curling my lip.

"He's the kindest man," Bertha said, with her eyes full on my face. "I told him to-night that he was like a brother to me, and he answered, so earnestly that I felt really confused, that I was more than a sister to him."

I felt the blood curdle around my heart, and the room swam before my eyes.

"I will go, dear, and leave you to your writing," she said, rising and evidently a little startled by my looks. I know my face was white.

"Well, good-by," I answered, recovering myself. "I hope you'll give me an invitation to the wedding; I see it can't be far off. Poor Warren! I shall have to console him."

"Oh, no!" she exclaimed, laughing. "I mean to keep him to make Mr. Lynde jealous. Then, Marian, I only want to flirt with the minister. I wouldn't marry him for any thing. I like to try my power over him, though. It's worth while having power over such a man."

I turned upon her.

"Bertha Mills, you're an insolent little fool! You to talk of having power over Mr. Lynde! You have deceived him with regard to your true character; and if you dare to trifle with him, I will tell him every word you have said to-night."

"Why, Marian," she sneered, pale with anger, "one would think you wanted him yourself."

"You may go!" I said, opening the door.

She made me a little mocking courtesy when she went out, saying, "You may have him, dear, when I've done with him."

The air of the room stifled me, and I threw on my bonnet and went out into the evening. A few steps from the gate a figure met me and stopped. It was Mr. Lynde; in search of her, I thought. He bade me a pleasant "good-evening," and walked beside me till we came to the corner of the street. I wanted to get rid of him, and so said, "Bertha has gone home, I think."

"Has she?"

"Yes, Sir; and I am going this way. Good-night."

"On that lonely road?" he asked, in surprise. "You won't go there alone in the evening?"

"My object in coming out was to get solitude and pure air," I said, without caring whether my voice was calm or not.

"May I go with you, Marian?" he asked, gently. "The pure air you can have, but I don't believe solitude is good for you to-night."

I made no answer, but walked on blindly under the stars. After a few steps he drew my hand within his arm. The road grew lonelier, and stretched out pale and spectral. It seemed a type of my life—a dim path leading to darkness.

I stopped short.

"I don't want to go any farther."

"You had best go home," he said, "and I will accompany you, unless you forbid me. Forgive me if I intrude, but I wished to speak with you."

I led Mr. Lynde to the parlor and sat down to hear what he had to say. He wanted my intercession with Bertha perhaps; or it might be that he would wish me, as her intimate friend, to be a little fitter for the office, and have a care lest I should taint her innocent simplicity with my wayward moods. Truly his business was a long time in coming.

"You wished to speak with me?" I said, coldly.

"I don't dare to, now I have come," he said, in a low voice. "I had something to ask of you—" He stopped.

"Mr. Lynde," I said, earnestly, with a pang of self-reproach at his faltering voice, "you can not please me more than by letting me serve you. Ask me whatever you will, I will do it."

"Marian!" he exclaimed.

I started up, shaking the blood into my face.

"I want you, Marian, body and soul!"

How the stars shone that night, every little urn full and brimming to drink my health and happiness! How the morning baptized the earth, and how the earth smiled up to the morning! How the first liquid notes of the universal harmony stole upon my ear, convincing me of God and heaven! How the smiles and kind words of my dear home friends shone like gold in the chain of the universal brotherhood! How my heart throbbed yet with the sudden tightening of my anchor chain, which every day would make shorter till those it connected were one and needed no chain, being so! How little Pansie lighted her flickering eyes at mine, and listened smiling, breathless, and silent, except for those eyes, while I told her what I scarcely told him as yet! How I kissed Bertha Mills when she came two days after to tell me that she was engaged to Mr. Warren (poor fellow!), and did hope we could be married at the same time—and would I wear a vail? or be married in a traveling dress, and start directly on a journey?

I hadn't got so far as to have settled that, but still was sure of a vail and a journey—the sweet vail of happiness, and the beautiful journey where love would make all the thorns bear flowers, and glorify the darkest clouds.

"It takes clouds to make rainbows, my Marian," said Mr. Lynde; "and when they are darkest we may always look for the brightening."

MY VALENTINES.

IT is sweet St. Valentine's Day,
And the year is fifty-nine,
And I, an elderly bachelor,
Am sitting at my wine.
I watch the bubbles that form
And break within the glass:
Ah me! my youthful joys
Were bubbles like these, alas!

I think I am growing old:
My hair is tinged with gray,
And seems to be getting scant—
I noticed it to-day.
And yet when I close my eyes
There's a strange electric thrill;
The blood bounds through my veins,
And I feel a school-boy still.

And my heart is strangely stirred
In a most unwonted way;
As it used to be, no matter how,
Many years ago to-day—
When I wrote to Isabel,
Or Charlotte, or Caroline,
And hailed them each in turn
My chosen Valentine.

On a sheet of gilt-edged note,
With a wounded heart above,
And some verses—save the mark!—
About Cupid's darts and love;
In a bold, round, school-boy hand—
No *i* without its dot,
And the *t*'s all carefully crossed,
And not a single blot.

They cost me infinite pains,
Those Valentines of yore;
When they were quite complete
I thrust them under the door;
Getting up at the early dawn,
Under gray-mantled skies,
Before the heralds of morn
Had fairly opened their eyes.

Do you ask me where are now
Those Valentines of mine?
They are treading the shady walks
Of life's serene decline.
I meet them in the street—
Perchance I am asked to dine;
Do they ever think of me then
As an early Valentine?

It is well I do not ask;
I can fancy the wondering glance
Of those whose womanly cares
Have stifled the old romance.
But it is not so with me;
For, sitting here at my wine,
My heart becomes a boy's
At the name of St. Valentine!

A MATTER OF LIFE AND DEATH.

THE love of life is said to be one of the most powerful and lasting instincts of the human soul. And yet, an Englishman of the last century shot himself because he was tired of buttoning and unbuttoning his clothes!

Whether it be bravery or cowardice in a man himself to put an end to his life—if it be ever allowable, and what causes are sufficient to excuse so dire a deed—whether suicide be indeed murder, and thus forbidden of God, or whether, as man has the power, so he has the right to put a period to his earthly existence: these are questions which have engaged the minds of many men wise in their day, and diverse ponderous tomes have been written for and against each proposition.

But history shows that the practice has obtained only among nations sunk in enervating luxuries and vices, and that the individual cases occurring in a healthier condition of society are invariably traceable either to moral degeneracy or to mental imbecility. Suicide was most common among the Sybarites, a people who inhabited a part of Italy during the infancy of Rome; and historians relate that so enervated were these people that they would not suffer blacksmiths, carpenters, or any noisy tradesmen to live within the city bounds, lest they be broken of their sleep. The loud-crowing cock was banished for the same reason; and Seneca mentions one Mendycides, of Sybaris, as so fatigued at "seeing" a man dig that he ordered such work never more to be done in his presence.

In the winter of 1780 a British officer attempted to shoot himself, in Hyde Park, London. His pistol flashed in the pan; and a mean-looking man, who had been watching at a distance, ran up and wrenched the weapon from the officer's hand. He immediately drew his sword and attempted to stab his preserver, who drew back, and, opening his arms, said, "Stab me, Sir, if you think proper. I fear death as little as you; but I have more courage. For more than twenty years I have lived in penury and affliction, and I yet trust in God for comfort and support." Here was a contrast between courage, true and false.

Aristotle truly observed that courage is the mean between fear and rashness, while suicide is the sum of both. Socrates, condemned to drink the hemlock draught, and for thirty days steadfastly looking his death in the face, held that "we men are, as it were, on guard, and it does not become any one to relieve himself from his station." The Emperor Julian, lying on his bed, mortally wounded in battle, thanked God that, after an honorable career, He had vouchsafed him a splendid and glorious departure, continuing, "and I hold it to be equally base to solicit or to decline the stroke of fate." "Remember that you are an actor in a play, of whatever part the Master of the company pleases," says Epictetus, in his *Enchiridion;* "if He assigns you a short part, then of a short

one; if a long one, then of a long one; if He choose you should personate a poor man, or a lame man, or a magistrate, or a private person, see that you perform your character to the best of your power: since this is your business, to act well the character assigned you; but to choose it belongs to another." Zoroaster's dictum is admirably brief, pointed, and suggestive: "It is forbidden to quit a post without the permission of the commander. Life is the post of man." The Epicureans defined suicide to be death by "the fear of death." Napoleon said, "A soldier should be able to subdue his passions; for the man who suffers mental pain without shrinking shows as much real courage as he who stands firm under the fire of a battery. To become the prey of melancholy, or to commit suicide to escape from it, is like flying from the field of battle before the contest is decided." An old English epigram declares:

"When all the blandishments of life are gone,
The coward sneaks to death; the brave live on."

And St. Paul sums up in one pithy sentence, "Let us then run with patience the race that is set before us."

"Dying," says Montaigne, "is without doubt the most remarkable action of human life." But he doubts if constancy and obstinacy in so dangerous a resolve as that of suicide are to be found. "It is very easy to bravado before one comes to the push; insomuch that Heliogabalus, the most effeminate man in the world, among his most sensual pleasures could forecast to make himself die delicately when he should be forced thereto; and that his death might not give the lie to the rest of his life, had purposely built a sumptuous tower, the base whereof was covered and laid with planks enriched with gold and precious stones, thence to precipitate himself; and also caused cords twisted with gold and crimson silk to be made, wherewith to strangle himself; and a sword, with the blade of gold to be hammered out, to fall upon; and kept poison in vessels of emerald and topaz, wherewith to poison himself, according as he should like to choose one of these ways of dying. Yet as to this fellow, the effeminacy of his preparations makes it more than likely that his heart would have failed him had he been put to the test."

Against this, however, must be cited the story of the philosopher Cleanthes. He had his gums swollen and rotten; his physicians (sensible men) advised him to great abstinence. Having fasted two days he was so much better that they pronounced him cured, and permitted him to his ordinary course of diet; "he, on the contrary, already tasting some sweetness in this faintness of his, would not be persuaded to go back, but resolved to proceed and to finish what he had so far advanced in," and accordingly starved himself to death.

The voice of the ancients was almost unanimous in favor of suicide under certain circumstances. Seneca declared the general sentiment when he wrote that "the wise man lives as long as he ought, not so long as he can." Philip writing to the Lacedæmonians that he would frustrate all their enterprises, received for answer, "What! wilt thou also hinder us from dying?" And when Ægis was asked which way a man might live free, he answered, "By despising death." Pliny admitted of but three sorts of diseases to escape which a man has good title to destroy himself; two of which were headache and a pain in the stomach. But in Rome, at the time of its highest prosperity, this death was astonishingly common; every conceivable excuse justified it, and every conceivable method was resorted to by its votaries. Starvation was a usual mode, and a surprising number of persons persevered in this, tedious as it was. Opening a vein, leaping from a precipice, and falling upon one's sword were other means much countenanced. The list of illustrious Romans and Greeks who put a period to their own existence is very curious:

Demosthenes took poison, which he carried in a pen.

Homer, it is related, hanged himself because he could not solve "the fishermen's riddle."

Cato stabbed himself.

Lucretius, long before, had a similar self-inflicted death.

Terence, the great poet, drowned himself because he lost his collection—one hundred and eight in number—of translated comedies.

Labienus, the poet, too, because his writings were burned by edict, burned himself!

Portia, Cato's daughter, and Catulus Luctatius died by swallowing burning coals.

Herennius, the Sicilian, beat his brains out against a post, and continued his suicidal knockings until he could and did see and salute them! He has had a modern imitator.

Seneca opened his veins.

Hannibal, as some say, took poison, which he carried in a ring; while others affirm that he drank bull's blood.

Empedocles, an old philosopher, threw himself into the crater of Vesuvius—a feat which was imitated on a small scale, a few years ago, by an English woman, who threw herself into the furnace of an iron foundery.

Petronius Arbiter, one of Nero's men of pleasure, having incurred the displeasure of his master, went home and opened his veins.

Nero himself cut his throat, to avoid a sterner fate.

Democles scalded himself to death.

Zeno, at the age of ninety-eight, stumbled and broke his thumb. He interpreted this accident as a summons from the earth, and hanged himself.

Cicero's eloquence—the dread of it—caused two suicides: of Macer, who hanged himself when informed that the great orator would plead against him; and of Cassius Licinius, who choked himself with a napkin to escape Cicero's judgment.

Aristarchus starved himself.

Cleombrotus Ambraciota, having read Pla-

to's Phædo, "entered into so great a desire of the life to come that, without any other occasion, he threw himself into the sea."

Coccieus Nerva, a famous and wealthy lawyer of Rome, killed himself "out of compassion for the miserable estate of the Roman Republic."

In the reign of Tiberius it was a law of Rome that the condemned who waited to be executed forfeited their possessions, and were denied the rites of sepulture; but those who by killing themselves did anticipate it were interred, and had liberty to dispose of their estates by will.

Though many Greeks put a period to their existence, it was the custom of that nation to rank voluntary suicide with treason, conspiracy, and sacrilege; but their laws against it were seldom enforced, and their prisoners condemned to death were their own executioners by poison. The Athenians cut off, after death, that hand of the suicide which was used in committing the act.

In the Isle of Zia, one of the Cyclades, it was the custom for "unprofitable old men" to poison themselves—which they did, we are told, "crowned with garlands, as triumphers over misery." Strabo relates that this practice was enforced, *particularly on the women!* at the age of sixty years. The only reason that we find for this cruel custom is, that "the air is healthy and the people disposed to longevity!"

In Massillia, a Roman colony fixed on the present site of Marseilles, the magistrates kept, at the public charge, a poison prepared of hemlock for those who had a mind to suicide. To obtain this the law required that the person should first appear before the Six Hundred—their Senate—and give a proper account of his reasons and motives for the act. Hereupon the magistrate granted leave thereto, and rendered up a sufficient portion of the deadly draught. And Pliny speaks of a certain hyperborean nation, "where, by reason of the sweet temperature of the air, lives did rarely end but by the voluntary surrender of the inhabitants; but being weary and satiated with life, they had a custom, at a very old age, after having made good cheer, to precipitate themselves into the sea from the top of a certain rock destined for that service."

Quintilian states and argues the case of a young man who, by "mathematician's predictions," was first to slay many enemies in battle and subsequently to kill his father. He became a warrior, and the first part of the prophecy was fulfilled. Coming home, and fearing that the second part would also be accomplished, he petitioned the Senate that he might kill himself in order to avoid so terrible a calamity.

By the Code of Justinian suicide is not ranked as a moral offense or crime in itself. The confiscation of property, which is the penalty of some suicides expressly pointed out, was never inflicted when any one killed himself, "either through weariness of life or an impatience under pain or ill-health, or for any other reason—not affecting the public treasury."

It was a crime, therefore, only when its *clammy fingers touched the sensitive pocket of the state!* The only rescript which relates to the subject, or seeks to impose a penalty, was issued by Adrian one hundred and twenty years after the birth of Christ. It decrees that "if a soldier do attempt to kill himself and not effect it, except he offered it upon impatience or grief, or sickness or sorrow, *or some other cause*, he shall be beheaded."

The same rescript is repeated in another title with this additional clause to the excusing causes: "Weariness of life, madness, or shame!"

St. Augustine tells us, in his Contemplation on the Bees, that "the subjects of the Persian King were their own executioners."

Among the ancient Ethiopians there were few men executed. It is recorded that they always avoided that fate by suicide, and that the practice was encouraged.

Though suicide in various forms, and under different pretexts, has become common in India, it appears that the Shastah, the ancient religious book of the Hindoos, strictly forbids it, and entails upon the self-murderer the severest punishment. It is related in the account of the creation given in the Shastah that the Debtah were God's angels; some of whom, rebelling, were thrown down to Onderah, a place of intense darkness, there to be punished forever. The faithful angels interceding for their fallen brethren, their punishment was finally commuted, and they were again placed in a state of trial and probation—preparatory to their being readmitted to heaven, if found worthy. For this purpose God created fifteen *Boboons* (regions or planets) for their purgation and purification. The earth is made the eighth, or middle of the fifteen; and after passing safely through the first seven, the spirit on its trial arrives upon our planet, and there assumes the lowest form of animal life. After having passed through eighty-seven different changes or forms of life, the last of which is that of the *Ghoii*, or cow, it at last enters the form of *Mhurd*, or man. Those who conduct themselves satisfactorily here are permitted to pass through the other seven Boboons of purgation. Those who misbehave are cast down again to Onderah, there to resume their weary travel upward. Now among the commands which Bramah received from God to communicate to the children of earth is the following, given in the divine language: "The mortal form wherewith I shall encompass the delinquent Debtah are the work of my hand. They shall not be destroyed, but left to their natural decay. Therefore whichsoever Debtah shall by designed violence bring about the dissolution of the mortal forms animated by their delinquent brethren, thou, *Sieb*, shalt plunge the offending spirit into Onderah for a space; and he shall be doomed to pass again the eighty-nine changes. But whosoever shall dare to free himself by violence from the mortal form wherewith I shall inclose him,

thou, *Sieb*, shalt plunge him into Onderah *forever*."*

It was no rare thing in the ancient wars for the entire inhabitants of a city to put themselves to death when capture appeared else inevitable. Thus perished a city of the Indies besieged by Alexander the Great, and also a Spanish place taken by the Romans. The Abydeans, pressed by King Philip, determined upon a similar course, but were surprised by their shrewd conqueror, who ingeniously took possession of their gold and treasure, and then gave the inhabitants of the city three days in which to slaughter themselves—which they accordingly did, there being no man left at the expiration of the appointed time.

There are numerous instances of generals of armies capping defeat with suicide. But none so quaint as that of Jaques du Chastel, Bishop of Soissons. He accompanied Louis IX. (St. Louis) on his unfortunate expedition into Africa, and seeing the King and the whole army upon the point of returning to France, "leaving the affairs of religion imperfect, took a resolution," says an old chronicler, "rather to go into Paradise; wherefore, having taken solemn leave of his friends, he charged alone, in the sight of every one, into the enemy's army, where he was presently cut to pieces."

The Japanese are the only people known to history among whom the established mode of suicide is taught to all youth as an indispensable part of their education. The *Hara-kiri* (literally, "happy dispatch") is a mode of disemboweling one's self, with which every Japanese of condition must be theoretically familiar; and great pains are taken to instruct boys in the proper way of performing it, the ceremonies which should accompany it, and the circumstances under which a well-bred man should feel himself obliged thus to destroy himself.

Singularly enough suicide has taken at different times the form of an epidemic. Gallius relates that the young women of Milesium once took it into their heads to put a period to their existence by throwing themselves into the wells. So far did the matter progress that the authorities were obliged to interfere. They put an immediate stop to this insane epidemic by the ingenious threat that every suicide should have her body exposed to the public gaze. Pliny relates that Tarquinius Priscus once put a stop to a similar state of things in his army by hanging up the bodies of suicides in trees and permitting the birds to devour their flesh. At Lyons, France, the women were once seized with a singular mania for throwing themselves down wells. The magistrates successfully imitated the example of their Milesian predecessors. When Malta was seized by the British, suicides became so frequent that the new Government was justly alarmed. It was only by treating the bodies of the self-murderers with the greatest indignities that a summary stop was put to the mania. Paris also has witnessed such a suicidal epidemic among its female population It was stopped by refusing the rites of burial to those who killed themselves. In 1793, during the Reign of Terror, 1300 suicides occurred in Versailles alone.

During the best half of the last century suicide became alarmingly frequent in England and France. This was the legitimate consequence of the extraordinary degeneracy of public and private morals in those countries. Gaming, drinking, and their kindred vices were practiced to excess; fortunes were nightly lost and gained at the card-tables. Mercier, writing in 1782, says that Paris, on account of the difficulties of getting a living, the gambling excesses, and the vast number of lotteries, had more suicides than any other city in the world. He adds naïvely that "at London it is the rich who kill themselves, because rich Englishmen are the most capricious of mortals, and consequently feel the greatest ennui." Various incidents, indeed, bore him out in his odd statement. One of Dr. Darwin's patients complained to him that "a ride out in the morning, and a warm parlor and a pack of cards in the evening comprised all that life affords," and not caring to endure such monotony longer, after fifty years' trial of it, he cut his throat. One Briton blew out his brains because he suffered from dyspepsia; another, for cause unknown, killed himself by rolling down the great Pyramid. Winslow relates that a Greenwich pensioner stabbed himself with his spectacles, sharpened for the purpose, because his allowance of grog had been stopped for some minor misdemeanor. A British apothecary blew out his brains, leaving to the world this legacy: "When a man knows not how to please his mistress, he ought to know how to die!" Jeremiah Clarke, a man in comfortable circumstances, walking out at evening into the country suddenly determined on suicide. Climbing over a fence to accomplish his purpose in a sheltered spot, he found himself in presence of a pond and some trees. Unable to decide between the two modes of death thus suggested, he finally tossed up a penny, which, coming down, struck upon its edge in the stiff mud, and "told no tale." Hereupon Mr. Clarke returned to his town lodgings and shot himself. Miss Frances Braddock, a young lady of nineteen years, wealthy, beautiful, and witty, but immoderately fond of play, gambled away her entire fortune in a year; and being at Bath, in 1731, was found one morning in her room hanging by a gold and silver girdle to a closet door. Her fate excited commiseration among all who knew her, except a near relative, who, when he heard of it, exclaimed, "Then she has tied herself up from play!"

So common did self-murder become, that the author of the *Connoisseur* declared his intention to make up a yearly list of British suicides, and proposed to distribute blanks among his friends in various parts, to be filled up from time to time. His blanks furnished the following supposititious causes, wherein we find a fair setting

* Holwell on the Shastah.

forth of the leading vices and extravagances of the day. He supposes deaths from

Newmarket races.	Fortune-hunting.
Electioneering.	Lord Bolingbroke, etc.
Lotteries.	The Robin Hood Society.
Gambling.	An equipage.
French wines, cooks, etc.	The dog-kennel.
Chinese temples.	Covent Garden.
A town-house.	Plays, operas, concerts, masks, etc.
A country-house.	Keeping the best company.
Tour through France, Italy, etc.	

But Frenchmen are no less ridiculous than Britons in the cause and manner of their self-inflicted deaths. Chenier killed himself by thrusting a key down his throat; and he has found a woman to imitate him. One of Rousseau's friends advocated suicide all his life, and having lived to the age of eighty, drowned himself in the Lake of Geneva. A French woman killed herself by swallowing broken glass—a frightful death. That not inconsiderable portion of Paris at present suicidally inclined, is divided between jumping off bridges and monuments (which have to be guarded by police to prevent such vile uses) and asphyxiation by charcoal fumes. The latter is decidedly the most popular mode with loving couples bent on death, from the fact that it occasions little physical suffering, admits of caresses and conversation during the closing moments of life, and gratifies a post-mortem vanity by not disfiguring the body.

The modern statistics of suicide present some singular facts. In a catalogue of suicides in London between 1770 and 1830, of the total of 7190 cases, 4337 were males and 2853 females; 1416 are attributed to poverty, 605 to reverse of fortune, and 1252 to domestic grief. But the catalogue is of little value to show causes, no less than 1389 males and 337 females being set down to "unknown." Fewer females commit suicide than males. In Berlin there were five males to one female; in Paris two to one; in Geneva four to one. The woman has evidently more of that species of courage denominated fortitude than man. Towns are more prolific of suicides than the country by fourteen to one. According to Professor Balbi's tables, the proportion of suicides to the population is in Copenhagen, 1 in 1000; in Paris, 1 in 2040; in Berlin, 1 in 2941; in London, 1 in 5000; in New York, 1 in 7797; in Boston, 1 in 12,500; in Baltimore, 1 in 13,656; in Philadelphia, 1 in 15,875. In the whole of France it is as 1 in 20,740; in Prussia, 1 in 14,404; in Austria, 1 in 20,900; and in European Russia, 1 in 49,182. This proves that the chief cities in even a thickly-populated country furnish by far the greater number of suicides.

It has been long thought that the gloomy weather of the later months of autumn conduces to suicide, and dull November has been called the month wherein Englishmen do most affect their death. But the table of M. Villeneuve, extending over seven years, proves this to be an error. His results were:

Spring	997	Winter	648
Summer	933	Autumn	627

Also, by other tables, it is proved that the maximum number of suicides in London, Hamburg, Copenhagen, and Rouen, occur in June and July, and the minimum number in October and November.

Curiosity has impelled some men to suicide. A case in point is furnished by a Polish youth who killed himself in New York some years ago, and left a poetic apology for his act, which, freely rendered, reads:

"Here lies a skeptic who was always doubting,
The proofs even of a God above him scouting;
To his own consciousness he made resistance,
And was uncertain of his own existence;
So, tired of doubt and darkness altogether,
Taking advantage of this genial weather,
He seeks in haste the other world's abyss,
To *learn* what mortals may *believe* in this!"

Of modern means for suicide the list of Professor Casper, of Berlin, including five hundred cases, gives a fair *résumé*. He states that 234 died by hanging, 163 by shooting, 60 by drowning (the summer season is the favorite for a watery death), 17 by cutting the throat, 20 by stabbing, 10 by poison, and 2 by opening an artery.

He attempts to give, also, the causes which moved these five hundred to the fatal deed. But he is obliged to put "unknown" to no less than 282 of the total. Of the balance he states 61 as dying from mental alienation, 54 from drunkenness and dissipation, 32 from dread of punishment, 18 from debts and domestic troubles, 14 from offended honor, 12 from painful diseases, 12 from love, 11 from matrimonial strife, 1 from religious excitement, and 3 from simple disgust of life, without especial moving cause.

We close our gathering with a word from Dr. Johnson. Boswell relates that he "supposed a case" to the Doctor: "If a man is absolutely sure that if he lives a few days longer he shall be detected in a fraud, the consequence of which will be utter disgrace and expulsion from society," whether, in such case, he would not be justified in killing himself? To which the Ursa Major of Literature: "Sir, let him go abroad to a distant country; let him go to some place where he is *not* known; don't let him go to the devil, where he *is* known."

THE NEST OF NIGHTINGALES.

THE chateau was surrounded by a beautiful park.

This park contained birds of every species: nightingales, blackbirds, and wrens made their assignations in the park.

In the spring time, such warblings were never heard. Every leaf concealed a nest, every tree was an orchestra. All the little plumed musicians struggled to excel each other. Some chirped, others cooed. This one executed trills and sparkling cadences; that sent forth clouds of *fioritures* with which he embroidered his theme. Actual musicians could not have done better.

But there were in the chateau two beautiful

cousins, who both sang better than all the birds in the park; one was called Fleurette and the other Isabeau. Both were handsome, attractive, and charming in every respect, and on Sundays, when they wore their fine clothes, one would have taken them to be angels, if their shoulders had not betrayed them—they wanted nothing but the wings. When they sang, their uncle, the old Lord Maulevrier, would sometimes hold their hands, lest they should take it into their heads to fly away.

I leave you to imagine what lances were broken, and tilts run in honor of Fleurette and Isabeau. The fame of their beauty and talent had circled through Europe, yet it did not make them any prouder; they lived in seclusion, seeing scarcely any one besides the little page, Valentine, a beautiful child with fair hair, and Lord Maulevrier, an old white-headed man, furrowed and enfeebled with having borne for sixty years the harness of a warrior.

They spent their time in flinging seeds to the little birds, in saying their prayers, but principally in studying the works of the masters, and practicing together some madrigal, hymn, or rustic ballad; they also had flowers that they themselves watered and cared for. Their life glided on in those sweet and poetic occupations of youth; they shrank into the shade, and held themselves aloof from the eyes of the world; yet the world was busied about them. Neither nightingale nor rose can conceal themselves; their song and their perfume will always betray them. Our two cousins were at the same time two nightingales and two roses.

Dukes and princes came to ask them in marriage. The Emperor of Trebizond and the Sultan of Egypt sent embassadors to the Lord Maulevrier to propose an alliance. The two cousins determined to remain maidens, and would not listen to the embassadors. Perhaps they felt, by some secret instinct, that their mission here below was to be maidens and sing, and that they would degrade themselves by doing any thing else.

They had grown up from infancy in this way. Their chamber window opened on the park, and they had been lulled to sleep by the song of the birds. They were scarce able to walk when old Blondin, the old lord's minstrel, placed their little hands on the ivory notes of a virginal; they had no other plaything, and they knew how to sing before they knew how to speak. They sang as other people breathe—it was natural to them.

This education had a singular influence on their character. Their harmonious infancy had separated them from the infancy of turbulence and noise. They had never uttered a sharp cry or a discordant complaint; they had wept in time, and sighed in concord. The musical sentiment, developed in them at the expense of the others, rendered them little sensitive to all that was not music. They floated along on melodious billows, and recognized the exterior world only by its sounds. They comprehended perfectly the rustling of the foliage, the murmuring of waters, the tingling of the clock, the sighing of the wind in the chimney, the humming of the mill-wheel, the falling of the raindrops on the vibrating panes; in short, all the interior and exterior harmonies. But I must acknowledge that they did not experience a profound enthusiasm at the sight of a sunset, and they were as little fit to appreciate a painting as if their beautiful blue and black eyes had been covered with a thick film. They had the musical passion; in their dreams they forgot to eat and to drink; they loved nothing else in this wide world. Stay! They did love something else; they loved Valentine and their flowers; Valentine, because he resembled the roses; the roses, because they resembled Valentine. But all this love was a secondary affection. It is true that Valentine was only thirteen. Their greatest delight was to sing at their window in the evening the music which they had composed during the day.

The most celebrated masters came from afar to hear and compete with them. They had not listened to more than a few bars when they broke their instruments, tore up their compositions, and avowed themselves vanquished. In truth, it was such melodious and delightful music that the heavenly cherubim came to the window with the other musicians, and learned it by heart, in order that they might sing it to God.

One evening in May the two cousins sang a hymn for two voices. Never was an exquisite theme more exquisitely worked out. A nightingale of the park, perched upon a rose-bush, had listened attentively. When they had finished, he approached the window and said to them, in his nightingale language, "I wish to have a trial of skill with you."

The two cousins replied that they desired nothing better, and that he should commence.

The nightingale began. He was a master nightingale. His little throat swelled, his wings fluttered, all his body trembled; there were roulades that seemed never-ending, arpeggios, chromatic scales. He soared, he sank, he spun out the notes like threads, he rounded his cadences with a hopeless purity; one would have said that his voice, like his body, had wings. He ceased, certain of having carried off the victory.

The two cousins, in their turn, began to sing. They surpassed themselves. The song of the nightingale seemed, near theirs, to be the chattering of a sparrow.

The winged virtuoso made a last effort; he sang a romance of love, then executing a brilliant flourish, he crowned it with a plume of high notes, vibrating and piercing, and far beyond the compass of the human voice.

The two cousins, not in the least alarmed by this wonderful performance, turned over a leaf in their music-book, and replied to the nightingale in such a style that Saint Cecilia, who listened from the cope of heaven, became pale

with jealousy, and let her *contrabasso* fall upon the earth.

The nightingale tried to sing once more, but this struggle had entirely crushed him. His breath was exhausted, his plumes stood on end, his eyes closed in spite of himself; he was about to die.

"You sing better than I do," said he to the two cousins, "and the proud desire to surpass you has cost me my life. One thing I ask. I have a nest; in this nest there are three little ones; it is in the third eglantine in the great avenue, on the brink of the lake; send for them, then, nourish them, and teach them to sing like yourselves since I am about to die."

Having said this, the nightingale died. The two cousins wept much, for he had sung so well. They called Valentine, the little page with the fair hair, and told him where the nest was. Valentine, who was a sharp-witted little rascal, easily found the place; he put the nest in his bosom, and brought it home without any trouble. Fleurette and Isabeau, leaning on the balcony, waited for him with impatience. Valentine soon arrived, holding the nest in his hands. The three little ones stretched out their necks and opened their great bills. The young girls pitied these little orphans, and gave each in his turn a beakful of food. When they had grown larger, the cousins commenced their musical education, in accordance with their promise to the conquered nightingale.

It was wonderful to see how tame they became, and how well they sang. They flew about the room, perching now on Isabeau's head, and now on Fleurette's shoulder. They alighted before the music-book, and, in truth, one might have said that they knew how to decipher the notes, they peered at the black and white keys with such an air of intelligence. They had learned all Fleurette's and Isabeau's airs, and had begun to improvise very pretty ones of their own.

The two cousins lived more and more amidst this solitude, and, in the evening, one might hear supernatural melodies streaming from their chamber. The nightingales, now instructed perfectly, took part in the concert, and sang nearly as well as their mistresses, who themselves had made great progress.

Their voices assumed each day a singular brilliancy, and vibrated, with a metallic and crystalline sound, beyond the register of the natural voice. The young girls grew visibly thin; their blooming color faded; they became as pale as agate, and nearly as transparent. The old Lord Maulevrier endeavored to prevent their singing, but he did not succeed.

As soon as they had sung a few bars a small red spot appeared upon their cheeks, growing larger until they had ended; then the spot disappeared, but a cold sweat rolled down their skins, and their lips quivered as if in a fever.

Still their singing was more beautiful than ever. It did not seem of this world, and, on hearing so powerful and sonorous a song issuing from those frail girls, it was not difficult to foresee the time when the music would break the instrument.

They knew this themselves, and practiced on their virginal, which they had before abandoned for singing. But one night the window was open, the birds warbled in the park, the breeze sighed musically; there was so much harmony in the air that they could not resist the temptation of executing a duet which they had that evening composed.

It was the song of the swan; a wondrous song, moist with tears, mounting to the most inaccessible peaks of the scale, and descending, on ladders of notes, to the profoundest depths. It was something sparkling and inconceivable; a deluge of trills, a rain kindling with chromatic lights, a musical fire-work impossible to describe. Meanwhile the little red spot grew larger and larger, till it covered nearly all their cheeks. The three nightingales watched and listened with singular anxiety. They shook their wings, they went and came, and could not remain still for a moment. At last the singers came to the last phrase of their song. Their voices became so strangely sonorous that it was easy to know that it was no longer living beings who were singing. The nightingales had flown away. The two cousins were dead; their souls had departed with the last note. The nightingales soared straight to heaven, bearing this wondrous song to God, who admitted them to Paradise in order that they might sing there the music of the two cousins.

In later years God made of the three nightingales the souls of Palestrina, Cimarosa, and the Chevalier Gluck.

MR. SHARPLY AGAIN.

MR. SHARPLY begs leave to present his compliments once more to the readers of *Harper's Magazine*.

Mr. Sharply is accused of being a grumbler: the accusation is a just one. The Sharplys are all grumblers. Sometimes Mr. Sharply grumbles for good cause; sometimes without cause—at least, without apparent cause.

Mr. Sharply is related to the Softlys—just as sour, lowering days are related to those of sunshine. Yet cloudy days have their uses. I think the Sharplys have theirs.

I am perfectly aware that the Softlys have more friends. Every body welcomes the Softlys. They say such kind, dear things of us; they have such pleasant voices; they flatter us so unconsciously!

But let us consider a moment if, with too much of the Softlys, we are not in danger of becoming soft and pulpy ourselves? I fear we are; nay, I am confident we are.

If you doubt it, try it with your parson. A good old gentleman, I dare say; full of the pleasantest humors; preaching sensible sermons, and not too long ones; who doesn't quote too often from Dr. South or from Robert Hall (in fact,

you wish he quoted more); a considerate man, who chucks your baby under the chin, and, when he dines with you, asks no questions about the pudding-sauce (flavored with rum).

What, now, if all the old ladies of your parish insist upon making a saint of him; and cram him with their praises; and pull out their pocket-handkerchiefs at all the tender parts of his sermon; and borrow his manuscript; and send him all manner of pen-wipers, in the shape of hearts and crosses; and slippers worked over with some good legend—what becomes of him, I want to know? Doesn't he grow pulpy, and forget his soberest duties, and perhaps buy a frizzled wig? Isn't there an end of all the sturdy, outspoken, manly truth that was ever in him?

What, now, if some cross-grained vestryman or deacon, whose name is Sharply, should blurt the whole story to him, and put him to his pluck; isn't our brother Sharply doing as much good, in his way, as ever a biting, driving storm does after long days of sunshine?

Then, again, there are your young fellows who take airs upon themselves, with long surfeit of kind words only, and become testy and intolerable. There is Young America—an exceedingly bright lad, whom we love as we love our own brother—has been under the education of the Softlys (and their kinswomen, the Boastlys) for a long, long time.

What is the result of it?

Young America, from being a bright lad, full of promise (for whom I, Stephen Sharply, always bought a paper of sugar-plums), has become one of the most audacious, and reckless, and braggart young scoundrels that I encounter any where! I can't help saying, even now, that he has a good face, and there are good parts to him; but, bless me! when he blurts out to me his own consequence, and insists that I don't praise him enough; that I am an old fogy; that I should do nothing but learn to chant hallelujahs to him; why, then, Stephen Sharply says: "Hark ye, Sir! this world is a pretty wide one, and there are old heads in it, and work to be done in it, and bread-corn to be grown, and quagmires to be drained; and serious, homely folk, who could be doing better things than to be eternally hymning your praises!"

Whereupon the arrogant young scape-grace turns on his heel, and says, "Sharply be d—!" (It would be an oath if I wrote it down.)

That is the way in which the Sharplys are treated nowadays. Yet it does not disturb them. My own impression is, that a little occasional abuse rather quickens the flow of the Sharply blood; making it, so to speak, discursive and appetizing.

It is all very well to have a good opinion of one's self; nay, it is in many respects an excellent thing; and I have known young gentlemen who, by force of it alone, have risen to eminence, in small towns. Yet it shouldn't be insisted on too much, and in all places. You may be a great man—exceedingly great; but there is room for you. Small people won't be crowded any the more by your telling us how large you are. Nay, we shall begin to suspect that you are puffing out your stomach and your cheeks with wind, to cheat us.

A puncture from some Sharply may ease you of this flatulence, and do you good.

But the Sharplys, if they be only honest, have more considerable work in hand than to be occupying themselves with cases of individual conceit and flatulency; except in instances of unusual bloat, diseases of this sort are much better given up to home cure.

I, Stephen Sharply, sometimes travel—at times by railway, and at times by ship. About two years since I had occasion to take a trip upon the Erie Road, and gave a story of it afterward, grumbling, of course—the Sharplys are all grumblers.

But yet, bating one or two imaginative persons who were introduced to give color to the story, it was both honest and true. It was at the time of the great strike among the Erie engineers; and there was consequent delay, and breakages, and all manner of vexations. Now, a man can bear vexations when he is prepared for them; but to be promised, by a score of brilliant placards in red-and-gold, that he is to be "put through" a given distance, upon an easy "broad gauge," in some sixteen hours at the outside, and then, in way of fulfillment, to be shot backward and forward, on a December night—to be toasted and chilled, and starved and stopped—and, finally, to be "put through" in thirty-six hours in place of the promised sixteen, is annoying.

At least the Sharplys think so; and what they think they say.

And yet it is a great road—a magnificent enterprise; how many millions shall we say, at this date?

Shall any Sharply dare to tell the truth about his unfortunate winter's trip upon it? Isn't he in the pay of some rival road? Isn't he some black-mail carrier? Can it be possible that any body (except the stock-holders) should grumble about the management of a great enterprise? Can any body talk about delay upon a road whose President is in the receipt of twenty-five thousand a year (I don't mean delay in payment of coupons, but delay of travel)?

As if a professed grumbler (all the Sharplys are) shouldn't grumble for the love of it!

And what an absurd notion it is, to be sure, that we must be always taking off our hats to "great enterprises," whether in way of newspapers, politicians, hotels, steamships, or railways; and saying, "By Jove, my dear fellows, you do these things in tip-top style!"

Suppose, the other day, on the Central, when the bridge broke with a train or two, that Stephen Sharply (being passenger) should have crawled out from the *débris* with a broken arm, and a cut in the head, and a few teeth gone; and, meeting the gentlemanly and attentive President and Superintendent, who had come down by express to look after the rotten timbers—suppose, I say,

that I should have said, "Really, my dear Sirs, this is a magnificent enterprise of yours—quite so! it's unfortunate—the rotten timbers, you know—but, I beg your pardon [spits out a few more teeth], bridges are, after all, not of much consequence!"

Not that the bridges on the Central really were rotten. Who believes that? Who says it, if they believe it? My opinion is that the word would be actionable; my opinion, therefore, is that the bridge was probably sound—possibly perfectly sound—fully sufficient for a good deal of ordinary stress; and did, in fact, prove itself so, until this unfortunate train came upon it. I have no doubt the same can be said of every bridge upon the road.

But what right has Stephen Sharply to talk about railway bridges at all; or about steam-boilers; or about Ohio whisky?

May he not possibly be injuring somebody's business? Is it conceivable that sharp things (supposing he says them) should not cut somewhere, and cuts may do an injury; therefore, all the Sharplys should become Softlys—isn't this a pretty bit of logic?

The other day—I can't say how long ago—a ship called the *Arabia*, or the *Persia*, ran into another ship called the *Europa*. What do we hear about it? Nothing from the people on the *Europa*, who only know that they did their best, in seaman-like fashion, to keep out of the way, and failed. From the *Arabia* we have a letter, signed by all the Softlys on board, which goes on to say that they have a charming captain and mate, who showed wonderful presence of mind, and "behaved admirably under trying circumstances;" with a few other such banalities which, I believe, are kept in type at the leading newspaper offices.

But we have another letter, with more life and blood in it, from the Sharplys of the ship, who say there was confusion of command, and most palpable bad seamanship.

Of course the Sharplys must have been bribed to do this sort of thing, else why grumble?—unless, indeed, they were run ashore, or sunk; and, even then, could it not be proven that the enterprise was a magnificent one, and Mr. Cunard a gentlemanly and attentive man?

Gentlemanly and attentive! What grand service these words are brought to accomplish in the Softly rhetoric! Does a conductor wear diamond shirt-pin, and call for tickets without impudence? Mr. Softly says, How gentlemanly and attentive! Does a ship-master carve your dinner of salt junk without retaining all the best, and bring you safe to land? Mr. Softly says, How gentlemanly and attentive! and perhaps clubs with his friends to present a gold-washed speaking-trumpet.

And does Mr. Sharply grumble at this? Naturally, he grumbles; and here, reasonably. What need to flatter, and give testimonials for simple performance of duty? Is straightforward performance of duty so rare? Are the Softlys so important that their security and comfort must be the signal for complimentary ovations? If we burn out all the blue lights and the rockets in plain sailing, what shall we do when we want to signal in earnest?

Again: a great steamer, of a great commodore, very dashing in all her appointments, makes brilliant passages—for speed—across the Atlantic. Suddenly an aggrieved passenger, having no other redress, and being kindly disposed to those who may travel in future, represents that the ship was overcrowded; that attendance was bad and scanty; that the fare was even worse; and that upon nearing the docks the confusion was something frightful, and in no measure controlled, or even struggled against, by the proper officers of the ship.

Whereupon the captain, being expert penman himself, or employing some lawyer friend to draft his reply, represents that the grumbler is some designing person in the interest of a rival line. He tells us that all the odium of the attack is due to the nationality of the writer; and whips out the fault-finder with a splendid splurge about the American eagle.

The grumbler, however, proves not only an honest fellow, but an obstinate one. He courteously renews the charges, with affidavits of some half dozen trust-worthy and well-known persons, who subscribe fully to his statements. And the gallant captain does not again appear—except upon his ship's deck, where, it is to be hoped, he pays a more wholesome regard than before to the quiet and the comforts of his passengers.

Mr. Sharply takes pleasure in recalling the circumstances to mind—not in furtherance of any national prejudice, but in the interest of the traveling public.

Mr. Sharply believes that he entertains a proper degree of respect and awe for magnificent enterprises and magnificent persons; but he does not believe that any degree of magnificence will atone for lack of humanity or kindliness; least of all does he believe that an enterprise which is dependent upon public patronage for its support should presume upon its established power or its wealth to ignore the rights or the comforts of individuals.

Great corporations are our republican tyrants; and it is a misfortune they can carry off so many sharp arrows without ever flinching or trembling.

Thus: look for a moment at that great Gessler of a railway which engrosses all the eastern travel from the metropolis; and which has been distinguished in its time for the most magnificent bit of official swindling and the most deplorable catastrophe of which the American people cherish any record.

How many shafts have been shot at it by sufferers—sufferers in pocket, sufferers in limb, sufferers in comfort; and yet how bravely and coolly it bears itself! To be sure it paid somewhat roundly for that fearful butchery of Norwalk; indeed, one might think, from paucity of present dividends, that the affair was still in course of active liquidation; but what a superb contempt

for any complaint of grievance less than a broken head!

Mr. Quigley, going out with his family to look at country-seats in Rye, finds the cars all full. A benevolent gentleman gives way to Mrs. Quigley; but Mr. Quigley, who is a stout, plethoric man, suffers incontinently. Shall he complain? Has this Company, which undertakes to transport passengers, and seat them, a right to receive pay for no seat at all—a right, in short, to limit and prescribe their engagements with the public by their own inclination? Mr. Quigley, who is of the Softly stock, says, "Oh dear yes! perhaps so. I guess it's all right."

Mr. Sharply takes the liberty of saying that it's not all right. But who cares for Sharply? Isn't he a sour fellow, and a grumbler? Of course he is; I admit it. But yet I insist that grumblers have their uses; and you who worry and fret at his grumbling may be very sure that if he puts truth into his grumble people will listen and remember; and if he puts no truth in it people will find it out and refuse to listen. Yet even the croak of Mr. Raven helps our love and longing for Mistress Nightingale.

WANTED—ST. PATRICK.

I

WHEN Irish hills were fair and green,
And Irish fields were white with daisies,
And harvests, golden and serene,
Slept in the lazy summer hazes;
When bards went singing through the land
Their grand old songs of knightly story,
And hearts were found in every hand,
And all was peace and love and glory;
'Twas in those happy, happy days
When every peasant lived in clover,
And in the pleasant woodland ways
One never met the begging rover;
When all was honest, large, and true,
And naught was hollow or theatric—
'Twas in those days of golden hue
That Erin knew the great Saint Patrick.

II.

He came among the rustics rude
With shining robes and splendid crozier,
And swayed the listening multitude
As breezes sway the beds of osier.
He preached the love of Man for Man,
And moved the unlettered Celt with wonder,
'Till through the simple crowd there ran
A murmur like repeated thunder.
He preached the grand Incarnate Word,
By rock and ruin, hill and hollow,
'Till warring princes dropped the sword
And left the fields of blood to follow.
For never yet did bardic song,
Though graced with harp and poet's diction,
With such strange charm enchain the throng
As that sad tale of Crucifixion.

III.

Though fair the isle and brave the men,
Yet still a blight the land infested:
Green vipers darted through each glen,
And snakes within the woodlands nested;
And 'mid the banks where violets blew,
And on the slopes where bloomed the primrose,
Lurked spotted toads of loathsome hue,
And coiling, poisonous serpents grim rose.
Saint Patrick said: "The reptile race
Are types of human degradation;
From other ills I've cleansed the place,
And now of these I'll rid the nation."
He waved his crozier o'er his head,
And lo! each venomed thing took motion,
And toads and snakes and vipers fled
In terror to the circling ocean.

IV.

Why is Saint Patrick dead? or why
Does he not seek this soil to aid us?
To wave his mystic crook on high,
And rout the vermin that degrade us?
Our land is fertile, broad, and fair,
And should be fairer yet and broader;
But noxious reptiles taint the air,
And poison peace and law and order.
For Murder stalks along each street,
And Theft goes lurking through our alleys—
What reptiles worse does traveler meet
On India's hills, in Java's valleys?
And when we see this gambling host,
That 'mongst us practice this and that trick,
One knows not which would serve us most—
The Goddess Justice or Saint Patrick!

THE VIRGINIANS.

BY W. M. THACKERAY.

CHAPTER LXI.

IN WHICH THE PRINCE MARCHES UP THE HILL AND DOWN AGAIN.

WE understand the respectful indignation of all loyal Britons when they come to read of Mr. George Warrington's conduct toward a gallant and gracious Prince, the beloved son of the best of monarchs, and the Captain-General

of the British army. What an inestimable favor has not the young man slighted! What a chance of promotion had he not thrown away! Will Esmond, whose language was always rich in blasphemies, employed his very strongest curses in speaking of his cousin's behavior, and expressed his delight that the confounded young Mohock was cutting his own throat. Cousin Castlewood said that a savage gentleman had a right to scalp himself if he liked: or perhaps, he added charitably, our cousin Mr. Warrington heard enough of the war-whoop in Braddock's affair, and has no more stomach for fighting. Mr. Will rejoiced that the younger brother had gone to the deuce, and he rejoiced to think that the elder was following him. The first time he met the fellow, Will said, he should take care to let Mr. George know what he thought of him.

"If you intend to insult George, at least you had best take care that his brother Harry is out of hearing!" cried Lady Maria—on which we may fancy more curses uttered by Mr. Will, with regard to his twin kinsfolk.

"Ta, ta, ta!" says my lord. "No more of this squabbling! We can't be all warriors in the family!"

"I never heard your lordship laid claim to be one!" says Maria.

"Never, my dear; quite the contrary! Will is our champion, and one is quite enough in the house. So I dare say with the two Mohocks; George is the student, and Harry is the fighting man. When you intended to quarrel, Will, what a pity it was you had not George instead of t'other, to your hand!"

"Your lordship's hand is famous—at picquet," says Will's mother.

"It *is* a pretty one!" says my lord, surveying his fingers, with a simper. "My Lord Hervey's glove and mine were of a size. Yes, my hand, as you say, is more fitted for cards than for war. Yours, my Lady Castlewood, is pretty dexterous too. How I bless the day when you bestowed it on my lamented father!" In this play of sarcasm, as in some other games of skill, his lordship was not sorry to engage, having a cool head, and being able to beat his family all round.

Madame de Bernstein, when she heard of Mr. Warrington's *bévue*, was exceedingly angry, stormed, and scolded her immediate household; and would have scolded George, but she was growing old, and had not the courage of her early days. Moreover, she was a little afraid of her nephew, and respectful in her behavior to him. "You will never make your fortune at Court, nephew!" she groaned, when, soon after his discomfiture, the young gentleman went to wait upon her.

"It was never my wish, madam!" said Mr. George, in a very stately manner.

"Your wish was to help Harry? You might hereafter have been of service to your brother, had you accepted the Duke's offer. Princes do not love to have their favors refused, and I don't wonder that his Royal Highness was offended."

"General Lambert said the same thing," George confessed, turning rather red; "and I see now that I was wrong. But you must please remember that I had never seen a Court before, and I suppose I am scarce likely to shine in one."

"I think possibly not, my good nephew," says the aunt, taking snuff.

"And what then?" asked George. "I never had ambition for that kind of glory, and can make myself quite easy without it. When his Royal Highness spoke to me—most kindly, as I own—my thought was, I shall make a very bad soldier, and my brother would be a very good one. He has a hundred good qualities for the profession, in which I am deficient; and would have served a commanding officer far better than I ever could. Say the Duke is in battle, and his horse is shot, as my poor chief's was at home, would he not be better for a beast that had courage and strength to bear him any where, than with one that could not carry his weight?"

"*Au fait.* His Royal Highness's charger must be a strong one, my dear!" says the old lady.

"*Expende Hannibalem*," mutters George, with a shrug. "*Our* Hannibal weighs no trifle."

"I don't quite follow you, Sir, and your Hannibal," the Baroness remarks.

"When Mr. Wolfe and Mr. Lambert remonstrated with me as you have done, madam," George rejoins, with a laugh, "I made this same defense which I am making to you. I said I offered to the Prince the best soldier in the family, and the two gentlemen allowed that my blunder at least had some excuse. Who knows but that they may set me right with his Royal Highness? The taste I have had of battles has shown me how little my genius inclines that way. We saw the Scotch play which every body is talking about t'other night. And when the hero, young Norval, said how he longed to follow to the field some warlike lord, I thought to myself, 'how like my Harry is to him, except that he doth not brag.' Harry is pining now for a red coat, and if we don't mind, will take the shilling. He has the map of Germany forever under his eyes, and follows the King of Prussia every where. He is not afraid of men or gods. As for me, I love my books and quiet best, and to read about battles in Homer or Lucan."

"Then what made a soldier of you at all, my dear? And why did you not send Harry with Mr. Braddock, instead of going yourself?" asked Madame de Bernstein.

"My mother loved her younger son the best," said George, darkly. "Besides, with the enemy invading our country, it was my duty, as the head of our family, to go on the campaign. Had I been a Scotchman twelve years ago, I should have been a—"

"Hush, Sir! or I shall be more angry than ever!" said the old lady, with a perfectly pleased face.

George's explanation might thus appease Madame de Bernstein, an old woman whose princi-

ples, we fear, were but loose: but to the loyal heart of Sir Miles Warrington and his lady, the young man's conduct gave a severe blow indeed! "I should have thought," her ladyship said, "from my sister Esmond Warrington's letter, that my brother's widow was a woman of good sense and judgment, and that she had educated her sons in a becoming manner. But what, Sir Miles, what my dear Thomas Claypool, can we think of an education which has resulted so lamentably for both these young men?"

"The elder seems to know a power of Latin, though, and speaks the French and the German too. I heard him with the Hanover Envoy, at the Baroness's rout," says Mr. Claypool. "The French he jabbered quite easy; and when he was at a loss for the High Dutch, he and the Envoy began in Latin, and talked away till all the room stared."

"It is not language but principles, Thomas Claypool!" exclaims the virtuous matron. "What must Mr. Warrington's principles be when he could reject an offer made him by his Prince? Can he speak the High Dutch? So much the more ought he to have accepted his Royal Highness's condescension, and made himself useful in the campaign! Look at our son, look at Miles!"

"Hold up thy head, Miley, my boy!" says Papa.

"I trust, Sir Miles, that as a member of the House of Commons, as an English gentleman, you will attend his Royal Highness's levee tomorrow, and say, if such an offer had been made to us for that child, we would have taken it, though our boy is but ten years of age."

"Faith, Miley, thou wouldst make a good little drummer or fifer!" says Papa. "Shouldst like to be a little soldier, Miley?"

"Any thing, Sir, any thing; a Warrington ought to be ready at any moment to have himself cut in pieces for his sovereign!" cries the matron, pointing to the boy; who, as soon as he comprehended his mother's proposal, protested against it by a loud roar, in the midst of which he was removed by Screwby. In obedience to the conjugal orders, Sir Miles went to his Royal Highness's levee the next day, and made a protest of his love and duty, which the Prince deigned to accept, saying:

"Nobody ever supposed that Sir Miles Warrington would ever refuse any place offered to him."

A compliment gracious indeed, and repeated every where by Lady Warrington, as showing how implicitly the august family on the throne could rely on the loyalty of the Warringtons.

Accordingly, when this worthy couple saw George, they received him with a ghastly commiseration, such us our dear relatives or friends will sometimes extend to us when we have done something fatal or clumsy in life; when we have come badly out of our lawsuit; when we enter the room just as the company has been abusing us; when our banker has broke; or we for our sad part have had to figure in the commercial columns of the London *Gazette*—when, in a word, we are guilty of some notorious fault, or blunder, or misfortune. Who does not know that face of pity? Whose dear relations have not so deplored him, not dead, but living? Not yours? Then, Sir, if you have never been in scrapes; if you have never sowed a handful of wild oats or two; if you have always been fortunate, and good, and careful, and butter has never melted in your mouth, and an imprudent word has never come out of it; if you have never sinned and repented, and been a fool and been sorry—then, Sir, you are a wiseacre who won't waste your time over an idle novel, and it is not *de te* that the fable is narrated at all.

Not that it was just on Sir Miles's part to turn upon George, and be angry with his nephew for refusing the offer of promotion made by his Royal Highness, for Sir Miles himself had agreed in George's view of pursuing quite other than a military career, and it was in respect to this plan of her son's that Madam Esmond had written from Virginia to Sir Miles Warrington. George had announced to her his intention of entering at the Temple, and qualifying himself for the magisterial and civil duties which, in the course of nature, he would be called to fulfill; nor could any one applaud his resolution more cordially than his uncle Sir Miles, who introduced George to a lawyer of reputation, under whose guidance we may fancy the young gentleman reading leisurely. Madam Esmond from home signified her approval of her son's course, fully agreeing with Sir Miles (to whom and his lady she begged to send her grateful remembrances) that the British Constitution was the envy of the world, and the proper object of every English gentleman's admiring study. The chief point to which George's mother objected was the notion that Mr. Warrington should have to sit down in the Temple dinner-hall, and cut at a shoulder of mutton, and drink small-beer out of tin pannikins, by the side of rough students who wore gowns like the parish-clerk. George's loyal younger brother shared too this repugnance. Any thing was good enough for *him*, Harry said; he was a younger son, and prepared to rough it; but George, in a gown, and dining in a mess with three nobody's sons off dirty pewter platters! Harry never could relish this condescension on his brother's part, or fancy George in his proper place at any except the high table; and was sorry that a plan Madam Esmond hinted at in her letters was not feasible—viz., that an application should be made to the Master of the Temple, who should be informed that Mr. George Warrington was a gentleman of most noble birth, and of great property in America, and ought only to sit *with the very best company* in the Hall. Rather to Harry's discomfiture, when he communicated his own and his mother's ideas to the gentlemen's new coffee-house friend Mr. Spencer, Mr. Spencer received the proposal with roars of laughter; and I can not learn, from the Warrington papers, that any application was

made to the Master of the Temple on this subject. Besides his literary and historical pursuits, which were those he most especially loved, Mr. Warrington studied the laws of his country, attended the courts at Westminster, where he heard a Henley, a Pratt, a Murray, and those other great famous schools of eloquence and patriotism, the two Houses of Parliament.

Gradually Mr. Warrington made acquaintance with some of the members of the House and the Bar; who, when they came to know him, spoke of him as a young gentleman of good parts and good breeding, and in terms so generally complimentary that his good uncle's heart relented toward him, and Dora and Flora began once more to smile upon him. This reconciliation dated from the time when his Royal Highness the Duke, after having been defeated by the French, in the affair of Hastenbeck, concluded the famous capitulation with the French which his Majesty George II. refused to ratify. His Royal Highness, as 'tis well known, flung up his commissions after this disgrace, laid down his commander's baton—which, it must be confessed, he had not wielded with much luck or dexterity—and never again appeared at the head of armies or in public life. The stout warrior would not allow a word of complaint against his father and sovereign to escape his lips; but, as he retired with his wounded honor, and as he would have no interest or authority more, nor any places to give, it may be supposed that Sir Miles Warrington's anger against his nephew diminished as his respect for his Royal Highness diminished.

As our two gentlemen were walking in St. James's Park one day with their friend Mr. Lambert, they met his Royal Highness in plain clothes, and without a star, and made profound bows to the Prince, who was pleased to stop and speak to them.

He asked Mr. Lambert how he liked my Lord Ligonier, his new chief at the Horse Guards, and the new duties there in which he was engaged? And, recognizing the young men, with that fidelity of memory for which his Royal race hath ever been remarkable, he said to Mr. Warrington,

"You did well, Sir, not to come with me when I asked you, in the spring."

"I was sorry then, Sir," Mr. Warrington said, making a very low reverence, "but I am more sorry now."

On which the Prince said, "Thank you, Sir," and, touching his hat, walked away. And the circumstances of this interview, and the discourse which passed at it, being related to Mrs. Esmond Warrington in a letter from her younger son, created so deep an impression in that lady's mind that she narrated the anecdote many hundreds of times, until all her friends and acquaintances knew and, perhaps, were tired of it.

Our gentlemen went through the Park, and so toward the Strand, where they had business; and Mr. Lambert, pointing to the lion on the top of the Earl of Northumberland's house at Charing Cross, says,

"Harry Warrington! your brother is like yonder lion!"

"Because he is as brave as one," says Harry.

"Because I respect virgins!" says George, laughing.

"Because you are a stupid lion. Because you turn your back on the East, and absolutely salute the setting sun. Why, child, what earthly good can you get by being civil to a man in hopeless dudgeon and disgrace? Your uncle will be more angry with you than ever—and so am I, Sir!" But Mr. Lambert was always laughing in his waggish way, and indeed he did not look the least angry.

CHAPTER LXII.

ARMA VIRUMQUE.

Indeed, if Harry Warrington had a passion for military pursuits and studies, there was enough of war stirring in Europe, and enough talk in all societies which he frequented in London, to excite and inflame him. Though our own gracious Prince of the House of Hanover had been beaten, the Protestant Hero, the King of Prussia, was filling the world with his glory, and winning those astonishing victories in which I deem it fortunate on my own account that my poor Harry took no part; for then his veracious biographer would have had to narrate battles the description whereof has been undertaken by another pen. I am glad, I say, that Harry Warrington was not at Rossbach on that famous Gunpowder Fête-day, on the 5th of November, in the year 1757; nor at that tremendous slaughtering-match of Leuthen, which the Prussian king played a month afterward; for these prodigious actions will presently be narrated in oth-

er volumes, which I and all the world are eager to behold. Would you have this history compete with yonder book? Could my jaunty, yellow park-phaeton run counter to that grim chariot of thundering war? Could my meek little jog-trot Pegasus meet the shock of yon steed of foaming bit and flaming nostril? Dear, kind reader (with whom I love to talk from time to time, stepping down from the stage where our figures are performing, attired in the habits and using the parlance of past ages)—my kind, patient reader! it is a mercy for both of us that Harry Warrington did not follow the King of the Borussians, as he was minded to do, for then I should have had to describe battles which Carlyle is going to paint; and I don't wish you should make odious comparisons between me and that master.

Harry Warrington not only did not join the King of the Borussians, but he pined and chafed at not going. He led a sulky, useless life, that is the fact. He dangled about the military coffee-houses. He did not care for reading any thing save a newspaper. His turn was not literary. He even thought novels were stupid; and as for the ladies crying their eyes out over Mr. Richardson, he could not imagine how they could be moved by any such nonsense. He used to laugh in a very hearty, jolly way, but a little late, and some time after the joke was over. Pray, why should all gentlemen have a literary turn? And do we like some of our friends the worse because they never turned a couplet in their lives? Ruined, perforce idle, dependent on his brother for supplies, if he read a book falling asleep over it, with no fitting work for his great strong hands to do—how lucky it is that he did not get into more trouble. Why, in the case of Achilles himself, when he was sent by his mamma to the court of King Whatd'ye-callem in order to be put out of harm's reach, what happened to him among a parcel of women with whom he was made to idle his life away? And how did Pyrrhus come into the world? A powerful, mettlesome young Achilles ought not to be leading-stringed by women too much; is out of his place dawdling by distaffs or handing coffee-cups; and when he is not fighting, depend on it, is likely to fall into much worse mischief.

Those soft-hearted women, the two elder ladies of the Lambert family, with whom he mainly consorted, had an untiring pity and kindness for Harry, such as women only—and only a few of those—can give. If a man is in grief, who cheers him; in trouble, who consoles him; in wrath, who soothes him; in joy, who makes him doubly happy; in prosperity, who rejoices; in disgrace, who backs him against the world, and dresses with gentle unguents and warm poultices the rankling wounds made by the stings and arrows of outrageous Fortune? Who but woman, if you please? You who are ill and sore from the buffets of Fate, have you one or two of these sweet physicians? Return thanks to the gods that they have left you so much of consolation. What gentleman is not more or less a Prometheus? Who has not his rock (ai, ai), his chain (ea, ea), and his liver in a deuce of a condition? But the sea-nymphs come—the gentle, the sympathizing; they kiss our writhing feet; they moisten our parched lips with their tears; they do their blessed best to console us Titans; *they* don't turn their backs upon us after our overthrow.

Now Theo and her mother were full of pity for Harry; but Hetty's heart was rather hard and seemingly savage toward him. She chafed that his position was not more glorious; she was angry that he was still dependent and idle. The whole world was in arms, and could he not carry a musket? It was harvest time, and hundreds of thousands of reapers were out with their flashing sickles; could he not use his, and cut down his sheaf or two of glory?

"Why, how savage the little thing is with him!" says Papa, after a scene in which, according to her word, Miss Hetty had been firing little shots into that quivering target which came and set itself up in Mrs. Lambert's drawing-room every day.

"Her conduct is perfectly abominable!" cries Mamma; "she deserves to be whipped, and sent to bed."

"Perhaps, Mother, it is because she likes him better than any of us do," says Theo, "and it is for his sake that Hetty is angry. If I were fond of—of some one, I should like to be able to admire and respect him always—to think every thing he did right—and my gentleman better than all the gentlemen in the world!"

"The truth is, my dear," answers Mrs. Lambert, "that your father is so much better than all the world, he has spoiled us. Did you ever see any one to compare with him?"

"Very few, indeed," owns Theo, with a blush.

"Very few. Who is so good-tempered?"

"I think nobody, Mamma," Theo acknowledges.

"Or so brave?"

"Why, I dare say Mr. Wolfe, or Harry, or Mr. George, are very brave."

"Or so learned and witty?"

"I am sure Mr. George seems very learned, and witty too, in his way," says Theo; "and his manners are very fine—you own they are. Madame de Bernstein says they are, and she hath seen the world. Indeed, Mr. George has a lofty way with him, which I don't see in other people; and, in reading books, I find he chooses the fine noble things always, and loves them in spite of all his satire. He certainly is of a satirical turn, but then he is only bitter against mean things and people. No gentleman hath a more tender heart, I am sure; and but yesterday, after he had been talking so bitterly as you said, I happened to look out of window, and saw him stop and treat a whole crowd of little children to apples at the stall at the corner. And the day before yesterday, when he was coming and brought me the Molière, he stopped and gave money to a beggar, and how charmingly, sure, he reads the

GEORGE'S FRIENDS.

French! I agree with him though about Tartuffe, though 'tis so wonderfully clever and lively, that a mere villain and hypocrite is a figure too mean to be made the chief of a great piece. Iago, Mr. George said, is near as great a villain; but then he is not the first character of the tragedy, which is Othello, with his noble weakness. But what fine ladies and gentlemen Molière represents—so Mr. George thinks—and—but oh, I don't dare to repeat the verses after *him*."

"But you know them by heart, my dear?" asks Mrs. Lambert.

And Theo replies, "Oh yes, Mamma! I know them by . . . . Nonsense!"

I here fancy osculations, palpitations, and exit Miss Theo, blushing like a rose. Why had she stopped in her sentence? Because Mamma was looking at her so oddly. And why was Mamma looking at her so oddly? And why had she looked after Mr. George, when he was going away, and looked for him when he was coming? Ah, and why do cheeks blush, and why do roses bloom? Old Time is still a-flying. Old spring and bud time; old summer and bloom time; old autumn and seed time; old winter time, when the cracking, shivering old tree-tops are bald or covered with snow.

A few minutes after George arrived Theo would come down stairs with a fluttering heart, maybe, and a sweet nosegay in her cheeks, just culled, as it were, fresh in his honor; and I suppose she must have been constantly at that window which commanded the street, and whence she could espy his generosity to the sweep, or his purchases from the apple-woman. But if it was Harry who knocked, she remained in her own apartment with her work or her books, sending her sister to receive the young gentleman, or her brothers when the elder was at home from college, or Doctor Crusius from the Chartreux gave the younger leave to go home. And what good eyes Theo must have had—and often in the evening, too—to note the difference between Harry's yellow hair and George's dark locks—and between their figures, though they were so like that people continually were mistaking one for the other brother. Now it is certain that Theo never mistook one or t'other; and that Hetty, for her part, was not in the least excited, or rude, or pert, when she found the black-haired gentleman in her mother's drawing-room.

Our friends could come when they liked to Mr. Lambert's house, and stay as long as they chose; and, one day, he of the golden locks was sitting on a couch there, in an attitude of more than ordinary idleness and despondency, when who should come down to him but Miss Hetty? I say it was a most curious thing (though the girls would have gone to the rack rather than own any collusion), that when Harry called, Hetty appeared; when George arrived, Theo somehow came; and so, according to the usual dispensation, it was Miss Lambert, junior, who now arrived to entertain the younger Virginian.

After usual ceremonies and compliments we may imagine that the lady says to the gentleman:

"And pray, Sir, what makes your honor look so glum this morning?"

"Ah, Hetty!" says he, "I have nothing else to do but to look glum. I remember when we were boys—and I a rare idle one, you may be sure—I would always be asking my tutor for a holiday, which I would pass very likely swinging on a gate, or making ducks and drakes over the pond, and those do-nothing days were always the most melancholy. What have I got to do now from morning till night?"

"Breakfast, walk—dinner, walk—tea, supper. I suppose; and a pipe of your Virginia," says Miss Hetty, tossing her head.

"I tell you what, when I went back with Charley to the Chartreux, t'other night, I had a mind to say to the master, 'Teach me, Sir. Here's a boy knows a deal more Latin and Greek at thirteen than I do, who am ten years older. I have nothing to do from morning till night, and I might as well go to my books again, and see if I can repair my idleness as a boy.' Why do you laugh, Hetty?"

"I laugh to fancy you at the head of a class, and called up by the master!" cries Hetty.

"I shouldn't be at the head of the class," Harry says, humbly. "George might be at the head of any class; but I am not a book-man, you see; and when I was young neglected myself, and was very idle. We would not let our tutors cane us much at home; but if we had, it might have done me good."

Hetty drubbed with her little foot, and looked at the young man sitting before her—strong, idle, melancholy.

"Upon my word it might do you good now!" she was minded to say. "What does Tom say about the caning at school? Does his account of it set you longing for it, pray?" she asked.

"His account of his school," Harry answered, simply, "makes me see that I have been idle when I ought to have worked, and that I have not a genius for books; and for what am I good? Only to spend my patrimony when I come abroad, or to lounge at coffee-houses or race-courses, or to gallop behind dogs when I am at home. I am good for nothing, I am."

"What, such a great, brave, strong fellow as you good for nothing?" cries Het. "I would not confess as much to any woman if I were *twice* as good for nothing!"

"What am I to do? I ask for leave to go into the army, and Madam Esmond does not answer me. 'Tis the only thing I am fit for. I have no money to buy. Having spent all my own, and so much of my brother's, I can not and won't ask for more. If my mother would but send me to the army, you know I would jump to go."

"Eh! A gentleman of spirit does not want a woman to buckle his sword on for him, or to clean his firelock! What was that our Papa told us of the young gentleman at court yesterday?—Sir John Armytage—"

"Sir John Armytage? I used to know him when I frequented White's and the club-houses—a fine, noble young gentleman, of a great estate in the North."

"And engaged to be married to a famous beauty, too—Miss Howe, my Lord Howe's sister—but *that*, I suppose, is not an obstacle to gentlemen?"

"An obstacle to what?" asks the gentleman.

"An obstacle to glory!" says Miss Hetty. "I think no woman of spirit would say 'Stay!' though she adored her lover ever so much, when his country said 'Go!' Sir John had volun-

teered for the expedition which is preparing, and being at court yesterday, his Majesty asked him when he would be ready to go? 'To-morrow, please your Majesty,' replies Sir John; and the King said that was a soldier's answer. My father himself is longing to go, though he has Mamma and all us brats at home. Oh dear, oh dear! Why wasn't I a man myself? Both my brothers are for the Church; but as for me, I know I should have made a famous little soldier!" And, so speaking, this young person strode about the room, wearing a most courageous military aspect, and looking as bold as Joan of Arc.

Harry beheld her with a tender admiration. "I think," says he, "I would hardly like to see a musket on that little shoulder, nor a wound on that pretty face, Hetty."

"Wounds! who fears wounds?" cries the little maid. "Muskets? If I could carry one, I would use it. You men fancy that we women are good for nothing but to make puddings or stitch samplers. Why wasn't I a man? I say. George was reading to us yesterday out of Tasso —look, here it is; and I thought the verses applied to me. See! Here is the book, with the mark in it where we left off."

"With the mark in it?" says Harry, dutifully.

"Yes! it is about a woman who is disappointed because—because her brother does not go to war; and she says of herself—

"'Alas! why did not Heaven these members frail
With lively force and vigor strengthen, so
That I this silken gown....'"

"Silken gown?" says downright Harry, with a look of inquiry.

"Well, Sir, I know 'tis but Calimanco; but so it is in the book—

"'..... this silken gown and slender vail
Might for a breast-plate and a helm forego;
Then should not heat, nor cold, nor rain, nor hail,
Nor storms that fall, nor blust'ring winds that blow,
Withhold me; but I would, both day and night,
In pitched field or private combat, fight....'

"Fight? Yes, that I would! Why are both my brothers to be parsons, I say? One of my Papa's children ought to be a soldier!"

Harry laughed a very gentle, kind laugh as he looked at her. He felt that he would not like much to hit such a tender little warrior as that.

"Why," says he, holding a finger out, "I think here is a finger nigh as big as your arm. How would you stand up before a great, strong man? I should like to see a man try and injure you, though; I should just like to see him! You little, delicate, tender creature! Do you suppose any scoundrel would dare to do any thing unkind to *you?*" And, excited by this flight of his imagination, Harry fell to walking up and down the room too, chafing at the idea of any rogue of a Frenchman daring to be rude to Miss Hester Lambert.

It was a belief in this silent courage of his which subjugated Hetty, and this quality which she supposed him to possess which caused her specially to admire him. Miss Hetty was no more bold, in reality, than Madam Erminia, whose speech she had been reading out of the book, and about whom Mr. Harry Warrington never heard one single word. He may have been in the room when brother George was reading his poetry out to the ladies, but his thoughts were busy with his own affairs, and he was entirely bewildered with your Clotildas and Erminias, and giants, and enchanters, and nonsense. No, Miss Hetty, I say and believe, had nothing of the virago in her composition; else, no doubt, she would have taken a fancy to a soft young fellow with a literary turn, or a genius for playing the flute, according to the laws of contrast and nature provided in those cases. And who has not heard how great, strong men have an affinity for frail, tender little women; how tender little women are attracted by great, honest, strong men; and how your burly heroes and champions of war are constantly hen-pecked? *If* Mr. Harry Warrington falls in love with a woman who is like Miss Lambert in disposition, and if he marries her—without being conjurors, I think we may all see what the end will be.

So, while Hetty was firing her little sarcasms into Harry, he for a while scarcely felt that they were stinging him, and let her shoot on without so much as taking the trouble to shake the little arrows out of his hide. Did she mean by her sneers and innuendoes to rouse him into action? He was too magnanimous to understand such small hints. Did she mean to shame him by saying that she, a weak woman, would don the casque and breast-plate? The simple fellow either melted at the idea of her being in danger, or at the notion of her fighting fell a-laughing.

"Pray what is the use of having a strong hand if you only use it to hold a skein of silk for my mother?" cries Miss Hester; "and what is the good of being ever so strong in a drawing-room? Nobody wants you to throw any body out of window, Harry! A strong man, indeed! I suppose there's a stronger at Bartholomew Fair. James Wolfe is not a strong man. He seems quite weakly and ill. When he was here last he was coughing the whole time, and as pale as if he had seen a ghost."

"I never could understand why a man should be frightened at a ghost," says Harry.

"Pray, have you seen one, Sir?" asks the pert young lady.

"No. I thought I did once at home—when we were boys; but it was only Nathan in his night-shirt; but I wasn't frightened when I thought he *was* a ghost. I believe there's no such things. Our nurses tell a pack of lies about 'em," says Harry, gravely. "George was a little frightened; but then he's—" Here he paused.

"Then George is what?" asked Hetty.

"George is different from me, that's all. Our mother's a bold woman as ever you saw, but she screams at seeing a mouse—always does—can't help it. It's her nature. So, you see, perhaps

my brother can't bear ghosts. I don't mind 'em."

"George always says, you would have made a better soldier than he."

"So I think I should, if I had been allowed to try. But he can do a thousand things better than me, or any body else in the world. Why didn't he let me volunteer on Braddock's expedition? I might have got knocked on the head, and then I should have been pretty much as useful as I am now, and then I shouldn't have ruined myself, and brought people to point at me and say that I had disgraced the name of Warrington. Why mayn't I go on this expedition, and volunteer like Sir John Armytage? Oh, Hetty! I'm a miserable fellow—that's what I am," and the miserable fellow paced the room at double quick time. "I wish I had never come to Europe," he groaned out.

"What a compliment to us! Thank you, Harry!" but presently, on an appealing look from the gentleman, she added, "Are you—are you thinking of going home?"

"And have all Virginia jeering at me! There's not a gentleman there that wouldn't, except one, and him my mother doesn't like. I should be ashamed to go home now, I think. You don't know my mother, Hetty. I ain't afraid of most things; but, somehow, I am of her. What shall I say to her, when she says, 'Harry, where's your patrimony?' 'Spent, Mother,' I shall have to say. 'What have you done with it?' 'Wasted it, Mother, and went to prison after.' 'Who took you out of prison?' 'Brother George, Ma'am, he took me out of prison; and now I'm come back, having done no good for myself, with no profession, no prospects, no nothing—only to look after negroes, and be scolded at home; or to go to sleep at sermons; or to play at cards, and drink, and fight cocks at the taverns about.' How can I look the gentlemen of the country in the face? I'm ashamed to go home in this way, I say. I must and will do something! What shall I do, Hetty? Ah! what shall I do?"

"Do? What did Mr. Wolfe do at Louisbourg? Ill as he was, and in love as we knew him to be, he didn't stop to be nursed by his mother, Harry, or to dawdle with his sweet-heart. He went on the King's service, and hath come back covered with honor. If there is to be another great campaign in America, Papa says he is sure of a great command."

"I wish he would take me with him, and that a ball would knock me on the head and finish me," groaned Harry. "You speak to me, Hetty, as though it were my fault that I am not in the army, when you know I would give—give, forsooth, what have I to give?—yes, my life to go on service!"

"Life, indeed!" says Miss Hetty, with a shrug of her shoulders.

"You don't seem to think that of much value, Hetty," remarked Harry, sadly. "No more it is—to any body; I'm a poor useless fellow. I'm not even free to throw it away as I would like, being under orders here and at home."

"Orders indeed! Why under orders?" cries Miss Hetty. "Aren't you tall enough, and old enough, to act for yourself, and must you have George for a master here, and your mother for a schoolmistress at home? If I were a man I would do something famous before I was two-and-twenty years old, that I would! I would have the world speak of me. I wouldn't dawdle at apron-strings. I wouldn't curse my fortune—I'd make it. I vow and declare I would!"

Now, for the first time, Harry began to wince at the words of his young lecturer.

"No negro on our estate is more a slave than I am, Hetty," he said, turning very red as he addressed her; "but then, Miss Lambert, we don't reproach the poor fellow for not being free. That isn't generous. At least, that isn't the way I understand honor. Perhaps with women it's different, or I may be wrong, and have no right to be hurt at a young girl telling me what my faults are. Perhaps my faults are not my faults—only my cursed luck. You have been talking ever so long about this gentleman volunteering, and that man winning glory, and cracking up their courage as if I had none of my own. I suppose, for the matter of that, I'm as well provided as other gentlemen. I don't brag; but I'm not afraid of Mr. Wolfe, nor of Sir John Armytage, nor of any body else that ever I saw. How can I buy a commission when I've spent my last shilling, or ask my brother for more who has already halved with me? A gentleman of my rank can't go a common soldier—else, by Jupiter, I would! And if a ball finished me I suppose Miss Hetty Lambert wouldn't be very sorry. It isn't kind, Hetty—I didn't think it of you."

"What is it I have said?" asks the young lady. "I have only said Sir John Armytage has volunteered, and Mr. Wolfe has covered himself with honor, and you begin to scold me! How can I help it if Mr. Wolfe is brave and famous? Is that any reason you should be angry, pray?"

"I didn't say angry," said Harry, gravely. "I said I was hurt."

"Oh, indeed! I thought such a little creature as I am couldn't hurt any body! I'm sure 'tis mighty complimentary to me to say that a young lady whose arm is no bigger than your little finger can hurt such a great strong man as you!"

"I scarce thought you would try, Hetty," the young man said. "You see, I'm not used to this kind of welcome in this house."

"What is it, my poor boy?" asks kind Mrs. Lambert, looking in at the door at this juncture, and finding the youth with a very woe-worn countenance.

"Oh, we have heard the story before, Mamma!" says Hetty, hurriedly. "Harry is making his old complaint of having nothing to do. And he is quite unhappy; and he is telling us so over and over again, that's all."

"So are you hungry over and over again, my dear! Is that a reason why your Papa and I

should leave off giving you dinner?" cries Mamma, with some emotion. "Will you stay and have ours, Harry? 'Tis just three o'clock!" Harry agreed to stay, after a few faint negations. "My husband dines abroad. We are but three women, so you will have a dull dinner," remarks Mrs. Lambert.

"We shall have a gentleman to enliven us, Mamma, I dare say!" says Madam Pert, and then looked in Mamma's face with that admirable gaze of blank innocence which Madam Pert knows how to assume when she has been specially and successfully wicked.

When the dinner appeared Miss Hetty came down stairs, and was exceedingly chatty, lively, and entertaining. Theo did not know that any little difference had occurred (such, alas, my Christian friends, will happen in the most charming families), did not know, I say, that any thing had happened until Hetty's uncommon sprightliness and gayety roused her suspicions. Hetty would start a dozen subjects of conversation—the King of Prussia, and the news from America; the last masquerade, and the highwayman shot near Barnet; and when her sister, admiring this volubility, inquired the reason of it, with her eyes—

"Oh, my dear, you need not nod and wink at me!" cries Hetty. "Mamma asked Harry on purpose to enliven us, and I am talking until he begins—just like the fiddles at the playhouse, you know, Hetty! First the fiddles. Then the play. Pray begin, Harry!"

"Hester!" cries Mamma.

"I merely asked Harry to entertain us. You said yourself, Mother, that we were only three women, and the dinner would be dull for a gentleman; unless, indeed, he chose to be very lively."

"I'm not that on most days—and, Heaven knows, on this day less than most," says poor Harry.

"Why on this day less than another? Tuesday is as good a day to be lively as Wednesday. The only day when we mustn't be lively is Sunday. Well, you know it is, Ma'am. We mustn't sing, nor dance, nor do any thing on Sunday."

And in this naughty way the young woman went on for the rest of the evening, and was complimented by her mother and sister when poor Harry took his leave. He was not ready of wit, and could not fling back the taunts which Hetty cast against him. Nay, had he been able to retort he would have been silent. He was too generous to engage in that small war, and chose to take all Hester's sarcasms without an attempt to parry or evade them. Very likely the young lady watched and admired that magnanimity, while she tried it so cruelly. And after one of her fits of ill-behavior, her parents and friends had not the least need to scold her, as she candidly told them, because she suffered a great deal more than they would ever have had her, and her conscience punished her a great deal more severely than her kind elders would have thought of doing. I suppose she lies awake all that night, and tosses and tumbles in her bed. I suppose she wets her pillow with tears, and should not mind about her sobbing—unless it kept her sister awake; unless she was unwell the next day, and the doctor had to be fetched; unless the whole family is to be put to discomfort: mother to choke over her dinner in flurry and indignation; father to eat his roast beef in silence and with bitter sauce; every body to look at the door each time it opens, with a vague hope that Harry is coming in. If Harry does not come, why, at least, does not George come? thinks Miss Theo.

Some time in the course of the evening comes a billet from George Warrington, with a large nosegay of lilacs, per Mr. Gumbo. "I send my best duty and regards to Mrs. Lambert and the ladies," George says, "and humbly beg to present to Miss Theo this nosegay of lilacs, which she says she loves in the early spring. You must not thank me for them, please, but the gardener of Bedford House, with whom I have made great friends by presenting him with some dried specimens of a Virginian plant which some ladies don't think as fragrant as lilacs.

"I have been in the garden almost all the day. It is alive with sunshine and spring; and I have been composing two scenes of you know what, and polishing the verses which the Page sings in the fourth act, under Sybilla's window, when she can not hear, poor thing, because she has just had her head off."

"Provoking! I wish he would not always sneer and laugh! The verses are beautiful," says Theo.

"You really think so, my dear? How very odd!" remarks Papa.

Little Het looks up from her dismal corner with a faint smile of humor. Theo's secret is a secret for nobody in the house, it seems. Can any young people guess what it is? Our young lady continues to read:

"'Spencer has asked the famous Mr. Johnson to breakfast to-morrow, who condescends to hear the play, and who won't, I hope, be too angry because my heroine undergoes the fate of his in Irene. I have heard he came up to London himself as a young man with only his tragedy in his wallet. Shall I ever be able to get mine played? Can you fancy the catcall music beginning, and the pit hissing at that perilous part of the fourth act, where my executioner comes out from the closet with his great sword, at the awful moment when he is called upon to *amputate?* They say Mr. Fielding, when the pit hissed at a part of one of his pieces, about which Mr. Garrick had warned him, said, 'Hang them, they *have* found it out, have they?' and finished his punch in tranquillity. I suppose his wife was not in the boxes. There are some women to whom I would be very unwilling to give pain, and there are some to whom I would give the best I have.'"

"Whom can he mean? The letter is to you, my dear. I protest he is making love to your mother before my face!" cries Papa to Hetty,

who only gives a little sigh, puts her hand in her father's hand, and withdraws it.

"'To whom I would give the best I have. To-day it is only a bunch of lilacs. To-morrow it may be what?—a branch of rue—a sprig of bays, perhaps—any thing, so it be my best and my all.

"'I have had a fine long day, and all to myself. What do you think of Harry playing truant?' (Here we may imagine what they call in France, or what they used to call, when men dared to speak or citizens to hear, *sensation dans l'auditoire.*)

"'I suppose Carpezan wearied the poor fellow's existence out. Certain it is he has been miserable for weeks past; and a change of air and scene may do him good. This morning, quite early, he came to my room, and told me he had taken a seat in the Portsmouth machine, and proposed to go to the Isle of Wight, to the army there.'"

The army! Hetty looks very pale at this announcement, and her mother continues—

"'And a little portion of it, namely, the thirty-second regiment, is commanded by Lieutenant-Colonel Richmond Webb—the nephew of the famous old General under whom my grandfather Esmond served in the great wars of Marlborough. Mr. Webb met us at our uncle's, accosting us very politely, and giving us an invitation to visit him at his regiment. Let my poor brother go and listen to his darling music of fife and drum. He bade me tell the ladies that they should hear from him. I kiss their hands, and go to dress for dinner at the Star and Garter, in Pall Mall. We are to have Mr. Soame Jenyns, Mr. Cambridge, Mr. Walpole, possibly, if he is not too fine to dine in a tavern; a young Irishman, a Mr. Bourke, who, they say, is a wonder of eloquence and learning—in fine, all the wits of Mr. Dodsley's shop. Quick, Gumbo, a coach, and my French gray suit! And if gentlemen ask me, "Who gave you that sprig of lilac you wear on your heart-side?" I shall call a bumper, and give lilac for a toast.'"

I fear there is no more rest for Hetty on this night than on the previous one, when she had behaved so mutinously to poor Harry Warrington. Some secret resolution must have inspired that gentleman, for, after leaving Mr. Lambert's table, he paced the streets for a while, and appeared at a late hour in the evening at Madame de Bernstein's house in Clarges Street. Her ladyship's health had been somewhat ailing of late, so that even her favorite routs were denied her, and she was sitting over a quiet game of écarté, with a divine of whom our last news were from a lock-up house hard by that in which Harry Warrington had been himself confined. George, at Harry's request, had paid the little debt under which Mr. Sampson had suffered temporarily. He had been at his living for a year. He may have paid and contracted ever so many debts, have been in and out of jail many times since we saw him. For some time past he had been back in London, stout and hearty as usual, and ready for any invitation to cards or claret. Madame de Bernstein did not care to have her game interrupted by her nephew, whose conversation had little interest now for the fickle old woman. Next to the very young, I suppose the very old are the most selfish. Alas, the heart hardens as the blood ceases to run! The cold snow strikes down from the head and checks the glow of feeling. Who wants to survive into old age after abdicating all his faculties one by one, and be sans teeth, sans eyes, sans memory, sans hope, sans sympathy? How fared it with those patriarchs of old who lived for their nine centuries, and when were life's conditions so changed that, after threescore years and ten, it became but a vexation and a burden?

Getting no reply but Yes and No to his brief speeches, poor Harry sat a while on a couch opposite his aunt, who shrugged her shoulders, had her back to her nephew, and continued her game with the Chaplain. Sampson sat opposite Mr. Warrington, and could see that something disturbed him. His face was very pale, and his countenance disturbed and full of gloom. "Something has happened to him, ma'am," he whispered to the Baroness.

"Bah!" She shrugged her shoulders again, and continued to deal her cards. "What is the matter with you, Sir?" she at last said, at a pause in the game, "that you have such a dismal countenance? Chaplain, that last game makes us even, I think."

Harry got up from his place. "I am going on a journey: I am come to bid you good-by, aunt," he said, in a very tragical voice.

"On a journey! Are you going home to America? I mark the king, Chaplain, and play him."

No, Harry said: he was not going to America yet: he was going to the Isle of Wight for the present.

"Indeed! a lovely spot!" says the Baroness. "*Bon jour, mon ami, et bon voyage!*" And she kissed a little hand to her nephew.

"I mayn't come back for some time, aunt," he groaned out.

"Indeed! We shall be inconsolable without you! Unless you have a spade, Mr. Sampson, the game is mine. Good-by, my child! No more about your journey at present: tell us about it when you come back!" And she gayly bade him farewell. He looked for a moment piteously at her, and was gone.

"Something grave has happened, Madam," says the Chaplain.

"Oh! The boy is always getting into scrapes. I suppose he has been falling in love with one of those country-girls—what are their names, Lamberts?—with whom he is ever dawdling about. He has been doing no good here for some time. I am disappointed in him, really quite grieved about him—I will take two cards if you please—again?—quite grieved. What do you think they say of his cousin—the Miss Warrington

BON JOUR, MON AMI.

who made eyes at him when she thought he was a prize—they say the King has remarked her, and the Yarmouth is *crêving* with rage. He, he! those methodistical Warringtons! They are not a bit less worldly than their neighbors; and, old as he is, if the Grand Signior throws his pocket-handkerchief, they will jump to catch it!"

"All, Madam; how your ladyship knows the world!" sighs the Chaplain. "I propose, if you please!"

"I have lived long enough in it, Mr. Sampson, to know something of it. 'Tis sadly selfish, my dear Sir, sadly selfish; and every body is struggling to pass his neighbor! No, I can't give you any more cards. You haven't the king? I play queen, knave, and a ten—a sadly selfish world, indeed. And here comes my chocolate!"

The more immediate interest of the cards entirely absorbs the old woman. The door shuts out her nephew and his cares. Under his hat he bears them into the street, and paces the dark town for a while.

"Good God!" he thinks, "what a miserable fellow I am, and what a spendthrift of my life I have been! I sit silent with George and his friends. I am not clever and witty as he is. I am only a burden to him, and if I would help him ever so much don't know how. My dear Aunt Lambert's kindness never tires, but I begin to be ashamed of trying it. Why, even Hetty can't help turning on me; and when she tells me I am idle and should be doing something, ought I to be angry? The rest have left me. There's my cousins and uncle and my lady my aunt, they have shown me the cold shoulder this long time. They didn't even ask me to Norfolk when they went down to the country, and offer me so much as a day's partridge-shooting. I can't go to Castlewood—after what has happened; I should break that scoundrel William's bones; and, faith, am well out of the place altogether."

He laughs a fierce laugh as he recalls his adventures since he has been in Europe. Money, friends, pleasure, all have passed away, and he feels the past like a dream. He strolls into White's Chocolate House, where the waiters have scarce seen him for a year. The Parliament is up. Gentlemen are away; there is not even any play going on—not that he would join it, if there were. He has but a few pieces in his pocket, George's drawer is open, and he may take what money he likes thence; but very, very sparingly will he avail himself of his brother's repeated invitation. He sits and drinks his glass in moody silence. Two or three officers of the Guards enter from St. James's. He knew them in former days, and the young men, who have been already dining and drinking on guard, insist on more drink at the club. The other battalion of their regiment is at Winchester: it is going on this great expedition, no one knows whither, which every body is talking about. Cursed fate that they do not belong to the other battalion; and must stay and do duty in London and at Kensington! There is Webb, who was of their regiment: he did well to exchange his company in the Coldstreams for the lieutenant-colonelcy of the thirty-second. He will be of the expedition. Why, every body is going; and the young gentlemen mention a score of names of men of the first birth and fashion who have volunteered. "It ain't Hanoverians this time, commanded by the big Prince," says one young gentleman (whose relatives may have been Tories forty years ago), "it's Englishmen, with the Guards at the head of 'em, and a Marlborough for a leader. Will the Frenchmen ever stand against *them!* No, by George, they are irresistible!" And a fresh bowl is called, and loud toasts are drunk to the success of the expedition.

Mr. Warrington, who is a cup too low, the young Guardsmen say, walks away when they are not steady enough to be able to follow him, thinks over the matter on his way to his lodgings, and lies thinking of it all through the night.

"What is it, my boy?" asks George Warrington of his brother, when the latter enters his chamber very early on a blushing May morning.

"I want a little money out of the drawer," says Harry, looking at his brother. "I am sick and tired of London."

"Good Heavens! Can any body be tired of London?" George asks, who has reasons for thinking it the most delightful place in the world.

"I have for one. I am sick and ill," says Harry.

"You and Hetty have been quarreling?"

"She don't care a penny-piece about me, nor I for her, neither," says Harry, nodding his head. "But I am ill, and a little country air will do me good." And he mentions how he thinks of going to visit Mr. Webb in the Isle of Wight, and how a Portsmouth coach starts from Holborn.

"There's the till, Harry," says George, pointing from his bed. "Put your hand in and take what you will. What a lovely morning, and how fresh the Bedford House garden looks!"

"God bless you, brother!" Harry says.

"Have a good time, Harry!" and down goes George's head on the pillow again, and he takes his pencil and note-book from under his bolster, and falls to polishing his verses, as Harry, with his cloak over his shoulder and a little valise in his hand, walks to the inn in Holborn, whence the Portsmouth machine starts.

CHAPTER LXIII.

MELPOMENE.

George Warrington by no means allowed his legal studies to obstruct his comfort and pleasures, or interfere with his precious health. Madam Esmond had pointed out to him in her letters that though he wore a student's gown, and sat down with a crowd of nameless people to hall-commons, he had himself a name, and a very ancient one, to support, and could take rank with the first persons at home or in his own country; and desired that he would study as a gentleman, not a mere professional drudge. With this injunction the young man complied obediently enough; so that he may be said not to have belonged to the rank and file of the law, but may be considered to have been a volunteer in her service, like some young gentlemen of whom we have heard. Though not so exacting as she since has become—though she allowed her disciples much more leisure, much more pleasure, much more punch, much more frequenting of coffee-houses, and holiday-making than she admits nowadays, when she scarce gives her votaries time for amusement, recreation, instruction, sleep, or dinner—the law a hundred years ago was still a jealous mistress, and de-

manded a pretty exclusive attention. Murray, we are told, might have been an Ovid, but he preferred to be Lord Chief Justice, and to wear ermine instead of bays. Perhaps Mr. Warrington might have risen to a peerage and the woolsack had he studied very long and assiduously—had he been a dexterous courtier and a favorite of attorneys—had he been other than he was, in a word. He behaved to Themis with a very decent respect and attention; but he loved letters more than law always; and the black letter of Chaucer was infinitely more agreeable to him than the Gothic pages of Hale and Coke.

Letters were loved, indeed, in those quaint times, and authors were actually authorities. Gentlemen appealed to Virgil or Lucan in the Courts or the House of Commons. What said Statius, Juvenal—let alone Tully or Tacitus—on such and such a point? Their reign is over now, the good old Heathens: the worship of Jupiter and Juno is not more out of mode than the cultivation of Pagan poetry or ethics. The age of economists and calculators has succeeded, and Tooke's Pantheon is deserted and ridiculous. Now and then, perhaps, a Stanley kills a kid, a Gladstone hangs up a wreath, a Lytton burns incense, in honor of the Olympians. But what do they care at Lambeth, Birmingham, the Tower Hamlets, for the ancient rites, divinities, worship? Who the plague are the Muses, and what is the use of all that Greek and Latin rubbish? What is Elicon, and who cares? Who was Thalia, pray, and what is the length of her i? Is Melpomene's name in three syllables or four? And do you know from whose design I stole that figure of Tragedy which heads this column?

Now, it has been said how Mr. George in his youth, and in the long leisure which he enjoyed at home, and during his imprisonment in the French fort on the banks of Monongahela, had whiled away his idleness by paying court to Melpomene; and the result of their union was a tragedy, which has been omitted in "Bell's Theatre," though I dare say it is no worse than some of the pieces printed there. Most young men pay their respects to the Tragic Muse first, as they fall in love with women who are a great deal older than themselves. Let the candid reader own, if ever he had a literary turn, that his ambition was of the very highest, and that however, in his riper age, he might come down in his pretensions, and think that to translate an ode of Horace, or to turn a song of Waller or Prior into decent alcaics or sapphics, was about the utmost of his capability, tragedy and epic only did his green unknowing youth engage, and no prize but the highest was fit for him.

George Warrington, then, on coming to London, attended the theatrical performances at both houses, frequented the theatrical coffee-houses, and heard the opinions of the critics, and might be seen at the Bedford between the plays, or supping at the Cecil along with the wits and actors when the performances were over. Here he gradually became acquainted with the players and such of the writers and poets as were known to the public. The tough old Macklin, the frolicsome Foote, the vivacious Hippisley, the sprightly Mr. Garrick himself, might occasionally be seen at these houses of entertainment; and our gentleman, by his wit and modesty, as well, perhaps, as for the high character for wealth which he possessed, came to be very much liked in the coffee-house circles, and found that the actors would drink a bowl of punch with him, and the critics sup at his expense with great affability. To be on terms of intimacy with an author or an actor has been an object of delight to many a young man; actually to hob and nob with Bobadil or Henry the Fifth or Alexander the Great, to accept a pinch out of Aristarchus's own box, to put Juliet into her coach, or hand Monimia to her chair, are privileges which would delight most young men of a poetic turn; and no wonder George Warrington loved the theatre. Then he had the satisfaction of thinking that his mother only half approved of plays and play-houses, and of feasting on fruit forbidden at home. He gave more than one elegant entertainment to the players, and it was even said that one or two distinguished geniuses had condescended to borrow money of him.

And as he polished and added new beauties to his master-piece, we may be sure that he took advice of certain friends of his, and that they gave him applause and counsel. Mr. Spencer, his new acquaintance, of the Temple, gave a breakfast at his chambers in Fig-Tree Court, when Mr. Warrington read part of his play, and the gentlemen present pronounced that it had uncommon merit. Even the learned Mr. Johnson, who was invited, was good enough to say that the piece had showed talent. It warred against the unities, to be sure; but these had been violated by other authors, and Mr. Warrington might sacrifice them as well as another. There was in Mr. W.'s tragedy a something

which reminded him both of Coriolanus and Othello. "And two very good things too, Sir!" the author pleaded. "Well, well, there was no doubt on that point; and 'tis certain your catastrophe is terrible, just, and being in part true, as is not the less awful," remarks Mr. Spencer.

Now the plot of Mr. Warrington's tragedy was quite full indeed of battle and murder. A favorite book of his grandfather had been the life of old George Frundsberg of Mindelheim, a colonel of foot-folk in the Imperial service at Pavia fight, and during the wars of the Constable Bourbon: and one of Frundsberg's military companions was a certain Carpzow, or Carpezan, whom our friend selected as his tragedy hero.

His first act, as it at present stands in Sir George Warrington's manuscript, is supposed to take place before a convent on the Rhine, which the Lutherans, under Carpezan, are besieging. A godless gang these Lutherans are. They have pulled the beards of Roman friars, and torn the vails of hundreds of religious women. A score of these are trembling within the walls of the convent yonder, of which the garrison, unless the expected succors arrive before mid-day, has promised to surrender. Meanwhile there is armistice, and the sentries within look on with hungry eyes, as the soldiers and camp people gambol on the grass before the gate. Twelve o'clock, ding, ding, dong! it sounds upon the convent bell. No succors have arrived. Open gates, warder, and give admission to the famous Protestant hero, the terror of Turks on the Danube and Papists in the Lombard plains—Colonel *Carpezan*. See, here he comes, clad in complete steel, his hammer of battle over his shoulder, with which he has battered so many infidel sconces, his flags displayed, his trumpets blowing. "No rudeness, my men," says Carpezan; "the wine is yours, and the convent larder and cellar are good; the church plate shall be melted; any of the garrison who choose to take service with Gaspar Carpezan are welcome, and shall have good pay. No insult to the religious ladies. I have promised them a safe-conduct, and he who lays a finger on them hangs. Mind that, Provost Marshal!" The Provost Marshal, a huge fellow in a red doublet, nods his head.

"We shall see more of that Provost Marshal, or executioner," Mr. Spencer explains to his guests.

"A very agreeable acquaintance, I am sure—shall be delighted to meet the gentleman again!" says Mr. Johnson, wagging his head over his tea. "This scene of the mercenaries, the camp-followers, and their wild sports, is novel and stirring, Mr. Warrington, and I make you my compliments on it. The Colonel has gone into the convent, I think? Now let us hear what he is going to do there."

The Abbess, and one or two of her oldest ladies, make their appearance before the conqueror. Conqueror as he is, they beard him in their sacred halls. They have heard of his violent behavior in conventual establishments before. That hammer, which he always carries in action, has smashed many sacred images in religious houses. Pounds and pounds of convent plate is he known to have melted, the sacrilegious plunderer! No wonder the Abbess-Princess of St. Mary's, a lady of violent prejudices, free language, and noble birth, has a dislike to the low-born heretic who lords it in her convent, and tells Carpezan a bit of her mind, as the phrase is. This scene, in which the lady gets somewhat better of the Colonel, was liked not a little by Mr. Warrington's audience at the Temple. Terrible as he might be in war, Carpezan was shaken at first by the Abbess's brisk opening charge of words; and, conqueror as he was, seemed at first to be conquered by his actual prisoner. But such an old soldier was not to be beaten ultimately by any woman. "Pray, madam," says he, "how many ladies are there in your convent for whom my people shall provide conveyance? The Abbess, with a look of much trouble and anger, says that, besides herself, the noble Sisters of Saint Mary's House are twenty—twenty-three." She was going to say twenty-four, and now says twenty-three! "Ha! why this hesitation?" asks Captain Ulric, one of Carpezan's gayest officers.

The dark chief pulls a letter from his pocket. "I require from you, madam," he says, sternly, to the Lady Abbess, "the body of the noble lady Sybilla of Hoya. Her brother was my favorite captain, slain by my side, in the Milanese. By his death she becomes heiress of his lands. 'Tis said a greedy uncle brought her hither, and fast immured the lady against her will. The damsel shall herself pronounce her fate—to stay a cloistered sister of Saint Mary's, or to return to home and liberty, as Lady Sybil, Baroness of ——." Ha! The Abbess was greatly disturbed by this question. She says, haughtily: "There is no Lady Sybil in this house: of which every inmate is under your protection, and sworn to go free. The Sister Agnes was a nun professed, and what was her land and wealth revert to this Order."

"Give me straightway the body of the Lady Sybil of Hoya!" roars Carpezan, in great wrath. "If not, I make a signal to my reiters, and give you and your convent up to war."

"Faith, if I lead the storm, and have my right, 'tis not my Lady Abbess that I'll choose" (says Captain Ulric), "but rather some plump, smiling, red-lipped maid like—like—" Here, as he, the sly fellow, is looking under the vails of the two attendant nuns, the stern Abbess cries, "Silence, fellow, with thy ribald talk! The lady, warrior, whom you ask of me is passed away from sin, temptation, vanity, and three days since our Sister Agnes—*died*."

At this announcement Carpezan is immensely agitated. The Abbess calls upon the Chaplain to confirm her statement. Ghastly and pale, the old man has to own that three days since the wretched Sister Agnes was buried.

This is too much! In the pocket of his coat of mail Carpezan has a letter from Sister Agnes herself, in which she announces that she is going

to be buried indeed, but in an *oubliette* of the convent, where she may either be kept on water and bread, or die starved outright. He seizes the unflinching Abbess by the arm, while Captain Ulric lays hold of the Chaplain by the throat. The Colonel blows a blast upon his horn: in rush his furious lanzknechts from without. Crash, bang! They knock the convent walls about. And in the midst of flames, screams, and slaughter, who is presently brought in by Carpezan himself, and fainting on his shoulder, but Sybilla herself. A little sister nun (that gay one with the red lips) had pointed out to the Colonel and Ulric the way to Sister Agnes's dungeon, and, indeed, had been the means of making her situation known to the Lutheran chief.

"The convent is suppressed with a vengeance," says Mr. Warrington. "We end our first act with the burning of the place, the roars of triumph of the soldiery, and the outcries of the nuns. They had best go change their dresses immediately, for they will have to be court ladies in the next act—as you will see." Here the gentlemen talked the matter over. If the piece were to be done at Drury Lane, Mrs. Pritchard would hardly like to be Lady Abbess, as she doth but appear in the first act. Miss Pritchard might make a pretty Sybilla, and Miss Gates the attendant nun. Mr. Garrick was scarce tall enough for Carpezan—though, when he is excited, nobody ever thinks of him but as big as a grenadier. Mr. Johnson owns Woodward will be a good Ulric, as he plays the Mercutio parts very gayly—and so, by one and t'other, the audience fancies the play already on the boards, and casts the characters.

In act the second Carpezan has married Sybilla. He has enriched himself in the wars, has been ennobled by the Emperor, and lives at his castle on the Danube in state and splendor.

But, truth to say, though married, rich, and ennobled, the Lord Carpezan was not happy. It may be that in his wild life, as leader of condottieri on both sides, he had committed crimes which agitated his mind with remorse. It may be that his rough soldier manners consorted ill with his imperious high-born bride. She led him such a life—I am narrating as it were the Warrington manuscript, which is too long to print in entire—taunting him with his low birth, his vulgar companions, whom the old soldier loved to see about him, and so forth—that there were times when he rather wished that he had never rescued this lovely, quarrelsome, wayward vixen from the *oubliette* out of which he fished her. After the bustle of the first act this is a quiet one, and passed chiefly in quarreling between the Baron and Baroness Carpezan, until horns blow, and it is announced that the young King of Bohemia and Hungary is coming hunting that way.

Act III. is passed at Prague, whither his Majesty has invited Lord Carpezan and his wife, with noble offers of preferment to the latter. From Baron he shall be promoted to be Count, from Colonel he shall be General-in-Chief. His wife is the most brilliant and fascinating of all the ladies of the court—and as for Carpzoff—"

"Oh, stay—I have it—I know your story, Sir, now," says Mr. Johnson. "'Tis in Meteranus, in the Theatrum Universum. I read it in Oxford as a boy—Carpezanus or Carpzoff—"

"That is the fourth act," says Mr. Warrington. In the fourth act the young King's attentions toward Sybilla grow more and more marked; but her husband, battling against his jealousy, long refuses to yield to it, until his wife's criminality is put beyond a doubt—and here he read the act, which closes with the terrible tragedy which actually happened. Being convinced of his wife's guilt, Carpezan caused the executioner who followed his regiment to slay her in her own palace. And the curtain of the act falls just after the dreadful deed is done, in a side chamber illuminated by the moon shining through a great oriel window, under which the King comes with his lute, and plays the song which was to be the signal between him and his guilty victim.

This song (writ in the ancient style, and repeated in the piece, being sung in the third act previously at a great festival given by the King and Queen) was pronounced by Mr. Johnson to be a happy imitation of Mr. Waller's manner, and its gay repetition at the moment of guilt, murder, and horror, very much deepened the tragic gloom of the scene.

"But whatever came afterward?" he asked. "I remember in the Theatrum, Carpezan is said to have been taken into favor again by Count Mansfield, and doubtless to have murdered other folks on the reformed side."

Here our poet has departed from historic truth. In the fifth act of "Carpezan" King Louis of Hungary and Bohemia (sufficiently terror-stricken, no doubt, by the sanguinary termination of his intrigue) has received word that the Emperor Solyman is invading his Hungarian dominions. Enter two noblemen who relate how, in the council which the King held upon the news, the injured Carpezan rushed infuriated into the royal presence, broke his sword, and flung it at the King's feet—along with a glove which he dared him to wear, and which he swore he would one day claim. After that wild challenge the rebel fled from Prague, and had not since been heard of; but it was reported that he had joined the Turkish invader, assumed the turban, and was now in the camp of the Sultan, whose white tents glance across the river yonder, and against whom the King was now on his march. Then the King comes to his tent with his generals, prepares his order of battle, and dismisses them to their posts, keeping by his side an aged and faithful knight, his master of the horse, to whom he expresses his repentance for his past crimes, his esteem for his good and injured Queen, and his determination to meet the day's battle like a man.

"What is this field called?"

"Mohacz, my liege!" says the old warrior,

adding the remark that "Ere set of sun, Mohacz will see a battle bravely won."

Trumpets and alarms now sound; they are the cymbals and barbaric music of the Janizaries: we are in the Turkish camp, and yonder, surrounded by turbaned chiefs, walks the Sultan Solyman's friend, the conqueror of Rhodes, the redoubted Grand Vizier.

Who is that warrior in an Eastern habit, but with a glove in his cap? 'Tis Carpezan. Even Solyman knew his courage and ferocity as a soldier. He knows the ordinance of the Hungarian host: in what arms King Louis is weakest: how his cavalry, of which the shock is tremendous, should be received, and inveigled into yonder morass, where certain death may await them—he prays for a command in the front, and as near as possible to the place where the traitor King Louis will engage. "'Tis well," says the grim Vizier, "our invincible Emperor surveys the battle from yonder tower. At the end of the day, he will know how to reward your valor." The signal-guns fire—the trumpets blow—the Turkish captains retire, vowing death to the infidel, and eternal fidelity to the Sultan.

And now the battle begins in earnest, and with those various incidents which the lover of the theatre knoweth. Christian knights and Turkish warriors clash and skirmish over the stage. Continued alarms are sounded. Troops on both sides advance and retreat. Carpezan, with his glove in his cap, and his dreadful hammer smashing all before him, rages about the field, calling for King Louis. The renegade is about to slay a warrior who faces him, but recognizing young Ulric, his ex-captain, he drops the uplifted hammer, and bids him fly and think of Carpezan. He is softened at seeing his young friend, and thinking of former times when they fought and conquered together in the cause of Protestantism. Ulric bids him to return, but of course that is now out of the question. They fight. Ulric *will* have it, and down he goes under the hammer. The renegade melts in sight of his wounded comrade, when who appears but King Louis, his plumes torn, his sword hacked, his shield dented with a thousand blows which he has received and delivered during the day's battle. Ha! who is this? The guilty monarch would turn away (perhaps Macbeth may have done so before), but Carpezan is on him. All his softness is gone. He rages like a fury. "An equal fight!" he roars. "A traitor against a traitor! Stand, King Louis! False King, false knight, false friend—by this glove in my helmet, I challenge you!" And he tears the guilty token out of his cap, and flings it at the King.

Of course they set to, and the monarch falls under the terrible arm of the man whom he has injured. He dies, uttering a few incoherent words of repentance, and Carpezan, leaning upon his murderous mace, utters a heart-broken soliloquy over the royal corpse. The Turkish warriors have gathered meanwhile: the dreadful day is their own. Yonder stands the dark Vizier, surrounded by his Janizaries, whose bows and swords are tired of drinking death. He surveys the Renegade standing over the corpse of the King.

"Christian renegade!" he says, "Allah has given us a great victory. The arms of the Sublime Emperor are every where triumphant. The Christian King is slain by you."

"Peace to his soul! He died like a good knight," gasps Ulric, himself dying on the field.

"In this day's battle," the grim Vizier continues, "no man hath comported himself more bravely than you. You are made Bassa of Transylvania! Advance bowmen—Fire!"

An arrow quivers in the breast of Carpezan.

"Bassa of Transylvania, you were a traitor to your King, who lies murdered by your hand!" continues grim Vizier. "You contributed more than any soldier to this day's great victory. 'Tis thus my Sublime Emperor meetly rewards you. Sound trumpets! We march for Vienna to-night!"

And the curtain drops as Carpezan, crawling toward his dying comrade, kisses his hands, and gasps,

"Forgive me, Ulric!"

When Mr. Warrington has finished reading his tragedy, he turns round to Mr. Johnson, modestly, and asks,

"What say you, Sir? Is there any chance for me?"

But the opinion of this most eminent critic is scarce to be given, for Mr. Johnson had been asleep for some time, and frankly owned that he had lost the latter part of the play.

The little auditory begins to hum and stir as the noise of the speaker ceased. George may have been very nervous when he first commenced to read; but every body allows that he read the last two acts uncommonly well, and makes him a compliment upon his matter and manner. Perhaps every body is in good humor because the piece has come to an end. Mr. Spencer's servant hands about refreshing drinks. The Templars speak out their various opinions while they sip the negus. They are a choice band of critics, familiar with the pit of the theatre, and they treat Mr. Warrington's play with the gravity which such a subject demands.

Mr. Fountain suggests that the Vizier should not say "Fire!" when he bids the archers kill Carpezan—as you certainly don't *fire* with a bow and arrows. A note is taken of the objection.

Mr. Figtree, who is of a sentimental turn, regrets that Ulric could not be saved, and married to the comic heroine.

"Nay, Sir, there was an utter annihilation of the Hungarian army at Mohacz," says Mr. Johnson, "and Ulric must take his knock on the head with the rest. He could only be saved by flight, and you wouldn't have a hero run away. Pronounce sentence of death against Captain Ulric, but kill him with honors of war."

Messrs. Essex and Tanfield wonder to one another who is this queer looking *pert* whom Spen-

cer has invited, and who contradicts every body, and suggest a boat up the river and a little fresh air after the fatigues of the tragedy.

The general opinion is decidedly favorable to Mr. Warrington's performance; and Mr. Johnson's opinion, on which he sets a special value, is the most favorable of all. Perhaps Mr. Johnson is not sorry to compliment a young gentleman of fashion and figure like Mr. W. "Up to the death of the heroine," he says, "I am frankly with you, Sir. And I may speak, as a playwright who have killed my own heroine, and had my share of the *plausus in theatro*. To hear your own lines nobly delivered to an applauding house is indeed a noble excitement. I like to see a young man of good name and lineage who condescends to think that the Tragic Muse is not below his advances. It was to a sordid roof that I invited her, and I asked her to rescue me from poverty and squalor. Happy you, Sir, who can meet her upon equal terms, and can afford to marry her without a portion!"

"I doubt whether the greatest genius is not debased who has to make a bargain with Poetry," remarks Mr. Spencer.

"Nay, Sir," Mr. Johnson answered, "I doubt if many a great genius would work at all without bribes and necessities; and so a man had better marry a poor Muse for good and all, for better or worse, than dally with a rich one. I make you my compliment to your play, Mr. Warrington, and if you want an introduction to the stage, shall be very happy if I can induce my friend Mr. Garrick to present you."

"Mr. Garrick shall be his sponsor," cried the florid Mr. Figtree. "Melpomene shall be his godmother, and he shall have the witches' caldron in Macbeth for a christening font."

"Sir, I neither said font nor godmother," remarks the man of letters. "I would have no play contrary to morals or religion: nor, as I conceive, is Mr. Warrington's piece otherwise than friendly to them. Vice is chastised, as it should be, even in Kings, though perhaps we judge of their temptations too lightly. Revenge is punished—as not to be lightly exercised by our limited notion of justice. It may have been Carpezan's wife who perverted the King, and not the King who led the woman astray. At any rate, Louis is rightly humiliated for his crime, and the Renegade most justly executed for his. I wish you a good afternoon, gentlemen!" And with these remarks, the great author took his leave of the company.

Toward the close of the reading, General Lambert had made his appearance at Mr. Spencer's chambers, and had listened to the latter part of the tragedy. The performance over, he and George took their way to the latter's lodgings in the first place, and subsequently to the General's own house, where the young author was expected, in order to recount the reception which his play had met from his Temple critics.

At Mr. Warrington's apartment in Southampton Row, they found a letter awaiting George, which the latter placed in his pocket unread, so that he might proceed immediately with his companion to Soho. We may be sure the ladies there were eager to know about the Carpezan's fate in the morning's small rehearsal. Hetty said George was so shy, that perhaps it would be better for all parties if some other person had read the play. Theo, on the contrary, cried out:

"Read it, indeed! Who can read a poem better than the author who feels it in his heart? And George had his whole heart in the piece!"

Mr. Lambert very likely thought that somebody else's whole heart was in the piece, too, but did not utter this opinion to Miss Theo.

"I think Harry would look very well in your figure of a Prince," says the General. "That scene where he takes leave of his wife before departing for the wars reminds me of your brother's manner not a little."

"Oh, papa! surely Mr. Warrington himself would act the Prince's part best!" cries Miss Theo.

"And be deservedly slain in battle at the end?" asks the father of the house.

"I did not say that; only that Mr. George would make a very good Prince, papa!" cries Miss Theo.

"In which case he would find a suitable Princess, I have no doubt. What news of your brother Harry?"

George, who has been thinking about theatrical triumphs; about *monumentum ære perennius;* about lilacs; about love whispered and tenderly accepted, remembers that he has a letter from Harry in his pocket, and gayly produces it.

"Let us hear what Mr. Truant says for himself, Aunt Lambert!" cries George, breaking the seal.

Why is he so disturbed, as he reads the contents of his letter? Why do the women look at him with alarmed eyes? And why, above all, is Hetty so pale?

"Here is the letter," says George, and begins to read it:

"Ryde, *June* 1, 1758.

"I did not tell my dearest George what I hoped and intended when I left home on Wednesday. 'Twas to see Mr. Webb at Portsmouth or the Isle of Wight, wherever his Reg^{t} was, and if need was, to *go down on my knees* to him to take me as volunteer with him on the Expedition. I took boat from Portsmouth, where I learned that he was, with *our regiment*, incampt at the village of Ryde. Was received by him most kindly, and my petition granted out of hand. That is why I say our regiment. We are eight gentlemen volunteers with Mr. Webb; all men of birth, and *good fortunes*, except poor me, who don't deserve one. We are to mess with the officers; we take the right of the column, *and have always the right to be in front;* and in an hour we embark on board his Majesty's Ship the *Rochester*, of 60 guns, while our Commodore's, Mr. Howe's, is the *Essex*, 70. His squadron is about 20 ships, and I should think 100 transports at least. Though 'tis a se-

cret expedition, we make no doubt France is our destination—where I hope to see my friends the Monsieurs once more, and win my colors *à la poinct de mon épée*, as we used to say in Canada. Perhaps my service as interpreter may be useful; I speaking the language not so well *as some one I know*, but better than most here.

"I scarce venture to write to our mother to tell her of this step. Will you, who have *a coxing tongue will wheadle any one*, write to her as soon as you have finisht the famous *tradgedy?* Will you give my affectionate respects to dear General Lambert and ladies: and if any accident should happen, I know you will take care of poor Gumbo, as belonging to my dearest, best George's most affectionate brother,

"HENRY E. WARRINGTON.

"P.S.—Love to all at home when you write, including Dempster, Mountain, and Fanny M., and all the people, and duty to my honored mother, wishing I had pleased her better. And if I said any thing unkind to dear Miss Hester Lambert, I know she will forgive me; and pray God bless all.—H. E. W.

"To G. ESMOND WARRINGTON, Esq.,
"At Mr. Scrace's house in Southampton Row,
"Opposite Bedford House Gardens, London."

He has not read the last words with a very steady voice. Mr. Lambert sits silent, though not a little moved. Theo and her mother look at one another; but Hetty remains with a cold face and a stricken heart. She thinks "He is gone to danger, perhaps to death, and it was I sent him!"

Monthly Record of Current Events.

UNITED STATES.

THE Session of Congress approaches its close, and no definite measures have been proposed to meet the deficiency in the revenues of the General Government.——The most important act which has yet been performed by Congress is the admission of Oregon into the Union. The Bill passed the Senate at the last session, but was not acted upon by the House. It was opposed by the Americans because the Constitution adopted grants the right of suffrage to aliens; and by the Republicans partly on account of the disabilities imposed upon persons of color, and partly from the wish to couple the admission of Kansas with that of Oregon. Various amendments having been rejected, the Bill as passed by the Senate was adopted on the 12th of February, by a vote of 114 to 103; 15 Republicans and 99 Democrats voting in favor of the admission; and 73 Republicans, 20 Democrats, and 10 Americans voting against it; 18 members not voting.——On the 16th of February the Senate, by a vote of 30 to 15, reaffirmed the resolution of June 12, 1858, recognizing the right of Messrs. Bright and Fitch to the seats now held by them as Senators from *Indiana* (not from *Illinois*, as misprinted in our last Record), contested by Messrs. Lane and M'Carty. Mr. Seward gave notice that annually, as long as he remained in the Senate, he should move that the resolution be expunged from the journal of the Senate.——The Pacific Railroad Bill was discussed in the Senate till January 27, when, upon motion of Mr. Doolittle, a resolution was passed that the Secretary of the Interior be authorized to advertise for proposals for building the road upon three lines—the Northern, Central, and Southern; $3000 being appropriated to defray the expense of advertising. The remainder of the Bill, upon motion of Mr. Simmons, being stricken out; the Bill was thus, for the present, practically killed. ——The House, on the 18th of February, by a vote of 126 to 76, passed the Homestead Bill of Mr. Grow. It provides that any citizen of the United States, or any person who has declared his intention of becoming a citizen, shall be entitled to enter any quarter section of unoccupied land, and to hold the same, on condition of actual settlement. The Bill is yet to be acted upon in the Senate.——On the 24th of January Mr. Slidell, in behalf of the Committee on Foreign Relations, presented the following Bill for the acquisition of Cuba:

"*Whereas*, Cuba geographically possesses a commanding influence over the large and annually increasing trade, foreign and coastwise, of the Mississippi valley:

"*Whereas*, the island, in its present colonial condition, must continue a source of injury and annoyance, endangering the friendly relations between Spain and the United States, by the aggressions of its local authority upon American commerce and citizens, for which tardy redress can only be had by circuitous demands on Spain: and

"*Whereas*, in the opinion of Congress and in accordance with the views of the President, as the last means of settling the existing and removing future difficulties, it is expedient that negotiations for the purchase of the island should be renewed—

"*Therefore*, be it enacted, etc., that thirty millions of dollars be placed in the President's hands for expenditure, either from cash in the Treasury or to be borrowed on five per cent. bonds of one thousand dollars each, redeemable in from twelve to twenty years."

This Bill was prefaced by an elaborate Report, in which it was shown that the ultimate acquisition of Cuba has long been recognized as the settled policy of our Government, the only difference of opinion being as to the time, mode, and conditions of obtaining it. The Report, assuming that Spain can not long retain the island, says there are but three alternatives in the future of Cuba: First, possession by one of the great European Powers: this we have declared to be incompatible with our safety, and have announced to the world that any attempt to consummate it will be resisted by all the means in our power. Second, the independence of the island: this could only be nominal, and must resolve itself into a protectorate either by some European Power or by us. The former could not be tolerated, for England and France would insist upon emancipation; a servile war would follow, and Cuba would become like Hayti, a black empire or republic, which would be more dangerous and offensive to our Southern States than the uncontrolled possession of the island by France or England. The third alternative is annexation to the United States, which must be effected either by conquest or by negotiation. Conquest would involve a war, which would cost more than any sum which it has ever been contemplated to offer for the purchase of the island, and would probably lead to a servile insurrection and great injury to the industry of the island. Purchase by negotiation seemed the only practicable course, and this could not be attempted, with any prospect of success, unless the President were furnished with the means for which the Bill provides. There were precedents for placing money at the disposal of the

President for similar purposes. It was done when Louisiana, Florida, and California were acquired. The offer of purchase could not be justly regarded as an offense to Spain. We simply say to her, You have a distant possession which is of little value to you, and which you are liable to lose at any moment. It is of great value to us, and we will give you for it a sum a hundred times greater than the revenue which it yields to you. That this offer has been made and rejected already does not prove that it will not now be accepted; and, at all events, the direct offer will not be made until there is reason to believe that it will be favorably entertained. Spain is in need of money, and circumstances may at any moment arise which will induce the Government of that country to raise it by the sale of Cuba. The Report proceeds to detail the advantages which would accrue to us from the possession of Cuba. It would put an end to the slave-trade. Since 1842 we have spent $800,000 a year to maintain a squadron on the coast of Africa to put down this traffic; Great Britain spends nearly $5,000,000 a year for the same purpose; yet the trade goes on, 25,000 or 30,000 slaves being annually exported to the Spanish islands, which are now the only slave-markets. The moment Cuba comes into our hands this trade will be stopped. So also the Coolie-trade will be suppressed. This traffic is in many respects worse than the African slave-trade; the mortality on the passage being 14¾ per cent., and the condition and treatment of those who survive being far worse than that of the slaves, since their masters have no interest beyond obtaining the greatest amount of labor during the period of their servitude. The slave-trade being stopped, the value of the slaves would be enhanced, and, as a consequence, their treatment would be better. The increase of population is the most reliable test of the well-being of any class of people. Since the opening of the slave-trade the West India islands have received about 4,700,000 negroes from Africa, a number far greater than the present population of the islands; the United States received about 375,000, and their descendants now number about 4,800,000; showing conclusively that the condition of the negroes with us is much more favorable than under British or Spanish rule. The Report proceeds to enumerate the commercial advantages which would arise from the acquisition of Cuba. Our flour pays a duty of $10 81 a barrel, and the export is only 5642 barrels; of Spanish flour, which pays only $2 52, 228,000 barrels were imported; our lard pays $4 a quintal, while olive oil, which is used as a substitute, pays but 87 cents; our beef is charged $1 96, and we sent but 339,000 pounds, while that imported from Buenos Ayres, paying but $1 17, amounted to 30,500,000 pounds. It is estimated that if Cuba were annexed to the United States she would annually consume 600,000 barrels of flour, 25,000,000 pounds of lard, 20,000,000 pounds of beef, and 10,000,000 pounds of pork. All our other articles of export to the island would be in like manner increased, and the carrying trade, freed from discriminating duties in favor of Spanish vessels, would fall into our hands. Cuba and Louisiana now produce about 45 per cent. of all the sugar consumed in Europe and the United States. If the island were annexed the amount of production would be greatly increased, and in a few years we should have as complete control of the sugar of the world as we now have of its cotton. The price to be paid for Cuba is estimated in the Report at $125,000,000, the interest upon which, at five per cent., would be $6,250,000. It is estimated that our tariff, applied to the present imports of the island, from other countries than the United States, would produce a revenue of $3,000,000; the Report presumes that the imports would in two years be so largely increased that the revenue would amount to at least $4,000,000, while $800,000 would be saved by the removal of the necessity of keeping up the African squadron for the suppression of the slave-trade. Thus our annual expenditure of $6,250,000 for the interest of the debt incurred by the acquisition of Cuba, would be credited by $4,800,000, leaving an annual balance of $1,425,000 to the debit of the purchase—a sum which the Committee think is not to be weighed in the balance with the political and commercial advantages which would result from the acquisition of the island.

William H. Prescott, the historian, died in Boston on the 28th of January. He was born in 1796, and graduated at Harvard in 1814. He designed to follow the legal profession; but while at the University, a fellow-student sportively threw a crust of bread, which struck his eye, causing an inflammation that resulted in its total loss. The inflammation finally extended to the other eye, the sight of which became so much impaired that he could use it for the purposes of study only at intervals, and for a short time. Notwithstanding this almost total loss of sight, he resolved to devote himself to literary pursuits, the ample fortune and unbounded liberality of his father affording him every facility for the prosecution of his studies. He made Spanish history his special object; and during a residence in Europe, he collected material from every source, and engaged a reader whose acquaintance with the languages supplied, in a measure, the deficiency in his own eyesight. Mr. Prescott's first work, the "History of Ferdinand and Isabella," appeared in 1837. Five years afterward he published the "History of the Conquest of Mexico," which was followed, in 1847, by the "History of the Conquest of Peru." He selected for his next subject the "History of Philip the Second," of which the first two volumes appeared in 1855, and a third was issued only a few weeks before his death.

SOUTHERN AMERICA.

In *Mexico* the attempt of General Robles to unite the "Conservatives" and the "Liberals" has met with an utter failure. After deposing Zuloaga, setting at liberty some five hundred political prisoners, and dispatching deputies to treat with the "Liberals" of Vera Cruz, Robles called together an Electoral Junta, taking for granted that he would be chosen President. This Junta assembled on the 30th of January; but instead of proceeding at once to the election of a President, they set about framing a plan of government. On New-Year's Day news came to the capital that Miramon, the young General who had previously defeated Vidaurri, had gained a new victory over Degollado, near Guadalajara. He was at once proposed as a candidate for the Presidency, in opposition to Robles. On the second ballot he was elected, receiving fifty votes to forty-seven cast for his opponent. Robles, in the mean time, was to act as substitute until the arrival of the President. Miramon reached the capital on the 26th; disapproved of the acts of Robles, arrested the prisoners who had been liberated, and even reinstated Zuloaga. The latter, however, abdicated in favor of Miramon, who accepted the office, and set out at once for Vera Cruz at the head of 5000 men, leaving Zuloaga at the capital to act as President *ad interim*.

A bloodless revolution has taken place in *Hayti*. On the 22d of December General Geffrard entered the small town of Gonaives, accompanied by five persons; pronounced against the Emperor, and proclaimed the Republic, of which he was named President. He was joined by the few troops at that port, and started for Port-au-Prince to meet Soulouque. The Emperor set out to encounter the enemy, but finding his troops deserting he returned to the capital, where he was shut up by Geffrard, whose forces were continually increased by desertions from Soulouque. At length, on the 15th of January, Geffrard entered the city without opposition. The Emperor, with his ministers, by the assistance of Geffrard, took shelter with the French consul. A formal act of abdication was drawn up and signed by him, and the Republic was solemnly proclaimed. The life of the ex-Emperor being threatened by a mob who surrounded the consulate, Geffrard gave orders that he should leave the country. When the troubles first broke out the foreign consuls had sent out a vessel to look for some ship of war to protect the Europeans resident in Port-au-Prince. They fell in with the British transport *Melbourne*, bound from Jamaica to England, with 400 or 500 soldiers on board. The captain consented to put in at Port-au-Prince, and reached there before the abdication of Soulouque. He agreed to convey the fallen monarch to Jamaica. With some difficulty Soulouque and his ministers were safely convoyed to the vessel, which then set sail for Kingston, where they arrived on the 22d of January.

EUROPE.

The recent advices from Europe indicate the probability of hostilities between Austria and Sardinia, which it is apprehended may involve a general war. Throughout Italy the opposition to Austrian domination gains strength daily, and Sardinia is looked upon as the champion of the popular cause. The speech of the King on the opening of the Chambers, cautiously alluding to the impending difficulties, was warmly applauded. "The horizon in which the new year arises," said his Majesty, "is not perfectly serene. Relying upon the experience of the past, we shall meet the eventualities of the future with resolution. Our country, though small in extent, has acquired credit in the councils of Europe, because it is great with regard to the ideas which it represents and the sympathy it inspires. This condition is not free from danger, since, while we respect treaties, we are not insensible to the cry of grief which reaches us from many parts of Italy. Strong in concord, and confiding in our rights, we shall await the decrees of Divine Providence with prudence and resolution."—M. Rattazi, the President of the Chambers, in taking his seat, referred to the impending Italian contest, and urged the necessity of harmony and union. "The present situation," said he, "is serious; it calls for the utmost sacrifices on our part. Let us not repeat past errors; let us not once more allow history to stigmatize us as impotent, because we are divided. All Italy now turns her eyes toward our Parliament. She places the fullest confidence in us; she tells us to be united and prudent." In the same spirit is the Address of the Chambers in reply to the Royal speech. "Your voice," says the Address, "influential and respected among all civilized nations, magnanimously expressing pity for the woes of Italy, will certainly revive the memory of the solemn promises that have as yet remained without fulfillment. The nation which looks upon you as the powerful interceder with the various European courts for the cause of liberty, which knows that in you, and by you, at last has been found the secret—lost for so many centuries—of Italian concord, will to a man range themselves round your person, and show that they have learned the ancient art of uniting the obedience of the soldier to the liberty of the citizen." Austria meets these threats of an Italian union by largely strengthening her armies, notwithstanding which numerous petty outbreaks manifest the popular hatred of the German rule. The most important feature in the present state of things is the intention apparently manifested by the Emperor Napoleon to take sides with Sardinia against Austria. This is signified by a marriage which has just been arranged between Prince Napoleon and the Princess Clotilda, daughter of the King of Sardinia. A few words addressed at the public reception on New-Year's Day by the Emperor to the Austrian Embassador confirmed the general opinion as to the critical relations between the two empires. "I regret," said Napoleon to the Austrian Embassador, "that our relations with your Government are not as good as they formerly were." These few words occasioned an alarming fall in the French, English, and Austrian funds.

In *Spain* great indignation was excited by that portion of the Message of the President of the United States relating to the proposed negotiations for the acquisition of Cuba. In the Chamber of Deputies M. Ulloa asked whether the Government intended to reply to the Message of Mr. Buchanan, which included a paragraph on the subject of annexing Cuba to the United States, which contained a grave insult to the Spanish nation. Marshal O'Donnell, in reply, said that the Government was disposed to demand satisfaction for such an insult. Spain was now in an era of development and restoration; if not great enough to menace, it was nevertheless strong enough to defend the integrity of the monarchy, and to preserve the dignity of the Spanish name. In whatever circumstances the Spanish nation may find itself, it would never be insensible to its honor; and would never abandon the smallest portion of its territory; and any proposition having that tendency would always be considered an insult to the Spanish people. While they would never be aggressive, and never aspire to denominate, they would never allow any encroachment to be made upon the dominions left to them by their fathers. This speech was received with applause; and M. Olozaga, in his own name, and in that of other members of different parties, proposed a resolution declaring that the Cortes had received with satisfaction the declaration of the Minister of Foreign Affairs, and would give the Government its constant support, in order to maintain the integrity of the Spanish dominions. This resolution was unanimously adopted, and was ordered to be inscribed in the archives.

The British Parliament convened on the 3d of February. The Queen, in her speech, says that, in respect to Mexico, forbearance has been carried to the utmost extent for injuries inflicted by both contending parties upon British subjects; and the naval commander upon that station has been instructed to demand, and if necessary to enforce, reparation.——Henry Hallam, the historian, died January 22d, at the age of eighty-one. His published works are: "The Constitutional History of England," "The History of Europe during the Middle Ages," and "An Introduction to the Literary History of Europe." He was also for many years a contributor to the *Edinburgh Review*.

Literary Notices.

The Life and Remains of Douglas Jerrold, by his son, Blanchard Jerrold. (Published by Ticknor and Fields.) The life of Douglas Jerrold presents but scanty materials for the pen of the biographer. During the early part of his career, while engaged in a desperate struggle for literary success, he had few points of contact with the public; and after his earnest, caustic, and aggressive spirit had raised him to a prominent rank in British journalism, he had little personal connection with the events on which he was wont to comment, with such pungent vigor, from his retreat at Putney. A considerable portion of this volume, accordingly, is devoted to an account of Jerrold's literary productions, which have less interest for the majority of readers than the incidents which, in ordinary cases, take their coloring from the current of actual life. The work, moreover, is written in too apologetic a strain, with numerous superfluous allusions to charges against Jerrold's character, and a pervading desire to substitute the aspect in which he appeared to his family and intimate friends for the more repulsive one which he often exhibited in the rude collisions of debate and intellectual differences. Douglas Jerrold certainly had little of the angelic in his composition. He was not only intensely human all over, but was more strongly tinctured with the old Adam than most men; very decided in his opinions, he was equally incisive in the expression of them; he could ill brook contradiction; with a tender kindness to his dog, his horse, his cat—in fact, to every member of the animal creation—he was sardonic and unsparing in his intercourse with men; and if he ever refrained from his joke through regard to the feelings of another, it was because such habitual cynicism as his could not always be sustained. His son has only followed a natural sentiment in wishing to place the memory of his father in the fairest light. His attempt would have been more effective, however, if he had admitted the quills and bristles which formed a part of his nature, and shown that beneath them all (as was the case) there beat a manly and generous heart. Douglas Jerrold is not to be judged merely by the red and angry spots that were visible on the surface. In many of the nobler qualities of a man, on a large scale, he had few equals. His transparent sincerity, his brave earnestness, his truthfulness to his convictions, and his scorn of every species of pretension, affectation, and hypocrisy, amply redeem his character from the reproaches of those who see in him only a specimen of soured and cankered ill-nature.

The picture of his domestic life, as here drawn by his biographer, presents numerous points of interest —some of them, indeed, not a little attractive. His suburban residence was an old country-house, buried in trees, and affording glimpses of a broad common, tufted with purple heather and yellow gorse. Here you would see him, on a bright summer morning, sauntering forth about eight o'clock, perhaps paying a visit before breakfast to a tribe of gipsies encamped beneath the neighboring elms. A little spare figure, with a stoop, wearing a short shooting-jacket, and the throat quite open, without collar or cravat, and crowned with a straw hat, pushes through the gate of the cottage, and goes, with short, quick steps, over the common, assisted by a stout stick. A little black and tan terrier follows, and every now and then rolls over the grass, in reply to a cheery word from its master. The gipsy encampment is reached, and after a chat and a laugh with his dusky friends, he returns to breakfast. The frugal repast is a pitcher of cold new milk, some toast, bacon, water-cresses, with perhaps a few strawberries that have been found in the garden. After the morning papers, which are invariably read and talked about at the table, the author retires to his study. This is a cozy place, where one might easily forget the tumult of the world. All about it are books. Milton and Shakspeare crown the shelves. A bit of Shakspeare's mulberry-tree lies upon the mantle-piece. The walls are hung with one or two pictures by Wilkie, and a few favorite engravings. The furniture is simple, solid oak. Not a speck is to be seen on the writing-desk. The marble shell on which the inkstand rests has no litter in it. Various notes lie in a row, between clips, on the table. The paper basket stands near the arm-chair for answered letters and rejected contributions. The little dog follows his master into the study, and lies at his feet. Soon the work of composition begins to glow. If it be a comedy, you see the author walking rapidly up and down the room, talking wildly to himself; if *Punch*, you shall hear him laugh presently as he hits on something droll. Suddenly the pen is thrown down, and the author passes through a little conservatory into the garden, where he will talk to the gardener, or watch the careful steps of the little terrier among the gooseberry bushes, and nibble a hawthorn leaf which he has plucked as he goes thinking down the side-walks. Again hard at work in the study. The thought has come; and, in letters smaller than the type in which they are to be set, down it goes on the little blue slips of paper which have been neatly prepared for its reception. A simple crust of bread and a glass of wine are brought in by a kind female hand, but no word is spoken; and the hand speedily disappears. The work goes rapidly on, and at last suddenly halts. The pen is dashed aside; a few brief letters are written and sent to the post; and away once more into the garden. The fowls and pigeons are noticed; a visit is paid to the horse and cow; then another long turn round the lawn; and at last a seat, with a quaint old volume, in the tent under the mulberry-tree. Friends, without fail, drop in and join Jerrold in his tent. Only cottage fare, but a hearty welcome to dinner. They talk about the book in hand. It may be Rabelais, or perhaps Jeremy Taylor; not improbably one of Jean Paul's rich fantastic creations, or a volume of the stately Sir Thomas Browne. The host loves to show his visitors the beauties and conveniences of his cottage. He gives a glowing account of the fruitfulness of the mulberry-tree, and does not forget the merits of the asparagus bed. Sometimes he will be carried away by his enthusiasm as the sun goes down; and will be seen, still in his straw hat, watering the geraniums or clearing the flies from the roses. Dinner, if there be no visitors, will be at four. In the summer a cold quarter of lamb and salad and a raspberry tart, with a little French wine and a cigar in the tent. Then a nap of forty winks on the great sofa in the study; another long stroll over the lawn; and the tea is prepared in the tent. Over the tea-table jokes of all kinds, as at dinner. No friend who may happen to drop in now will make any difference in the circle.

In his personal habits Jerrold was a wonder of helplessness. He could never draw a straight line, nor play any game that required manual skill. He

could never dance a step, nor master a single figure of a quadrille. He could not carve the plainest joint, nor ride a horse, nor draw a cork. He never brushed his hat; never opened a drawer to find a collar; never knew where he had put his stick. His toilet was usually performed with his back to the glass. He had a decided weakness for any newly-invented strop or razor, for patent cork-screws, coffee-pots, match-boxes, knives, and lamps. If he saw something new, he must have it instantly; but if the thing did not succeed in the first trial, it was cast aside forever.

The biographer gives a touching description of the last hours of his father. Jerrold had betrayed some symptoms that excited apprehension in the spring of 1857, but it was not until the 1st of June that he was seized with the fatal attack. The previous day, although complaining of indisposition, he was at a dinner party given by Mr. Russell, the narrator of the Crimean war, in company with Mr. Dickens and several other friends. On the morning of June 1 he was unable to rise from his bed; his heart was evidently affected, but not to the extent that excited great alarm. On the following day he was, perhaps, a little weaker, but not worse, and made preparation for his journal as usual. Each day, however, his case became more critical, and it was at length evident that his work on earth was done. The morning of June 8 brought one of the loveliest summer days, but the hand of death was on the sufferer. At about ten o'clock he spoke for the last time; and in a moment, without a struggle, he fell into his long rest with a smile upon his face. That moment softened the remembrance of ancient animosities. Old friends came and knelt at the bedside, and kissed the hand as it hung, still warm, over it. His remains were deposited near those of his dear friend, Laman Blanchard, and he was followed to the grave by several of the most distinguished of his literary contemporaries.

Harper and Brothers have published the seventh volume of Miss STRICKLAND'S *Lives of the Queens of Scotland*, containing the completion of Mary, Queen of Scots, and presenting an eloquent defense of the beautiful and unfortunate Princess. In point of variety of incident and vivacity of style this volume compares favorably with either of its predecessors.

The Old Plantation, by JAMES HUNGERFORD. (Published by Harper and Brothers.) The scene of this story is laid in the southern part of Maryland, and comprises incidents that occurred at the distance of about a quarter of a century. Although founded on local and even personal circumstances, the writer has given to his narrative a certain spicy freshness which can not fail to interest the general reader in its perusal. The slight plot which serves to connect the varying incidents in a comprehensive unity is well managed; but the chief attraction of the volume consists in the liveliness of its descriptions, which are not only animated and picturesque, but evidently true to nature. The narrative is occasionally diversified by a vein of reflection, showing the aptitude of the writer for the more serious exercises of the intellect, as well as for the portraiture of living manners and external nature.

The Laird of Norlaw is a reprint of an admirable Scottish novel, by the popular author of "Margaret Maitland," marked by a touching religious pathos, and a fine sense of the lights and shades of character. (Published by Harper and Brothers.)

Fankwei; or, The "San Jacinto" in the Seas of India, China, and Japan, by WILLIAM MAXWELL WOOD. (Published by Harper and Brothers.) The veteran surgeon of the United States fleet composing the expedition to Siam in 1855 here presents an interesting record of his experience in the waters of the East. His volume contains several graphic episodes illustrative of life on board ship—that inexhaustible theme, which, however hackneyed, is never finished—together with a great amount of information concerning the manners and customs, political condition, and religious ideas of the remote regions to which his official capacity gave him intimate access. He writes in a style which has not the least trace of affectation, but bears the impress of a decided individuality, showing the resolute thinker and observer rather than the experienced author. In addition to the topics which naturally fall within the compass of his narrative, Dr. Wood presents numerous comments on the naval discipline and traditions with which many years have made him familiar. They are brought forward with a certain sailor-like frankness, and are adapted to awaken attention, though they may not secure conviction. Their general bearing is to show that the American navy is too exclusively moulded on the model of the British, instead of receiving its character from the spirit of our own institutions.

Episodes of French History, by Miss PARDOE. (Published by Harper and Brothers.) The Consulate and the First Empire are the periods of which this entertaining volume presents a series of piquant illustrations. We certainly should be unwilling to vouch for their historical correctness, nor do we understand the author to put in strong claims on that score; but as agreeable selections from the romance of history, brilliantly colored by the embellishments of imagination, they will be read with interest by the lovers of lively narrative. Among the scenes which are brought before the reader are Josephine and Bonaparte at Malmaison, Madame Tallien and the First Consul, an incident in the Life of Bernadotte, and several others, which are even more marvelous than ordinary fiction.

European Life, Legend, and Landscape, by an ARTIST. (Published by J. Challen and Son.) The European experiences of a young American artist, who withholds his name from the public, are given in this agreeable volume. Without making any positive addition to the stores of information imparted by previous tourists, it presents a lively narrative of passing events and attractive scenes, and is evidently the production of an observing and accomplished mind.

The Pioneers, by J. FENIMORE COOPER (published by W. A. Townsend and Co.), is the first volume of the elegant new edition of the great American novelist some time since announced by the publishers. It is illustrated by a variety of steel and wood engravings of designs from the pencil of Darley, and executed in the most admirable style of that eminent artist. The typography and binding are in excellent taste, although the proof-reader has evidently nodded over his responsible task.

Curiosities of Natural History, by FRANCIS T. BUCKLAND. (Published by Rudd and Carleton.) A very readable volume, giving a popular description of some of the curious facts in the animal kingdom. The author is a son of the late celebrated Dr. Buckland, which is a good voucher for the accuracy of his knowledge; although, for the most part, he abstains from the technicalities of the subject, and confines himself to those aspects which are open to common observation and of universal interest.

Editor's Table.

OFF the Southern coast of the United States, about one hundred and thirty miles from Cape Sable, the southernmost headland of Florida, about one hundred miles from Cape Catoche, the most projecting point of the opposing Peninsula of Yucatan, right athwart the mouth of the Gulf of Mexico, commanding the Mississippi River, the entrance to the Gulf, and a thousand miles of American coast, lies the rich, fertile, and beautiful Island of CUBA.

Its length is about seven hundred miles, its average breadth about forty. Its area, with the adjacent islands immediately dependent on it, amounts to 47,278 square miles. The State of New York contains 47,000 square miles; Pennsylvania, 46,000; Mississippi, 47,156. So that the Island of Cuba, with its dependencies, is as large as New York, Pennsylvania, or Mississippi.*

Situated between the nineteenth and the twenty-third parallels of latitude, the climate and products of Cuba are tropical. Its staples are sugar, coffee, and tobacco.

Its trade is very considerable. In 1855 the importations into the Island of Cuba were $31,216,000; the exports $34,803,000.

The population of the island, according to a calculation based on the census of 1850, is now about 1,586,000; of which 742,000 are white, 263,000 free colored, and 581,000 slaves.

But it is not worth while to present very elaborately the statistics in regard to Cuba here. That branch of the matter is quite exhausted by the late reports of Mr. Slidell and Mr. Branch.

Cuba—discovered by Columbus, in 1492—is now, with the neighboring island of Porto Rico, all that remains to Spain of her colonial possessions—all that is left of the transatlantic portion of that vast empire on which the sun was said never to set. Of Mexico, Central America, or Guatemala, New Granada, Peru, Chili, not a rood is left her. All of her once immense American possessions that she can call her own are Cuba and Porto Rico.

The decline of Spanish power on this continent has been coincident with the majestic growth of the Union; and for more than thirty years the expediency of the acquisition of Cuba by the United States has been discussed by the statesmen, the public prints, and the people of this country. Often pushed into the back-ground by matters of more pressing moment, it has never been lost sight of. With the steady increase of our empire the question has steadily acquired more and more prominence; and now, upon the project to place a fund of thirty millions in the hands of the President for the distinct purpose of purchasing the island, the subject is presented to the consideration of the country with more force and urgency than ever.

It is worth while, then, carefully to examine the matter of the acquisition of the Island of Cuba, with reference to its expediency, and also as to the means of accomplishing the object. We propose to do this with a single eye to what we suppose to be the permanent interests of the country, without any reference to the wants or necessities of any political party. The question of Cuba—and so it is as to all questions connected with the extension of our empire—has an interest above and beyond all party contrivances or political exigencies. The question is now thirty years old; it will be older before it is settled. It may be temporarily affected, one way or the other, while we write, by some European disturbance or some domestic vote. But it will ultimately be determined on great general principles; and so believing, we shall, as we have said, look at the matter solely as one of prominent and permanent American interest.

And in doing this we may as well say at once that we throw wholly out of view all topics connected with the question of slavery. Some individuals or portions of the country may desire the acquisition of Cuba because they hope and believe that such an event would put a stop to the slave-trade. Some may desire it, others dread it, because they think it would strengthen the institution of slavery. We leave these and all kindred considerations out of view. We do this certainly from no indifference, no blindness to the great interests, moral and industrial, involved in every thing connected with slavery, but for widely opposite reasons.

In the first place, no possible good can be effected by it. There are some questions which should never be drawn into the political vortex. Religion is one of these; temperance another; we believe slavery another. We see no result from twenty years' discussion of slavery except domestic disturbance, ill-temper, sectional jealousy, and general alienation.

In the second place, it is quite clear that we do not yet know enough of the laws which govern the relations of slavery to say what, in this aspect, will be the effect of the annexation of Cuba. The question of slavery must ultimately be decided by natural and economical laws; but before that period can be reached it is evident that great additions are to be made to our stores of knowledge, experience, and wisdom.

The subject of slavery on the continent of Europe, unconnected with any difference of color or marked physical difference of any kind, unaffected by the fact or the belief of intellectual superiority or inferiority, is comparatively easy of solution. The process of emancipation and amalgamation of the sovereign and the subject races goes on there slowly but steadily. It has been in operation for centuries. We see it now being wrought out under our eyes in Russia. But in those countries, where slavery or subjection is connected with difference of color and other marked physical dissimilarities, where there is an actual or asserted intellectual inferiority, the problems of slavery—in other words, the relation of the dominant and the subject races, their relative rights and duties—are infinitely more perplexing. Of this we have abundant proofs every where. The Sepoy mutiny—that great blot on the administrative skill and intelligence of England—redeemed in part by a grand display of what brave men and courageous women can do, the condition of Spanish America, Hayti, and Jamaica, the French St. Regis contract, the trade in Coolies, all show that this vast subject is as yet but little understood, and that its results can be but dimly foreseen—all show that it is wisest, so far as political and party combinations are concerned, to leave these great questions—where, indeed, after all our fretting and fuming, we must leave them—to the ruling of the Superintending Power who shapes our

* There seems to be some discrepancy about the superficies of the island. Turnbull, in his "Cuba," published in 1840, p. 241, puts it at 32,807. "Cuba and the Cubans," published at New York, in 1850 (p. 203), makes it 64,000 square miles. We have taken the intermediate sum of 47,278 from Colton's Atlas, published in 1857. The State of Maine contains 31,766 square miles; so that, on the lowest computation, Cuba is larger than the State of Maine.

ends, rough hew them as we will—to the superintending guidance of a great First Cause infinitely wiser than a myriad party mountebanks and quack-salving politicians.

We propose, then, to inquire what are the reasons that should prompt us to desire the annexation of Cuba—the force of the objections presented to the measure—and, finally, the means best calculated to secure the object.

The first reason that points to the acquisition of Cuba is obviously the intrinsic value and the great resources of the island. If Cuba were a sand-bank, if it were a rock, the case would be very different. But the island is one of the jewels of the earth. It is the "gem of the Antilles." All testimony concurs as to the fertility of its soil—the loveliness of its climate—its immense capacities if properly developed. Its staples—coffee, raised nowhere in the Union, sugar and tobacco, produced very partially—may be said to be all absolute additions to the wealth of the United States.

On the other side, an open commerce with Cuba would furnish a large and prosperous outlet to many branches of American manufacture; and under a system of easy and unrestricted intercourse its delightful climate would afford a welcome escape from the rigorous cold and chilling fogs of the winters of the Northern States. That Cuba would be an immense positive addition to the wealth and resources of the United States can not be doubted; and that, in an industrial point of view, it would be more to the United States than it ever can be to Spain is as little to be questioned. It is not now to be argued that the American policy of stimulating individual enterprise has an effect on the development of national wealth and material resources such as no other country can pretend to.

The military importance of Cuba can not be overrated. Havana is within half a day's steaming from Cape Sable, the southern point of Florida, and within two days and a half of the city of New Orleans. Its ports are numerous. Havana itself is one of the safest, best defended, and largest harbors in the world; and Havana is only one of a score of deep and capacious bays where the navies of the world might ride in safety.

The island of Cuba in the hands of Spain is regarded by us with comparative indifference. We know the weakness of Spain; a nation without a navy or pecuniary resources can make little injurious use of the most formidable position. But Cuba is susceptible, in the hands of a strong power, of being an infinite annoyance to the United States. Gibraltar in the hands of England is not near so great an irritation to Spain, not near so great a clog and embarrassment upon her commercial, military, and naval movements, as would Cuba be to us in the hands of a strong foreign power. We all know how a great naval strong-hold is regarded. The only real success of the allies in the late war was the destruction of Sebastopol; and they thought themselves well rewarded for a two years' deadly struggle by that achievement. It certainly is not too much to say that this country would view with unmixed aversion and alarm the possession of Cuba by any great European power, and that its occupation by England would be regarded by us as an event to be prevented at any cost. So said, substantially, President Adams, more than thirty years ago: "The convulsions to which the islands of Cuba and Porto Rico, from the peculiar composition of their population, would be liable in the event of an invasion (by Mexico and Colombia), and the danger therefrom resulting of their falling ultimately into the hands of some European power other than Spain, will not admit of our looking at the consequences to which the Congress of Panama might lead with indifference." From that time down to the masterly letter of Mr. Everett to M. de Sartiges, the language of this country has been uniform. "It has always been declared to Spain," writes Mr. Webster to M. de Sartiges in April, 1852, "that the government of the United States could not be expected to acquiesce in the cession of Cuba to a European power." The acquisition of Cuba by the United States would put an end to all apprehension of this event.

But, says the lover of *statu quo*, where is the apprehension—what is the danger?

And we fully admit the pertinency of the question. If it can be fairly established that Cuba is likely, for any considerable period, to remain in the tranquil and undisturbed power of Spain, we should regard the present agitation of the question as unnecessary and ill-advised.

Let us see, then, if the possession of Cuba by a great European power is an event reasonably to be apprehended or not. What are the facts? What has been the history of Cuba? What the history of Spain?

The facts in regard to Cuba are these: that ever since the island was taken possession of by Spain it has been the object of the repeated attacks of both England and France; that the Spanish possession has been in the highest degree precarious; and that nothing but their jealousy of each other has prevented one or the other of the great naval powers obtaining it before this time. In 1538 Havana was attacked and burned to the ground by the French. In 1655 Jamaica, originally belonging, like Cuba, to Spain, was taken by the English, and has been theirs ever since. In 1762 England sent out an expedition under Lord Albemarle for the express purpose of taking Cuba, and effected her object after a short, well-fought conflict; that Cuba is not English now is owing only to the fact that she was obliged to surrender it. She retained the possession of the island till the next year, 1763, when, in the general peace, she was obliged to disgorge. She might well afford to, for in the Seven Years' War she had stripped France of all her possessions on this continent. In 1807 the French attacked the island without success. On the 4th March, 1808, Charles IV. made a formal cession to Napoleon of Spain and the Indies—of all the possessions of Spain in either continent; but Napoleon, having been swept off the ocean at Trafalgar, could make nothing of the transatlantic part of the gift, and Wellington canceled the remainder.

So the fact is, as regards the past, that, within a trifle over a hundred years, the Island of Cuba has actually belonged, either by conquest or cession, to both England and France. It is abundantly apparent that nothing but their respective inability to retain it has prevented Cuba ere this from being either an English or a French colony. Now what we say is this: taking into consideration the incapacity of Spain, and the close struggle going on in Europe for the mastery, the tremendous passions there at work, the total uncertainty of the future of the continent, the formidable growth of this country, and the greatly increased importance of Cuba in the eyes of the world, no reasonable man can doubt that the very first war in which Spain finds herself involved with any European power she will lose Cuba, unless she can find some ally strong enough to keep

it for her. And what reason is there to suppose that Spain will be able forever to keep the peace? England has been three times at war with Spain within one century—in 1762, again in 1780, and again in 1804; and if England is at war with her again it may be considered absolutely certain that one of her first acts would be to take possession of Cuba.

Look at the history of Spain for the last half century, and see how incapable she is to maintain herself in the great European struggle. To understand the question of Cuba, it is necessary to know well the history of Spain.*

When, in 1814, after the downfall of Napoleon, Ferdinand VII. returned from his prison at Valençay, and regardless of the wishes of the people, as proclaimed by the Cortes in the Constitution of 1812, undertook to re-establish an absolute government pure and simple, the condition of the country, exhausted by the great Peninsular struggle, was in every respect most lamentable. It was a dreadful picture of beggary and anarchy.

After a few years of convulsive life—if life it could be called, alternating with military conspiracies and insurrections, in which the rickety machine of Bourbonian despotism proved entirely insufficient to preserve order, to restore credit, or to give the unhappy country any thing which it wanted—Riego, in 1820, raised the standard of insurrection, Abisbal (O'Donnell) deserted the King, the Constitution of 1812 was proclaimed, and the Cortes convened.

Then followed three disastrous years of wrangling in the Cortes; armies of the Faith fighting against the ministers of the sovereign they pretended to adore; perpetual and universal disturbances; Mina on one side, Torrijos on the other; revolts and insurrections every where, till the French interfered with a strong arm; the foolish old Duke of Angoulême performed the farce of the Trocadero; and the Constitution was quenched in the blood of Riego.

Absolute power resumed the sceptre, but with no better success than before. Military commissions were varied with guerrilla risings, and the first Carlist insurrections took place. For ten years, till the King's death, anarchy substantial prevailed. The finances were ruined; the population impoverished; commerce prostrate; the priesthood absolute. "Nothing," said a pasquinade of 1826—"nothing is wanting to thy happiness, my dear country! Thou hast monks and locusts, the police, ports without ships, troops without breeches, a brilliant priesthood, high roads infested by banditti, and an exhausted treasury!" Bands of insurgents prowled about. The country was overwhelmed in debt. A dreadful insurrection took place in Catalonia. The future was rendered dark by the intrigues of the Carlists; and so, in 1833, Ferdinand VII. closed his reign—exhibiting one of the most extraordinary spectacles that the world has ever seen—confusion within, impotence without, debt, disturbance, convulsion on every side.

The effect of the last act of Ferdinand VII., by abolishing the Salic law and placing his daughter Isabella on the throne, was to produce a seven years' civil war, after his death, for the country which he had so well governed during his life. Obedient to his call, the demons of internecine strife appeared. The country was divided into two hostile camps—one embracing the adherents of the excellent Queen Mother Christine, and her daughter, the *Innocente Isabel;* the other of Don Carlos, or Charles V. as he was called—and then ensued the most infernal state of things that has been seen in Europe since the Middle Ages. What with the gentle shepherd Jauregui (he went by the name of El Pastor), Zumalacarregui, Mina, and their adherents, the whole country was a scene of savage bloodshed. Prisoners were put to death in cold blood; villages were first decimated by shooting every fifth man, and then burned. It seemed, really, as if hell were let loose. And, amidst all this infernal uproar, a new Constitution was proclaimed, and in July, 1834, peers and deputies met, surrounded by military revolts at Madrid, Malaga, and Saragossa, to inaugurate a new era. For seven years the Carlist war continued, until it fairly wore itself out; and, in 1840, Spain found a master in the Duke de la Victoria. In 1843 he gave way to Narvaez, and took refuge in flight. In 1845 a new Constitution was proclaimed. In 1846 Europe was convulsed by the disgraceful business of the marriages of the Queen and her sister; and from that time to this the history of Spain has been little more than that of rapid ministerial changes, Court intrigue, and royal scandal, varied by Carlist insurrections and local disturbances of more or less serious character. In 1854 Concha and O'Donnell organized a formal resistance to the ministry of the Conde San Luis; the battle of Vivalcaro was fought, the houses of the members sacked, the streets of Madrid barricaded, Christina banished, Espartero placed at the head of the Government, and O'Donnell made Marshal. On the heels of this revolution a new Constitution, that of 1855, followed. From this time "the two Consuls," Espartero and O'Donnell, divided the power, till July, 1856, when Espartero gave way, and amidst insurrections at Madrid, Barcelona, and Saragossa, a new Constitution, that of 1845, was adopted. Since then the chief contest has been between Narvaez and O'Donnell.

Any one can judge for himself what kind of public opinion, what kind of national force, what kind of improvement are like to have been produced in a country the last generation of which has been passed in scenes like these.

Now, on the other hand, look at the gradual steady diminution of the Spanish empire. Here it is, given by a recent Spanish authority: "In 1565 we gave up the Isle of Malta to the Order of St. John. In 1620 the Lower Navarre and Bearne was yielded to France; and in 1649 the Rousselon. In 1640 we lost Portugal and her colonies. In 1648 we recognized the sovereignty of the Netherlands. In 1626 the English wrested the Barbadoes from us; in 1655, Jamaica; in 1704, Gibraltar; in 1718, the Luccas; in 1759, Dominica; and in 1797, Trinidad. In the seventeenth century France took possession of Martinico, New Granada, Guadaloupe, and the half of the Isle of San Domingo; and in 1800, Louisiana. In the eighteenth century we yielded up Sardinia to the Duke of Savoy, and to Morocco our rights on Mazalquivir and Oran. We ceded Parma, Placencia, and Lucca, with other dominions in the north of Italy, to princes of the House of Bourbon; and in 1759 Naples and Sicily were emancipated from Spanish government. In 1819 we sold Florida to the United States; in 1821 we

* In Salvandy's "Don Alonzo," that curious work, insufferable as a tale but very valuable as a picture of Spanish life, he says: "Distraite par ses alliances et par ses perils, l'Europe n'a point vu ou n'a vu que d'une maniere imparfaite l'ere fatale du faible Charles IV., l'empire patriotique des Cortes de Cadix, l'orageux avenement de Ferdinand VII. et ce qu'a été son regne. C'est la pourtant qu'il faut remonter pour sonder toutes les plaies de l'Espagne, apprecier ses besoins veritables et prevoir ses destinees."

lost our half of the Isle of San Domingo; and before 1825 all the vast continent which our glorious ancestors had acquired was lost to us forever. Of all this immense power we have, as a remembrance of the past, the isles of Cuba and Puerto Rico, the distant Philippines, and our African possessions alone."

Keeping, then, this brief resumé of Spanish history for the last forty years before our eyes, we say, and we challenge any one calling himself a statesman to deny it, that the possession of Cuba by Spain is in the highest degree precarious, and that the reasonable probability, without any regard to the United States, is, that Spain can not retain it another half century. "Can the possession of Cuba by Spain be expected," writes Mr. Everett to M. de Sartiges, in December, 1852, "to last very long? Can Spain resist the mighty current of the affairs of the world?"

Connected with this branch of the subject is the character of the government of Cuba — of colonial government generally, and of Spanish colonial government in particular—and on this, of course, much depends. If Cuba were well governed; if its population were attached to the mother country; if its resources were being steadily developed, of course the actual *statu quo* would be entitled to much more respect, and the claims of Spain to retain its power much greater. In fact it would be an outrage for us to desire, or for Spain to consent to the transfer of a loyal, well-affected population. But how stands the case?

Spanish America was closely studied by a keen-eyed traveler at the beginning of this century, and the record of his observations still remains a monument of his sagacity and rare good sense. Humboldt, then himself the subject of an almost despotic power, and no fanatical lover of liberty, after seeing both Cuba and Mexico, pronounced this judgment on the character of Spanish colonial government: "The want of social life in the Spanish possessions, the hatreds which divide the classes nearest to each other, and in consequence of which colonial life is full of bitterness, come simply from the political principles on which this country has been governed ever since the sixteenth century. . . . . The greater the colony the more distrustful the government. According to the ideas unhappily adopted these distant colonies are considered as the tributaries of Europe. Authority is exercised, not according to the public interest, but as is dictated by the fear of seeing them grow too fast. The mother country looks for its safety to the balance of power produced by civil dissensions; and, by fomenting political enmities, it tries to nourish the spirit of party, and to augment the hatred that is purposely kept up between all classes and the constituted authorities." (Lib. ii., chap. vii.)

In less than ten years from the time that these observations were made by the philosophic German, the causes which he pointed out began to produce their ultimate effect, and within twenty-five years the Spanish yoke was forever thrown off by Mexico, Guatemala, and all her other colonies in South America.

Cuba and Porto Rico alone remain, and all testimony goes to show that the character of colonial rule has not altered. It is substantially the same cold, selfish despotism, governing the island solely with reference to the interest of the mother country, without any honest regard to the welfare of the island itself or the feelings of its people.

"The Peninsular system, as it is called," says Turnbull (p. 171), writing in 1840, "engenders discontent in various ways, and is rapidly preparing the minds of the Creole population for the dissolution of a connection which entails on them heavy burdens without even the show of compensation." Again (p. 11), "In this ill-governed country the happiest combination of capital, enterprise, and skill is not sufficient to insure success in any similar undertaking." (He is speaking of mines.)

Madden, writing about the same period (p. 106), calls it "a crazy despotism, clinging to ignorance as its chief hold on the loyalty of the people."

Turnbull says (p. 340) that it is the settled policy of the Government to keep the whole population dependent, by maintaining in their minds "the wholesome dread of a servile insurrection;" and Madden says (p. 85) that Spain owes her retention of Cuba, ever since 1837, to nothing whatever but this very fear.

But we do not require the testimony of individual witnesses to show the indifference of the mother country to the true interests of Cuba. Take the matter of the pirates. Only a little more than thirty years ago the West Indian seas swarmed with pirates. England did not put them down. Spain did not put them down. It became necessary for the United States to act; and so apparent was the complicity or supineness of the island authorities in the matter, that a bill was actually reported in Congress to blockade the ports of Cuba. "It is not," says Mr. Webster, in a letter to Mr. Barringer, of 26th November, 1851 (Works, vol. vi. p. 514), "for the purpose of reviving unpleasant recollections that her Majesty's Government is reminded that it is not many years since the commerce of the United States suffered severely from pirates and boats and vessels which found refuge and shelter in the ports of the Spanish islands. These violators of the law, these authors of gross violence toward the citizens of this republic, were finally suppressed, not by any effort of the Spanish authorities, but by the activity and vigilance of our navy."

The Spanish Government of Cuba is only kept in existence by a rigid censorship of the press, a considerable navy, and an enormous standing army. The censorship of the press is familiar to all. For more than twenty-five years, long before American filibusters were heard of, Spain has had quartered on the island a force of 25,000 soldiers. France maintains an army of 500,000 to 32,000,000 of people, or one soldier to every sixty-four men; and this is justly called an enormous force. Cuba maintains an army of 25,000 to 1,500,000, or one to every sixty men.

In truth Spain is indebted for her possession of Cuba entirely to the police of America. Repeal our neutrality laws, and it would be impossible for Spain to prevent our people from supplying the disaffected inhabitants of the island with munitions and men sufficient to overthrow the Captain-General in three months.

Nothing seems to be more certain than that the great bulk of the inhabitants of Cuba are totally disaffected to the rule of Spain. "The Creole proprietors," says Turnbull (p. 171), "of the soil of Cuba are weary of the yoke of the mother country." "An ardent desire for independence is entertained by the Creole inhabitants" (p. 349). Madden, writing or publishing in 1849 (p. 84), says: "It is needless for recent political writers of Cuba to deny the existence of a strong feeling of animosity to the mother country, and a longing desire for separation. From my

own intimate knowledge of these facts I speak of their existence. Cuba, ever since I knew it, has been slowly, but steadily, becoming Americanized."

And this, it is to be observed, is not the evidence of witnesses interested against Spain or in favor of the United States. It is the testimony of Englishmen, who have every inducement in the world to put the best face on the present state of things.

And how indeed could it be otherwise? Here is an island governed now on the colonial system of the sixteenth century by a power the most feeble in Europe. She has no representation in the national Legislature. The Governor-General, wielding an all but despotic authority, is uniformly a foreign noble without any deep interest in the island. The officials are generally Spaniards or foreigners. "It is a country," says Mr. Webster (Works, vol. vi. p. 528), in his report on the case of Mr. Thrasher, "where jury trials are not known, where representative government does not exist, where the privilege of the writ of habeas corpus is unheard of, and judicial proceedings in criminal cases are brief and summary." Add to this a restricted press, a large standing army, and a general system of repression. How can it but be odious? And one hundred and fifty miles away is a great free country, full of life and activity, governing itself, dashing on in the career of prosperity, without censors, without an army that can be called one, almost without police of any kind. How can the Cubans otherwise than hate the government of Spain?

Connected with the subject of colonial misgovernment is one fertile source of annoyance and vexation to this country. The intercourse of our people with the island of Cuba is frequent, the annoyances of Spanish officials perpetual, and when these occur reference is always made necessary to Spain. The Governor-General, despotic enough for every other purpose, being directed to pursue this course for delay, and to make redress difficult. Take the case of the *Black Warrior*, and many other instances; a whole cargo ordered to be unladen on account of some wretched formality of the custom-house not being observed, no redress possible on the part of the Governor-General, but a reference ordered to Spain. How is this to be endured?

But if the government of Spain be thrown off, one of only two things can follow—independence or annexation to some other power. Now independence as applied to Cuba is an impossibility. We have had enough of Spanish American Republics. Whether it be something in the blood, or want of training, or the influence of the Catholic Church, or some still more occult cause, certain it is that the Spanish American population in this country is, in its present condition, unfit for self-government. Forty years' experience proves this, and nobody wants to begin again with Cuba.

But a *tertium quid* has been suggested. Is not independence feasible under the guarantee of England and France? This is a pure delusion so far as we are concerned. The guarantee of England or France would be the power of England or France, and as far as our interests are affected, the island might as well be in their possession.

We repeat, then, that taking into view the history of Cuba since its discovery, the history of Spain for the last half century, the fertility and resources of the island, its military importance, its grave misgovernment, the disaffection of its inhabitants, its incapacity for independence, the consequent extreme danger of its soon falling into the hands of some European power, and the annoyances sure to flow perpetually from its occupation as it is at present situated, that it is impossible for the United States to avoid entertaining a fixed and ardent desire for the occupation of Cuba.

And it is to be observed that not one of the dangers or evils which exist at present is likely to diminish with time.

We desire to avoid, in regard to Spain or her people, the use of language which can give just cause of offense. Were we for a moment inclined to the baseness of insulting a gallant nation, the memory of Zaragoza would forbid it:

> "No lanzó en vano
> La invicta Zaragoza el santo grito,
> De vencer o morir, grito tremendo
> Que sobre el trono estremeció al tirano."

But the stern facts of history are not to be gainsayed. This much may with propriety be asserted of Spain: that long civil wars have shaken to its base the whole fabric of her political organization; that three hundred years of despotism have paralyzed the energies of a once vigorous people; that a fanatical and intriguing Church has exercised a pernicious influence on the country; and that the royal house has set no standard of public or private virtue. Though the condition of things is in some respects better, as in fact it is every where in Europe, materially, than it was fifty years ago, still there is no real improvement. Commerce, internal and external, languishes. There is no intellectual activity—railroads hardly exist. The country is rent by the most violent parties, a Pretender openly contests the throne, and the condition of things is in every aspect absolutely precarious. No intelligent Spaniard who loves his country will, we believe, seriously deny any one of these propositions.*

On the other hand, the relative strength of the other great powers has enormously increased. England was never so strong on the water as she is now; France never was more formidable on land or sea, or more disposed to intervene in foreign questions. All Europe is more than ever awake to the progress of this country, more than ever jealous of our gigantic strides.

We repeat, then, that the question of Cuba will every day more and more urgently press itself on this country for a solution until it is definitively settled; it behooves every intelligent man in the Union to examine the question, and to prepare himself to act on it or decide on it as may fall to him in his respective sphere; and to do this, not as a blatant demagogue, nor hack politician, but as an American citizen anxious for the permanent grandeur and prosperity of his country.

We believe that, to a great extent, this has been already done. From Jefferson to Buchanan our chief magistrates of all parties have held but one language. The discussion now going on in Congress will, it is true, give us a more definite test than we have ever yet had of the wishes and feelings of the country. But we apprehend that when the people are consulted, they will be found overwhelmingly in favor of the acquisition of Cuba.

The desire has grown gradually with the growth of the country. It certainly does not originate in

* Those who desire to have a correct idea of the virtues and vices of the Spanish character, will do well carefully to weigh the estimate formed by Napier, the author of the Peninsular War. He knew the country, he viewed it with no unfriendly eye, and his observation was as keen as his language is forcible and expressive.

any unfriendly feeling to Spain. It springs from a correct idea of the real strength of that power, and from a just jealousy of European interference on this continent. As to Spain herself, not only our language but our conduct has been most strictly careful and considerate. We have evinced a steady desire to do nothing to interfere with her rights. "The records of the diplomatic intercourse between the two countries," says Mr. Webster (Letter to Mr. Barringer, 26th November, 1851, Works, vol. vi. p. 514), "will show to her Catholic Majesty's government how sincerely and how steadily the United States have manifested the hope that no political changes might tend to a transfer of these colonies from her Majesty's crown."

The neutrality laws have been enforced, and the fate of Lopez and of Walker shows how little assistance filibustering has received from the United States. Our good faith, in this respect, is conspicuous. Indeed, we believe that there is not a government in Europe that would have so long left so tempting a prize untouched. It certainly is not England, that has planted her standard in every quarter of the globe. It certainly is not France, that has uniformly seized every inch of land on which she could lay her grasp. It is not Austria, with her troops stationed in Milan and Florence. It is not Russia, silently, but steadily, swooping on to the South.

We have still to consider the objections which, independent of those growing out of slavery, are urged against the measure.

The objection that we *can not* buy Cuba, that Cuba is not to be sold, is surely trifling—no one can say any thing about it till we have fairly tried. If one Spanish government will not sell, another may. If an outgoing Cabinet will not do it, an incoming one perhaps will. If the present dynasty refuses, perhaps the Count de Montemolin would assent, and who can say how soon the son of Don Carlos may be on the throne? This much is very clear to any one familiar with Spanish history, that within the last thirty years there have been repeated occasions when Cuba could have been purchased for a very reasonable price, had we been prepared for prompt and energetic action. There is little rashness in saying that such, or similar occasions, will again present themselves—at all events, till the experiment has been tried by a skillful employment of all the means in our power, to predict its failure is un-American and irrational.

The objection that the effort to purchase Cuba is an insult to Spain, seems to us singularly unfounded. It is all very well for the restless M. Olazaga to make an outburst on the national honor and the integrity of the territory, and for the Prime Minister, O'Donnell, not to let himself be outdone, and to thunder still louder in reply. We ought to understand that game in this country by this time.

But what is the proposition, and where is the insult that it contains? We say to Spain, you are not as strong by sea or land as England, France, or Russia. It is entirely certain that the next European war which breaks out you will lose Cuba, or if you do not it must be by some dispensation of Providence wholly irrespective of your own strength. We *can not and will not* see Cuba go into the hands of England, France, or Russia. Now we offer you for the island more than it can be possibly worth to you; we do it in the most respectful and friendly way; we should be perfectly willing to leave Cuba in your hands indefinitely, but we know that can not be. Pray, where is the insult either in language or idea? Is it any insult to Marshal O'Donnell or to his country, to tell him that Spain is not so strong a naval power as England? The idea of an insult in the case appears to us very childish. Of course Spain has a clear indefeasible right to refuse. If so, all parties stand on their naked abstract rights, and the question, whether we desire it or not, will probably have to be decided by the dread arbitrament of war. These contingencies Spain is at perfect liberty to take; but she has no right whatever to pretend that an offer to buy one of her islands is an insult.

We pass to more solid considerations.

It is objected that Cuba is an island somewhat distant from our shores—that its population is Spanish—and that its government by us will present difficulties. We fully admit it. We have no doubt that the acquisition of Cuba will present new problems and serious difficulties. All power is followed by responsibility. And if the alternative were real Cuban independence or tranquil Spanish possession we might think these arguments against its acquisition very strong, perhaps conclusive. Cuba independent would not be so strong as to be dangerous. Cuba well-governed would be almost as useful to us as if it were a part of the Union. But we have no belief in the possibility of any such a state of things—nobody believes it. We do not think there is a statesman alive, European or American, who will stake his reputation on a prediction that Cuba could remain independent ten years, or that it will belong to Spain twenty-five; and the question for the American people, therefore, is to determine whether they will use every fair and honorable means to acquire her, or make up their minds calmly to look on and see her all of a sudden occupied by some European power. We are well satisfied that they will certainly not do this last. It is wiser, then, to meet and avert the evil. In regard to this branch of the subject, too, it is to be observed, that the moment Cuba is an integral part of the United States the same process that has taken place in Louisiana would be repeated. A stream of Americans would pour in, and we know by long experience how small a nucleus of our people, trained to self-government, is necessary to set the republican machine going and to keep it in order.

The next objection to the acquisition of Cuba is, that we do not require it. The Union is large enough. "I have always wished," said Mr. Webster, in his speech on the admission of Texas, in 1845, "that this country should exhibit to the nations of the earth the example of a great, rich, and powerful republic, which is not possessed by a spirit of aggrandizement." "My opinion has been," said he, again, in his great speech of 7th March, 1850, "that we have territory enough, and that we should follow the Spartan maxim, 'Improve and adorn what you have. Seek no further.'" This has been the language and policy of a class of statesmen in this country, who, in regard to Louisiana, to Florida, to Texas, to California, have been actuated by the same motives, and adhered to the same line of conduct. That they belong to the names of which America is proud who shall deny; and yet who now will advocate these notions? The truth is, that they have been urged by members of a minority, unoppressed by the responsibilities of power, and, like all minorities, seeking grounds for attack. We have not the slightest belief that Mr. Webster, as President of the United States, would ever have uttered the words, "Improve and adorn what you have. Seek no further!"

For how impracticable is the idea! how contrary to the history of nations! to the genius of man! What vigorous individual, in the full career of success, halts, and folds his arms contented with what he has achieved if any thing yet remains to be attained? Tell the statesman to be satisfied with the diplomatic post or the prime minister's seat, and not to aspire to the curule chair. Tell the colonel to sheath his sword, and not wish to be a general. Tell Scott to rest satisfied with the fame of Ivanhoe. Tell Shakspeare to pause with the Tempest. Tell the man of commerce to be contented with his million, and not seek to double it. One and all laugh your advice to scorn; the genius that impelled them to the point at which they have arrived still urges them on; not till the physical power fails, not till the eye grows dull and the strength gives out, does the active man cease his unflinching labors.

And of the active, eager, ambitious, intrepid men is the active, eager, ambitious, intrepid nation composed—urged on by the same passions, impelled by the same desires. "The law of progress," says Mr. Everett, "is as organic and vital in the youth of States as of individual men." Look at the history of nations. Did the Romans cease to advance so long as they had power to do so? Where is there a scintilla of proof that England is content with her acquisitions? Has France yet begun to "Improve, adorn, and seek no further?" The idea is a sheer fallacy; we must be a great nation or a little one; we must advance or we must recede. We can not escape the destiny of our position. Perhaps it might be well, if it were possible, to pause in our impetuous career. Perhaps wealth and population would accumulate more rapidly in our large cities, agriculture in the old States would advance more steadily, their rural districts become more populous; but it is a vain expectation. Go tell the hardy Yankee boy to be patient amidst the snow and frost of Litchfield or of Becket Hills; "to improve and adorn, to seek no further." He smiles on you superior, nay, while you are speaking he is on his way to Chicago, to St. Paul's, to San Francisco; and so it happens that at this moment, and at any time for the last fifty years, has New England been denuded of all the active young men of each generation.

The same process is going on at the South and Southwest; and while Mexico is crumbling to pieces beneath her miserable rulers—while Central America is a stumbling-block and a stone of offense in the very path not only of our progress but of our communications—while Cuba, misgoverned and liable at any moment to fall a prey to European ambition, is within half a day's sail of our coasts—so long the territorial progress of America is a law of our existence; nothing but anarchy, or intestine divisions as bad as anarchy, can prevent it.

Another adverse argument is founded on the opposition of the European powers. This objection does not, in the present case, seem very formidable. We do not at all underrate the strength or the weight of those powers. If this country were to embark in any mad, immoral scheme of conquest, and Europe were formally to threaten opposition, we should consider the matter very serious indeed. We leave the part of Bobadil to our Congressional heroes—we have not the slightest idea of hanging up our boots before the astonished eyes of Louis Napoleon and the Czar of Russia. But in this case, independently of the fact that, as has been repeatedly said, the question is mainly an American one, and that consequently the European powers have no good right to object to our acquisition of Cuba, there is no evidence whatever that they would do so. The only two powers that can interfere are England and France. As to France, we admit that her purposes may be doubtful. The Government of that country is in the hands of a single man, uncontrolled by any thing but his own views of his own interest. Under such conditions what the individual will do—in other words, what will be his own view of his own interest—no mortal but himself can tell. We assume, therefore, that Louis Napoleon might desire to oppose us in any scheme that we might have for the annexation of Cuba. We are speaking of opposition by force. Now no one believes either that France would really interfere by force alone, or that her single-handed interference would avail much. A naval war with France would doubtless be a respectable struggle, but we do not believe any one thinks it likely we should come off second best.

The real question, the only question is, would England interfere? To this the answer seems to us plain. No war can now be made by England any more than by this country, unless it be popular with the people; and it will be a very difficult matter to make any one who knows England believe that she will go to war with us about Cuba. All her material interests lie directly the other way. They would all be greatly benefited by our acquisition of the island. We see no reason to doubt that England would look either with indifference or with satisfaction on the measure, if properly brought about.

Again, it is objected that the present time is unpropitious. This we believe, logically speaking, the weakest of all objections. In regard to Europe and the contingencies of any operation there, so far as preparation is concerned, no time is unpropitious — all times are propitious. The present, be that present when it may, is the time to be prepared for any future. Nothing can exceed the precarious and uncertain condition of the whole Continent. In France, every thing hangs on the life of Louis Napoleon; out of France, every thing on his impenetrable policy. Nobody knows what an hour may bring forth. The only way to accomplish any thing is to be fully prepared to act at a moment's warning.

And we do not say this with reference to any recent event. We are not alluding to the speech from the Sardinian throne, or to the Olympian nods of the Jove of the Tuileries. We are speaking of what may be called a normal state of things, of the condition of Europe for the last forty years. Ever since 1815 the whole policy of the governing powers of the Continent has been to keep down all liberty, all general intelligence, all activity—except mere material industry—by an enormous armed police. As our Bryant hath it:

> "Oh, ye wild winds! a mightier power than yours
> In chains upon the shore of Europe lies!
> The sceptred throng, whose fetters he endures,
> Watch his mute throes with terror in their eyes;
> And armed warriors all around him stand,
> And as he struggles tighten every band;
> And lift the heavy spear with threatening hand,
> To pierce the victim should he strive to rise."

So it has been now for more than a generation; and experience establishes the fact that this system, however successful it may be considered in the long run, is subject to the most sudden and violent disturbances, which render all prognostications in regard to the future, at any given time or for any given time, absolutely impossible. The

motto, then, for him who desires to do any thing founded on general considerations of European policy, is—if the present moment is unpropitious—simply, "Watch and wait!" "Pray to God, and keep your powder dry!"

We repeat, therefore, that the acquisition of Cuba is not simply desirable, but that it is a matter of national necessity, and that the objections to it are not founded on solid reason. We proceed to consider the means of effecting the end.

In considering the means of annexation filibustering holds the first place, chiefly because it has as yet been the only one efficiently tried. There is no doubt it might be made very effectual. The only practical operation of our neutrality laws is to protect Cuba and Spanish America, and chiefly Cuba. Any time within the last ten years, if the neutrality laws had been repealed, Cuba would have been overrun by a swarm of adventurers from this country. She would, beyond all peradventure, have been long since practically annexed, unless some foreign power had interfered to prevent it—an experiment of very doubtful success. But our Government has held, and rightly held, that this mode of dealing with a civilized state was not to be endured; and since the repeated abortive attempts of Lopez and Walker—rendered abortive by the practical operation and enforcement of our neutrality laws—no one can, with the shadow of reason, pretend that we have discharged the obligations of international law with less than extreme good faith. To this policy we no doubt shall adhere. If ever the time comes when necessity shall compel us, for our own safety, to resort to force, it will be done openly. A declaration of war or its equivalent will be resorted to. Under no circumstances do we believe that filibustering will be tolerated.

No doubt the acquisition of Cuba may become a question of force. No doubt—if there was any serious danger of Cuba falling into the hands of England or France, if the brutal policy of "Africanization" were seriously threatened by the Spanish Government—no doubt armed interference would at once present itself to the consideration of this country; but now the question offers itself in no such aspect. Nothing but impending evils of the most serious character can ever warrant an appeal to the awful arbitrament of war. Nothing short of such evils would induce this people to tolerate it. We put therefore filibustering and war with Spain, for the present, out of view.

It has been suggested that the object could be effected by something short of war. That in case of fresh aggressions on our commerce—in case of another commercial outrage like that of the *Black Warrior*, the United States should seize the island and hold it. This looks plausible enough at first sight; but how is this *coup de main* to be performed? How is Cuba to be seized? It can hardly be grasped like one of her own oranges. Cuba has forts, an army, a navy. To seize Cuba you must take the Moro Castle. This requires a naval force and land forces to back it. It could not be done with a sloop of war or a bomb ketch. In short, an expedition of no small strength would be an indispensable requisition to the operation of *seizing* Cuba. Such an expedition requires time, money, and, probably, Congressional action. How long was the expedition to Paraguay fitting out? And in the mean time the Spanish Government of Cuba would be on the defensive, and the mother country on the alert. In short, to seize Cuba means to make war on Spain, and, like war, is to be put out of view, for the present at all events.

Negotiation alone remains. But *in what way?* And this is the real gist of the case. We have already, in a very feeble way, under Mr. Polk and General Pierce, tried it without success.

We are a constitutional, representative Government; Spain is nominally the same thing. Under such Governments, treaties have to be ratified by popular bodies after they are made; and ratification implies time, discussion, possible rejection—at all events complete publicity. Publicity involves every species of opposition. Time involves all kind of dangers. Those least familiar with the history of our diplomacy know, that, though the great treaty with Spain by which we acquired the Floridas was executed on the 22d February, 1819, it was not ratified by her till the 22d February, 1821—two years after it was signed—those two years being filled by the angry mission of Mr. Forsyth, and every species of procrastination and evasion on the part of Spain. Now it appears to us pretty obvious that Cuba is not to be had in this way—that, unless a *secret* and *prompt* bargain can be made, it is useless to hope to make any. This, we think, will hardly be denied by any practical man. We say the negotiation, to be successful, must be secret, and must be prompt.

This brings us to the root of the matter. We take it that the only possible way to insure secrecy and promptitude is by giving power to the negotiators practically *to close the bargain.* If there is any other mode, we should very much like to have it suggested. *How is the bargain to be closed?* Nothing in the world can get rid of the necessity of ratification. The Constitution requires treaties to be submitted to the Senate, and to the Senate a treaty for the acquisition of Cuba must go like any other treaty. Still the bargain may be to all intents closed—promptly closed—absolutely closed—forever closed; but this can only be done *by the payment of money.* And this brings us to Mr. Slidell's Bill and very able report.

By that Bill thirty millions is placed in the hands of the President to be used with reference to the acquisition of Cuba (125 millions being contemplated as the whole price). It is very obvious how, if ever, the thirty millions are to be used. They are to *bind the bargain.* Mr. Preston may never be able to use them; but if the Bill passes, sometime or other, in the convulsive existence of Spain, when some O'Donnell is going out or some Duke de Victoria coming in; perhaps at some dynastic change, when the Constitutionalists are giving place to the Carlists, an American envoy may be able to say to the incoming ministers:

"Amigos mios! Muy Señores mios! You are about to undertake the difficult task of governing Spain. It must be admitted that your success is uncertain. The uncertainty results chiefly from the dreadful state of your finances. I will give you one hundred millions—one hundred and twenty-five millions—for Cuba. You don't need it; it costs you more than it is worth. Some day it is sure to be ours. Think of my proposition."

"Bah!" replies the Spanish Prime Minister. "What good will that do us? A treaty has to be ratified—to be discussed; talk in Congress—talk in the Cortes; lose our places—perhaps our necks—three times over before we touch the money. Bah!"

"Valame Dios! Vmd no me entiende!" replies the American envoy. "Your Excellency does not understand me. I am not such a greenhorn as you do me the honor to suppose. I will *give* you what I offer, and here is thirty millions down to bind the

bargain! Draw on the Rothschilds to-morrow for it. Here stands M. Weiswiller, the confidential friend of the house, who will tell you it is all right."

The whirligig of Fortune's wheel bring all sorts of chances with it; and whenever such an offer as this is made by a clever man who has watched his time, we should be very sorry to be a guarantee to the refusal of the Spanish Government. Every body who reasons to the contrary may know, or think that he knows, a great deal about what is called Castilian pride or Spanish obstinacy; but he seems to us to know very little of human nature—very little of the condition of Spain. Nay, more; we undertake to say, and we think nobody will venture to deny, that in the rapid and violent changes of ministry in Spain since the accession of the present sovereign—*i. e.*, twenty-five years—there have been at least a dozen occasions when an American envoy, with thirty millions at his disposition, might have been absolutely sure of meeting with an eager assent to such a proposition. What has happened will happen again, and all this without implying any corruption—any indirection whatever on the part of either this country or of Spain.

But it is said that this kind of legislation tends to diminish the agency of the Senate in the transaction, and that just so far as it operates to make the treaty binding and the ratification a mere matter of form, it goes to enlarge the power of the President and to diminish that of the Senate. No doubt it is so. We concede it frankly. But is that an objection? Observe, the evil of this Government, as of all free Governments, is want of unity and executive vigor. In ordinary matters this is of no consequence; but the moment a crisis appears the defect becomes one of magnitude; and in these cases it becomes absolutely necessary to strengthen the executive in order to secure promptitude and secrecy, to prevent the eternal delays and the everlasting haranguing of our parliamentary bodies. This has been shown repeatedly. So in this very treaty matter, in regard to our treaties with Louisiana, Florida, and Mexico. On each of these occasions this very practice was resorted to, of placing money in the hands of the President to bind the bargain. Reason and precedent, therefore, concur, and the only question is as to the real merit of the contract. In this respect the President, it seems to us, does wisely. His submission of the matter to Congress enables him fully to know their views and that of the country, so that this discussion on the treaty in fact only precedes instead of following its execution. If upon reports like those of Mr. Slidell and Mr. Branch this Cuba Bill is passed by both Houses, we repeat, the sense of the country is taken infinitely better before the treaty is made than by a debate in secret session of the Senate after it is made. Who can doubt it?

To place a secret service fund of thirty millions in the hands of the Chief Magistrate is no doubt a bold measure. No doubt it calls for full confidence in the President of the United States. Nor do we believe the confidence misplaced. We say the *President of the United States*, without intending any particular compliment to the experienced and veteran statesman now at the head of the Government. We believe no one has ever been selected President of the United States who would, deliberately, misapply a trust fund placed in his hands for a special object. If the object be a good one, and the means well devised, we would place the fund in the hands of Mr. Buchanan; and so we would have done in those of General Harrison, or General Taylor, or Mr. Polk, or General Pierce, or any past President of the United States.

To sum up, therefore, as the lawyers say—

The acquisition of Cuba, rightly made, would be a great addition to the wealth and the power of the United States.

The condition of Europe is, in the highest degree, precarious; and it is exceedingly improbable that Spain can long retain Cuba. If Spain loses it, it must fall to England, France, or the United States. The independence of the island, with or without foreign aid, is an impossibility.

This country never will, and never ought to, tolerate the idea of the possession of Cuba by either England or France.

The acquisition of Cuba, sooner or later, is therefore a political necessity for this country. The time may be delayed, or it may be accelerated by events; but the national mind should be taught to look steadily to the acquisition of Cuba as a proper and a certain event.

As to the means. Filibustering is out of the question; on grounds of good morals and public policy it is not to be thought of.

War with Spain is at present equally inadmissible.

Seizing Cuba is practically declaring war against Spain.

Negotiation is the only present practicable mode.

Negotiation, to be successful, must be secret and prompt; and the only way to secure those results, is to put a sum in the hands of the negotiator to enable him to close the bargain.

Owing to the precarious and uncertain condition of Europe, the present is a proper and fitting time to make the necessary arrangements.

Power should be given and left in the hands of the Executive till future orders. It may be one year, five years, ten years before any one can use it; but sooner or later, and before very long, the time will come, and then it will behoove us to act, and to act promptly.

This is the only way to acquire Cuba without war, or, at least, the hazard of war.

We believe these propositions are, in the language of the old jousts, each and every of them defensible, "against all comers;" and we have little doubt that, sooner or later, they will command the approbation of the people of America, wholly independent of party combinations.

Editor's Easy Chair.

IT was near Hartford that the Easy Chair encountered the great snow-storm of the year.

For you must know that Easy Chairs are not necessarily infirm, nor ex-officio, incapable, as too many persons, who associate them only with Bank parlors and Insurance offices, are fond of affecting to believe. No indeed; some of them are as brisk as the uneasiest chairs of your acquaintance, and would run all over the world if they only had rollers.

Rollers are less respected than they should be. Who that has traveled (and what star-spangled-banner-bearer has not, waving it triumphantly over all the mountain tops and in all the valleys of the world—poor things, too, compared with the Rocky Mountains and the Mississippi River)—who that has traveled, I say, has not learned to respect rollers; has not, in fact, met all kinds of timber—rough, hewn, and carefully cut—huge back-logs and mere kindling wood, going every where comfortably upon rollers?

Rollers are the secret. No stick so sticky but, if

it can fit itself to rollers, may go up the Pyramids and down the Danube. A good many get about upon plated or even brass rollers; but, on the whole, the golden seem to be preferable. They are surer, and often last longer.

And for want of these very rollers how many of the most hospitable, most delightful Chairs are compelled to stay at home! They do not stir from their rooms, their offices, their firesides. They hear the beautiful stories that the travelers tell—they think how fine it would be to see lands of which they dream, pictures and statues and buildings—the faces of the living and the graves of the dead; to enjoy what they perceive at once the stick that is telling the story did not enjoy because it could not understand or feel. But they remain quietly in their places. Time passes over them, and their forms become quainter and more old fashioned; newer patterns of chairs come in, but the old become only more reverend as they become stranger, and although, having no rollers, they can not run around the world, yet many who have had the longest and liveliest wanderings believe that nothing was better worth hearing or seeing in all that travel than the Chair that could not stir from home.

For human timber grows curiously, or is strangely hewn; sometimes art twists it, and carves it, and tones it into some Beau Brummell—and so the wood becomes a fantastic toilet-table. Then, again, nature leaves it a vast forest of every kind of tree, full of singing birds, and fruits, and flowers, with sunlight and moonlight streaming all through it, making romance and glory.

And usually the toilet-table has rollers, while the forest has not!

And so, following the musical direction, *da capo*, we all come round again to the statement that the Easy Chair encountered the great snow-storm of the year near Hartford; and whether it was going upon its own rollers or that of the Railroad Company it does not say.

It was what is called an old-fashioned snow-storm, and every Yankee knows what that is. The adjective itself seems to convey an impression of intensity which no other word can carry. As a matter of fact, old-fashioned things were, in their time, new fashions. The gentlemen engaged in politics, for instance, in the golden age, probably found quite as much brass lying in their way as we people of the iron age. Besides, our climate has not ameliorated in the lapse of years, as we generally believe. Why, on the 10th of January, in this very current glad new year of grace, 1859, the mercury fell lower in the city of New York than it has fallen for seventy years.

At least E. Merriam says so; and for his part the Easy Chair would as soon laugh at the almanac as at E. Merriam.

We have "old-fashioned" hospitality, "old-fashioned" manners, "an old-fashioned time," precisely as people in the old-fashioned times used to have them. We mean by the word something genuine and hearty; and the snow-storm deserved the word.

Down it came; beginning after midnight, and during the silent, dark hours before dawn, rustling softly against the windows with a whispering, incessant earnestness, as if to make the half-roused sleeper conscious of the web of strange winter beauty that was weaving all over the earth. With every light, busy drift against the pane the sense of security and comfort became more profound. The half-roused sleeper sank away again into forecasting dreams of the enchanted landscape he should see upon awaking: in dreams he heard the remote chime of sleigh-bells and the shouts of children coasting; in dreams, the wild beauty of the morning was prefigured, yet not more beautiful than when it came.

In the gray dawn the storm was unabated. It fell in large flakes, every one of which told, and the whole village was muffled in snow. It had caught upon every bough and twig—it clung to every window-sill and sash—it was drifted around doors and fences—and, still thickly falling, it had already buried the low posts and fences—the dirty, stony, dreary places were covered with waving, delicate, sparkling snow, and the detail of the topography of the village was utterly destroyed.

Nobody was seen upon the street. You looked out at the village churches, and shuddered to think how spectral and cold they were inside, and how inaccessible. There was a double ridge in the road overblown with the light snow; and in the bar-room of the tavern there was a tradition that a sleigh had passed along at an early hour. A huge black Newfoundland dog suddenly went leaping and wallowing through the deepest drifts, buried out of sight, almost, and his black tail waving cheerily behind, like the flag of a pirate's cutter in a rolling sea. The air was not cold, but the wind blew keenly, and the snow fell more and more thickly.

In the tavern, people looked out of the windows, and discussed the storm. There were rumors of incredible depths, and comparisons with other years and storms. One had measured the depth of the snow at seven in the morning—another had heard from a neighbor—another wondered whether any trains would come through—and, at intervals, the whole united in a chorus, led by some one who spoke the sentiment of all, "Bless my soul! why, it's a real old-fashioned snow-storm!"

The Easy Chair was especially interested in the trains, for he wanted to reach Hartford, which was only ten miles off.

"Well, Mr. Landlord, what's the chance?"

"There'll be no train this morning—sure," said he, cheerfully. "Perhaps something will get through before night, though."

"Could I push on to Hartford with horses?"

"I shouldn't like to be the man that tried it," replied he. "However, we'll know something more about it when the stage comes back from the dépôt, which is about two miles off."

"How long has it been gone?"

"Well, it's now eleven, and it went down at seven."

The little, whispering, rustling snow, so impalpable, so sparkling, so airy, so gentle and pure, had paralyzed the activity of the world! Travel, trade, human communication of every kind was at a dead lock. The little particles of hot water in the shape of steam which have wrought the daily material miracle of the century were entirely conquered by the little particles of cold water in the shape of snow. The tough hills of Connecticut, which enormous capital, and profound skill, and the incessant labor of thousands of men for years, had succeeded in leveling, and excavating, and grading, were built up again and restored to their old impassability in a single night, by an agent so exquisite that, if it touched your cheek as it worked, you felt only a cool dampness. It was a material image of the effect of eloquence; for so impalpable words, that seem to have no substance or power, fall thickly upon a si-

lent mass of men, and build in their minds great heights of resolution and daring; standing on which they pluck from tyrants their country's liberty—or perhaps only fill their fancies with images as pure and graceful and lovely as the outline of the drifted snow.

At noon the stage-sleigh, drawn by four stout horses, struggling, and almost floundering, in the snow that reached their bellies, slowly dragging the sleigh that plowed up solid masses as it came, appeared down the street. The driver was sheeted and shaggy with snow. He stood peering out of his muffler, and encouraging his animals—poor fellows, how bravely they toiled!

He reported no train—no news—and no prospect of any kind but snow, and a general faith that the New Haven line would push through somehow.

As he spoke the storm rustled against the window in soft derision. Whish! whish! it seemed to say, let us have one white day of peace.

But the Easy Chair must say a word to Hartford, and so ascertaining that there was a telegraph station near by, it prepared to reach it. The wind was now a gale, and the snow drove furiously and blindingly through the air. Seen from the windows, it was a pretty spectacle; but actually encountered, it was as different as the lake in whose waters you are drowning from that whose glossy surface took every hue of the sky, and was an image of heavenly repose.

Furred, and coated, and muffled, and booted, and wrapped as closely as it knew how to wrap, the Easy Chair stepped from the door. There were no paths—there could be none—and a huge embankment of snow surrounded the house. With a bold leap he was in the midst of it to his waist, and then struck out as well as possible, like a swimmer in a furious sea, against the pitiless whirling of the snow and piercing wind that dashed savagely at him while he toiled and tumbled in the drifts.

All went well enough as long as he held to one side of the street.

But at length, to reach the telegraph office, which was in the basement of a church, it was necessary to get through or over the vast unbroken reefs and cliffs of snow that filled the street. At the door of the office a small boy was animatedly going through the movements of shoveling a path, and seemed to be entirely satisfied that the snow whirled back again as fast as he threw it aside, until it seemed to the Easy Chair, who had plenty of time to observe every thing while it was preparing for the plunge, that the youngster tasked his skill to scatter the snow in such a light shower that none of it should fail to blow back again.

There was no path from the sidewalk into the street, and there was nothing to do but push off into the solid banks of snow; and, with a vigorous rush, the Easy Chair moved forward, buried now almost to the shoulders, then shaking his frame and buffeting the storm as he emerged into a shallower drift, making irregular headway toward the boy, who had suspended his labor to watch this much more interesting performance. He laughed and cheered lustily as he saw the desperate struggle, not, as the sequel showed, without some mischievous expectation. For as the Easy Chair came nearer in long, lurching tacks, and, by way of establishing some human sympathy in the midst of the elemental saturnalia, cried out lustily that Jack Frost was having it all his own way, his foot struck something in the snow—he had, in fact, tripped over the top rail of a buried fence, which the naughty boy knew was in the way, and, with an involuntary and mighty dive, the Easy Chair disappeared, headforemost, in the lightly packed snow.

He heard a great shout of utter uproarious delight as he fell, and the next moment, scrambling, and blowing, and shaking, he rose unsteadily to his feet, smeared all over with snow—snow on his whiskers, on his eyebrows, on his eyelashes; snow up his legs and arms; snow down his neck, and in his hair, and in his gloves; snow all over him, and, as he felt, all through him, wet and chilly; while in his bewilderment, as the Chair made unhappy and unsuccessful efforts to smile, and joke, and bear it off cheerfully, as a trifle of no moment, the naughty boy, weakened perhaps by his labor, shouted with excess of hysteric glee, and finally sank down by his shovel in a deliquium of delight.

The Easy Chair came on, blowing and perspiring, and stood at length in the office. But, oh! how weary! how shaky in the knees! how feverishly hot! how uncomfortably wet! The boy, now somewhat recovered, brushed the Chair down with a broom, breaking out into little snickering gusts of laughter, and carefully pointing out the way back, in which there were no tops of fences to tumble over. But under every snow-bank now, to the imaginative apprehension of the Chair, there were nothing but latent fences, lying in wait to trip up the heels of wayfarers. Suddenly the broad, glittering waste of snow became like a smooth tropic sea, in which lurk reefs with jagged teeth to seize unsuspecting vessels.

But with the heroism of Smelzel, who closed his eyes in what he believed to be a field full of man-traps and, helter-skelter, rushed out of it, profoundly surprised that he arrived at the end of his journey at all, or, in any case, with whole legs (which he would not have done, you know, except that the man-traps had all been removed in the previous century), so rushed the Easy Chair, and, duly grateful, without tumbling over the tops of any more fences (perhaps, as *in re* man-traps, because there were none there).

Ah! what a kindly port of refuge was the hotel! It might have been a poor one. It might have had a close stove of some infernal device in the Easy Chair's chamber. It might have been dirty and repulsive. It might have been so—because *some* taverns are so—in Italy, for instance. But this was a generous house with a generous host; and in a generous room the Easy Chair planted itself before a generous fire, an open, blazing, sympathetic fire; with a gentle singing, a subdued roaring, going on all the time, and merry flames flickering and peering up chimney eagerly, as bright-eyed children like to peep into dark rooms; and croning contentedly to itself, as if, within its own domain, it had conquered that whispering, sly, insinuating, softly-treacherous snow.

In the afternoon of the still storming day the covered sleigh came again to the door, and the Easy Chair stepped in with three fellow-passengers, and they plowed and pushed down the road toward the station, the horses smoking and straining, and slowly walking. It was about the rate of a heavy ox-sled; and gradually the gray monotony of the silent afternoon, the occasional brisk chirp and word of the driver, the sound of the scraping of the sleigh bottom against the snow which it pushed up, worked like a spell, and as we went at the speed of an ox-sled, so we seemed to understand the state of the

logs of wood that are drawn upon it. Every moment we became more and more like mere sticks—wooden blocks. Steam, cars, speed, were ideas that went gradually out in the mind, like sparks from burned paper.

At length we reached the station. Men were shoveling in every direction, and vast bulwarks of snow were reared beside the platform. There was no news of any train farther than New Haven. There, for seven hours, the morning train from New York had been waiting. It was now late in the afternoon, and snowing as hard as ever. The good-natured men about the station could give no hope, and, upon the whole, seemed to regard the excitement of the delay and interruption as an agreeable variety in the monotony of regularity. A pleasant-faced boy worked the telegraph, click! click! Man was still triumphant. If he could not run along the rail, he could talk along the wire. We talked with Hartford and New Haven, and the thick-falling snow that had averted the locomotives and the huge snow-plows could not stop a single word that was whispered through the storm.

There was a locomotive upon a branch road that connected at this station, and orders presently came from Hartford that it should start. There were three passengers who had been waiting all day, and although they were told that no car could be taken, they willingly agreed to ride upon the wood in the tender. Up they jumped, putting up their collars, and pulling down their caps, and turning their backs to the engine. Several other men with shovels followed and sat upon the wood. The conductor buttoned up his huge coat and stepped to the side of the engineer, the bell rang, the steam shrieked as if it were summer and there were a long train of cars, the rest of us stood on the platform and wished them a pleasant journey. Off they rolled; they had a trip of twenty miles to make—it was four o'clock in the afternoon, and at ten in the morning they had not been heard from.

As the Easy Chair turned back into the station where he had been waiting, he observed a solitary woman sitting in the room allotted to the "ladies" (as if the female American were ever any thing else! *vide* the railroad cars!). She was a kind of statue of silence. She sat as if she had been sitting from immemorial time, with no chance of relieving her mind by speech. The men passed in and out of their room; they talked freely and cheerfully together; they joked, and ran round, and even went behind one of the highest snow bulwarks, to a place called a "saloon," where beer could be had; they smoked, and spat, and unbent their mighty minds in whatever way they chose, and fought the blue devil Ennui as vigorously as they could.

But for the solitary woman there was no such resource. She was alone in a masculine world; and she sat all day silent, and had been sitting all day silent since eight o'clock—it was now past four—for she had come down by that earliest sleigh at the time the adventurer had measured the depth of the snow, and found twenty-four inches upon a level. There was indeed a fellow-passenger of hers at that hour, and at intervals during the day he probably beamed in upon her solitude; but he, too, was overcome with silence, yet it was a cheerful, philosophical silence, for he said afterward that he was used to travel and its chances.

Toward six o'clock, as there were no tidings of the train, and as the sleigh was about returning to the hotel, we stepped in again, leaving behind in the station a gentleman whose home was in Hartford, and who had made up his mind to remain in that room until the car came that was to carry him home.

Through the deep snow we toiled wearily homeward.

Oh grateful Chinese herb! Oh fragrant Indian weed! Oh solacing fumes of evaporating mountain-dew! The evening floated away, beguiled by the story of the Pilgrims, told in the freshest and fullest, the most comprehensive and satisfactory manner, in the first volume of Dr. Palfrey. The storm was clearing, and the gentle rustle—half fascinating, half fearful—was heard no more. At midnight the stars shone bright. The outline of the landscape gleamed pale through the cold air; all so silent, now, all so dim, while the stars twinkled with lustrous life; and the great, memorable, old-fashioned snow-storm of '59 was over.

And now one word about the history of which the Easy Chair has just spoken.

Dr. Palfrey has published the first volume of a "History of New England," a work of rare and ripe scholarship: so clear and calm, so dignified, animated, and vigorous a story that the reader feels that the work is now adequately accomplished—a work of the profoundest interest to every New Englander, and to every American.

Our historians Bancroft and Hildreth have, of course, accounts more or less copious of the first settlements; but they are necessarily brief, and subsidiary to the general panoramic view which they paint. But Dr. Palfrey, with a detail full of intelligence and interest, and never dry, or halting, or doubtful, succeeds in showing us the men as they lived, the times as they were, without the gloss of an unjust enthusiasm or the partiality of adverse prejudice.

Thus his relation of the whole difficulty between the colony of Massachusetts Bay and Roger Williams is both genial and candid, although he states frankly that, from the Puritans' point of view, with the design they had of forming a particular kind of State and Government, Roger must go. When he formed his own colony in Rhode Island he did precisely what Winthrop and his friends had done in Massachusetts—that is, he made the body of freemen the judges who should become one of their number, although he carried the catholic and democratic principle a little farther.

The difficulty in judging the men of Massachusetts is, that they are generally represented as the great pioneers of religious liberty. They were not so at all, or only in a very limited sense indeed. Undoubtedly they helped carry forward the practice of the great idea; but they did not know it, and they did not mean to. They hung heretics with a will, and often, when they did not hang, it is clear enough that their mouths watered to do it.

Laud certainly persecuted the Nonconformists, and so did his predecessors. But the Nonconformists quite as certainly persecuted greater Nonconformers. It always is so, and always must be. People want to worship God according to their own consciences; not to let other people worship according to theirs.

Dr. Palfrey shows a full and fair appreciation of Roger Williams's character; although, perhaps, that noble man is entitled to more praise than the Doctor is disposed to give him, and that for the very reason that he had the courage to stand to his opinions so stoutly. Many other men in history have, in gener-

al, perhaps agreed with him; and he, like many earnest reformers, may have been rather ardent than constant in his faith; and, like Daniel Boone in the wilderness, pushing on farther when people came to his side and dwelt with him. Roger loved a good argument—a stout intellectual wrestle. We may well believe that of a man who rowed himself from Providence to Newport, alone, in an open boat, after he was seventy years old, to break a cudgel with George Fox. George was off before he arrived, but Roger shied his stick after him—if a grave old Chair may use such an expression of the reverend Roger and the indomitable George.

Mr. Arnold—who, simultaneously with Dr. Palfrey, has put out the first volume of the History of Rhode Island, written with a fidelity which is beyond praise—treats the question of Roger Williams substantially as Dr. Palfrey treats it, with this natural difference, that while the latter dwells more at length upon the general enthusiastic and incoherent intellectual action of Roger Williams, and the objects which the Boston men had in view in organizing their colony, the former displays with more affectionate reverence the sublime scope of Williams's idea of moral liberty, and censures the limited political philosophy of the Massachusetts colonists.

If, leaving details, the Easy Chair should say that the central interest of New England history is that the Pilgrim settlers brought more fully than any others, although in a dislocated and unconscious form, the fundamental idea upon which, in a fuller development, our American national institutions rest, the reader would instantly begin to scrutinize the wood of which it is constructed, to see if it were not carved of a Maine pine, or a Massachusetts elm, or a Vermont maple, or a Connecticut oak, or a New Hampshire larch, or a Rhode Island apple-tree!

So, perhaps, the wiser course is not to say it—and, above all, not to hint that New England is still the brain and the conscience of the whole.

Heavens! it wouldn't suggest such a thing for worlds!

The Easy Chair used to chat with his friends about the singers who perched for a season upon the boards at Astor Place, or even at the Academy. But his voice has to reach so many and so far that the singers had all gone silent long before his voice was heard, and new songs of all kinds were being sung to the listening public.

Yet the pretty little Piccolomini ought to have a word of remembrance, no matter how her name is pronounced. We can fancy ourselves standing upon the shore as she sails away (for the veracious Mr. Ullmann declares, in his prodigious advertisements, that nothing will persuade that affectionate Mr. Manager Lumley to be separated from his pet, Piccolomini, after the 1st of April. *The 1st of April*, did you say, Mr. Ullmann? Ah, Sir! and didn't you turn the 1st of April upon us, out of season, with your celebrated Musard?), standing upon the shore, and blowing kisses, and waving lace handkerchiefs, and shaking primrose gloves at her as she sails back to her longing Lumley.

A pretty little Piccolomini it was; and yet one was almost pained to see her. Prettiness is so evanescent! *Petitesse* is such a small capital! Yet how she bounded upon the stage, as if the audience were her lover and she were gayly punctual at the tryst! Her lover, who would not let a rough word be said nor a wind blow cold against his darling! Her lover, who had a soft pat of primrose glove for every little arch twist and hoyden fling, and all the pretty naughtinesses!

It was almost painful, because you could almost see the shadow falling out upon her from the side-scenes. It was a triumph of coquettish youth, achieved upon an arena on which only the triumphs of genius are permanent, and therefore it looked like a girl dancing gayly upon thin ice in April, thinking it was a rock of adamant.

Farewell, pretty Piccolomini!

"Gather your rosebuds while you may;"

and may you so line your little nest that, if winter should ever come, and the sun should ever go behind a cloud and nobody care to hear your song, you may be glad enough to sing your own little song in your own little nest, nor waste a regret upon the applause that thought it admired you, but only admired your youth.

More than once has the Easy Chair recorded his obligation to the wandering organ-grinders, who weave a spell of music in the dullest day, and make Italy and southern roses burn through the fog in Nassau Street.

Can we easily compute the influence of those soft, persuasive melodies upon the hearts that hear, and hear unconsciously? Not only by exquisite association with the choice moments of love and youth and beauty, but by the essential sweetness and character of the music they make, the hand-organs are fountains of feeling scattering their invisible spray of refreshment upon many a weary brain—upon many a sinking heart.

Have you watched one of the players sometimes? A boy, perhaps, or young man, with large, round, black, abstracted eyes? with a velvet coat and a Calabrian hat, a dark skin and a grace even in repose, even in tugging under his heavy instrument? But most of all, where it is a genuine Italian, an alien and romantic aspect; the look of an estray; Phœbus, somehow, run down to a sorry hack, and standing in a pound?

They do not ask for money, you observe. They look at you, perhaps, sometimes with an encouraging smile, but more frequently with no recognition, and as if you belonged to different spheres. "If you have music in you," their silence seems to imply, "or any thing that answers to music, you will understand the situation of affairs in our pockets, and, often enough, in our hearts."

It is most melancholy, perhaps, when they have a monkey. It is such a ridiculous parody of a man; and when you are touched to the heart with imaginary sorrow to see a grizzled ape-face contorted over a nut-shell, or staring with brute wishfulness at you as its owner makes a bow in a rusty blue old Continental military coat, is a sad revulsion. You could give a shilling to your remembrance of that day at Sorrento, when the brown-faced girl sang fisher songs upon the rocks, and among them the very *Luisella* that the organ plays; but you can not see Luisella in a monkey.

But be generous. Make it two shillings—send the boy home happy!

Encouraging vice and idleness?

Why, my dear Mr. Grundy, do you take under your charge the habits and moral character of Mr. Keenedge, because you buy stocks, or tea, or carpets, or clothes of him? Not at all. You pay his bill, not because you know he may get tipsy on the money, but because he sells good sugar. Could

you, perhaps, apply the same principle to the long, dark-haired youth with the abstracted eyes?

So do the organ-grinders run away with this foolish old Chair that it quite forgot it was going to talk of another form of the same nuisance, as Mr. Solomon Gunnybags delights to call them—the *image-men.*

Now, Mr. Gunnybags, don't fly into a passion before the Easy Chair has said a single word. It is not going to defend or abuse them as a highly moral or immoral class of people. They are probably no better and no worse than the great family of Gunnybags in all its branches. But their trade is a great deal better than many trades and professions which enjoy extreme respect.

The image-men are useful agents of that unconscious education which is going on all the time and all around us. Do you suppose it makes no difference whether a child's eye is familiarized with coarse and mean and squalid objects, or those which are really lovely and elevating? Would you be quite as willing your grandson should be bred in constant contact with ugliness and filth, as with beauty and cleanliness; in a tenement city house, as in the open sweetness of the country?

Of course you would not; because, sputter at "nonsense" as you may, you know that as a man does not live by bread alone, so he is not altogether educated by class-books. The education of the eye and ear, by shapes of beauty and musical sounds, is quite as important as learning to spell willing with two l's, or to understand that d-o-g does not spell cat.

The men who grind the organs, and those who carry about upon boards the plaster casts of famous or graceful statues, are scattering seed finer than thistle-down—seed that shall by-and-by come to harvest in many a kind word, sweet thought, and prompt sympathy. Idlers? Why, they are no more idlers than the rest of us. They remind us perpetually of the noble works that have been wrought. The public eye grows familiar and the public ear fond of the sights and sounds that refine and invigorate.

Do you remember the things that used to be carried about when you were a child, Mr. Gunnybags? Sir Gardner Wilkinson recalls them. "Cats with moving heads; green parrots; wooden lambs covered with cotton wool; or (if the figure of a man was attempted) a coarse boor holding an equally vulgar pot of beer." Shall we not confess with him that we are grateful for the change so unostentatiously brought about by these humble foreigners?

The poet whose elegy upon George Steers was published in the February number of the Magazine wishes to correct the spelling of the name attached to the poem as that of the author. "The Long Island Farmer" is not Wedgewood B. Homer; he is Bloodgood H. Cutter. The correction would have been made earlier had it been possible.

Our Foreign Bureau.

WHY not call it *Bureau*, office, *sanctum*, which we have established here upon the banks of the Seine? Why not—since the Magazine has now become an established institution, known over the world, and sought after from Hong-Kong to Frazer River—why not have a permanent news rendezvous in the central city of the Old World, where we may rule, with our quill sceptre, upon our editorial throne—sending forth our couriers, as occasion may serve or as the public interests may demand, to bring us in report of what may be doing—in Lombardy (if the war become earnest); in St. Petersburg, when the Demidoffs and the Gortschakoffs rally their splendid toilets or their glittering sledges; in Vienna, if ever that dead elegance of Hapsburg ripen into blaze of war or blaze of enthusiasm?

It may involve exceptional and extravagant expenditure; but does not our exceptional circulation demand it? And shall we not find repayment in the smiling eyes that shall read our report, and in the glad ears that shall listen for the world-echoes which come floating, like friendly voices, through our office window on the banks of the Seine?

And what if wandering Americans should make occasional rally there, to intercept, without interrupting, the great current of gossip as it floats on and over to the dainty type-setters of Franklin Square? We shall welcome them; only asking two undisturbed days in the week in the which to group our material and send it forward.

(Second floor, third door to the left, No. 80 Quai Voltaire.)

Fortunio (they know him at all the cafés on the Boulevard) is in our employ; just now he was with us, telling, in his rollicking way, how some political refugee has within the week made escape from the clutch of Louis Napoleon. A small matter in itself; but our Fortunio has a way of building small matter into imposing romance. As thus. He taps our shoulder as we sit engrossed in vast piles of journals:

"Have you heard of the adventure of Marie F——?"

"Not we. Who is Marie F——?"

"Shame! not know the maiden belle of the last fête at the Hotel de Ville? Mouth of a cherub; hair flaxen! Well, she goes to Strasbourg to visit an aunt—a few hours, you know; first-class place; *coupé* to herself. But just at the moment of setting off a belated stranger rushes upon the platform; first-class ticket. The guard, in his haste, opens the door of the *coupé*, and thrusts him in.

"Embarrassing for Marie, who looks steadfastly out of her own window for the first league; then gives a stolen glance at her companion; not bad looking, *moustache* well turned, and young.

"Half a league more of out-look; the country grows dreary, and she ventures another eye-shot. Young man is evidently anxious and perplexed.

"Marie returns to the landscape (growing finer), and is just occupying herself with the study of certain artistic effects produced by a group of extinguisher turrets against a copse of poplars, when she becomes conscious of the near approach of the stranger. She turns in alarm. Not only near her, but before her; a dirk in one hand, and in the other—scissors!

"The stranger asks, in a tone of command, that Mademoiselle take the scissors and remove his *moustache!* The knife, and a certain wildness of manner, give force to his demand.

"Evidently a madman. Her cries could not be heard if she screamed. Therefore she obeys. Next she must submit for a few moments to be blindfolded; and the stranger proceeds to tie her own handkerchief over her eyes; then retires for ten minutes to his own side of the *coupé*. At the end of this time Mademoiselle is informed that she can remove the bandage from her eyes.

"She does so; and finds, in place of the young stranger, a benevolent-looking old man of five-and-

sixty! He has effected the admirable travesty while she has been blindfolded.

"A strange mystery about the man's madness; and poor Marie is in an agony of terror. The false old man again makes appeal to Mademoiselle to conceal all she has seen for three days; after this, she may tell what she chooses. Marie makes the strange promise, and keeps it.

"Her confidant at the end of that time is her father. His suspicions are awakened, for he holds a certain high place in the administration of police. The description given by his daughter corresponds with that of a certain noted political refugee, implicated, within the week, it is said, in some new plot of assassination of the Emperor. Further inquiry confirms his identity with the traveling companion of Marie F——.

"The pretty Marie has a romantic story to tell, and the refugee a romantic tinge given to a lucky escapade."

Now, when our friend Fortunio drops such a story in our ear, we do not turn upon him with a brusque demand of testimony for its authenticity; we know he has never any such testimony to adduce. We know his habit of literary embroidery. The whole affair may possibly be put down in to-morrow's *Presse* in this shape: "Guiseppe Mantoni, a suspected conspirator, disguising himself by shaving off his beard in a railway carriage upon the Great Northern, has made his escape to England." Yet we listen to Fortunio. There are those who like his way of telling a story; therefore we employ him.

Another gentleman from whom we occasionally levy contribution is that Henri de Pène who, last summer, came near slipping away from all further outlook upon sunny trifles, by that fearful double duel (which we duly chronicled) with two sons of Mars.

But M. de Pène is himself again.

He sat here with us just now, philosophizing, criticising; ambling along over his subject with the easiest grace in the world.

Shall we try and recall some shreds of his talk? Just in from the Gymnase, where they are playing the "Cendrillon" of M. Barrière.

Odd it is that the world should cling to a story which should have for one of its chiefest elements the injustice of a mother! Over and over it is repeated, in Italian Cenerentola, in music of Nicolo, in English nursery book, and always listened to. The conclusion must be that mothers are unjust; that many a poor Cinderella does sit at home, in the corner of the great chimney; that prettier sisters win the kisses, and the flowers, and the silks, until some fairy fête comes and drops a crystal slipper; upon which away the neglected one goes dancing toward success and happiness. But what redeems the matter always, she does not prove unkind, but has tender words and wishes for those who have neglected her, and crowns the tale with the great, golden moral of good for evil.

Well, the Cinderella of M. Barrière (marvelously played by a little Victoria who will fill the place of Rose Cheri some day) is a serene, brown-eyed, quiet-living creature—not altogether neglected, but not enjoying a tenth part of the maternal affection and maternal favors which are showered upon her laughing, black-eyed sister Blanche. Yet her heart is yearning toward the mother who neglects her, and toward Blanche who slights and wounds her. Upon a certain festal day Cinderella has prepared a gift for her mother—a vail embroidered by many months' secret toil, and a little bunch of wild flowers: will not these open the mother's heart at length?

Blanche, too, has secretly prepared her gift—a miniature of herself, exquisitely done by the artist most in vogue.

And the mother, with blind fatuity clinging to the little miniature of her favored child, scarce notices either vail or flowers, but runs with the precious gift to the poor Cinderella that she may join in her admiration.

And the poor girl, with tortured heart, kisses the image of her happy sister, her chagrin all lost in a burst of tenderness.

(A great many eyes are hidden in white cambric at this pass.)

Then there is a gaunt, brutal sort of cousin, Antoine by name, who has claim to a large portion of the estate which mother and daughters are at present enjoying. The matter is working through some long Chancery suit, which Antoine proposes to satisfy and compromise by marrying the neglected Cinderella.

She, poor girl, recoils in horror; but the mother, with rare cruelty, urges filial duty in the matter, and commands acceptance.

No fairy is yet in sight.

A count (no matter for the name) becomes meantime a *habitué* of the house. An admirable match for the pretty Blanche; so thinks Blanche, and so thinks Blanche's mother. Blanche is not heartless either, but has a ripe and full one if it were well governed; and before she knows she has lost it, and the unsuspecting count is its keeper.

Cinderella, suffering and doubting, is visited by no fairy yet; but a certain Aumont, good fellow and proud and earnest, knows what tenderness belongs to her; in fact, has plunged so madly in love with her that he must needs stultify himself by fighting a duel with the persistent and odious cousin Antoine; from which rencontre he comes away with his arm in a sling.

Affairs stand thus, when, upon a sudden, and to the great surprise of all parties, the count makes proposals for the hand of—Cinderella!

The mother is amazed; Blanche altogether desolate. But the count avows himself very much in earnest. The manifest neglect of the second daughter had at first excited his sympathy only, but the sympathy had led to closer observation, and the observation had revealed to him her rare merits.

The mother recognizes at length her injustice, and there follows a scene of embraces and tears, which (so far as tears may do it) is repeated in the pit and the galleries, and in fact all over the house.

But Cinderella has no heart to give; Aumont has won that. The count reconsiders his determination, and Blanche is made happy; and there is a vague suspicion floating (as the curtain drops) that the widowed mother may possibly atone for her injustices, and keep the property, by marrying the braggart Antoine.

There is rather a taste for tears this winter upon the Paris boards. "*Un jeune homme pauvre*" has been very largely watered in this way—even to imperial weeping at the private theatre of Compèigne.

De Pène, who is a loquacious fellow withal, and rambles all over Europe (*Voie des Journaux*) collecting news, tells us what we are pained to learn about the magnificent Ristori.

She has had her usual success in Florence, more especially in an Italian rendering of Phèdre. Upon the morrow of its first representation she writes a

confidential letter to a friend, saying: "I cleared last night $——, besides press money." The letter carrying such triumph is shown to the father, who, weak man, must needs copy and preserve it for private circulation; private circulation grows so large presently as to need imprint; and a little spicy Florentine journal, piqued in its pride, attacks the great Madame Ristori for bribery of the papers. Whereupon the artiste commences action for defamation.

Great scandal comes of it; and, worst of all, the unpalatable truth that artistes even of the first reputation are in the habit of paying largely for the *bravuras* of the papers.

If we think smally of the man or woman who will buy praises, what shall we think of those who have them to sell? (Are such things known among you at home?) We say, pierce them with the same spit, and broil them together.

Again, this friend of ours, De Pène (chatter-box that he is!), must tell us what he counts rather a piquant anecdote about one of our countrymen, who wears a gilt band about his cap (one of the marines, possibly?), down at Nice.

It appears the King of Wurtemberg, a pleasant, sedate, unpretending old gentleman, is passing his winter at that sea-port.

Our countryman, strolling up and down upon the quay, accosting people in familiar manner, presently falls in with a stately old gentleman quite by himself, and gives him "Good-morning."

The old gentleman returns the salutation.

"Stranger here?"

"*Oui, Monsieur.*"

"Got many acquaintances hereabout?"

"A few," responds the old man.

"Do you know who lives yonder?" asks the gilt-banded gentleman, pointing to a villa near by.

"The King of Wurtemberg."

"What sort of king is he? Gentleman?"

"He has that reputation."

"Who is stopping with him?"

"His chamberlains."

"Eh? Chamberlain? What's a chamberlain? Why does he have chamberlains?"

"So as not to be alone."

Just here a chamberlain passes out of the villa gates, and, approaching, makes respectful salutation to the old gentleman, who, to the great mortification of the eager questioner, proves to be the King himself.

De Pène says of the American, "*Il court encore —avec sa casquette brodée d'or,*" which is much as if a Westerner were to say, "He streaked it—with his gold cap!"

To all which, after listening, we reply, good-humoredly: "It's a fable, Monsieur de Pène; it carries its untruth with it. We Americans are curious indeed and fact-loving; but we are not in the habit of proclaiming our ignorance in that style to a chance acquaintance; and you may be sure that a man who was ass enough to wear gold decoration without authority, would never have blazoned his ignorance of royal retinue; and if he wore his decoration honestly, his intelligence would forbid the truth of what you say."

We note the matter, however, in token of the prevailing disposition on the Continent to point sneers at the American character. And are our travelers wearing the quiet dignity which would destroy their force?

And now from this pleasant talk with our friends hereabout, let us turn for a moment to our budget of letters—letters from Athens, letters from St. Petersburg, letters from Hong-Kong, and here a pleasant letter from Siam. Our correspondent gives us a story of a state dinner. It is too good to pass by:

"In a large room with plain, whitewashed walls, but handsomely furnished, sit the consul and his wife, duly attired to do honor to their expected guests. Some of the junior officers of the consulate loiter in the veranda watching the river, the great highway of Bangkok. Presently a rich barge, distinguished by a row of official umbrellas at the stern, glides to the pier, and from it steps the Praklang, whom Europeans call Minister for Foreign Affairs. Quickly following, in another and still richer barge, comes his Royal Highness the Prince Wongsa, chief of the Princes, half brother of the kings; and, equally punctual, the Kalahome, or Prime Minister, rides into the court on a beautiful pony, followed, as also the others, by a numerous train of slaves. The nobles enter the room; of their retainers some return home, others sit in the court outside, but the betel box-holders, the cigar bearers, and the carriers of the official tea-pots crouch on the veranda watching their masters' wants, and anon crawling in to supply them. For, though politeness makes them accept our invitations, and consent to sit on chairs and use knives and forks, they can not give up for a minute their quid of betel, and are far more hasty than our code polite sanctions in resorting to the fragrant weed. They all wear rich embroidered sarongs (or waistcloths), bound round the waist with silk sashes. The two Ministers have assumed, in addition, tight silk jackets buttoned up to the neck—a mark of respect to their English entertainers, especially the lady, to whom the Prince expresses his regret at not being able to do likewise, pointing to a great boil on his back as a most sufficient reason. The Prime Minister is a gentlemanly and highly-intelligent man, rather reserved and proud. He speaks English fairly, but avoids parading it; indeed, seems studiously to avoid the use of it if he can have an interpreter. He readily adapts himself to European manners, and, by his noble bearing and dignified conversation, inspires respect in all who know him. In figure he is slight, and but for his mien he would be altogether lost sight of in the presence of that monster of obesity, the Prince Wongsa, a mass of fat, having but slight resemblance to a man, a horrible toad-like being. His overgrown cheeks hang in great rolls till they are lost in the huge mountains of blubber which hide his shoulders; and as for his paunch, it must measure three yards round. So clumsy is he that, despite his princeship, not even the most enthusiastic of boarding-school misses could think him handsome. His unwieldy paunch, his merry, false, and boastful disposition, and his meanness in money matters, have given him among Europeans the name of the Siamese Falstaff. He is a merry fellow, always making jokes and leading in the laugh. And what a laugh! He laughs all over, rolling about and heaving his huge body in such an alarming way, and giving utterance to such strange sounds the while, that the first idea of the uninitiated is to send for a doctor; but as he recovers, and they watch all the disturbed creases of fat subsiding into quiet, the laugh that he has done with is taken up by the spectators. His manners are, to European ideas, as coarse as his person, and sundry internal rumbles and sounds impolite are the accompaniments of his dinner—a performance, however, in which he is

equaled, if not excelled, by the Praklang, also a fat old gentleman, but less addicted to talking and laughing. To-day, indeed, he seems quite dull; perhaps the presence of his senior officers is a restraint. The illustrious company sit down to dinner, and an excellent dinner it is, for, thanks to the skill of our preserver and the activity of our purveyors, no one who has the means to afford them need now be without all the luxuries of an English and French bill of fare. Turtle soup and salmon, hare and currant jelly, peas and beans, damson tart and Stilton cheese, with many other less familiar but higher sounding viands, relieve the invariable staple of a Bangkok dinner, fowls and ducks; even these to-day make their appearance in a new guise, plumped with English stuffing, savory with French mushrooms. Madras supplies the most appetizing of curry stuffs, and Bombay sends the ducks (a kind of dried fish) to eat it with; California contributes the potatoes, and Australia the flour; France, Spain, Germany, and Portugal each send of their best wine; the West Indies furnish the curaçoa; there are dates from Egypt and almonds from Persia, coffee from Ceylon and tea from China.

"The Prince wishes to take wine with the gentleman next him, whose attention is called to the fact by a vigorous poke in the ribs; he turns round, his noble friend is grinning expressively, and tapping his wine-glass; two glasses are quickly filled, two heads are gravely inclined, two glasses are emptied, and the interesting rite is over. A minute more, and the Praklang follows the example of his Royal Highness; another poke, another draught, and he may sit at ease: he has but two neighbors, and his ribs may rest for that evening. The Prince and Praklang continue drinking with all round the table, attracting attention, where their arms will not reach, by a series of horrid grunts and quick repetitions of his name whom they wish to honor. How differently the Kalahome manages! He conveys by an interpreter his desire; servants fill the glasses; he bows condescendingly, sips his wine, and resumes his conversation."

From Russia always talk about the progress of the serf independency, which great scheme of the Emperor, it must be confessed, drags wearily and languidly toward full execution.

Another matter, however, which will not less interest the real civilizers of the world, and those who love healthful progress, is the establishment, under a society recently organized in St. Petersburg, of schools for the instruction of the poor, to be opened on Sundays, the only day upon which most of them could avail themselves of the privileges offered.

To read and to write—are not these hopeful things to learn even upon a Sunday? Things, too, of which the masses even of mechanics are sadly ignorant. In addition to these special schools, it is proposed further by the same society to establish certain courses of lectures, in which men of all trades may be taught orally the elemental scientific truths which belong to their respective pursuits.

May we not rank these designs, with the proposed amelioration of the system of serfdom, as hopeful signs for Russia?

Meantime, however, the sad abuses of trust in high places is revealed from day to day. Only latterly we have this development: An *ispravink* (chief of police) in the East, upon the Caucasian frontier, bargains with a merchant to pass his tea through free of duty; the *striaptchü* (an official corresponding to your district-attorney) discovers the fraud, and draws fifteen hundred dollars from the merchant as a bribe to keep silence. Having pocketed this sum, he goes to the police official and proposes copartnership in further demands upon the importer of teas; and together they push their exactions to such outrageous extent that the poor merchant submits himself to the mercy of the Emperor.

The Imperial family, long since returned from its autumn retreat at Tsarkõe, is lending its city presence to the balls and *raouts*, and to the triumph of the black tragedian, Aldridge.

"Will your far Westerners spend a sigh," says our correspondent, "if I tell you that the Empress-Mother is more feeble than ever, failing fast, if we may credit rumor; and the frequent bulletins confirm the street rumors?"

We were speaking just now of the proposed courses of lectures in St. Petersburg (think of lectures in Russia!). Within the month (December) a series has been opened under the auspices and at the cost of the mercantile house of Vedoff, Srougovstchikoff, & Co. (all honor to Vedoff and Srougovstchikoff!), and the early lectures have been thronged, the first being upon Botany, and following ones upon Physiology. We will not tax your compositors with the names of the professors.

Yet again, in indication of the march which Russia is making just now, let us chronicle the return of certain explorers, who had recently gone out to determine upon the best practical route from the capital to the mouth of the Amoor River. They bring, it is true, no such voluminous report as belongs to your Western surveyors for a Pacific Railway; but it is by half more prompt, more practical, and more economical!

Let America see to it that Russia—despotic Russia—does not distance her in gaining hold upon that great commerce and those splendid fisheries which must belong to the seas of Ochotsk and Japan!

'Tis but a short sail from San Francisco, through the Behring Straits (in summer), to rich shores and to teeming rivers, whereabout, in twenty years' time, a great people will be wearing Merrimack cottons, or else the fabrics of Russia and Prussia.

Would the trader like a few practical details as to what may be salable—in Japan, for instance?

He shall have them.

Cloths should be sent in pieces about 25½ yards in length, by as near as possible 41 inches in breadth. They ought to be thick, fine, and glossy, with broad black list or selvage. Cashmeres, of the same length, but only 28¾ inches broad; camlets, of the same length, but only 32¼ inches broad; watered camlets, of the same length, but only 28¾ inches broad; printed woolen velvets (trijp), of the same length, but only 23 inches broad. Besides these articles Patna, Bengal, and European (why not American?) chintzes, red cottons, Adrianople red stuffs, Armozyns, Kaliatour wood, and elephants' tusks may be advantageously introduced. With regard to the latter, it is likewise necessary to observe that great attention must be paid to the size and weight of the different qualities. Glass and crystal wares find, too, a ready sale. Small wine-glasses and drinking vessels of middling quality are most in request. Watches, clocks, mirrors, telescopes, and other optical instruments, are much sought after by the wealthier classes; and drugs, if of good quality, may be advantageously disposed of. The Japanese carry on their accounts in thails, and one thail is as nearly as possible equal to sixty-seven cents in American

money. Pieces of cloth of the above-stated dimensions were sold, before the opening of the trade, at from twenty-eight to thirty-six thails; cashmeres at fifteen; camlets at twelve; watered camlets at seven; printed woolen velvets at about ten thails—average prices.

With regard to return cargoes we have but little to say. The copper mines of Japan are very rich, but the Government has always jealously limited the export of that or any other metal, and it remains to be seen how much will be obtainable by the American merchants, and at what prices. The next article in value is camphor; and then there are lackered wares, silks, and crapes, which latter we get in abundance from China, so that it may be fairly doubted if it would turn out to the merchant's advantage to bring them over from a great distance. Yellow and white wax, dried ink-fish (*zeekat*), for Chinese consumption, whalebone, camphor-wood, and mother-of-pearl are among the few wares at present adapted for exportation. The future will enable us to form an opinion as to the coals we are likely to get from Japan. At present we know nothing about their quantity or quality, and, in fact, very little of the natural resources of the country, which time and prudence may render available to our trade.

And while we have wandered thus far away Eastward, let us enjoy a spice of the literature of those countries. Before the Ascot Society, in London, Mr. Fowle gave, latterly, a translation of the Burmese ethical work, the "Nidhi Keyan," from which we excerpt, in way of sample, the following passages:

"Riches are not equal to learning, for wisdom can not be stolen or lost; it is therefore thy best friend, and benefits while living, and even after death. . . . . Gather up each fragment of learning, and think it not small or unworthy of notice; for as rivers are formed and wells are filled by drops of water, so may thy wisdom increase. . . . . The wealth of priests is moral precepts. . . . . A man of good family upholds its honor, and, however poor, never disgraces it. . . . . Soft words make friends; bitter words make many enemies. . . . . One wishes for a friend when one gets a rose or dainty dish. . . . . The beauty of women and the sweetness of the sugar-cane bring satiety; but of the words of wisdom you can never be filled. . . . . Be thankful for the feast when you have partaken of it. . . . . Be grateful to your wife in old age. . . . . A man who continually asks favors is not liked. . . . . A person may have youth, beauty, rank, and wealth; but without learning he is like a handsome flower that has no fragrance. . . . . The master beats his people as a potter batters his clay—not to break or destroy it, but to bring it into shape. . . . . A rose imparted its fragrance to a leaf in which it was folded; so associate thyself with wise men, and their wisdom will cling to thee. . . . . However great may be the misfortunes of the virtuous man, he will never transgress by breaking the law or acting improperly. . . . . A silly person can discover a fault as small as a little seed in others, but he can not see a fault as big as a cocoa-nut in himself."

There might be worse proverbs—and better Burmans!

And now suppose we were to return from the Far East by way of the Mediterranean and the Ionian Islands.

They are pretty islands, you know; and just now very much talked of, by reason of the new British envoy, and by special reason of their restiveness under the wing of Victoria.

Corfu, chiefest among them, has this winter been visited by an extraordinary number of fashionable tourists—political, artistic, and sporting. The latter are the most numerous. Hotels and lodging-houses are crowded by gentlemen who have come out for the purpose of shooting on the opposite coast of Albania, which abounds in game of all sorts. "On account of the sirocco and deluges of rain," thus writes our correspondent, "but little success has, however, as yet attended their efforts. The presence of a special envoy on an extraordinary mission may have increased the interest attached to Corfu just now, and drawn others to the spot. Every yacht in the harbor is taken, the price of every thing is doubled, and dogs are at a premium. For the last ten days, therefore, this little town, which is inhabited by only twenty thousand persons, has been enlivened by a succession of entertainments and festivities, which have put every available vehicle in requisition, and must have proved a good harvest to the vendors of every species of female attire. Milliners have, even in this distant isle, to follow Paris fashions, and to tax their imagination and ingenuity in the preparation of that extensive paraphernalia which the ladies of the senators and representatives of the Ionian Parliament love to revel in no less than the daughters of New York merchants and Western Congressmen. Balls, dinners, receptions, and levées have been the order of the day; and no exertion seems to have been spared on the part of the Corfiotes to do honor to the High Commissioner Extraordinary, whose patience must, however, have been sorely tried in having so suddenly to make the acquaintance of such numbers of her Majesty's Ionian subjects."

Our correspondent further says: "The inhabitants of the neighboring islands are as good wreckers as the men of Key West, and watch a ship in a storm with feelings of great interest. Light-houses are an abomination in their sight. A gentleman who has just returned from a shooting excursion encountered a severe gale off Ithaca, and, though the natives gathered in numbers on the shore, in expectation of his yacht being driven on the rocks and wrecked, his shouts brought no help, and on a cessation of the storm he and his friends were received with expressions of lively disappointment. An adventurous ensign was upset in his boat off Cephalonia, the other day, and drifted for a good while, clinging to it; a barge full of Greeks put off from the shore, as he thought, to rescue him, but on their approach to within twenty yards of him they stopped rowing, and inquired what price he would pay for the rescue. The young officer, not being inclined to bargain for his life, and seeing a good chance of drifting to land, would not come to terms; so they left him to his fate, which was not, however, I am happy to say, a watery grave."

Another letter we take up from a gossiping correspondent in Berlin gives us this little account of the fête (birth) day of the English-Prussian Princess Frederick William:

"The morning broke clear and cold, and at a very early hour dense crowds of spectators assembled in the vicinity of the Princess's palace, anxious to obtain a glimpse of her. Soon after nine o'clock carriages began to drive up in rapid succession, con-

veying the chief military and civil authorities to inscribe their names on the Princess's visiting-book. Among the earliest to arrive were Lord and Lady Bloomfield, who were graciously invited to remain and take part in the ceremonial appointed to take place in the Chapel Royal—a beautiful edifice situated in one of the wings of the palace. The members of the Prussian royal family arrived before noon, and at twelve o'clock the whole party entered the chapel, where an impressive service was performed in the German language. The Prince of Wales, who is on a visit to his sister, wore the uniform of a colonel in the Guards. After the company had departed her Royal Highness withdrew to obtain a little repose after the fatigue of the day, during which period the Prince of Wales and his brother-in-law drove out and visited some members of the Prussian royal family, returning before eight o'clock to a dinner *en famille*. In the evening a few of the public offices were illuminated, and some of the theatres had special performances in honor of the day. It was remarked that her Royal Highness, although somewhat pale, looked remarkably animated and happy. Prince Frederick William wore the uniform of the regiment of Guards to which he belongs. During the day her Royal Highness received a number of costly presents, many of which came from far distances. Several packages arrived from England; among them a large bouquet of English roses and other choice flowers, purposely grown for the occasion. The Princess, it is said, anticipates her confinement very early in the ensuing year. It would be impossible to describe the enthusiasm with which this event is looked forward to by all classes of society in Berlin."

We have put thus much in type, that our readers may contrast the record with the terrible progress of the British "double marriages" in Carlyle's "Frederick the Great." The great alliance is surely now fairly won; and the court festivities of Prussia, it is to be hoped, are of a different complexion from those which enlivened the "Tobacco parliaments" of old.

Royalty is not yet exploded. Economy is probably less than it was in the time of Frederich Wilhelm, consumption of Champagne may be even greater; church-goers may possibly be fewer; diplomacy is as inscrutable and as false; but if we compare the two ages, who had not rather take his chance under the present Regent, and prospective King, than to have lived under the wing of the great Potsdam giants?

From the British Princess it is no long remove (not so long as that from Siam to Corfu) to the British Premier; and we have a sketch of him here which will be read with interest:

"Nothing is more strikingly characteristic at once of the whole genius and temperament of Lord Derby than his manner in the House of Peers upon the night of some great discussion—upon the occasion, let us say, of one of his important ministerial statements. Every one is in expectation. The building is comparatively crowded—the Lords in unusual attendance, the Commons clustered below the bar, strangers grouped upon the steps of the throne, or to the right and left upon the floor of the House behind the woolsack. Although the Premier is seated, in the midst of his colleagues, upon the front Treasury bench, he among them all is at once readily distinguishable. You recognize him at once by the watchful glance—that frequent look of vivid and vigilant observation. If you mark him keenly before he rises, moreover, you fail not to note the nervous anxiety betrayed in his every lineament, in the compression of the firm lip and the knitting of the broad forehead. When at length, amidst the breathless silence of the assembly, he has gained his feet, how through the clear and unstudied exordium he rapidly, yet by imperceptible gradations, wins upon the sympathy of his audience by his evident sincerity and earnestness. Later on, when he has passed the outskirts of his argument, and has fairly warmed to his theme, all the more genial qualities of his mind become apparent, shining out winningly, delightfully, playfully, with an air of exhilaration. It is a vivacity with him 'ever young' in its easy animation. Yet, suddenly, in the midst of this, if he is desirous at any moment of reverting to a more serious tone, of recalling himself and his hearers to a mood of gravity befitting some impressive and emphatic declaration—his look, his voice, his bearing are instantaneously invested with the dignity of the senator and the statesman. The management of his harmonious voice, above all, is throughout marked in every turn and inflection by an almost perfect art and a nearly matchless dexterity; more especially, as we have heard it inimitably described, when, upon occasion, it is so managed that 'the cadence falls like the running bullet in a loaded bludgeon.'"

Nothing more from England; indeed your American papers are so thoroughly posted in all British matters that we rarely seek for our material in that direction.

Falling back, then, into the solitude of our office-chair—the correspondence for the month being exhausted—what have we to beguile the half hour which waits before the closing of our monthly budget?

Nothing, except it be the "Life of Vicdocq."

And who was Vicdocq?

The "Old Hays" of France; the great police detective of his day; the Vautrin of Balzac's stories.

He died about half-way through the year 1857, having been born in Arras in the year 1775.

He commenced life by robbing his father's house, and ended it, in the most tranquil part of Paris, a gray-haired patriarch, with a fortune at command, and full of police honors.

While a boy he fled into Belgium to escape imprisonment, and there associated himself, successively, with a show of traveling and educated dogs, and a Punch and Judy theatre. Weary of this, he enrolled himself a soldier, fought against the Austrians, deserted, was retaken, received a bullet in the leg, and married, at the age of eighteen, a woman four or five years his senior, who had the misfortune to be thin, deformed, ugly, and without character.

At Lille, shortly after, being condemned to prison for an attack upon his superior officer, he aided a poor devil to escape by means of forged papers. For this new offense he was condemned to the galleys; and there formed that wide acquaintance with culprits and their habits which served him so well in after years.

In the year 1809 he was named chief of the secret police of Paris, with pay of five thousand francs a year. Within a twelvemonth after his entrance upon official duty he had arrested and expelled from Paris no less than eight hundred of his old criminal friends. The wariest and the most subtle were matched by him with a subtlety equal to their own. His capacity for taking on disguise, whether of voice, or dress, or gait, or even countenance, was something most wonderful. He introduced himself into the

haunts of the lowest thieves as one of them; and with equal facility, appeared at *bourgeois* fêtes as an honest, stolid vendor of perfumery. On one occasion he passed himself off, to his own superior, the prefect of police, as a well-known Duchess of the Faubourg St. Germain! And remembering that he was five feet five, and had the shoulders of a Hercules, his power of concealment seems almost inconceivable. Even at the age of sixty he passed himself off, for a whole evening, in a numerous and delighted society, as a stout young country wench of Nancy.

There is a story of his winning a way to the dinner-table of the Baron Mechin that may perhaps be worth the telling.

The Baron Mechin had been prefect; had been deposed; and was believed to be plotting against the Government. He was to give a dinner party, at which it was supposed his friends might talk over their plans. Impossible, on any pretext, to procure invitation for any secret member of police. In this juncture the new prefect sends for Vicdocq, who had hitherto been employed only in detection and arrest of such gross criminals as robbers and cut-throats.

"Vicdocq," says the prefect, "you are capable of almost any thing you undertake; I have a service to propose to you. The Baron Mechin gives a dinner; we must have report of the conversation. Can you contrive to be of the party?"

"When is the dinner to come off?" says Vicdocq.

"To-night."

"*Parbleu!* it is short notice. And where does he live?"

"26 Rue de la Chaussée d'Antin."

"*Bien;* I will be of the party."

"You think it possible?" says the amazed prefect.

Vicdocq has the Napoleonic scorn of the impossible.

He disguises himself as a servant; wanders into the Chaussée d'Antin; makes his observations; enters a wine shop beneath the hotel of the Baron Mechin; seats himself at one of the little tables; passes a word or two with the boy attendant; and is presently gratified by the entrance of the chief cook of the Baron.

Vicdocq hails him as an old acquaintance (much to the amazement of the simple cook); plies him with good wine; discusses chances for service; expresses intense admiration for the capacity of his companion; and "could he be allowed to see the result of this day's preparation—such an artistic display of dishes (he could put on a bit of livery and pass himself as servant of one of the guests); it would be a proud thing for him."

But the simple cook, at his last introduction of a friend under such circumstances, had missed half a dozen pieces of plate; it had made him wary; the thing was quite impossible.

The direct attack fails; but Vicdocq, by means of his conversation, is in possession of certain data about the household which he presently puts in requisition.

Bidding the cook *bonjour* he retires, hurries home, disguises himself this time as a pleasant, gray-haired old gentleman from the provinces, and wandering toward the scene of his strategy, enters a café upon the corner of the Boulevard, orders a light lunch, writes a note, and, beckoning a commissionaire, dispatches it to M. Benoit, valet of the Baron Mechin.

In a few moments M. Benoit enters; inquires for M. Lambert; he is directed to the table at which sits Vicdocq; is received kindly.

Vicdocq prays him to be seated, offers him a taste of Madeira, and opens his plan.

M. Benoit is desperately in love; wishes to marry; his name, however, is on the conscription list for the year; he has no money to buy a substitute; five hundred francs are needed; would M. Benoit like the five hundred francs?

Without a doubt—charmed to earn them. It can be easily done. The Baron Mechin has a parrakeet he prizes highly?

Benoit says yes; in fact he has the care of him.

Will Benoit, for the sum of five hundred francs, this evening, just before the hour of dinner, allow the pet bird to escape by the window on the street?

"Impossible! the bird would be lost; a thousand francs could not replace him."

"But he shall not be lost; *tenez*, here is a little silken thread, with a lead bullet attached; tie the string to the left wing of the bird; he will flutter and drop to the pavement; I will be there to receive him. It is a ruse of mine only, to have interview with the Baron on matters of importance; and if you lose service, *tenez*, here is my card; you shall take service with me."

Benoit reads the card—a pompous title upon it:

M. Lambert,
Notaire-Certificateur à Montélimart.

It wins upon the valet, and the bargain is struck.

At the appointed hour Vicdocq is on the street—a serene, stately old gentleman from the provinces. His agents, meantime, posted here and there to intercept the parrakeet in case of escape.

When the guests have all arrived a casement is suddenly opened; a parrakeet screams and flutters in the air, drops, and is instantly caught up by Vicdocq. He detaches the thread, protects the bird under the lapel of his coat, and asks naïvely of the shopkeepers to what fair lady so beautiful a bird belongs?

It is the Baron Mechin's; and the Baron's balcony is already thronged with the Baron's guests, eager to learn if the capture has been made.

M. Lambert (sending up his card) is overjoyed to find he has done a worthy man, and so sterling a patriot, even so small a service. He begs liberty to return the bird with his own hands. He enters—is delighted at the opportunity afforded; the liberal sentiments of the Baron (in low tone) are so dear to his heart; proudest day of his life; the Baron does not, perhaps, know what ardent friends he possesses in the little commune of Montélimart?

The Baron has, indeed, heard of M. Lambert, and of his liberal opinions; is delighted at the opportunity; it was a fortunate escapade of the bird that gives him such unexpected pleasure; a few friends are with him; would M. Lambert do him the honor to dine?

Vicdocq could ape the manners of the pompous *bourgeois* as well as those of the Duchess of St. Germain. He delights his host; draws out the political views of the company; and takes report next morning to the delighted prefect.

Happily it was not such as to endanger either the life or liberty of his pleasant entertainer.

Editor's Drawer.

"GOOD wine needs no bush." Better than wine, to make glad the heart, is the matter in this Drawer, and it needs no note of commendation. Read this from an excellent Methodist brother in the ministry in the West, who writes from Ohio, and certifies to the authenticity of the story:

"Over the contents of the 'Editor's Drawer,' in the last 'issoo' of *Harper*, I have 'laughed as I would die.' Herewith I send you an anecdote of a whang-doodle hard-shell preacher, who wound up a flaming sermon with this magnificent peroration:

"'My brethring *and* sistern! ef a man's full of religion you can't hurt him! There was the three *Arabian* children; they put 'em in a fiery furnace, hetted seven times hotter than it could be het, and it didn't swinge a har on their heads! And there was John the Evangeler; they put him—and where do you think, brethring and sistern, they put *him?* Why, they put him into a caladronic of bilin' ile, and biled him all night, and it didn't *faze* his shell! And there was Dan'el; they put him in a lion's den—and what, my fellow-travelers and respected auditories, do you think he was put into a lion's den for? Why, for prayin' three times a day. Don't be alarmed, brethring and sistern; I don't think any of *you* will ever get into a lion's den!'"

A NEWLY-ELECTED Justice, in one of the mountain counties in Ohio, no doubt honestly believing that his jurisdiction extended over the whole of the United States as well as the inhabited portions of Canada and Mexico, lately perpetrated the following in issuing his first warrant. It appears that some half dozen young Kentuckians had been at a wedding in one of the rural parts of Ohio, and having imbibed rather freely, became noisy; and, finally, kicked up a row. One of the sober-sided citizens of that region, feeling aggrieved at the conduct of the boys, laid in his complaint, in the form of an affidavit, before the nearest magistrate, and demanded a warrant for their arrest; telling the magistrate, at the same time, that the boys would probably be in Kentucky before the warrant could be served upon them. The magistrate called for pen, ink, and paper; and assured him that he was elected by over two hundred majority, and that he would issue a warrant that would take them in Kentucky, or any where else; whereupon he immediately sat down and issued the warrant, and, for safety and certainty, directed it "To all Constables in Ohio and Kentucky."

The description of the offense charged in the warrant is as follows:

"Whereas the Defendants, on or about the 14th day of October, A.D. 1858, at the county aforesaid, did, *unlawfully*, *riotously*, and *routously* assemble themselves together, with intent then and there to do an unlawful act—to wit, with force and violence, against the person and property—to wit, the dwelling-house of one W. D., then and there being—to wit, then and there to strike and beat the said W. D., who was too old to defend himself; and to injure his said property, by then and there shooting at him, the said W. D., and other members of his family, with a pistol supposed to be loaded, but the contents are unknown to this Court. These are, therefore, in the name, and by the authority of the State of Ohio, to command you to arrest said Defendants, if found within your State; or, if they have fled to any other State to avoid the levy of this warrant, you are authorized to pursue after them and bring them back, as well to answer the charge aforesaid, as to answer for a contempt offered to me personally, and to the authority of this court, by attempting to escape beyond its jurisdiction; and you will have their bodies forthwith before me for trial as soon as you return with them, dead or alive.

"Given under my hand and seal of office, this 15th day of October, Anno Domini, in the year of our Lord, 1858.

"A. B." (*seal.*)

The aggrieved individual actually took the warrant to Kentucky, and tried to get a constable to arrest the defendants under it; but the constable, after consulting his attorney, concluded that the Ohio Justice had mistaken the extent of his jurisdiction; and, not knowing what might be the result of a suit against him for false imprisonment, declined obeying the mandate so imperiously directed to him.

THE late Judge M—— was said in his early days to be very fond of a quiet game of cards, and was reputed to be quite a proficient in all the mysteries of euchre, high low, bluff, etc., etc. While holding the circuit in one of the Western counties, the counsel for the plaintiff was examining a rather reluctant witness, and in the course of his examination put some question to the witness which was objected to by the opposing counsel, and ruled out by the Judge as improper. This was repeated again and again, in different forms, until the Judge, out of patience, called out to the plaintiff's counsel, "*Mr. B——, if you have got any trumps you had better play them, and not undertake to nig any more!*"

JUDGE B——, of E—— County, in this State, was one of the *side* Judges of the old Court of Common Pleas, a very good sort of man and a respectable merchant, but considerably elevated by his position on the bench; and, on the resignation of the first Judge, his self-esteem was by no means decreased by his becoming the presiding Judge. While holding court on one occasion, a Mr. T——, who has since become somewhat eminent in his profession, tried his first cause, and excited the unanimous commendation of the whole bar at the ability he displayed. A question of some importance in the result of the cause arose during the trial, and, after a very able argument on the part of our young friend, was decided by the presiding Judge against him. This aroused his young blood; and in the excitement of the occasion he remarked, in the hearing of the Judge, "*that he was astonished at such an outrageous decision.*" Judge B——, much excited at the remark, called the young man to an account, and required of him an apology, which it was arranged should be made at the opening of the court in the afternoon; or, in default, the Court would commit him for contempt. Mr. T—— was very much alarmed at his position, and called on his friend, John R——, celebrated for his dry humor and ready wit; who told him to give himself no further uneasiness on the subject, as he would help him out. At the opening of the court Mr. T—— was called upon for his apology. The tall, gaunt form of John R—— arose, who said that he had been requested by his young friend to address the Court in his behalf; and after commenting upon the talents and rare ability displayed by his young friend in the trial of the cause, his youth, and inexperience in the ways and customs of courts, and of this court in particular, remarked, "*That had his young friend been as familiar with the practice and decisions of this court as he* [Mr. R——] *was, he would have ceased long ago to be astonished at any decision your Honor might make!*" [An old story, but good as new.—ED. *Drawer.*]

"THE people of our State of Tennessee are at this time greatly 'exercised' upon the subject of the 'New Code' which was passed by our last Legislature. Section 1840 of the Code reads as follows: 'Every miller or bolter of flour, made or intended for exportation, shall provide and use distinguishable brands or marks; and before the flour is removed shall impress on the head of each barrel the name of the miller or bolter by whom it was manufactured,

and the quality of flour contained in each particular barrel, by branding or marking thereon, at full length, the words "family," "superfine," "fine," "middling," as the case may be.' Shortly after the issuance of the 'Code' I was passing by the mill of our simple-minded and law-abiding friend, W—— L——, when you may guess my surprise and amusement to see about one hundred or more barrels bearing the following *inscription*, at full length: 'W—— L——, *miller or bolter*, family, superfine, fine, middling, as the case may be!' and my friend still busy, brush in hand, doing a hundred or so more.

"'Why, what does all this mean?' said I.

"He triumphantly pointed out to me the abovementioned section of the Code, and said, '*Done* accordin' to law, you see, old hoss!'

"I succeeded in holding in till I left him. Some one has enlightened him, I suppose; as I notice a great many barrels, whose heads are painted all over red, waiting to receive new inscriptions or brands."

"The author of 'Cousin Sally Dillard,'" writes a correspondent, "has furnished the Drawer with 'an ower true tale' about one of our judges (his name is not Billings, though), whose peculiar merits do not consist in a quick appreciation of a joke. The same witty contributor knows another instance of inappreciative solemnity, which he could report much better than I. But here it is:

"Some years ago, when Governor Morehead graced the executive chair of the old North State, a ferocious onslaught was made against his administration by the party in opposition, which had a majority in our Legislature. A committee was appointed by that body to examine the expenditures of his Excellency in the executive mansion—which we call 'the palace.' Mr. Brogden, now State Controller, was chairman of that committee—since celebrated as the 'Spoon Committee.' The majority of this committee and its chairman were politically opposed to the Governor, and went into the scrutiny *con amore*, hoping to find something rich out of which capital might be made for the coming canvass. After visiting the palace, and peeping about among its furniture and fixings generally, this grave body met to make their report upon the awful waste and extravagance which his Excellency had shown in building an ice-house, and repairing his stables, and in divers naughty east room embellishments, when it occurred to the chairman—a simple-hearted but not very polished citizen—that the committee had neglected a very important part of their duty, inasmuch as they had not *counted the spoons*, and verified the number as charged in the Governor's bills. Ben Pope, a member of the committee, and a gentleman of infinite humor, exclaimed with much mock indignation against an investigation that implied that a Governor of North Carolina *might steal spoons*. 'But, Brogden,' said he, 'if you wish to count the spoons, go and do it. *I* shall not go, and I am sure the other members of the committee will be ashamed to accompany you in such a pitiful service. You will go alone—and—and, Brogden, *who is to count them after you?*'

"Several gentlemen were dining that day with the witty and very accomplished Mrs. T——, and the spoon story was told and enjoyed with great glee by all at the table—all but G—— M——, whose only failing is similar to that which afflicts Judge *Billings*. He is slow at taking a joke, and understands one only when he has had time to turn it over and examine it in all its bearings. But, unlike the Judge, when he once gets hold of it, he never lets it slip. It works him all over, and his enjoyment is intense, and intensely explosive. On this occasion, long after the uproarious mirth had subsided, and other and more quiet themes were under discussion with the dinner, the sober-sided George incontinently burst out into a terrific fit of laughter, such as none but he can perpetrate, for he has a voice like young thunder, and old Stentor was a baby to George in a vocal way.

"'Good!' exclaimed he. 'Good! Glorious! I see it!'

"'See what?' asked Mrs. T——.

"'Oh, that joke upon Brogden and the spoons! Glorious! Capital! Capital!'

"'There was no danger of losing the spoons,' said the lady, laughing, 'if Brogden was as slow at taking them as Mr. M—— is at taking a joke.'

"The feast went on, but G—— M—— could not get over the spoon joke; and semi-occasionally, if not oftener, during that dinner, he thundered out his appreciation of Ben Pope's fun. He could not help it. Brogden and the spoons, the spoons and Brogden, were ringing in his ears, and he must let out. And even now, though years have passed, there is no question but the demure and quiet woods of old Guilford are waked up by some very mirthful and un-Quakerly sounds whenever the memory of that scene comes over his mind."

"During that same session of the Legislature, the dominant party had determined to pass some resolutions of a party character on a certain day. The minority were equally determined that it should not be done. A noisy night session was the consequence. All sorts of parliamentary tactics were employed by the minority to stave off the question. It was about midnight when this same Green Mitchell—for that is his name—a member of the Lower House, an eminent lawyer, a pure gentleman, and large-hearted philanthropist, obtained the floor. He lifted up his voice to a high key, and said, pausing after every word: 'Mr.—Speaker—The—point—of—order—now—under—discussion—is—decided—in—one—of—the—three—large—volumes—of—Hatsell's—Precedents.— I—am—not—certain—in—which—volume—but—I—shall—begin—at—the—beginning—of—the—first—volume—and—read—on—until—I—find—it.' He then ordered one of the pages to bring him 'a pitcher of water, and three large spermaceti candles. He should probably want them all before he was done, though he should use only one at a time,' etc. The consequence was that the majority consented to adjourn, and the resolutions were passed on a subsequent day."

"People nowadays, when the Congress of the United States is spoken of, get an idea of a body whose only intellectual recreation is the delivery of long Buncombe speeches, which poorly make up for their want of novelty and point by the noise and pretension with which they are pronounced. But, not to go back to the time of the Randolphs and Burgesses and Holmeses of an earlier day, there have been many 'good things' said by our M.C.'s within but a few years, which are worth the trouble of preserving. Two or three of these, which I now recall to mind, I propose to put into your Drawer for that purpose. '*Pars quorum*,' I do not pretend to say I was; but my particular employment at the Capitol gave me good opportunity to hear and enjoy as well as if I had been 'one of 'em;' and I am glad to show

you that I have had appreciation and memory of the wit of others, although making no claim to be among the perpetrators myself. I will chronicle nothing but what is harmless to the fame of any one living or dead, so I hope to be pardoned for the use of names.

"Every body has heard of 'long John Wentworth,' of Chicago. Well, when in the House of Representatives, one day, a vote was being taken by tellers on some question on which the lines of party were a little broken, John found himself separated from his Democratic friends and arranged on the other side. It was on a Lake Harbor Improvement Bill. You know how they vote by tellers—passing in pairs, like yoke-fellows, between two members, who are appointed to stand in the area in front of the Speaker's chair, and make report of the numbers in the affirmative and negative. Our tall Illinoisan, towering in person above all the crowd who were pressing forward thus in couples to be counted, looked down and around him, inquiring, 'See here, boys! am I alone among these rascally Whigs? Isn't there any good Loco Foco here to pass through with me?'

"'Double yourself up,' said Abner Lewis, of New York, who, with Robert C. Schenck, of Ohio, was coming just behind; 'double yourself up, Wentworth, and so you will go through with the hardest Loco Foco in this crowd.'

"'Ah, yes,' added Schenck; 'you think "None but himself can be his parallel."'

"But the quotation and application were both unnecessary. The shaft needed no feathering.

"This same Mr. Schenck, who, in the eight or ten years of his service in the House of Representatives, held always the first position, in my judgment, as the readiest and most effective debater in the Hall, was famous for letting off good and brilliant things, and sometimes very pungent ones, in conversation as well as on the floor. It required all of his very gentlemanly and polished manner, often, to reconcile the object of his sarcasm to take, and endure good-humoredly, the trenchant blows he could give. In the long-protracted debate on the 'Oregon Question,' in the time of President Polk's administration, Mr. Andrew Kennedy, of Indiana, was one of the most violent of the 'Fifty-four forty or fight' party. Andy was known as a man of much more native shrewdness than of cultivation. He had finished a loud and fiery war-speech one day, and passed out into the post-office room of the House, which was commonly used by the members as a lounging and chatting place. He was still glowing with unsubsided excitement and patriotism, when some one remarked to him:

"'Kennedy, you did belabor the British lion terribly. Queen Victoria would hardly sleep soundly to-night if she could know how you had been defying and threatening her.'

"'Very well,' said the flushed orator, 'them's just my sentiments! Yes, Sir,' said he, looking almost fiercely at Mr. Schenck, who happened to be the only Whig present, 'them's my sentiments. I hate every thing *English!*'

"'I do not doubt it at all, Sir,' quietly rejoined the latter; 'I have observed that you extend your hostility sometimes *even to the language!*'

"But Mr. Schenck once was himself pleasantly and wittily hit by a most excellent fellow. Some one had sent across the hall to his desk a card, on which was written a crabbed Latin sentence, requesting a translation. He looked it over, and gave the opinion that it had better be passed on to George P. Marsh, of Vermont, who was the admitted scholar of the House; but said that if he did venture a construction, he should say 'that there was either a mistake in the punctuation or it was bad Latin.'

"'Maybe it's *good* Latin, Schenck,' dryly remarked Julius Rockwell, of Massachusetts, who overheard the conversation; 'that may be the difficulty!'

"How much better and more becoming such encounters of wit than the brutal pugilism with which our nation's Solons sometimes diversify the scenes of legislation!"

"For the delectation and edification of my better half," writes a Southern correspondent, "I was just now reading to her George Bulpin's advertisement in *Harper's Weekly*. One of our 'chattels,' who rejoices in the name of *Frank*, being in the room, was a delighted listener. Said 'chattel' values himself at $1500. The advertisement announced that Mr. Bulpin had recently purchased a stock of goods in Paris amounting to one million of *francs* in value. The 'chattel,' wholly unacquainted with the currency of the French, and imagining that the cloaks and furs in Bulpin's establishment had cost a million times his own value, rushed out to his mates and announced the intelligence by informing them that 'a store-keeper in New York had bought his new goods, and had traded a million of niggers for 'em!'

"'Oh, Frank, hush! you lyin', you know you is,' said one of his auditors; 'dey ain't no one man eber had a million niggers.'

"'You jes come in de house, den, an' see wheder Marsa's lyin'. I hearn him read it in de paper, an' de store-keeper's name is Bullpen, an' all dem niggers was named *Frank*, a million of 'em, sartin.'"

In the early days of the State of Indiana, the capital was Corydon; and the annual sessions of the General Assembly usually brought together as wild a set of mad wags as could be found in the State, who had to rely upon their own resources for amusement, for there were then few theatres, concerts, or shows.

These lovers of mischief had established a *mock Masonic Lodge*, into which they would entice such as were a little green, and take them through a variety of ridiculous ceremonies, to the infinite amusement of the crowd.

On one of these occasions, it being understood that a good-natured, athletic young man, about half a simpleton, was to be initiated, the room was crowded. Judge Grass (it being a character in which he was peculiarly happy) had consented to act the rôle of the devil; and to make the services more impressive had put on a false face and a large paper cap, surmounted with horns, and, with some chains in his hands, placed himself behind a screen.

After taking the candidate through a variety of ceremonies he was brought to a stand before the screen, and told that he had then to confess all the crimes he had committed during his whole life. The candidate confessed some trivial offenses, and declared that he could recollect no more. At this the Judge came out from his hiding-place, groaned, and shook his chains. The frightened candidate related some other small matters, and declared that he had disclosed all the crimes he had ever committed. At this the groans of the pretended devil became furious, the chains rattled and he shook his horns in the face of the terrified candidate, who, starting back in alarm, cried out,

"*H-h-old on, M-m-m-ister D-d-evil, if I m-m-must*

t-t-t-ell you, I d-d-did k-k-kiss J-j-judge G-g-grass's w-w-wife a c-c-couple of t-t-times!"

The groaning ceased.

WHOEVER knows the Rev. Dr. Robert M'Cartee knows a man of a most rare and genial humor, whom it would be pretty difficult to get the advantage of in readiness of wit or reply; but when gained, no one enjoyed the joke more than the Reverend Doctor himself. It was while he was the beloved pastor and friend of a congregation in Port Carbon that he met a Quaker gentleman in the cars between Pottsville and Philadelphia. Their first conversation turned on the different tenets of their faith, when the Reverend Doctor, wishing to change the subject, remarked that his broad-brimmed friend was laboring under a severe cold, and recommended to him a very efficacious remedy, which he had often used, very simply compounded; "which," said the Doctor, with a look of sly humor, "we call 'Stewed Quaker.'"

"H-e-m! h-e-m!" chuckled the Quaker, coolly enjoying the joke at his own expense, "thee might stew a Presbyterian to death before thee'd get that much good out of him."

IT is the custom in many parts of the country to allow ministers to pass over the bridges free of toll. A minister traveling along the other day came to a bridge. A freshly-imported Paddy came out of the toll-house and stopped him; but, on being told his office, bade him go on. The minister asked him "why he believed his mere word without any credentials?"

"Faith," says Paddy, "a pr'acher wouldn't lie, sure!"

There is capital *Irish* in that; but it takes a minute to take the whole of it in.

SOME years ago it was the custom for the students in the Theological Seminary at —— to preach before the Professors, who criticised their performances. Upon a certain occasion a young man, who was very sophomoric in his style, was preaching on "The Creation." He drew a glowing picture; spoke of the dark night of chaos, out of which, at the fiat of Omnipotence, sprang a bright and beautiful world, bespangled with flowers, gayly-plumed birds, etc., etc. Old Dr. ——, whose turn it was to criticise, sat through it all evidently very much annoyed, and the older students expected some long and scathing rebuke. The venerable Doctor, however, after a pause of a moment, in which he surveyed the orator minutely, turned to the students and said: "*He can't beat Moses!*"

WE extract the following from a letter by a missionary in Syria, on the all-absorbing subject of the crinoline:

"One day an Arab from Ghurzug called upon us and said that he had seen a great curiosity at Beirût. Said he: 'The French and English ladies there wear large umbrellas under their dresses. I am sure of it. I saw the frame-work. And when the sigñoras passed along I saw the merchants move away their baskets and boxes in the narrow streets to let them pass.'"

"WHEN, in the beginning of the past summer, the yellow fever commenced its ravages in our city, the neighboring towns, with the *exception* of B——, published in the newspapers their quarantine laws forbidding any one from our city to enter their towns, under the usual penalties, unless after a quarantine of several days. An acquaintance of mine having business which, in a few days, would call him to B——, was fearful lest that town, too, should exclude Charlestonians; but no notice having appeared, he 'packed up' and started thitherward. You may imagine his surprise on arriving there, to find a notice pasted on the *Court-house*—within the town—forbidding any person or persons from Charleston to enter that town, under a penalty of five hundred dollars and one month's imprisonment. Ought not those folks to be looked after?"

Irish all over.

CAPTAIN THISTLE, of whom a story was in the Drawer some time ago, is now in this city, a worthy and respectable man, and we have every reason to know that the story was purely fictitious. The gallant Captain resides in Bleecker Street, and may be inquired of by any one who doubts the correctness of what we now state.

"I VISITED, a few days since, the Shelby Agricultural Society's fair grounds, a mile and a half from this, the 'Bluff City.' After satisfying myself with the internal arrangements of the place, I was about passing out at the main gate when I observed a large tent in a distant corner.

"'What's in that tent?' said I to the gate-keeper.

"'That's *the* bar,' said he.

"'The *bar?*'

"'Yes, Sir.'

"'Singular,' said I, 'that they can't get along with an "institution" of this sort without a *whisky*-shop.'

"'It's no whisky-shop,' gruffly replied he; 'it's the *bar*—the *Oss*-tralian bar.'

"Lovell and old Bruin were playing their pranks in that tent."

CALIFORNIA justice is sometimes very summarily administered, and the following is a specimen thereof. A correspondent writes:

"Our town has long been infested with a set of loafers and gamblers, who have been a scourge to the quiet citizens and a terror to the public officers. On the election of J—— B——, last fall, to the office of Justice of the Peace, he determined to deal with them 'as the law directs.' While walking up the main street he heard an altercation in one of the saloons, and going in saw two of the sporting fraternity 'pitching in' to each other. Without waiting for warrant or constable he immediately collared the largest and most pugnacious of the two, and requested him to 'walk up to the office and settle.' This he refused to do; whereupon the Squire took him by the throat, and *held* him till the blood started from mouth and nostrils. Thinking that sufficient argument in favor of 'law and order,' the Squire let go his hold, and again requested his company. He again refused to go; whereupon our energetic Squire took him up in his arms and carried him to the office, called the Court to order, and fined the sporting man forty dollars, which he paid. The 'Court' then adjourned with the remark, 'Gentlemen, that is what I call *even-handed justice.*' I 'concurred' in that opinion."

DURING the last hour of the session of the late Mississippi Legislature there was considerable merriment in the House. Upon some measure the "House went into the Committee of the Whole,"

D—— in the chair. Now D—— was evidently not a handsome man, having, among other defects, a remarkably large nose and very prominent eyes. Some member playfully moved that the Daguerreotype of the chairman should be taken, with which to ornament the Hall. Mr. S—— objected; because, he said, that the I's and No's (nose) could not be taken in the "Committee of the Whole."

JIM is a "five-year-old," and very fond of going to school. His mother once said, "Jimmy, you can not go this morning; some of the scholars have the measles, and I am afraid you will take it from them." "Ma, I promise you I will not take it even if they give it to me!" replied he.

Speaking of a gentleman with a very ugly name, Jim exclaimed, "If I was that man I would get married and change my name!"

LITTLE JUNIOR, a bright and thoughtful fellow of four summers, awoke the other morning, and, turning to his grandmother, said, "Grandma, I dreamed I had a carriage last night!" "Did you?" said she; "well, what did you do with it?" "Oh," said he, in his thoughtful manner, "I left it in the *dream-house!*"

"IN my reading class," writes a clever correspondent, "was a boy who loved to show his learning by using bigger, if not better, words than he found in the book. His lesson was to give the dictionary definitions of a page of words, on which was: 'Missionary—*one sent* to preach the Gospel.' To make it a little more elegant, he cried out, 'Missionary—*one penny* to preach the Gospel!'"

"WE have a little three-year-old feminine, who, a few evenings since, was importuning me to repeat to her the lines,

'Twinkle, twinkle, little star!' etc.,

which led to a tedious questioning on her part about the stars. The evening was beautifully lit up, and we were enjoying the scene, looking out of the window. I had become about tired of answering when she asked, 'And where do the stars go when they go out?' As it was getting about time to retire for the night, I thought I would put an end to the whole business, and answered, 'I guess they go to bed!' In a few moments she asked, 'And who makes their bed?'"

"THE little son of Ex-President Tyler, a boy of four years, stood gazing at the COMET, and exclaimed, 'It's God's kite sailing in the sky!'"

An octogenarian writes to the Drawer: "I make bold to send you a conundrum made by my little grand-daughter on the occasion of the departure of one of her older brothers on a voyage for health. I omit her lisp, but otherwise give her words:

"'Why,' asked she, 'is Fred like a man that has fallen off a tree, and is determined to go up again?' *Ans.* 'Because he is going to try another *clime!*'

"Not bad for an eight-year-old, is it?"

"IT will not be necessary that I should inform any one of your readers who was S. S. Prentiss, as the history of this wonderful man is a part of the history of the country. Many years ago, when he was engaged in a large practice in Mississippi, he and his friend, Judge G——, were on the circuit in some of the eastern counties of the State, and stopped for the night at the village of H——. Late at night Prentiss discovered that Judge G—— and himself were not the only claimants for possession of the bed, as he was vigorously beset by a description of vermin who do not make very comfortable bed-fellows. Accordingly he awoke Judge G——, and a consultation was had whether they should beat a retreat or make an effort to exterminate their assailants. The latter course was, however, adopted; and for the purpose they took from their saddle-bags a brace of pistols, with caps, powder, and other munitions of warfare. With pistols in hand, they proceeded to raise the bed-clothing; and as one of the creeping reptiles would start from his hiding-place bang—bang! would go the pistols. This, of course, aroused and alarmed the worthy landlord, who came in hot haste to the room, and when he learned the facts was in great rage. Prentiss demanded he should leave the room, claiming that he was only 'exercising the right of self-defense—a right which the law of God and the law of man had given him.' Both the entreaty and the threats of the landlord proved unavailing. The firing continued until bed, bedstead, and bedding were riddled with balls. At last they succeeded in capturing one of the enemy, when a difference of opinion arose between Prentiss and Judge G—— as to what should be his fate. At length it was agreed that he should be 'fairly and impartially tried by a *jury of his country.*' Three of the landlord's sons were brought in and forced to sit as members of the jury, and a third lawyer who was present acted as judge. The prisoner was then pinned to the wall. Judge G—— (who was a very able lawyer) opened for the prosecution in a speech of two hours in length. Prentiss followed for the defense in a speech of four hours. There were those present who had known Prentiss intimately, and had heard him upon great occasions of his life, and who now assert that this was perhaps the most brilliant speech he ever delivered."

A CINCINNATI correspondent writes: "The following specimen of negro wit is too good to be lost. I was some time ago in a barber's shop, enjoying the delightful titilations of a shampoo, when Bill, our barber, a very observant, talkative fellow, and as black as the ace of spades, said to me, with his strongest darkey twang,

"'Massa C., do you know Lawyer ——, in de same building whar your office is?'

"'Oh yes,' I replied; 'very well.'

"'Gosh,' said Bill, 'he's got de littlest head of any man I ever seed!'

"At this remark a big, fat, chuffy negro, lounging on a settee, spoke up: 'What use a man got wid a big trunk, when he hain't got many clothes?'

"I thought it fitted the head exactly."

HERE is a specimen of breaking the news gently. During the summer of 1849 a Mr. James Wilson, of West Jersey, died with cholera while some fifty miles from home. John Rogers was employed to convey the dead body in a wagon to his friends and home. By inquiry he learned the precise house of the deceased. On driving to the door he called to a respectably-appearing lady, who was in fact the newly-made widow, and asked:

"Does Mr. Wilson live here?"

"Yes," was her reply, "but he is not at home to-day."

"I know he's not at home now, but he will be very soon, for I've got him here dead in the wagon!"

Figures 1, 2, and 3.—Morning Negligée and Children's Toilets.

THE MORNING NEGLIGÉE is specially designed as a bridal peignoir. The Chemisette is only apparent, being really a portion of the garment. It is wrought in needle-work so as to give the garment the appearance of being a half-high dress. The sleeves are similarly constructed, so as to present the appearance of under-sleeves. If desired, the skirt may be wrought in a suitable design in needle-work, *en quille*. The corsage is close, and, with the skirt, is similar to that presented last month, being cut in one length, so as to fit rather closely at the waist, with a moderate fullness below. Our illustration is designed for white muslin. Should merino be selected for the material, a blue-bird egg color is appropriate, if it suits the complexion. In this case the robe must have the neck cut square, half-high, with an inside *fichu;* the sleeves also must be short, and turned back, buttoning upon themselves, with under-sleeves arranged in broad plaits, as represented in the illustration. The vandyked sleeve-caps, which have buttons at each point, may be slightly stiffened. The cord and tassels are merely for ornament. The coiffure consists of a simple lace handkerchief.

FIGURE 4.—CORSÉT TOURNURE

The BOY'S TOILET consists of a Scotch cap of black velvet with feather and plaid band; a Zouave jacket; full trunk pants, closed at the knee, with over-alls and gaiters. The jacket is of dark-green velvet, heavily embroidered, and confined with hooks and eyes. It may be edged with gold lace.

The CHILD'S TOILET is of white muslin, trimmed with blue ribbons.

The CORSET TOURNURE is a novelty which is highly recommended. While serving the purpose indicated by its name, it forms an effectual support for the skirts.

We also illustrate a SKIRT SUPPORTER, the extreme lightness and simplicity of which commends it to public favor. It consists of a girdle of three parallel slips of watch-spring steel, furnished with a slide so as to be readily adapted to the size of the wearer; this, instead of the person of the wearer, receives the pressure of the girding; small protuberances projecting from the girdle serve as points of supports for the skirts. This girdle, with the skirts, is sustained by light braces passing over the shoulder.

HARPER'S
NEW MONTHLY MAGAZINE.

No. CVII.—APRIL, 1859.—Vol. XVIII.

THE WRECKER.

IN the autumn of 18— the good ship *America*, L. S. A., master, sailed from New York, bound to Mobile and a European port, and homeward. The vessel had been chartered to take the place of the regular packet in the well-known and popular packet line of the Messrs. E. D. Hurlbut and Co. At the urgent solicitation of her owners, though with great reluctance on his own part, her old commander, Captain A——, who, after a long service at sea, had retired for life, as he supposed, to his quiet home in F—— H——, Massachusetts, was prevailed upon, for this voyage only, to rejoin his ship.

The passage, up to the date of the fatal catastrophe which resulted in the total loss of the ship and the partial loss of her cargo, was remarkably

Entered according to Act of Congress, in the year 1859, by Harper and Brothers, in the Clerk's Office of the District Court for the Southern District of New York.

prosperous and pleasant. In a company of passengers numbering about thirty, ladies and gentlemen, a choice and agreeable society was found. The master of a ship ought to be among the most prominent and interesting social features on board; and I am sure in the present instance this presumption was true, and I do injustice to none in recording the truth, and assigning to our Captain a high place as a gentleman among others who worthily bore that honorable name. For my own part, I found in him my most agreeable companion on board, of whose leisure I was glad to avail myself, in drawing from him results of a varied and extensive observation, and experience of men and things. Nor was our Captain indifferent to the gentler impulses of sympathy with the unfortunate and suffering; and I remember another of his chosen quotations from the poet was the touching appeal—

"When chill November's sturdy blast."

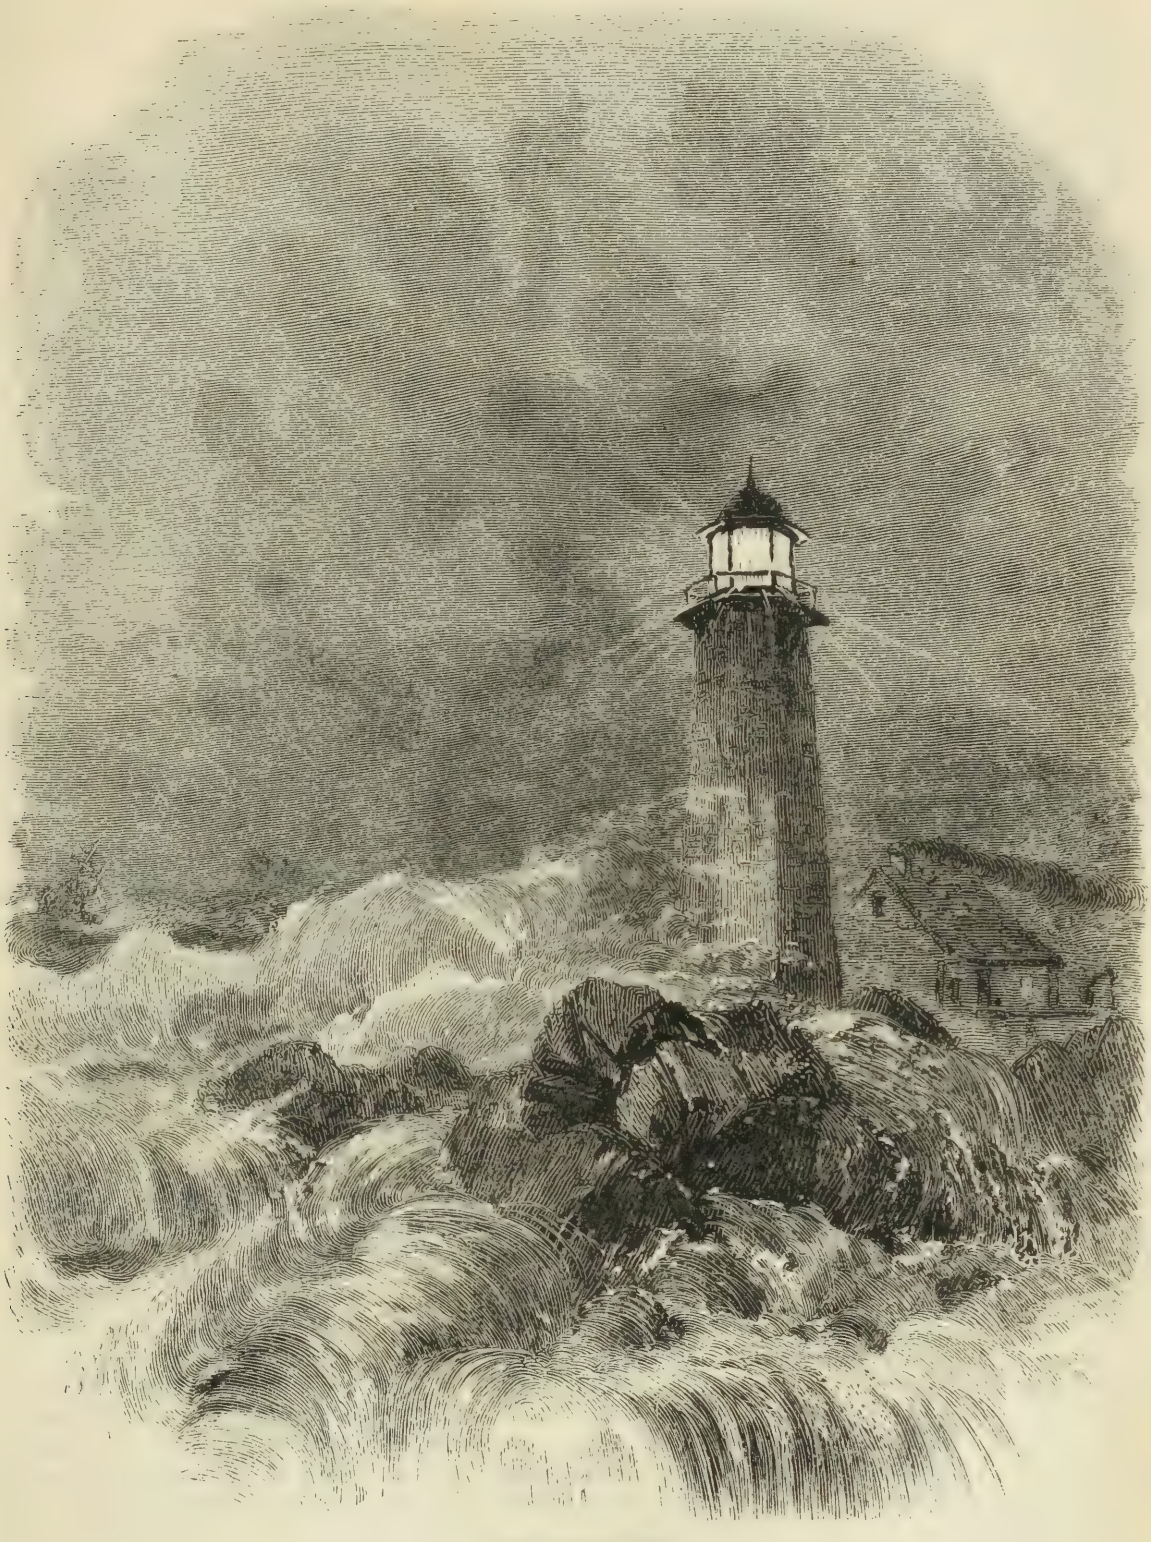
But, withal, Captain A——'s modesty was equal to his literary acquisitions. "Sir," I remarked to him, "you are very familiar with the poets." He instantly replied, "Mr. ——, you have all."

Our passengers, I have said, made a pleasant company. We had variety. The greater part were connected with trade, merchants and merchants' clerks, returning to their place of business from a summer Northern visit. We had one with us who called himself a lawyer, but our Captain, for some reason, was inclined to think he was "only a marine court lawyer." And what with reading and conversation, eating and sleeping, observing the "wind and weather," watching the ship's progress in dull or lively sailing, and the ever-interesting details of skillful navigation, with such spice of variety as headwinds and squalls might afford, and the excitement of "Let go and haul!" reefing, taking in and making sail, that old way of sea voyages before the innovation of ocean steamers, though often tedious, was not without its interest. It was considered good enough when the best that could be had; and even in comparison with steam has, in some respects, its own superior excitements of pleasure.

But to our passage. In good time we made the "Hole in the Wall," and passed Abaco; sailed smoothly over the cream-colored waters of the Bahama banks, making our congé to King John in passing his dominions; enjoyed a holy Sabbath-day and its Christian worship with a solemnity and depth of devotion which a "Sabbath at sea" helps so much to inspire; against a headwind and in a dark night beat in safety through Providence Channel; doubled the Isaacs, and passed the Double-headed Shot Keys, prominent waymarks, and without accident or harm stood on our course, running along the line of the Keys of Florida, unconscious and unsuspicious of danger.

On the evening of the sad disaster all on board were unusually cheerful. The weather was fine, balmy, soothing—in a word, tropical. All felt the joyfulness of the approaching termination of our passage; the last turning-point was at hand; soon we were to haul up for our "northwest course," and when Tortugas light was nearly abeam, with mutual pleasant congratulations and hopeful anticipations, all retired at ten o'clock below, saying, "No more land will be seen till we make Mobile light."

An hour passed away, and all was still as sleep could make the occupants of their several berths. It was a calm, starlight, gently-breezing night, and our gallant bark, borne onward in her course by the hardly whispering wind, was making easy progress, when suddenly she brought up all standing and hard aground.



In a moment all were startled from their berths, in unexpected mingled terror and surprise. Soundings were made forward, aft, and in all directions around the ship, and our position was ascertained upon a sunken reef. Sails were backed, and all possible efforts made to clear the reef, but in vain.

Soon the falling tide revealed still more our danger. The ship careened more and more upon her side, and showed that she had grounded during high water. And now, among us all, speculations were indulged upon the probable cause of our calamity—how it was possible the ship could have been drawn so much out of our course, whether by a strong current which set us upon the reef, or by a hazy atmosphere—though the sky was cloudless—which had dimmed the light of the Dry Tortugas, and made the distance from it seem greater than it was; or whether—a conjecture which the circumstances contributed to suggest — the keeper of the lighthouse, in complicity with some wrecker, had willfully obscured the light, in the hope of luring the ship to her destruction upon the reef.

This last hypothesis our commander thought most probable. "We are," he exclaimed, "victims of the piratical wreckers!"

The morning dawned upon a seemingly hopeless wreck. The sea was still smooth, as it had been fortunately through the night, but the ship was hard aground. No steamer was near to be called to our relief, and the prospect of getting afloat was sufficiently gloomy.

Soon a small fishing-smack came near, and from it a rough specimen of humanity, who said he was master of the smack, boarded us. He held also a wrecker's license. He was, therefore, not regarded very favorably by our company, more especially as he had been seen to come to us from the direction of the Tortugas light. Though years have since passed away, in my memory I have a distinct impression of the man, hailing from the ancient town of G——, Connecticut, as he stood upon our deck by the starboard bulwarks, a stout, burly, red-faced, sun-burned sailor, whose only clothing consisted of a Guernsey shirt, pantaloons rolled up to his knees, and a slouched, weather-beaten hat, without stockings or shoes. With some stretch of fancy, Byron's description of the meeting of Gabriel and Satan may represent the cold civility of this occasion, as to the skipper and our worthy Captain:

THE LIGHT-HOUSE.

"Between his darkness and his brightness
There passed a mutual glance of great politeness."

Offers of assistance were made by the skipper, but refused, not only because the charge was high, but also and chiefly because our Captain feared, perhaps wisely, that he might be drawn into still greater danger. The captain of the smack left us, but evidently with the conviction that his opportunity would come.

Captain A—— meanwhile was not idle. All that ingenuity and skill could devise was attempted to save the ship. The time of high-water was approaching. A kedge anchor was carried out astern, all hands were at the windlass, and at high-water, as was hoped but hardly expected, the ship floated! The scene on board was full of joy and activity, sails were trimmed, every man at his post, but unfortunately it was impossible to "fetch by" the reef; and again the ship grounded, driven even farther on than before. This was our situation for another night.

Another day came, and with it other plans for saving the ship. The wind now rose, and we were thumping severely. It was determined to lighten the vessel, and, at high-water, try to drive her with all sail over the reef. Again the wrecker

came on board, and in answer to our Captain's inquiries gave advice as to a place of anchorage if required. The ship, under a heavy press of sail and a strong wind, was carried over the reef, but in the act of passing the rudder was unshipped and rendered useless. Now all was bustle and hurrying to and fro. By trimming sails the ship was steered to the anchorage pointed out by the wrecker, near a key to the southwest of the light-house; but too near, for during the night following the wind rose to half a gale, and before morning the anchor had dragged, the ship again struck bottom, and the stern was fast burying itself in the sands of a lee-shore.

The end had now come. The next morning the ship struck more heavily, the wind increased, and the wreck, driven first stern-wise, was now broadside upon the key. The wrecker had left us the night previous and returned to the light-house. Noon came, and every thing was ominous of danger. It made our Captain's heart ache, as the ship struck and ground heavily upon the coral rocks beneath.

"Would," he exclaimed, "that my body instead were grinding upon these rocks!"

Preparations were now ordered to be made for leaving the ship, as it might be unsafe to remain on board through the coming night, and a raft was begun upon which to float the passengers to the shore.

These preparations were stayed by the timely return of our wrecker with his smack. His opportunity had arrived. With much difficulty he succeeded in taking off all our passengers with our luggage, and landing us on the Dry Tortugas island. It was after dark when we were landed. Upon the island the only dwelling was that of the light-keeper. This, with only two rooms, was given up to the passengers. To one room the ladies were assigned; in the other, and on the piazzas, the gentlemen distributed themselves as best they could. Stores were brought from the wreck the next day for the use of the company.

Now, according to the rules of professional wrecking, the voyage was ended; the wreck belonged to the underwriters; the wrecker who "first came" must be "first served" with the opportunity of saving property, ostensibly for the underwriters, but quite as much for the wrecker's own benefit. Our wrecker, with his crew of two or three fishermen, among whom the deputy light-keeper figured familiarly, had obtained complete possession of his prize.

Captain A——, anxious to promote the interests of the underwriters, immediately asked the wrecker to assist him in getting word to Key West, the rendezvous of wreckers, for more assistance in saving the wrecked cargo. The vessel having bilged, the value of the goods was hourly diminishing. Fair promises were made to these requests; the only means of conveyance was the light-house boat, a small sloop-rigged open boat of about five tons—that boat, it was assured, should be sent. But there the matter ended.

Three days thus passed away. The wrecker meanwhile was busy about the wreck. Our Captain became impatient, and insisted that he should fulfill his promise. Then, seeing the Captain's decision, he consented that the next day the boat should be sent, in charge of the deputy light-keeper. Some of our passengers also volunteered to accompany the expedition. Among these was our "lawyer," who thought the occasion a favorable one for distinguishing his zeal and courage. The time for setting out came. The morning was calm and delightfully mild. Not without some foreboding of failure Captain A—— saw the party off, wishing them a safe and speedy passage.

It was not, as must be confessed, a small undertaking to make the passage—a distance of from sixty to seventy miles—in so small a craft. But none was so confident and boastful of "going through" as our lawyer. "The thing," he said, "can and shall be done!"

Long, owing to the prevailing calm, the tiny boat remained in view, making but little progress. At length a breeze sprang up, and it was wafted out of sight.

The exposure and anxiety which our Captain had suffered had brought upon him a severe attack of fever. He had taken up his quarters, for the sake of greater quiet, on the ground floor of the light-house. At his request I bore him company. He was sick in body and sick at heart.

"How foolish I was," he said, "to leave my home for this voyage! Yet now I would like to make another, only to give the Dry Tortugas a wide berth."

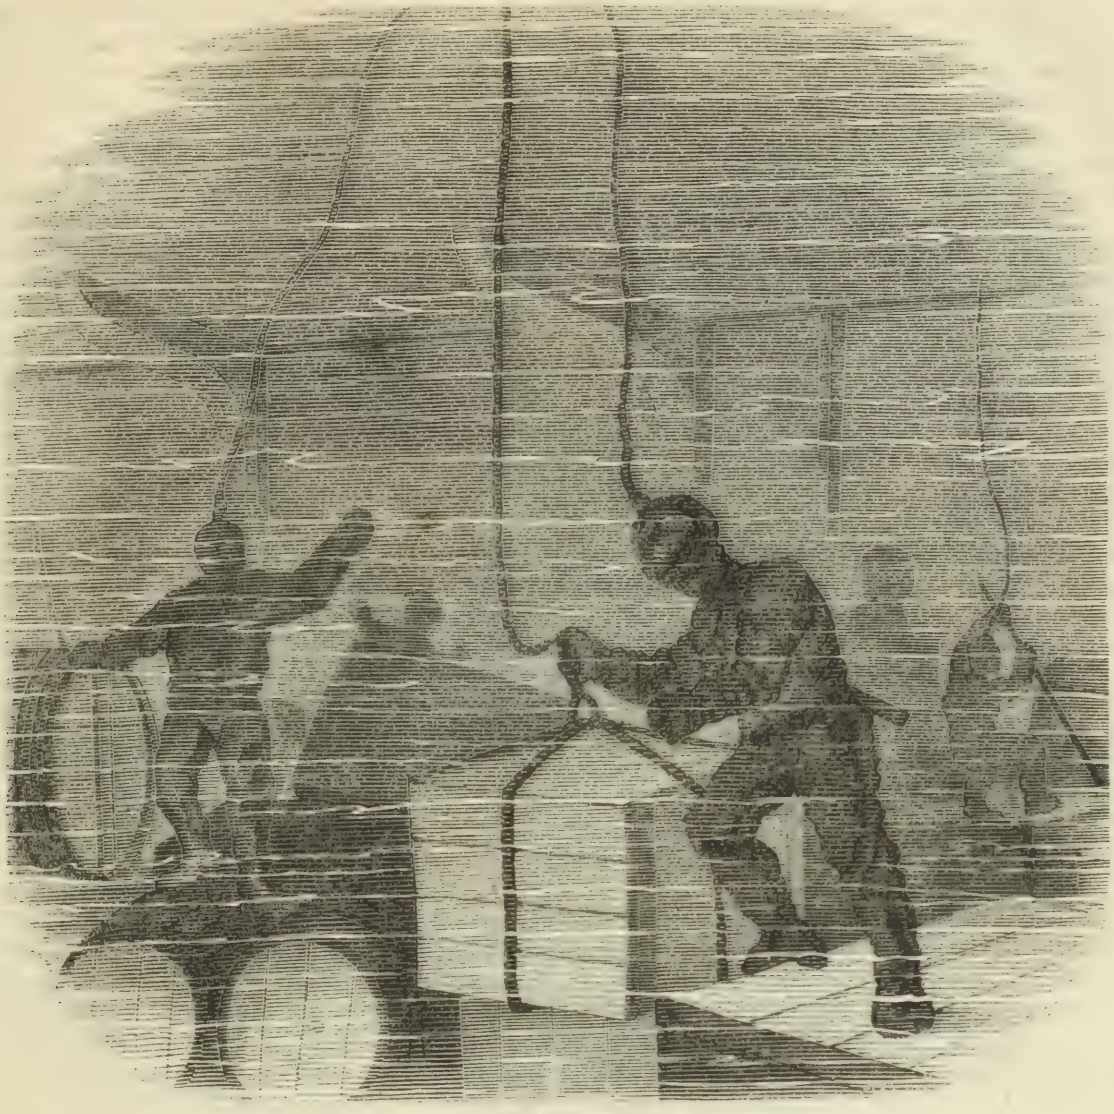
Evening came, and the unwelcome news of our returning expedition spread through our company. When the party landed, and told their own story, it was plain that the light-keeper had been at work with their fears. This was singularly confirmed, and divulged, with other things, the same night. For, while the Captain and myself were in our place upon the floor of the light-house, the deputy light-keeper and wrecker passed in and by us, and went up to the top of the light-house, and there commenced talking about the incidents of the previous day. The winding staircase constituted an excellent whispering-gallery; so that their ordinary tones in conversation were distinctly heard. The deputy light-keeper said he had represented to those with him most formidable obstacles to be encountered—calms and head-winds, a long passage at the best, and liability to meet severe squalls and northers. The effect he designed was attained. And now, over this result, the wrecker and light-keeper rejoiced heartily. Prospects of a rich harvest were brighter than ever; and in the view of it the wrecker, with marked satisfaction, said, "If the boat can be kept back another day, I shall be able to get all I wish, and then she may go!" Captain A——, hearing this, said to me, "Now the boat shall go; and that to-morrow morning, even if I am obliged, sick as I am, to go myself in her!"

The importance of our overhearing this conversation, in its relations to the coming salvage

ALMOST CAPSIZED.

suit, will be seen in the sequel. The circumstances made me a competent witness in the case.

In further planning about this trip, Captain A—— said he would undertake it if I would accompany him. To this I assented; and the next morning the light-keeper, who did not make any resistance, with a boy to assist in the business of sailing, and ourselves, embarked in the little boat for a second, and, as it proved, successful experiment. The early morning was calm as the previous one. Soon, however, a breeze arose, but it was dead ahead. Our first stretch was on a starboard tack, by which we stood out into the Gulf. Late in the afternoon, the wind being fresh, we tacked ship and crossed the line of the chain of Keys, and passed to the northward of them. At midnight the weather became decidedly squally. The first two or three squalls were comparatively light. Then followed one which came upon us as a horrible tempest. The first blast from it knocked us down upon our beam ends. To add to our danger, when an attempt was made to let go the halyards they were found to be foul. We were for a few moments in imminent danger. Indeed, I am confident we should have been capsized, only that, by dint of the greatest exertion, the peak was lowered enough to shake the wind partly out of the sail, and so were we saved. After this experience of the skill and watchfulness of our "ship's company," we kept a sharp look-out to windward ourselves. This squall over, we had light and baffling winds the remainder of the night; but as morning dawned a regular norther set in, which, under shortened sail, carried us onward rapidly, and for the last two or three miles, being to the northward, providentially, of our port, we ran down to it under "bare poles," unable to carry any sail.



WRECKERS AT WORK.

While still at a distance we were descried by the people of Key West, and crowds were gathering—the light-house boat being recognized—on the dock awaiting our arrival. The visit of this boat being unexpected by them, their conjectures as to the reason of it were shown by the inquiry which first greeted us on landing, "A wreck?" And the next, "Where?" showed the nature of their anxiety as well on the subject. The answers to these simple questions fulfilled one great purpose of our mission. The message was delivered, and it had its effect. Before we left the wharf, though a perfect gale was blowing, preparations were making on board several wrecking vessels to set out immediately for "the wreck." Some did set out, but the severity of the norther was so great that they were soon obliged to put back. Among these vessels was a fishing smack, just in from Havana, having a deck-load of oranges. In the haste for departure the fruit was by shovelfuls thrown overboard, some falling upon the dock, but the greater part into the sea.

Captain A—— and myself were glad at once to go to a hotel and order breakfast, not having eaten any thing for more than twenty-four hours past. With sharpened appetites we sat down to a table of Key West beef-steaks (green turtle), with other dishes to match. At the suggestion and request of Captain A—— the Divine hand was gratefully acknowledged, which had safely rescued us out of our great perils, and brought us to our desired haven. "We should be most ungrateful," said he, on a subsequent occasion, "if we failed to recognize the providence of God in our deliverance from the greatest danger in which I have ever known myself to be found. For, in this instance, no resource was left us but our own frail craft. At other times of peril, in storm or shipwreck, I had relief in thinking of my boats or other means of safety at command, but here we had nothing of the kind."

A part of our business also was to engage a vessel to proceed to the Tortugas, and take on board our passengers and convey them to their destination. The next day she sailed, and in her we returned to the scene of the wreck. At the earnest request of Captain A—— I remained, not joining my fellow-passengers, though it was highly important that I should have gone. For the purpose of appearing as a witness in the salvage suit at Key West I consented to stay.

THE DIVERS.

I had now a fortnight or more upon my hands, some eight or ten days of which I spent at the Tortugas, while the work of saving goods from the wreck was going forward. Alone, or in company with Captain A——, I occupied a part of this time in exploring the reefs, as portions of them were left bare by the retreating tide. How the recesses of the coral beds, the chambers of busy, wondrous life, teemed with the varied uncounted forms of existences inhabiting the deep! Or, breaking in pieces the coral rocks, were revealed, imbedded within them, the date and almond bivalves. There were the star-fish, sea-urchin, and these and other genera, with their almost endless species. Strange scenes in living forms all around in view; while the reefs and islands—all the solid substances beneath and above the water—were the remains of now extinct life.

The first wrecker had precedence of all the rest in privileges at the wreck, and, before the arrival of the reinforcement, had succeeded in discharging all, or nearly all, of the dry and undamaged goods. Then came the more difficult work of breaking up the cargo from the lower hold and out of the water, which, at the flow and ebb of the tide, rose and fell in the bilged vessel. The last and most difficult of all this business was that of the divers, who had been trained in the waters around New Providence, and who now persevered in their work deep in the vessel's hold, fore and aft, making fast to huge boxes and bales of merchandise, and this notwithstanding the water was discolored and made nauseous by dye-stuffs, drugs and medicines, and poisons, too; and left not their unwelcome though gainful employment until it became absolutely insupportable.

The business of wrecking ended, the wet goods dried as far as they could be by exposure on the neighboring Key, all were then put on board the wrecking vessels and taken to Key West.

On returning myself in one of these vessels to Key West, I found the place astir with an additional excitement, growing out of another wreck which had occurred upon Carysfort Reef about the time of our own. This wreck of a large merchantman—large according to the standard of the times—with a full cargo of assorted merchandise, gave also employment to a large party of wreckers, as desirous as ours of making a prize.

Following in the order of things, the public sale of the wrecked goods took place under the orders of the Admiralty Court, the savings of each wrecker or association of wreckers being kept distinct from those of other parties.

The next and last act in this business was the suit for salvage in the Court of Admiralty, which could not fail to be regarded with special interest by all concerned.

It was interesting to myself, and it may be to others, to trace some of the distinguishing features of the system of wrecking. The great risk to commerce in the dangerous navigation of the Florida Keys—frequent wrecks and heavy losses of property in vessels and cargoes—prompted the establishment of the scheme. It was too great an interest to leave to the possibilities of a precarious and sadly partial relief. The system of wrecking, therefore, was established, consisting in the issue, by the Court of Admiralty, of wrecking "licenses," which are ever subject to the authority and control and revocation, for reasons, of that court. The penalties of any abuse of privilege or other dishonesty in the prosecution of the business of wrecking, involve not only a recall of the license, but also a forfeiture of compensation in salvage fees, and, in extreme cases, of the privilege of a license temporarily or forever.

Licenses may be held by parties engaged in the coasting and inter-island trade; and among these are such as are employed in supplying the markets of Cuba with fish caught along the Florida reefs, to which class our man of G——, Connecticut, belonged.

At the date of the events of the present narrative the Admiralty Court of Key West was presided over by Judge W—— the independent.

The wreckers held "the Judge" in awful reverence; for while they could not fail to pay respect to his person, they with reason feared his justice.

I was puzzled to understand how the wreckers, who as a class were no better than they should have been, were controlled. "Oh," said he, in reply to my inquiry on this point, "that is easily done. If they commit any offense against honor or justice, instantly I take from them their licenses." This was summary and effectual government.

The trade and business of all kinds being at this time exceedingly small in Key West, the business of wrecking, in its various relations and details, constituted no inconsiderable source of material gain. It offered opportunities for investment of capital, and speculative trade in wrecked cargoes and wrecked and condemned vessels. The wreckers especially found their harvest in decrees of salvage.

The percentage for salvage varies according to circumstances. It may appear extravagantly high in all cases. But a large compensation is essential, as an inducement to the wrecker, to undergo hazard and exposure and toil in his business. The experiment had been made by the Board of Underwriters in New York of fitting out a wrecking schooner of their own, and sending her to Key West in the hope of a gain to their interests. But the experiment signally failed. The wrecking service is one which can not be maintained by ordinary rates of wages and compensation. The underwriters' vessel consequently remained idly, or laggardly at best, in port, while the independent wreckers were braving the storms and hardships of a most trying business.

When it is considered how much of the wrecker's time is unemployed, how greatly hazardous his service, and often how small the amount and value of goods saved, surprise will be much less on account of the high salvage rates which go to sustain the entire corps and scheme of wrecking.

The humane aspects of the system are signally cheering. As in the case of our own wreck, so likewise in every one, the attention of the wreckers is first turned to the preservation of the passengers and their baggage. And for this service it is not considered that any award is bestowed.

The only exception to this last remark must be reserved for a case peculiar in its circumstances, and especially interesting in its character, which was related to me by Judge W——. A brig laden with sugars, bound from Havana to a European port, was wrecked upon a reef to the eastward of Key West. On board the vessel, besides the crew, were four or five passengers. Only one boat remained from the wreck fit for use, and this was too small to hold the entire company in escaping from the wreck. A raft was constructed and the party divided, some entering the boat and the others embarking upon the raft, which was attached by a rope to the boat for the purpose of being towed to the nearest Key. The attempt was made accordingly, but in vain. No progress could be made in a rough sea and against a head wind and current. Reluctantly, but of necessity, the raft with the people upon it was cast adrift. The boat alone reached the island, and the party falling in with a wrecker reported the wreck and the abandoned raft. The wrecker went immediately in pursuit of the raft and its freight of human life, and for two days watchfully and anxiously cruised for it, until it was found and the people upon it were rescued. Then, and not till then, the salvor proceeded to the wreck. Of the perishable lading nothing could of course be saved; and after stripping the wreck, all the available rigging, sails, chains, and other furniture, were carried into Key West.

"In this case," said Judge W——, "I awarded to the salvor all the avails of the articles saved, in value not over three or four hundred dollars, as a just though inadequate compensation for efforts in saving human life. And this was the first and only instance in which I ever gave an award for such an object."

And it is a specially memorable fact, as related to me by the same authority, that in all the preceding period of the existence of the wrecking system up to that time, not a single human life had been lost by shipwreck in the entire sphere over which the wreckers cruised.

Only a few years after that date, sad to narrate, in a most terrific gale which swept along the Florida Keys, this pleasant aspect was changed, not through any fault of the wreckers, but by an

THE RAFT.

awfully destructive hurricane, which drove scores of vessels upon the reefs and keys, and destroyed many wrecking vessels with their brave and hardy crews.

Of the mode of conducting a salvage suit little need be said, as it falls under the general rules governing civil cases. That in the present instance the forms of law were strictly observed, and impartial audience was given to the parties in the case, and due regard paid to the several interests involved, and that dignity and decorum marked the whole course of the proceedings, may well be supposed from the courtly and upright bearing and character of the presiding judge.

An incident in the progress of the affair occurred which showed the wisdom and independence of the court. One of the attorneys remarked, "May it please the court, I undertake to prove thus and so." The Judge replied, "The court, Sir, will waive that matter." Judge W—— was well aware that the testimony in form would be given as offered, but in effect it would prove nothing. I inquired in private of the Judge, "How do you receive such evidence as you are sometimes obliged to hear?" He replied, "I regard more the manner than the matter of it."

A heavy penalty was inflicted among the decisions in the case of the Carysfort Reef wreck. It was charged that a certain wrecker had received from the wreck goods which he failed to deliver at Key West. Further, this wrecker had on the way stopped at his home at I. Key. The main fact having been proved, the wrecker was denied all salvage for his four vessels employed, and deprived also of his wrecking license.

In the case of our own wreck, and with reference to the special matter about which I had been detained, the first wrecker forfeited the higher rate to which he would have been entitled but for the sinister part he played in preventing messages from being forwarded sooner to Key West for assistance; the proof of which criminality on his part, as has been related, his own lips furnished in the top of the Tortugas light. For this guilty interference he was made to suffer, in having his salvage cut down from fifty or sixty per cent. to thirty-five per cent. upon the amount of goods saved by his vessel. This difference in percentage against himself inured to the advant-

age of the underwriters in the sum total of several thousands of dollars.

Of all concerned, none experienced a more grateful relief than the Captain of the lost *America*, when the last act of this business was completed, in the closing up of the several salvage suits by the decrees of the court, and the disbursement to each wrecker, or association of wreckers, of the several awards in their favor. The underwriters' portion was the residuum. And it is justly due to Captain A—— to say he labored diligently, and at all points, to make this portion as large as possible.

Judge Marvin, the present able Judge of the Admiralty Court of Key West, in a recently published work on "Wreck and Salvage," gives some interesting information on the present condition of the wrecking system. Forty-seven vessels, averaging fifty tons, and carrying about eight men each, held licenses during the year 1858. This number was found fully adequate to the wants of commerce. About one half the vessels engaged in wrecking associate with this the business of fishing for the Havana market. The United States District Court for this district was established in 1847. The Judge alone has authority to license wrecking vessels. The act of authority provides that "No vessel nor master thereof shall be regularly employed in the business of wrecking on the coast of Florida without the license of the Judge of said Court; and before licensing any vessel or master the Judge shall be satisfied that the vessel is sea-worthy, and properly and sufficiently fitted and equipped for the purpose of saving property shipwrecked and in distress, and that the master thereof is trustworthy and innocent of any fraud or misconduct in relation to any property shipwrecked or saved on said coast."

Embezzlement of wrecked goods, or voluntarily running a vessel aground under the pretense of piloting her, colluding with the master of a vessel wrecked or in distress, or corrupting him by any unlawful present or promise, are, severally, good causes for withholding or revoking the license.

One inference from the view which my opportunities gave me for observing the operation of the wrecking system is all I have to add upon this whole subject. The scheme is wise, humane, economical, and effective; but there is an obvious necessity that it be narrowly watched and faithfully guarded.

In conclusion, for himself, Captain A——'s lingering, constant regret was that he had been so unwise as to undertake this voyage, and his oft-expressed wish that he might yet make another to the Gulf, only for the opportunity it would afford him to "give a wide berth to the Dry Tortugas."

And if it might add any thing to his cup of earthly happiness, one who loves him as a man and a brother would crave for him the fulfillment of that cherished wish for another opportunity to give "A WIDE BERTH TO THE DRY TORTUGAS!"

THE CHRISTIAN MARTYRS OF MADAGASCAR.*

IN the year 1696 a Dutch brig, bound from Bombay to Charleston in the just founded colony of the Carolinas, was becalmed in the Mozambique Channel, and finally, falling short of provisions, was obliged to make a port on the coast of Madagascar to obtain supplies. The chief article of food obtained was rice; and as this was of a very superior quality, large and full in the grain, the Dutch captain, on arriving at Charleston, made Governor Thomas Smith a present of half a bushel which remained over. The Governor, instead of eating it, divided it among his friends to plant in their gardens. The new plant succeeded admirably; and from this small beginning has sprung the extensive rice culture of North and South Carolina, and Georgia; whose grain still retains its superiority in the markets of the world.

Madagascar, to which we Americans thus owe a very valuable staple product, is an island lying along the eastern coast of Africa, from which it is separated by a body of water known as the Mozambique Channel. It is about 1000 miles long, from 240 to 250 wide, and distant from the Portuguese city of Mozambique, on the African Main, about 250 miles. The natives have no especial name for their country; but call it, rather vaguely, "*Izao rehitra Izao*," signifying, "All this, Entirely;" "*Ni tani rehitra*," "All this Country;" "*Ny riaka*," "The Island;" "*Ny anivony*," "The-in-the-midst-of-the-flood." It was known to the Arabian and Persian merchants of the Middle Ages, who called it *Serendib* and *Magaster*, traded with its inhabitants, and spun tough yarns about it, which that credulous old Venetian, Marco Polo, retailed in good faith to wondering Europe. He says: "A thousand miles from Sokotera [Socotra] South Westward, is *Magaster*, one of the greatest and richest Isles of the World, three thousand Miles in Circuit, inhabited by Mohammedans, and governed by four old Men. The People live by Traffic, and Sell great Store of Elephants' Teeth. They feed on Camels' Flesh, as most delicious of all other. Much Ambergrease is driven here upon the Shores. The Island abounds with wild Beasts, as Lions, Giraffes, wild Asses, and other Game. Silks, Cloth of Gold, and other rich Goods are brought hither from foreign Countries. Vessels seldom sail Southward to any of the numerous Islands except this and Zenzibar, by reason of the violent Currents: For there is no returning Northward; and the Ships which from Malabar make the voyage in twenty or twenty-five days are three months going back.

"At a certain Time of the Year there comes hither from the South a wonderful Bird called

* *Three Visits to Madagascar during the Years* 1853—1854—1856. *Including a Journey to the Capital, with Notices of the Natural History of the Country and of the present Civilization of the People.* By the Rev. WILLIAM ELLIS, F.H.S., Author of "Polynesian Researches." Illustrated by a Map and Wood-cuts from Photographs, etc. 8vo, Muslin. New York: Harper & Brothers.

THE CHRISTIAN PRINCE AND PRINCESS ROYAL.—[FROM PHOTOGRAPHS.]

Rukh, like an Eagle, but so large that it takes up an Elephant in its Talons, and soaring aloft kills him by letting him fall, then feeds on him. His Wings when spread out extend fifteen Paces, the Feathers being eight long and proportionably thick: A Messenger sent by the Great Khân to view the Island, brought back one of the Feathers, which measured nine Spans, and the Barrel two Palms; besides the Tooth of a Chinghial, a Beast bred there as big as a Buffalo, which weighed fourteen Pounds."

The lover of the "Arabian Nights" will probably remember that *Serendib* is made the scene of one of Sindbad's most fortunate mishaps—his adventure in the valley of diamonds.

The Arabians are still the principal traders to Madagascar. They have numerous trading posts on the western coast of the island, and exercise

a kind of commercial supremacy over the rude inhabitants of the northwestern coast. They are shrewd, unscrupulous, and avaricious; cheat and rob where they dare, and are the go-betweens in the trade of other foreigners with the natives.

The island was first visited of Europeans, in 1502, by Lorenzo Almeida, son of the Portuguese Viceroy of the Indies. He called it after his patron saint, St. Lawrence. His successor, in 1508, circumnavigated it and took possession of it; and it has since, in like manner, been taken possession of by the Dutch, the French, and the British—a process which has not, however, up to the present time, resulted in any thing important to either possessors or possessees. Radama, —the Napoleon of Madagascar, the predecessor and father of the present Queen, and a shrewd old gentleman as ever lived—remarked once to a British envoy, when an invasion was hinted at: "I have two generals—General *Hazo* [forest] and General *Tazo* [fever]—in whose hands I can safely leave any invading army."

The first attempt at colonization was made by the French in 1642, under a charter from Cardinal Richelieu. The Jesuit priests who accompanied the colony, by their bigotry roused to fury the jealous spirit of the natives, who arose and destroyed the French. Another colony, founded on Isle St. Mary, on the eastern shore of the island, in 1745, was for the same cause massacred and destroyed in 1754. A third attempt was made in 1773 by Count Beniowski. He aroused the hostility of the then French Governor of the Mauritius; and finding himself unsupported in his attempts at forming a French colony in Anton Gil Bay, on the northeastern shore of the island, conceived the romantic idea of laying in Madagascar the foundation of an independent kingdom, of which he proclaimed himself king, under pretense of being the child of a native royal princess who had been held captive in the Isle of France. He assumed the name of King Ampausacabe, appointed officers to carry on the government in his absence, and thereupon sailed for England and France with the purpose of enlisting one of those powers in his favor. Not succeeding in this, he came to New York, procured stores and arms, and returned to his kingdom in July, 1785.

His first act was to seize upon all the French ports on the island; whereupon the French sent a frigate to Anton Gil Bay to destroy his settlement. Beniowski was killed in the first engagement with his countrymen—and so ended his kingdom and all his grand sounding plans for the amelioration of the country. He seems to have been a hot-headed dreamer, who acted with undaunted courage, but with no foresight or wisdom.

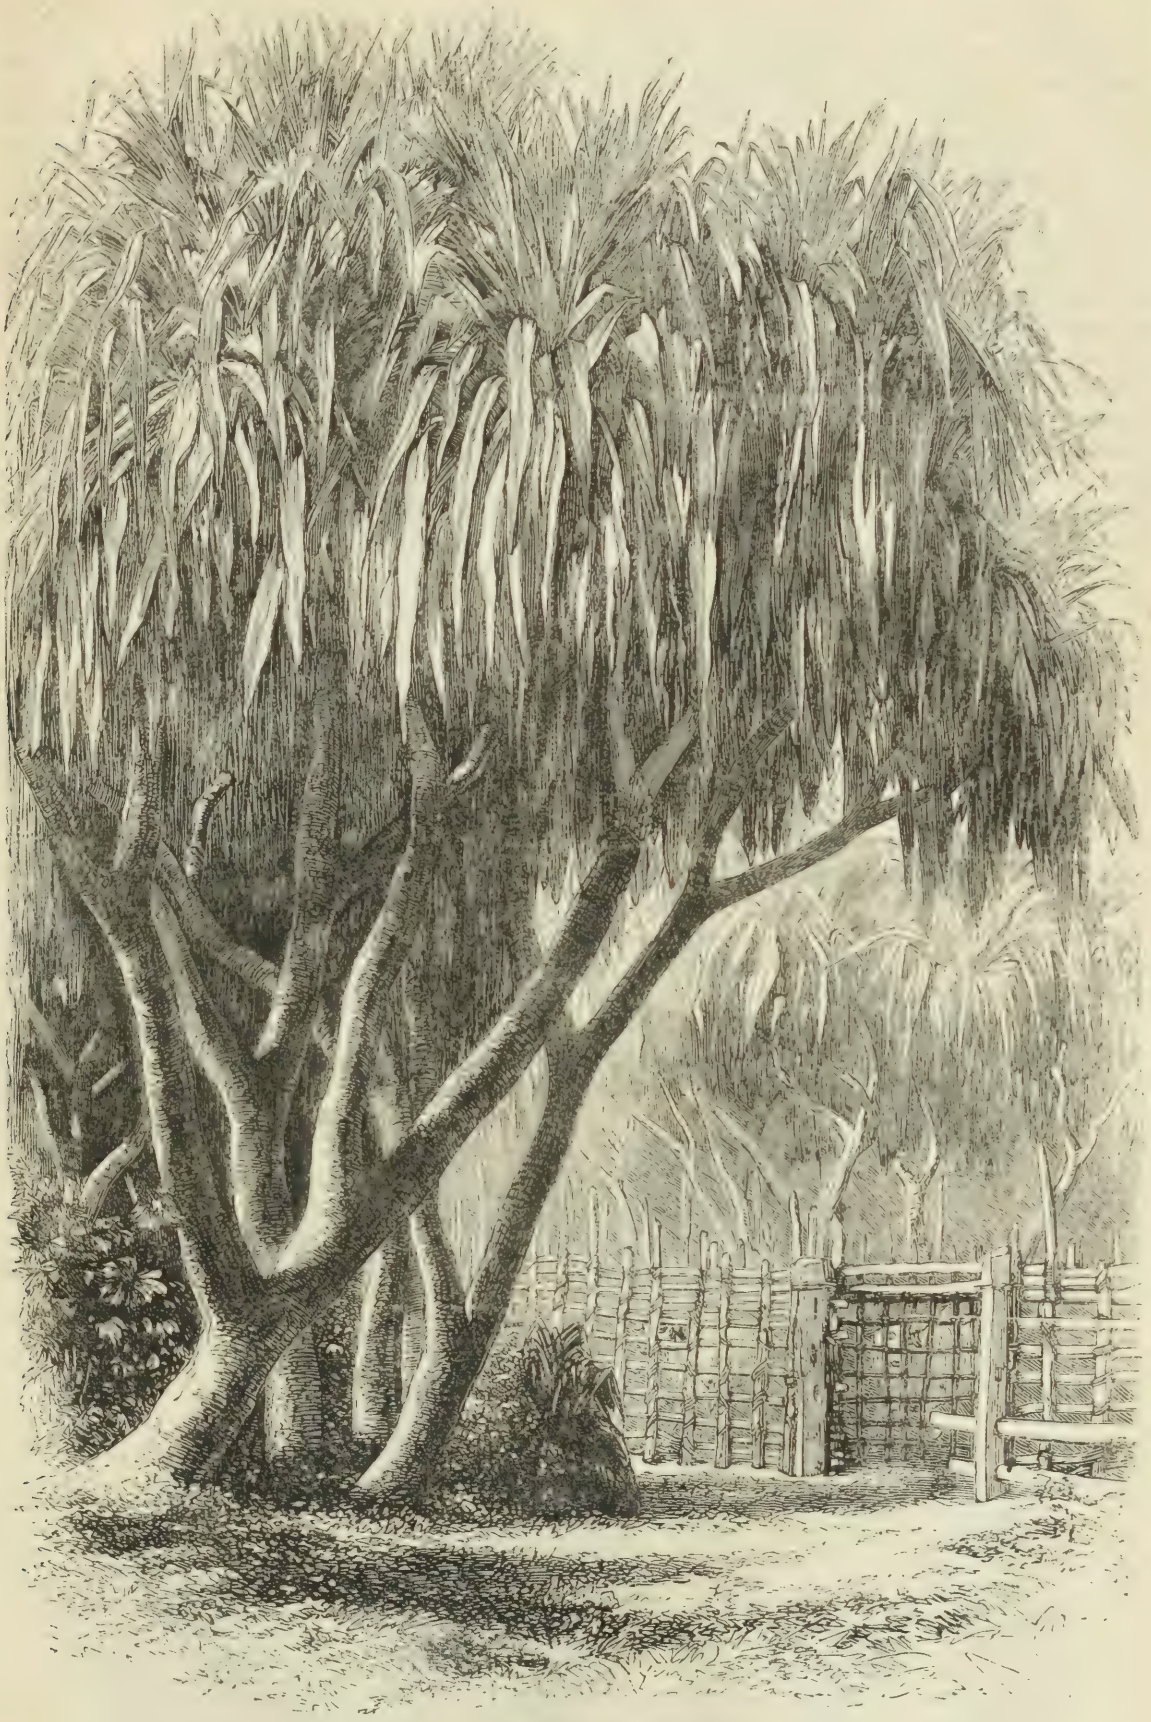
Before this, in 1710, the bays of Madagascar were the chosen haunts of the pirates, who then gained rich booty from the spice and specie-laden Indiamen of Portugal, England, Spain, and Holland. Johanna, one of the Comoro Isles, just to the north of Madagascar, was the port of the famous Captain Kyd, the ruins of whose fort still crown a hill commanding the harbor. The Isle

HARBOR MASTER'S HOUSE, TAMATAVE.

HOVA OFFICERS AND BEARERS.

St. Mary, forming with the main island a secure harbor, with somewhat intricate entrance, was another piratical stronghold. Here Kyd and his compeers hove down and repaired their ships, and caroused in safety on shore among the then hospitable islanders. There are yet many legends of buried treasure current in this portion of the coast. The British and French finally drove the pirates from this and other strongholds. Some were taken and hung, others escaped in their vessels, but several crews were obliged to escape inland; and here ingratiating themselves with the chiefs, presently established a considerable traffic in slaves, by means of which trade they also finally made their peace with the French settlers of neighboring Bourbon and

Mauritius, where slave labor was in considerable demand. As the readiest means of obtaining slaves, these precious rascals pitted the ruling chiefs of the island against each other, buying their slaves of the victors. Ere many years the chief business of the islanders became the catching and selling of their friends and enemies; the woods were filled with robbers and man-stealers, and every house was a man-trap whose owner invited his friends to dine over a pitfall, down which, at the close of the entertainment, his hapless guests were precipitated into the arms of expectant slave-dealers. To make matters still worse, it was popularly believed that the slaves were sold to the French and British only to be *eaten* by these supposititious cannibals.



In 1810 the Isle of France became a British colony. In 1816 Radama was induced to send two of his younger brothers to Governor Sir John Farquhar to be educated. The Hovas, previous to Radama's reign, formed one of the least powerful of the tribes among whom Madagascar is divided. Ambitious, and not at all scrupulous, Radama from time to time subdued his neighbors, waging most cruel wars of extermination against those who made resistance. Appreciating the superiority of the thorough organization and drill of European troops, he, in 1816, persuaded a Mr. Brady, a British soldier, to remain in the country and train his army in the European manner; after which he was victorious in every battle that was fought.

But the King saw beyond this. He summoned British tradesmen and teachers to his dominion; and wrote a letter to the London Missionary Society, in which he promised to protect as many missionaries as they should send, "provided you send skillful artisans to make my people workmen as well as Christians." In 1818 the first missionaries set up a school for children at Tamatave, the principal port of communication; where, according to the report, "the children were much delighted, especially with the singing." Radama encouraged the schools, sending his own children, and those of his nobles and chief men, regularly. At an examination held at the capital in 1825, the King made an address to the children, in which this remark shows his practical turn of mind: "The knowledge you obtain is good—good for *trade*."

The language of Madagascar was spoken, but not written. The natives appear never to have possessed a knowledge of written characters. The most important work of the missionaries was, therefore, to invent an alphabet, and construct a grammar, preparatory to the translation of the Bible and school-books into Malagassy. This was accomplished. The Bible, tracts, and school-books were placed in the hands of the people; and in ten years, from the first visit of missionaries, nearly 15,000 natives had learned

AFRICAN PALM-TREE.

PANDANNUS TREES AND CATTLE PEN.

to read, many to write, and several thousand had been instructed as carpenters, builders, tanners, curriers, shoemakers, and workers in iron. A great number had professed Christianity. Radama, though never himself a professed Christian, was shrewd enough to see through the cheats of the idol-masters and diviners, as well as to appreciate the uses to himself of educated followers. Thus had been accomplished, in an unusually short space of time, among a people somewhat jealous of foreign control, the introduction of letters, of many of the most useful mechanic arts, and of legitimate and honorable principles of trade—the three great civilizers,

when they go hand in hand with Christianity. As for religious advancement, their idolatrous beliefs sat but loosely at any time upon the Malagassy; of their customs of infanticide, and the poison ordeal of *tangena*, the former seems at once to have fallen into disrepute, while the latter, during Radama's reign, was almost totally abolished, to be revived, however, with great barbarity, under his successor. Lying and stealing were habits most firmly settled in the popular mind of Madagascar, and it was for a long time a reproach of stubborn pagans, to the Christian converts, that they refused to lie. "What kind of men are you," exclaimed a fierce native judge to some Christians brought before him, "who go about telling the truth, and refusing to swear by your sisters!" The first missionaries remarked that the language contained no equivalents for the words *generosity* and *gratitude*.

In 1828 Radama died. His appointed successor, Prince Rakatobe, an excellent young man—nephew of the deceased King, was assassinated, and Radama's Queen took possession of the throne. The custom of the country required a total cessation from all labor except the culture of rice (this to prevent a famine) for twelve months after the King's death. The schools were ordered to be continued, but the Queen took the scholars of a certain age for soldiers, the consequence of which was that people hid their boys away. The missionary presses were kept busy, and in this year the Bible was printed complete in Malagassy, as well as many thousand copies of Scripture passages, etc.

In 1829 the French—whose forts at Isle St. Mary and Nosi Beh have always been eyesores to the Malagassy, and who have at various times displayed a desire to rule the whole Island—made an attack upon the sea-port of Tamatave. This brought matters to a climax. All foreigners were immediately expelled, the missionary publications destroyed wherever found, schools stopped, the profession of Christianity interdicted, and, finally, a general purification of the realm resolved upon. This was accomplished by causing every man and woman suspected of Christianity to pass through the ordeal of the tangena, of which a great many died.

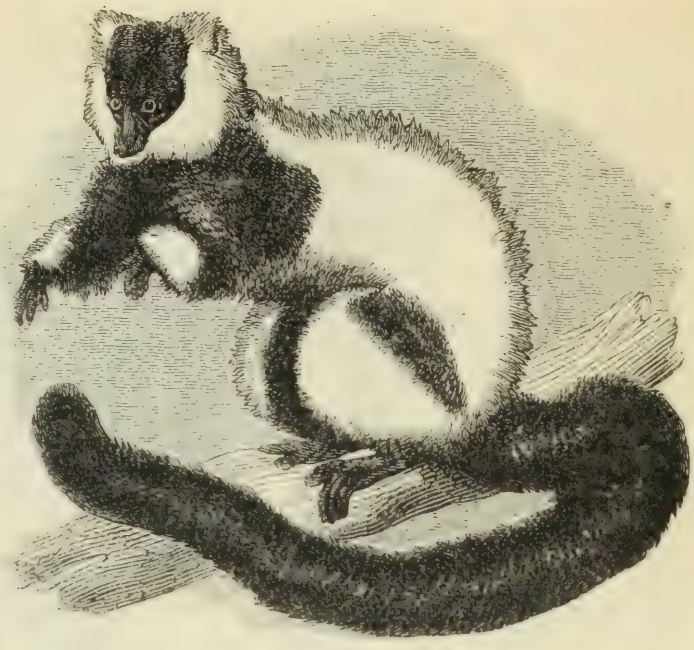
The tangena nut is a violent vegetable poison. When two witnesses certify the guilt of an accused person, he is condemned to the ordeal. First he is made to eat a quantity of rice, with which he receives three pieces of chicken-skin. A portion of tangena nut is then scraped into water, which the prisoner drinks. Vomiting is one of the milder effects of the poison. Should the three pieces of chicken skin be ejected from the stomach, the sufferer is declared innocent; and should he afterward recover, he receives a present from the sovereign. Should the three pieces of skin fail to make their appearance by a given time (half an hour), the prisoner is declared guilty, instantly slain with a club, and his effects divided between the executioners and the Government.

Several missionaries were allowed to remain at Antannanarivou until 1835, when the last left for the Mauritius. In March of that year an edict of the Queen required "all who had attended school, or had learned to read; all who had attended public worship; all who had spoken against the idols or customs of the country, and all who had been baptized, or had joined the Christians, or observed the Sabbath, within one

HOVA AND BETSIMASARABA WOMEN.—[FROM PHOTOGRAPHS.]

JACK-TREE, WITH FRUIT.

month to come before officers appointed and confess the same." Some were fined, many were sold into irredeemable slavery, with cruel conditions attached, such as that they should not be approached or aided by friends or relatives. A great many perished from drinking the tangena, and numbers were forced to drink scalding water, were burned at the stake, thrown from precipices, killed with spears and clubs, or buried alive.



So thorough was this examination that the Queen and her idol-keepers flattered themselves they had extirpated the belief and practices of the Christians from the island. All reports, however, place it beyond a doubt that the exact reverse happened. The fortitude and patient goodness shown by the unfortunate converts gained secret accessions to their ranks, even in the midst of the most violent persecutions. Moreover, the love of education has shown itself very strong in the Malagassy; and the stoppage of the public schools caused many to favor secretly the case of those who alone would teach their children to read and write.

The persecutions were rigorously kept up for seventeen years—from 1834 to 1851. In all these years death or slavery was the fate of any found in possession of Bibles or tracts, or caught in the act of Christian worship. At no time was a suspected convert left in peace. Yet the Christians constantly received accessions to their ranks; and even in the capital, under the eyes of the savage idol-keepers and chiefs, who were the principal instigators of the persecutions, the small band gradually increased. During the year 1846 one hundred men and women declared themselves Christians, and among these was no less a person than Prince Rakotandrama, the only son of the Queen, and heir-apparent to the crown. These conversions were of course kept secret; but when, five months afterward, twenty-one of the new converts were detected and condemned to death, the Prince, with noble courage, appealed publicly to his mother for their lives, owning his sympathy with them.

In June, 1845, three French and British vessels of war were sent to Tamatave, to adjust some differences between the natives and a few European cattle-dealers who still lived at the port. The commanders failing to get satisfaction, fired into the town, burned it down, and killed a number of people. They, however, lost two boats' crews, killed by the Malagassy. The heads of these unfortunates were stuck on poles over the gate of the palisaded fort which fronts the harbor; and here the writer of this saw them, bleached with long exposure, on a visit to Tamatave in 1850. They were still there when Mr. Ellis arrived on his first visit, in 1853.

In 1849 there occurred another season of violent persecution. More than two thousand persons were brought to trial for their belief in Christianity; many were sold into slavery, heavily fined, and tortured, and eighteen, several of high rank among them, were put to death. The terrors of the law caused many to renounce their

faith at this time. But on the other hand, Mr. Ellis ascertained that no sooner did the persecutions relax somewhat than the Church received numerous accessions from among those who had witnessed the steadfast and patient spirit of the sufferers.

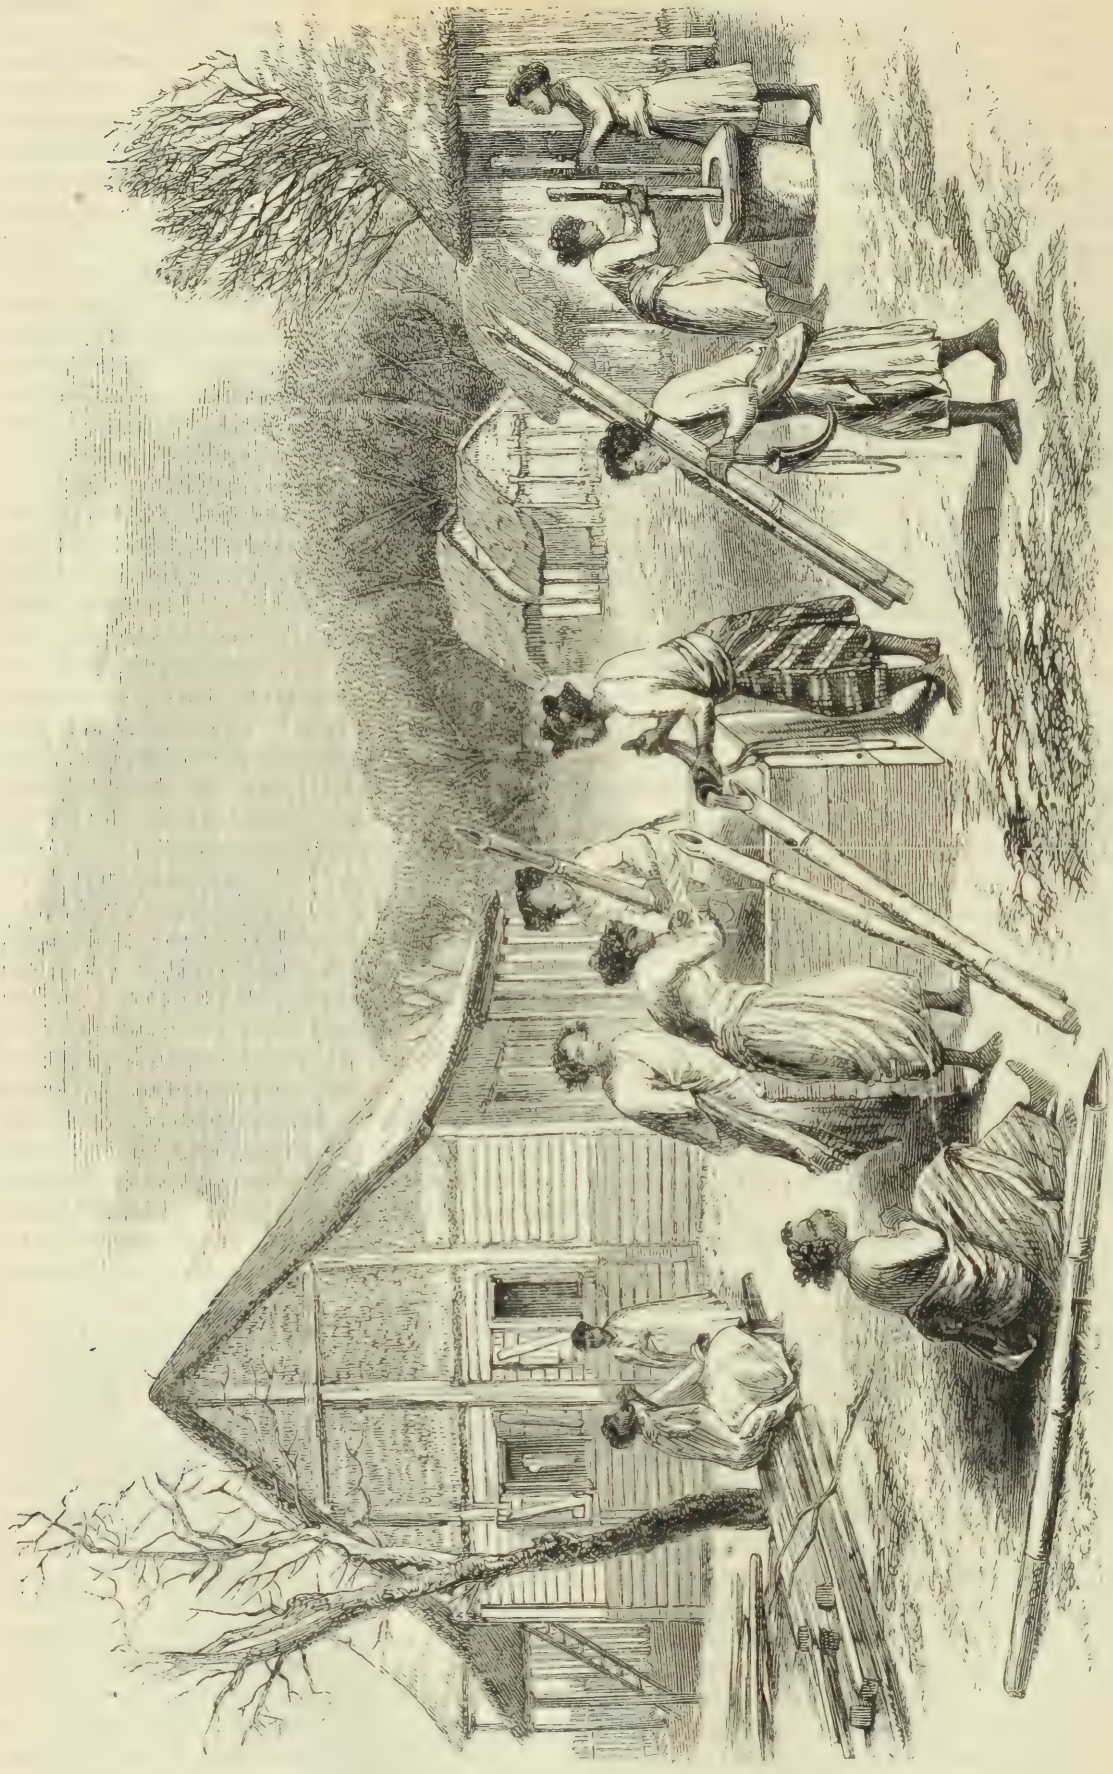
LEMUR.

For twenty years—from 1834 to 1854—no Europeans but a few traders had visited Madagascar; and these had remained on the sea-shore, principally at Tamatave, and confined themselves strictly to trade. In these twenty years it was generally supposed that the Malagassy had fallen back almost altogether into their ancient barbarism. From time to time the London Missionary Society received communications from native converts, which proved that the remnant of Christianity remained, and even grew. But no one dared anticipate that the arts of civilization which had been so fostered by Radama, and so energetically put down by his successor, survived. In 1852, letters from Antannanarivou spoke encouragingly of political and other favorable changes then in progress, under the auspices of Prince Rakotandrama and his friends. It was thought desirable that some intelligent European should visit the capital in a friendly way, to see for himself the condition of things. Mr. Ellis, well known in the world of letters as the author of "Polynesian Researches," was deputed to this office; and his most interesting account of this somewhat dangerous expedition shows that so far from retrograding, amidst all the tyranny and persecution of twenty years the knowledge of reading and writing had become very general; all the numerous officers of government being obliged to make reports of duties performed, in regular dispatches to headquarters—that several of the mechanic arts introduced by the Missionaries were in a flourishing condition; and that, in short, the Hovas, now the ruling people of the Island, had proved satisfactorily their capacity for unaided progress toward civilization.

Mr. Ellis received the Royal permission to visit Antannanarivou in 1855. He arrived at Tamatave in 1856, and was hospitably received by the officials of the port and district; the harbor master, commanding general, and the chief judge, whose euphonious name was *Rainibehevitra*, signifying *Father of Great Thoughts*. The harbor master's house, which was a fair sample of the better class of Hova dwellings, was a very comfortable affair. The walls inside were hung with the native cloth, made from the fibres of the rofia palm; a fine large mat covered the floor of long and well-joined planks. A four-post bedstead, covered with fine sleeping mats stood in one corner; in the centre stood a table covered with a white cloth, on which refreshments were placed; and a number of chairs and native seats, the latter of matting, in the shape of high square ottomans, were scattered about the room. The company asked many questions about England, France, and America, the officers meantime refreshing themselves from time to time with small mouthfuls of snuff, which they take mixed with salt and the ashes of a native plant. The Malagassy do not smoke, but all who can afford it chew this snuff. Every officer has in his retinue a snuff-box bearer, who from time to time hands his master a piece of bamboo cane nine inches long, beautifully polished, covered with rings, and having a lid with

A CATTLE FAHITRA.

a silk tassel. Emptying half a tea-spoonful into his palm, the chief by a rapid jerk of the hand tosses the delectable morsel on to his tongue.

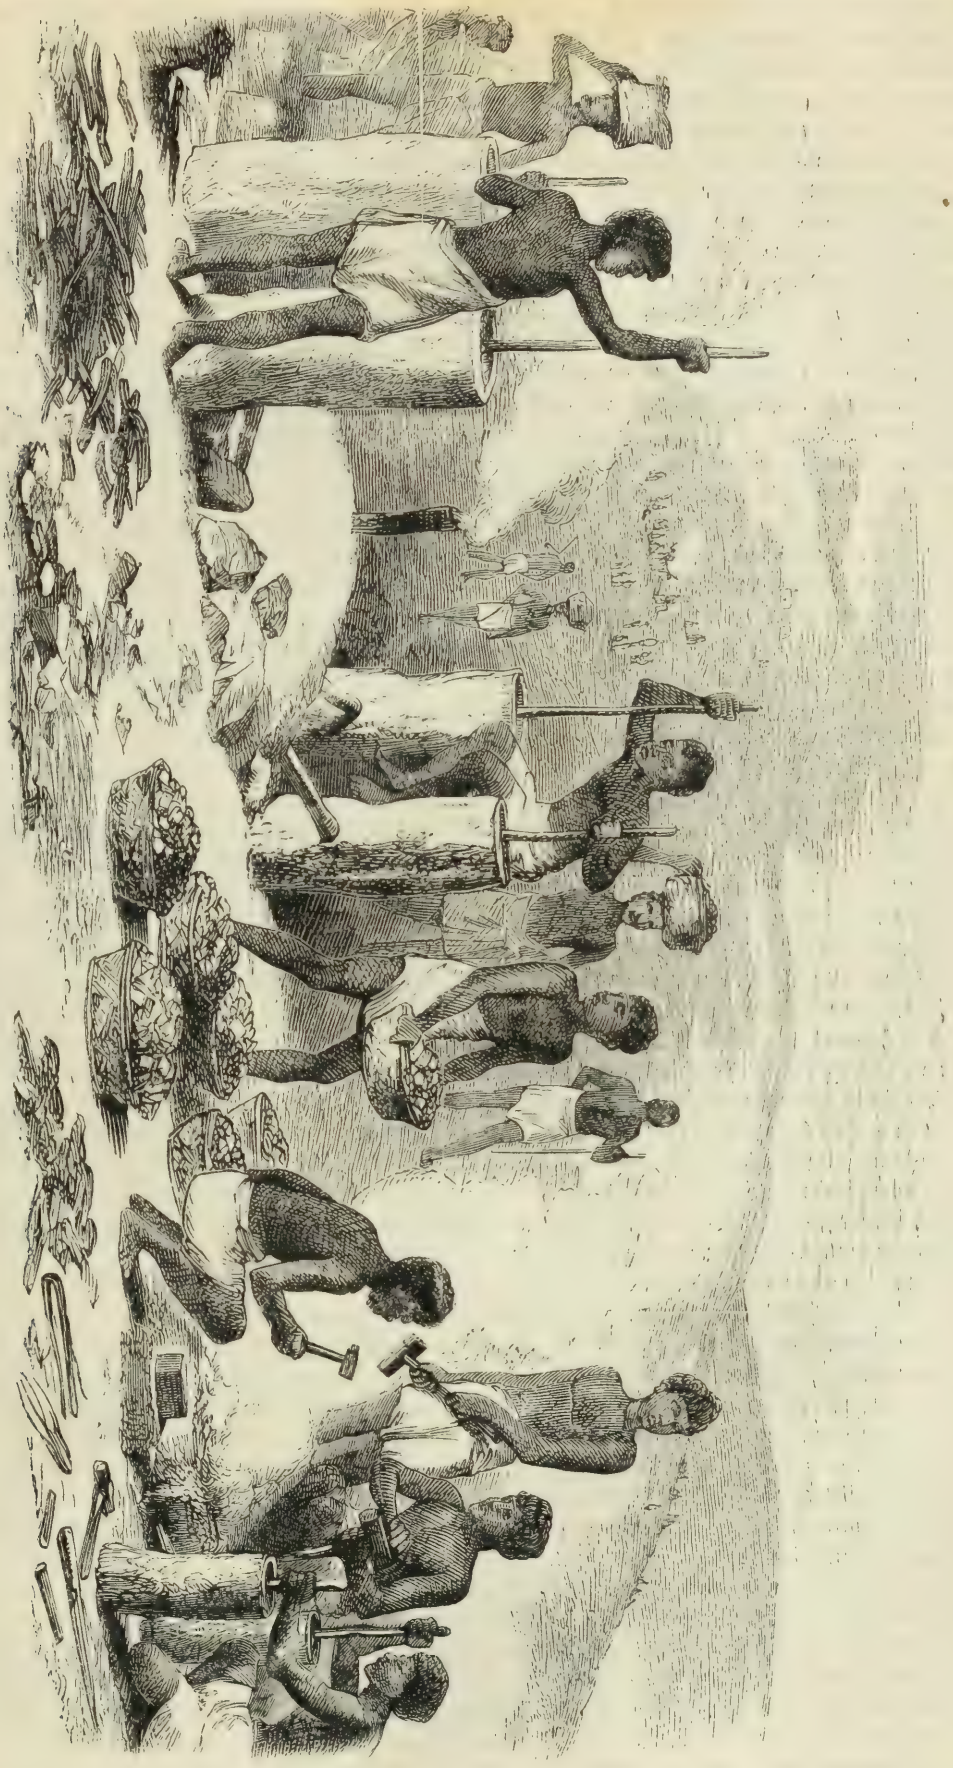


Every missionary should be a physician. No sooner was Mr. Ellis's arrival known than he was sent for by numbers, who desired him to see and prescribe for fever-patients. The Madagascar coast-fever is one of the most deadly diseases known. On parts of the coast white men are sure to die if attacked. The natives suffer less, but even they must be acclimated. One day a head chief sent for a prescription. Mr. Ellis calling to see him, found him reclining on a bed in a narrow, dark, close hut, whither he had removed to keep warmer. A fire was burning in the middle of the floor. A native lamp dimly lighted the apartment. This lamp consisted of an iron rod sharp at one end, and having at the other extreme a cup with a hook above it. The rod was stuck firmly into the ground, the cup contained melted fat in which floated a lighted wick, and from the hook was suspended a piece of bullock's fat which, melting, replenished the cup.

Presently entered an aid-de-camp of the chief with two letters. He was ordered to read them; then to answer them according to instructions given by his sick master. Bringing paper, pens, and ink, he seated himself cross-legged on the ground near the lamp, laid a quire of paper on his knee, and wrote while the chief dictated the words. The letter finished, it was read aloud to the chief, who approved; whereupon the writer brushed some sand from his naked foot upon the sheet, with the feathery end of his long quill, to prevent it blotting, folded the sheet, sealed it, and dispatched it by a messenger.

"There was something singularly novel and suggestive as to the processes by which the civilization of nations is promoted in the spectacle I had witnessed," says Mr. Ellis. "Little more than thirty years before, the language of Madagascar was an unwritten language; a native who had been educated at Mauritius was the only writer in the country, and he wrote in a foreign tongue; but now, without any of the appliances which are usually connected with a secretary's desk or office, a quiet, unpretending young man, seated on a mat on the floor in a low dark cottage three hundred miles from the capital of the country, and with his paper on his knee, receives and writes with accuracy and ease the orders or instructions of his superior; and while the latter reclines in his sickness on his mats spread on the floor in his leaf-thatched hut, as his fathers had done for generations before, he has only to utter his wishes or his orders, and these are conveyed to those whom they concern with as much authenticity and correctness as the most formal dispatch from an office of the most civilized nation. And when I reflected that to such an extent had the native government availed itself of the advantages of writing as that in the year 1836, when the late missionaries left the capital, there were four thousand officers employed, who transacted the business of their respective departments by writing, and that such is the benefit or pleasure which the people find in thus communicating with each other, that scarcely a traveler ever journeys from one place to another without being a letter-carrier, I was strongly impressed with the fact that, besides the benefits of their directly religious teaching, missionaries were rendering most important aid toward the enlightenment and civilization of mankind."

The 25th of June is the Malagassy New Year. This is a national festival in which all the people join, there being a cessation of labor for three days. Mr. Ellis was invited to a State dinner, given by order of the Queen to the chiefs and foreign residents at Tamatave in honor of the day. The native officers wore uniforms of great variety and some splendor, one being arrayed in rich green velvet, trimmed with gold lace. All wore gold epaulets, and cocked hats with feathers. The visitors were received by a guard of soldiers, wearing a folded white cloth across their loins and white belts across their naked shoulders. A band, consisting chiefly of drums and clarionets, played native and foreign airs. The dinner hour was half past five. The places at table were designated by the guests' names written on small pieces of paper, laid upon the table-napkins. Mr. Ellis was placed between the lady of the house and the master of ceremonies. The dinner consisted of soup, turkey, roast pig, fowls of various kinds, with good pastry, and, most important of all, a dish of *jaka*. This is the ceremonial beef preserved without salt from the previous year's festival, and now tasted by each guest, after a speech from the master of ceremonies, in which he stated that the Queen desired the foreigners in the port to partake with her subjects of the hospitalities of the season. Coffee followed the dinner, and dancing upon that. The evening was concluded by drinking the Queen's health in a small glass of liquor; the toast being proposed in another speech by the Marshal. Can any man with a well-ordered appetite ask a surer evidence of Malagassy civilization than was afforded by this dinner?



In all his intercourse with the natives Mr. Ellis found the subject of education one most gladly touched upon. He was informed that though public schools were abolished, all who were able taught their children to read. Books with the words extending in lines *across* the page are strictly prohibited; but books with the lines running up and down (spelling-books?) were admitted. A singular regulation places all the skilled labor at the command of the Government. This was Radama's Napoleonic idea. Thus the carpenters, blacksmiths, workers in iron and leather, the sewing women, as well as all who can read and write, are liable to be called, at any time, to serve the Government without remuneration. When not so employed, however, they are permitted to work for themselves. The chief native manufactures are cloth made from the rofia palm, and often beautifully dyed; baskets and mats, of very fine texture and brilliant colors, used for various purposes; hats, and the

FEMALE SLAVES DRAWING WATER AT A WELL.

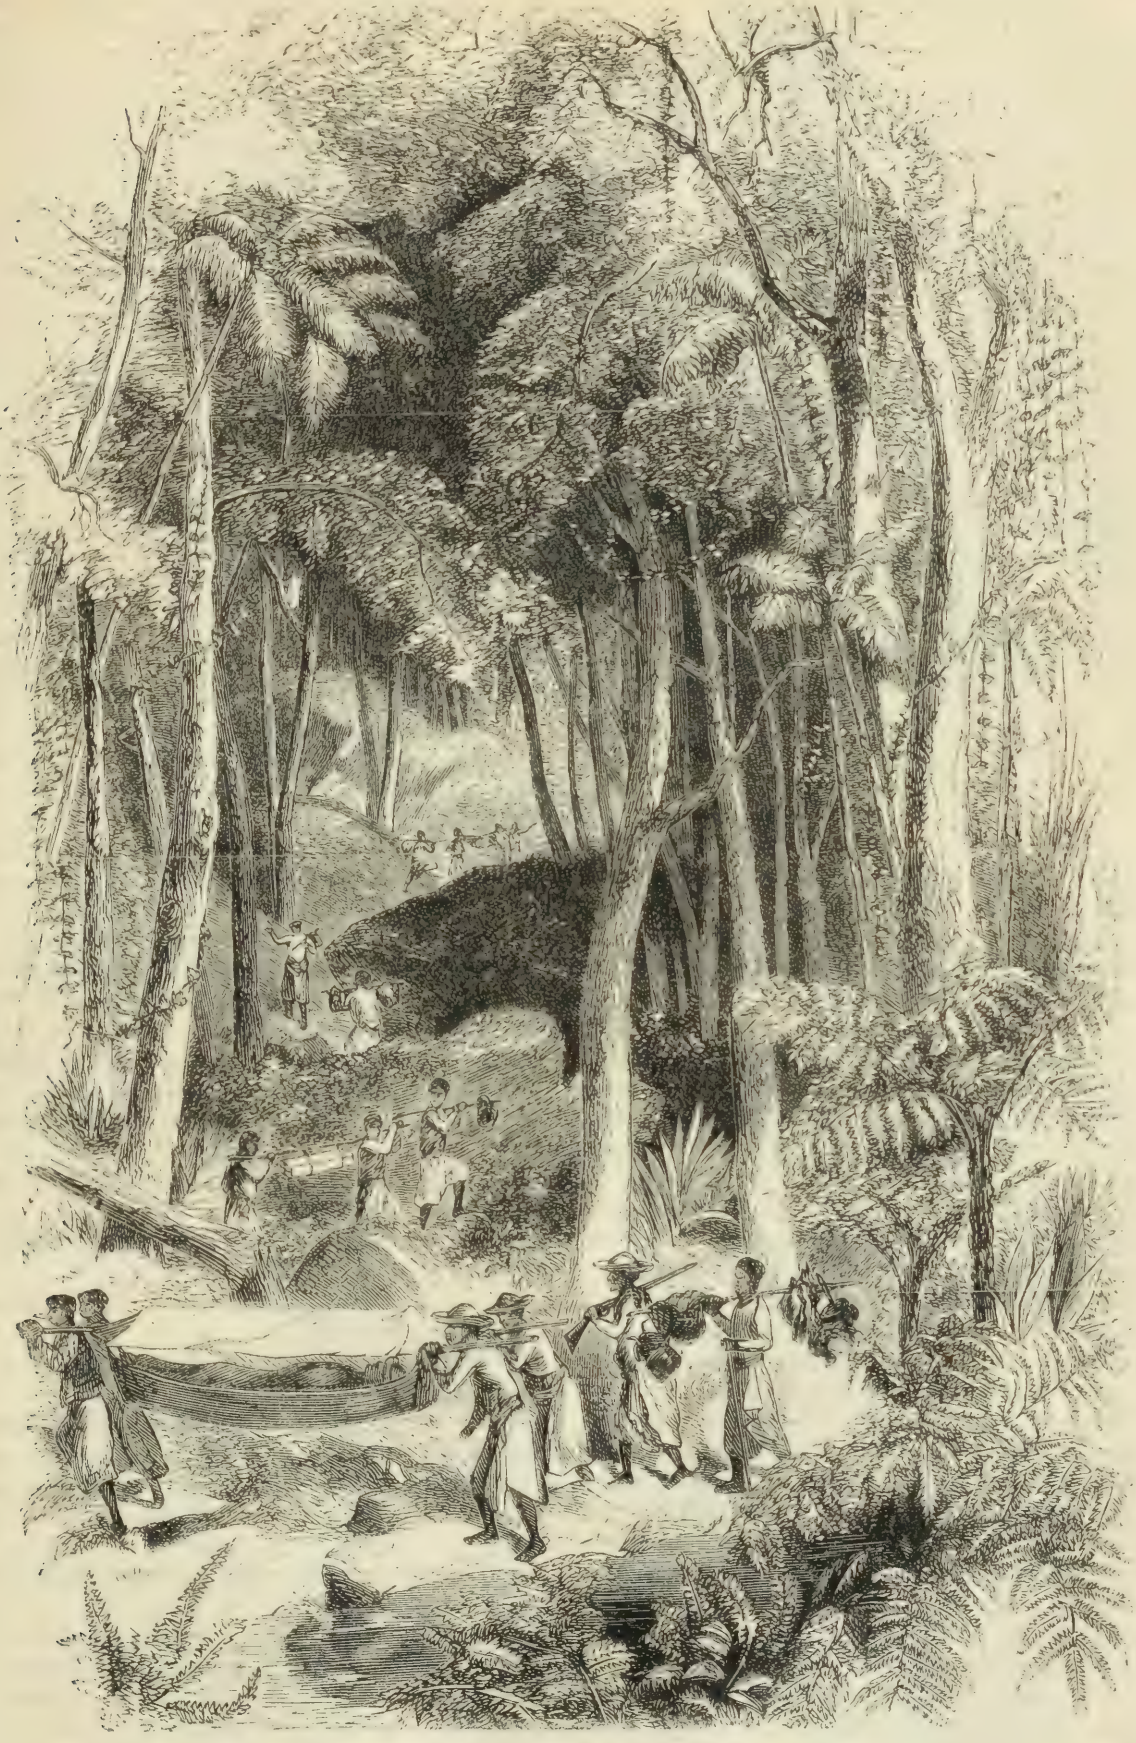
shawl-like garment of cotton and silk worn by the nobles, called a *lamba*.

Cattle and rice are the chief articles of export at present; but it appears that the Government collects also other articles of commerce. Of course Mr. Ellis met a New York merchant in Tamatave. Americans are now found wherever there is an opening for commerce. A Mr. Mack, agent of a New York house, informed Mr. Ellis that he had just concluded a contract with the Queen's Government to take all the gum, beeswax, and India-rubber that would be collected for several years; giving in exchange principally arms and ammunition.

IRON SMELTING AND NATIVE SMITHS.

The markets of the towns abound in iron ware and tools, such as saws, axes, and hammers, sold at exceedingly reasonable rates—a most promising sign of advancing civilization. Iron is found, in certain parts of the country, in such plenty that only the surface ores are used. The processes of smelting and working the ores are carried on in the neighborhood of running streams, where the ore, broken into small bits, is washed carefully before being placed in the furnaces. These are built of stone, generally sunk two or three feet into the ground, and covered tightly with clay when charged. The blast is supplied by two pairs of pistons, working in wooden cyl-

inders—generally part of a small tree hollowed out. The iron is permitted to cool in the furnace, taken out in lumps, reheated and beaten into bars or rods, and in that shape taken to market or to the Government store-houses. The smiths who work for the Government live in villages together, and labor in common.



Receiving a letter from the capital, inviting his immediate presence there, Mr. Ellis prepared for an arduous journey of fourteen or fifteen days, over roads which, though often traveled, are yet far from easy. A large party of bearers were appointed, at the Government expense, to carry the goods he intended as presents to the Queen and her chief officers, as well as some photographic apparatus and a small coil of telegraph wire, with the needful instrument and chemicals. Wheeled carriages are not known in Madagascar, and pack oxen are not used. Every burden is borne on the backs of men. No less than one hundred and nine men were needed to carry Mr. Ellis's baggage, and his palanquin and cooking utensils required twelve more. The Government had given orders that this large party should be provided with food and sleeping accommodations by the inhabitants of the villages they passed through. When they stopped at night, the palanquin was suspended to the rafters of a hut, and formed an easy bed, conveniently removed from the dirt, rats, and insects which unpleasantly encumbered the floors. At every stop the packages were stored in the *lapa*—a house provided by Government for such purposes. The journey was a tedious one. The dense jungle of Madagascar, the fruit of a rich soil soaked by heavy rains almost every month in the year, is oppressive to the spirits of the traveler. The sunshine is uncertain—rain but too certain. There are few birds—none of cheerful voice—and the snakes, scorpions, centipedes, and crocodiles (which last populate the rivers, and lie in wait upon the banks), with stories of whose attacks the guides beguile the way, are the reverse of pleasant. If to these be added the constant care necessary to protect the stranger from fever, the disagreeable jolting of the palanquin by day and the general roughness of accommodations by night, a journey to Antannanarivou will not appear a pleasure-trip. Mr. Ellis was fortunately a zealous naturalist. A new flower or shrub—and they are not few, the peculiar flora of Madagascar being almost unexplored—gave him no end of delight. The jack-tree, which bears the bread-fruit of Madagascar; the giant-leaved rofia palm, of whose fibrous bark the beautiful native cloth is made; the pandannus-tree, whose leaves serve as waterproof wrappers for all kinds of parcels in Madagascar; and the singular "traveler's-tree," whose broad, high leaves form with the trunk a reservoir, where the thirsty traveler may always find from a quart to two quarts of pure and healthy water—these, and many more, beguiled the tedium of his journey. In the woods he was amused with the antics of a pretty animal of the monkey tribe, the lemur, whose chattering somewhat enlivened the silence of the jungle. The aye-aye—a singular animal peculiar to Madagascar, and of which only one specimen has as yet been brought to Europe—is regarded by the natives with somewhat superstitious feelings, which make them averse to catching it.

In the villages the daily life of the people was laid before him. At one he saw the manner in which male and female slaves are punished. Slaves are worth from seventy to one hundred dollars for males, and from twenty to forty dollars for females. They seem to be well treated, not overworked, and seldom punished. The boards joined about the neck of a young girl, and the heavier iron collar about the neck of a boy, were the only punishments Mr. Ellis saw used. As an evidence of the amount of writing done at the capital, Mr. Ellis saw on the shore of one of the small lakes with which the country abounds a number of people employed in collecting and drying the dark-colored, shining, micaceous sand, which was afterward sent to Antannanarivou, to serve the purpose of blotting-paper in the Government offices.

Food seemed abundant every where. The splendid hump cattle of Madagascar, which form the chief wealth of the nobles, are sold for from four to six dollars per head. The beef is tender and succulent; and the singular process of fattening, in a cattle-pit, called a fahitra, enables them to bring to market animals of enormous size. The fahitra, as will be seen by our illustration, is a pit dug in the ground, in which the animal is forced to stand up, with its fore legs upon a raised platform, and its food above the level of its head. Their theory is that, in fattening, the chief weight of the body should be thrown on the hind-quarters. Fowls are fattened in a hole, or in a close basket, where they are crammed with a paste of rice flour, until, in some chickens brought to Mr. Ellis's table, the fat on the legs, and some other parts, was full an inch thick.

The locusts, which annually cause great destruction of crops in the central provinces, are highly esteemed as food by the natives. They generally fly within two or three feet of the ground; and on the approach of a swarm the people rush out and strike them down with their lambas, and with large flat baskets. The women and children gather them up from the ground into long-necked sacks, where they are divested of legs and wings by a severe shaking up. These extremities are then winnowed out, the bodies dried in the sun, or fried in fat, then packed in sacks for food, or sold in the markets. Europeans who have been forced by stress of hunger to eat locusts thus prepared do not deny them a certain pleasant, nutty flavor; and it is generally acknowledged that they are wholesome and fattening.

At last, on the 26th of August, 1856, Mr. Ellis reached Antannanarivou, a name which signifies "the city of a thousand towns." It stands upon an oval-shaped hill, a mile and a half in length, and four or five hundred feet high. Near the centre, and upon the *tampombohitra* (crown

TRAVELING THROUGH THE FORESTS.

of the town) stands the palace, the loftiest building in the place. It is about sixty feet high, surrounded by double verandas, and has the steep roof necessary in this rainy climate. The roof is pierced on three sides with attic windows; and on the centre of the top stands a large figure of a gilt eagle, with outstretched wings. Adjoining the Queen's palace is a smaller building, on the same plan, in which resides the Christian Crown Prince. The neighborhood of the town is a dreary, treeless waste. Near a brook at the entrance of the town a large pile of granite was

CATCHING LOCUSTS.

pointed out as the place where many Christians had been put to death.

A convenient house had been set apart for Mr. Ellis by the Queen's orders; and here he received many eager visitors, administered medicines to the sick, who were brought him in great numbers, and held much converse with the Christian converts, who came to him at all hours, by day and night. It must be remembered that Christianity is yet prohibited in the island; that the persecutions may recommence at any time; and that a cruel death hovers over every convert. There results a very singular and affecting feature of Mr. Ellis's work—a necessary concealment of every circumstance which might lead to the identification of those Christians with whom he came in contact, or of whom he obtained knowledge. He states that their religious feelings "appeared sincere and satisfactory, and derived simply and solely from the teachings of God's Holy Word." How steadfastly the Gospel doctrine has progressed appears from the fact that a large number of those who have suffered death, tortures, and slavery became Christians after the missionaries left. There is not in all the stories of the martyrs a more affecting recital than in these simple extracts from a MS. confided to Mr. Ellis, the journal of one who was sold into slavery in 1849. "It is quoted without apprehension," says Mr. Ellis, "as those to whom they refer have passed into a world where the cruelty of the persecutor can never enter." Here are the extracts:

"On the 14th of March, 1849, the officer before whom the Christians were examined said, 'Do you pray to the sun, the moon, or the earth?'

"R—— answered, 'I do not pray to these, for the hand of God made them.'

"'Do you pray to the twelve mountains that are sacred?'

"R——. 'I do not pray to them, for they are mountains.'

"'Do you pray to the idols that render sacred the kings?'

"R——. 'I do not pray to them, for the hand of man made them!'

"'Do you pray to the ancestors of the sovereigns?'

"R——. 'Kings and rulers are given by God that we should serve and obey them, and render them homage. Nevertheless they are only men like ourselves; when we pray, we pray to God alone.'

"'You make distinct and observe the Sabbath day.'

"R——. 'That is the day of the great God; for in six days the Lord made all His works. But God rested on the seventh, and he caused it to be holy; and I rest or keep sacred that day.'

"And in similar manner answered all the Christians, and when a man who had kept aloof saw that one—a woman—did not deny God, and remembered that to deny God was followed with compunction, he went and spoke as the others had done, and when these brethren and sisters were bound, the husband of one of them, who had heard their confession, came and said to

them, 'Be not afraid, for it is well if for that you die.' He was a soldier from a distance, and not of the number of the accused; then he was examined, and as he made the same avowal, they bound him also. And they removed these ten brethren and sisters, and made their bands hard or tight, and confined them each in a separate house.

"And, at one o'clock at night, we [those not yet accused] met together and prayed.

"On the 22d of March, when one had said Jehovah is God alone, and above every name that is named, and Jesus Christ is also God, the people cried out, mocking. And to another the officer said, 'Rabodampoimerina (the sacred name of our queen) is our God, but not your God.' He answered, 'The God who made me is my God; but Rabodo is my queen or sovereign.' And when he refused other answer, they said, 'Perhaps he is an idiot or a lunatic.' He answered, 'I am not an idiot, and have not lost my understanding.' Then there was a commotion and buzz among the people, saying, 'Take him away.' And they took him to prison.

"And before it was light on the following day, the people assembled at A——y. Then they took the eighteen that chose God, and to inherit life, and to become His sons and His daughters, and bound their hands and feet, and tied each of them to a pole wrapped in mats, and placed them with the other prisoners. And of these united brethren and sisters ten were from Vonizongo. And when the officers and troops and judges arrived they read over the names of each class of prisoners, and then placed them by themselves, and stationed around them soldiers with muskets and spears; and the sentences were then delivered, consigning some to fine and confiscation, others to slavery, others to prison and chains, some to flogging, and eighteen

AYE-AYE.

MODES OF PUNISHING SLAVES.

to death, four to be burned, and fourteen to be hurled from the rocky precipice and afterward burned to ashes.

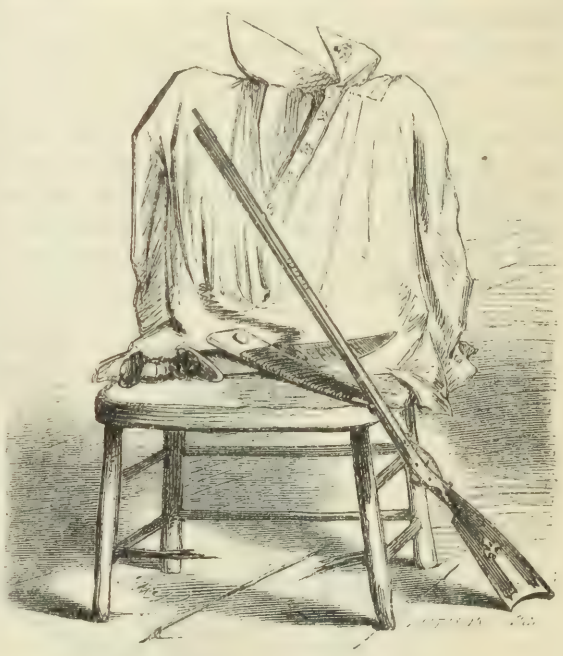
"And the eighteen appointed to die, as they sat on the ground surrounded by the soldiers, sang the 137th Hymn.

"And when the sentences were all pronounced, and the officer was about to return to the chief authorities, the four sentenced to be burned requested him to ask that they might be killed first and then burned. But they were burned alive.

"When the officer was gone, they took those eighteen away to put them to death. The fourteen they tied by the hands and the feet to long poles, and carried on men's shoulders. And these brethren prayed and spoke to the people as they were being carried along. And some who beheld them said that their faces were like the faces of angels. When they came to the top of Nampaminarina they cast them down, and their bodies were afterward dragged to the other end of the capital, to be burned with the bodies of those who were burned alive.

"As they took the four that were to be burned alive to the place of execution, these Christians sang the 90th Hymn, beginning, 'When our hearts are troubled.' Each verse ending with 'Then remember us.' Thus they sang on the road. And when they came to Faravahitra, there they burned them, fixed between split spars. There was a rainbow in the heavens at the time, close to the place of burning. Then they sang in the Hymn 158:

> 'There is a blessed land,
> Making most happy;
> Never shall the rest depart,
> Nor cause of trouble come.'



"That was the hymn they sang after they were in the fire. Then they prayed, saying, 'O Lord, receive our spirits; for thy love to us has caused this to come to us. And lay not this sin to their charge.'

"Thus they prayed, as long as they had any life. Then they died; but softly, gently. Indeed, gently was the going forth of their life. And astonished were all the people around that beheld the burning of them there."

Ten years ago this pleasant month of March, these Christian men and women thus met their deaths.

After a stay of some days, Mr. Ellis at length received audience of the Queen. The Court sat upon the veranda of the palace, and Mr. Ellis, with a French resident and two interpreters, were ushered through a great crowd to a station in front of the Queen. Bowing to her, and then to the tomb of Radama, they pronounced the salutation "Tsara, Tsara, tompoko;" "It is well, it is well, Sovereign." After mutual inquiries after health, Mr. Ellis then offered the *hasina*, a customary tribute of a coin (in this case an English sovereign), without which no one must have audience of the Queen. Thereupon followed speeches of friendship from Mr. Ellis and the Queen, and presently the audience was over and the strangers retired. The speeches made seem to have been quite as meaningless as they would have been on any similar occasion at a European court.

Mr. Ellis found the Malagassy disposed to be friendly toward Europeans, so long as they were assured they had no ulterior designs upon the country. The repeated attacks of the French have aroused their jealousy, and by making the country inaccessible have, doubtless, retarded by years the civilization of the people. They will suffer no foreign yoke; but all seemed anxious for a legitimate foreign trade, and the farther spread of civilized arts. It is to be hoped that the great nations who can so greatly affect the destiny of such a minor and semi-barbarous people will permit them to advance in the only way in which there can be true advancement for nations or men—by permitting them to aid themselves. Unless some criminally foolish act of hostility on the part of France should again excite the enmity of the Malagassy against all white men indiscriminately, it seems certain that, on the death of the present Queen and the accession of her Christianized and educated son, the arts and amenities of our civilization will change the face of the great island. Meantime, may God protect His people there!

THE RED RIVER TRAIL.

> From the great lakes of the Northland,
> From the land of the Ojibways,
> From the land of the Dacotahs."
>
> LONGFELLOW.

MINNESOTA—euphonious name of the far-off Northland! There is music in the word, and poetry in its import. The untamed savage selected it from his own vocabulary, and with it christened his hyperborean elysium the "*water and smoke country.*"

Many who have failed to discover precisely wherein consists the romance of Indian life and character (according to Cooper), or, blind to their own imagination, will see no poetry in a

breech-cloth, no sentiment in scalp-locks and scalping-knives, discern no epic theme in swarthy cheeks and darkling eyes that peer from massy uncombed hair, utterly ignoring the æsthetics of the red man, must nevertheless admit that the enunciation of Indian proper names not only often falls musically upon the ear, but that the etymology of the words is as often strikingly expressive and full of sentiment. Thus, in the accepted signification of the original words, *menah* (water) and *shotah* (smoke), the former refers to the innumerable rivers, lakes, and streamlets that diversify the country, and the latter to the peculiar haziness of the atmosphere during the delightful period of the "Indian Summer"—a season when the fancy instinctively revels amidst bucolic scenes of *dolce far niente*. Then nature seems to lapse into dreamy repose; the autumnal sunlight throws a mellow hue upon the prairies; the hum of the insect world is strangely audible; smoke floats lazily in the still air; and naught disturbs the placid surface of the lakes save the ripple of the birchen canoe, or the dip of the swallow as he skims the wave. The Indians' dream of the beatitude of the spirit land is here almost realized. What name so appropriate then as Minnesota? However, there are some unpunished witlings who assume that in the aboriginal vernacular the correct interpretation of the word is, the "land of fire-water," from the quantity of whisky drank there; but we discard this rendering as Quixotic, and a base attempt to "do" the Indian out of his poetic fame.

It had long been the cherished desire of Mr. C. Sharpe Penman to penetrate this to him almost mythical region of the West—the quondam home of the immortal Hiawatha and the mighty Mudjekewis—the land of the Dacotah and Chippewa—the country whose people, like Henry V., swear "by St. Paul," and whose great men are those who traffic in furs—that isotheral Canaan where corner lots are wealth, and where money is loaned at four per cent. a month. Long had Mr. Penman contemplated the vastness of the undertaking, and carefully weighed its difficulties and dangers. The information that he had acquired from the perusal of sundry narratives of pioneer life and exploring parties had made him in some degree familiar with the hardships and privations that he might expect to encounter; and besides, the careful study of the most recent maps and histories of Minnesota that he could obtain (published some six years since) convinced him that, with the exception of the small trading post known as St. Paul, the entire country was a wilderness, traversed only by wild beasts and Indians, and a few vagabond white men nearly as barbarous as the Indians themselves. For many months had Mr. P. sought in vain for some congenial spirit, as brave and reckless as himself, to become his *compagnon de voyage*, and share the delights and dangers of his contemplated trip.

At length, by that good fortune which alone favors the brave, opportunity offered. A party was organizing for a grand "buffalo hunt" in this very section of country, to be composed only of the most distinguished personages, and Mr. P. received a pressing invitation to become one of the number. Included among them were His Excellency the *fêted* Mohammed Pasha and sundry (roving) foreign diplomatists, Congressmen, and office-hunters, indefatigable in the pursuit of game, and others in pursuit of pleasure under difficulties. So rare an opportunity, with the promise of such illustrious company, was not to be thrown away. Mr. P. eagerly jumped at it; and in this case, at least, it is safe to say that he did not leap before he looked. Indeed he invariably received much credit for his foresight; and by those who are inclined to believe that there *is* something in a name, it has more than once been intimated that the key to his usual good fortune was *C. sharp*.

Accordingly, Mr. Penman at once began to make the necessary preparations, and to look about for a proper outfit. He was by no means what some sportsmen would style a greenhorn. On the contrary, he was a professed disciple of Izaak Walton, and a devoted worshiper of Nimrod and Diana. He had angled for sunfish and bull-pouts, and hunted gophers and med'-larks in Connecticut. He had not always fed on toast and tea, nor luxuriated in feather beds; for on more than one occasion, while camping out in some neighboring woods, he had been reduced to corn bread and ham bones. Still, with all his experience and knowledge of what should properly constitute his *mecum portare* when on an expedition of this sort, he had in this instance some doubts as to the items pertaining to his outfit. He accordingly determined to write to an acquaintance in Minnesota, who had several times crossed the Rocky Mountains, fought "grizzlies" in California, and starved on the deserts of the Cimarron and Gila, and who was consequently to be considered competent and reliable authority. In due time he received the following reply:

"MINNESOTA, *May*, 1858.

"DEAR PENMAN,—Your letter of many interrogatories has been received. Inclosed is a list of articles suitable for your outfit, though there may be some things that I have omitted. These your good judgment will supply. Your chief difficulty will be a tendency to carry too much. A good-sized knapsack should hold all the smaller articles of your equipment. Tobacco will secure you friends, and is a good commodity for trading with Indians. I don't think you need be apprehensive of any danger from the redskins, though it is always well to be prepared for emergencies. A fair supply of wits and a good pair of eyes are your best protection. 'Keep your eye skinned' is the universal proverb of the prairies. *See sharp.* By-the-by, a small party of us here expect to start on a hunting cruise about the time you propose, intending to travel in the same direction, and would be pleased to join you, or have you join us. Will you consent? Yours in haste,

"TICK."

From the time of the receipt of this letter until the day of departure Mr. Penman's mind was one perfect phantasmagoria of buffalo, Indians, rifles, fishing-tackle, Mackinaw blankets, and moccasins. Often, both waking and dreaming, he imagined himself already on the ground; for

"Often do the spirits
Of great events stride on before the events,
And in to-day already walks to-morrow."

Eagerly did he await the motions of the great men and high officials who had booked themselves for the land of promise. Day after day dragged slowly by, but he had not yet heard even the first warning note of preparation. "Great bodies move slowly;" and, in this case, he began to fear that they would not move at all. At length the auspicious day arrived, and his misgivings proved realities. The expedition was abandoned! Fortunate then was it for Mr. P. that his philosophy enabled him to abide this bitter disappointment with equanimity; but more fortunate still that the proposal of his friend "Tick" held out an expedient not likely to fail.

Before another sun had set he was far on his way toward the Mississippi.

It is useless to attempt to describe our hero's emotions upon beholding, for the first time, the waters of the mighty river—the "parent of perpetual streams." Though he could not exult, like De Soto, in the consciousness that he was the first white man who had ever gazed into its mysterious depths, still the event was to him scarcely less impressive. As he looked upon its placid surface, disturbed by scarcely a ripple, and reflecting the emerald hue of its wooded banks, and the blue and silver of the flecked sky above, his soul expanded, his pulse beat quickly, and a new life and vigor leaped through his veins. He seemed to stand upon the confines of another world. Here was the dividing line that separated the wilderness from civilization. All beyond was a region of dreams and uncertainties. A thousand tales of the legendary past came up before him. Almost he expected to hear the war-whoop of the savage from yonder wooded islet, to see the panther bounding from the adjacent thicket. The fancies of his bewildered brain were only dispelled after a time by the sight of the tall pipes of an approaching packet as she steamed around the bend, reminding him that this is a progressive age.

Gliding swiftly up the river, each succeeding mile developed new beauties in the ever-changing panorama. Clusters of picturesque islets, whose massive foliage rested on the wave; gently sloping hills, covered with green sward to the summit, and capped with groves of burr-oak that look like apple orchards; fantastic bluffs and isolated rocks; rugged turrets and crags overgrown with vines and mosses, and perched upon the very verge of the projecting cliff, looking like the ruins of ancient castles or fortresses; romantic little dells and ravines, in which are nestled the rude log cabin of the pioneer, or the mushroom hamlets of some enterprising settlers—these constitute the chief features of the Upper Mississippi. This is what *Nature* has done. But though Mr. Penman wondered at the profusion with which she had here dispensed her fairest gifts, yet the evidences of the presence of man and his labor that continually met his astonished eyes were far more surprising because more unexpected. He had been sitting for some time in a fit of mental abstraction, leaning on his elbows, with his chin between his hands, when he suddenly felt himself jostled, and, on

SCENERY ON THE UPPER MISSISSIPPI.

looking up, discovered an ambiguous looking individual, who appeared much like a New York alderman run to seed, or a member of the swell mob disguised as a countryman.

"I say, stranger," said he, with a stately wave of his hand, "do you observe that city just yonder?"

Upon adjusting his spectacles, Penman discovered two or three buildings to the left, almost hidden in a ravine. One was a good-sized structure of stone, on which was a large sign bearing the words, "Forwarding and Commission—Storage." A small frame shanty, on which the words "City Bakery" were conspicuous, and a tumble-down log-house, dignified by the name of "Hotel," completed the number.

Mr. Penman duly apprised his companion of the result of his observations.

"Well, Sir, that is the very best location on the river, and is destined to be the great metropolis of the Great West. Yes, Sir!"

THE FUTURE METROPOLIS.

"But you don't mean to say that is a *city*, regularly incorporated!"

"Yes, *Sir*—all laid out and plotted—public squares—lots fifty dollars per foot—Mayor and all."

Penman thought the place rather small for a city, and suggested that the greater part of the houses might lie back of the bluff—thought the hotel business wouldn't pay.

"Look a-here, stranger," said the other, abruptly, "whar do you hail from?"

"New York."

"Humph! thought as much. You city chaps down East think you are all creation; but I reckon we can teach you a thing or two out here. 'Twont do to be too free in your remarks about things you don't know nothing about."

Penman felt humbled, and retired to his meditations. It was a mystery to him where all the stores and commission-houses of the numerous self-styled cities that line the river obtained their customers. Not from the local population, surely. He afterward learned, to his surprise, that these often do an immense business—that each is the channel through which flows the grain and other produce of the back country for miles around, and whither the scattered inhabitants resort to procure the little necessaries of life. Surprising quantities of goods and merchandise are daily landed at these embryo metropolises. In the flush times fortunes came at the bidding here.

For three days did Mr. Penman delight in the beauties of the ever-changing landscape, while the steamer glided onward and onward into the silent depths of the wilderness, winding through charming islands, some of them dotted with picturesque wigwams, occasionally passing a steamer or huge raft floating down with the tide, startling the wild duck from the wave, or the red deer from his retreat in the shaded pool. Occasionally a fisherman's boat or Indian canoe shoots out from some little bay, or is seen coursing along the shore; the blackbird whistles in the woods, the blue crane stands moping in the water, and the eagle and hawk are floating lazily high up in the light of the mid-day sun. These were his day visions. At night, when the moon was shining in her full effulgence, flooding both forest and river with her silvery light, the picture was still more enchanting. But then was it

grand indeed, and strangely exciting, to see the lurid light gleam out from the furnace doors, creating fantastic and ever-changing shapes upon the shadowy shores; to watch the showers of streaming sparks, and to listen to the rushing of the water, the heavy clank of the engine, and the hoarse breath of the smoke stacks as it came from the rosin-fed furnaces—infectious of boiler explosions. Moreover, it excited Penman's apprehensions. He felt uneasy, and his mind wandered strangely from themes of poetical fancy to the study of the mechanical forces. It was the only drawback to his complete enjoyment. But his journey now drew near its close, and present delights were soon to be numbered with the past. The steam-whistle sounded, the bell tolled, the engine ceased its movements, and the huge craft glided quietly up to her landing.

"Man the plank! Here, you men—run her out—steady—now—run her up—lively there—why *don't* you take her up? All ashore! Out with them casks—lively, I say!"

Old Tick was waiting on the levee, and in a moment had jumped on board.

"Arrived at last, eh?" he exclaimed, grasping Penman's extended hand. "I feared you had disappointed us. But where's the Sublime Porte and the rest of them?"

"Port! Ha! ha! your old failing!" laughed Penman. "I'm sorry I haven't the article. But I've a very good sample of *brandy* in my knapsack," he added, *sotto voce*.

"Ah! very good in its place," replied Tick, wondering at his friend's singular construction of his question. "But, I say, where is the distinguished Turk and the others who were to accompany you?"

"Oh! ah! hum! withdrawn from the ticket like shrewd politicians who can see no chance of being elected. But I'll give you the whole story by-and-by—give you an ex-party statement."

"Well, then, let's move. Our boys are all waiting at the hotel."

"Directly—as soon as I get the rest of my luggage. There goes the bell now!"

"More traps!" ejaculated Tick, as he hastily followed the other to the baggage-room. "Well, you've no lack, that's certain. Be lively now—she's moving!"

Seizing a number of parcels, he jumped to the levee, while Penman delayed for a stray article. In the mean time the boat moved off.

Directly Penman appeared at the foot-lights.

"Hooray there! Here's a passenger wants to go ashore!" shouted the deck hands. "Run out the plank!" yelled the mate. "Here, you fellow! Now's your chance—jump for it!"

Penman rushed frantically down the extended plank, now some six feet from the shore; but as he sprang his foot slipped, and he landed most unceremoniously, though without bodily injury. From C sharp to B flat the transition was easy and rapid.

On the following morning Penman proceeded to the appointed place of meeting, fully armed and equipped. He had spared neither pains nor expense in perfecting his outfit, and had omitted nothing that his own or others' experience, or that his imagination suggested might be useful. Having donned his hunting costume, strapped on his knapsack, blankets, and cooking utensils, stuck his belt full of weapons, shouldered his rifle, and surveyed himself complacently in a mir-

RIVER VIEW.

ror, he pronounced himself *au fait* and "ready." His friends were awaiting him.

"Ah! here he comes at last!" said Tick. "But what has he got? My eyes! what a traveling curiosity shop!"

"Why, he has arms enough for a pirate!" said Skittles.

"Yes, and boots enough for a freebooter," added Wabash.

"Good-morning, gentlemen!" bowed Penman, with a bland smile. "You see here a veritable representative of the ancient Nimrod. Do you not think my outfit unexceptionable? You observe I have all the essentials. I've always found it well to be well prepared."

"Preparation is every thing," remarked Skittles, aside.

This produced an explosion of laughter, in which Penman felt obliged to join, though he couldn't discover precisely "where the joke came in."

THE LANDING.

"You seem in excellent humor to-day," he continued. "If I was certain now that we should not be molested by Indians out in these savage wilds whither we are going, my mind would rest upon a bed of roses. By-the-by, I have a quantity of trinkets in my knapsack which I hope to trade with some of the red men hereabouts; also some tobacco and a handful of half dimes. I am told that the Indians are ignorant of the value of coin, and will take a dime for a dollar at any time. But why do you laugh, gentlemen? Do not my ideas tally with the facts?"

"Oh yes, brother Penman, exactly. Go on—in your own way. You'll be the death of us, let alone Injuns!" gasped old Tick, convulsively. "That outfit is proof against savages; they won't dare approach you. You are safe. But to speak seriously, Penman, I think you had better leave a portion of your traps behind, or really we shall have to procure another horse. The animals are not very stout. You see we have here all the blankets and public stores that we need."

"True. But supposing it impossible to procure these things in this part of the country, I took care to buy every thing in New York."

"So you thought we were all savages in this part of the world, eh? Well, it will do you good to come out here. It will enlarge your ideas. But here are the horses, so let's move."

Penman felt mortified and slightly irritated, but he said nothing, and quietly followed instructions.

The route of this party varied very little from that proposed by the other. It was their design to follow up the Mississippi River to St. Cloud, and then take a northwesterly course to the Red River of the North. Here a few days were to be spent in hunting buffalo. *Then*, if their spirits, strength, time, and ammunition held out, they were to proceed to Pembina, near the boundary of the British possessions, thence to Frazer's River, and across the Rocky Mountains to Behring's Straits, take the overland route to Hong-Kong, and return by the ocean route to the United States. This, however, was entirely optional with each. As Penman said:

> "'A true, devoted pilgrim is not weary
> To measure kingdoms with his feeble steps.'"

And there was no calculating how far they might go after they had once got fairly started.

After a trip of some thirty miles they reached St. Paul, the Mecca of the Northwest. We will not here attempt to describe Penman's astonish-

ment on beholding a place of so great size and such imposing appearance located in the midst of a wilderness. Of course it was incomprehensible to him; and had he not recalled to mind certain historical scraps of the medieval time, that told how nations dwelt in walled cities, etc., the marvelous problem would never have been solved to his satisfaction.

St. Paul possesses all the characteristics of thriving Western cities. It looms up in majestic proportions, like the huge frame-work of a leviathan, showing rather what is to be than that which now is. It is simply a giant in embryo. Here stately warehouses and fine blocks of brick and stone buildings, mountains of earth, and Alps of rock are strangely commingled. Palatial structures, plank sidewalks, with steps ascending and descending, hills, gullies, ravines, lagoons, and ridges, well-graded streets, gas-pipes, steamboats, temporary rickety shanties scattered here and there without system or regularity, like drift-wood left by a flood; kidded Beau Brummels and moccasined Winnebagoes, lager-beer and billiard saloons, with an admixture of tobacco-pipes, half dimes, city and country scrip, bankers and real estate brokers, and a general conglomeration of all things good, bad, and indifferent, form one grand and magnificent hotch-potch that outrivals the confusion of the diluvian period. Yet these very features are the best evidences of the wonderful progress and enterprise of the place. In truth, the camp-fires of the Indians have but just been extinguished, and the wheels of the dray rumble over the fresh trails of the bear and deer.

Penman looked and wondered, and passed his hand over his eyes like one blinded by the sun.

"Shades of the Magi!" he exclaimed. "But this surpasses all expectation. However, it can be accounted for in a great measure. Emigration tends directly to St. Paul. It is the only point in this part of the country that is known or heard of abroad. Every body comes here, stops here, and settles. It is a great *well*, and all the springs run into it."

Satisfied with this logical conclusion, he lapsed into a brown study. For a time his face wore a puzzled and rather a disappointed look, but presently brightened again.

"Whip up the nags!" he cried, cheerily. "Let us congratulate ourselves, gentlemen, that we are so soon to pass the Rubicon of civilization. I long to leave all traces of the white man behind, and breathe the freedom of the primitive wilderness. Above all, I especially desire to look upon the famed Falls of St. Anthony, which, I am told, includes the wildest and most romantic scenery of the West, rivaling even Niagara itself; though, I presume, from its proximity to St. Paul, some adventurous pioneers have already erected their rude cabins there."

"Yes; I believe there is also a saw-mill there," replied Tick, laconically.

"Wouldn't it be well to examine our weapons, in case of encountering a stray party of Indians?" inquired Wabash. The question was put to Tick, though particularly intended for Penman's ear.

"I reckon," was the reply.

Penman stole a hasty glance at his armor.

A few moments passed, and anon the buildings of a compactly-built city loomed up in the distance.

"What place is that?" asked Penman, with surprise.

"St. Anthony."

"Shades of the Magi!" was Penman's solemn exclamation.

Shortly afterward their vehicle was rumbling through the busy streets of the Manchester of the Far West. Granite buildings rose on either side, and hotels that rivaled the huge caravansaries of Eastern cities. Conspicuous among these is the "Winslow House," to whose capital bill of fare Mr. Penman did ample justice, and the anticipation of a further acquaintance with which, on his return, consoled him for more than one experience of short commons on his journey. Immense dams spanned the entire breadth of the river, and huge mills and manufactories mingled the hum of their heavy machinery with the roar of the foaming waters. The main street, bordering the river, presents quite a business aspect. To the westward is the University building—a large granite structure of imposing appearance. A beautiful wire suspension-bridge and a number of wooden ones connect the adjacent thriving city of Minneapolis. In point of beauty it is the queen city of the West; and the circumjacent scenery is unrivaled. Its lumber business is immense; no less than from 50,000,000 to 75,000,000 feet of lumber being annually manufactured. Some 200,000,000 feet of logs are rafted down every season.

Such was Penman's hasty review of the place; but he ventured few remarks.

"This is the *town*. Now let us see the *Falls*."

"Here they are before you!"

"These! is it possible? Why, I expected to listen to the music of the cataract; but, instead of that, I hear nothing but a dam roaring."

"It strikes me your remark is slightly profane," remarked Skittles.

"As you like it," rejoined Penman, with some show of vexation. "I confess I am disappointed. Instead of Nature, here is nothing but Art. There is nothing grand, romantic, beautiful, nor picturesque here—nothing but everlasting saw-logs, saw-mills, and mill-dams. If this ever was what it has been described, it can now never be redeemed. It is all artificial. The romance and beauty of St. Anthony is gone forever! I confess I am disappointed."

"Nature must succumb to the triumphant march of Improvement," suggested Tick.

"Humph!" growled Penman.

"Your mistake is a common one," remarked Skittles, fully sympathizing with Penman's feelings. Skittles was a true lover of Nature, and for three years had jealously watched the rapid innovations of the pioneer settler, yet not without some satisfaction, since the value of his lands

were thus enhanced a hundredfold. "Eastern people," he said, "are apt to get the impression that this part of the country is almost a wilderness, hardly yet redeemed. How few, indeed, can have any conception of the rapidity with which it is being settled up! Civilization pursues one as a remorseful conscience does a fugitive criminal. He can not escape from it. The traveler starts from the East with the design of reaching some place where the hand of civilization has not left its imprint—where Nature revels in all its primitive grandeur of trackless forest and unbroken prairie. Steam lends him her aid, and speeds him two thousand miles on his way, but he is still haunted by the everlasting presence of man's labor. He mounts fleet horses, and hundreds of miles are added to his journey; but civilization is still with him. The voice of the steam-engine is heard in the bosom of the forest, and the smoke of the settler's cabin curls from the lap of the far-off prairie. Ah! Penman, this is a great country! If any New Yorker, or any denizen of the cramped states of Europe, is inclined to doubt, let him traverse its broad expanse, and he will find that the wild beast does not make his lair in every timber tract, nor the red Indian claim its sovereignty undisputed."

ON THE PRAIRIE.

"Well done, orator and poet!" shouted Wabash. "Next, music!" So saying, he took down an old fiddle from its accustomed place and perseveringly punished the "Arkansaw Traveler." This had the effect to enliven the entire party, who had unconsciously lapsed into a sentimental fever. It encouraged the plodding horses, started up the song of the bobolink and redbreast by the wayside, astonished the solemn-looking kine, and loosed the loud tongue of Sancho the dog, who had until now been silently trotting along in the shade of the wagon; the passers-by stared; and Sancho bounded on in advance, barking his delight. Such was the power of music.

Wabash was an eccentric gentleman from Indiana, born and bred on the Wabash bottom, and supposed to be proof against mosquitoes and fever and ague. He had an inexhaustible fund of humor and narrative; and in relating his numerous stories was wont to take his cue from the preceding narrator with the never-failing preface of "That reminds me of an incident that happened down on the Wabash." Hence his sobriquet. Skittles, Penman, and Tick have already been noticed. These four composed the party.

This day's journey was altogether barren of adventure. The route, for the most part, traversed an open prairie, though at times leading through beautiful groves of oak, that nestled here and there like island gems in a peaceful sea; and occasionally winding along the wooded banks of the silent Mississippi, which, ever and anon, greeted the eye with sun-lit smiles, as it danced and sparkled through the trees. These were the chief features of the scenery. It might have been monotonous but for its exceeding beauty. Every thing wore the freshness, the vigor, the bloom of a perennial spring. Above was that deep blue sky—that *Minnesota* sky—whose cerulean depths the eye seemed almost to fathom, yet only to realize that they were illimitable; while on every side the verdure of trees and prairie shone with a living green that almost dazzled with its brightness—such a green as those may never see whose limit of vision includes no more than the dusty leaves of nut-brown hue that starve in city parks and thoroughfares. But brighter than all was the glory of the prairie flowers. Far away, as far as the eye could reach, they bloomed in every variety of shape and color, like one boundless garden of rare exotics, filling the air with their delightful perfume. Plants that are nurtured by the careful attention of the Eastern florist here grew wild in rich profusion. Roses of every hue, tulips, lilies, sweet-scented verbenas, pinks, sweet-williams, hyacinths, and lady-slippers, mingled their sweet breath with that of many nameless varieties. To crush them beneath the foot seemed sacrilege; yet a prairie of flowers might have been plucked from among them with no perceptible diminution of their number. How many, many flowers were here

"—— born to blush unseen,
And waste their sweetness on the desert air!"

Were they at the disposal of a city florist, they would have proved an inexhaustible mine of wealth.

Penman was enraptured. This was indeed a new world to him.

"Beautiful, exceedingly!" he exclaimed. "Were it not for these fenced fields of grain, these farms and hamlets that we meet occasionally, I should almost fancy I trod the delectable hunting-ground of the Indian's heaven."

The soil here was not remarkably fertile, being sandy; and though all the land had been taken up in sections, halves, and quarters, still only a small part had been improved or occupied by the settler—most of it, indeed, being held by

speculators, while those farmers who aimed to grow rich on the fat of the land had wisely gone still farther west, to the more fertile prairies beyond the Mississippi. Hence, with the exception of half a dozen large villages, human habitations were met only at times, and often a distance of eight or ten miles was passed without seeing a house or cabin; while, at frequent intervals along the road side, the expired or still smoking embers of the camp-fires of the emigrant or tourist marked the spot where they had rested for the night. It was hard to realize that but *four* years had passed since this very land was the exclusive property of the red man, but now transferred to his white brother by sale and treaty. These smiling, peaceful prairies have been the silent witnesses of many a tragic deed of blood, and the celebration of drunken, barbarous orgies. The savage Chippewas have had many a scalp-dance here; and the blood of white man and Indian has mottled the turf. Just yonder is the ruin of an old French trading-post, standing alone in its desolation, a monument of man's avarice and iniquity. Ten years ago that Frenchman let out the evil spirits from a barrel of whisky, and these entering into the savages assembled there, did tear and rend them like the demons of the ancient time. Pandemonium was then let loose. They howled and yelled, and cut themselves with knives; and in the midst of their bacchanalian orgies, when their insane revelry was at its height, they seized the unfortunate but imprudent trader, tore off his scalp, and danced like fiends around the burning timbers of his already plundered house. Thus he paid the penalty of his crime.

Late in the afternoon — that is, about five o'clock—after traversing for a considerable time a treeless prairie of greater extent than any they had before crossed, our adventurers descried the welcome outline of a belt of timber on the horizon before them.

"That's Big Lake," said Tick. "We will camp there to-night. We should gain nothing by going a mile or two farther, and a more suitable and delightful spot is not to be found on the route. Besides, it is not best to press the horses too hard on the start."

"If I mistake not," said Skittles, "it is a famous lake for bass. If we are fortunate enough to find old Brown's canoe there the chances are that we shall feast to-night."

The lake did not belie Tick's representations. It was one of those enchanting sheets of water that abound in Minnesota, and for which that State is so remarkable. It was not one of ordinary lily-padded lagoons, overrun with tall, rank rushes that spire up from depths of slimy mud, in whose sluggish waters lazy fish float motionless the livelong day, and on whose weedy shores great frogs and turtles sun themselves "from morn till dewy eve;" but its fount was clear as crystal, like a diamond of the first water set in the emerald green of its wooded banks; its waves rippled musically on pebbly shores that were rich with variegated agates and brilliant cornelians, and almost laved the green sward that carpeted its gently sloping banks. Such was Big Lake, though most inappropriately named, unless the signification of the word "big" implied something *remarkable*. Its diameter is about two miles.

With assiduity did Tick and Wabash apply themselves to the task of making preparations for the night, while Penman stood by, with hands in his pockets, curiously eying their movements, but entirely at a loss how to lend a helping hand, until aroused by the sharp voice of Tick, who rather peremptorily remarked that "those who expected to eat supper must expect to help get it."

Forthwith, Penman being duly instructed, proceeded to gather dry fuel for the camp-fire, while his companions were no less busy. The horses, speedily relieved of their harnesses, were permitted to graze *ad libitum*, the tea-kettle came forth from its covert, and promiscuous biscuit, pork, salt, pepper, cheese, and crackers from their hiding-places, blankets and knapsacks were brought out, and fresh water dipped from the lake, while Sancho, for lack of more profitable employment, snapped his trap-like jaws at every tormenting fly *sans souci*.

Meanwhile, during these hasty preparations for supper, Skittles had stolen away unobserved, discovered the wished-for canoe, and was now seen in the middle of the lake beating the air and the water with a choice bit of pork that he had fastened to his hook in lieu of a better bait, evidently with much profit to himself and detriment to the fish. This sight was too much for Penman. He had one of Conroy's best 200 feet trolling lines, with spoon attached, that had never yet been proved; and, eager to test its merit, he ran down to a neighboring point of land, hailed his comrade, and was magnanimously received on board. The spoon worked to a charm, and in half an hour fish enough were caught to surfeit a score of appetites more ravenous than theirs. The bass is a strong fish, and the sport of capturing him is most exciting. He strikes boldly, and pulls with a will. You feel that first tug run through every nerve like an electric thrill. Between you and the fish the sensation is reciprocal. As soon as he feels himself hooked his efforts to free himself are most extraordinary, and require much skill to prevent. Anon you see his huge nose plowing the water one hundred feet distant as he allows himself to be drawn rapidly toward you; then suddenly he rallies and throws his body clear out of the water, or betimes darts away with the line like a runaway steed with the bits in his teeth. But you humor him according to his notions, giving him the line when necessary, though keeping his nose always toward you, and directly you have the ineffable satisfaction of lifting a huge twelve-pounder over the side of your canoe, and seeing him flounder on the bottom. He is fine game for a sportsman.

Hearty was the welcome the fishermen received on their return, and in a twinkling one

of the fish, cut up in sections, was frizzling and sputtering in melted pork scraps, the sweet savor thereof ascending most gratefully to the nostrils of all. Eight eyes regarded wistfully that magic ring of iron—that frying pan, and Sancho crawled still nearer to the side of the hungry travelers, fidgeting and whining his impatience.

When all was ready none needed a second invitation to partake of the appetizing viands. Huge mouthfuls of fish and bread were hastily washed to place by copious draughts of coffee, and an incredible amount of ham and biscuit was quickly disposed of with an appetite truly startling to dyspeptics and users of "pepsin." Long was the feast protracted, and when at length the most voracious of them all declared himself satisfied, and had wiped his well-used knife, the stars were shining brightly in the clear blue sky, and a veteran owl had commenced his nightly hoots from the top of an adjacent tree. Then once more the flickering embers of the fire were kindled into a cheerful blaze (for the evening air was cool). Wabash took down his fiddle and the others their tobacco-pipes, and, while he vigorously executed the Virginia reel, they devoted themselves to "Virginia twist," until at length, under the soothing influence of musical airs and vapory smoke, all yielded to the demands of the drowsy god, and resignedly committed their wearied bodies to his care.

At midnight the moon got up—that jolly old half-moon—and laughed at her reflection down in the sparkling lake; and with her coming came spectral figures, shapes, and shadows, creeping out from every copse and thicket. The hooting owl winged his noiseless flight to some distant tree, and the gentle breeze, that had rustled the leaves and rippled the lake, now died away, and all was still. Naught was heard in the camp save the deep breathing of the slumberers and the munching of the horses near at hand. Wabash lay snugly enveloped in his blanket, with his head comfortably pillowed upon a bag of oats, but he slept uneasily. He had eaten too bountifully of bass, and bad dreams distressed him. His fancy conjured up visions of wild beasts and savages, and burnings and tortures, and once or twice he started with the belief that blood-thirsty demons approached him with stealthy steps to take his life. Had he fairly awakened, the spectre of his dream would have assumed a more tangible shape; for one of the horses had scented

AN ATTACK OF NIGHTMARE.

the oats in the bag, and, strangely venturesome, cautiously approached until the coveted prize was directly under his nose. At first he pricked his ears suspiciously, then smelled, snuffed, and at last, emboldened, seized it with his teeth, taking up at the same mouthful a large bunch of the sleeper's hair. Meanwhile Wabash's dream ran in this wise: he heard the savage at his side, felt his hot breath upon his cheek, his heavy hand upon his breast, felt his fingers twisting his hair, but he could not move a muscle; quickly the sharp knife encircled his head; he perspired in agony, made one desperate effort, and with the jerk that tore his devoted scalp from the skull he started up with a cry more fierce than an Indian war-whoop or a city milkman's yell. With a snort of alarm the horse wheeled about, and Sancho, per force of habit, barked most lustily. The noise and confusion and the tramp of rapid feet instantly aroused the heaviest of the sleepers.

"Great Heavens! what's that?" shrieked Skittles, springing to his feet, and glaring about him in dismay.

"A panther! Indians! we're attacked!" yelled Penman, clearing his blanket at a jump, with a rifle in one hand and pistol in the other.

"'Tacked be dogged!" growled old Tick, raising himself on one elbow, and reconnoitering the premises at a glance. "Attack of the *nightmare* more like. Why can't you keep quiet, and let a fellow sleep?" and he lay down again and rolled himself up in his blanket.

It was half-suspected that he had been a silent witness of the whole procedure, for his blanket now twitched spasmodically, and a suppressed chuckle was heard from its folds.

Meanwhile, Wabash having assured himself of the safety of his scalp, and fully recovered the use of his senses, now felt extremely foolish. Having solved the mystery to his own satisfaction, he would have composed himself to sleep once more, could he have resisted the temptation of relieving himself of the burden of the joke by throwing it upon Skittles and Penman, who had not yet recovered from their trepidation.

"That *was* a big one!" said he.

"What? what was it?" said both, in a breath.

"Why, a striped wolf. Didn't you see the animal?" That was the only way to get rid of him—yell like murder. They ain't afraid of fire nor powder, and it ain't no use to shoot at 'em, for their hide is as thick as a rhinoceros's."

"Gracious! what a narrow escape! We must stand guard after this. That dog is no good at all, or he would have aroused us—confound him."

"Oh, pshaw! It's nothing to an adventure I had down on the Wabash last summer. A party of us—"

"Oh, lie down and go to sleep," again growled Tick, impatiently. "What's the use of making all this fuss?"

"Humph! we'll have to *go* to sleep, for it won't come to us," rejoined Skittles. "It's no use trying to sleep any more to-night."

However, all lay down again, and the camp resumed its usual quiet; but it continued only for a moment. With the absence of the wind down came the mosquitoes in countless myriads, ravenous for blood, and from that moment all idea of sleep was at an end. It was their first visitation, and the party had not thought it necessary to fit up their mosquito nets. Still came the mosquitoes, in double phalanxes, "thicker, faster, and more of them," and hovered and floated above. They hummed and sung and poised their trenchant blades, and settled down and bit and sucked and sung. In vain the victims fought and slapped and covered their heads. Their tormentors' sharp bills penetrated all coverings—boots even, as Wabash affirmed. But Wabash played the Stoic and endured their attacks unmoved, to the wonder and admiration of Skittles and Penman, though with the loss of an immense amount of blood.

"Confound the varmints—there's no end to 'em!" Penman swore.

"Pooh! never mind 'em. I don't feel 'em at all," said Wabash.

"That's no consolation to us. Confound 'em, there's two more of the wretches dead. I believe I have killed a million, and I can't see as they have diminished at all."

"Oh! let 'em bite. You must get used to 'em, as I am," said Wabash, again. "If you lived on the Wabash bottom, you might see mosquitoes worth speaking of. Why, I have known 'em suck a man clean dry in five minutes."

Old Tick had remained silent until now. He had heroically endured their assaults; but now his Stoicism had been taxed to the utmost.

"Come, boys," he said, "it's no use. We can't stand this any longer. We shall be eaten alive if we remain. It is now three o'clock—only an hour and a half to daylight. I think we had better hitch up the horses. That will take us half an hour. We can then make ten or fifteen miles by seven o'clock, get breakfast, push on again for two or three hours, and then lie by during the heat of the day."

All readily agreed to this proposition; and the party soon after took their flight out of Egypt, pursued by vindictive hosts. About eight o'clock in the morning they passed a large number of men busily throwing up an embankment of earth.

"What's that?—a fort?" asked Penman.

"No; they are building a railroad. We intend to travel over this road by steam in the course of a year or two."

"It strikes me that you Minnesota people are more energetic than wise."

"Folks differ as to that. But let me tell you, if you don't know it, that we are now building *four* railroads in this State."

"You are a go-ahead people—got up on the high-pressure principle. You will 'bust your biler!'"

"In five years we shall be a great State," pursued Tick.

"Ah! yes; the mushroom grows in a day and dies in an hour," rejoined Penman.

"Get up, there!" shouted the other, and cracked his whip at the horses.

The party reached St. Cloud that evening—distance, seventy-five miles from St. Paul. St. Cloud is a town of only three years' growth; and though it has a couple of fine hotels, two or three churches, a large number of stores, and is tastefully laid out, it is less remarkable for its size, its rapid progress, and the good quality of its components, than for its natural beauties and picturesque location. It stands on a high wooded bluff, at a bend of the Mississippi, and is literally embosomed in trees. Mrs. Swisshelm, of newspaper and printing-press notoriety, publishes a weekly paper here, which she conducts with ability.

At this place the number of the party was increased to seven. Of the additional *dramatis personæ* may be mentioned, first, one Major Tewksbury, an English sportsman, anxious to test the accuracy of his rifle upon the buffalo and other wild game of the Western prairies, as well as to look after a recent purchase of city lots that he had made in the city of "Chippewa"—a thriving place on the Upper Mississippi. In all his predilections, tastes, habits, and notions he was thoroughly English. He wore a shooting-jacket of the most fashionable cut, spotless linen shirts and colors, of which he had an indefinite supply; gloves of kid or buckskin, immense rubber boots, and a sort of a small military cap, which he thought especially becoming. In his speech and action he was extremely precise, and was inclined to look upon the free-and-easy manner of Western men as decidedly vulgar. He despised the Yankees; and was as profuse in his disparagement of every thing American as he was lavish in his praise of every thing English. The only wonder was that he should have ever consented to leave his native land to make his home in so disreputable a country; and, more than all, to have invested his money in it. He was, however, a person of many good qualities, and proved agreeable company throughout the expedition.

Dr. Quackenboss, a short, fat, good-natured little man, from Alabama, with a rubicund face and "jolly red nose," and a cranium considerably bald, was an honest disciple of Æsculapius—honest, we say; for he had on numerous occasions swallowed his own medicaments! But this unusual temerity, together with hot rolls at breakfast and tea, had so impaired the organism of his stomach that he was now fain to attest the efficacy of prairie air and horseback jolts to assist his digestion. To this end he had purchased a scrubby Indian pony, bob-tailed and cross-grained (oats swallowed askew), and was now prepared to straddle his prescription, and to endure pony's jerking gait, with a grace becoming the most patient of patients. There was nothing peculiar about his dress, if we except his hat, an immense Mexican *sombrero*, which he declared would answer the treble purpose of umbrella, sun-shade, and shanty.

Addition No. 3 was no less a person than Captain Kinks, who was to act in the capacity of chaperon and guide to the party for the rest of the journey, the greater part of which was to be made through an unsettled and little-traveled country. He was a gentleman of considerable

DOCTOR QUACKENBOSS.

intelligence, and had traversed this route on many previous occasions. He subsequently proved extremely useful in rescuing the party from watery graves, digging them out of sloughs, bridging bottomless quagmires, etc., etc.

The next morning, at the hour for starting, Penman astonished the company by making his appearance with his head closely shaven. The razor had done its work thoroughly, and not a vestige of last night's luxuriant head of hair remained. He approached majestically, and, removing his hat, bowed and regarded his friends with the perfect nonchalance of a dandified "croppy" in a public assembly—not at all disconcerted. A spontaneous burst of uproarious laughter greeted him.

"Wagh! that's some, anyhow!" yelled Tick.

"What a subject for a phrenologist!" exclaimed the Doctor, carefully manipulating his cranium.

"'Ere's to all the 'air off your 'ed!" cried the Englishman, tossing off an imaginary bumper.

"Ain't he a beauty, though!" said Wabash. "He reminds me of a chap down on the Wabash!"

"What *can* have happened, my dear friend?" interrupted Skittles, with an air of concern. "You look as though you had been scalped!"

"Ay, there's the rub! To be or not to be scalped? that's the question," replied Penman, with spirit. "For myself, I prefer the latter, even though it cost me my hair."

"Ah! I see. So you really took this precaution to prevent your being scalped by Indians?"

"I did, indeed. I've no notion of leaving my top-knot to ornament any boasting red-skin's wigwam. Now, you see, in case we are worsted in an encounter with any hostile savages, it will be impossible for them to scalp me."

"It's not so bad an idea, after all," said the Doctor. "I think *I* need have no apprehension on that score," he added, rubbing his own bare pate with evident satisfaction. "But really, my friend, I am sorry for you."

"And I," added Skittles. "What a desecration of Nature's endowments! What a waste of beauty! Gentlemen, let us weep for Adonis!"

"Better weep for Adonis living than for a dead Hector," rejoined Penman. "I have information from reliable persons that the Indians are very troublesome in some parts of the State whither we are going; and I think you may find that proper precautions are not to be sneered at."

"All aboard for Red River!" now shouted Captain Kinks, from the wagon-box, and, cracking his whip, the party drove off with colors flying, amidst the cheers of those who had assembled to see them off; the Doctor gallantly bringing up the rear. Some two miles from the town they struck the old Red River trail, which they followed. This is the road made by the Pembina carts on their annual visits to St. Paul, whither they convey valuable freights of furs and buffalo robes, which they barter for provisions, merchandise, and necessaries of all descriptions. The present month of July was the time when the trains invariably made their appearance, and our party looked forward with eager expectation and curiosity to the day when they should meet them. Indeed, a small advance-party had already arrived at St. Paul, and the rest were known to be not more than a week's journey behind.

Pembina, as is known, is the northernmost settlement of the United States, being but five miles from the boundary of British America. It contains a population of six or seven hundred souls, and was settled originally by British subjects, who supposed they had located on British soil. The greater part of its inhabitants are half-breeds, who gain a livelihood by hunting and farming. Their dialect is as various as their origin; being principally Chippewa and bad French, with an admixture of Cree, English, and Gaelic. Pembina is four hundred and sixty miles from St. Paul, and this is (or was) its nearest market. But now that St. Cloud has come to be a town of considerable size, it naturally aspires to the hope that it may, at no distant day, secure this valuable trade of the Red River people, since it can not but be an object to them to shorten their long and tedious journey a distance of seventy-five miles. It seems strange to think of a people traveling twenty or thirty days to do their shopping; but how much more wonderful must it seem to these hyperboreans themselves, during each successive year, to witness the rapid advances of civilization, and to find thriving towns where all was an unsettled region the year before!

The Pembina fur traffic dates back only to the year 1844, when it received its first inception at the hands of Norman W. Kittson, the present Mayor of St. Paul. For three years he battled with the Hudson's Bay monopoly with little promise of success, suffering continued reverses and losses; but from the year 1847 the stream of trade began to turn toward the Mississippi Valley, and to break over the artificial barriers imposed by the Company. In 1850 the proceeds of furs collected amounted to $10,000, and in 1857 it had increased to $180,000. In 1844 the number of carts employed was only six; in 1858, six hundred; and it is an interesting fact to notice that four hundred of these came from the British territory. There is hardly a doubt that, with the termination of the sway of the Hudson's Bay Company, the whole of the trade heretofore forced through the difficult channel of Nelson's River will now find its more natural outlet in this direction. Hence there now seems more necessity than ever for a military post on the Red River; and it is to be hoped that this necessity will be supplied by the fort now building at Graham's Point.

The Red River trail, which our party traveled, here lay over open prairie, without shade or protection from the heat of the sun, which was oppressive. But the Captain had thoughtfully

erected a cotton awning over the wagon, and this most gratefully tempered the heat to Penman's shorn head, and shaded the thin-skinned Englishman, Skittles, and Tick. It was only large enough for four. The Captain and Wabash occupied the driver's seat.

Three miles from St. Cloud they crossed the Sauk River on a bridge, and after a ride of four miles over prairie and oak openings, considerably cultivated, reached the settlement of St. Joseph. (Gracious! what a catalogue of saints! Minnesota abounds in that staple.) Here the Doctor's saddle began to be uncomfortable, and he showed signs of uneasiness, but he still persevered, and hitched along, with pony's jerking gait, puffing and blowing, his face red with exercise, and his dumpy legs pressed closely to bobtail's sides. This caused the party much merriment.

"I say, Doc, do you feel better now?" and "Doc, does your digestion improve?" and "Is he easy under the saddle, Doc?" and a multitude of such bantering questions were showered upon him, successively, until his proverbially good temper became slightly ruffled, and his fiery red face grew still redder. At last they reached St. Joseph, and he slid heavily from the back of his animal, and seated himself upon a convenient bench.

"What's fun to you, gentlemen, may be the death of me," he said, wiping the perspiration from his forehead. "Whew! but this beats tepid baths and mustard poultices! Well! kill or cure is *my* rule of practice."

"More frequently the former, I suspect," remarked Skittles. "But really, Doc, I hope you will make an exception in your own favor."

"Thanks for your good wishes, but confound your nicknames!" returned Quackenboss, with a show of warmth. "I detest that word 'Doc.' It isn't more than half civil, either, to address a member of the profession by that title. You Yankees have an inveterate fashion of abbreviating all names, as if you were afraid of wasting breath, or something of that sort. Now, some of my patients used to take the same liberty, and called me 'Quack' for short, and my office-boy called me 'Boss' for ditto; and now you young scape-graces go so far as even to *dock* my title, as somebody has this horse of mine, by cutting off its termination!"

This amusing repartee elicited a round of cheers from the company.

"The—ah—Doctor is quite right," said Major Tewksbury, pompously. "His gentle rebuke is—ah—well-timed. Pardon me, gentlemen, but I think there is no country where so little respect is shown to age, rank, or station as in America. In my opinion, it indicates a boorish character and bad breeding; in fact, I may say—ah—a low rank in the scale of civilization."

"I hope *you* don't feel hurt by our rudeness, or degraded by our companionship," retorted Wabash, with sarcastic manner, and instantly running up the American flag. "Now, down on the Wabash we are different from the Yankees. *We* give every old scoundrel a title whether he has a right to it or not. As a general thing, the more titles the worse man. Every body there is captain, colonel, or major."

"Do you mean personality, Sir?" responded the English major, bristling up.

"Not in the least, Mr. Tewksbury. I supposed you came honestly by your title."

"What, Sir!" fiercely. "Do you mean to insinuate that I—"

"Stop, now!" interposed the Doctor. Cease this dispute, and don't spill blood here. Remember I haven't my surgical instruments with me. Besides, you know the Atlantic cable now unites England and America in one eternal bond of fratricidal love!" (The Doctor sometimes twisted his words.)

At this moment Captain Kinks appeared with a huge pitcher of beer.

"Here, gentlemen!" he said; "if you *will* froth at the mouth, do it in a rational way. Here are glasses. You can now draw a bead on each other without possibility of personal injury."

"Your health, comrades," nodded the Doctor, as he drank. "May your last *bier* be as agreeable as this."

This sepulchral joke restored good humor at once; and bidding adieu to St. Joseph, they proceeded gayly on their way. Tick kindly offered to bestride the Doctor's horse, and the Doctor took his place in the wagon. They had traveled but a mile or two, when a dense yellowish cloud was seen on the distant prairie, and apparently moving slowly toward them.

"Hurrah! here come the carts!" shouted Kinks. "It must be them, and no mistake."

Gradually the cloud increased in size, and spread away to the southward like the tail of a comet, and soon a single ox-cart could be distinguished at the head of the column, as if just emerging from the thick pall of dust. As the train approached, the outlines of other carts, filing in long procession, could be defined; and soon the foremost came up. Our travelers halted to gaze and wonder at the novel spectacle. There were some hundred and fifty carts in all—rude, wooden vehicles, put together without a particle of iron—not excepting tires and linchpins—and each drawn by a single ox, harnessed in shafts with gearing of strips of raw hide. The appearance of the drivers accompanying was not less grotesque. One hardly knew whether to be most surprised at the odd uniformity of their costume of coarse blue cloth, richly ornate with brass buttons, their showy belts of red flannel, and their small jaunty caps, or at the remarkable diversity of their figures and complexions, including, as it did, the fair skin and light-brown curls of the Saxon, and the swarthy hue and straight black hair of the Indian, with every intermediate shade that amalgamation could produce. Each driver had the charge of five or six carts, the animals being led by a strap tied to the cart next in front—so that, while he flourished his whip over the back of the leader, the rest were compelled to follow, *nolens volens*. In some cases these straps

had chafed the roots of the horns until the flesh was raw and bloody, and this added much to the woe-begone appearance of the wretched animals. Each cart was heavily loaded with furs, which were covered with a buffalo robe spread over the top.

As the train dragged slowly by, each driver raised his cap with a respectful "*Bonjour!*" but on every face were traced the lines of care. The effects of their long and toilsome journey were visible alike on man and beast. No cheery "wo-ha!" was heard from the men, but they walked wearily and in silence beside their jaded and over-tasked animals, or lay stretched at full length upon the tops of their loads, sleeping or half awake. The oxen, gaunt and lean, as if they had long been strangers to good pasturage, with protruding eyes and drooling lips, toiled painfully with their burdens; while the heavy wheels, that had never known grease, kept up an incessant creaking and groaning, as if speaking for the dumb oxen their unspeakable woes. A thick coat of dust covered every thing, and black mud on the wheels and bellies of the cattle gave good evidence of the deep sloughs they had crossed on their route. In the middle of the train was a cart of more pretensions than the rest, drawn by an Indian pony and covered with canvas, containing the factors of the Fur Company. They were evidently pure Anglo-Saxons, but in their general appearance were rougher, if any thing, than their half-breed teamsters. A mattress spread upon the bottom of the vehicle, and a suspicious black bottle at their side, showed that they were not indifferent to creature comforts. As they drove by, one of them, with a most remarkable "Bowery twang," sung out:

"Ef yer want ter see the finest carriage in the train, here yer are!"

At length the last cart dragged by, and our travelers once more resumed their journey, highly interested in the rare sight they had been permitted to witness.

"That is a spectacle well worth seeing," said the Doctor. "You don't see such things on the other side of the Atlantic, my friend?" addressing the Englishman.

"Ah—very ordinary. We have much finer carriages in England."

Crossing Jacob's Prairie, which is five miles in length, flanked on both sides with timber, and containing many fields of grain, they arrived at Cold Spring, a small hamlet, early in the afternoon. Here they stopped to dine and bait the horses. Provisions were quickly produced and spread upon the grass, and, seating themselves upon the ground, the party proceeded to dispatch their meal in true backwoods style. Major Tewksbury discovered a small mound of earth, which offering unusual facilities for a comfortable seat, he at once appropriated for himself; but he had hardly got fairly to work with knife and fork before he suddenly sprang to his feet as if he had received an electric shock, and commenced a series of contortions and evolutions not laid down in military tactics. Biscuit and bacon were dashed furiously to the ground, and knife, fork, and tin plate went flying in different directions. He stamped, kicked, and swore, slapped his legs and thighs, scratched his sides and back, and hitched his pants and vest. Then off went one boot, then the other, and then his pants followed. What could have happened? The cause was plain. He had seated himself on an ant-hill, and now black ants of the largest size were running over his body in every direc-

THE MAJOR IN DISTRESS.

tion! There was no eating after this. The effect was magical. Every man was roaring, and screeching, and rolling on the ground, until their sides ached with laughter.

"What *can* be the matter with Major?" gasped old Tick, as soon as he could recover his breath. "Is the man drunk or insane? Oh, Major, what is it?"

"Ugh! ugh!" yelled Tewksbury, still pirouetting, and executing the most inimitable *pas de deux*. "I'm on fire! I'm bitten to death!"

"Oh, it's only an attack of the shakes," said Wabash, provokingly, not forgetting his old grudge. "I've seen plenty of 'em on the Wabash bottom."

"Pshaw! he's going through the Shanghai drill," said Kinks.

"No; I have it. It's the St. Vitus's dance," said the Doctor. "I've treated many such cases. Major, I must write you a prescription immediately. You'll never recover unless you take care of yourself at once."

Forthwith he pulled out pencil and paper, and drew up the following prescription:

"℞ Aqua vitæ.....2ʒ
Lignum vitæ.....1ʒ
Pura aqua.....1ʒ
Sal Saltus.....½ʒ
Vito Vite.....1ʒ
"Shake and mix."

"There," said he; "that will help you."

But, in the mean time, the Major had disappeared, and was now seen behind the wagon changing his clothes.

A ride of five miles farther brought them to the small settlement of Richmond, on the Sauk River. Thus far their journey had been easy, and without bodily discomforts; but here they left the Red River trail, and followed a blind track on the north side of the Sauk valley—the mark of the newly-surveyed State road from St. Cloud to Breckinridge. Beyond this all was doubt and uncertainty; and henceforth the party would have to intrust themselves solely to the knowledge and skill of Captain Kinks to pilot them safely to their destination. On receiving this information Mr. Penman was in ecstasies. He rejoiced in the belief that he had at last reached the limit of civilization, and was soon likely to get to the celebrated "jumping-off place" in the region of sundown. All thought of danger from savages was banished by the joy he anticipated in beholding and mingling with the native children of the forest.

"I am impatient," he said, "for the hour to come when I can grasp the hand of some aged chieftain, and gazing on his inspired brow, hear him talk of the Spirit Land and the far-off hunting grounds of his forefathers. I long to listen to the sweet and gentle lullaby of the young squaw, as she soothes her babe to rest, amidst the warbling of mocking-birds and the roundelays of the whip-poor-will, as they blend their notes with hers. I long to realize my many dreams of picturesque wigwams amidst flowery groves, of light birchen canoes bounding over foaming breakers and dashing rapids, the wild chase, and the mysterious ceremonies of the mystic "medicine man;" to roam in peaceful groves, where resounds the love-song of the young brave to the blushing and innocent maiden; to hear the shrill war-whoop, and the wild shouts of victorious warriors over the scalps of countless enemies; to—hum—ah."

Here Penman's flight of fancy carried him so high that he was in danger of being lost forever.

"Hear war-whoops, eh?" said Kinks, with a provoking grin. "If what you heard at St. Cloud is correct, about the Indians being hostile, your last wish may soon be gratified."

Penman involuntarily placed his hand on his poll, but made no reply. He was soon after detected putting fresh caps on his revolver.

The Captain had heard rumors before he started of renewed hostilities between the Sioux and the Chippewas, as well as that some straggling war-parties had levied on the cattle and provisions of some of the settlers in the Sauk valley, but he gave so little credence to them that he thought them not worth repeating. However, he had privately determined to make inquiries of a friend who lived some twenty miles beyond, and whose name had been mentioned as one of those who had received attentions from the Indians. This man's house he knew lay directly on the trail the Indians followed in passing from their own to the enemy's country.

The scenery of the Sauk valley is beautiful and varied. Lakes and streams are met successively, and pleasant groves of oak diversify the undulating prairie which stretches away in graceful curves, till in the dim distance it meets the horizon, while the serpentine course of the river is plainly traced by the dense belts of oak and willow that skirt its banks. It is one of the most favored spots of earth, and Nature has here surpassed the perfection of art in laying out and adorning her lawns and parks and groves and terraces. As the party advances, a gigantic crane starts up from the river with its shrill, harsh voice, and flapping his huge wings sails lazily away to some place of fancied security; the prairie chicken rises with its windy whir, and wild pigeons flutter in the oaks and willows, while on a distant ridge a herd of deer are quietly feeding. Anon a solitary buck darts out from a willow copse on the opposite bank, and tossing his head aloft, bounds gracefully over the prairie. Penman seizes his rifle with nervous haste and fires. The bullet glances over the water, and the deer gallops away unhurt. All laugh, and Penman, much mortified, reloads in silence. Anon a solitary log-house is passed, surrounded with cultivated fields, or a rickety shanty marking some unoccupied claim. And thus the passing hours are whiled away, the country growing more beautiful at every step, and exciting frequent exclamations of delight. At length the setting sun sinks in the western sky, and with the approach of evening the mosquitoes, those dreaded pests and the only curse of this western paradise, begin to swarm in countless myriads, coming up

from the river in clouds, and filling the air with their ceaseless hum. It is time to camp, but what a prospect for comfort! for quiet sleep! It is true the air is still and balmy, the rich sward soft as velvet, the sky radiant with mellow hues, and softly blending shadows are floating over the prairie, all inviting rest, a quiet siesta, and a calm repose; but what a mockery of bliss! what an aggravation! To pause here, allured by these delights, is but to consign one's self to voluntary martyrdom, to endure exquisite tortures, to be consumed by minutest particles. But this is low ground. Yonder knoll, away from the river, where the evening breeze has full scope, may afford some relief, and the horses' heads are turned thitherward.

On the way an odd-looking individual is observed near by, seated on a stump, vigorously beating the air with both hands, and apparently going through a series of gymnastic exercises.

"Halloa!" shouted Tick. "I say, stranger, are there many mosquitoes about here!"

"Well, no — not very — thick about here, though there's a—good many—over—yonder!" was the broken reply, each pause being filled up with spasmodic blows and slaps at what seemed to be invisible objects.

"We'll go on a piece," said Kinks. But matters did not improve. They accordingly camped, resignedly submitting to the force of circumstances. The duties of the hour were performed with astonishing alacrity, for continued and rapid motion was the only salvation of each individual. Even the indolent and aristocratic Englishman forgot his high-bred notions, and applied himself with becoming industry to collecting materials for making "smudges," regardless of his kid gloves and spotless linen. The horses, too, hungry though they were, cropped but hasty mouthfuls of the tempting and luxuriant grass, and after rolling upon the earth, and rubbing their sides against trees and bushes, finally parted their halters, and galloped away over the prairie to rid themselves of their winged tormentors. This made extra work for somebody, and Skittles, who volunteered to go out and bring them back had the misfortune to get mired in a slough, where he was so bitten by mosquitoes as hardly to be recognizable the next morning. His face and hands were greatly blotched and swollen, and bore the appearance of one having the small-pox. Indeed, so greatly did he suffer that it was several days before he fully recovered. If Skittles's credulity had ever before been put to the test by the mosquito stories of the Western backwoodsmen, he was now prepared to believe every thing. As to their numbers and ferocity there can be no exaggeration. It is easy to imagine that a person exposed, even for a short time, to their attacks, without covering, would not long survive the poisonous effects of their bites. In most parts of the unsettled country it is impossible to live without suitable protection for the body. No hunter or lumberman goes without it, even in the middle of the day. At evening he surrounds himself with a zone of smudges, and at night his only safety is within his mosquito net.

Thus we find our adventurers disposed in camp. In the thick smoke of their smudges, or securely ensconced within the mosquito bars which they have carefully erected on suitable sticks, they bid defiance to their tormentors. The horses, too, usually so averse to fire, now boldly approach and stand quietly in the thickest of the smoke, blinking their smarting eyes, but thankful for the temporary relief. The evening meal is hastily dispatched, and now, all drawing forth their tobacco-pipes, sought to ease "the ills that flesh is heir to," as one cures ham and bacon, by a permeating investment of smoke. Smoke was their only solace in that hour of trial, and though they endured all with Stoical resignation, not an eye was tearless.

Said Skittles to Tick, awaking from a sort of reverie, "It's singular, isn't it, that it is only the *female* mosquito that torments us and steals away our blood?"

"Didn't know it."

"It's even so. Surely any one can see that their onslaughts are made with real feminine ferocity, such as the other sex is incapable of."

"How can you distinguish the one from the other?" asked the Doctor from within his retreat.

"By their shape and color, and especially their bite. Didn't I just say that it was only the *females* that bit? But really, it does seem to me as if I never before saw them equaled in size, numbers, and variety; for here are scuttlebacks, ring-tails, browns and blacks, and short-horned gallinippers, any one of which might be mistaken for a bird at a little distance."

"Nor I," said Wabash, "excepting down on the Wabash bottom, where they are hunted for snipe."

"Come, friend Skittles!" spoke Penman, "you are quite an entomologist; can't you write or read us a short dissertation on the mosquito, his life and habits?"

"Certainly," replied S., proceeding to the task at once. "The mosquito is an offensive and venomous species of insect. (That's so.) He abides in swamps and marshes, though he does by no means confine himself to those localities. (We wish he did.) His bill is long, sharp, and piercing, and his voice is like unto it. In these respects he differs not from the snipe or sand-hill crane; neither as to his general personal appearance, particularly when on the wing. He also much reminds one of a Scotch bag-pipe, and yet is unlike it, inasmuch that his piping *ceases* when his bag is full, and *vice versa*. He delights in blood and torture, and his cruelty is particularly manifest, in that he invariably sucks his victim through a tube instead of swallowing him at once. (Ruffian!) His appetite is insatiable, and is limited only by his capacity. When full, he retires for a time, but like the chamber of a Colt's revolver, returns to the charge as often as he goes off; so also, if he be driven away forcibly, and for this his pertinacity is remarka-

ble. But of what possible use he is I wot not, unless it be as a model of industry and perseverance." (Bravo.)

Skittles might have expatiated still farther—for he seemed perfectly familiar with his subject—had not a quick, low growl from the dog suddenly cut his remarks short. Another growl followed, then a quick, angry bark. All listened breathlessly—it was impossible for the eye to penetrate the thick vail of smoke. Short, quick steps were distinctly heard in the distance, then a sound as of a brief struggle, and of an animal choking for breath, accompanied with low guttural tones. Penman thought of his previous night alarm, and now prepared himself for the unknown danger.

"What do you think it is, Captain?" asked he, with a whisper.

"Perhaps a wild cat has attacked one of the horses," suggested Skittles.

"No, they are all here."

"Wolves fighting, perhaps?" said the Major.

"A mosquito combat," hinted Wabash; "or possibly they are just finishing that man we saw before supper."

"Hark!" said Penman. "Don't make fun. It may be some real danger. There! Hear that!"

The sounds had now approached much nearer, and the struggling, scuffling, and choking were greatly increased. Penman would have now called for a volunteer to reconnoitre, had he not been deterred by observing the imperturbable gravity of the Captain and Tick, who puffed their black-stemmed pipes in silent contempt of the fears and opinions of the "greenhorns" in the party. But now came the crisis. There was a rush of feet, a quick, heavy fall, and a low agonizing groan, then presently a cry for help. There was a human being in peril!

"Halloa! help m—" The exclamation was cut short, and then came another rush.

Tick and Kinks now crawled out from the smoke, and the rest of the party tumbled out of their comfortable quarters inside the mosquito bars. The mystery was cleared up at once. By the dim light of the stars the shadowy outline of a man was defined holding by a rope an animal of some sort, which was pitching and plunging and darting in every direction. Between the two there appeared to be a desperate conflict, and it seemed doubtful which would triumph in the end, for often the beast would give the rope a sudden jerk that would almost pitch the other head foremost to the ground. Then recovering from the shock, the man would bestow upon him a shower of expletives, catching at each word like a drowning man for breath, and vainly endeavoring to keep him in control. Thus for several minutes this semi-comic tragedy was kept up, to the infinite amusement of the spectators. At length the man came within fair speaking distance.

"Halloa!" said Tick.

"Halloa!" bawled he. "What's the time of night? Who's there? Where you bound? Any—whoa, I say! Confound your pesky hide! Going on further in the morning? I've got to tie up here somewhere to-night. Whoa—hey there—blast your picter!"

From numerous hints it was evident that he

TAMING THE SHREW.

wished to pass the night in camp, but they were not recognized. Finally, after exhausting the whole Western catalogue of travelers' queries, he proceeded on his way with the following answer to the oft-repeated question of "what's the matter?" "I've got a tarnation heifer here—blast her!—that's as wild as Satan, and I'm going to drive her until morning, and see if I can't tame her!" So saying, he plunged into the darkness.

This explained the whole. All admired the stranger's pluck; but it was evident that if either triumphed in the end, it must be the heifer.

THE COSTLY KISS:

A NEW YORK DETECTIVE EXPERIENCE.

A WHOLESALE hardware store down town was entered, the safe opened, and sixteen thousand dollars taken, one night last August. Next morning complaint was made, and I was sent to work the case.

On examining the premises every thing showed the touch of a professional hand. The lock of the front door had been "tooled" effectually; the bolt was dislodged, and could not be shot. The door of the counting-room had been kicked in, the thin partition making this an easy matter. The safe had been opened without violence, a key fitted to the lock having evidently been used. The fall-rope—the stout rope used for hoisting goods to the upper stories—had been cut; one end had been made fast to a handle of the safe; the other end hung out from the window, which opened into an alley-way some fifteen or twenty feet below. It seemed plain that the thief had been unwilling to run the risk of coming out through the front door into the street—it might have been nearly daylight—and had preferred this less exposed exit. Nothing in the store had been taken, with the exception of a pair of silver-mounted pistols; the thief had, reasonably, been content with the booty found in the safe.

After concluding this examination I received from the partners a description of the money stolen. It consisted of new bills on a Massachusetts bank—fives and tens—twelve thousand of the amount having a private mark, put on at the bank, for reasons of their own. This mark was a "Co," written in small letters, in red ink, near the right-hand lower corner. Besides, I was shown pistols of the same pattern as the ones taken. Lastly, I took a look at the key of the safe. It was a plain, straight key; the tip screwed on. The make of the key was such that it could not easily be copied; I doubt whether an impression could have been taken from it in wax worth any thing. This key had been in the pocket of the senior partner over night. There was a duplicate tip kept in a drawer of one of the counting-room desks very carelessly; but this drawer was found locked, and the tip within. I borrowed this tip, as it might possibly be of use to me.

Before I left, I asked the partners if they suspected any body on their premises? No: their porter, a respectable black man, had been in their employ for fourteen years; they *knew* him to be honest. Of their clerks, one was a boy, just from the country; next to him was a young man, a nephew of the junior partner, engaged to be married to the adopted daughter of the senior partner, and about to receive an interest in the business; the head-clerk was a superintendent of a Sunday-school in Brooklyn, and therefore above suspicion; the book-keeper, an elderly young man, bald, bachelor, quiet, regular, reliable as an interest-table. No, again; it was not possible that the work had been done by any one connected with the establishment. True, the safe had been opened by some one who had used the right key; but if this had been done by one of the employés, he would not have made such a fuss about getting in and out.

The first step I took was to get my cards printed. Here's one of them that I keep as a memento of this case. You see I describe the bills, noticing particularly the private mark—the "Co"—and offer a reward to any one giving information at police head-quarters of the person offering such bills; and there is a reward of one hundred dollars for the recovery of the whole amount—a ridiculously small reward, but all they would allow me to offer. These cards I distributed at bar-rooms, billiard-saloons, eating-houses, livery-stables, lodging-houses, including some hotels; shipping offices; the foreign steamers, of course; exchange offices, and other places likely to be patronized by "cracksmen." I also sent some of the cards to the police of other cities. And this was all I could do. I had set my hooks, and now must wait patiently for a bite.

When I first entered the force I was told that I must cultivate my bump of patience, and I have had occasion to learn the value of the advice. It was annoying to have day after day go by with no advance made in my work, but there was no help for it. It was nearly a week before I got even a nibble.

This came in the form of a note left at the office, informing the deputy that something might be learned about the bills marked "Co" by calling at such a number Greenwich Street, a place where I had left one of my cards. I went over there immediately, and found that one of my fives, marked, had been taken there, at the bar, the night before; but it had not been noticed as a marked bill until after the man had gone. The bar-keeper, however, remembered the man, and described him. The description answered to no one I knew. All I could do was to circulate the description, and hope that some brother officer might 'light upon him; I might, myself. Not much, however, from *that* nibble; but as the possessor of the "swag" had begun to spend on his money, I had hopes of having something to do before long.

Next day another call at the office from a livery-stable keeper in East Broadway. I wasn't in when he called, but the sergeant took the man's

information, and told him he'd send me up to his place. I went, and found he had taken in a "fineff" ($5), one of my marked bills. It was a man I'd had dealings with before; and when I left one of my cards with him he said, jokingly, that if my man came in his way he'd halter him for me, and put him in a clean stall till called for. Well, what I got from this source was just this: the stable-keeper had taken the "V" from a grocer close by; and when the horse man questioned the provision man, *he* said he'd taken it from a widow woman that kept a boarding-house in that neighborhood. They hadn't questioned the widow, but left that for me; so I got her address, and went right to the house. It was about eleven o'clock, and she was in the heat of getting dinner—came up to see me with a very red face and her sleeves rolled up. However, I won't take time to paint her picture. The amount of my visit there was that she had taken the bill from one of her boarders, a nice little girl, she said, by the name of Jenny Rice; she worked at a bindery down town, and was the widow's seventh or eleventh cousin, in some way. She gave me an exact account of the relationship, but I never can remember farther than *second* cousin in my own family. Well, I asked the widow how she supposed Jenny came by the bill. I had told her at first that the bill was a bad one, and I had received it in business, and traced it round to her. She said she had no idea; most likely for wages at the bindery. By this time I had made up my mind that the widow was an honest, reliable kind of a little woman, and I gave her some idea of what was in the wind; told her I was an officer, and said something about a reward. I told her I was anxious to know something about Jenny's acquaintances; what young men she knew, etc.

"Now," says she, "Jenny's an honest girl; that I *know;* but I don't like the company she keeps—that's a fact! That is, I don't mean company in general; but there's a young fellow that's walked up home with her, and taken her out to concerts a few times, that I don't like at all. He's got too much money, and is rather too much of a gentleman—not that he's a bit too *good* for her, but he isn't the kind of a young man I want to see paying attentions to my Jenny—she's the same to me as a daughter. Jenny's got his daguerreotype locked up somewhere, the foolish girl! I wish I could get it for you, but it won't do to try to get into her drawer. But *he* couldn't have given her *five dollars; that's* out of the question! I'd better ask Jenny where she got it. I'll ask her this noon; and if you'll come here this afternoon I'll tell you what she says."

Now the widow's talk about this young man had interested me, as you may guess. I wanted to *see* him; and I thought I could do it best by being at the house toward night, when he might walk home with Jenny. So I told Mrs. Gould—the widow, that is—that I'd rather she wouldn't say any thing to Jenny about the bill at present; that it wasn't best to trouble her, for it was most likely, as she said, that the bill came from the bindery; but that I'd be round that evening, and if the fellow she'd spoken of should happen to come home with her, or come in to invite her to go any where with him, why, I could see him, and then find out what kind of a person he was. The widow said she wouldn't speak to Jenny if I thought it wasn't best; and that if I would make inquiries about this Gregory's character—that was the name Jenny called him by—she'd be very much obliged to me. And we agreed that I should come there that evening, and—if there was any occasion for it—I should pass as a distant relation of hers from Rhode Island, where her husband came from. And so, after fixing on the best time to call, I came away.

At the office again; and there I found a message waiting for me to go to a station-house down town, to see a young woman who had been offering some of my marked bills. You see my hooks were getting nibbles for me in several directions.

On my way down town I stopped in at the store, and told the partners that I was started at last on several scents, and should drive my man to earth in a few days. The news was acceptable to them, as you may suppose.

Well, at the station-house I found a young Irishwoman, who, they said, had been offering some marked bills at a shipping-office, in payment for a second-cabin passage to Liverpool. The money was shown me—about seventy-five dollars—and I recognized it at once. The woman was an unusually pretty Irish girl, well dressed, and having the appearance of being a first-class servant. She gave her name as Margaret—she wouldn't give the other—and she seemed determined to keep her own affairs to herself. I perceived, as I thought, that she was what the French call *enceinte.* Poor thing! I said to myself, it's more than likely that the very rascal I'm after is your deceiver, and has given you this money to get you off to Ireland, out of the way.

I took Margaret into the Captain's sitting-room, and tried to talk with her, but I was met at the outset with such a speech as this:

"Mr. Officer," said she, "you may spare your words. My secret is dearer to me—dearer even than the baby that lies near my heart. God bless and preserve it! It will save trouble for me to speak plainly now at the start. I shall never tell who gave me that money."

I was a good deal taken aback by such a speech as that, you know. About all I could say was what I did:

"We must put you in prison until you do," says I.

"Very well," she replied; "I can stand *that* well enough, though I *wouldn't* like to have *his* baby born in a *prison!* But it's a vow I've made, and I'll never be left to break a vow that my conscience and my heart tell me to keep."

"Well, Margaret," I said, "you may think better of this. I'll see you again to-morrow morning;" and I had her put into the room of

one of the sergeants, who was absent on leave, for over night. I thought it possible that a night's confinement might be an argument with her, and, besides, I had a dim hope that my visit at Mrs. Gould's that evening might lead to discoveries which would make the breaking of Margaret's vow unnecessary. I had her safe in hand, at all events, and could afford to wait for something to turn up which should enable me to get hold of her secret. Poor girl! I was sincerely sorry for her. Her real Irish beauty—the most charming beauty, to me, in the world—her dark gray eyes, glistening with tears; her sad situation; her devotion to her betrayer; all these excited my sympathies for her in an alarming degree—for a policeman: a policeman, you know, has no business to *have* such things as sympathies about him.

Well, I was at Mrs. Gould's at the set time, just before tea. Jenny came home alone—a very pretty girl she was, by-the-way, a plump little bird of a girl, lively as a wren ("Jenny Wren" I called her, to myself)—and as I sat in the sitting-room with the widow, I had to be introduced to her as a Mr. Gould, from Rhode Island. She didn't pay me as much attention as I should have liked, but hurried through her tea and went up to her room to dress to go out.

"Tell Sue," says she, "when she comes, to come right up to my room."

"Where are you going?" the widow asked.

"Oh, we're going out to spend the evening; sha'n't be home till late. But you needn't sit up; I've got the key." And so she flitted off.

"That *Sue*," says Mrs. Gould, as soon as Jenny was out of hearing, "*she* goes with Gregory *too!* He'll be with them girls to-night, sure as rats! If you mean to see him, you'd better follow the girls."

The advice was good, and I soon left the house and got a position across the way from which to watch them when they came out. Sue arrived in a few minutes, and then pretty soon they came out together, and turned into East Broadway, I following at a proper distance behind. They went at a brisk pace down street, and hadn't gone far before they met a young fellow coming up. They had a very jolly meeting, laughing and talking at a great rate. I didn't try to get a look at him then; I felt sure they were going together to some place of amusement, and I could follow them in and spot him at my leisure, so I let them go along undisturbed. They went on, each of the girls taking an arm, until they came to the National Theatre, and there they went in. I gave them time to get fairly in, and then I took a pit ticket and went in too. Looking around after I got seated, I soon discovered Jenny by her bonnet—the trimming was rather peculiar—and who do you think, by thunder! was with her? That young clerk, the one that was a relation of one partner, engaged to the daughter of the other, and about to become a member of the firm himself!

"You—blessed young rascal!" says I to myself, "what the—mischief are you up to?"

But I didn't stop to think long there. This Charley, as he was called, might recognize me—for he had seen me at the store—and be on his guard. You see I had at once concluded that he was the burglar. I know that I had no distinct proof of it, but you know we often *feel* sure of some facts before we *are* sure. Well, I got out into the street; and as I wanted to find a quiet place to think, and had plenty of time, I went into a saloon near by, and sat down over a glass of iced lager.

Now, if you'll think a moment, you'll see I was in something of a quandary. If there had been nothing else to do but the arrest of the man I believed was the guilty party, why I had only to walk back into the theatre and collar Charley Taylor, *alias* Gregory; for I was sure, I thought, of his being the man. But then, in a case of this kind, in which highly respectable people are mixed up, you know, it's best to be *very* sure and have your proofs before you go to extremities. Now I hadn't *got* any proofs.

And then another thing, *the recovery of the money* was really my main business. Justice is all very well, of course, but I knew that the hardware firm down town cared considerably more for their sixteen thousand dollars than for the appropriator thereof, especially, mind you, if said appropriator should prove to be *one of themselves*, as I may say. But if I were to go and dash at Charley in a careless way, he might—supposing him guilty—find means to put it out of our reach; or he might—of course he *would*—protest his innocence, and have so arranged matters as to demand our proofs. This would be difficult, perhaps; at all events, I hadn't any at present. I might watch him and wait till he had occasion to pass off some more marked bills, but that might be a long and tedious job; and then again I might trip him up in a few hours. But I had, I thought, a better way. Most likely Jenny had got that five-dollar bill from him; that was a pretty fair guess. And most likely, too, poor Margaret's money came from the same hand, though of that I wasn't so sure. A young rascal like him, who would flirt with sewing-girls while engaged at the same time to be married to a rich and fashionable young lady, educated, refined, and all that; and more than this, who would steal his own money, so to speak, to the tune of sixteen thousand dollars, was bad enough for any thing. If any one of my suspicions was correct, the others were likely to be. Now, according to my theory, both Jenny and Margaret held proofs against him. But Margaret wouldn't expose him, and Jenny, probably, was so much bewitched with the handsome young villain that he could make her believe any thing and do any thing for him. It was quite unlikely that she would own, for the sake of her own character, that he had given her money. Very well, I could play off the two girls against each other. Make either believe that he was in love with the other, and *then*, you know, jealousy would bring out the truth right away.

By the time I had arrived at these results my

second glass of lager had disappeared, and I got up, decided on two points at least: one, to let Charley alone for the present—I had him within reach any time I wanted him; and the other, to go and see Margaret again, and try the effect of a little honest deception. And I thought I might as well go then as any time, for it wasn't late. So I went.

When I got to the station-house they told me that the poor girl had been sobbing and moaning in a pitiful way, but that for the last hour she had been quiet. I knocked at her door, and she came and opened it immediately, and looked just as if she was expecting some one. When she found it was only me, she went back to her chair and sat down, and her face showed, as plain as could be, that she had made up her mind to be faithful to her vow, let what would come. She had taken off her bonnet and arranged her hair—dark, wavy hair, done up plainly and tastily—and she looked prettier than ever. I oughtn't to call her pretty, for that's a *little* word, I think. She was beautiful enough for a queen, but it was that kind of beauty—I declare I can't describe it, but I should like my *sister* to have such a face. It was goodness and liveliness and sweetness and archness, all put together; and her paleness and sad looks rather improved her appearance.

"So you're bound you won't betray Charley?" said I, as I sat down.

She started up like a wild deer at the name Charley; she threw her hands out just as I have seen it done on the stage, and her eyes didn't flash, they *burned*.

"How do you know?—" she began, and then she changed her tone:

"Ah, Mr. Officer, didn't you think you'd caught me that time! His name *isn't* Charley, and it's guess again, Sir, and worse luck to you."

Poor girl! Nature spoke before you did, and betrayed the secret you tried so well to keep.

"No, Margaret," said I, "you can't deceive me. I know all about it."

And I told her enough, and in such a way, as to convince her that I knew every thing she feared, and I asked her to trust me and make a clean breast of it.

"Very well, Sir," she said; "you seem to think you know a great deal about our—about my affairs. You know so much you surely can't want to hear any more from me. You'll be an older man than you are, though, before you get me to break my vow."

Then she leaned forward, put her head into her hands, and gave up to her feelings. She hadn't but just controlled her voice while saying what she did. I saw that if I wanted to know any thing more from her I must bring all my facts to bear. But did I *want* to know more? Why break the poor thing's heart with the truth?

Well, I sat some time thinking about it. There was no sound in the room but the buzz of the gas, and, once in a while, the saddest of sighs from poor Margaret. I concluded, finally, that it was best to get her statement if possible. I should want to use it to convince the partners of the rascality of Charley; it might, perhaps, save his intended bride from making a life-long mistake; and, lastly, it was best that Margaret herself should know—the sooner the better—the character of the man she was evidently trusting. So I began:

"Margaret," said I, breaking the stillness, and making her start, almost frightened, from her seat, "Margaret, this is a bad business of mine—"

"Sure it is," she interrupted.

"—And I don't like to have it to do; but as I'm in it I must go on, and I want to have it done and over with. Now listen to me: I shall tell you nothing but the truth, *so help me God!* and I can prove it all to you if you want it. In the first place, you used to live at Mr. Brown's in Tenth Street. Charley boarded there with his uncle, and there he met you. (She was shivering all the time, though it was a hot night; her head was in her hands, so I couldn't see her face.) Charley is engaged to be married to Miss Sarah, the young lady that lives with Mr. Brown's partner—perhaps you know her."

During this last sentence she slowly raised her head and *looked* at me—*such* a look! I declare if some painter could see her as I saw her, he could make a picture that people couldn't look away from.

"Mr. Officer," said Margaret, "if this is a lie you're telling me, may—may God forgive you. But you're—breaking—my heart!"

"Margaret," said I, "it's the sad truth, and nothing more nor less. I have a sister at home, and I couldn't trifle with a woman. And now hear me out. This very night, not much more than an hour ago, I saw him making love to a pretty sewing-girl at the theatre. He is with her a great deal, takes her to theatres and concerts, and she is in love with him if he isn't with her."

"Oh, my God!" she groaned, and rocked herself to and fro. I could hardly stand it. If I hadn't felt so *mad* at Charley, I don't know but I should have had occasion to wipe my eyes too.

"You see, Margaret," I went on, "that this fellow is a thorough *rascal*, and whatever promises he has made you are worth just nothing at all."

"*No*, Sir!" she burst in; "he promised me money, and he gave it to me, too, with a free hand, God bless him! He's as generous a man as lives; but the *rest!* oh, the *rest!* I'd be glad to think you lied to me, Sir, though I knew 'twould sink you fathoms deep in hell. But something tells me you're speaking the truth with your honest face."

"That money," said I, "Margaret, was *stolen*. He has been living a fast life lately, and he had to rob a store to get money. He broke into his own uncle's store, and took thousands of dollars, and it's that that's bringing every thing out. The money was marked."

"And so you're on his track, and I'm fool enough, *curse* my woman's weakness, to help you to more proofs against him!"

She went on now for some time in such a way that I feared her trouble had crazed her. She paced the room, hardly minding me, now cursing herself, now him—"her *baby*, oh, her *baby*, *his* baby!" And then she fell on her knees at her chair, and uttered one of the wildest, strangest, and yet most beautiful prayers I ever heard. From the tone of the prayer I saw she was thinking of suicide, and I planned how to prevent this. I concluded to take her home with me, and leave her under the care of my mother and sister.

Well, I'm making too long a story of this, but I can hardly help it. I never was so interested for any body as I was for that poor Irish girl. I pitied the intended bride of Charley, it is true, but I hadn't *seen* her, and besides, I knew that she hadn't suffered wrong from him. But Margaret! there she was, the poor crushed flower, right before me: she's before me *now*, for that matter.

To go on now, and finish up as soon as I can. I took Margaret home with me. She was glad to go, or rather, she went without any objections. I led her along as I would a child. At home I left her in good hands.

And now I had the agreeable little task of undeceiving the simple-hearted Jenny. There wasn't really any *necessity* for it, for I had proofs enough through Margaret; but, as I thought the matter over, I came to the conclusion to use Jenny's proof—if I could get any—and so save Margaret an exposure. In this way, too, I could spare, somewhat, the feelings of Charley's family, especially of the young lady he was engaged to. She was innocent, and it would be too bad to make her suffer more than was necessary; *that* would be enough. So, next day, I found Jenny; met her at noon, and had a talk with her in Mrs. Gould's sitting-room. She wouldn't believe what I told her, and said that it was "none of my business" where she got that bill, spiteful and nippy as she could be. I convinced her that it *was* my business, and proposed to prove to her that what I had told her about Margaret was true. I didn't want to *compel* her to tell me where she got the bill; it was easier and better to get at the truth in a gentler way. And so I asked her just to go with me and *see* Margaret. Well, finally, she consented to go. Now, if I knew how, I should just like to describe the meeting between those two girls; but I *don't* know how; there's no use in my trying. To tell the truth, I left them alone part of the time. When I came in again, in about half an hour, contrary to what I expected—for they began at each other somewhat in the way of cats, to speak plainly—I found them almost in each other's arms, and both crying.

When I took Jenny away, we walked to Mrs. Gould's without a word on either side. As soon as we got seated in the house,

"Now," says I, "Miss Jenny, do you want to have Margaret exposed to any more trouble; or shall I have what I want from you?"

"No, no!" she said; "Margaret's had more than her share of trouble. As for me, I've only been flirting, carrying on a little—ha! ha! (but it was a hollow kind of a laugh, Jenny!) and I can afford to do any thing, almost, to spare her. Only I *don't* want to go into court! Must I?"

I told her that it might not be necessary; and then I asked her, plumply, if Charley gave her that bill.

"Yes, he *did!*" she said; "and I'd rather tell the whole story than to leave it *part* told. It was this way: Charley tried to snatch a kiss from me one evening, and I told him, in fun, that kisses were worth a dollar apiece. 'I'll give you *five!*' says he. 'Let's see your money,' says I; and then he put the bill in my hand, and I, like a silly girl, gave him the kiss. I tried to make him take back the money, but he wouldn't take it, and finally left it on the floor when he went away. I thought then that, as he cared so little for money, I could find better use for it than he was likely to put it to, and so I paid it to Mrs. Gould for board. And *now* he'll find what *such* kisses really cost sometimes, I hope; for, if I *ever* liked him, I'm sure I *hate* him *now*."

So, you see, I had got all the proof I wanted. Perhaps I haven't said, in so many words, that Margaret had admitted that Charley had given her that money which she offered at the shipping office; she did; and, besides this, she had told me that she had seen him have large rolls of bills, which he said he had *inherited*.

Well, my next step was to get hold of Master Charley in such a way that I could secure man and money at the same time. I shall soon come to that now, and the end of the story.

Early next morning I reported progress to the Deputy. He seemed as much interested in the case as I was, and told me to go on and arrest Charley as soon as I could.

From there I went down to the store, and told the partners every thing. They were, of course, completely overcome, and didn't know what to say or do. Charley's uncle spoke first, and proposed calling him down to talk with him. I objected to this, and told them why. If they wanted me to recover their money, they must let me do it in my own way; and I told them my reasons for fearing that he would deny the charge, and try to get off himself, and either take the money with him, or get rid of it—put it out of our reach in some way. The sum was a little too large to risk; its loss had straitened them a good deal—for, as you may remember, the hard times were beginning about then—if they could possibly have spared it, I am sure they would have hushed up the matter in some way. They concluded, however, to leave me to finish the case as I chose, making me promise, though, to make nothing public—at least not till I had consulted them.

The way I managed to get the money was this—and I take some credit to myself for the process. If you'll bear in mind that I was to do nothing publicly, you'll understand better why I acted as I did at first:

I found out that Charley was going to the opera that evening with his intended. I went

there too. I was dressed in opera style, so as to be ready to play the part of a gentleman of fashion, if necessary. I looked around for some time before I found Charley and his friend; and when I did find them, and saw *her*, I was sorry, I tell you, for what I had got to do. She was not nearly so pretty as Margaret, but she *loved* him; every look and action showed it. I needn't dwell on that, and I don't want to. It's enough to say that here was another heart to be broken, and I was the unfortunate wretch to be the means of it!—Sometimes I think I won't remain in the force another day; but I find I'm getting used to it. I don't want any more cases like this, though. —Between the acts I met Charley in the lobby, and pretending to have something to say to him of importance, asked him to be so kind as to step aside with me for a moment. He looked at me with surprise, and recognized me as the officer he had seen in the store; but he went with me into a corner a little out of the stream.

"Now," says I, "I suppose you don't want to have the muss of a public arrest here, with your lady to take care of, and acquaintances all around—"

"Arrest for *what!*" says he, putting on the indignant, but taking care to speak low. I almost smiled at the difference between his manner and his tone.

"Well, for taking about sixteen thousand dollars out of a certain safe down town," says I.

He was excited, of course; but he carried himself with surprising coolness.

"I'm much obliged to you for beginning this so quietly," says he; "but I assure you that you have made a great mistake."

"We won't waste words," says I. "I have only to say to you just this—and if you're a sensible man you'll do what I say, and save yourself a public arrest: *I know Margaret; I know Jenny Rice; I know*, as perhaps you don't, that almost all of those bills *have a private mark on them;* and I know that *I have got you foul* every way. Now listen to me—you needn't waste time in talking now—I want you to go back and finish the opera with your friend; and you may be sure that I shall be close by you all the time. You mustn't mind it if I claim your acquaintance; and then when you ride home, I'll go too. After you've put your friend inside her door, you are to go with me, quietly. Now if you fail to obey my directions, in any particular, rely upon it that I shall expose you as publicly as I can. *If* I've made a mistake, you can prove it to me, and nobody need be the wiser for your arrest."

The orchestra began just then, and he knew he must go back to be in his seat when the curtain rose; so he sullenly gave me his word to do as I told him, and left for his place.

I watched him as he played his part with his lady—'twas better than looking at the opera to any one fond of playing; and when the opera was concluded I walked by his side—I didn't have to speak to him—and saw them into their carriage; then I hurried up on to the box with the driver, making him think I was a friend of the gentleman inside, going to join him after he had seen his lady home, and that I didn't go inside because I didn't want to disturb their tête-à-tête; and so we drove off.

I kept my place, when we got to the house, until he had seen his friend inside her door; I think there was a kiss with their good-night—if there was, it was the last—and then he came down the steps, and I joined him. He paid the driver, and then I walked away with him to the nearest station-house. On the way he owned that, as for Margaret and Jenny, he had nothing to say; but that it was "too bad to be brought out for a paltry fifteen dollars." And then he told me that he had been one of the first in the counting-room the morning after the robbery, and had seen a ten and a five lying on the floor among the loose papers in front of the safe, and had, he admitted, taken them for his own use; but he was sure his uncle and the other partner wouldn't think much of that.

"You forget," said I, "that you gave Margaret at least seventy-five."

He started a little, and then says he,

"Well, I see you're smarter than I am; and I may as well own up. The *porter* did the business, and I caught him at it, and he gave me five hundred to keep mum."

"Why didn't you make a better bargain?" I asked him.

At that he winced a little.

"Now," says I, "you needn't lie any more about this. I know all about you. I haven't followed you for nothing the past fortnight. *You* opened that safe, and *you've got that money*, and *I want it!*"

With that he trembled and turned pale. We had got inside the station-house, and he sat down in the sitting-room, and seemed to be entirely overcome. Presently he looked up and began to come the pitiful dodge, and to ask me to help him out of the scrape, to have mercy on him, and all that. He offered me any amount to let him off. I cut him short. Says I,

"I'll show you as much pity as you deserve, you scoundrel! and no more. And the long and the short of it is, that the best thing you can do is to fork out that money and make matters as easy with the firm as you can. What *they'll* do in the mercy line, I don't know."

Then he began sobbing and blubbering, and said that he couldn't restore any thing; that he'd got frightened and thrown the greater part of the money into the dock, and had spent nearly all the rest.

"*What* dock?" said I.

"At the foot of Beekman Street," said he.

"Did it sink or float?"

"It sunk—that is—some of it sunk—I believe —and some—floated."

He stammered over this, and I came down on him the moment he got through.

"You *lie*, you rascal!" says I; "you haven't *been* to the foot of Beekman Street! you can't dodge out *that* way, either!"

I said this at a venture, like, for I wasn't sure that he *hadn't* been there, but I suspected him from his stammering; in fact, I had asked him whether it sunk or floated to try him. But I made a good hit; I was right in my suspicions. And he, thinking that I *had* followed him so closely as to know every step he'd taken, saw that there was no use trying to escape me. So he owned up, thoroughly. He told me how he'd planned the robbery, how he'd used the extra tip, putting it back in the drawer after using it—he had found a key that fitted the drawer—and how he had broken the front door lock and left the rope hanging out the window, to make it seem that an ordinary burglar had been in; but he said he hadn't suspected the private mark on the bills.

Well, I kept him at the station over night, and the next morning we went together down to the store. We marched right in—it was early, and no one there but the porter—and up stairs, up to the attic, and there, from behind some old stove-pipes, he brought out two rolls of bills, tied up with a fish-line. Then down to the counting-room, where we sat waiting for the firm to come in. As soon as they came there was a *time*.

On counting the money it was found that about a thousand of it was missing. I suppose the firm was content with recovering so much, and to spare the feelings of the family the affair was hushed up. I made the complaint, of course, but the case never came into court, that I know of. Charley walks the streets of New York to-day, and from the company he keeps I shouldn't be surprised if I had to "cap" him again.

His wife that would have been I don't know any thing about. But I know that Margaret is out of his reach. I saw her on board a packet bound for Liverpool, on her way home, about three months ago. Her grief brought on a miscarriage, and she was at death's door; but she recovered, and is now at home in Ireland—my sister has heard from her.

If Charley sees this story in print, he may just understand that if he had reformed and tried to live honestly I wouldn't have said a word about him; and one more thing, he had better look out for "shadows," any time of day or night, and not pay too dear for his KISSES.

PORPHYROGENITUS.

I.

BORN in the purple! born in the purple!
Heir to the sceptre and crown!
Lord over millions and millions of vassals—
Monarch of mighty renown!
Where, do you ask, are my banner-proud castles?
Where my imperial town?

II.

Where are the ranks of my far-flashing lances;
Trumpets, courageous of sound;
Galloping squadrons and rocking armadas,
Guarding my kingdom around?
Where are the pillars that blazon my borders,
Threatening the alien ground?

III.

Vainly you ask, if you wear not the purple,
Sceptre and diadem own;
Ruling yourself over prosperous regions,
Seated supreme on your throne.
Subjects have nothing to give but allegiance—
Monarchs meet monarchs alone.

IV.

But, if a king, you shall stand on my ramparts,
Look on the lands that I sway,
Number the domes of magnificent cities,
Shining in valleys away—
Number the mountains whose foreheads are golden,
Lakes that are azure with day.

V.

Whence I inherited such a dominion?
What was my forefathers' line?
Homer and Sophocles, Pindar and Sappho,
First were anointed divine:
Theirs were the realms that a god might have governed,
Ah, and how little is mine!

VI.

Hafiz in Orient shared with Petrarca
Thrones of the East and the West;
Shakspeare succeeded to limitless empire,
Greatest of monarchs, and best:
Few of his children inherited kingdoms,
Provinces only, the rest.

VII.

Keats has his vineyards, and Shelley his islands,
Coleridge in Xanadu reigns;
Wordsworth is eyried aloft on the mountains,
Goethe has mountains and plains;
Yet, though the world has been parceled among them,
A world to be parceled remains.

VIII.

Blessing enough to be born in the purple,
Though but a monarch in name—
Though in the desert my palace is builded,
Far from the highways of Fame:
Up with my standards! salute me with trumpets!
Crown me with regal acclaim!

HEAD AND HEART.

"AM I to congratulate you, then, that you are at last fairly captured, Guernsey?"

"You will never have occasion for that, Marston."

"Indeed; must I suppose that your majesty is for once condescending to the amusements of other mortals, and actually flirting instead of being, *bona fide*, in love with Miss Lucy Forester?"

"That lady is my betrothed wife," was the very stiff reply; "and I have that high regard for her without which I should not make her such."

"Not a particle of love about the affair, of course, Sir Philosopher."

"Marston, I am not so foolish as to consider it necessary to rush headlong into extravagances at the sight of every pretty face. I intend to hold my affections and every other part of my nature under my own control, as a man should do."

"Well, if you won't quite annihilate me, let me ask what has induced you, universally considered as a confirmed old bachelor, to forsake musty books and sage philosophy, and commit the foolish steps of matrimony?"

"In the first place, being only thirty, I have never considered myself in the venerable aspect you mention. Secondly, I never intend to forsake study. And, thirdly, this is no such new step, but what I have always purposed when I should find a woman to please me. Will you proceed with your catechism?"

"Thank you, with pleasure. What are the qualities which won the heart—beg pardon—the high approbation of Ralph Guernsey? To be sure, Miss Forester is amiable and pretty; but when half a hundred beautiful and intellectual women are at your command, I must confess some surprise at your choice."

"I do not wish for intellect in a wife, and as for beauty, my ideal is too high for realization. Miss Forester is a high-bred, truthful, affectionate woman, with not so little mind as to disgust nor so much as to be a bore. She is not strong enough to try to govern, nor weak enough for all those petty arts and affectations which characterize the generality of her sex."

"Then it is for her negative virtues that you have chosen her?"

"Simply those — and now let us change the subject."

Externally, Ralph Guernsey was a noble specimen of a man, with a form from which a sculptor might have modeled an Apollo, and a head as noble as that of a Jove. But in the expression of the firm mouth, that must be a dull physiognomist who could not read pride, contempt, and almost hardness, which, when not effaced by the smiles none could command more readily, gave a fair index to his character. Yet no one could doubt that he had the gift to rule others. Not without warm natural feelings, he had educated himself by the aid of an intensely strong will into a stoical indifference. Of course, then, he did not seek to gain the affection of his race; yet his rare acquirements, his polished manners, his great wealth, and the strong, keen intellect, which was his glory and pride, gave him an almost unbounded influence. The reputation he had acquired as an author he affected to think lightly of; and, indeed, the whole course of the world was something of a bore to Ralph Guernsey, Esq., who nevertheless was not the least of a misanthrope, but found in his serene self a world quite sufficient to his joys. Love, therefore, he esteemed as foreign to his nature as other emotions of the ignoble herd. What, then, had induced him to add, or propose to add, to his complete existence the encumbrance of a wife? One day he had suddenly awaked to the consciousness that there was something fine and respectable in being the head of a family—in having a grand mansion and a well-bred wife to preside over it, and in bringing up children to inherit the paternal name and honors. The idea was such a forcible one that he would not own it as new, but persuaded himself into the belief that it was only the development of a long-lived intention. So he began to look about him, and soon honored Lucy Forester with his choice. Poor thing! it was a wonder that she was not utterly overwhelmed by it. When this great man stooped from his sphere and entered hers she shrank back at first in dismay. But he, attracted in spite of himself by her sweetness and grace, drew nearer and wooed in tender words; and all the depths of her true nature were stirred as they would have been, if really it had been the angel she thought who troubled them, and not one of the self-seeking sons of men. It was so strange that he could love her, and she looked to him as some far-distant planet might look in admiring gratitude to the sun.

"Do you love this man, Lucy?" asked her father, as he stroked the silken hair from her pure forehead, and looked almost sadly into her earnest eyes.

"How can I help it, father? Am I not honored in loving him? Could you have dreamed that your little girl would have been the choice of such a man?"

"Yes; I ought to be contented, but we have loved and cared for you so tenderly here that I am afraid you are hardly fitted for any other home. Perhaps this is not altogether the man I would have desired for your husband; but then I can't judge for you in this matter, and so I must even make up my mind to let my Lucy go;" and good old Judge Forester looked at his daughter till his eyes moistened and tears stood in Lucy's, though hers were very happy ones, and even those she was half-angry with herself for allowing.

Lucy Forester certainly had a great deference for her dignified suitor, and this appeared to him extremely becoming and natural. It did not occur to him to strive to diminish it, and his efforts to be lover-like were confined to stately compliments, which sometimes fell upon her ear strangely cold. "Yet," thought the gentle soul, "what ought I to expect from one so much older and wiser than myself—I, a mere child in comparison?" and she went on loving all the more, as if to make up for the lack she only dimly suspected in him.

One bright summer morning she entered the room where he was waiting her, looking very lady-like and lovely in her simple white dress, and a faint blush suffusing her pale features. Another than Ralph Guernsey might have criticised that delicate face as wanting in animation; but he called it classical and elegant, and desired no more. It was agreeable to him to watch her quiet movements, to note her exquisitely nice observance of all the proprieties of dress and speech, and even of thought. With how much complacency he flattered himself upon his taste in the selection of such a jewel for the adornment of his life! Now and then, perhaps, he felt a slight annoyance when, unconsciously to herself, her affection for him broke through her usual repose of manner and seemed to claim a return. It was very womanly and beautiful, to be sure, within a certain limit, but for him to act the lover, very absurd. Still, on rare occasions like this bright June morning we were telling of, Mr. Guernsey shone out of his clouds, and his fair betrothed lifted up her head like a blossom to meet his smiles. "Poor child!" thought this benevolent soul, "how happy a few tender words make her!" and a mixture of pity and contempt possessed him.

"I have good news to tell you," said she; "and you must promise to be very glad with me."

"I promise any thing you please."

"Then know that my sister, my dear only sister, of whom I have told you before, is coming to us soon—coming to live with us for a whole year at least."

"Tell me of her. I have forgotten all you ever said. What is her name, and why has she not lived with you before?"

"Her name in Evelyn. She is my half-sister, and her mother was a beautiful Southern lady, who died young—only two years after she married my father. Evelyn always lived with her grand-parents, who were sad and lonely after the loss of their only daughter, till they too died; and since she has been with her uncle, who is a

rich Southern planter and has no daughters. So I have never seen my sister. Is it not strange? Papa has long desired that she should come home, but she dreaded the cold Northern climate and the parting from her friends so greatly that he did not urge it. But now she has consented to come. You will like her very, very much, Mr. Guernsey."

"As your sister, I certainly shall."

"But for her own sake you will also. She is said to be a beauty, doubtless a grand Southern beauty, with rich black hair and those flashing eyes I admire so greatly. Then she has a fine intellect, that I know very well from her letters. Mine are so unworthy in comparison with hers that I hardly dare write her."

"Beauties I do not care for, especially brilliant, black-eyed ones; and intellectual women are my abhorrence. Do not, I beg of you, copy your sister in that respect, and don't consider it necessary that I should add myself to the number of her adorers."

"Oh, we shall see; time will show. Only do not wholly forget me when she comes; that I could not bear."

That same June morning a gay cavalcade rode along a grassy path amidst the rich luxuriance of Southern woods. The air rung with merry voices—the light breeze shook the white catalpa-blossoms from their slender stems till they fell like snow upon the heads of the riders. Last of all followed slowly a lady and her attendant, she gazing sometimes upward into the blue sky, and sometimes away into the green arches of the forest. The rich bloom on her cheek was heightened by exercise, and her whole face was almost radiant with her joy in the beauty around. Profuse chestnut curls drooped carelessly beneath her cap, and were tossed by the breeze. Altogether it was a fair picture, and no wonder that her companion, bluff, impetuous fellow as he was, turned from all other beauties to gaze upon her.

"It is the crowning day of summer—the gem of the year. Such a sky! such an atmosphere! worth living for!" and she spoke rapidly and with enthusiasm, as if unconscious of another's presence.

"You have not a word, not a look for me, Evelyn," said the young man, reproachfully, looking wistfully at the form beside him, in its stately grace.

She turned her face slowly toward him and said, bitterly,

"Are you jealous even of the bright, sunny weather, Cousin Harry? Can you not leave me free to enjoy my own thoughts?"

"Why may I not share your thoughts?" he answered, gently; "or have you cast me out of them altogether?"

"By no means; but I do not like to be forced to talk. You are unreasonable, Harry; indeed you are."

"Unreasonable, Evelyn! No wonder, for you drive me half mad."

"Indeed! And what now?"

"Cold as an iceberg to me—in raptures now with a book, and now with a picture, and now with a fair day; or, worse than all, giving your smiles to some new admirer. You know, Evelyn, how my whole soul is linked to you, and yet you grudge a word, a glance, to tell me what I have a right to demand from you. Yes, a right;" and the manly countenance of Harry Jewett grew almost fierce with emotion.

But his companion expressed only impatience. Laughing lightly, she said,

"If you are to use such language, then the sooner that right is canceled the better. Let us understand each other, if possible. I have told you many a time that I can not always command sweet words at your pleasure, but must follow my own moods. I am not a person of one emotion, and your excitement annoys me. Can't you be somewhat more self-possessed."

"Pardon me," said he, sadly, "I ought to trust you; I do. But the thought of how soon I am to be separated from you, from the light of your countenance for a whole year, is so hard."

"Well, let us be good friends, then, and don't be so impetuous again. By-the-way, is Captain Allen to dine with us? Put on your best face, and do not be jealous." And nodding maliciously, she hurried on to join the rest of the party, leaving her vexed companion to recover his composure in solitude.

A spoiled child, Evelyn Forester had grown up with an absorbing passion for admiration, which she had so much skill as to hide from ordinary observers, appearing rather indifferent to it than otherwise. In her character was a singular mixture of mean and noble qualities. Her vanity was not confined to a regard for her personal charms; it impelled her to a careful culture of her powers of mind, which were by no means inferior. She had a strong love for the good and beautiful in the abstract, and kindled into a lofty enthusiasm for heroic and self-denying deeds, that was somewhat inconsistent with the real selfishness and unscrupulousness of her nature. Poor Harry Jewett's intense admiration had won her favor, and so she became engaged to him with the mental reservation on her part, "to be broken whenever I please." He fluttered about her beauty, now attracted, then repelled, but always unable to overcome the inexplicable fascination which was the secret of her power. It was an unfortunate bondage in which she held him, and his really fine character was gradually becoming weakened and palsied in it, when to his distress, and equally to his benefit, she took a sudden freak to comply with her father's oft-repeated request, and spend a year at the North.

"How beautiful she is!" thought Lucy Forester, on the evening of the day that brought her half-sister to her loving welcome. "How like a picture—stately, but winning! Ah, I wonder what Ralph will think of her? He can not help being pleased with her." And a sharp pang crossed her mind, for which she reproached herself immediately, and fell on her knees beside

the white-draperied bed, praying that she might be kept from envy and all evil, and made only loving to all her fellow-creatures. So it was with pure pleasure that Lucy presented the lover of whom she was so proud to the sister of whom she was scarcely less so. They, on their part, regarded each other with a degree of mutual surprise. Miss Forester, who had measured her younger sister according to her own standard, had set her down as a weak, or at most an entirely ordinary character, and never entertained a suspicion that the lover of whom Lucy had timidly told her was more than a mere commonplace—and commonplace men were so disagreeable! But here he stood; and she could not deny that he was distinguished in person and manners, one to be remarked in a crowd; and Miss Forester's very cool salutation was accompanied by an unspoken remark—"I will become better acquainted with you by-and-by." On the other hand, Mr. Guernsey, who made it a matter of principle to consider every new acquaintance guilty of being disagreeable till they had proved to the contrary, was slightly impressed by Miss Forester's indifferent manner and nonchalant air. "Really, she was fine-looking; not a mere doll-face, nor a bold, black-eyed beauty. Above the usual type of woman, decidedly."

Evelyn seemed in no haste to fulfill her resolve, but bided her time, content, meanwhile, with bringing into play the whole battery of her fascinations, while she attacked Mr. Guernsey's self-esteem by her apparent indifference. She watched, with a curiosity almost inexplicable to herself, the result of her wiles. Not that her heart was interested; for were not she and he each pledged to another? Only Mr. Guernsey was a new study of human nature—a *rara avis*—whom Miss Forester would dissect and analyze for her amusement and instruction—nothing more—and the young lady looked demurely into her mirror, and gave a sort of virtuous frown at the large blue eyes, out of which some demon had seemed to suggest the thought aforesaid respecting *heart*.

Ralph Guernsey did one of his literary friends the honor to bring him to see his bride-elect. But the bride-elect, though as self-possessed as a marble statue, was almost as still. Utterly unused to the genus lion, she was somewhat in the attitude of a lamb, just about to be pounced upon by two of the fiercest of their kind. By-and-by Evelyn came to the rescue. Dressed though she was, richly and almost gayly, Lucy's fastidious tastes were almost disturbed; but Mr. Guernsey's eye failed to notice any imperfection, and his friend gazed upon her, something as if the goddess of love and beauty (to speak classically) had descended from heaven, or ascended from sea-foam, before his eyes. Evelyn held her peace at first, watching with inward amusement her sister's embarrassment and the heavy efforts at conversation. Soon came her time, and she very modestly hinted an opinion which had force enough to excite the attention of the stranger. Then she grew more confident, and measuring her ground well—brilliant, and finding an appreciating ear—enthusiastic. Mr. Guernsey's literary friend was somewhat amazed, and more delighted, and but that he had already a wife and children twain would have been almost ready to fall down and worship. As for Mr. Guernsey, he had at first some disposition to be offended, and took refuge in a side conversation with Lucy; then began to listen in spite of himself, and even condescend to become interested.

It was vexing to his pride, however, when his friend exhausted his vocabulary of praise upon Miss Forester, and ignored the existence of Mr. Guernsey's purest-rayed gem. Lucy was too quiet—he must confess to himself—not that he would have her so demonstrative as her sister—no lady should manifest so much feeling, especially on abstract subjects—unfeminine altogether; but his betrothed should not allow herself to be thrown quite in the shade, fair lily though she was.

So ran the reflections of Ralph Guernsey as he entered his comfortable bachelor-lodgings, and musingly poked out of the coals visions of delicate features shaded by heavy brown locks, and clear dark eyes, over which the lashes often brooded dreamily; this alternating with a face glowing with the warm flush of excitement, around which fell tresses of wavy chestnut hair; and again a band of rosy children in frolicsome attitudes, as if dancing to the sound of merry music. Indeed, Mr. Guernsey, are you caught dreaming? A strange state for a man of your stamp; and so you have just discovered, as you busy yourself in that strange-charactered volume that lies open on your table.

"Don't think of rising, Lucy dear," said Evelyn, with the utmost tenderness, as she bathed her sister's forehead and stroked back her disheveled hair; "this violent headache demands perfect rest. Can you not give up seeing Mr. Guernsey this evening?"

A flush passed over Lucy's colorless cheeks, and she said, "It will seem strange to him, and a headache is a slight thing. Even papa is apt to consider headaches as mere whims;" and she rose, pressing her hands to her throbbing temples, but was compelled to sink back again by pain.

"You see; you can not sit up. Let me make your excuses to Mr. Guernsey, and I will send Nancy to sit by you while you try to sleep."

"Do, please, Evelyn. You are so kind—how did I live so long without my good sister?" and Lucy closed her eyes and tried to quiet herself to sleep, while the good sister, after shading the light and summoning the servant, departed to the parlor to do her duty there.

Mr. Guernsey accepted the excuse, with tenderest regrets, of course, but did not think it necessary to depart at once; and Evelyn pursued the path of duty still in seeking to console him. Under such merciful ministration his regret was soothed. Under the sunshine of her presence his iciness thawed so fast as perceptibly to affect the thermometer of Evelyn's feelings, which, however, rose rather than fell, as it should, to

make the metaphor complete. Was Mr. Guernsey fond of music? She could hardly doubt the fact, though Lucy had never spoken of it, perhaps because Lucy was very little of a performer herself.

Yes, intensely (*true*, as far as any of Mr. Guernsey's feelings could be intense); he doubted not Miss Forester made up for her sister's lack in that respect. Oh no, not at all; but she loved music, so much indeed as to make her dissatisfied with all her own attempts. Might he not have the pleasure of listening to her. If he asked it, certainly; she would trust him not to be critical. Evelyn played and sang with great simplicity and beauty, shrewdly guessing at Mr. Guernsey's tastes, and winning unbounded approbation. So that well-fortified gentleman was besieged by ear-gate as well as eye-gate; so successfully, too, that he at last roused himself to some efforts in self-defense. They told very well upon the besieger. It was not often that he thought it necessary to talk sense with a lady, but when the time came no one could talk better. He was really eloquent. His fine eyes flashed, and he was quite conscious that he was doing and looking very well. While his listener, half-surprised and wholly pleased, bent her graceful head slightly forward, and her eyes answered when her lips felt themselves incompetent—all entirely as became an excellent listener. It was very flattering, to be sure, that he should distinguish her by such a condescension, and so the self-loves of the two, like bubbles, floated up majestically together. Meanwhile Lucy kept vigils sleepless from pain; often, most likely, invoking blessings upon the model pair below, who thought little enough of her — that their own consciences knew, if indeed they owned such commonplace associates. Ah me! it is well for this world that there are meek, praying souls left in spite of all its gloss and false glitter. Of poor estate is he who has not one such—mother, or sister, or wife, or friend—to ask God's benediction upon him at morning and nightfall.

Ralph Guernsey went homeward in a whirl of emotion. Rapidly he strode down the street, in the cold autumn evening, angry with himself for the strange discomposure that had seized him, making him in one evening as a new man. Was this love? He scoffed at the thought. What was it, then, that made the blood flow so quickly in his veins and his pulse throb as he recalled the image of Evelyn Forester, looking up to him with that calm, Madonna-like expression? Why had he been in such haste to bind himself to Lucy, who was often so insipid? What a wife Evelyn would have made him! What a lustre she would have added to his future dignity as the head of a family! Alas! why had his ideal become possible only too late? But too late it was, and Mr. Guernsey set his teeth firmly, knit his brows, and tried to be stoical. Evelyn sat in the moonlight at her chamber window, looking down into the street, where almost all sounds had died away, and meditated. By-and-by she rose, and began to walk steadily backward and forward across the room, looking almost like a ghost as the pale light fell upon her white dress, over which her long loose hair streamed like a vail. She spoke aloud in tones clear and almost stern, as she often did, when thinking more earnestly than usual. I will marry this man, and no other upon the face of the earth. I should glory in him as my husband. I love him, and he will soon love me, if he does not already. It does Lucy no wrong—weak child—she does not know what love is. She is half afraid of him now. And even if she suffers for a while, it will be all the better for her in the end. She will transfer her devotion to some one more akin to herself. And poor Cousin Harry—he will be deeply wounded; but that was only a conditional engagement which I formed to please my uncle and aunt, and even if I had never seen Mr. Guernsey, it would have been all the same as far as he is concerned. It would be strange indeed if Lucy were to win such a prize, who does not even know how to appreciate it. A splendid person, talents, influence, wealth; and with this catalogue of Ralph Guernsey's attractions she laid her head upon the pillow for a sleep, over which, if angels watched, it must have been with tearful eyes. How different from this passion, that even in its earnestness could plan and calculate, was Lucy's pure affection! Daily had it grown into an intensity that deepened and enlarged her whole nature while it rose above it. To make some sacrifice for her beloved would have been her delight; to do or suffer some great thing to prove herself worthy of him. The bitterest grief that could have come upon her would have been to see him in his true light; but this she never wholly did. Something of the beauty and glory of that early love always shone around him to Lucy's eyes, even when the reality of it had faded altogether away. A shadow sometimes crossed her path. If Ralph were only not so cold, and would not seem so often quite forgetful of her in Evelyn's presence! She would not expect much of him, since she could not talk or sing like her sister, and was very little of a companion for him. But after all, why should she be dissatisfied? Did he not love her, and had he not chosen her among all women—and the sunshine came again. Yet day by day the cloud grew. Evelyn, becoming more assured of her power, engrossed Mr. Guernsey to a degree that seemed unreasonable even to her gentle sister; while he, led on in spite of himself, was lulled by the voice of the charmer, charming so wisely. It was somewhat late in the day when this cold, practical man opened his eyes and bestirred himself to shake from his limbs those fetters, so delicately silken, that bound him. Struggle vigorously, good giant—what has become of your strength? Nay, let it never be said that a man, especially one who does not believe in love more than in nonsense of any other kind, found a lady's chain too much for his theories to break. But so it was. Decidedly shaken in his stronghold, Ralph Guernsey surrendered without conditions, and the en-

emy entered triumphant, all her perfumed pennons waving in the breeze. Lucy stole quietly down to the parlor, whither her sister had preceded her, humming a merry air which a careless hand was playing upon the piano within. She paused an instant at the door to adjust a stray ribbon, and the music paused. She entered by a side-door, and as she opened it gently she saw in the mirror opposite a sight—very simple, to be sure—which made her heart leap suddenly with a great pang. Evelyn sat at the piano, her hand wandering idly over the keys, while her face was turned toward one which was bending over her, and all aglow with smiles and blushes. Ralph's face was turned away from Lucy, but there was something in his attitude of earnest attention that made all her past forebodings rush back upon her in a flood. It was only an instant before Evelyn discovered her entrance, and the half-audible "hush!" with which she interrupted something her companion was saying only confirmed the suspicion that now forced itself upon Lucy's mind for the first time, in the character of a plain truth. Mr. Guernsey moved toward her with evident embarrassment, and Evelyn strove to hide her confusion in a light laugh. But Lucy seemed to be endowed with an unnatural strength. She shut out for the time the new conviction that had flashed upon her, and through the long hour that followed was the most calm of the three.

When Evelyn left the room a strong resolution nearly formed itself in her mind. "Not to-night; no, I am not yet strong enough," she said to herself. "To-morrow will do. All shall be settled then. I can bear suspense no longer. Since it must be, let it be soon; but not to-night."

When Mr. Guernsey left her, and she fled to her chamber, all her fortitude forsook her; and falling beside her bed, she buried her face in the pillows, groaning and sobbing aloud.

There are times in life when a new nature arises within us; when the gay become thoughtful, youth changes into maturity, and weakness into strength. There are new birthdays of the soul, through which we gain the consciousness of higher heights and deeper depths of experience than we had dreamed before. It was through such a change that Lucy Forester was now passing. With resolutions, prayers, long visions of that which the future was to bring, she entered that night upon her new life. Sadder, but stronger; older, but more wise, the next morning found her after that baptism of sorrow.

"It is true, Lucy, I have yielded wrongly and strangely," said Ralph Guernsey, as Lucy spoke gently and firmly of the past. The proud man was humble before this young girl. "But, believe me, in future it shall be otherwise; you shall have no cause for complaint."

"I do not complain, Mr. Guernsey; and let it be otherwise in that you shall deal truthfully with my sister, who loves you, and whom you love."

"I will wrong you no more, Lucy, but care for you all my life as a husband should."

"God forbid!" she answered, solemnly; "let us not do each other and Evelyn such a wrong as that."

She argued with him long, and he, keen reasoner though he was, was surprised to see the matter in such a new light. So it was right, then, after all, to yield to his own wishes, and very foolish that he should be scrupulous as to the opinion of the world, when the world would very likely second his own feelings. Mr. Guernsey felt that he was too willing to be convinced, but convinced he was; and sweet Lucy, her heart very sore all the while, knew not whether most to grieve or rejoice that her task was performed so easily.

"Evelyn, dear," said she, as she sought her sister, "Mr. Guernsey wishes to see you. Do as your own feelings bid you, without thinking of me."

"Lucy, Lucy, what have you done!" exclaimed Evelyn. "You did not understand — you should have let me explain."

"He will explain all. Go to him; it is all right."

And the heroic girl drew herself from her sister's grasp, sending her to the impassioned words of her lover.

"And you have not loved her all this time, Ralph, but me—only me?"

"I mistook. I fancied I loved her sufficiently till I saw you. Then I knew quite otherwise."

"Oh! she did not know you as I know you, did not love you as I do, or she could not have given you up!"

"She is young—a mere child—and will easily forget."

And so the two dismissed the unwelcome thought of the evil they had done.

When he had gone, Evelyn came to her sister.

"How much I owe you, best of sisters! Oh! Lucy, you can not guess how I love Ralph Guernsey. If I have erred in loving him before this you will pardon me, for I may trust your goodness wholly."

"You may trust me, Evelyn. I desire, above all things, your happiness and his." And her voice almost failed her as his image rose before her. "Only let us not talk of it to-night. I am very tired—weary with the excitement."

"Dearest sister"—and Evelyn bent forward to kiss her forehead, but a kind of instinct, like a shrinking from the touch of evil, made her draw back and push her sister gently from her—"only one thing more, my darling. You can guess how much it troubles me. How will our father regard this? I dread his anger, Lucy. Think —I am almost like a stranger to him; not his child and pet, as you are."

"I will see him to-morrow, Evelyn, and make him understand it all. He will be indulgent, as he always is—dear, kind papa!"

And with this new self-denial Lucy crowned her great sacrifice, smoothing away difficulties, soothing her father's just anger, and making things appear reasonable, and right, and nat-

ural. Verily there is no logic like that of a strong, faithful, unselfish heart!

And what shall I say of the wedded life of Ralph Guernsey and Evelyn Forester? Who should be more happy? Did they not love one another? Had he not won a bride peerless in mind and person, presiding over his mansion as a queen might over a royal palace—a star in society? And had not she obtained the object of her ambition, and gained what her heart most craved? Were not their children brave and beautiful? Did not the wealthy and the learned, the wise and the great, compose the circle in which they moved? Who could ask more than this? Of the jarring of will with will, the conflict of hard natures, each strong in its idiosyncrasies; the jealousies, the growing lack of sympathies, let us not tell. Whether Ralph Guernsey did not sometimes think of the love he had thrown away, and have glimpses of a purer and better life to which it might have led him; whether his wife ever remembered with regret the warm, earnest passion of her Southern cousin, are matters into which the world considered it wrong to pry. Besides, what are such trifles, as weighed in the balance with those substantial goods mentioned above? Draw the curtain upon the lives on which God, and good angels, and true-hearted men and women look with pity and sadness.

For all losses there are gains. It is something not of man's ordaining that, sooner or later, sorrow and evil find a compensation. So when one soul chooses the lower good, and seeks it devotedly and only, another may be led by the very grief of that fall to "higher levels" of acting and being. So was it with Lucy Forester. Whatever bitterness there might at first have been in her disappointment, time, that heals all wounds, tempered and turned it into sweetness. In the gentle ministrations of home, the light of her parents' eyes, and the comforter of their failing years, she found no narrow sphere of influence. But this was not all. Rising from the discipline of sorrow to a fuller consciousness of the great meaning of life, she came to be a minister of love to many, through the means of an almost holy though thoroughly woman-like life. Whether she ever married—whether it was ever given her to fulfill what, we can not question, are the loveliest and noblest duties of woman, dwelling amidst the pure influences of childhood and the joy of a husband's affection—we will not say. For be that as God wills it, there is never a life fruitful in good works, and shedding the radiance of kindly feeling through all its sphere, great or small, to whom the full measure is not meted back. A genial author speaks with pity of the unloved ones. God be thanked, say we, rather, that there need be none such; that to the homeliest destinies may cling the tendrils of some fair and fruitful growth; that, to satisfy these strongest human needs, our Father has provided resources as manifold as those with which the bare rock amidst the stormy waters is covered with soil, and greenness, and bloom.

LITTLE CHILDREN.

THE arrival of a baby in a family is a not very unusual occurrence; and without any very elaborate antiquarian investigations, we may safely believe that such events date back to the remotest ages, and are likely to continue for ages to come. Yet the coming of the little stranger is always a great circumstance; and once in our lifetime, however quiet may be our temperament or small our ambition, we make a sensation, and are the observed of all observers. The baby, who is usually awaited with anxiety, is welcomed with open arms; and in spite of the present formidable aspect of the bread question, and the frequent reason for calculating the proportion between the size of the bread-basket and the number of mouths waiting to be fed, the new claimant contrives to find a home with a hospitality perhaps quite as cordial in lowly as in stately households. Immediately the new-comer begins to show that marked characteristic of every new age, the revolutionary spirit; and the first shrill cry that announces his advent heralds his assault upon all the settled habitudes of the family. Every thing must yield not so much to his whims as to his dependence, and the whole family, from the old grandfather—if such venerable head there be—down to the least pet of the nursery who has just graduated from babyhood, is enlisted by a resistless sympathy in the service of the little pensioner. The baby rules in the majesty of his weakness; and while other thrones are perhaps becoming a little shaky, this majesty keeps its seat and stands among the established institutions of our race.

We are writing perhaps somewhat pleasantly upon so grave a theme as childhood; but we trust that our cheery tone, like the laugh of childhood itself, will be found to win tenderness, as well as to express joy. We confess to being lovers of little children, not only in the abstract but in the concrete; and while well aware that the stern lessons of political economy may hint a certain limit of moderation in the philoprogenitive ambition, we know of no reasonable limit to the affection, and have no fears that good Jean Paul's creed will become too popular—that creed which all catechisms might admit, "I love God and little children." In fact, the affection that little children win from us interprets God's love to us. God loves us not because we can help Him, but because He helps us; and the best that He asks of us is that we should be willing to let Him help us by his providence and grace. He is glorified not by rising above Himself—for the All-mighty and All-perfect can not rise above Himself—but by his condescension; and the anthem "Glory to God in the highest," was heard on earth when the Eternal Being descended to our humanity and dwelt with the Holy Child at Bethlehem. As we in our poor way repeat that condescension, we have a nearer sense of God's love; and as we befriend those whose helplessness claims our care, we rise to new wisdom and new joy. We may not, indeed, entertain any such philosophy

of loving-kindness, yet may none the less have its fruits; and undoubtedly the new peace that comes into a family with the little child's coming is proof that the hearts that reach down in such tenderness to that little one are not only opened by parental affections, but also by filial faith, and the soul, like the seed-corn, as it presses its roots into the earth, opens its leaves toward heaven to drink in the rain and the sunshine of God. Whatever may be the reason God's blessing goes with babies, and we do not care to say what kind of a world this would be without their presence. The monk and nun share in the benediction, and, if nowhere else, they find something to pet even in the hour of their devotion, and there is to them something human as well as divine in the holy mother and child over the altar. The priest is no priest of God unless he leads little children to the Good Shepherd; and as to the celibates not under ghostly vows, and to whom we lately paid our respects, the bachelors and maids among us, we can promise them little true peace unless they continue—as they generally do—to care for some brother or sister's children in the absence of any of their own.

We are the more ready to say our word for children because, in spite of the manifest tenderness of our American people toward their offspring, there are symptoms of a national conspiracy against childhood, and Herod is out-Heroded—not by any wholesale slaughter of innocents, for such an assassin would be torn into inch pieces by our mothers before he put his hands upon the second victim, but by the prevalent impatience of the slow march of nature, and the rage for crowding the early bud forward into premature flower and fruit. If many people could have their way there would cease to be any more little children, and the babies in long clothes would stride forth in pantaloons or petticoats to astonish beholders with precocious feats, as marvelous as the duties of the learned fleas, and quite as honorable to our humanity. We, of course, protest, as we have done before, against this whole forcing process in every stage of its development, and most of all in the early stage, when the plant is so tender that fatal violence may be done to its delicate organism.

We say then, first of all, let us secure to our little children their proper naturalness, or their just place and development under that system of natural law to which in their physical constitution they belong. Their own mother's bosom should be the first guaranty of this natural right, and we are quite willing to be voted very stupid and old-fashioned in insisting that every mother should nurse her own child if she possibly can. We have no words to express our condemnation of the idea, becoming in quarters of somewhat equivocal fashion not uncommon, that the mother's natural office should be made over to some hireling, and that it is better to trust the hope of the family to some strange breast—perhaps to some half ogress with blood tainted with rum or what is worse—than break the mother's rest, or keep her from midnight routs, by care of her child. If a mother is stinted by nature in the fountains of aliment, she must submit to her privation and do the best in her power to supply her loss by other aid, but even then she ought not to think her care abated, but rather increased, by the transfer; and no wealth nor service can dismiss the mother's eye from its providential watch over her offspring. We believe in refinement, and are lovers of elegance; but we hold the refinement and elegance to be empty pretension that undertake to slight honest human instincts, and try to be wiser than God and nature. We are not, indeed, ambitious of playing the physiologist, and entering into the particulars of the nursery, diet, bathing, clothing, and exercise of children. It is clear that immense errors prevail in each of these respects; and the bills of mortality, that show so large a portion of our race to be cut off in infancy, prove that all the mistakes are not to be charged to the doctors, and that so costly and precious a product as human life is most lavishly and recklessly squandered. The old system of overdosing has been matched by the new system of overpetting or overtraining; and perhaps as many children have been destroyed by being daintily kept from the fresh air and free muscular activity as of old were destroyed by the laudanum bottle and its attendant abominations. We can not rejoice too much in the comparative emancipation of the nursery from the apothecary's shop, and are quite sure that the regular medical practice is not surrendering all the honors of this emancipation to the votaries of infinitesimals, but is disposed to give even less medicine to children than anxious parents often desire. Let this negative reform be carried out into a more positive policy, and all the blessed agencies of light, air, water, and motion will win new honors in the field so long occupied by drugs, and often make the grassy play-ground a better herbarium than gardens of balm and poppies, saffron and senna and rhubarb.

We are well aware that the idea of entire naturalness may be carried so far as to be run into the ground; and some of our own champions of nature so glorify instinct at the expense of discipline as to remind us of what Voltaire said of some of the extravagances of poor Rousseau—they made him feel like getting down and going on all fours. Yet it will be found that they are poor students of Nature who find any follies in her teachings; and the freest physical development will be helped instead of being harmed by due regard to the superior moral and intellectual laws. Thus the proper check upon indolence and the sensual passions is found in the just development of the higher muscular and nervous faculties, and the child who is physically well educated is by this very fact raised above the merely animal life by being made physically as well as morally a truly human creature. That we too often miss the due method of physical discipline appears not only from the frequent sickness of children, but from the stiffness and want of ease that seem to possess them as soon as they come under our training hand, and to present

them to the world as the only young creatures that are not free and graceful in their movements. We have made some improvements in the dress of boys and girls, that give nature fairer play; yet much remains to be done to complete the emancipation, by putting off all cramping encumbrances and allowing every limb and muscle full sweep. Instead of leaving the fashions of dress to a set of dashing *modistes*, we would submit them to a council of artists and physicians, and so strike a brave blow at once for beauty and health in the nursery, with the hope that the offspring of God's noblest creature might not always surrender the palm of grace and freedom to kittens and lambs.

The question of the intellectual discipline of children is closely connected with their physical training, and many are the victims of the book and the school-room. The old method was to consider the school as a kind of prison-house for the scions of our perverse humanity, where learning was to be forced down reluctant throats by terror, in the absence of any intrinsic charms in the medicinal draught. The staple of study was in the main the work of the memory, and improvement was measured, like bricklaying, by the foot, the quantity laid being final proof of the work done. Rules of grammar and arithmetic that had no sort of lodgment in the juvenile understanding were laboriously committed to memory, and verses of Scripture and poetry were learned without stint. This old-fashioned system is exploded, to the infinite relief of millions of otherwise cramped muscles and aching heads. It will be well if the new system does not fall into another kind of narrowness by dismissing the memory from its rightful office, and forcing little children to be philosophers before their time. Childhood loves variety, and the alternation of activities that is so essential to the comfort and energy of us all is imperiously necessary to the development and even to the sanity of children. They soon weary of one thing, and judicious training will seek to study the laws of mental alternation so as to secure unity in variety, and by the interchange of exercises lead out the faculties in due order and force. Nothing is clearer than that little children are soon tired of one attitude of body, and a careful observer will note the same weariness of one attitude of the mind. The little fellow who has been sitting an hour aches to stand or walk or run; and so, too, when he has been receiving impressions from his book or teacher, he aches to change his mental attitude, and give expression to his feelings or ideas by some positive act. If we scrutinize this necessity of change, we shall find a remarkable illustration of it in the senses most essential to education, which are created as if it were in couples, as if to relieve guard with each other. The nerves of sensibility exchange labors with the nerves of motion, so that when we receive a sensation we long to make some corresponding muscular movement, and our condition is intolerable when our nerves are constantly excited and our muscles are kept in rest. The ear and the eye, each in its way, illustrate this law by alternating with their natural allies the voice and the hand. When we have listened, we long to speak; and when we have seen, we long to touch. So, on the other hand, when we have spoken we are ready to listen, and when we have touched we are the more ready to see. The same interchange of functions may be traced throughout all the faculties of the mind, and it will be a new day in the education both of young and old when the vast significance of this law is discerned, and by a wisely-adjusted alternation of exercises variety and unity of culture may be secured, and monotony and fickleness may be alike set aside. It will be then found that the just discipline of children is not the dull, unwholesome thing which it is often supposed to be, and that the work of the school-room may gain not a little life and force from the sports of the play-ground. We do not, indeed, propose to do away with all hard work in school; for if there were no hard work there could be none of the happy feeling of relief when it is done, and play would lose its zest if all the hours were pastime. What we ask is that study should be in accordance with and not against the nature of the mind, and so the terrible habit be shunned that makes study so false and spectral, and shuts the world of books out of the free air and bright sunshine of nature and of God. The very tones which children, even bright children, often fall into the moment they open a book tell the whole story; and the transition from the free, ringing voice of the play-ground to that formal drawl or whine, proves that the mistake of separating words from things has begun thus early, and the blight of pedantry has fallen upon these fresh and opening buds of our hope and joy.

We suppose that the root of most mistakes in the education of little children comes from overlooking the important distinction between the lessons that are to be put into them and the mental life that is to be brought out of them; or, in other words, from forgetting that the mind is not a sheet of blank paper to be written upon, but a leaf whose vital organism is to be developed. Children are thus not only to be taught, but they are to be animated; and the proof of their proficiency is not so much in what they *know* as in what they *are*. Sometimes the contrast between the child's own mind and his learning is most striking; and if frequently the lesson is in advance of the little student's thought, the thought is not seldom in advance of the lesson—as in the case of those startling questions and marvelous fancies with which the pets of the nursery sometimes confound the wiseacres of the parlor and library. Probably these questions and fancies take the child quite as much by surprise as they do the parent, and they come not from any theory or purpose, but from some spontaneous impulse, which shows that, in childhood as in maturity, the mind within us, God's generous and mysterious gift, is greater and more fruitful than our own will or calculation. Whether we think of it or not, a large part of the archness of little

children which so delights us comes from this contrast between their mind and their acquirements. There is a charm in the lisp of their words, as in the stumbling of their steps, that presents to us in playful contrast their great aspirations and their small achievements. There is something in them very young, and something very old, and the jumble of bright intuitions and funny mistakes in their expressions reminds us of the odd figure which some urchin of the nursery cuts when he buries his head under his father's ponderous hat, or nestles in his grandfather's roomy arm-chair, with spectacles gravely mounted upon the miniature nose. The old element in children comes from the rational principle, which is not the creature of the schools but the gift of God; and it is the flashes from this true light that so often startle us with signs of intelligence in children quite as incongruous with their years as father's hat or grandfather's arm-chair.

It is important that this distinction should be carefully noted both in school education and at home; for ill fares the training that counts the mind as naught but a passive tablet, and the lesson as the only vital power. Even the faculty that holds the humblest place in the scale, and is usually thought to be the mere drudge or baggage-master of the intellect—the memory—is not a passive tablet, but a vital force, and holds no truth firmly without taking it as a truth to be assimilated with some measure of vital sense, instead of a dead tradition to be buried. A little child's memory is surely a living force, and any thoughtful observer who watches its spontaneous play, as it produces and reproduces its vivid impressions of scenes and characters in such marvelous round, will not wonder that the ancients called Mnemosyne the Mother of the Muses, since the fancies of the nursery, as well as the inventions of the drama and the epic, come from the mysterious power that receives all impressions of nature and life, and recombines or remembers them in such vivid and novel combinations. We who have children of our own know well that the degrading theory of the materialist as to the native powers of our children is far less reasonable than the poet's beautiful picture of the exuberances of these powers in their spontaneous play, and that the faculty of memory thus presented by Wordsworth deserves more respect, and claims more inspiration, than dull pedants believe:

"Behold the child among his new-born blisses—
A six years' darling of a pigmy size!
See where, 'mid work of his own hand, he lies,
Fretted by sallies of his mother's kisses,
With light upon him from his father's eyes!
See at his feet some little plan or chart,
Some fragment from his dream of human life,
Shaped by himself with newly-learned art;
A wedding or a festival,
A mourning or a funeral!

"And this hath now his heart,
And unto this he frames his song:
Then will he fit his tongue
To dialogues of business, love, or strife;
But it will not be long
Ere this be thrown aside,
And with new joy and pride
The little actor cons another part,
Filling from time to time his 'humorous stage'
With all the persons down to palsied age
That life brings with her in her equipage;
As if his whole vocation
Were endless imitation."

Happy will it be for us when such true and cheerful philosophy is carried out in our schools and households; and, while all wholesome instruction is given and firm discipline is applied, all care shall be used to quicken the intellectual faculties without cramming them with crude verbiage, and to bring out the active will without breaking its buoyant spring under arbitrary appliances. There is something in the free and healthful development of a child's mind that acts upon his whole future, and justifies us in applying to it one of the sacred words of religion, or in calling the child mentally regenerate who is thus newly and well born into the atmosphere of truth and resolution. Too many of us bear the marks of the cramping process from our childhood, as of an imperfect birth; and it is not only in crooked spines and round shoulders that we have reason to remember the twists and stoop that set their mark upon us in our tender years.

What we have said of physical and intellectual training applies with equal force to the heart, or to the whole range of our affections and desires. It is by the heart that little children mainly rule us, and by this that we should rule them. In fact it is impossible to separate their affections from their senses and thoughts, or to run through their mental processes any thing like the sharp line of demarcation which metaphysicians run between ideas and emotions. Even the bodily senses of a bright child are full of affection, and a red apple or a downy peach is grasped and devoured, not in gluttonous sensualism, but in rapturous enthusiasm, as if the palate were connected with the highest sensibilities, and a sweet taste, like a delicious fragrance, could waft the fancy into the land of the blessed. We profess to know children pretty well, and we have seen too much of the old Adam in their moods and freaks to allow us to call them angels; yet we do sacredly recognize in them a wealth of ready affection which it is treason against God and humanity to deny or to neglect. Their very weakness is ready to open into a precious grace if we will only guide it wisely, and the child's natural dependence soon rises into a filial faith. This trusting temper in them is a great comfort to us, by rewarding our protection, and when wisely guided it is a great blessing to them, by leading them to the true rock of reliance. There is something in the perfect trust in which a little child comes to our arms that opens all the springs of loving-kindness; and if the lion passions within us are ever near the golden age when they are to lie down with lamb-like gentleness, it is when a little child leads them. This ready confidence goes naturally with a spontaneous good-will, and nothing pleases the little one more than to be employed in some affectionate service, so that often the best cure for a freak of petulance is a

call to some small mission of love. A bright boy of one of our friends took on bitterly and would not be comforted when he heard that his father was going to Europe, but immediately dried his tears when told by his father that he was expected to look after the family, and especially to take care of mother's comfort. Although just out of his petticoats he was delighted with the idea of doing something, and so proved the wisdom of that philosophy which prescribes active kindness to others as the medicine for our own complaints. The young heart that so easily trusts and loves has quite as ready a spring of joy, and it is marvelous upon how small a capital unspoiled children can be happy. Too soon we allow them to unlearn this blessed alchemy, and, instead of turning all things into gold by the sunshine of their native glee, they are perversely led to wish to turn gold into all things by the dazzling glare and feverish heat of false fashions. Any one may see the two methods at a glance who will take an exact account of what a healthy child in the country needs to set him up in the full play of his joy, and compare it with the huge and never-ending inventory of novelties and dainties which are essential, we will not say to the happiness, but to the decent quiet of one of the pet specimens of our too artificial city manners. A half dollar will buy the marbles, top, and hoop that will insure the delight that is rarely won by the uncounted gold that is lavished on costly toys and trash confectionery. It is well to keep this native fountain of joy open and flowing, for whether wealth or limitation be the lot of our children, they can have from us no better heritage than the habit of enjoying simple pleasures, and thriving on "human nature's daily food"—the common gifts of good Providence. A child in the family with this spirit is a well-spring of comfort that refreshes the whole house with living water; and the care-worn father, as he comes home from his business and takes such a little piece of blessedness to his heart, needs no metaphysics of optimism to make him believe that God is good, nor any brandy or billiard table to give his spirits a reaction from the yoke of labor.

How to secure a child's heart in its proper trust, affection, and joy, is, of course, a great question, and we do not aim to have any new theory of moral and religious training. Of one thing, however, we are quite sure—the superiority of practical example over all speculative teaching. A child may have morality and religion, yet can not easily be a theoretical moralist or theologian, and must learn of God and humanity in the school of actual life and genuine experience. The true way to teach little children moral and spiritual realities is by presenting these as realities, and allowing the facts to precede and suggest the interpretation, just as, in the study of nature, the things go before the definitions, and the flowers and the stars are seen with the eye before botany and astronomy are read with the understanding. On this principle a true and genial home-life is better discipline for the child than any lectures on domestic economy, and a broad and earnest church-life is far better than bodies of divinity or libraries of ecclesiastical history. In this conviction thoughtful and practical persons of all religious creeds seem to be agreeing; and there is something quite emphatic and encouraging in the universality and warmth of the desire to open the fold of the Good Shepherd to the young lambs, and nurture children in the faith that the Christian Church is their true home, and they go from their own Providential mother in renouncing or slighting her watch and care. Nothing is more marked in the religious history of our own country than the disposition to secure to childhood its spiritual birthright, and to confirm a holy faith by the charms of early association, as well as by the light of timely instruction. If the strength of our national attachment to Christianity were to be put to the test, it would be found to have quite as strong a hold upon us by its little tendrils as its stout branches, and that many a strong will is fastened to the Rock of Ages by the loving faith of little children, those tendrils of the human vine.

We could write on to any length upon a topic so winning; but we must not indulge our own humor at the expense of the reader's patience, nor forget that little children are not in every home, and that time, that pushes them on toward maturity, as well as death, which so often cuts them down in their blossom, is calling them away. Yet they never do go away; and childhood, whether it ripens into manhood or is stricken by death, lives transfigured, not blighted, in every loving heart. This view of the subject should not be slighted; and it is important to have an eye upon the future influence of this spring time, when it becomes a cherished remembrance or may become a disheartening regret. We do not believe indeed in keeping such anxious watch for the future as to forget the present, nor in thinking so much of our way of living as to lose the zest of life itself. We can be happy, however, in our own or our children's early years without any premature care or precocious ingenuity. The method that best serves the present need best secures the future heritage, and the young life that opens most genially and healthfully under vernal skies and breezes has best hope of summer blooms and autumn fruits. It will be found that the most pleasing amusements, like spring buds, have a prospective utility, and the memory of a truly happy childhood is a treasure of manly strength and joy. It would be well if parents and kindred would bear in mind this charm of early association in their holiday gifts and festivities, and thus lay up for the little ones a store of enduring memorials and satisfactions, instead of wasting so much time and money upon flashy trifles that last but for a day or a month, and have no prospective worth or meaning. We need all such ministries to keep our own hearts fresh and young by the remembrance of our early days; that time, instead of being the sepulchre, may be the garden of our youth, where the seeds

of our young joys may spring up and bear blossom and fruit an hundred fold; making us thus younger in feeling as we are older in years, and bidding us, in the words of the blessed Master, "enter the kingdom of heaven like a little child."

It is not wise to forget, moreover, that, if children are taken away, there is comfort in other and nearer memorials than the marble and the grassy mound of the cemetery; and our home associations should be sacred with their memory, not only by our frequent regrets and constant love, but by all the hallowed festivals and keepsakes that keep the absent one from being lost to us, and so secure to the family all its treasures. We need not draw upon any art of rhetoric to tell the grief of a true parent over the coffin of a little child, for it seems like the drying up of the very fountain of life in which age renews its youth, and the charm and freshness of childhood return to us in our hardness and care. Yesterday a smile from that little face took fifty years from our shoulders, and we were merry as the little smiler, and ready to live over with glee the most youthful antics as if they were the play of our own spirits. Now that face is changed, and the burden of years falls back upon us with added weight. Who will wonder at parents' grief when it is remembered how wonderfully the little sleeper blended the powers of memory and hope, and at once revived the old days and cheered on the new. The torch thus extinguished leaves to darkness the field of remembrance and expectation, and no wonder that anguish at the bereavement sometimes verges upon despair. But good Providence brings the balm out of the ground watered with tears; and of all human sorrows none are so blessed and uplifting as that which draws parents upward toward the little ones whose angels do behold the face of our Father in heaven. Do the best that we can for them while they are with us, and whether they go or stay their blessing is still ours, and their trust, and affection, and joy are treasures evermore.

Play on, then, little friends, and be loving and true while you play. We work the more bravely at sight of your joy, and your work will be better if your play opens your hearts, and braces your limbs, and quickens your spirit for the trials and the joys to come. We were little boys ourselves once, and with all our grave lessons we mean to be old boys still.

LOST AND FOUND.

"TWENTY-FIVE DOLLARS REWARD.—Lost, on the evening of January 5, in Broadway or Fifth Avenue, a large cape of Russia sable. The above reward will be paid to any one who will return it to the office of the *Journal of Commerce*."

This, to Miss Julia Lane, was the most interesting paragraph in the newspaper. She read it over and over again. Was she obliged to believe that it referred to the beautiful cape which her father had found in Clinton Place? Very likely the advertisement meant another. People were losing things continually. Then how strange to have it returned to the office of the *Journal of Commerce!* It looked very much as if some one was making capital of lost capes, presuming on the probability of at least one cape being lost in the length of Broadway and Fifth Avenue from the numerous parties in the open sleighs. The omission of the connecting "Clinton Place" confirmed this supposition. No; she was not at all sure that this was the one. She doubted more the more she thought about it.

Julia had been positively unhappy for weeks from the want of a fur cape. So many of the other girls, in fact almost every body, had them. She wondered how they could afford it; but they had them, and she hardly felt respectable without one. Her father had told her that he could not for a moment think of making such a purchase. He had not recovered from his heavy losses of last winter, and his profession gave him a bare support. Devoted to his professional pursuits, and enjoying, too, with keen relish, the society of the cultivated and literary circle in which he moved, he could not sympathize with his daughter's craving for fur capes. So the subject had been dismissed from their conversation, though not from the mind of the young lady. She, too, had higher tastes, but for the time they were obscured. She really felt ashamed to go out wearing her old, narrow, faded mink victorine. Why could not she dress as well as other people?

And now the way seemed to be opened. A fur cape, handsomer than her utmost ambition had aspired to, was brought to her door. It was asking too much for her to relinquish it to such an indefinite demand as that advertisement. Besides, reasoned our consistent young lady, people who wear such capes can or ought to afford to lose them. The loss to the owner was probably but a slight inconvenience, while the finding was to her the gratification of her strongest and otherwise unattainable desire.

Still lower down in the strata of her thoughts was this: Anna Willard has just returned from Europe a rich heiress. George Willard has been quite attentive to Julia this winter, and specially requested that she would call upon his sister, who was on a visit to her uncle. She did not like to go and call upon those stylish people in that old victorine. The cape was exactly the thing to make her feel comfortable and as good as any body. If she could only think it right to keep it!

She pondered the matter all day. She had no mother, poor girl, or perhaps a fur cape would not have seemed of so much importance. Several of her young friends came in during the day, almost all of them the happy possessors of capes, sable, mink, or squirrel; but not one of them, thought Julia, with self-congratulation, not one of them so handsome as—*mine*.

"We have been down to Gunther's," said Miss Bidwell. "His furs are so cheap that mamma said she could not resist the temptation, and bought one for Kitty. You have not got yours yet, have you, Julia?"

Julia had comforted herself by imagining that, in some possible contingency, she might have a cape in the course of the winter; and it had seemed one step toward realizing her hopes to confide them to her friend, Miss Bidwell. How delighted she felt to be able to reply,

"I think that I shall have one soon. I was talking with father about it this morning."

"To think of that school-girl, Kitty Bidwell, having a mink cape! That makes four fur capes in that family. I am sure that father could afford it as well as Mr. Bidwell. I wish that father felt a little more pride about my looks. If I had a mother to care for me!" And Julia burst into a passion of tears, which she imagined were tears of filial devotion and regret. Before she came out of it she felt almost as if Providence had taken her case in hand, and had gratified in a mysterious way the wish denied by her unsympathizing father.

"Any advertisement of that cape?" asked her father at the dinner-table.

"None that answers to this one. I sent for the other papers. The same advertisement is in them all, but it does not mention Clinton Place."

"Where are the papers? Let me see it."

They were up stairs, in Julia's room. She had almost persuaded herself, but she was somewhat fearful that her father would not be so easily satisfied. He was a man of the strictest integrity, and did not for a moment imagine that his daughter would not be as desirous as himself to restore the property to its owner. He did not know the power of a passion for fur capes.

"I think I will advertise it," he said.

"I should think that the owner would do that," replied Julia.

It was advertised (though, through a mistake, not till two days afterward), and not called for, except by a showily-dressed woman, who could not describe it aright, probably another victim to the fur cape mania.

They were going to a lecture a few evenings afterward.

"Suppose I wear that cape, father," said Julia.

"Put it on, dear, and let me see it."

Julia ran up stairs, and soon came down with the rich fur over her shoulders.

"Is it a handsome one?" asked the unsophisticated scholar.

"Oh, very."

"Is it not *too* handsome for you to wear? You know, Julia, that I am not rich. You do not know that I am in debt, and it therefore would not be proper for you to wear an expensive article."

"People will think that it is a present."

"Even that I should not like. We should dress according to our circumstances."

"A great many people, no richer than we are, wear fur capes."

"I know that there are many foolish people who are conscious of having no higher claim to respectability. I should be sorry to have my daughter fall back upon that ground. I am very sure, Julia, that no one whose good opinion is of any value would think better of you for dressing expensively. This striving to imitate others is not consistent with true dignity and self-respect."

"But what are we to do with it, if I do not wear it? It will save buying a cloak for several winters. See, father, does it not look well? It fits me exactly. Some good fairy sent it to me, I have no doubt."

"Yes, it is very pretty, but I am very sorry that we have not found the owner. You are sure that it is a suitable one for you to wear?"

Suitable! It suited her wishes exactly—her *highest* wishes. It was handsomer than any of the other girls'. Now she would not be ashamed to call on Anna Willard. But she did not say this.

"Oh yes, father, it is exactly what I want," she said.

If you could have seen her the next day! But you have seen hundreds with just that self-satisfied air, begging admiration of all the passers-by. "Look at me! I am dressed as well as any body!"

She could hardly walk far enough, so desirous was she to gratify every body with the sight of so much elegance. She scrutinized all the furs in the street with intense interest. She had the satisfaction of hearing one lady say to another, "*That's* a handsome cape!" She met Sophia Burley, and her cape, which last week was an object of envy, now looked so shabby! She saw two or three handsomer than her own, and began to murmur at Fortune for not sending her the best while she was about it.

She met Catherine Perry, who exclaimed, "What a splendid cape! That, to be sure, is worth waiting for. But where are your cuffs and muff? Nobody wears a cape alone."

Julia had thought of that, for her hands and arms felt the loss of their usual protectors, which were not esteemed worthy companions of the new magnificence.

On her way home she went into a shop, and it seemed to her that she was treated with more attention than usual. After making most of her purchases she passed to another part of the establishment and sat down, waiting, with an air of patient condescension, while a young woman behind the counter received and returned the cordial greeting of a plainly dressed lady in deep mourning. This haughty air was not natural to Julia. At another time it would have given her real pleasure to witness such a meeting. But to-day she was the slave of the cape, and here were two persons who did not acknowledge its pre-eminent claims. She rose disdainfully to leave the shop.

"Pardon me," said the shop-woman, "I will attend to you at once."

"No matter," said Julia, coldly. "I am in haste, and will not interrupt you."

This was said with an air of superiority which she thought eminently suited the wearer of a sable cape.

She returned home feeling a good deal exalted in the scale of being.

The next day she put on her handsomest dress and the beloved cape which kept both body and spirit so comfortable, and paid her visit to Miss Willard. She was shown into a parlor, whose costly elegance she painfully contrasted with her own simple and more tasteful home. "It is well that I have this cape!" she thought. "How I should have felt to come here in my old victorine!"

Presently a lady in black entered and approached her. To her great surprise she recognized in Miss Willard the lady whom she had met in the shop on the previous day. Miss Willard also remembered Julia.

"I owe you an apology," she said, "for so interfering with your shopping yesterday."

Julia begged her not to mention it.

"I had heard that my old friend, Miss Sawtelle, was there, and went to see her. We were both affected at seeing each other. It was hardly the place for our first meeting after this long separation, which had brought such changes to us both. It was not strange that she forgot her duties."

Julia replied that if she could have imagined any thing of the kind she would not have interrupted them for a moment.

"I know it. I am sure you would not willingly have given pain. She is a noble girl, and I admire her independence in taking a situation where she is constantly exposed to insult from the heartless among her old acquaintances. Her uncle wished to adopt her after her father's reverses; but she said it was better for herself to be independent, and she wished, if possible, to encourage others by her example. I always thought her one of the most cultivated and lovely girls that I know, but I did not give her credit for so much dignity of character."

"It is a great and rare pleasure," continued Miss Willard, "to find a person acting out her own convictions, and living according to her ideal. There is so little individuality among us Americans! We dress, and furnish our houses, and live, in a certain way, because our neighbors do, without consulting our own circumstances or even our own tastes. The English, with whom I have lived the last year, err perhaps on the other extreme; but, in so doing, they show at least a self-respect which Americans in general can not boast of."

"Yet," said Julia, "one does not like to be entirely different from other people. We all judge of others by those outward things."

"I confess," replied Miss Willard, "that my pride would take that direction. When I see all these vulgar people striving to be fashionable—looking as if they carried all their possessions on their backs—having no higher aim than to have their silks, and furs, and laces as expensive as their neighbors—I feel like dressing in serge and hair-cloth. My soul is sick of this mean ambition, this paltry vanity, this self-indulgence and self-assertion! How little they know of the true value of money—of the true meaning of life!"

Julia made a feeble assent, rather bewildered by this new view of things. She was entering into a sphere in which fur capes were not in the ascendant.

"I am afraid that you will think me very severe," continued Miss Willard, with a sweet smile; "but I feel very deeply on this subject. On coming home, and looking at things in the light of a great sorrow, I long to be a preacher of faith."

"Of faith!" echoed Julia.

"Yes; of faith in something nobler and more satisfying than self and this outward world; of faith in a Heavenly Father, who gives to each his peculiar lot and his peculiar duties! Why not take cheerfully what He gives us, without grasping for what He gives to others? Why not be satisfied with His choices for them and for ourselves? We are spoiling the beauty and variety of His plan by this rubbing down of our individual life, and shaping ourselves by others."

And this was the visit for which a sable cape was so necessary!

We will not say that Julia's feelings were not to be envied; for the first awaking of the soul to its own degradation, its own wants, to the consciousness of being so far off from what is most desirable—surely this is infinitely better than self-complacent blindness!

Here was a lady, young, and gifted with all the means of self-enjoyment and self-aggrandizement, one who could turn upon herself the admiring and envying eyes of all the throng of fashion, yet spurning fashion and luxury beneath her feet! Sorrow had added new weight to the injunctions of her dying father, that she should spend the wealth he left her not for herself but for others. Her pure and simple tastes were gratified at little expense. She shrank from every thing which attracted attention to herself. Her free and loving spirit gave itself forth to cheer, to comfort, and to help others. And when she met this young girl, in whom she knew that her brother felt a deep interest, and saw with pain that the spoiler had entered her soul and was eating up its treasures, her heart warmed with pity and sorrow. Her brother had spoken of Julia as modest and unpretending; unlike most New York girls in her simple naturalness. Little did Julia know the mischief that the cape, and the *desire* for the cape, had done. Little did she think that the first time she wore it, when she entered the lecture-room, Mr. Willard's companion whispered to him, as she passed, "If I had seen that cape yesterday, perhaps I should not have been so lenient to Mr. Lane when he came to beg a further extension of our firm. I am really sorry; I thought he had more principle, and that she had more sense."

After this George Willard avoided Julia; and for this even the fur cape was not sufficient consolation.

But the good work was begun. The cape had failed of its great object—the gaining the good

opinion of Miss Willard. Disappointed vanity had taught a hard but useful lesson. In the mortification, the self-dissatisfaction, the almost hopeless longing, Julia was entering the narrow gate of a nobler life. Miss Willard was quick to see it; and not by reproaches or contempt, but by opening new sources of enjoyment, new spheres of action—by leading her to feel what is true and noble in books and in life—she led her young friend, step by step, out of the bondage into the freedom of a life forgetting self, and aspiring to what is highest.

"But you are out to-day without your fur cape! Are you not imprudent, dear Julia?"

This question was asked by Miss Willard, one morning, when Julia called for her to visit a poor family, wearing the old mink victorine.

"Can you wait a few minutes, Anna?"

"Certainly. For what?"

"While I tell you about that cape." Julia gave its history, extenuating naught. "Now, Anna, do you wonder that I do not wish to wear it again?"

Miss Willard listened with the deepest interest. "I am glad to hear this, Julia—more glad than you can imagine," she said. "I thought the cape was not suitable for you."

"And to think that my strongest reason for desiring it was that I might gain your favor! What a rebuke your simple dress was to me!"

"I like to see people well-dressed," replied Miss Willard, smiling; "but I have resolved for myself that there shall be nothing in my appearance to remind any one of the poor stuff which sometimes separates friends. Oh! Julia, was not the way in which I acquired it enough to teach me how little it is worth? In inheriting it I inherited orphanage and sorrow! Death gave it to me—a death which showed me, more than any thing else has ever done, how worthless are the vanities of this life—how great and real are the things which lie beyond it!"

"I am ashamed to tell you of one feeling I had, but I will. I thought, '*She can afford* not to dress well.'"

"And so I can," said Miss Willard, smiling; "and so can any body who has any thing in herself which makes her indifferent to the opinions of others. For my part, I consider great thoughts and great objects, a great joy, a great hope, a great sorrow quite as ennobling as a great fortune."

"But, my dear Julia," she continued, "there is no harm in your wearing the cape since you have done worshiping it. Indeed, it is imprudent to leave it off; and it had best do good to somebody."

"No, I shall never wear it again. It has given me only pain and mortification since the first day I saw you. Discontent and pride and envy are written all over it. The poor have seemed to reproach me for wearing it, and the rich to ridicule me, and my own heart has condemned me. If I could only find the owner how thankfully I would restore it!"

Anna kissed her tenderly, and said, after a pause, "I have something to tell *you*, Julia. That was *my* cape."

"Yours!"

"Yes. I recognized it at once, when you came to see me, by its peculiar shape and fastenings."

"Oh! Anna, what an angel you have been!" And Julia hid her weeping face on her friend's shoulder. "But I am so glad to find the owner! And it will be well for me to see you wear it, to be reminded of my—"

"No, Julia, I shall never wear it again. I never liked to wear it. It was the gift of my uncle, and I wore it only for that reason."

"How could you let me come into your presence? How you must have despised me!"

"You might despise me, Julia, if you knew my heart. What can any of us do in this life but repent, and strive, and look upward to One who knows all, and yet does not cast us off?"

"I do repent—I do strive—I do look upward as my only hope," said Julia, solemnly.

"Do you not think," said Anna, "that we hate the sins of which we repent more than those which are comparative strangers to us? That low back-door of penitence leads us into the safest places."

"But to return to our cape," she continued. "I gave it to you long ago. You can wear it or not, as you please. Do what you like with it. It has caused you a great deal of pain; perhaps in some way it may give you pleasure. Its loss has been a great gain to me. I have received far more than its value in exchange. Now I shall not relax; I am firm."

"If you will insist upon making me a thief, I shall exchange the stolen property into something less liable to be detected."

"Very well; just as you please."

"And I shall wear this horrid old, shabby victorine for the rest of the winter, causing thereby great scandal."

"And your father?" asked Anna. "Will he consent? Does he know about it?"

"I told him all last night."

"What did he say?"

"Every thing that was kind. It seems as if you both loved me better than ever."

"I am sure we do," said Anna, kissing her.

The next morning Julia came down stairs with the cape done up in paper, and handed it to her father. Not if she had stood before him in queenly attire would he have felt such pride in her as now, on seeing this triumph over self and vanity.

"Now I feel like myself, dear father; like your own Julia."

He kissed her tenderly. "You have fully decided to give it up?"

"I desire never to see it again. I shall breathe more freely without it. It has been only a burden. Now, father, will you do the best you can with it, and let me have a little satisfaction out of it at last?"

We must not tell her secrets, but we have no doubt that others, too, received some comfort

from it, who did not know how much more blessed was the giver.

"Do you believe that Julia Lane is wearing that old victorine again! What do you suppose it means? I can not understand it," said Miss Bidwell.

"Nor I, either," said Miss Perry.

Probably not.

Perhaps George Willard understood it, for he spent that whole evening with her, and left her with a decided feeling that she, too, "could afford not to dress well."

THE SONG OF THE TRINITY BELLS.

I AM the D of Trinity chime,
Tol lol, tol de rol, lol;
Swinging, and singing forever in rhyme,
Tol de rol, tol de rol, tol de rol, lol;
Swinging and ringing in steeple high,
A hundred feet toward the sky;
I and my brothers, nine are we,
What is worth seeing be sure we see;
A hundred feet
Above the street
Swing we merrily, watching the crowd,
Watching—and telling our thoughts aloud.
Speak, brother E,
Nearest to me,
Tell us whate'er you hear or you see.

E

A hundred years I have watched the street,
The crowd that saunters idly by,
The marts where men of money meet,
The spots where golden treasures lie;
They stand beneath our steeple's shade
With grasping hands of every grade,
And as our chimes swell on the wind,
Their stolid hearts must grow more kind;
For bells, while ringing on the air,
Bring with themselves a thought of prayer;
What have you rung in music sweet
Along that stately throbbing street?

The bells for a newly-wedded pair,
As they swept the aisles in their flush of pride;
The diamonds glistened in the hair
Of the wondrous wealthy bride.

The bells for the early summoned dead,
As they carry her up to the altar side;
No diamonds glisten on the head,
No smiles to hail the coming bride.

The bells for the old year going out,
For the new year coming grandly in;
The bells for the bannered hosts that flout
The air with shout and martial din.

The bells for the tidings of great woes,
And the bells for the joyful strains of mirth,
For the tribute that a people owes
To great and glorious names of earth.

Where falls the sun in mid-day glare,
Beside this tower of stone,
The hearts of patriots moulder there
In silence, all alone.

The dust of good and gracious men
Was placed beside the portals when
The god of gain, with clutching hand,
Ran not so madly through the land.
Look, brothers, where yon knavish crew
Would cut their cursed pathway through,
Would toss the bones from yonder mould,
Of beauty young, and patriot old,
To gain a trifle more of GOLD.

Chime.

Sing merrily, swing merrily,
Here in the steeple high;
Whatever passes along the street
We will ring it out in the sky.

Listen, brothers, one and all,
To the song of the middle F bell;
Sing ye cheerily all your chimes
For the tale he has to tell.

Sing merrily, swing merrily,
Here in the steeple high;
Whatever passes along the street,
We will ring it out in the sky.

F

A blind man sits on the railing stone
From the morn to the setting sun,
I hear his pipes, with their hollow drone,
All day, as the blind man sits alone,
With a task that is never done.

I see a few of a thoughtful mien
Stand silently by, with a vacant stare;
A few, that are neither clad nor clean,
Stand still to gaze on the solemn scene,
By this stately house of prayer.

I see the thousands every day
Pass by in their pompous wealth;
But I saw a beggar, lame and gray,
Stop twice by his side, on his daily way,
To drop him a coin by stealth.

Shut out from the light of the morning sun,
Shut out from the glare of the day,
Unloving himself, and loved by none,
The blind man stays till his work is done
And the Lord shall call him away.

Chime.

Ring a peal of a glorious chime,
Ring while the crowd goes by;
Listen to sin, to shame, and crime,
And ring it out in the sky.

Ring! ring! ring! ring!
A peal of a wondrous change;
Sing! sing! brother G,
Whatever is new or strange.

G

It was more than a score of years ago
That a beautiful dark-haired bride
Came timidly home with a working man
To labor through life by his side.
At the window of yonder garret floor
I have watched her many a day,
Busily plying her needle and thread,
Stitching, and singing away.

Stitching and singing till nightfall came,
In all the wealth of her charms,

Hoarding her love for that working man,
And pouring it out in his arms.
Many and many a summer night,
Too late for the patter of feet,
I have heard the musical sound of their laugh
Ring happily over the street.

And so he lived, this sun-browned man,
Working away through life,
And never a sound there came to me
Of a single word of strife.
And so they lived for many a year,
And so they live till now;
And just as loud their laughter rings,
And just as smooth her brow.

She never has worn a silken gown,
This lady fair of mine;
But the dress she wears, of a snowy white,
Is rich with a silken shine.
She never has worn a jeweled ring,
But the simple golden band
Remains as bright as the day it clasped
Her trusting, girlish hand.

Chime.

Swing merrily, swing merrily,
Here in the steeple high;
The love and the truth in a woman's heart,
We will ring it out in the sky.

A

Well!
I am A, the elder bell,
Hear the story I shall tell.
Wall Street lies before my sight,
Wrapped in night—
Scheming brains no longer there.
Where?
In palaces gay with damask and gold,
In hovels and holes, both dirty and old;
Sipping the flavor of dainty wine,
Sleeping on linen, rich and fine;
Gnawing the crust of mouldy bread,
Sleeping on straw, for the want of a bed.
There,
Every day, in his carriage and pair,
Spotlessly gloved, with jeweled hand,
Comes a banker of talent rare,
One of the paragons of the land.
This banker of fame
Has a wonderful name.
Widow and child with confidence trust
This banker, who floats in a sea of gold,
Who spurns the metal as though it were dust,
And gains by his ventures a hundred-fold.
Why?
The fame of his gold is a terrible lie;
The hour will come, like the crash of a storm,
When the frantic crowd will cry
Like wolves for his heart-blood, rich and warm,
To have and to hold,
Instead of his gold.
Guilty, and followed by curses and jeers,
The wonderful banker retires,
With the gold he has coined from death and from tears,
And the world in secret admires.

Chime.

Ring! ring! swing! swing!
If we had but the banker swinging on high,
How welcome he should be;
Let it be tolled along the sky
We would keep his company.

B

Dead! beneath the morning sun,
With the work of life undone;
Dead! in woeful, desperate want,
Swollen lips, and features gaunt,
Clothed in filth, a woman lies,
Staring upward to the skies
From her open, filmy eyes;
Young she is, and fair has been,
As yon gazing crowd has seen,
When, in days now passed away,
She has flashed upon Broadway.

Chime.

Ring solemnly over the dead!
Why is this woman here
With never a hand to hold her head,
And never an eye a tear?

B

Not an eye shall shed a tear,
She is dead this many a year;
In her stay of guilty shame
She has even lost her name.
That infernal demon, DRINK,
Rots out every human link;
She has ceased for years to think;
All as pure as flying snow
Till she knew its fiend-like glow.
Stood her mother at this place
She would cease to know her face.

Chime.

Ring a dirge for a human soul,
A curse for the human lie
That holds the brain in its damned control
Till its victims wither and die.

C

'Tis the holy Sabbath-day,
Bells are chiming on the air,
Christian folks are on their way
To the many spots of prayer.
Christian people, rich in grace,
When you bend the willing knee,
Think you of some pleading face,
Looking, "Will you pray for me?"

Think of sin, of shame, and death,
Think of sorrow, ever nigh;
You but waste your Christian breath
When you pass them lightly by.
God, who hears the lowest moan
Which the outcast sighs or swears,
Dying, in the street alone,
Also hears your studied prayers.

Which His mercy pardons first
You or I will ever know;
Which shall be the most accursed,
Studied prayer or desperate woe.
Christian people, save a soul—
This shall be a double prayer—
When the Judgment books unroll
You will find it entered there.

Chime.

Sing merrily, swing merrily,
Here in the steeple high;
Find the love of a Christian heart,
And ring it out in the sky.

SALLY LEWIS AND HER LOVERS.

A GHOST STORY: FOUNDED ON FACT.*

VERY possibly the reader may suppose that he is to be carried back to the dark ages, or transported to some distant region, far as the Blocksberg, because he is about to meet a ghost. We hasten to undeceive him. He is merely requested to step into an old-fashioned coach—as coaches ran some thirty years since, and travel along the well-beaten post-road which, within the memory of living men, formed the great highway between the famous cities of Boston and New York. Having honestly paid his fare, changed horses at Harlem, and lunched at West Farms, he is supposed to arrive, some time before sunset, at the village of R——, a brisk little place on the Sound, duly provided with steamboat wharf, stores, taverns, and sloops. We might easily name the very locality, the precise spot on which occurred the startling circumstance which we are about to relate; but personal considerations, regard for Sally and her lovers, point out a different course, and a general idea of the ground must suffice. Measuring distances by steam, and not by old-fashioned mile-stones, Sally Lewis lived very near New York; a two hours' run in the little steamboat would carry her to town any day. True, the church spires were not in sight from her grandfather's door, but many a summer evening, while sitting in the little porch, Sally had watched the fire-rockets in their meteor-like ascent from the public gardens of the city, and many a winter's night she had stood at her window, shivering with cold and pity, as she watched the angry glare of the flames raging within the bosom of the town. True, the hum of mart and street did not reach the Lewis farm; but the worthy Deacon's radishes and onions found their way, twice a week, to Fulton Market, and the cockney loungers of Broadway came every summer, with the grasshoppers and katydids, to air themselves in the rural walks of R——. In short, the Lewis family were no rude, ignorant backwoodsmen; their position was a favorable one, surrounded by the full glare of enlightenment streaming from the windows of lantern-like academies and school-houses; they knew B from Bull's foot, they had seen the sights of Manhattan; they had beheld General Washington in uniform and wax at the Museum; and, quite as a matter of course, they read carefully one of the two newspapers published every Friday morning in the main street of R——.

The old couple, moreover, were very honest, worthy people, with consciences at least as quiet as those of their neighbors. They owned a few acres of land in the outskirts of the village, and here stood their dwelling, amidst red beans and yellow pumpkin blossoms. The house was small, wooden, and red; just like a thousand others about the country whose inmates have never seen a ghost. Nearly opposite was a pleasant country place belonging to a gentleman who passed his winters in New York, and on their right stood the district school-house, where the children of the community, and Sally among the rest, were supposed to have acquired a vast amount of learning, including all the arts and sciences. There was no church-yard or cemetery in sight, and the only wood at hand was a pretty grove on Mr. Van Wyck's lawn, while all about them lay cheerful gardens and open fields. The highway passed immediately before their door, and it was a road much traveled by coach, wagon, and cart. In short, to judge from appearances, one would never have believed the place likely to be favored by visits from a spectre. It must also be observed that, looking toward the village, one saw through an avenue of Lombardy poplars the wooden walls of the R—— Academy, the belfry of which, very striking in its architectural proportions, looked down upon the neighborhood in full scientific dignity; moreover a Lyceum, delivering learned lectures, met every Wednesday evening beneath the same roof. It would have been only natural to suppose that the bell of an Academy, swinging over a Lyceum, might have laid the ghost which appeared to Sally and her lovers; but such was not the case, and, as if still farther to refute common notions on such points, the moment chosen by the spectre for its first appearance was one little in accordance with the presumed partialities of a gloomy, restless, spirit; it was in the month of June, when all is life and loveliness, and beneath the soft light of a summer moon that the apparition was seen.

Sally Lewis herself, our little heroine, was a tailoress; not a very romantic occupation, you will say; but one that is very useful and respectable nevertheless. It has been observed, by-the-by, that this trade, with the feminine termination to its style and title, is a usurpation upon the sphere of the lords of the creation peculiar to American society. But we hear of men dressmakers at Naples—men-milliners at Paris, why not, therefore, of a tailoress on the shores of Long Island Sound? Let us be thankful that little Sally Lewis did not aim, like some of her ill-starred countrywomen, at being an oratoress, or a parsoness, or a coloneless, but contented herself, in a common sensible way, with needle and thimble. Sally was, moreover, a very clever, skillful little tailoress, managing goose and shears with great dexterity. She was very pretty too, and upon the whole, making certain allowances, rather a good girl—active, neat, good-tempered, and kind-hearted. Her grand-parents, at least, could see few faults in her. Their partiality had indeed spoiled Sally just a little, for to tell the whole truth she was somewhat giddy and vain—two foibles quite enough to bring about a world of mischief. Once in a while the old people seemed to see things in this light.

"But then the child is so young, Nathan! She'll grow more sober presently," said Grandmother Lewis, looking over her spectacles at Sally, who was loitering about the porch, broom in hand, with the amiable hope of distract-

* The principal fact in this narrative is literally true, and occurred within thirty miles of New York some five-and-twenty years since.

ing the attention of a certain young carpenter of her acquaintance, from the work he had just then in hand—repairing the paling of Mr. Van Wyck's grounds opposite the Deacon's cottage.

"I suppose she will, wife. I only wish the girl would take Ben Wright in the end, for he is one of the likeliest young men about here—as good a carpenter as there is fifty miles around," replied the Deacon.

"So he is, Nathan; and I shouldn't wonder if she did take him before a twelvemonth is over. She likes him, I reckon, about as well as any of the boys that come after her."

"Well, I can't say I like to see her treating Ben as she does sometimes. Why she almost teased the life out of him last week going to that 'ere frolic on the water with big Abe Johnson."

"So she did. But that's only her way. Girls is sometimes awful hard on the one they like best. Why I used to be awful hard on you, Nathan, just to see how you would take it," quietly observed grandmother Lewis, wiping her glasses, to take up a stitch in the stocking she was knitting for the Deacon.

A twinkle of sober fun just glimmered in Deacon Lewis's little gray eye as he rolled a bit of tobacco in his mouth, smoothed his thin white locks, and bethought him of sundry heartaches which his Hetty had given him half a century before.

"Why, there was Abe Johnson's grand'ther—wasn't I awful sweet to him sometimes, just for the sake of teasin' you, Nathan? And all the time I cared more for one kind look out of your eyes than I did for Abe Johnson—the grand'ther, I mean—and all his fields and cows and sheep in the bargain."

"You did—did you, Hetty?" said the Deacon, complacently. "Well, you said somethin' like that afore, old woman, fifty-six years last fall, I reckon it was. That's a good while ago; but it sounds kind o' good to hear you say the words now, Hetty."

"To be sure," said the old dame, nodding her head with the confidence of one who had played with the Deacon's heart-strings pretty well in her day.

"Well, I suppose the young folks know what they are about."

"They don't always know that, by a good sight, Nathan. But we musn't be over hard on 'em, for all that. We must give 'em time to come round."

But now Sally had just discovered that she was only wearing out the new broom for nothing, since the porch, with the little walk in front, were as clean as possible. Her sweeping, however, had not been entirely thrown away. Ben Wright had first looked up from his work, then said good-morning, and afterward wasted some five minutes of his time chatting with Sally, finally sawing off a piece of paling in the wrong place. All this was highly satisfactory. Sally had behaved badly during the last week, and she knew it perfectly well, having been guilty of sundry misdemeanors in the way of flirting, right and left, after giving Ben so much previous encouragement that he had fully made up his mind to offer himself at the first opportunity. Sally was, in fact, a little flirt in the grain; I am ashamed to confess it, not admiring flirts at all; but as she was, in most other respects, a pretty good little damsel, we must follow her grandmother's example and not be too severe on her.

The broom was hung up. Sally began to get things ready for dinner.

"It can't want much of noon," she said, tripping about very briskly.

"About five minutes," replied the grandmother, looking up at the wooden clock in the corner.

Sally glanced toward the door. "There's a heavy shower coming up," she observed.

"Yes, and rain is much wanted," replied the Deacon, as he went soberly into the garden to pick cucumbers for dinner.

Sally fidgeted about, now here, now there.

"Grandmother," she said, suddenly.

"Well, child?" answered the old dame.

"It's going to rain hard!"

"It's likely that it will," said grandmother, looking at the clouds.

Here Sally stepped into the buttery.

"The bell will ring soon for noon, I reckon," she added, coming into the kitchen again.

"To be sure it will."

"I was thinking—" Here Sally popped her little brown head into the open cupboard.

"Well, what was you thinking, child?" asked the old dame, with some curiosity.

"Suppose we was to ask Benjamin Wright to come in and eat his dinner here to-day, seeing he's working so nigh the house, and there's such a black gust coming up? If we don't, he'll have to walk the best part of a mile in the rain to his brother's. It's dropping now," said Sally, hurriedly, and turning a little red.

"Why, yes, child. It would be kind o' neighborly to ask him in."

"Only neighborly—just what I thought. And there's the currant-pie I made yesterday, in the cupboard."

"And you've got out a clean table-cloth, I see."

"Why, I thought I might just as well," said Sally, who generally managed the housekeeping her own way.

"Well, I'll tell your grandfather to ask Benjamin, when he brings in the cucumbers."

"Oh, I can ask him myself, grandmother!"

"Do as you like, child"—which Sally was very apt to do without any bidding whatever.

Things were soon ready. The cloth was spread on the cherry table; a broken dish was changed for a better one, to put the cold boiled pork on; a bit of cheese was cut; the cucumbers were sliced; the currant-pie was set on the table; and a bright knife and fork laid by the place destined for Ben.

The Deacon took last week's newspaper, and

sat down in his rocking-chair, waiting for Sally to put the stew on table.

"We're thinking of asking Benjamin Wright to step in and eat his dinner here to-day; it's going to rain hard, and he has a good way to go to his brother's," said Grandmother Lewis to the old man, with a look which added, "It's all Sally's doings, and you see how things are going."

It took the Deacon a full minute to understand the drift of the matter; but when he saw through it he left his chair well pleased, and was stepping into the porch to call out the invitation across the road. But this, it seems, did not suit Sally.

"I can ask him, grandfather," she said, tripping past the Deacon, a pink sun-bonnet on her head, a bright tin pail in her hand. "I must go over the way for fresh water."

So the Deacon went back to his rocking-chair, and Sally crossed the road to the pump. How the invitation was worded we can not say, but Grandmother Lewis, peeping through the scarlet-bean trained over the window near which she sat, reported to her goodman that "Ben looked mighty pleased, and that Sally seemed kind o' bashful for her."

The bell soon rang for noon, and with its first stroke Ben Wright stepped into Deacon Lewis's kitchen, looking hot and happy. He was hungry too. He did, perhaps, only too much justice to the savory stew, the cold pork, potatoes, currant-pie, cheese, and cucumbers; but as he had been hard at work since sunrise, his good appetite on such a sentimental occasion must be overlooked or forgiven. The old couple were well pleased. Sally looked pretty and tidy, and gave only one or two saucy little twists of the head, really in spite of herself as it seemed. She meant to behave remarkably well. Upon the whole, all parties appeared to feel that the stew might prove an important dish to those who shared it together; as for Ben, he came fully to the conclusion that, if he could help it, this should not be the last dinner that Sally was to cook for him. He was entirely mollified by the invitation, and determined to make, that very evening, an unconditional offer of himself, and every thing belonging to him, to his little hostess's acceptance. After half an hour's chat, when the shower had passed over, he went to his work again, and while his auger turned and turned in the piece of timber at his feet, Ben revolved in his mind all the beauties and good qualities of Sally Lewis. Drooping love and expiring hope had been surprisingly revived by the stew. That very morning, when Ben came to his work opposite the Deacon's door, he threw a look at the little sign over the window, "*S. Lewis, Tailoress*," and said to himself, "Sally Lewis is a pretty girl; but that's all that can be said for her. She's quite welcome to walk home from meeting every Sunday with Job Potter for all I care—that she is!" At noon Ben ate the stew. Sally became once more not only "the prettiest girl in R——, but as good as she was pretty." When he went home from his work in the evening his head was so full of her that he did not even see the stage-coach driving past, nor a face nodding to him from the window. Yet that arrival boded no good to Ben Wright, as we shall presently see.

After the young carpenter had eaten his supper he determined not to go back to his task that evening; he was working by the job, and could well afford to give up an hour or two to courting. He would ask Sally Lewis to take a walk, and—perhaps he might ask her something else too.

"What have you put on your Sunday coat for, Ben? is any thing going on to-night?" asked his brother, as the young man stepped up to the looking-glass in the kitchen, to give the last touch to hair and collar.

"Now you're after Sally Lewis again, in spite of all you said yesterday!" interposed his sharp-sighted sister-in-law—no friend of Sally's.

As Ben could not deny the accusation, and as he heartily repented having called Sally a wild thing the night before, he made no reply to either remark.

"I thought Sally and Abe Johnson were going to make a match," said the brother.

"Sally Lewis don't care a copper for *you*, Ben; take my word for it!" said the sister-in-law.

"I'm not so sure of that," thought Ben to himself, dwelling on the delicious stew, as he took his way toward the Deacon's, heart and head full of the little tailoress. It wanted still an hour of sunset, and the youth indulged in delightful anticipations as to the result of that hour. "What walk would Sally choose? What would she say? How would she look!"

Ben moved briskly, full of pleasant fancies, and soon reached the Deacon's door. He knocked; the old couple were in the kitchen, and welcomed him. He saw at a glance that the window of the little parlor adjoining was open, and Sally appeared at the door to invite him in. She was dressed in all her finery, and looked brighter and prettier than usual. Could she have foreseen that Ben was coming? His heart beat and his eye brightened at the thought! He followed her into the little parlor with high expectations of felicity; alas! as he crossed the door-sill he beheld—not a ghost, something infinitely worse—a rival; the most dangerous of two or three rivals!

"How's your health, Mr. Wright?" drawled out a curly-headed, pink-cheeked youth, one whom Ben knew only too well, a young dandy tailor, the son of a neighbor. It was the same face which had nodded to the young carpenter from the stage-coach. Orville Snip was a youth who a year earlier had been a plain, hard-working lad. Within the last six months he had, unhappily for himself, inherited a little money, which now seemed very likely to ruin him. His ambition had been fired by the thousand dollars left him by an uncle. He turned his back on his native village, went to New York, entered a grand tailoring establishment, launched out into

small follies innumerable, and had now returned to R—— with the laudable object of amazing his old neighbors in general, and of captivating the heart of Sally Lewis in particular. The previous winter he had kept up a great flirtation with her, and caused Ben, who had loved the child for a year or two, many an uneasy hour. We shall not attempt to describe the sudden and complete damp thrown over poor Ben's spirits by finding Orville Snip with Sally on this evening of all others. The walk must be given up; the words he came to say must remain untold; and he must try, moreover, to look with decent civility upon Orville's very handsome coat and very curly locks, diamond breast-pin, signet ring, and gold chain to boot.

"I thought you did not recognize me when I passed in the stage, Mr. Wright, though I knew you at once; you looked quite natural with your utensils on your arm."

"My tools you mean. I did not see you. But I'm not sure I should have known you if I had. You are somewhat changed."

"Do you think so?" drawled out the simpering youth. "Well, I suppose I am altered, for even Miss Lewis did not recognize me at first."

"Oh! you are wonderful changed," said Sally. "You are so dressy, and you have got so much hair about your face, I shouldn't have known you in an hour if you hadn't told your name."

"Ha, ha, ha! But many gentlemen in the city dress as much, I assure you, Miss Lewis; and as for mustaches, it is hardly possible to do the thing genteelly without them," replied Orville, with a sentimental smirk, for which Ben could have cheerfully knocked him down.

"I'd no notion they were so common," said Sally.

"Would you advise me to shave? Gentlemen from the city are often stared at in the country, I am told. Would you advise me to have the operation performed, Miss Lewis?"

"Oh no! I think mustaches are very becoming to you."

"Why the ladies seem to approve of them. Mr. Wright, you'll have to follow the fashion, too," continued Orville, with a simper.

"I don't pretend to follow the fashions on my face; and I should think you might find it rather a troublesome trade."

"Me? Not at all, I assure you. The cultivation of refinement comes natural to gentlemen from the city."

"Is it pleasant living in New York?" inquired Sally, with interest. "I was there for a short spell last year, but I never staid long at a time."

"It's the only place in the world fit to live in, Miss Lewis! When a gentleman has once got accustomed to fashionable life in the city, he feels quite out of his equipment any where else."

"It's a beautiful, grand place," said Sally. "So many elegant houses! And then the stores! And the ladies all so tasty!"

"You are quite right. *Apropos*, do you remember the store of *Fitter and Shaper*, Merchant Tailors, in the Bowery? It must have struck you, I think. I've just gone into their establishment. Fitter is a *protajay* of mine, and offered me a situation. It's the finest show window in our line from one end of the street to the other."

"It's lucky there are different trades to choose from!" exclaimed Ben. "Now I could never make up my mind to live within doors, among bales of cloth and such like. It would choke me!" he added, much as if that process were already going on.

"Ha, ha!" simpered Orville, running a finger through his curly locks. "You are not inclined to the tailoring business, Mr. Wright. To speak freely, I should judge so from appearances. But you are very impolite to Miss Lewis in saying so much against her profession."

Sure enough, here was poor Ben getting himself into trouble by abusing Sally's trade; while, on the other hand, he was drawing the chains of sympathy closer between his sweet-heart and his rival, who both dealt in broadcloth.

"I didn't mean that," blundered Ben.

"You didn't mean to be impolite to Miss Lewis because she's a tailoring lady, I dare say; but to my mind the ladies show their taste by taking up the business."

"You are quite free to say what you like about my trade, Mr. Wright," said Sally, with a terrible toss of her head. "Moreover, you're at liberty to think what you please about it, I'm sure."

Worse and worse. Poor Ben was in a fever. And thus matters continued throughout the evening. Orville was radiant with elegance. He could not say enough about the magnificence of New York, the charms of town life, and, above all, the splendors of the establishment of Fitter, Shaper, and Co. Sally listened with lively interest. Orville seemed rising in her estimation every moment. Such elegance, such knowledge of the world, such fashionable words and opinions, such whiskers, such mustaches, and such a diamond pin had never yet appeared under the Deacon's roof. Possibly Sally's tailoring capabilities also enabled her to appreciate more fully the fineness of Orville's broadcloth and the pattern of his waistcoat. Ben grew more and more silent, Orville more and more talkative. At length a bell was heard. It was that of the Academy; being a Wednesday evening, the Lyceum was about to meet.

"That bell sounds natural—it is the Academy, I presume," observed Orville.

"Yes, it is Lyceum night," replied Sally.

"Indeed! Did you propose attending the exercises, Miss Lewis?"

"Well, I hadn't calculated to go."

"Pray change your intention, and allow me to escort you."

"Well, I don't care if I do," replied Sally, rising with alacrity. "I don't think much of lectures; but it's pleasant to go any where of an evening."

No sooner said than done. In a trice Sally had put on her best shawl and hat, and certainly both were very becoming. Orville was at her side in a minute. Not a word did Ben say. Sally gave a half look toward him.

"You are going with us, I suppose, Mr. Wright?" she asked, in a cold tone.

"I'm much obliged; but I wasn't thinking of going to the lecture when I came out to-night." And Ben took leave very abruptly.

Whether Sally felt any qualms of conscience we can not say; but if she did they were not lasting. She soon took her seat in the lecture-room of the Academy by the side of the dandy Orville, now receiving his tender insinuations with a bright color, now looking busily among the audience, spying out acquaintances here and there, and hoping they were all wondering at the elegance of her companion. Sally was completely dazzled by Orville Snip. As for the lecture on "Athenian Eloquence," delivered by Alcibiades Bunker, Esq., she did not hear one word of it; but then, to do her justice, she did not pretend to care for it. With many other faults Sally had one great merit: she was entirely free from pretensions of all sorts, literary, scientific, or social.

Ben had walked rapidly away from the Deacon's door without exactly knowing what direction he had taken; but at the end of five minutes he found he was going home, and kept on his way there full of bursting thoughts, in which Sally and Orville had each a share. Not caring to show his face before his sister-in-law that evening, he slipped into the little room where he slept while she was out of the way, locked his door, and throwing himself on the bed lay there tossing about all night.

The next morning, sorely against his will, Ben was obliged to return to his job upon Mr. Van Wyck's fences, opposite the Deacon's door and Sally's sign. He walked resolutely along, and would not cast even one side glance toward the dwelling of the Lewises, but set about his work hammering and sawing with even more diligence than usual. Noon came; but no invitation with it, no stew to cheer his spirits to-day. Instead of any consolation he was obliged to hear from his sister-in-law that folks said Orville Snip, who was a sort of cousin of hers, "had come, and had been at the Lyceum the night before with Sally Lewis! It must be a mistake about Sally, for I know you were courting Sally at the Deacon's last night. It's some other girl, I suppose, that looks like her."

Ben made no answer. But when his brother and sister-in-law began talking over Orville Snip's good luck in general, his legacy in particular, and expressed the opinion that he had come back to R—— for a wife, they drove Ben from table, and out of the house ten minutes sooner than he needed to have gone.

On his way back to work again, not caring to run the risk of meeting Orville airing himself in the main street, Ben took a by-way through the fields. He had nearly reached Mr. Van Wyck's, and was passing through a meadow adjoining the lawn he was fencing, when an object lying in the grass near the path struck his eye. It was a man's hat; a gray beaver, and, strange to say, no cast-off rubbish, but in perfectly good condition. Ben looked about for the owner. Two cows grazing quietly at a distance were the only occupants of the field. The young man turned aside to take a nearer view. As he stepped from the path it suddenly struck him the hat looked wonderfully like one worn the preceding evening by Orville Snip! It was the extreme of the lastest fashion in shape and color. As the idea occurred to him Ben gave the beaver an involuntary kick, which turned it over and showed a name written in the crown—"Orville Snip, Esquire; No — Bowery, New York City."

"The very hat!" exclaimed Ben, snapping his fingers. But why should Mr. Snip's new beaver be lying in Mr. Van Wyck's meadow, instead of crowning its owner's curly, oily locks? This was a point Ben was already burning with curiosity to solve. It was very probable that Orville, in returning from the Deacon's the night before, might have taken this path, which led, by a short cut, toward his mother's; but why should he have left his hat on the way? With all the dislike of a rival Ben could not accuse young Snip of drinking, unless he had fallen into bad habits very lately; neither could Orville have become intoxicated either at the Deacon's or at the Lyceum. The neighborhood was a good one, quiet and orderly, and a highway robbery had never been committed at R——. Besides, the hat showed no traces of violence to the owner, but was perfect in every way, excepting that it looked precisely as if it had passed the night in the wet grass. To discover the history of the hat that very day was Ben's determination on the spot. In the mean time he tied up the beaver in his handkerchief, and hurried to his work again, concealing his prize in a basket of shavings.

Enlivened by curiosity, and chuckling at the idea of having Orville's handsome beaver buried in shavings, Ben was now once more in tolerably good spirits. Even his indignation against Sally showed symptoms of subsiding a little. He cast several looks over the way; things appeared there just as usual. He saw grandmother Lewis knitting in her rocking-chair, and the Deacon at work in the garden; he had also several glimpses of Sally herself, passing to and fro, once with a bright pink frock on her arm, and again clapping and starching some piece of muslin finery, as though preparing for company. Ben took another look at the hat, to make sure he had read the name aright, and was well pleased to see again in full letters the style and title of Mr. Snip. At length, who should come stepping along but Orville himself, dressed precisely as he was the evening before, with the exception of his hat—he now wore a straw instead of yesterday's beaver. Nodding condescendingly to Ben, from the opposite side of the road, he entered the Deacon's door.

Now Ben had resolved the night before, as he

saw Sally Lewis tripping off to the Academy by the side of Orville Snip, that he would never again cross the Deacon's threshold, or certainly not until Sally had begged him to do so, on her bended knees. But, as we have already observed, the consciousness of having Orville's beaver in his basket had a highly soothing effect; it was a very agreeable thought that he could make his rival look foolish whenever it pleased him to do so. He therefore chose to remember, what he had previously resolved to forget, that during his yesterday's dinner, while partaking of the stew, the Deacon had said something about a little job on his garden gate. Accordingly Ben now walked boldly across the street, and went to the door, hammer and nails in hand. Sally asked him in. Orville was already there. At the first glance Ben thought, or fancied, that his spirits were somewhat lower than the day before; and there was occasionally a sort of uneasy, absent look about his mustached countenance which was not lost upon the young carpenter.

"Won't you take a seat, Mr. Wright," said Sally, blushing a little as she offered him a chair.

"Thank ye—I can't stay but a minute," said Ben, taking the chair however. "How did you like the lecture?" he asked, turning to Orville, impatient to hear him speak.

"The lecture! Oh, it was very fine, Squire Bunker is an elegant speaker."

"Did it last long? Was it late before you got home?" continued Ben, quite unable to repress his curiosity.

Orville changed color—there could be no doubt of the fact.

"I don't believe it lasted more than an hour," said Sally, very naturally. "Don't you think we were back again before ten, Mr. Snip?"

"I guess so," said Orville, with a bewildered look that surprised Sally.

"Why, I am sure it was not later," added Sally, who thought Orville much less fascinating and complimentary than the evening before.

"I suppose you have seen a good many old friends already," observed Ben, by way of carrying on the conversation, and thus giving himself an excuse for cross-questioning Orville.

"I've seen all I care to see," replied the youth; an answer which Sally took entirely as a compliment to herself, although, as Orville spoke, a strange expression passed over his face.

"You saw a good many old friends last night, Mr. Snip, at the lecture," added Ben.

Orville faintly muttered some indistinct reply.

Ben scrutinized the youth as closely as he dared, and was convinced, from his whole expression, that something untoward had taken place. What could it have been? No attack from thieves, certainly; for the false diamond breast-pin, the magnificent signet ring, and glittering watch-chain, still adorned Orville's person as on the previous evening. Ben determined to draw still nearer to the particular point which so strongly excited his curiosity.

"What have you done with your beaver?" asked the young carpenter, with pretended carelessness, as he took up the straw hat near him. "I was thinking of getting one like it myself, if such a thing could be had in the village."

Orville pretended not to hear, but he turned deadly pale.

"Were you looking for your instruments, Miss Lewis?" he said, picking up Sally's shears; but his voice faltered as he spoke, and his hand actually trembled as he held them toward her.

"I was saying, Mr. Snip, that this here hat is not as tasty looking as the beaver you had on yesterday, for I noticed that article as being uncommon handsome," repeated Ben, gaining in complacency as Orville became confused.

"Why, I suppose straw is cooler for warm weather," interposed Sally, finding that Orville did not answer immediately.

"I suppose so—yes, it's cooler," repeated Orville; and then, making a desperate effort, he rallied his spirits, and soon began to talk nearly as glibly as the evening before. Ben could learn nothing more; so after a while he went off and patched up the Deacon's gate, determined to return again in the evening, in order to solve the mystery of the hat, if possible.

Carrying Orville's beaver in the basket of shavings under his arm, he walked home again across the meadow; but although he peered sharply about, in every direction, all looked just as usual in the field, even at the precise spot where the hat had been picked up, which was at the foot of a bank, just beneath the ha-ha wall of Mr. Van Wyck's lawn.

In the evening, having left the beaver in his own room, Ben set out again for the Deacon's. Orville was already there, and seemed to have recovered entirely from the morning's embarrassment. He tried to make himself very agreeable to Sally, and talked again largely about New York and what fashionable gentlemen said and did there. He even bore one allusion to his hat quite firmly, giving Ben a quick, suspicious glance as he spoke.

It was still early in the evening, and the old Deacon and his wife were in the room.

"When do you expect to get through with your work at Mr. Van Wyck's?" inquired the Deacon of Ben.

"I have nearly done, Sir; the piece of paling opposite your house is the last of the job."

"Mr. Van Wyck has been doing a good deal at his place this year, one way and another—setting out trees, putting up fences, and getting things in order," observed the Deacon.

"It's a handsome place, and well worth the pains Mr. Van Wyck takes with it," added Ben.

"Yes, it's the handsomest place about here, to my mind. It's a fine farm, and well worked. I suppose you have heard of the strange mess they lighted on in the garden the other day—them dead bones."

"Yes, Sir; I happened to be there when they plowed them up."

"Be there many of them?" asked Grandmother Lewis, with much interest.

"Why, yes, marm; Dr. Gallipot came over to look at them, and he concluded there must have been as many as twenty men buried there."

"I suppose some battle was fought hereabouts in the Revolution," said Sally.

"No, child; there was no such battle fought here. There was a fight upon Griffin's farm, nigh the wood."

"Some folks say that ghosts have been seen in that wood," observed Sally.

"Well, I don't know how that may be, child, but there was a smart fight up there between some of our farmers and the royal troops. But as for these bones in Mr. Van Wyck's garden, it's more likely they're the old Indian natives. There used to be a swell in the land just there, and by digging and plowing they've come to the graves, I suppose."

"Well, whosoever's the bones may be, if they're human beings they ought to have Christian burial. It's cruel like to leave 'em uncovered," added the old grandmother.

"They'll be buried again to-morrow, Hetty; I heard them talking about it."

"Yes, marm; Mr. Van Wyck ordered a box to put them in, which I am making now," added Ben.

"That's right. I do suppose if ever there was any thing that could bring a man's spirit back again to walk on the earth, it would be having his bones uncovered and his grave dug up. Especially Indians; for it's well known they're wonderful particular about their dead," said the Deacon.

"Do you really think, grandfather, that ghosts come back to this world?" inquired Sally, a little sobered by the turn the conversation had taken.

"There's a good deal to be said on that p'int, child. There's nothing quite against it that I know of; and some good people think they've seen them. I shouldn't like to say for sure that they do come back, or that they don't."

"I, for one, don't much believe in them," said Ben; "for it's what no man would believe in unless he had seen one; and I never saw a ghost yet."

"To be sure, it must be very uncommon, if it does ever happen," added Mr. Lewis.

"Did you ever know a man, Sir, whose word was good for any thing, who declared he had seen a ghost?"

"No—I never did."

But here Grandmother Lewis interposed. She had never seen a ghost herself; but she could name several people who knew others who had seen ghosts. And moreover, a certain gossip of hers, the widow Timms, had actually seen two ghosts: the first, a man who had been hanged for murder in the neighborhood, whose ghost she saw the week afterward, standing under the gallows; and the second was her own husband, whose ghost she had seen digging potatoes one night, a week after his death.

During these remarks Orville had been listening in breathless silence, looking so strangely withal, that at last he attracted the Deacon's attention.

"Why, Mr. Snip, you look as if you were staring at a ghost this minute!"

Orville faltered a few words but made no distinct reply.

"Perhaps he has seen one," observed the grandmother, with a tone half compassionate, half respectful.

Poor Orville stammered and blundered and said nothing clear.

"Is it so?" asked the Deacon. "If you have seen a ghost in the course of your life, Orville, why, don't be above saying so," added the old man, with lively interest.

Sally dropped her scissors; Ben forgot to pick them up, so great was his curiosity excited by young Snip's manner. Still he seemed unwilling to speak.

"You look considerable exercised, Orville, and I think you had better say what's on your mind," continued the Deacon.

"It's a great comfort to tell any thing strange to other folks, as I know from experience," added the old lady.

Thus urged, Orville at length spoke.

"If I was only sure you wouldn't make fun of me—Ben Wright here, and Sally—" continued the youth, in a more plain and natural voice than he had spoken in since the appearance of his mustache.

"If you have really seen a ghost, I should be the last man to laugh at you," replied Ben, in his usual good-natured way, though he was firmly convinced that Orville had been frightened by a shadow.

"Well, as you're all friends here, I may as well tell what happened," began Orville. "After the lecture I came home with her," looking at Sally, "and she asked me in—and I staid late."

Ben make a nervous movement on his chair.

"She sat in this very room maybe a couple of hours. At last I went off, not thinking of any trouble at all. It was late, and to make the walk shorter, I turned in at Mr. Van Dyck's, as I have often done since my brother's been overseer there. It's considerable shorter than going by the road."

His listeners assented, and motioned to him to go on.

"Well, I walked along as spry as can be round by the garden, meaning to go out by the gate on the other road. I soon came to the place where they had been plowing. Now, I never was afraid of a ghost in all my life; I never thought of such a thing. But when I came to the place I saw the bones all lying about in the moonlight. I knew what they was, for my brother had told me about them, and said how the doctors declared they was human beings. Well, seeing them all lying about in the moonlight made me feel kind o' solemn."

"That was only nat'ral, and to your credit, Orville," said Grandmother Lewis.

"Feeling solemn, as I said, I walked on quicker—" catching Sally's eye full on him, Orville was put out.

Ben bit his lip, and tried his best to look grave, still feeling very incredulous.

"Well," said the old Deacon, impatiently, "you was feeling kind o' solemn, and walking quick—"

"Just then I stumbled over a bone—I tripped so as to fall half over."

"Oh! that was dreadful bad luck—to stumble over dead bones!" groaned the old lady, holding up her hands and shaking her head.

"Go on, go on!" cried the Deacon.

"When I righted myself—"

Here Orville paused with a look of horror that could never be counterfeit.

"What happened then?" cried Ben, burning with curiosity.

"I saw a ghost, as sure as my name is Orville Snip!"

"What?" "How?" "Where?" cried the listeners, eagerly.

"It was standing just before me, in the edge of the wood," said Orville, in a hollow voice, the perspiration starting from his forehead at the recollection.

"What was it like?" asked Ben.

"Like a ghost!" said Orville, solemnly.

"How large was it?"

"Taller than a man, by a good deal."

"White or black?"

"All white — like — wrapped in a winding-sheet."

Sally clasped her hands with an exclamation of horror.

"Did it speak?"

"At first it only looked straight at me."

"Did it move?"

"It stood still at first, only stretching out its arms."

"Oh, deary me! that was to warn you not to walk on the bones," said the old lady.

"What else did it do? Perhaps you only concluded you saw it," added Ben.

"No I didn't, Ben Wright; I saw it as plain as I see you now," replied the other, bluntly. "The moon was shining, though it was not very bright, to be sure, but I could see all about me —the house—the trees—the bones."

"Did it speak at all?"

"Only in a kind of fluttering, whispering way."

"What did it say?"

"I—I'm not sure I heard quite plain."

"How long did it stay?"

"I don't know for certain; I stopped just a minute to make sure I really did see it, and then—"

"And what then?"

"It began to move toward me, and—and I turned round and jumped down the ha-ha—and —and—walked home through the meadow."

"You felt solemn and walked quick, I suppose," said Ben.

"I can tell you what, Ben Wright, if you had a ghost at your heels you would walk quick too."

"Maybe I should; but it followed at your heels, did it? did you turn round to look?"

"Yes, Sir, I did; and I saw it moving about among the bushes."

"Did it feel solemn, and move quick?" again asked Ben, who felt convinced in his own mind that Orville had seen nothing but the bones and the moonlight.

"I only wish you could see it too!" cried Orville.

"I wish I could. Will you go with me to-night—now—and show me the place?"

"Yes, I will go;" cried Orville, mustering all his courage at this challenge.

"There's no use in going now, boys," said Grandmother Lewis. "Ghosts was never yet known to come so early. It's after the lights are put out in the houses, and Christian people are all asleep, that they prowl about."

"What o'clock was it when you saw it last night?" asked Ben.

"About midnight."

"Well, we can wait till then, unless you're afraid to take another look."

"No more afraid than you, Ben Wright!"

"I don't see, boys, why I shouldn't go too," observed the Deacon.

Orville was well pleased to secure another recruit, and Ben had no objection; but Grandmother Lewis would not listen to the plan. To be left alone with Sally while ghosts were abroad in the neighborhood was not to be thought of for a moment. But Sally, who had some spirit and more curiosity, settled the matter by proposing that the whole party should go together. It required full half an hour's persuasion to bring Grandmother Lewis over to this plan; but Sally was accustomed to have her way on all occasions, and at last succeeded. The old lady admitted that if nothing was seen no harm was done, while, on the other hand, should they actually meet the ghost, it would be something to boast of for the rest of her days. So it was settled—they were all to go. The interval between this decision and the eventful hour of midnight was passed very appropriately in relating all the startling horrors and wonders known to either of the party; at last even Ben caught himself gravely telling a regular ghost story, which, however, he professed not to believe at all. When midnight drew near, they all set out.

The night was warm and close. There was a young moon in the heavens, but passing clouds partially obscured her light, while fitful flashes of lightning in the distance seemed to threaten a shower.

"I am afraid the ghost won't show himself before so many folks, and one of them a Deacon too," said Ben, as they left the house.

"Hush, Benjamin; don't talk so bold like!" exclaimed the old lady.

"You won't be after making fun when you see it!" cried Orville, who felt very uncomfortable as they drew near Mr. Van Wyck's gate, though, under the eyes of his sweet-heart and his rival, he did not dare to retreat.

Ben walked first, and quietly opened the gate. The party entered, and a winding road, which

swept in a wide semicircle toward the principal entrance of the house, lay before them. On one side was a grassplot bordered with flowers, on the other a lawn sprinkled with clumps of shrubbery and scattered trees. The house was shut up, being unoccupied at the time, and all was calm and silent about them. The young moon shed a pale light around, which was now darkened by passing clouds, now broken by flashes of dull, lurid lightning.

"You turned off here, I suppose, if you were going out of the other gates," said Ben, who headed the line.

A brief assent was Orville's only reply, from the rear, where he had taken up his position, while the Deacon's family, in the middle rank, were all more or less excited by the singular object of their midnight walk, and even Ben was growing more and more eager as they approached the spot.

"Here is the pile of bones, and there all about is where they were plowed up; you can just see the white bones though the moon is under a cloud now."

"I see them; and I smell the fresh earth," said the Deacon.

"These are really human bones!" cried Sally.

"Human bones, child; and no man can tell when they were buried," replied the Deacon, while Grandmother Lewis looked down in solemn silence, heaving dreadful sighs and clutching tight at Sally's arm.

Just then the cloud which had vailed the moon passed slowly away; the moonlight fell upon the lawn, then reached the sweeping road, then the curious excited group, and whitened the pile of bones lying at their feet.

A hollow whisper startled the party.

It was from Orville; tightly grasping the arm of the young carpenter, he pointed to the grove on their right.

"There!" he muttered in a smothered voice.

His companions turned. A tall, spectral-looking figure stood just within the edge of the wood, with an earnest gaze fastened upon the group.

In a single second conviction had flashed upon all—it was no shadow, no play of the moonlight, no deception of the fancy, but an unearthly, wonderful, spectral form, bearing an aspect unlike any object they had ever yet beheld.

The old grandame groaned and shook, and, covering her eyes with her apron, would have dropped to the ground had she not been supported. Sally trembled like an aspen-leaf, and drew closer to the Deacon, though her eye seemed riveted, as by a spell, on the apparition. Orville retreated behind Sally; the Deacon was amazed, bewildered, appalled. Ben felt very strangely indeed.

"Ghost or devil, I'll see what it is!" cried Ben, rallying after the first instant of amazement.

"Oh, Benjamin, don't go!" whispered Sally, imploringly.

Ben paused, and looked back at Sally. When he turned again the spectre had vanished. The moonlight faded, clouds returned, and all was dark again.

"Let us go home," said Sally, faintly, and trembling all over.

"It's an awful sight!" murmured the Deacon.

The old woman groaned.

Just at that moment the dim outline appeared again for a second, quivering as with agitation, and apparently in motion.

"It's coming this way!" cried Orville, in terror.

"I'll meet it, then!" exclaimed Ben, advancing toward the wood.

In vain Sally implored him to come back. He walked firmly on, although he could not move quickly, for it was now quite dark again. Presently another flash of lightning glared over the lawn. The apparition seemed to have changed its position, though still within the edge of the grove. A thousand strange thoughts chased each other through the young man's mind with the rapidity of the lightning flickering over his head. He had played ghost himself in his boyish days, but never had he seen or even imagined any thing like the shadowy figure which now vanished, now reappeared before his strained eyeballs, seeming by its vague indistinctness to mock both thought and vision.

"It's like what one dreams of!"

"It may be the ghost of an Indian chief. Some of their braves have that grand look; I've seen them."

"It moves—slowly—now quick again! It raises its arm!"

A faint, whispering, fluttering sound was now heard; but so vague and indistinct as to mock the bewildered senses of the young man. At that instant, in making a sudden, eager movement, Ben stumbled over the root of a tree, and fell on one knee upon the grass. He rose and was on his feet again in a second; but the apparition was gone. He hesitated, paused, listened, and then advanced more cautiously in the darkness. Some large object stopped his advance. It was the branch of a tree. Measuring its girth with his arms, Ben knew it to be the large elm beneath which the apparition had first shown itself.

"Here I'll stand and know the end of it, if I have to stay till daylight!" cried the youth, boldly.

But a chill went to his very heart when, stretching out his arm at the same instant, he felt a cold, damp touch upon his hand. He started involuntarily. He looked up. That imposing, shadowy figure, with its earnest, unearthly gaze fastened upon himself, stood immediately before him, apparently within reach, and seeming to grow more and more distinct, and yet more ghostly, every second. Ben gazed in wonder, absolutely speechless. A fluttering murmur was heard. Was it from the leaves of the tree above, or some spirit-tongue addressing him?

He gazed, he listened more intently.

His resolution was rewarded. The object of the apparition was revealed.

A sharp, vivid flash of lightning, followed by a rattling peal of thunder, were succeeded by darkness yet deeper; and as the spectre once more vanished, young Wright turned away, slowly and thoughtfully retracing his steps toward the pile of bones where he had left his friends.

But the Deacon's family were gone. They had moved toward the gate, where they stood anxiously awaiting Ben's return. He was received by them as Hercules returning from the kingdom of Pluto.

Sally went forward to meet him.

"Is it you, Benjamin? Is the ghost gone?"

"It has vanished."

"Did it speak?"

"It spoke."

"Oh! what did it say?"

"It gave me a message—to you!" whispered Ben, solemnly, taking the hand Sally had unconsciously extended toward him as she spoke; and then a loud, ringing, uncontrollable peal of laughter burst from his lips, sounding strangely, indeed, amidst the solemn midnight hush of those quiet grounds.

The Deacon and Grandmother Lewis were seized with horror at this untimely merriment. Sally believed he had lost his senses.

"The ghost is stone!" he cried. "It's white marble—one of the figures they call statues. I never saw one in my life, but I've read about them. Mr. Van Wyck was expecting some from Italy. I did not know they had come!"

"What? A stun ghost!" cried Dame Lewis.

"Stone? Well, I've heard of such things, though I never seed one," said the Deacon.

"A stun ghost! That's what I never heerd of!" said Dame Lewis, again.

"Only a stone figure, mam," interposed Ben.

"A stun figure, Nathan! That's as bad as a ghost! It's like the graven images of the idolaters!"

"They're common enough in the old countries, though we haven't any hereabouts. But I sha'n't soon forget this one! Where's Orville?" And again Ben laughed heartily.

Mr. Snip had vanished as effectually as the apparition, and indeed he disappeared entirely from R—— the next day. As the clouds were now very threatening, the whole party returned to the little red house—the Deacon comforting his companions with the remark that they had at least seen something he had never beheld before. Ere he went home that night Ben contrived to persuade Sally to hear the message of the ghost: "Better take for a husband an honest, hard-working fellow, who loves you heartily, than a monkey-faced, spendthrift dandy, who is in love with himself, and, moreover, afraid of a ghost!"

Such we have heard was the amount of the message. Sally wisely determined to follow the advice, coming as it did from a ghost. The next day Ben and herself went by daylight to look at the "stun ghost," as Grandmother Lewis persisted in calling it. As for Ben, he was far more struck with the noble statue of Demosthenes, from the Naples Gallery, when seen by daylight, than he had been in its ghostly character at midnight. The young man was strangely impressed with it. He returned to the feet of the statue again and again, at all hours, gazing, wondering, admiring, until at length, one day, the young carpenter, like the Italian boy, felt that he was an artist too! He went home and chiseled an imaginary head of Ethan Allen, in wood. His success was very good. Mr. Van Wyck saw it, urged him forward, like a kind and wise friend, furnishing counsel, encouragement, advice, engravings, casts, means, as these were needed. We all know the result. Mr. Wright not only received a wife from the hands of the ghost, but fame and fortune reached him through the same channel. His celebrated statue for the Central Park at New York has been seen and admired by—how many! That sweet bust of his wife—little Sally Lewis that was—is it not one of the loveliest things in the public gallery of the city of Albany?

A COSMOPOLITE BILL OF FARE.

THOUGH man is all but omnivorous, nothing is more difficult than to induce any given man, civilized or barbarous, to taste and like a new dish. He was certainly a bold man who first ate an oyster. When Captain Cook first visited the Sandwich Islands, he invited the King of Owyhee to dine with him, and his Majesty was induced to inaugurate the repast with a mouthful of bread, a viand entirely novel to him. No sooner had he got a taste than he spat it out with every symptom of disgust; and declining farther prandial ventures, returned ashore to his customary roast dog and decayed fish. The Japanese refuse beef and milk, but eat rats. The New Hollanders surfeit themselves with stale shark, rancid whale blubber, and earth worm, but regard with horror the white man's simple breakfast of bread and butter. The negroes of the West Indies revel in the luxuries of baked snakes and finger-long palm worms, fried in their own fat; but their delicate stomachs revolt at the thought of a rabbit stew. A recent traveler heard a Barbadian negro thus vent his indignation upon an unlucky market-woman who had offered him a rabbit: "I should jest like to know war you take me for, ma'am? You tink me go buy rabbit? No, ma'am. Me no cum to dat yet; for me always did say, and me always will say, dat dem who eats rabbit eats pussy, and dem who eats pussy eats rabbit." A delicate stomach indeed! A Frenchman would doubtless agree with the Barbadian in theory, reversing the practice, however, by eating both cat and rabbit. The Russian eats tallow-candles, the Greenlander drinks train oil, Dr. Livingstone's favorites, the Barotse, affect crocodile steaks; and one of his African friends, so the Doctor states,

made a contented supper one evening from a blue mole and two mice. These dainties the Frenchman righteously turns up his nose at, preferring a lively frog, a few snails, and—when he can afford it—a tart of the diseased livers of geese, which favorite esculents John Bull in turn dislikes; preferring solid beef and mutton, wherein at least Brother Jonathan agrees with him; though it is to be hoped that he enjoys these and their attendant luxuries with greater moderation than does the "Britisher," if Sydney Smith's account is to be believed. That worthy clergyman, having ascertained the weight of food he could live upon and preserve health and strength, acknowledged to Lord Murray that, between the ages of ten and seventy, he had consumed forty-four one-horse wagon loads of meat and drink more than would have sustained him, the value of which mass of nourishment was about thirty-five thousand dollars.

Sir John Ross states that an Esquimaux will eat twenty pounds of meat and oil per day. A Tongouse allowance is forty pounds of rein-deer meat; and a Russian Admiral saw three Yakutes eat a rein-deer at a sitting. A visitor to New Zealand relates that two natives of that cannibal isle went out to the shore, after a hearty supper, and finished the half-putrid carcass of a shark at one moonlight sitting; and Captain Sturt, the Australian explorer, saw a New Hollander eat over one hundred jerboas (a vaulting rat) at a sitting. He placed a number for a few seconds under the ashes, then, with the hair only partially burned off, took them by the tail, and bit off the bodies, one after another. When he had eaten a dozen bodies, he stuffed the dozen tails into his mouth, to chew up leisurely.

It is a notable fact that the most civilized nations are the most liberal in their gastronomic taste. Next to the Chinese, whose ultra civilization has betrayed them into the toleration of half-hatched eggs, shark's fins, and bird's-nest soups, comes the Frenchman; and to him follows the American. Seriously, is it not an evidence of genuine civilization, this tolerance which refuses not any thing which is clean and wholesome? What unwarrantable prejudices have not modern travelers exploded? Dr. Shaw enjoyed lion, which he found to taste like veal; Dr. Darwin had a passion for puma, the South American lion; Dr. Brooke found melted bear's grease not only palatable but delicious; Hippocrates, Captain Cook, and the writer of this, vouch for the excellence of dog, though the Philosopher of Cos recommends it *boiled*, when every body who has tried knows the superiority of roast dog. Mr. Buckland tasted boa constrictor, and found the flesh exceedingly white and firm, and much like veal in taste; Sir Robert Schomburgk found monkey very palatable, though, before dissection, it looked disagreeably like roast child; and Gordon Cumming is loud in the praise of baked elephant's trunk and feet. To cook these a pit is dug, stones are heated in it, and when all is ready, two men shoulder a foot and dump it in. When the hole is full (the four feet, and a few slices of the trunk, fill a good-sized pit), heated stones are put on the mess, leaves over the stones, earth over the leaves, and the hungry hunter impatiently awaits the unearthing of his savory mess.

Of course a line must be drawn somewhere. The baked missionary of the New Zealand cuisine, the under-done human thigh of the Feejee Islander, and the broiled fingers, which are thought "a dainty dish to set before the King" of Sumatra, are not to be recommended. Nor would a man be thought illiberal who should fail to appreciate a stew of red ants in Birmah (though ants are said to have an agreeable acidity when properly prepared), parrot pie in Rio de Janeiro, roast bat in Malabar, or a cuttle-fish fry in the Mauritius. But the eminent and lamented Soyer used to assert that civilization and cookery advanced hand in hand; and we may rely on it that, as the reasoning powers of man are developed, so will his stomach become less squeamish. "A nice man," said Dean Swift, prophetically, "is a man with nasty ideas;" and though, as Montesquieu asserts, there may be valid reasons for not eating pork, surely there may be reasons quite as unimpeachable for eating giraffe, alpaca, bustard, anaconda, horse? Let man, at any rate, aim at consistency. The French of the Antilles delight in the guana—a hideous lizard—but they refuse the delicate and pork-like meat of the young alligator. We laugh at the South Sea Islander's use of buckskin breeches, who stuffed a pair with sea-weed and boiled them for dinner; but at the time of the great London Exhibition, in 1851, it is known that so extensively were buffalo hides and sheep and calf-skins boiled down into jellies that the price of those staple articles rose considerably in all the English ports. Eels are a favorite dish with epicures; but rattlesnake would not go down even under the euphonious name of "Musical Jack." During the famine the Irish, even when reduced to the most desperate pitch of hunger, refused corn meal. All civilized nations reject dog and cat as culinary articles, though those animals are clean feeders, but make a staple of swine, the most foul feeding of beasts. Chickens and pigeons are table luxuries; but nobody "hankers after" crow, which is a cleaner bird than either. John Bull will not taste squirrel, though every American mouth waters at the mention of savory squirrel stew. Such alimentary inconsistencies are endless, and often most seriously interfere with the comfort of prejudiced travelers.

It is curious to notice the different parts of animals that are eaten. Sheep's head, pig's head, calf's head and brains, ox head, in England the heads of ducks and geese, ox tongue, rein-deer tongue, walrus tongue, crane's tongue, and in America sheep and pigs' tongues. In China the tongues of fowls and ducks are a high-priced dainty. John Chinaman relishes also the maw and fins of the shark; while in Siam the dried sinews of various animals are a prime luxury. Feet are generally liked, from the web-feet of ducks and geese in Europe, the trotters of

sheep and pettitoes of pig, which are a popular edible in London, and the bear's paws, loved of North American hunters, down to the elephant's feet, much desiderated by the Caffre and Bushmen. Ox tail, sheep's tail, pig's tail are in common use. The Australian rejoices in Kangaroo tail; the North American trapper in beaver tail; the South African Boer in the fat tails of his sheep, which, during life, are dragged about in a hand-cart, and after death are melted into butter, or make a delicious stew. In Honduras the tail of the manatee, or sea-cow, is a staple dish for the table, though new settlers do not stomach any part of the animal on account of its vivid resemblance to man. The female has hands, and holds its young up to its breast precisely as a human mother would. In Juan Fernandez many thousand lobsters are annually taken, whose tails are dried and served on the dinner tables of Valparaiso. The tongue of the sea-lion has been found palatable by travelers. It is rather an extensive affair. A visitor to the Falkland Islands reports: "For a trial we cut off the tip of the tongue hanging out of the mouth of a sea-lion just killed. About sixteen or eighteen of us ate each a pretty large piece, and we all thought it so good that we regretted we could not eat more of it." Shark fins are in such demand for soups in China that from ten to fifteen thousand hundred-weight are annually imported from various parts of India. Forty thousand sharks are taken annually off Kurrachee, near Bombay, for their back fins, which are the only ones used. They are caught there chiefly in nets; but, according to Dr. Ruschenberger, the natives of the Bonin Islands have trained their dogs to catch fish, and he saw two of these animals rush into the water, seize each the side fin of a shark, and bring it ashore in spite of resistance.

In the Arctic regions eating is carried on under various serious difficulties; and to drink even water is an unusual luxury, presupposing a fire. The cheerful glass is often frozen to the lip, and the too ardent reveler may splinter a tooth in attempting to gnaw through a lump of soup. You eat your daily allowance of ship's rum, and ask your intimate friend for a chew of brandy and water. The Greenlander finds it necessary not only to "first catch his fish," but also to thaw it, before he can prepare it. How grateful, then, to the Esquimaux palate must be the yielding tallow candle, which, having eaten, he carefully draws the wick between his teeth to save the remaining morsels of fat! The greatest luxury of the Greenlander is half-putrid whale's tail; and next to this comes the gum of the right whale, which the Tuski call their sugar, and which a British officer reports to be delicious, tasting as much as possible like cream cheese. Dr. Kane was enthusiastic about the liver of walrus, declaring that Charles Lamb's roast pig could not compare with this uncooked awuktanuk. But the Doctor also wondered why people at home did not eat raw beef; and this throws some doubt over his recommendation of the Esquimaux dainty. Whale meat is dark-red and coarse. It is very commonly eaten by old whalemen, but has a rank flavor, which makes it unpleasant to a nice palate, as the writer of this can testify. On board American whalemen it is usually made into force-meat-balls, when pepper and other spices disguise somewhat the unpleasant flavor. Porpoise used to be a favorite dainty of the old English nobility. It was eaten with a sauce composed of sugar, vinegar, and crumbs of fine bread. Porpoise liver is, even now, very toothsome to the sea appetite, being dry and much like pig's liver.

To return to more temperate regions: the dog is a favorite dish not only among the Sandwich Islanders, but with the Chinese, who regularly fatten it for the table; the Africans of Zanzibar, to whom a stew of puppies is a dainty meal; the Australian natives, who assiduously hunt the wild and never-barking dingo; and the Canadian voyageurs. In Canton, the hind-quarters of a dog are hung up in butchers' shops next to the hind-quarters of lamb, but bear a higher price. A traveler in the Sandwich Islands says, "Near every place at table was a fine young dog, the flesh of which, to my palate, was what I can imagine would result from mingling the flavor of pig and lamb." They are fed chiefly on taro, a fine species of potato, and are thought fit for market at the age of two years. The mode of cooking dogs and pigs in these islands doubtless contributes to make them a gastronomic success. A hole is dug in the ground sufficiently large to contain the animal, which is carefully cleaned. A fire is built in the hole and stones thrown in, which are made red-hot. When all is ready, the sides and bottom are lined with the red-hot stones, fragrant leaves are thrown in, and the dog (or pig) laid on these on its back. The body is then covered with more leaves, with stones, and finally with earth, which makes the oven tight. After a proper time, the savory mess is taken out, cooked to a turn, and in a style which not even the great Soyer could excel. The interior is full of the finest juices of the animal, which makes a delicious gravy. Epicures, who have tasted sucking pig roasted in this manner, declare that it is inimitable. How Lamb would have delighted in this succulent dish!

As for rats, the Chinese, the negroes of the West Indies and Brazil, the New Hollanders, the Esquimaux, and many other people, esteem them most fit food. In Canton rat soup is thought equal to ox-tail soup; and a dozen fat rats are worth two dollars. A Yankee speculator is about —according to recent Calcutta papers—to make a good thing of salted rats! The British Indian province of Scinde has been for several years so infested with grain-eating rats that the price of grain has risen twenty-five per cent. Government has proclaimed a head-money on all rats and mice killed in the province, of six cents per dozen; the slayer having the privilege of keeping the body, and presenting only the tail. Putting this fact together with the high price got for rats in the Chinese markets, the speculator has

made his arrangements for a monopoly of what he considers a very lucrative business; and declares his intention to export to China, as a first venture, 120,000 rats. "I have to pay one pice [about half a cent] a dozen [in Scinde], and the gutting, salting, pressing, and packing in casks, raises the price to six pice per dozen. If I succeed in obtaining any thing like the price that rules in Whampoa and Canton for *corn-grown* rats my fortune is made—or, rather, I will be on the fair road to it, and will open a fine field of enterprise to Scinde."

The nest of the *Hirundo esculenta*, which is thought so delicious a morsel by the Chinese and Cambojans that the finest white nests are worth, in Canton, nearly twice their own weight in silver, is found chiefly in caves on the shores of Java and the neighboring isles. It resembles, externally, ill-concocted, fibrous isinglass, and should be white in color, with a red tinge. It is nearly the size of a goose egg, about the thickness of a silver table-spoon, and weighs from a quarter to half an ounce. Those that are dry, white, and clean are the most valuable. They are packed in bundles, with split rattans run through them to preserve the shape. They are procured from the caves, at much peril to the takers, twice every year; and the opening of the caves on these occasions is performed with many singular superstitious ceremonies. The best are sent to Pekin, for the use of the Celestial Court, and bring in Canton no less than four thousand dollars per picul of 133⅓ pounds; about 250,000 pounds are brought to Canton every year. To prepare them for the table is a most tedious and laborious performance. Every feather, stick, and other impurity, is first carefully removed; and then, after undergoing countless washings, the nest is made into a jelly, which serves to thicken soups.

From birds'-nests we turn to eggs, which form an important article of food among all known races. The English, who are great egg eaters, receive from France annually 130,000,000 of eggs, and from Ireland 150,000,000; a fact which recently caused serious alarm to Mr. *Punch*, who called upon his countrymen to "turn their barns into hen-houses, and throw off the *yolk* of the foreigners." The great object of egg buyers is to get them fresh, and many modes are resorted to to determine this point; some dealers placing the eggs in water, when, it is said, if they are good they will lie on their sides—if bad, stand on their ends. In Fulton and Washington markets, New York, the egg-dealer places a lighted candle under his counter, and, taking up the eggs, three in each hand, passes them rapidly before the light. If the egg is fresh the light will shine through it with a reddish glow, while a stale egg is opaque. So quickly can this process be conducted, that eggs are inspected thoroughly by our dealers at the rate of from one to two hundred per minute. In China duck eggs are a great article of consumption. They are preserved in a mixture of salt and a red ochrous earth. But the Chinaman and the Dyak of Borneo trouble themselves very little on the point of freshness. The Celestial hen's nest is robbed indiscriminately, and half-hatched eggs are thought a very palatable dish.

The most convenient of eggs should be that of the ostrich. Its contents are equal to those of twenty-four common hen's eggs; and the nest, a mere hole in the sand, contains, generally, twenty-four eggs—quite a prize to an African sportsman, who generally takes off his shirt on coming to such a *find*, ties up the sleeves and neck, and places the contents of the nest in this impromptu bag, with which he totters back to the camp. The best way to cook an ostrich egg is to place it on end in the hot ashes, break a hole in the upper end, and with a small stick stir the contents till your omelette is done.

San Francisco has an inexhaustible supply of eggs in the immediate vicinity of its bay. The islets known as the Farallones de las Grayles, lying about twenty miles from the Golden Gate, are visited, at regular periods, by men who procure there immense quantities of the eggs of a kind of gull which frequents the islands. From a part of the Great Farallone, called the Rookery, there were taken, in less than two months (part of July and August), more than five hundred thousand eggs. Several such bird islets were formerly to be found on the Californian coast. On one, off the harbor of San Pedro, which the writer of this has visited, the number of the birds was prodigious, and the noise, the filth, and the wings of the parent birds made the collection of eggs an undertaking of no little labor. On Ichaboe, and other rocks where penguins, gulls, cormorants, and albatrosses resort to breed their young, the birds are found so closely wedged together that it is almost impossible to find foot-room between; and these otherwise untamable creatures grow as tame as barn-yard fowl. Sailors are accustomed to lift them off their nests to get at the eggs, and where the ruthless spirit of destruction prevails thousands of harmless and useless animals are needlessly slain. From a little islet, a mile and a half long by a mile broad, near Cape Town, twenty-four thousand eggs are taken every fortnight to supply the Cape Town market. The penguins stand in pairs by their nests, and defend them very stoutly against robbers; so that seamen find it necessary to wear high, stout boots to prevent the bites of the birds.

In some of the Pacific Islands the eggs of lizards are highly esteemed; and in the West Indies the eggs of the guana, which is after all but a lizard, are thought a delicacy. The eggs of the alligator are eaten in the Antilles; and Mr. Joseph states, in his "History of Trinidad," that he found them to taste very much like hen's eggs, which they also resemble in shape. Turtle's eggs are in great esteem wherever they are found, as well by Europeans as others. They are about the size of a pigeon's egg, and have a soft shell. The mother turtle deposits them by night, one hundred at a laying, in the dry sand, and leaves the sun to hatch them. She lays thrice a year,

at intervals of two or three weeks. It requires an experienced hand to detect the eggs, which are always ingeniously covered up; but where they are hunted but few escape. The Indians of the Orinoco obtain from these eggs a kind of clear and sweet oil, which they use instead of butter. In February, when the high waters of the river recede, millions of turtles come on shore to deposit their eggs. So sure is this harvest, and so abundant, that it is estimated by the acre — this space often yielding one hundred jars. The total yearly gathering of the region about the mouth of the Orinoco is about five thousand jars of oil; and it takes five thousand eggs to make a jar.

The turtle, that beast so intimately connected with the welfare of city governments, is a delicacy of quite modern repute. At the beginning of the last century it was only eaten by the poor in Jamaica. At present calipash, calipee, and green fat are luxuries known only to the stomach of Dives and his compeers. Both the turtle and the guana are hunted with considerable cunning. The first named is watched, when it comes on shore at night, and tumbled over on its back, where it lies helpless until its captors have time to carry it off. The guana, luckless lizard! is hunted with dogs; and when taken alive, has its mouth sewed up to prevent it biting. It lives for a month or six weeks without food. A soft-shelled turtle abounds in the bayous of Louisiana, and is much prized as a table delicacy. It is particularly hard to catch; but when lying on a log at the water-side, sunning itself, is often a fair shot for the rifle. When shot, however, it is unluckily prone to tumble into the water and make its escape, even in death. To prevent this, it is related that an ingenious epicure devised the following satisfactory plan: He cut a piece of wood one inch long, and so rounded as easily to fit into his rifle. To this "toggle" he secured a piece of stout twine, seven or eight inches long, the other end of which was run through a rifle-ball. The ball was then inserted in its place, the string and toggle followed, and he was ready for his turtle. Getting a fair shot, the ball pierced the turtle and entered the log on which it was lying, where it stuck. But the string and toggle held the astonished beast firmly until his enemy could come in a canoe to make good his capture.

The Isle of Ascension, in the South Atlantic, is an extensive breeding-place for turtle. Dr. W. M. Wood, in his just published work, "Fankwei: a Cruise in the United States Steamer *San Jacinto*," says that the turtle of Ascension are a government monopoly, and that large basins have been erected for the accommodation of the breeding turtle and their newly-hatched young. A singular fact is, that from the time the young turtle become of the size of a dollar they disappear, and are seen no more until they return four or five hundred pounds in weight. Where they spend the interval has not been discovered.

Lobster is a favorite dainty with Americans and Englishmen, but no one thinks of eating locusts. Yet these last form a welcome meal to many tribes and nations, and all travelers who have tasted them bear witness that they make a toothsome dish. We do not propose to advocate their introduction to American tables; but it is worth while to remark that the chief difference between lobster and locust, considered as an article of diet, is that the first is the foulest feeder known, while the locust, though not dainty, lives chiefly on fresh vegetable substances. Let us not reproach the locust-eaters.

Ants are eaten in many countries. In Brazil the largest species are prepared with a sauce of resin. In Africa they stew them with butter. In the East Indies they are caught in pits, carefully roasted, like coffee, and eaten by mouthfuls afterward, as our children eat candies or raisins. Mr. Smeathman says: "I have eaten them several times, dressed in this way, and think them delicate, nourishing, and wholesome. They are something sweeter, though not so fat and clogging as the caterpillar or maggot of the palm-tree snout-beetle, which is served up at all the luxurious tables of the West Indian epicures, particularly the French, as the greatest dainty of the Western world." A curry of ants' eggs is a very costly luxury in Siam; and in Mexico the people have, from time immemorial, eaten the eggs of a water insect which prevails in the lagunes of that city.

The Ceylonese, ungrateful wretches, eat the bees after robbing them of their honey. The African Bushmen eat all the caterpillars they find. A Bushman would be a valuable acquisition for a New York market gardener's cabbage field. The Australians are notorious as maggot eaters; and the Chinese, who waste nothing, eat the chrysalis of the silk-worm after they have wound the silk from its cocoon. It is said that the North American Indians used to eat the seventeen-year locusts. The Diggers of California fatten themselves on grasshoppers; hogs are also fond of them; and it is related that, in New Jersey, an ingenious soap-boiler made excellent soap, of which a swarm of seventeen-year locusts formed a prominent ingredient.

The African Bushmen and the savages of New Caledonia are very fond of spiders roasted. This singular taste is not unknown even in Europe. Reaumur tells of a young lady who, when walking in her garden, used to eat all the spiders she could catch; and the celebrated Anna Maria Schurman ate them like nuts, which, she averred, they much resembled in taste. Lallande, the French astronomer, was equally fond of them; and a German, immortalized by Rosel, used to spread them on his bread instead of butter.

Among oyster-eating people the Americans take the lead; and New York is the greatest oyster market in the world. There are in the city nearly two hundred wholesale dealers, who have invested in the business over half a million of dollars. The trade in New York amounts to nearly seven million dollars per annum, and about fifty thousand people are engaged in it,

directly and indirectly. Virginia furnishes from her bays about two-thirds of the oysters consumed in the Union. Fifteen hundred and twenty boats are engaged in their collection and transportation. Baltimore, on account of its vicinity to the Chesapeake Bay oyster beds, is the chief seat of the oyster transporting business. From here they are sent all over the Western and Southern States. One firm opens, in the season, 2500 bushels of oysters per day, and has paid the Baltimore and Ohio Railroad Company for freight no less than $35,000 in one year. Governor Wise estimates that Virginia possesses 1,680,000 acres of oyster beds, containing about 784,000,000 bushels of oysters. The lover of this bivalve who fears that the immense consumption will bring on a scarcity, may take comfort in the knowledge that the female oyster spawns per year a family of 8,000,000 young ones.

Snails are a prime luxury in Europe. The French are large consumers, but the Viennese are the principal snail-eaters of the world. At the town of Ulm, on the Danube, great quantities of snails are fed for the Vienna market, those which have been fattened upon strawberries bringing the highest price. Sixty thousand pounds of snails are annually exported from the Isle of Crete. At Cape Coast Castle the great African snail, which attains a length of eight inches, is made into soup. In England snail-soup is prescribed for consumptives.

But enough of outlandish dishes. So long as we stick to our homes and our good American beef, pork, and mutton—of which, by-the-way, according to recent statistics, every New-Yorker is supposed to consume half a pound per diem—we need not offend our stomachs with snail soups, ant stews, or alligator steaks. We close our bill of fare with an anecdote which will furnish a useful hint to that respectable and popular class of men, the keepers of eating-houses. The scene is a city court-room; and the judge has taken it upon himself to cross-examine the chief witness in a case before him.

"You say you have confidence in the plaintiff, Mr. Smith?"

"Yes, Sir."

"State to the court, if you please, what causes this feeling of confidence."

"Why you see, Sir, there's allers reports 'bout eatin'-house men, and I used to kinder think—"

"Never mind what you thought—tell us what you know."

"Well, Sir, one day I goes down to Cooken's shop, an' sez to the waiter, 'Waiter,' sez I, 'give us a weal pie.'"

"Well, Sir, proceed."

"Well, Sir, just then Mr. Cooken comes up, and sez he, 'How du, Smith—what you goin' to hev?'

"'Weal pie!' sez I.

"'Good,' sez he, 'I'll take one tu;' so he sets down and eats one of his own weal pies, right afore me."

"Did that cause your confidence in him?"

"Yes, it did, Sir; when an eatin'-house keeper sits down afore his customers an' deliberately eats one of his own weal pies, no man can refuse to feel confidence—it shows him to be an honest man."

A word to the wise is sufficient.

THE PAUPER'S HOME.

ONE house each mortal hath,
Built without beam or lath;
Toward it winds one path—
One path.

No rent the tenant pays,
There are no quarter-days;
Yet the landlord comes always—
Always.

Oft stands it desolate,
Long closed its outer gate—
Its outer gate so strait—
So strait.

Yet liv'ried servants there
One feast and bowl prepare;
One perfume fills the air—
The air.

The tenant findeth room,
Findeth a quiet home,
Where guests or duns ne'er come—
Ne'er come.

One dress all tenants wear,
Pauper, and prince, and heir;
Alone each enters there—
Enters there.

No more a vile outcast,
Pauper! thy house thou hast,
Proprietor at last—
At last.

BORED TO DEATH.

I AM what is vulgarly, if not profanely, denominated a "poor-devil author."

The clock had just struck nine as my pen gave the last stroke to Chapter One Hundred and Twelve of the "Hobgoblin Husband," a thrilling tale which I contribute hebdomadally to the *Bunkum Weekly*. By my side lay the unfinished manuscript of that scathing treatise on the Political Tendencies of the Gulf Stream, which subsequently attracted such general attention in the *Arctic Review*.

Withdrawing my mind momentarily from its preoccupation, I observed that my grate wanted coals—an observation whose correctness was confirmed by a shivering sensation in my limbs.

Rousing myself to the effort which the emergency demanded, I arose from my seat and, my room being unprovided with a bell, went to the door, opened it, stepped out into the hall, leaned over the baluster, and was just inflating my lungs to shout "Bridget!"

I should, however, remark parenthetically that my room was Number Five of the attic of Mrs.

M'Screwby's boarding-house, on Bleecker Street, near Avenue A. The other occupants had, two hours before, gone out singly and in groups to the theatre or cheaper places of amusement. Unwonted, almost fearful, silence reigned—a silence that was rendered the more impressive by the fact that the fifth story, immediately below, was equally quiet.

I was, as I before intimated, about to break this silence by shouting "Bridget!" when the intended action of my vocal organs was prevented by a sound which just then saluted my ears. That sound was a violent and obstreperous cachinnation. It was not precisely a horse-laugh; I am unable zoologically to classify it. It broke abruptly upon the stillness with no apparent cause or sequence, and seemed to leave a strange quiver in the succeeding silence.

I had just convinced myself that it was but the product of my own brain, over-excited by the thrilling conceptions just embodied in Chapter One Hundred and Twelve aforesaid, when I again heard it more distinctly than before. Although decidedly masculine in tone, it yet forcibly reminded me of the refrain heard by Jane Eyre in the desolate chambers of Thornfield; and I stared in uneasy apprehension of seeing Grace Poole with her pot of porter, or the livid Mrs. Rochester herself, stalk forth from some attic room in Mrs. M'Screwby's boarding-house.

"Ha! ha! ha!"

This time it was deep, resonant, and hollow, as though forced from the depths of an empty stomach. I fancied that the Demon of Starvation might be exulting over the carcass of some of my unfortunate fellow-attics—perhaps Brown, the unpublished poet in Number Three, or Smithio, the gaunt artist in Number Nine.

"Ha! ha! ha—a—a!"

Sonorous and prolonged, like the jubilant howl of a wolf that has just concluded a repast on some unusually toothsome traveler.

I confess that I was frightened. I felt the capillary covering of my head rise and stand in serried array around its bald apex. A chill crept through the marrow of my bones—if, indeed, the bones of a poor devil author can, even figuratively, be said to contain marrow.

I at length perceived that the strange sounds originated in Number Eight—Jones's room.

I knew nothing whatever of Jones, except that his inky fingers and untidy aspect had convinced me that he belonged to the literary profession. The settled gloom of his countenance and compression of his bloodless lips, together with a strange twinkle in his eye, had given me the impression that he was harboring some dreadful purpose. I had always instinctively shrunk from Jones.

Now, however, fully determined to learn the source and nature of these mysterious explosions, I proceeded to Number Eight. The door stood open, and I timidly looked in. There sat Jones in his solitary chair before the empty grate, habited only in a ragged dressing-gown. He held a newspaper before his eyes, and would alternately read something therein and give utterance to a yell of laughter.

Thinking him intoxicated, I was about to retire, when, seeing me, he rushed forward to greet me.

"Ah! come in, Mr. Podhammer! Delighted to see you! Come to congratulate me, I suppose? Happiest moment of my life! He's done for—yes, he's done for at last! Ha! ha! ha!"

"Who's done for?" I asked, bewildered.

"Ah! true, you don't know. Read that. Ha! ha! ha!"

Thrusting into my hand an evening paper, he pointed to an obituary notice:

"Death of an Editor. — We regret to have to announce the demise of Archibald Pippin, Esq., the late well-known and accomplished editor of *Bullion's Monthly*. He has been for some time declining, and expired last evening."

Here followed a eulogium on the talents and virtues of the deceased.

"Been some time declining! Ha! ha! ha! Sit down, dear fellow, and I'll tell you the whole, confidentially."

I would gladly have retreated, but Jones had button-holed me, and placed himself between me and the door. So, with the best grace possible, I sat down on the bed. He rubbed his hands together, and laughed again; but then, with an effort, became quiet, sat down in the chair, drew it in front of me, leaned forward until his glaring eyes almost touched mine, and began:

"Sir, I was born a genius. I manifested that genius, when not yet out of my cradle, by crying only in poetic feet. I made verses before I could talk distinctly, and was an acknowledged poet at six years of age.

"When I reached manhood my productions were the delight of my native State—I am a native of an Eastern State, Sir. They were eagerly sought for and lauded by the editors of the *Oriental Palladium*, the *Massachusetts Bay Miscellany*, and the *Ladies' Literary Monthly*. Poetry gushed spontaneously from my inkstand. No subject was too lofty or too profound for my prose. I dwelt in a heaven of inspiration, Sir, from which I looked down with placid contempt on the puny efforts of those whom the world calls great.

"It is ever a necessity of genius to love and be loved. It was my fate to adore Arabella Muggins—an angelic creature, with languishing blue eyes and glossy black ringlets—the daughter of a merchant in my native town. Arabella adored me in return. We plighted our mutual faith, and sought the paternal benediction.

"The sordid Muggins, insensible to the charms of poetry and the dignity of genius, called me a beggar, and forbade me, with threats of personal violence, ever again to visit his daughter.

"That night I formed a resolution. I managed to have an interview with Arabella, and communicated my resolution to her.

"'Arabella,' I said, 'your father accuses me, with truth, of being poor. There is here no adequate pecuniary reward for literary genius. To-

morrow I will go to New York, where wealth is the recompense of merit. I will write for the magazines, and receive the munificent sums which the publishers delight to lavish on contributors. I will produce books whose multiplied editions shall pour gold into my now empty pockets. I will purchase a villa on the Hudson, whose banks are dotted with the country seats of literary men. Then I will return, exhibit to your father the evidences of my opulence, and again sue for your hand. Think you he will then refuse me?'

"Arabella approved of my resolution.

"With one passionate embrace, the memory of which will ever haunt me, we bade each other —as we thought—a temporary adieu. Oh! what bliss then loomed up before me! It was all blasted by— But he's done for! Ha! ha! ha!

"I came to New York—it was just a year ago —took rooms, and devoted myself to intense literary labor. Even genius needs money. To supply my immediate necessities I prepared articles for the magazines. Having first devoted several hours to the study of my subject, I penned a trenchant satire on City Life. I also produced several poems, and a scathing review of Contemporaneous Literature. I took these to the office of *Bullion's Monthly*, inquired for the editor, and was ushered into the presence of Pippin.

"I conversed freely with Pippin, communicated to him something of my history, plans, and aspirations, and added some valuable suggestions with regard to the management of his magazine.

"Pippin said that, as a matter of form, it would be necessary to examine my manuscripts before paying for them, but promised to send me the money as soon as they should have been approved.

"I returned to my room and waited for the remittance, of which I stood in need, my landlady and laundress having suggested the payment of their bills.

"Three weeks passed, and the money came not.

"In the mean time my landlady and laundress had become urgent.

"Thinking the remittance might have miscarried, I decided to call upon Pippin. As I entered the office he quietly opened a drawer— to get my money, as I supposed. You may imagine my astonishment and indignation when he produced and handed to me my manuscript, on which was indorsed the word 'Declined!'

"My first impulse was to throttle Pippin. My second emotion was compassion for a man so lamentably destitute of literary appreciation. Bestowing upon him a glance of withering contempt, I left the office and carried the manuscripts to *Pressman's Monthly*. There they met the same fate.

"In the mean time my landlady and laundress had become clamorous.

"My articles were afterward successively rejected by *Boggs's Monthly* and *Fizzle's Monthly*.

"In the mean time my landlady and laundress had become belligerent, and I had been driven to change my quarters.

"During the months which had now elapsed I had not been idle. I had completed a book— a poem in forty cantos—a poem whose success I confidently expected would cause Milton and Shakspeare and Byron to rise from their graves out of sheer envy.

"With triumphant emotions I bore it to the publishing-house of Sheep and Calf, and left it for the inspection of their manuscript-reader.

"At the appointed time I called to complete the arrangements for its publication. Messrs. Sheep and Calf informed me that their manuscript-reader had reported unfavorably to my book.

"Under this unexpected blow I only found breath to demand, 'Who is your manuscript-reader?'

"'Archibald Pippin,' replied Sheep.

"'Pippin of *Bullion's Monthly?*'

"'The same,' said Calf.

"The whole mystery stood revealed.

"I rushed out into the darkness of gathering evening, and strode homeward. Torrents of rain deluged my head and streamed down my back, but could not cool the fever of indignation within. The object of that indignation was Pippin. Pippin, moved by base envy of superior genius, had first rejected my articles. Pippin had, doubtless, instigated other editors to do the same. Pippin had now committed his crowning outrage by condemning my book.

"I passed periodical dépôts where next month's magazines were for sale, filled with commonplace trash. That my brilliant productions were excluded was the work of Pippin. From booksellers' windows gleamed, in crimson and gilt, the inferior works of weak authors. That my great poem had no publisher was due to Pippin. Other literary men were dwelling in the midst of luxury and breathing the incense of adulation while I, Adolphus Jones, was plodding umbrellaless through the storm, to encounter the yet more formidable tempests of my unpaid and indignant landlady. For this I had to thank Pippin.

"I reached my cheerless room. On my table lay a letter from a correspondent in my native town. It informed me that Arabella, having waited six months for me to fulfill my promises to her, had at length yielded to her father's solicitations and become the wife of another.

"My cup of bitterness was full, my ambition crushed, my hopes blasted, my love blighted. Henceforth I could have but one object in life— revenge on Pippin. I tossed restlessly all that night, revolving plans for the attainment of my object, none of which were sufficiently certain and comprehensive. Toward morning—it may have been a dream—I thought a demon perched on my bedside, and whispered to me a suggestion. That suggestion I adopted, and arose at daybreak with a fully matured resolution—a resolution to the accomplishment of which I have since

devoted every energy of my being. That resolution was—let me whisper it to you—*to bore him to death!*

"My *modus operandi* was to visit him frequently, provided with a liberal supply of manuscript. This I would read to him by the hour, under the pretext of asking his criticism or submitting it for his acceptance. I generally paid my visits to him about noon, the hour when the energies are beginning to flag after the labors of the morning, and prolonged them until I saw that he was reduced to an extreme point of irritability and exhaustion.

"Fortunately for my success, Pippin was a man of slender physical frame and highly sensitive nervous organization. I, on the other hand, was endowed by nature not only with iron nerves, but also with that peculiar pertinacity of purpose and fertility of resources so essential to the organism of a great and highly successful bore. You need not wonder, then, that I soon gained as complete ascendancy over Pippin as does the mesmerizer or psychologist over his subject, or the serpent over the bird which he is charming.

"Within a very few months I began to observe unequivocal tokens of my success in Pippin's increasingly haggard countenance and the look of ill-concealed terror with which he would greet my approach.

"Pippin did not yield to his fate without some struggles; but against a determination such as mine his struggles were impotent. When, driven to desperation, he gave orders that I should not be admitted, I gained access to him by means of ingenious disguises. When he changed his quarters I was sure to trace him unerringly and penetrate to his retreat. Not remorse or a bailiff ever dogged a victim more indefatigably than did I mine.

"Never did doting parent watch more eagerly the returning bloom on the countenance of an invalid child than did I the encroaching ravages of terror and anguish on the visage of Pippin. Oh! it was glorious to note the deepening and lengthening of the wrinkles, the sinking of his eye, the increasing concavity of his cheek. Never was trill at the Academy of Music such dulcet music to my ear as was the feeble, sepulchral tone with which he complained of loss of appetite, qualms, chills, vertigo, and sleepless nights.

"At length he took to his bed.

"Yesterday I called at his house. Lest I should not be admitted I hastened to his room without announcing my name. Assuring the anxious friends who surrounded his bed that I had come to amuse and divert him, I seated myself beside him and read forty pages of manuscript which I had prepared for the occasion. I then entered upon a detailed narration of my early history.

"When I had thus entertained him for several hours, I observed that his countenance became agitated with violent convulsive twitches. He asked in a scarcely audible voice, but with that mild intonation which always characterized him, if I would not defer the remainder of my interesting recital until another occasion. Assuring him that I was quite at leisure I continued my narrative.

"His countenance became yet more violently agitated, and his eye flashed with the lurid light of a just-expiring taper. He sprang from his bed and, with a sudden spasmodic movement of his hand, followed by several equally sudden movements of his foot, impelled me out of the room and down the stairs. He then bolted the door after me.

"I knew that exertion would be fatal to him.

"The next morning I met the undertaker coming from his house with a happy countenance. We grasped hands and rejoiced together.

"I carried the tidings to the evening paper and waited impatiently for its issue. I seized the first copy printed and bore it in triumph up Broadway. I read it aloud and shouted in my ecstasy. People stared at me and doubtless thought me mad. They little dreamed—"

At this moment the terror and disgust excited in me by Jones's recital reached its climax. The malicious gleam which his eye shot into mine filled me with a shuddering apprehension that he was about to repeat upon me the horrid experiment whose success had filled him with such fiendish exultation. The bare idea caused my flesh to creep and my bones to quiver.

Suddenly thrusting him away with a violent effort I made a rush for the door. Winged by fear I fled through the hall, overthrowing several of the boarders who were just returning to their rooms. I reached my apartment in safety and bolted the door behind me. I dreamed fearful dreams all night, from which I would awake with the terrible expectation of seeing Jones seated beside me, intent on boring me to death.

When I arose in the morning I found that three hairs in my left whisker had turned from their original red to snowy whiteness.

I immediately removed to the attic of another boarding-house.

MY FIRST OF APRIL.

THIS was the day—a year ago—
That first I saw her, sauntering slow
Over the meadow, and down the lane,
Where the privet was shining with recent rain.

The world had flung its torpor away,
And breathed the pure air of the April day;
The sap was pulsing through maple-trees,
And the rivers were rushing to meet the seas.

All the secret thrills that through Nature run,
Silent and swift as the threads of the sun,
Shook with their tremors each growing thing,
And worked with the mystic charms of spring.

Like ghosts at the Resurrection Day,
The snow-drops arose from the torpid clay;
And the violets opened their purple eyes,
And smiled in the face of the tender skies.

The larch-trees were covered with crimson buds
Till their branches seemed streaming with sanguine floods;
And the ivy looked faded and old and sere
'Mid the greenness that sprouted every where.

But though the landscape was passing bright,
Her coming lent it a rarer light;
A tenderer verdure was on the grass,
And flowers grew brighter to see her pass.

Her form and face, as she moved along,
Seemed like a sweet incarnate song—
A living hymn that the Earth, in glee,
Sent up to Heaven, the sun, and me.

So seemed she to me a year ago,
When first I saw her, sauntering slow
Over the meadow, and down the lane,
Where the privet shone with the April rain.

The year is past—entombed—forgot.
I stand to-day on the self-same spot.
Still do the pallid snow-drops rise,
And the violets open their purple eyes.

And a coming greenness is in the lane,
And the privet glistens with recent rain;
The larches sprout, and the blue-birds sing,
And the earth resounds with the joy of spring!

But the joy of the world is gone from me;
I see no beauty in field or tree;
The flower that bloomed in my path is crushed;
The music that solaced my life is hushed.

I see her tombstone from where I stand—
Stark and stiff, like a ghastly hand
Pointing to heaven, as if to say,
There we will meet on some April day!

EARS.

THOSE appendages to the head, whose elongation is so asinine and out-turning indicative of attention in brutes, are singularly unimpressive in the ordinary estimate of humanity; often concealed by the *coiffure* in one sex, and rarely beautiful in the other, they are comparatively ignored by artists and physiognomists; yet have they a remarkable significance, being symbolic of coarseness and refinement. That principle of beauty which, in vegetable life, adorns the stem with side leaves or blossoms, in architecture the column with volutes, and in shells with rosy convolutions, hath its human manifestation in the ear. How daintily are moulded these portals of the auditory nerve, and how aptly the well-poised head on fair shoulders is, as it were, made emphatic by the softly-indented ovals, on which rests the line of the smooth hair-band or which supports the tress! Of the sculptor's handiwork few points better mark the finish of the chisel and the individuality of the least mobile of features. Napoleon had a trick of pinching ladies ears—it was the caress of a patronizing ambition; and among Victor Hugo's most bitter sarcasms, launched at the imperial and foresworn nephew, is the prophetic image he conjures up of the Muse of History leading him to posterity by the ear. As a part of natural language, consider the diverse expression of the ear, whether it is large or dainty, big at the lower end or delicate, close to the head or at a wide angle, small and round, or thick and pendant.

The effect of a little brilliant attached to the lobe is marvelous in some faces, partly because it draws the eye and gives relief to the curve of the cheek below; yet larger ornaments disfigure and savor of barbarism. But it is the office associated with the form, the function allied to the beauty, which makes the ear suggestive to the mind's eye. It is Nature's dearest confessional. Ancient criminal law mutilated this organ as a mark of infamy; and even a brand on the forehead does not so instantly convey the idea of a discovered rogue as a cropped ear. Poetry draws innumerable figures of speech from this unobtrusive feature. "Lend me your ears!" pleads Brutus to the populace. How is the illusory in life typified by that description of Macbeth, when he complains that the witches "keep the word of promise to the *ear* and break it to the *hope*;" and Desdemona's incipient love foreshadowed in the "greedy ear" with which she devoured the Moor's adventures; morning described by the "pearl in every cowslip's ear;" and love's blindness figured in the kiss bestowed on Bottom's "fair long ears!" Shakspeare personifies herein—he speaks of the "ear of grief;" "the dull ear of death;" the warlike, dreaming bridegroom's, married, sad-attending, public, royal ear; "a lover's ear will hear the lowest breath;" and stars of midnight are likened to a "rich jewel in an Ethiop's ear." Fine-Ear is no common fairy; and "rattle in the welkin's ear" is a complete hint of a tempest, as well as the image "lark to shepherd's ear" of dawn. In animals the prominence and flexibility of the ear give it remarkable expression — as the diversity of look in Landseer's dogs, from the nervous, erect ear of the terrier and greyhound to the broad lappets of the setter, and the flexile and silky ones of the spaniel so emphatically illustrate. In hares and rabbits, in horses and sheep, the whole character of the head is modified by the shape and action of the ear; and there is a more wide range among animals than in man of the degrees of sensibility in the auditory nerves, extending from the obtuse ear of the adder to the acute hearing of the hound.

That is a sublime idea of Addison's in his Hymn—that the earth *listens* to the moon; but the process of hearing, in itself, is an infinite marvel. It is by a most refined species of touch that sound is communicated; aerial pulses convey it with so regular a gradation that Newton calculated the speed of transmission with mathematical exactitude. The action is mechanical; and the effect of sound upon the atmosphere, in its relation to the ear, has been aptly compared to that of a pebble cast into a lake—successive undulations extend from the centre to the shore. Thus on invisible ripples float the waves of sound, to die away on the auditory nerve as the wave upon the beach; vibration ever attends it—in the rattle of thunder which shakes a castle's massive foundations to the tremor of the piano when a note is struck. That the propagation of sound is not instantaneous, like that of light, we know by the familiar fact that the flash precedes, by several seconds, the report in artillery both celestial and human. The phenomena of wind and stringed instruments, grave and acute sounds, the different capacity of wood, stone, glass, and metal for transmitting them, the wonders of natural echoes and of ventriloquism, are among the countless scientific phases of acoustics. There is no sense wherein the diversities of taste are so extreme as that of hearing. We have, indeed, recent curious discoveries in regard to what is called "color-blindness," and national antagonisms in food and odors are patent; but what a complete *terra incognita* is the experience of an individual endowed with musical sensibility and knowledge, to one who, in Elia's quaint phrase, "has no ear!" What is infinitely suggestive to one is only a barren concussion or shrill caprice to the other; and yet affectation is in no sphere more common; and you will find the coxcomb or *parvenu*, who can not distinguish Old Hundred from Yankee Doodle, nor Mozart from Bellini, pretend to agonize over a false note, and talk more glibly of the technicalities of music than a prima donna or composer.

Harriet Martineau, some years ago, published a "Letter to the Deaf," in which she gave those afflicted with this infirmity much good counsel based upon her own experience. It would, however, have been quite as appropriate to advise those with acute hearing how to treat such as are not thus favored. The latter are rarely im-

patient under their privation, and learn to depend upon their own resources, as in the case of Miss Martineau herself; but the brutal impatience manifested by those who, vexed at the necessity of repeating an observation, or, in their selfish hardihood, unmindful of the baseness of insulting misfortune, exhibit in their intercourse with the deaf anger and incredulity by a scornful smile or a burst of passion, offer excellent subjects for the lay-preacher. In this country, especially, where the rapid and extreme alternations of temperature so inflame the mucous lining of the eustachean tube as to frequently cause temporary and casual deafness, more or less continuous or spasmodic, a little knowledge of the ear and its liabilities might induce sympathy and forbearance. No persons have better opportunities to estimate the comparative delicacy and consideration which comes from gentle blood or kindly self-forgetfulness, and the coarse rudeness of vulgar and unsympathetic minds, than the deaf. The helplessness of the blind and decrepit instantly appeals to decent observance if not to the humanity of all; but irritable people are incommoded by the deaf, and so vent their displeasure in needless shouts or ungracious reproaches, while the ready adaptation and thoughtful kindness of the more disinterested makes a deeper impression by contrast; for love not only lends a "precious seeming to the eye," but a sweet adaptation to the voice, and a humane consideration, which is at once the "heart of courtesy" and an element of the spirit of Christianity. Of all sorrowful mysteries the greatest is what we strive to imagine is the consciousness of genius deprived of one of the senses; how through memory imagination combines sounds and colors; and what must be the inward experience of men whose external impressions have furnished select intelligence, and ministered to profound and subtle sympathies, when cut off from these means of intercourse with life and nature! The blindness of Milton and Handel, and the deafness of Beethoven, are of more than pathetic significance in the psychological history of art.

If another Locke were to write on the association of ideas, modern science would furnish him quite a new stock of illustrations. Sound, like sleep, "has its own world," ranging, in each individual consciousness, from the mechanical routine hinted by the morning drum or the locomotive's whistle to the mysterious sphere on which the spiritually-minded enter with the key-note of a grand symphony. Some of the more purely suggestive of master compositions have been caught from the voices of nature, whose scale of harmony, extending from the roar of winds and waves to the rustle of grain and the hum of insects, breathes to attentive ears the whole eternal process of the universe. But of sounds derived from human invention and economy there is none which, in the variety and the permanence of the associations it awakens, compares with that of bells. The individual quality of their tone, the scenes amidst which we first hear them, the sacred or local memories intertwined with their vibration, appeal to the memory with a distinctness seldom otherwise realized. Hence the most aspiring of German poets availed himself of this fact to compose an immortal "Song of the Bell." The most reckless and weird of our native bards found in the graduated intonation and emphatic occasion of bells scope for the remarkable verbal and rhythmic ingenuity which conserves his effusions.* On the same principle Gray touched at once the pensive strain of his elegy by allusion to the curfew.

The language of bells is cosmopolitan. It requires no polyglot to understand the meaning of those sounds which, for fourteen hundred years, have announced from church towers worship, festivity, and death. We may be wandering thousands of miles from home, amidst a crowd whose garb and tongue are alien, or in a lonely and distant region, where the very herbage beneath and branches above proclaim a foreign soil, and yet the instant a bell's chime falls on the ear we take up the broken link of our electric human chain and feel at home once more. Bells, said the pious Latimer, inform Heaven of the necessities of earth; and so also do they announce the identity of human wants, instincts, and destiny, and thereby indissolubly blend their cadence with the sentiment of life. The modern novelists have well availed themselves of this fact, as in Victor Hugo's "Nôtre Dame," Jerrold's "St. Giles and St. James," and in Dickens's "Little Dorrit." And this universality is recognized by the poets. In that tender episode of Dante where he speaks of the voyager recalling at sunset the friends left behind, it is the "*squilla di lontano*" which seems to "*piange il giorno che si muore.*" "The bell invites me," soliloquizes Macbeth on the eve of crime; and Hamlet can find no more significant image to betoken Ophelia's madness than "sweet bells jangled out of tune." How Moore sang of those "Evening Bells," and Lamb felt the dying year's chime!

"Of all sounds of all bells—(bells, the music nighest bordering upon heaven)—most solemn and touching is the peal which rings out the old year. I never hear it without a gathering up of my mind to a concentration of all the images that have been diffused over the past twelvemonth; all I have done or suffered, performed or neglected, in that regretted time. I begin to know its worth, as when a person dies. It takes a personal color: nor was it a poetical flight in a contemporary when he exclaimed,

---

* "Hear the sledges with the bells—
Silver bells!
What a world of merriment their melody foretells!
* * * * * * *
Hear the mellow wedding-bells—
Golden bells!
What a world of happiness their harmony foretells!
* * * * * * *
Hear the loud alarum-bells—
Brazen bells!
What a tale of terror, now, their turbulency tells!
* * * * * * *
Hear the tolling of the bells—
Iron bells!
What a world of solemn thought their monody compels!"

'I saw the skirts of the departing year.'

It is no more than what, in sober sadness, every one of us seems to be conscious of in that awful leave-taking. I am none of those who

'Welcome the coming, speed the parting guest.'"

A fire and a festa, a gratulation and a requiem, welcome to peace and call to arms, find voices in bells. It was a beautiful reverence for their office that led the architects of old to lavish their highest skill on the towers wherein those vocal ministers of humanity were to vibrate. The Florence Campanile is a memorable instance; its variegated marbles, its harmonized proportions, its lofty grace—so effective beside the vast dome and massive spread of the Cathedral—associate the bells which call out the "Misericordia," and sound matins and vespers over the beautiful valley of the Arno, with one of the fairest trophies of the builder's skill. No wonder that primitive faith consecrated bells with prayer and song; and that science combines, moulds, and tempers the metal with vigilant care, in order to develop the rarest charms of sound.

"Fastened deep in firmest earth,
Stands the mould of well-burned clay.
Now we'll give the bell its birth;
Quick, my friends—no more delay!
* * * * *
With splinters of the driest pine
Now feed the fire below;
Then the rising flame shall shine,
And the melting ore shall flow.
Boils the brass within,
Quickly add the tin,
That the thick metallic mass
Rightly to the mould may pass.
See, the boiling surface whitening
Shows the whole is mixing well;
Add the salts, the metal brightening,
Ere flows out the liquid bell.
Clear from foam and scum
Must the mixture come,
That with a rich metallic note
The sound aloft in air may float.
See how brown the liquid turns!
Now this rod I thrust within;
If it's glazed before it burns,
Then the casting may begin.
* * * * *
And it shall last to days remote,
Shall thrill the year of many a race;
Shall sound with sorrow's mournful note,
And call to pure devotion's grace.
Whatever to the sons of earth
Their changing destiny brings down,
To the deep, solemn clang gives birth,
And rings from out this metal crown."*

There is something remarkably endearing in the sound of bells. Whoever has caught their distant peal while coasting along the Mediterranean shores, or felt the summer stillness of an Alpine valley broken by the chimes from a venerable belfry, can imagine, as the mellowed intonations blend with the scenery and make the soft air melodious, how precious to native associations must be the familiar echoes. At the Zürich Insane Asylum, some years ago, there was an inmate whose occupation had been that of a bell-ringer. So keenly did he feel the deprivation of his accustomed office that, making his escape, he hastened to the nearest magistrate and implored to have his occupation restored or be immediately beheaded. What a chapter in history are the Vespers of Palermo! One of the most affecting legends of which so many charming ballads have been constructed by the Germans, is the "Blind Steed" of Langbein:*

"What bell-house, yonder, towers in sight
Above the market square?
The wind sweeps through it day and night,
Nor gate or door is there.
Speaks joy or terror in the tone
When neighbors hear the bell?
And that tall steed of sculptured stone,
What doth the statue tell?"

The answer to this inquiry is, that the fathers of the town created what they called the "Doom-bell of Ingratitude," that whoever felt that serpent's sting might therewith summon the ministers of the land and have instant punishment awarded the offender. A prosperous citizen of the place owned a horse not less remarkable for beauty and fleetness than for sagacity; his services were long and memorable, but in his old age his master turned him adrift to starve; he roamed about, gnawing at every chance twig, and at last—

"Once, thus urged on by hunger's power,
All skin and bone—oh, shame!
The skeleton, at midnight hour,
Up to the bell-house came.
He stumbled in and chanced to grope
Near where the hemp-rope hangs;
His gnawing hunger jerks the rope,
And hark! the bell-doom clangs."*

The judges meet, and are astonished to "see such a plaintiff there;" but consider "'twas God that spoke," and oblige the ungrateful master to take home and provide for his steed.

There is the bell which summons to the diurnal repast, and one whose clang wakes the weaver and machinist; the bell at the stern, which sounds the monotonous flight of hours at sea, and those whose merry click, on arm and ankle, times the Egyptian dancing-girl's gyration; there is the diving-bell, and the "all-ashore" bell of the parting steam-packet; there are the tinkling alarums on the necks of browsing kine, the gay jingle of sleigh-bells over the white, fleecy plain, and those which cheer the patient mule's steps amidst the mountains of Spain. The falcon wore his little bell; "bell, book, and candle" were the old instruments of exorcisms; and a "cap and bells" the badge of court fools. The bells of the household, which startle with expectancy the domestic circle as heralds of the favored guest or the stranger's coming; the silver bells of the greyhound's collar; the brazen bell of the crier; and so on through all the economies of life wherein bells enact a utilitarian part as far removed from the ancient and the poetic service associated with the cathedral and the rites of humanity as are her aspirations from her drudgery. There have been memorable superstitions connected with these little messengers of sound; mysterious voluntaries, inexplicable monotones, identified with some catastrophe, or prophetic thereof, as warnings or summons made their echoes portentous.

* Schiller's "Song of the Bell."

* German Lyrics, translated by C. T. Brooks.

Ere the wreck of a steamer, plunged forever in the trough of the sea, a few years ago, in Long Island Sound, her brave company all gone, some beneath the waves, and others frozen or suffocated, above the surging and desolate waters, with the fitful rush of the gale, still clanged the bell, swung by the tempest like a dirge over its victims. "Silence that dreadful bell!" exclaims Othello, when the isle was "roused from its propriety." And how often, on sensitive brain and quivering nerves, do the ill-timed jar of these intrusive messengers wake the same impatient protest of invalid and mourner! A popular novelist, alluding to those of London, as heard in a house of sorrow on Sunday, well calls them "exasperating." On this side of the water the church-bells often, and especially in villages, lack the tone so mellow across the sea; they are often hung too near the earth, and rung by inexperienced hands; their accents are business-like and commonplace, even in their call to prayer; herein, as in other interests, art and sensibility to the beautiful lack votaries. Yet are there notable exceptions. Whoever has found himself in Wall Street on a Sabbath morning, and heard those deserted precincts of financial excitement resound with old Trinity's harmonious chimes, must have felt, with all the zest of contrast, the solemn poetry of bells. In front of Lafayette's portrait in Independence Hall, Philadelphia, is a bell which, even mute, appeals to every American heart by this inscription: "The ringing of this bell first announced to the citizens who were anxiously waiting the result of the deliberations of Congress (which were at that time held with closed doors) that the Declaration of Independence had been decided upon; and then it was that the bell proclaimed liberty throughout the land to all the inhabitants thereof!" In that city, also, is the oldest chime of bells in the land; they hang in Christ Church. One in Boston, long endeared, once drew crowds to the North End to listen. "Within the sound of Bow-bells," was long the cockney way of claiming nativity in London. The note of a bell is, of all sounds, that which comes nearest home to the local spell of a habitation. In cities, where rural sights and sounds are wanting, imagination insensibly clings to these aerial and familiar tones: perchance they breathe over the ashes of the loved, or have mingled with the labor and the pastime of years; above the hum of trade and the voices of the thoroughfare their clear, deep, prolonged refrain is perchance the only sound that whispers to the brooding heart of higher interests than the work and the pleasure of the hour. There is to the forlorn a greeting, to the reminiscent a charm, and to the meditative an inspiration in their music; it pulsates through the air at dawn, noontide, or midnight; "above the world while in it;" the pen or pencil is self-arrested as if at a friendly voice; the book is closed; the head turns on the pillow; and thoughts of responsibilities maturing with the hours, of hopes blasted in the past, or that "wander through eternity," come as the last vibration slowly expires. Even the ambitious and absorbed Napoleon would pause in his rapid promenade, and grow pensive and thoughtful at the sound of bells, and often was seen arrested and touched by the sound of those at Malmaison, so fraught with memories of love and remorse.

It is marvelous how the ear discriminates congenial sounds. "Ceux," says Balzac, "qui passant habituellement les nuits, et qui ont observé les differents effets de l'acoustique par un profond silence, savent que souvent un léger retentissement est facile à percevoir dans les mêmes lieux où des murmures égaux et continus n'avaient rien de distinctible."

Nature's daintiest products are the model of bells. How many flowers wear their shape, and might be imagined to have hinted their creation to Adam! Horace Smith, in his exquisite hymn to these evanescent and graceful forms, speaks of the "floral bell that swingeth;" and the delicate song in the Tempest says, "In the cowslip's bell I lie." Bells signalize to consciousness the most hallowed associations of travel. We seem to hear a voice from the far-past in the reverberation of cathedral bells in Europe. Near one of the wonderful old churches on the Danube, in Germany, Spain, Italy, and English cathedral towns, what a panorama of history, what memorable personages and pensive retrospection, the sound of ancient bells awaken in the mind of the imaginative stranger! At Oxford and Rome, at Rouen and Nuremberg, what martyrs, reformers, saints, bards, kings, and artists, whose names blend with the local memories of the place, reappear to the fancy, as the bells, which announced their advent or rang their knell, fill the air with echoes from the long dim "corridors of time," and connect them with the wants, aspirations, and fragilities of this "shoal of time" on which we stand and listen with awe and love! All over the Continent are famous bells—that of Erfurt, for instance: some for antiquity, others for size; this because of its exquisite tone, and that on account of a saintly tradition; and many as intimately associated with the fortunes and the fame of the church or town wherein they have so long rang out the chimes of human vicissitude and faith.

"Our ears," says Theophrastus, "are the most dangerous instruments about us for receiving violent impressions to alter and disturb us." And one obvious reason why this should be the case in hearing rather than seeing, is because of the comparative interval and succession of sound; whereas the process of sight is usually continuous and unbroken. There are sounds which rouse, soothe, or inspire the fancy and the memory more vividly than any object of vision. In certain moods or circumstances, the patter of rain, the tick of a clock, the dash of sleet against the pane, the chirp of a cricket, the shrill note of a locust, the sough of trees, the moan of waves, the notes of certain birds, the creaking of a ship's bulwarks, the bleat or low of kine, the dull echo of a falling clod—any characteristic and perfectly intelligible sound—is like the monotone of destiny, the key-

note of our past or the herald of our actual life; having a mysterious influence upon consciousness through the imagination and the auditory nerves. "Melody and harmony," observes Isaac Taylor, "have a *fixed affinity* with the several emotions of our moral constitution; and they awaken, with unvarying certainty and precision, this or that sentiment or passion;" and Davies declares—

"This is the slowest yet the daintiest sense;
For ev'n the ears of such as have no skill
Perceive a discord and conceive offense;
And knowing not what's good, yet find the ill."

The relation of the sense of hearing to the mind is, when minutely pondered, as fraught with psychological wonders as vision when expounded by such a speculative inquirer as Berkeley. The reason, we are told, why those born deaf are also dumb, is that we must speak to ourselves inwardly—have the idea of speech before utterance. It is easy to imagine a train of metaphysical inference from this one fact in the philosophy of the senses. There are rare mysteries in acoustics. The reflective traveler can scarcely fail to lose himself in a labyrinth of conjectures as to the possible application of its laws after his experience in the ear of Dionysius at old Syracuse or the whispering gallery of St. Paul's. There was a church in Naples where a jealous nobleman discovered that, by standing on a particular slab of the vast floor, he could hear distinctly the low voices of a distant confessional, and thus regularly acquired a knowledge of his wife's peccadilloes. The ignorance of acoustic principles is annually demonstrated in the expensive practical errors made by architects in constructing buildings for oratory and vocalism.

Montaigne's father caused him to be awakened in childhood by music, and to this he attributes, in a measure, the constitutional serenity of his nature. Disraeli the elder has a chapter in his "Curiosities of Literature" on Medical Music, containing some remarkable facts and inferences, the effects of harmony in curing delirium and melancholy—as in the case of Saul, so beautifully dramatized by Alfieri—in preventing the fatal consequences of a tarantula bite, etc., are well authenticated; and a French writer says, in explanation, that melodious sounds "assist the circulation of the blood, dissipate vapors, and open the vessels so that the action of perspiration is freer." The fable of Orpheus, the practice of uncivilized nations, and the anecdotes of the effect of their national air upon the Swiss—indicate how nearly allied are sound and the passions; Collins has lyrically suggested the idea, and Milton speaks of "putting the soul in tune"—with him a literal process, for there is no little analogy between the blind poet's Organ and the rhythm of Paradise Lost. The "impressions which the waves of sound make upon the labyrinth of the ear" have, indeed, an intellectual and moral significance, which science and psychology must unite to apprehend. It is enough to remember that music is a life to her legitimate votaries, and that art hints at infinite possibilities in the mere act of listening. Even among our own artists—this theme has proved the occasion of signal triumphs—the very foot of the Scribe, in Allston's Jeremiah, listens; Crawford's Orpheus and Power's Fisher Boy (the one lulling Cerberus with his harp as he steals into Hades, and the other holding a shell to his ear, with an expression of innocent wonder) are favorite statues.

Both the philosophy and the poetry of sound—the possible ministry of the ear to the soul—have been best illustrated by the poets; their very rhythm reveals the exquisite relation between auditory impressions and reason, memory and imagination; and an appeal to this sense often gives the whole impression of an actual scene or an inward experience. Thus Campbell pictures a sea-fight in a stanza:

"'Hearts of oak!' our captain cried; when each gun
From its adamantine lips
Spread a death-shade round the ships,
Like the hurricane eclipse
Of the sun."

And Wordsworth nowhere more sweetly indicates his favorite idea of the subtle influence of nature upon humanity than in the verse—

"The stars of midnight shall be dear
To her; and *she shall lean her ear*
In many a secret place,
Where rivulets dance their wayward round,
And beauty, born of murmuring sound,
Shall pass into her face."

While Milton, in a single and bold image, suggests all the rapture of musical delight—the highest pleasure derivable through the ear:

"Can any mortal mixture of earth's mould
Breathe such divine, enchanting ravishment?
Sure something holy lodges in that breast,
And with these raptures moves the vocal air
To testify his hidden residence.
How sweetly did they float upon the wings
Of silence, through the empty-vaulted night,
At every fall smoothing the raven down
Of darkness, till it smiled!"

HALF AN HOUR WITH MR. HUME THE SPIRITUALIST.

IN the spring of 1858 I was in Naples while Mr. Hume, the famous spiritualist, was there. He is so much talked of—his doings, movements, and position so freely canvassed—and he seems, in a word, so much more of public property than private, that I do not feel I am transgressing the proprieties of social life in giving a short account of the little I saw, and the great deal I heard, of him.

Our minister, Mr. Owen, knew the celebrated spiritualist intimately, and at his house I heard much of him, although it was not there I saw him, as the only *séances* he held at Mr. Owen's were strictly private, being for the King's brother, Prince Luigi, and no one was present but the immediate family of Mr. Owen. The reports of these *séances* made us all very curious, and desirous of seeing the spiritual lion; but he was like the man in the parable, "he was mar-

rying a wife," and could not be seen by common folk—one had to be a Prince and a Bourbon, it seemed, to command that privilege. He told my friend, Mrs. Rochester, however, who knew him intimately, that he would come with her some morning to see me *sans cérémonie*, and without announcement; but his intended bride's family, with whom he was traveling—wealthy Russians — were planning daily excursions to Amalfi and Pæstum, Sorrento and Capri, Pozzuolo and Baia, and all the numberless points of enchanting interest that surround Naples. For that reason this promised gratification never reached me.

One morning Mrs. Rochester came in and told me that he was very desirous of being presented to Mr. Bryant, who was also at that time in Naples, and that he was to call on the poet that afternoon. Having authority, she invited me to be present at the interview. Accordingly at three o'clock I went to the Hotel de l'Europe, where I was received courteously by the distinguished poet's family, and we laughed and talked merrily about the expected visitor. The manner with which Spiritualism is treated shows how little actual faith we have in it, although an inherent love of the marvelous, a yearning to know something of that great silent Beyond, makes some of us fancy we have. Of course I am not speaking of the avowed professors of and believers in it, but of the great party of outsiders who listen to and repeat greedily its wondrous tales and "*developments.*" The most marvelous stories are told and laughed over, which, if one believed, would make one feel solemn and silent. One story, I remember, we talked of that day with certainly amused if not merry wonder, which was calculated to have caused us very serious feelings if we had given to it even an atom's weight of faith.

During one of the *séances* with Prince Luigi, little babies' hands had appeared under the table covering—spirits of children Mr. Owen had lost twenty years before—their little doubled-up fists had played in the silk flounces of the mother's dress, their little unseen forms had nestled down at her feet, snatched up kerchiefs with invisible hands, and tied knots with little unseen fingers. Then an accordeon was held beneath the table, and the little invisible beings played on it a broken but sweet melody, a few strains; then the accordeon trembled as if held by little hands too weak for its weight; then fell to the ground. Now we believed that those who had told us this were honest and sincere in their belief, but we had no faith in spirits having caused the marvel.

While we were talking of this Mr. Hume and Mr. Owen were announced. Mr. Hume was presented to Mr. Bryant; and I noticed that he took a rapid survey of the poet, who has as distinguished a presence as name, while he was being introduced, as if he were weighing and measuring him mentally.

"You are clever and cunning, young Aureolus Bombastus," I thought, "but you can not do that."

Only a few moments passed during the introduction, and I do not know if the rest noticed the sharp weight-and-measured look that flashed out of the bright blue eye of the young spiritualist, as he scanned the patriarchal-looking poet, who stood receiving his boyish guest with simplicity, politeness, and a loyalty of manner, as if he respected himself, his surroundings, and was willing to extend the same feeling to all who approached him; but short as the moments were, they impressed me strongly; and there rose to my lips, as I noted the young man's expression, the words which Browning puts into the mouth of Paracelsus when he first sees Aprile the poet:

> "Art thou the sage I only seem to be,
> Myself of after time, my very self,
> With sight a little clearer, strength more firm,
> Who robs me of my prize, who takes my place
> For just a fault, a weakness, a neglect?
> I scarcely trusted God with the surmise
> That such might come."

The principal presentation of the visit being over, we ladies were introduced, willing adjuncts of the poet. As I was a nobody I had a good chance of observing and noting—one advantage of the many that *nobodies* possess. My first examination was of the *physique* of the young man. He seemed about five or six and twenty, had light-brown hair and blonde complexion, a frank, boyish countenance, and a quick, bright, blue eye, clear as the waters that wash the base of a granite mountain; his voice was ringing, and had a cordial tone in it, and the throaty laugh of youth, as if no care or sorrow had sent the laugh lower down for springs to feed it. A genial, merry manner, an egotistical freedom in talking of himself, a hearty, innocent candor, were the first things that struck me; and but for that sharp weight-and-measure expression of his face which I had noticed as I entered the doorway of the salon, I might not have examined the young man's features, or noted his manners any more than to have thought him an imaginative person, who possessed a great deal of that mysterious magnetic power of which so little is known, and who used it with the unconsciousness of a real childlike nature. But the recollection of that look remained; and after the first survey of his person I returned to the examination of his face, to find out where lay the sharpness and cleverness. At last I discovered them in those glancing blue eyes and frank, laughing mouth. Around the eye and mouth setting were numberless little foxy lines, which gave a curious, cunning, knowing expression to the face, strangely at variance with its surface character.

How curious is the history that every human face tells! No matter how hidden the labor, how strong the will, how stern the self-control, the murder will out in some little leaf of the countenance. I looked from the spiritualist to the poet, from the poet to our minister, and contrasted, as strongly as my weak woman powers would enable me, the three faces. Mr. Owen's is dreamy, speculative, and almost poetical; but there are certain hard lines about the mouth, and

square wrinkles on the brow, which tell of the struggle that may have gone on in his nature between wild, utopian visions, and sober common sense, and turned the vague dreamer, who would have lived and tried to make others live out impossible schemes, into the acting, practical man, fit to be what Madame de Staël said his great preceptor, M. Fellenberg, desired his educational system to produce: "A liberal bond between the inferior and superior classes; a bond which should not be founded only on the pecuniary interests of the rich and the poor."*

Mr. Bryant's face and head are as satisfactory as any admirer of the poet's works can wish. A fine high brow; a head as classic in its outline as an antique; a calm reflective eye, so serious that but for its serenity it would be stern, inquiring in its expression at times, not so much of outward things, but as if communing with something high and beyond; a mouth expressing sensitiveness and purity. Add to this the gray hair that clusters around his fine head, and the patriarchal beard which is as oddly at variance with the fire of the eye as Richelieu's eye and voice were with his tottering gait; then his calm manner, simple and plain, but the simplicity and plainness of high culture, and an inherent self-respect, which, though unobtrusive, is none the less felt. I had heard him described as cold, stern, and exclusive—to me he seemed serene, self-poised, and just. From his quiet face, expressive of that perfect wisdom which results from a constant communion with good, true thoughts, I shifted my eyes to the young Scotchman, whose spiritualistic success has made him famous enough to be mentioned hereafter in the history of this unknown magnetic, human atmosphere, when future discoveries have made it as "*natural*" and "*easy to believe*" as steam and electricity.

The young man's tongue was running with voluble facility, while his eyes were scanning quickly his audience; the graceful form of the poet's invalid wife, who lay upon the sofa, her delicate, lady-like features and exquisite little hand and foot, which peeped out from the folds of the soft silken dressing-robe—all these I felt certain were noted, as that sharp blue eye swept over her, and then on each member of the circle. I noticed also that he remembered among the other ladies present which one was the poet's daughter. He had a word for each and all, in proportion to our ranks; but intellect sate on that American throne—a Bryant, not a Bourbon.

He talked of a living *double* he had, with frank fun, as if he heartily enjoyed it; some charlatan who was pretending to be Mr. Hume, and who had played numberless pranks which were even rascally and dishonest—such as introducing himself into families, getting invitations to stay all night, and decamping before daybreak with all the silver. This person had visited Florence, Marseilles, and a variety of places.

"And so droll," said the young man, with a burst of *naïve* surprise, as if all the world should be familiar with his personal appearance; "so odd, the descriptions given of this person show him to be totally unlike me—for they all say he is a middle-aged, large, dark-haired man."

Then he talked of his engagement with delicious *naïveté;* said, with a merry laugh, that he had only known the lady six weeks.

"Although," he added, with a little dash of his chin up and toss of his head, "we had known of each other by reputation long before." It was inimitable.

There was none of the accepted notion of a magician about him. Indeed it seemed strange, while looking at this eager, boyish, apparently enthusiastic youth, to think of him as the man who had been consulted seriously by the long-headed Louis Napoleon, and had been invited by persons of the highest rank in Europe as a guest to visit them, who had treated him and his spiritualism with respect. He did not say one word about spiritualism, but spoke of himself as well known, not with offensive conceit or presumptuous vanity, but with the *naïve* frankness of a youth. Notwithstanding all this, he seemed sharper and more cunning than this air implied. There was certainly "method in his *manner.*" He made the conversation as general as possible, even while speaking of himself; kept up a brisk talk, a perfect chatter, left no room for suggestions, or the natural remarks or questions that might have arisen from such a personal style of talking. He said he was born in Scotland, had gone to the United States when very young, then returned while still a youth to Scotland.

After talking half an hour or so, Mr. Owen reminded him of the time, and he arose with the quick, alert movement that characterized him, and took his leave of Mr. Bryant and the ladies, with the fresh, eager manner of a very young man who had not been long enough in the artificial world to grow conscious or affected, but who was entirely free from *gêne* or shyness. Of course we discussed him after we left; and we ladies expressed our surprise that no raps had been heard around him, nor any wonderful deviltry displayed. I could not help thinking what marvelous cleverness he had shown in not attempting any feats in the presence of the wise, serene, plain-seeing man beside him.

Before I took my leave we talked of a clever, pretty story we had heard of him in connection with the Brownings. One evening, while he was sitting in their salon at Florence, he played with some green leaves lying on the table, and which Mr. or Mrs. Browning had gathered during an afternoon walk. While talking he formed them into a wreath which, after he had completed it, he threw carelessly on the table and turned aside to play with something else, for this thoughtless, unconscious handling of cards or little table ornaments while he is talking is said to be one of his peculiarities. A low exclamation from the one

> "who mutely sits
> Musing by the fire-light, that great brow
> And the spirit small hand propping it,"

* Madame de Staël's "L'Allemagne."

attracted the attention of every one to the little leafy wreath. It was rising in the air, without the help of any visible hands; it rose gently, and swayed an instant to and fro, as if a soft breeze half lifted, half impelled it; it moved slowly on, every one watching it earnestly, until it arrived near Mrs. Browning, then it fell, eddying down like the leaf her husband writes of in "By the Fireside," and rested on that "great brow," mingling its rich glossy leaves with the hair of which Browning says in the same poem,

——"So dark and dear, how worth
That a man should strive and agonize
And taste a very hell on earth
For the hope of such a prize!"

We all united in the opinion that Mr. Hume's powers had never been better employed than in making his "unseen spirits of the air" crown

"My perfect wife, my Leonor."

THE VIRGINIANS.

BY W. M. THACKERAY.

CHAPTER LXIV.

IN WHICH HARRY LIVES TO FIGHT ANOTHER DAY.

THE trusty Gumbo could not console himself for the departure of his beloved master: at least, to judge from his tears and howls on first hearing the news of Mr. Harry's enlistment, you would have thought the negro's heart must break at the separation. No wonder he went for sympathy to the maid-servants at Mr. Lambert's lodgings. Wherever that dusky youth was, he sought comfort in the society of females. Their fair and tender bosoms knew how to feel pity for the poor African, and the darkness of Gumbo's complexion was no more repulsive to them than Othello's to Desdemona. I believe Europe has never been so squeamish in regard to Africa as a certain other respected Quarter. Nay, some Africans—witness the Chevalier de St. Georges, for instance—have been notorious favorites with the fair sex.

So, in his humbler walk, was Mr. Gumbo. The Lambert servants wept freely in his company: the maids kindly considered him not only as Mr. Harry's man, but their brother. Hetty could not help laughing when she found Gumbo roaring because his master had gone a volumteer, as he called it, and had not taken him. He was ready to save Master Harry's life any day, and would have done it, and had himself cut in twenty tousand hundred pieces for Master Harry, that he would! Meanwhile Nature must be supported, and he condescended to fortify her by large supplies of beer and cold meat in the kitchen. That he was greedy, idle, and told lies is certain; but yet Hetty gave him half-a-crown, and was especially kind to him. Her tongue, that was wont to wag so pertly, was so gentle now that you might fancy it had never made a joke. She moved about the house mum and meek. She was humble to Mamma, thankful to John and Betty when they waited at dinner; patient to Polly when the latter pulled her hair in combing it; long-suffering when Charley from school trod on her toes, or deranged her work-box; silent in Papa's company — oh! such a transmogrified little Hetty! If Papa had ordered her to roast the leg of mutton, or walk to church arm in arm with Gumbo, she would have made a courtesy, and said, "Yes, if you please, dear Papa!" Leg of mutton! What sort of meal were some poor volunteers having, with the cannon-balls flying about their heads? Church? When it comes to the prayer in time of war, oh! how her knees smite together as she kneels, and hides her head in the pew! She holds down her head when the parson reads out "Thou shalt do no murder" from the communion-rail, and fancies he must be looking at her. How she thinks of all travelers by land or by water! How she sickens as she runs to the paper to read if there is news of the Expedition! How she watches Papa when he comes home from his Ordnance Office, and looks in his face to see if there is good news or bad! Is he well? Is he made a General yet? Is he wounded and made a prisoner? ah me! or, perhaps, are both his legs taken off by one shot, like that pensioner they saw in Chelsea Garden t'other day? She would go on wooden legs all her life, if his can but bring him safe home; at least, she ought never to get up off her knees until he is returned. "Haven't you heard of people, Theo," says she, "whose hair has grown gray in a single night? I shouldn't wonder if mine did — shouldn't wonder in the least." And she looks in the glass to ascertain that phenomenon.

"Hetty, dear, you used not to be so nervous when Papa was away in Minorca," remarks Theo.

"Ah! Theo, one may very well see that George is not with the army, but safe at home," rejoins Hetty; whereat the elder sister blushes, and looks very pensive. *Au fait*, if Mr. George

HETTY'S MISGIVINGS.

had been in the army, that, you see, would have been another pair of boots. Meanwhile, we don't want to harrow any body's kind feelings any longer, but may as well state that Harry is, for the present, as safe as any officer of the Life Guards at Regent's Park Barracks.

The first expedition in which our gallant volunteer was engaged may be called successful, but certainly was not glorious. The British Lion, or any other lion, can not always have a worthy enemy to combat, or a battle royal to deliver. Suppose he goes forth in quest of a tiger who won't come, and lays his paws on a goose, and gobbles him up? Lions, we know, must live like any other animals. But suppose, advancing into the forest in search of the tiger aforesaid, and bellowing his challenge of war, he espies not one but six tigers coming toward him?

This, manifestly, is not his game at all. He puts his tail between his royal legs, and retreats into his own snug den as quickly as he may. Were he to attempt to go and fight six tigers, you might write that Lion down an Ass.

Now, Harry Warrington's first feat of war was in this wise. He and about 13,000 other fighting men embarked in various ships and transports on the 1st of June, from the Isle of Wight, and at daybreak on the 5th the fleet stood in to the Bay of Cancale, in Brittany. For a while he and the gentlemen volunteers had the pleasure of examining the French coast from their ships, while the Commander-in-Chief and the Commodore reconnoitered the bay in a cutter. Cattle were seen, and some dragoons, who trotted off into the distance; and a little fort with a couple of guns had the audacity to fire at his Grace of Marlborough and the Commodore in the cutter. By two o'clock the whole British fleet was at anchor, and signal was made for all the grenadier companies of eleven regiments to embark on board flat-bottomed boats and assemble round the Commodore's ship, the *Essex*. Meanwhile Mr. Howe, hoisting his broad pennant on board the *Success* frigate, went in as near as possible to shore, followed by the other frigates, to protect the landing of the troops; and now, with Lord George Sackville and General Dury in command, the gentlemen volunteers, the grenadier companies, and three battalions of guards pulled to shore.

The gentlemen volunteers could not do any heroic deed upon this occasion, because the French, who should have staid to fight them, ran away; and the frigates having silenced the fire of the little fort which had disturbed the reconnoissance of the Commander-in-Chief, the army presently assaulted it, taking the whole garrison prisoner, and shooting him in the leg. Indeed he was but one old gentleman, who gallantly had fired his two guns, and who told his conquerors, "If every Frenchman had acted like me, you would not have landed at Cancale at all."

The advanced detachment of invaders took possession of the village of Cancale, where they lay upon their arms all night; and our volunteer was joked by his comrades about his eagerness to go out upon the war-path and bring in two or three scalps of Frenchmen. None such, however, fell under his tomahawk; the only person slain on the whole day being a French gentleman, who was riding with his servant, and was surprised by volunteer Lord Downe, marching in the front with a company of Kingsley's. My Lord Downe offered the gentleman quarter, which he foolishly refused, whereupon he, his servant, and the two horses, were straightway shot.

Next day the whole force was landed, and advanced from Cancale to St. Malo. All the villages were emptied through which the troops passed, and the roads were so narrow in many places that the men had to march single file, and might have been shot down from behind the tall leafy hedges had there been any enemy to disturb them.

At nightfall the army arrived before St. Malo, and were saluted by a fire of artillery from that town, which did little damage in the darkness. Under cover of this the British set fire to the ships, wooden buildings, pitch and tar magazines in the harbor, and made a prodigious conflagration that lasted the whole night.

This feat was achieved without any attempt on the part of the French to molest the British force; but, as it was confidently asserted that there was a considerable French force in the town of St. Malo, though they wouldn't come out, his Grace the Duke of Marlborough and my Lord George Sackville determined not to disturb the garrison, marched back to Cancale again, and—and so got on board their ships.

If this were not a veracious history, don't you see that it would have been easy to send our Virginian on a more glorious campaign? Exactly four weeks after his departure from England Mr. Warrington found himself at Portsmouth again, and addressed a letter to his brother George, with which the latter ran off to Dean Street so soon as ever he received it.

"Glorious news, ladies!" cries he, finding the Lambert family all at breakfast. "Our champion has come back. He has undergone all sorts of dangers, but has survived them all. He has seen dragons—upon my word he says so."

"Dragons! What do you mean, Mr. Warrington?"

"But not killed any—he says so, as you shall hear. He writes:

"'Dearest Brother,—I think you will be glad to hear that I am returned, without any commission as yet; without any wounds or glory; but, at any rate, *alive and harty*. On board our ship we were almost as crowded as poor Mr. Holwell and his friends in their Black Hole at Calicutta. We had rough weather, and some of the gentlemen volunteers, who prefer smooth water, grumbled not a little. My gentlemen's stomachs are dainty; and after Braund's cookery and White's kick-shaws, they don't like plain sailor's *rum and bisket*. But I, who have been at sea before, took my rations and can of flip very contentedly; being determined to put a good face on every thing before our fine English *macaronis*, and show that a Virginia gentleman is as good as the best of 'em. I wish, for the honor of old Virginia, that I had more to brag about. But all I can say in truth is, that we have been to France and come back again. Why, I don't think even *your tragick pen* could make any thing of such a campaign as ours has been. We landed on the 6 at Cancalle Bay, we saw a few dragons on a hill—'

"There! Did I not tell you there were dragons?" asks George, laughing.

"Mercy! What can he mean by dragons?" cries Hetty.

"Immense long-tailed monsters, with steel scales on their backs, who vomit fire, and gobble up a virgin a day. Haven't you read about them in The Seven Champions?" says Papa.

"Seeing St. George's flag, I suppose they slunk off."

"I have read of 'em," says the little boy from Chartreux, solemnly. "They like to eat women. One was going to eat Andromeda, you know, Papa; and Jason killed another, who was guarding the apple-tree."

"'. . . A few dragons on a hill,'" George resumes, "'who rode away from us without engaging. We slept under canvass. We marched to St. Malo, and burned ever so many privateers there. And we went on board shipp again, without ever crossing swords with an enemy or meeting any except a few poor devils whom the troops plundered. Better luck next time! This hasn't been very much nor *particular glorious:* but I have liked it for my part. I have *smelt powder*, besides a deal of rosn and pitch we burned. I've seen the enemy; have sleppt under canvass, and been dredful crowdid and sick at sea. I like it. My best compliments to dear Aunt Lambert, and tell Miss Hetty I wasn't *very much fritened* when I saw the French horse.

"'Your most affectionate brother,

"'H. E. WARRINGTON.'"

We hope Miss Hetty's qualms of conscience were allayed by Harry's announcement that his expedition was over, and that he had so far taken no hurt. Far otherwise. Mr. Lambert, in the course of his official duties, had occasion to visit the troops at Portsmouth and the Isle of Wight, and George Warrington bore him company. They found Harry vastly improved in spirits and health from the excitement produced by the little campaign, quite eager and pleased to learn his new military duties, active, cheerful, and healthy, and altogether a different person from the listless moping lad who had dawdled in London coffee-houses and Mrs. Lambert's drawing-room. The troops were under canvas; the weather was glorious, and George found his brother a ready pupil in a fine brisk open-air school of war. Not a little amused, the elder brother, arm in arm with the young volunteer, paced the streets of the warlike city, recalled his own brief military experiences of two years back, and saw here a much greater army than that ill-fated one of which he had shared the disasters. The expedition, such as we have seen it, was certainly not glorious, and yet the troops and the nation were in high spirits with it. We were said to have humiliated the proud Gaul. We should have vanquished as well as humbled him had he dared to appear. What valor, after all, is like British valor? I dare say some such expressions have been heard in later times. Not that I would hint that our people brag much more than any other, or more now than formerly. Have not these eyes beheld the battle-grounds of Leipzig, Jena, Dresden, Waterloo, Blenheim, Bunker's Hill, New Orleans? What heroic nation has not fought, has not conquered, has not run away, has not bragged in its turn? Well, the British nation was much excited by the glorious victory of St. Malo. Captured treasures were sent home and exhibited in London. The people were so excited that more laurels and more victories were demanded, and the enthusiastic army went forth to seek some.

With this new expedition went a volunteer so distinguished that we must give him precedence of all other amateur soldiers or sailors. This was our sailor Prince, H. R. H. Prince Edward, who was conveyed on board the *Essex* in the ship's twelve-oared barge, the standard of England flying in the bow of the boat, the admiral with his flag and boat following the Prince's, and all the captains following in seniority.

Away sails the fleet, Harry, in high health and spirits, waving his hat to his friends as they cheer from the shore. He must and will have his commission before long. There can be no difficulty about that, George thinks. There is plenty of money in his little store to buy his brother's ensigncy; but if he can win it without purchase by gallantry and good conduct, that were best. The colonel of the regiment reports highly of his recruit; men and officers like him. It is easy to see that he is a young fellow of good promise and spirit.

Hip, hip, huzzay! What famous news are these which arrive ten days after the expedition has sailed? On the 7th and 8th of August his Majesty's troops have effected a landing in the Bay des Marais, two leagues westward of Cherbourg, in the face of a large body of the enemy. Awed by the appearance of British valor that large body of the enemy has disappeared. Cherbourg has surrendered at discretion; and the English colors are hoisted on the three outlying forts. Seven-and-twenty ships have been burned in the harbors, and a prodigious number of fine brass cannon taken. As for your common iron guns, we have destroyed 'em, likewise the basin (about which the Mounseers bragged so), and the two piers at the entrance to the harbor.

There is no end of jubilation in London; just as Mr. Howe's guns arrive from Cherbourg come Mr. Wolfe's colors captured at Louisbourg. The colors are taken from Kensington to St. Paul's, escorted by fourscore life-guards and fourscore horse-grenadiers with officers in proportion, their standards, kettle-drums, and trumpets. At St. Paul's they are received by the Dean and Chapter at the West Gate, and at that minute—bang, bong, bung—the Tower and Park guns salute them! Next day is the turn of the Cherbourg cannon and mortars. These are the guns *we* took. Look at them with their carving and flaunting emblems—their lilies, and crowns, and mottoes! Here they are, the Téméraire, the Malfaisant, the Vainqueur (the Vainqueur, indeed! a pretty *vainqueur* of Britons!), and ever so many more. How the people shout as the pieces are trailed through the streets in procession! As for Hetty and Mrs. Lambert, I believe they are of opinion that Harry took every one of the guns himself, dragging them out of the batteries, and destroying the artillerymen. He has immensely risen in the general estimation in the last few days. Madame de Bernstein

has asked about him. Lady Maria has begged her dear Cousin George to see her, and, if possible, give her news of his brother. George, who was quite the head of the family a couple of months since, finds himself deposed, and of scarce any account, in Miss Hetty's eyes at least. Your wit, and your learning, and your tragedies, may be all very well; but what are these in comparison to victories and brass cannon? George takes his deposition very meekly. They are fifteen thousand Britons. Why should they not march and take Paris itself? Nothing more probable, think some of the ladies. They embrace; they congratulate each other; they are in a high state of excitement. For once they long that Sir Miles and Lady Warrington were in town, so that they might pay her ladyship a visit, and ask, "What do you say to your nephew now, pray? Has he not taken twenty-one finest brass cannon; flung a hundred and twenty iron guns into the water, seized twenty-seven ships in the harbor, and destroyed the basin and the two piers at the entrance?" As the whole town rejoices and illuminates, so these worthy folks display brilliant red hangings in their cheeks, and light up candles of joy in their eyes, in honor of their champion and conqueror.

But now, I grieve to say, comes a cloudy day after the fair weather. The appetite of our commanders, growing by what it fed on, led them to think they had not feasted enough on the plunder of St. Malo; and thither, after staying a brief time at Portsmouth and the Wight, the conquerors of Cherbourg returned. They were landed in the Bay of St. Lunar, at the distance of a few miles from the place, and marched toward it, intending to destroy it this time. Meanwhile the harbor of St. Lunar was found insecure, and the fleet moved up to St. Cas, keeping up its communication with the invading army.

Now the British Lion found that the town of St. Malo—which he had proposed to swallow at a single mouthful—was guarded by an army of French, which the governor of Brittany had brought to the succor of his good town, and the meditated *coup de main* being thus impossible, our leaders marched for their ships again, which lay duly awaiting our warriors in the Bay of St. Cas.

Hide, blushing glory, hide St. Cas's day! As our troops were marching down to their ships they became aware of an army following them, which the French governor of the province had sent from Brest. Two-thirds of the troops, and all the artillery, were already embarked, when the Frenchmen came down upon the remainder. Four companies of the First Regiment of guards and the grenadier companies of the army faced about on the beach to await the enemy, while the remaining troops were carried off in the boats. As the French descended from the heights round the bay these guards and grenadiers marched out to attack them, leaving an excellent position which they had occupied—a great dike raised on the shore, and behind which they might have resisted to advantage. And now, eleven hundred men were engaged with six—nay, ten times their number; and, after a while, broke and made for the boats with a *sauve qui peut!* Seven hundred out of the eleven were killed, drowned, or taken prisoners—the general himself was killed—and, ah! where were the volunteers?

A man of peace myself, and little intelligent of the practice or the details of war, I own I think less of the engaged troops than of the people they leave behind. Jack the Guardsman and La Tulipe of the Royal Bretagne are face to face, and striving to knock each other's brains out. Bon! It is their nature to—like the bears and lions—and we will not say Heaven, but some Power or other has made them so to do. But the girl of Tower Hill, who hung on Jack's neck before he departed; and the lass at Quimper, who gave the Frenchman his *brûle-gueule* and tobacco-box before he departed on the *noir trajet?* What have you done, poor little tender hearts, that you should grieve so? My business is not with the army, but with the people left behind. What a fine state Miss Hetty Lambert must be in when she hears of the disaster to the troops and the slaughter of the grenadier companies! What grief and doubt are in George Warrington's breast; what commiseration in Martin Lambert's, as he looks into his little girl's face and reads her piteous story there! Howe, the brave commodore, rowing in his barge under the enemy's fire, has rescued with his boat scores and scores of our flying people. More are drowned; hundreds are prisoners, or shot on the beach. Among these, where is our Virginian?

CHAPTER LXV.

SOLDIER'S RETURN.

GREAT Powers! will the vain-glory of men, especially of Frenchmen, never cease! Will it

be believed that after the action of St. Cas—a mere affair of cutting off a rear-guard, as you are aware—they were so unfeeling as to fire away I don't know how much powder at the Invalides at Paris, and brag and bluster over our misfortune? Is there any magnanimity in hallooing and huzzaying because five or six hundred brave fellows have been caught by ten thousand on a sea-shore, and that fate has overtaken them which is said to befall the hindmost? I had a mind to design an authentic picture of the rejoicings at London upon our glorious success at St. Malo. I fancied the polished guns dragged in procession by our gallant tars; the stout horse-grenadiers prancing by; the mob waving hats, roaring cheers, picking pockets, and our friends in a balcony in Fleet Street looking on and blessing this scene of British triumph. But now that the French Invalides have been so vulgar as to imitate the Tower, and set up their St. Cas against our St. Malo, I scorn to allude to the stale subject. I say Nolo, not Malo: content, for my part, if Harry has returned from one expedition and t'other with a whole skin. And have I ever said he was so much as bruised? Have I not, for fear of exciting my fair young reader, said that he was as well as ever he had been in his life? The sea-air had browned his cheek, and the ball whistling by his side-curl had spared it. The ocean had wet his gaiters and other garments, without swallowing up his body. He had, it is true, shown the lapels of his coat to the enemy; but for as short a time as possible, withdrawing out of their sight as quick as might be. And what, pray, are lapels but reverses? Coats have them, as well as men; and our duty is to wear them with courage and good-humor.

"I can tell you," said Harry, "we all had to run for it; and when our line broke, it was he who could get to the boats who was most lucky. The French horse and foot pursued us down to the sea, and were mingled among us, cutting our men down, and bayoneting them on the ground. Poor Armytage was shot in advance of me, and fell; and I took him up and staggered through the surf to a boat. It was lucky that the sailors in our boat weren't afraid; for the shot were whistling about their ears, breaking the blades of their oars, and riddling their flag with shot; but the officer in command was as cool as if he had been drinking a bowl of punch at Portsmouth, which we had one on landing, I can promise you. Poor Sir John was less lucky than me. He never lived to reach the ship, and the service has lost a fine soldier, and Miss Howe a true gentleman to her husband. There must be these casualties, you see; and his brother gets the promotion—the baronetcy."

"It is of the poor lady I am thinking," says Miss Hetty (to whom haply our volunteer is telling his story), "and the King. Why did the King encourage Sir John Armytage to go? A gentleman could not refuse a command from such a quarter. And now the poor gentleman is dead! Oh what a state his Majesty must be in!"

"I have no doubt his Majesty will be in a deep state of grief," says Papa, wagging his head.

"Now you are laughing! Do you mean, Sir, that when a gentleman dies in his service, almost at his feet, the King of England won't feel for him?" Hetty asks. "If I thought that, I vow I would be for the Pretender!"

"The sauce-box would make a pretty little head for Temple Bar," says the General, who could see Miss Hetty's meaning behind her words, and was aware in what a tumult of remorse, of consternation, of gratitude that the danger was over, the little heart was beating. "No," says he, "my dear. Were kings to weep for every soldier what a life you would make for them! I think better of his Majesty than to suppose him so weak; and if Miss Hester Lambert got her Pretender, I doubt whether she would be any the happier. That family was never famous for too much feeling."

"But if the King sent Harry—I mean Sir John Armytage—actually to the war in which he lost his life, oughtn't his Majesty to repent very much?" asks the young lady.

"If Harry had fallen, no doubt the Court would have gone into mourning: as it is, gentlemen and ladies were in colored clothes yesterday," remarks the General.

"Why should we not make bonfires for a defeat, and put on sackcloth and ashes after a victory?" asks George. "I protest I don't want to thank Heaven for helping us to burn the ships at Cherbourg."

"Yes you do, George! Not that I have a right to speak, and you ain't ever so much cleverer. But when your country wins you're glad —I know *I* am. When I run away before Frenchmen I'm ashamed—I can't help it, though I *done* it," says Harry. "It don't seem to me right somehow that Englishmen should have to do it," he added, gravely. And George smiled; but did not choose to ask his brother what, on the other hand, was the Frenchman's opinion.

"'Tis a bad business," continued Harry, gravely; "but 'tis lucky 'twas no worse. The story about the French is, that their governor, the Duke of Aiguillon, was rather what you call a *moistened chicken*. Our whole retreat might have been cut off—only, to be sure, we ourselves were in a mighty hurry to move. The French local militia behaved famous, I am happy to say; and there was ever so many gentlemen volunteers with 'em, who showed, as they ought to do, in the front. They say the Chevalier of Tour d'Auvergne engaged in spite of the Duke of Aiguillon's orders. Officers told us, who came off with a list of our prisoners and wounded to General Bligh and Lord Howe. He is a lord now, since the news came of his brother's death to home, George. He is a brave fellow, whether lord or commoner."

"And his sister, who was to have married poor Sir John Armytage, think what *her* state must be!" sighs Miss Hetty, who has grown of late so sentimental.

"And his mother!" cries Mrs. Lambert.

A RUN FOR THE BOATS.

"Have you seen her ladyship's address in the papers to the electors of Nottingham? 'Lord Howe being now absent upon the publick service, and Lieutenant-Colonel Howe with his regiment at Louisbourg, it rests upon me to beg the favor of your votes and interests that Lieutenant-Colonel Howe may supply the place of his late brother as your representative in Parliament.' Isn't this a gallant woman?"

"A Laconic woman," says George.

"How can sons help being brave who have been nursed by such a mother as that?" asks the General.

Our two young men looked at each other.

"If one of us were to fall in defense of his country we have a mother in Sparta who would think and write so too," says George.

"If Sparta is any where Virginia way, I reckon we have," remarks Mr. Harry. "And to think that we should both of us have met the enemy, and both of us been whipped by him, brother!" he adds, pensively.

Hetty looks at him, and thinks of him only as he was the other day, tottering through the water toward the boats, his comrade bleeding on his shoulder, the enemy in pursuit, the shot flying round. And it was she who drove him into the danger! Her words provoked him. He never rebukes her now he is returned. Except when asked, he scarcely speaks about his adventures at all. He is very grave and courteous with Hetty; with the rest of the family especially frank and tender. But those taunts of hers wounded him. "Little hand!" his looks and demeanor seem to say, "*thou* shouldst not have been lifted against me! It is ill to scorn any one, much more one who has been so devoted to you and all yours. I may not be over-quick of wit, but in as far as the heart goes I am the equal of the best, and the best of my heart your family has had."

Harry's wrong, and his magnanimous endurance of it, served him to regain in Miss Hetty's esteem that place which he had lost during the previous months' inglorious idleness. The respect which the fair pay to the brave she gave him. She was no longer pert in her answers, or sarcastic in her observations regarding his conduct. In a word, she was a humiliated, an altered, an improved Miss Hetty.

And all the world seemed to change toward Harry, as he toward the world. He was no longer sulky and indolent: he no more desponded about himself, or defied his neighbors. The colonel of his regiment reported his behavior as exemplary, and recommended him for one of the commissions vacated by the casualties during the expedition. Unlucky as its termination was, it at least was fortunate to him. His brother volunteers, when they came back to St. James's Street, reported highly of his behavior. These volunteers and their actions were the theme of every body's praise. Had he been a general commanding, and slain in the moment of victory, Sir John Armytage could scarce have had more sympathy than that which the nation showed him. The papers teemed with letters about him, and men of wit and sensibility vied with each other in composing epitaphs in his honor. The fate of his affianced bride was bewailed. She was, as we have said, the sister of the brave commodore who had just returned from this unfortunate expedition, and succeeded to the title of his elder brother, an officer as gallant as himself, who had just fallen in America.

My Lord Howe was heard to speak in special praise of Mr. Warrington, and so he had a handsome share of the fashion and favor which the town now bestowed on the volunteers. Doubtless there were thousands of men employed who were as good as they: but the English ever love their gentlemen, and love that they should distinguish themselves; and these volunteers were voted Paladins and heroes by common accord. As our young noblemen will, they accepted their popularity very affably. White's and Almack's illuminated when they returned, and St. James's embraced its young knights. Harry was restored to full favor among them. Their hands were held out eagerly to him again. Even his relations congratulated him; and there came a letter from Castlewood, whither Aunt Bernstein had by this time betaken herself, containing praises of his valor, and a pretty little bank-bill, as a token of his affectionate aunt's approbation. This was under my Lord Castlewood's frank, who sent his regards to both his kinsmen, and an offer of the hospitality of his country house, if they were minded to come to him. And besides this, there came to him a private letter through the post—not very well spelled, but in a handwriting which Harry smiled to see again, in which his affectionate cousin, Maria Esmond, told him she always loved to hear his praises (which were in every body's mouth now), and sympathized in his good or evil fortune; and that, whatever occurred to him, she begged to keep a little place in his heart. Parson Sampson, she wrote, had preached a beautiful sermon about the horrors of war, and the noble actions of men who volunteered to face battle and danger in the service of their country. Indeed the Chaplain wrote himself, presently, a letter full of enthusiasm, in which he saluted Mr. Harry as his friend, his benefactor, his glorious hero. Even Sir Miles Warrington dispatched a basket of game from Norfolk: and one bird (shot sitting), with love to my cousin, had a string and paper round the leg, and was sent as the first victim of young Miles's fowling-piece.

And presently, with joy beaming in his countenance, Mr. Lambert came to visit his young friends at their lodgings in Southampton Row, and announced to them that Mr. Henry Warrington was forthwith to be gazetted as Ensign in the Second Battalion of Kingsley's, the 20th Regiment, which had been engaged in the campaign, and which now at this time was formed into a separate regiment, the 67th. Its colonel was not with his regiment during its expedition to Brittany. He was away at Cape Breton, and was engaged in capturing those guns at Louisbourg, of which the arrival in England had caused such exultation.

CHAPTER LXVI.

IN WHICH WE GO A-COURTING.

Some of my amiable readers no doubt are in the custom of visiting that famous garden in the Regent's Park, in which so many of our finned, feathered, four-footed fellow-creatures, are accommodated with board and lodging, in return for which they exhibit themselves for our instruction and amusement: and there, as a man's business and private thoughts follow him every where, and mix themselves with all life and nature round about him, I found myself, while looking at some fish in the aquarium, still actually thinking of our friends the Virginians. One of the most beautiful motion-masters I ever beheld, sweeping through his green bath in harmonious curves, now turning his black glistening back to me, now exhibiting his fair white chest, in every movement active and graceful, turned out to be our old homely friend the floun-

der, whom we have all gobbled up out of his bath of water souchy at Greenwich, without having the slightest idea that he was a beauty.

As is the race of man, so is the race of flounders. If you can but see the latter in his right element, you may view him agile, healthy, and comely: put him out of his place, and behold his beauty is gone, his motions are disgraceful: he flaps the unfeeling ground ridiculously with his tail, and will presently gasp his feeble life out. Take him up tenderly, ere it be too late, and cast him into his native Thames again—— But stop: I believe there is a certain proverb about fish out of water, and that other profound naturalists have remarked on them before me. Now Harry Warrington had been floundering for ever so long a time past, and out of his proper element. As soon as he found it, health, strength, spirits, energy, returned to him, and with the tap of the epaulet on his shoulder he sprang up an altered being. He delighted in his new profession; he engaged in all its details, and mastered them with eager quickness. Had I the skill of my friend Lorrequer, I would follow the other Harry into camp, and see him on the march, at the mess, on the parade-ground; I would have many a carouse with him and his companions; I would cheerfully live with him under the tents; I would knowingly explain all the manœuvres of war, and all the details of the life military. As it is, the reader must please, out of his experience and imagination, to fill in the colors of the picture of which I can give but meagre hints and outlines, and, above all, fancy Mr. Harry Warrington in his new red coat and yellow facings, very happy to bear the King's colors, and pleased to learn and perform all the duties of his new profession.

As each young man delighted in the excellence of the other, and cordially recognized his brother's superior qualities, George, we may be sure, was proud of Harry's success, and rejoiced in his returning good fortune. He wrote an affectionate letter to his mother in Virginia, recounting all the praises which he had heard of Harry, and which his brother's modesty, George knew, would never allow him to repeat. He described how Harry had won his own first step in the army, and how he, George, would ask his mother leave to share with her the expense of purchasing a higher rank for him.

Nothing, said George, would give him a greater delight than to be able to help his brother, and the more so as, by his sudden return into life as it were, he had deprived Harry of an inheritance which he had legitimately considered as his own. Laboring under that misconception, Harry had indulged in greater expenses than he ever would have thought of incurring as a younger brother; and George thought it was but fair, and, as it were, as a thank-offering for his own deliverance, that he should contribute liberally to any scheme for his brother's advantage.

And now, having concluded his statement respecting Harry's affairs, George took occasion to speak of his own, and addressed his honored mother on a point which very deeply concerned himself. She was aware that the best friends he and his brother had found in England were the good Mr. and Mrs. Lambert, the latter Madam Esmond's school-fellow of earlier years. Where their own blood relations had been worldly and unfeeling, these true friends had ever been generous and kind. The General was respected by the whole army, and beloved by all who knew him. No mother's affection could have been more touching than Mrs. Lambert's for both Madam Esmond's children; and now, wrote Mr. George, he himself had formed an attachment for the elder Miss Lambert, on which he thought the happiness of his life depended, and which he besought his honored mother to approve. He had made no precise offers to the young lady or her parents; but he was bound to say that he had made little disguise of his sentiments, and that the young lady, as well as her parents, seemed favorable to him. She had been so admirable and exemplary a daughter to her own mother, that he felt sure she would do her duty by his. In a word, Mr. Warrington described the young lady as a model of perfection, and expressed his firm belief that the happiness or misery of his own future life depended upon possessing or losing her. Why do you not produce this letter? haply asks some sentimental reader of the present Editor, who has said how he has the whole Warrington correspondence in his hands. Why not? Because 'tis cruel to babble the secrets of a young man's love; to overhear his incoherent vows and wild raptures, and to note, in cold blood, the secrets—it may be, the follies—of his passion. Shall we play eavesdropper at twilight embrasures, count sighs and hand-shakes, bottle hot tears: lay our stethoscope on delicate young breasts, and feel their heart-throbs? I protest, for one, love is sacred. Wherever I see it (as one sometimes may in this world) shooting suddenly out of two pair of eyes; or glancing sadly even from one pair; or looking down from the mother to the baby in her lap; or from papa at his girl's happiness as she is whirling round the room with the captain; or from John Anderson as his old wife comes into the room—*the bonne vieille*, the ever-peerless among women; wherever we see that signal, I say, let us salute it. It is not only wrong to kiss and tell, but to tell about kisses. Every body who has been admitted to the mystery—hush about it. Down with him *qui Deæ sacrum vulgarit arcanæ*. Beware how you dine with him, he will print your private talk: as sure as you sail with him, he will throw you over.

While Harry's love of battle has led him to smell powder—to rush upon *reluctantes dracones*, and to carry wounded comrades out of fire, George has been pursuing an amusement much more peaceful and delightful to him, penning sonnets to his mistress's eyebrow, mayhap; pacing in the darkness under her window, and watching the little lamp which shone upon her in her chamber; finding all sorts of pretexts for

sending little notes which don't seem to require little answers, but get them; culling bits out of his favorite poets, and flowers out of Covent Garden for somebody's special adornment and pleasure; walking to St. James's Church, singing very likely out of the same Prayer-book, and never hearing one word of the sermon, so much do other thoughts engross him; being prodigiously affectionate to all Miss Hetty's relations—to her little brother and sister at school; to the elder at college; to Miss Hetty, with whom he engages in gay passages of wit; and to Mamma, who is half in love with him herself, Martin Lambert says; for if fathers are sometimes sulky at the appearance of the destined son-in-law, is it not a fact that mothers become sentimental, and, as it were, love their own loves over again?

Gumbo and Sady are forever on the trot between Southampton Row and Dean Street. In the summer months all sorts of junketings and pleasure-parties are devised; and there are countless proposals to go to Ranelagh, to Hampstead, to Vauxhall, to Marylebone Gardens, and what not. George wants the famous tragedy copied out fair for the stage, and who can write such a beautiful Italian hand as Miss Theo? As the sheets pass to and fro they are accompanied by little notes of thanks, of interrogation, of admiration, always. See, here is the packet, marked in Warrington's neat hand, "T's letters, 1758–9." Shall we open them and reveal their tender secrets to the public gaze? Those virgin words were whispered for one ear alone. Years after they were written, the husband read, no doubt with sweet pangs of remembrance, the fond lines addressed to the lover. It were a sacrilege to show the pair to public eyes: only let kind readers be pleased to take our word that the young lady's letters are modest and pure, the gentleman's most respectful and tender. In fine, you see, we have said very little about it; but, in these few last months, Mr. George Warrington has made up his mind that he has found the woman of women. She mayn't be the most beautiful. Why, there is Cousin Flora, there is Cœlia, and Ardelia, and a hundred more, who are ever so much more handsome: but her sweet face pleases *him* better than any other in the world. She mayn't be the most clever, but her voice is the dearest and pleasantest to hear; and in her company he is so clever himself; he has such fine thoughts; he uses such eloquent words; he is so generous, noble, witty, that no wonder he delights in it. And, in regard to the young lady—as thank Heaven I never thought so ill of women as to suppose them to be just—we may be sure that there is no amount of wit, of wisdom, of beauty, of valor, of virtue with which she does not endow her young hero.

When George's letter reached home we may fancy that it created no small excitement in the little circle round Madam Esmond's fireside. So he was in love, and wished to marry! It was but natural, and would keep him out of harm's way. If he proposed to unite himself with a well-bred Christian young woman, Madam saw no harm.

"I knew they would be setting their caps at him," says Mountain. "They fancy that his wealth is as great as his estate. He does not say whether the young lady has money. I fear otherwise."

"People would set their caps at him here, I dare say," says Madam Esmond, grimly looking at her dependent, "and try and catch Mr. Esmond Warrington for their own daughters, who are no richer than Miss Lambert may be."

"I suppose your ladyship means me!" says Mountain. "My Fanny is poor, as you say; and 'tis kind of you to remind me of her poverty!"

"I said people would set their caps at him. If the cap fits you, *tant pis!* as my papa used to say."

"You think, Madam, I am scheming to keep George for my daughter? I thank you, on my word! A good opinion you seem to have of us after the years we have lived together!"

"My dear Mountain, I know you much better than to suppose you could ever fancy your daughter would be a suitable match for a gentleman of Mr. Esmond's rank and station," says Madam, with much dignity.

"Fanny Parker was as good as Molly Benson at school, and Mr. Mountain's daughter is as good as Mr. Lambert's!" Mrs. Mountain cries out.

"Then you *did* think of marrying her to my son? I shall write to Mr. Esmond Warrington, and say how sorry I am that you should be disappointed!" says the mistress of Castlewood. And we, for our parts, may suppose that Mrs. Mountain was disappointed, and had some ambitious views respecting her daughter—else, why should she have been so angry at the notion of Mr. Warrington's marriage?

In reply to her son, Madam Esmond wrote back that she was pleased with the fraternal love George exhibited; and it was indeed but right in some measure to compensate Harry, whose expectations had led him to adopt a more costly mode of life than he would have entered on had he known he was only a younger son. And with respect to purchasing his promotion, she would gladly halve the expense with Harry's elder brother, being thankful to think his own gallantry had won him his first step. This bestowal of George's money, Madam Esmond added, was at least much more satisfactory than some other extravagances to which she would not advert.

The other extravagance to which Madam alluded was the payment of the ransom to the French captain's family, to which tax George's mother never would choose to submit. She had a determined spirit of her own, which her son inherited. *His* persistence she called pride and obstinacy. What she thought of her own pertinacity, her biographer who lives so far from her time does not pretend to say. Only I dare

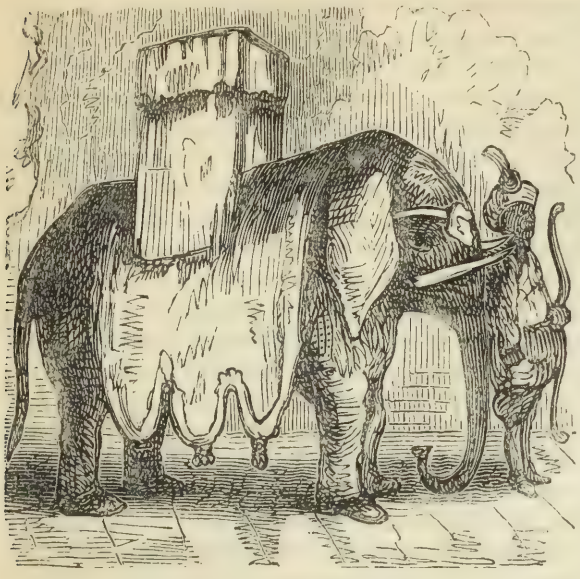
say people a hundred years ago pretty much resembled their grandchildren of the present date, and loved to have their own way, and to make others follow it.

Now, after paying his own ransom, his brother's debts, and half the price for his promotion, George calculated that no inconsiderable portion of his private patrimony would be swallowed up: nevertheless he made the sacrifice with a perfect good heart. His good mother always enjoined him in her letters to remember who his grandfather was, and to support the dignity of his family accordingly. She gave him various commissions to purchase goods in England, and though she as yet had sent him very trifling remittances, she alluded so constantly to the exalted rank of the Esmonds, to her desire that he should do nothing unworthy of that illustrious family; she advised him so peremptorily and frequently to appear in the first society of the country, to frequent the Court where his ancestors had been accustomed to move, and to appear always in the world in a manner worthy of his name, that George made no doubt his mother's money would be forthcoming when his own ran short, and generously obeyed her injunctions as to his style of life. I find in the Esmond papers of this period bills for genteel entertainments, tailors' bills for Court suits supplied, and liveries for his honor's negro servants and chairmen, horse-dealers' receipts, and so forth; and am thus led to believe that the elder of our Virginians was also after a while living at a considerable expense.

He was not wild or extravagant like his brother. There was no talk of gambling or race-horses against Mr. George; his table was liberal, his equipages handsome, his purse always full, the estate to which he was heir was known to be immense. I mention these circumstances because they may, probably, have influenced the conduct both of George and his friends in that very matter concerning which, as I have said, he and his mother had been just corresponding. The young heir of Virginia was traveling for his pleasure and improvement in foreign kingdoms. The Queen, his mother, was in daily correspondence with his Highness, and constantly enjoined him to act as became his lofty station. There could be no doubt, from her letters, that she desired he should live liberally and magnificently. He was perpetually making purchases at his parent's order. She had not settled as yet; on the contrary, she had wrote out by the last mail for twelve new sets of wagon-harness, and an organ that should play fourteen specified psalm-tunes: which articles George dutifully ordered. She had not paid, as yet, and might not to-day or to-morrow, but eventually, of course, she would; and Mr. Warrington never thought of troubling his friends about these calculations, or discussing with them his mother's domestic affairs. They, on their side, took for granted that he was in a state of competence and ease, and, without being mercenary folks, Mr. and Mrs. Lambert were, no doubt, pleased to see an attachment growing up between their daughter and a young gentleman of such good principles, talents, family, and expectations. There was honesty in all Mr. Esmond Warrington's words and actions, and in his behavior to the world a certain grandeur and simplicity which showed him to be a true gentleman. Somewhat cold and haughty in his demeanor to strangers, especially toward the great, he was not in the least supercilious; he was perfectly courteous toward women, and with those people whom he loved, especially kind, amiable, lively, and tender.

No wonder that one young woman we know of got to think him the best man in all the world —alas! not even excepting Papa. A great love felt by a man toward a woman makes him better, as regards her, than all other men. We have said that George used to wonder himself when he found how witty, how eloquent, how wise he was, when he talked with the fair young creature whose heart had become all his. . . . . I say we will not again listen to their love whispers. Those soft words do not bear being written down. If you please—good Sir, or Madam, who are sentimentally inclined—lay down the book and think over certain things for yourself. You may be ever so old now, but you remember. It may be all dead and buried; but in a moment up it springs out of its grave, and looks, and smiles, and whispers as of yore when it clung to your arm, and dropped fresh tears on your heart. It is here, and alive, did I say? O far, far away! O lonely hearth and cold ashes! Here is the vase, but the roses are gone; here is the shore and yonder the ship was moored; but the anchors are up, and it has sailed away forever.

Et cetera, et cetera, et cetera. This, however, is mere sentimentality; and as regards George and Theo, is neither here nor there. What I mean to say is, that the young lady's family were perfectly satisfied with the state of affairs between her and Mr. Warrington; and though he had not as yet asked the decisive question, every body else knew what the answer would be when it came.



Mamma perhaps thought the question was a long time coming.

"Pshaw! my dear," says the General. "There is time enough in all conscience. Theo is not much more than seventeen; George, if I mistake not, is under forty; and, besides, he must have time to write to Virginia and ask Mamma."

"But suppose she refuses?"

"That will be a bad day for old and young," says the General. "Let us rather say, suppose she consents, my love?—I can't fancy any body in the world refusing Theo any thing she has set her heart on," adds the father; "and I am sure 'tis bent upon this match."

So they all waited with the utmost anxiety until an answer from Madam Esmond should arrive; and trembled lest the French privateers should take the packet-ship by which the precious letter was conveyed.

CHAPTER LXVII.

IN WHICH A TRAGEDY IS ACTED, AND TWO MORE ARE BEGUN.

James Wolfe, Harry's new Colonel, came back from America a few weeks after our Virginian had joined his regiment. Wolfe had previously been Lieutenant-Colonel of Kingsley's, and a second battalion of the regiment had been formed and given to him in reward for his distinguished gallantry and services at Cape Breton. Harry went with quite unfeigned respect and cordiality to pay his duty to his new Commander, on whom the eyes of the world began to be turned now—the common opinion being that he was likely to become a great General. In the late affairs in France several officers of great previous repute had been tried and found lamentably wanting. The Duke of Marlborough had shown himself no worthy descendant of his great ancestor. About my Lord George Sackville's military genius there were doubts, even before his unhappy behavior at Minden prevented a great victory. The nation was longing for military glory, and the minister was anxious to find a general who might gratify the eager desire of the people. Mr. Wolfe's and Mr. Lambert's business keeping them both in London, the friendly intercourse between those officers was renewed, no one being more delighted than Lambert at his younger friend's good fortune.

Harry, when he was away from his duty, was never tired of hearing Mr. Wolfe's details of the military operations of the last year, about which Wolfe talked very freely and openly. Whatever thought was in his mind, he appears to have spoken it out generously. He had that heroic simplicity which distinguished Nelson afterward: he talked frankly of his actions. Some of the fine gentlemen at St. James's might wonder and sneer at him; but among our little circle of friends we may be sure he found admiring listeners. The young General had the romance of a boy on many matters. He delighted in music and poetry. On the last day of his life he said he would rather have written Gray's Elegy than have won a battle. We may be sure that with a gentleman of such literary tastes our friend George would become familiar; and as they were both in love, and both accepted lovers, and both eager for happiness, no doubt they must have had many sentimental conversations together which would be very interesting to report could we only have accurate accounts of them. In one of his later letters, Warrington writes:

"I had the honor of knowing the famous General Wolfe, and seeing much of him during his last stay in London. We had a subject of conversation then which was of unfailing interest to both of us, and I could not but admire Mr. Wolfe's simplicity, his frankness, and a sort of glorious bravery which characterized him. He was much in love, and he wanted heaps and heaps of laurels to take to his mistress. 'If it be a sin to covet honor,' he use to say with Harry the Fifth (he was passionately fond of plays and poetry), 'I am the most offending soul alive.' Surely on his last day he had a feast which was enough to satisfy the greediest appetite for glory. He hungered after it. He seemed to me not merely like a soldier going resolutely to do his duty, but rather like a knight in quest of dragons and giants. My own country has furnished of late a chief of a very different order, and quite an opposite genius. I scarce know which to admire most. The Briton's chivalrous ardor, or the more than Roman constancy of our great Virginian."

As Mr. Lambert's official duties detained him in London, his family remained contentedly with him, and I suppose Mr. Warrington was so satisfied with the rural quiet of Southampton Row and the beautiful flowers and trees of Bedford Gardens, that he did not care to quit London for any long period. He made his pilgrimage to Castlewood, and passed a few days there, occupying the chamber of which he had often heard his grandfather talk, and which Colonel Esmond had occupied as a boy: and he was received kindly enough by such members of the family as happened to be at home. But no doubt he loved better to be in London by the side of a young person in whose society he found greater pleasure than any which my Lord Castlewood's circle could afford him, though all the ladies were civil, and Lady Maria especially gracious, and enchanted with the tragedy which George and Parson Sampson read out to the ladies. The Chaplain was enthusiastic in its praises, and indeed it was through his interest, and not through Mr. Johnson's after all, that Mr. Warrington's piece ever came on the stage. Mr. Johnson, it is true, pressed the play on his friend Mr. Garrick for Drury Lane, but Garrick had just made an arrangement with the famous Mr. Home for a tragedy from the pen of the author of Douglas. Accordingly, Carpezan was carried to Mr. Rich at Covent Garden, and accepted by that manager.

On the night of the production of the piece Mr. Warrington gave an elegant entertainment to his friends at the Bedford Head, in Covent Garden, whence thy adjourned in a body to the

theatre, leaving only one or two with our young author, who remained at the Coffee House, where friends from time to time came to him with an account of the performance. The part of Carpezan was filled by Barry, Shuter was the old nobleman, Reddish, I need scarcely say, made an excellent Ulric, and the King of Bohemia was by a young actor from Dublin, Mr. Geoghegan, or Hagan as he was called on the stage, and who looked and performed the part to admiration. Mrs. Woffington looked too old in the first act as the heroine, but her murder in the fourth act, about which great doubts were expressed, went off to the terror and delight of the audience. Miss Wayn sang the ballad which is supposed to be sung by the king's page just at the moment of the unhappy wife's execution, and all agreed that Barry was very terrible and pathetic as Carpezan, especially in the execution scene. The grace and elegance of the young actor, Gahagan, won general applause. The piece was put very elegantly on the stage by Mr. Rich, though there was some doubt whether, in the march of Janizaries in the last, the manager was correct in introducing a favorite elephant, which had figured in various pantomimes, and by which one of Mr. Warrington's black servants marched in a Turkish habit. The other sate in the footman's gallery, and uproariously wept and applauded at the proper intervals.

The execution of Sybilla was the turning point of the piece. Her head off, George's friends breathed freely, and one messenger after another came to him at the Coffee House, to announce the complete success of the tragedy. Mr. Barry, amidst general applause, announced the play for repetition, and that it was the work of a young gentleman of Virginia; his first attempt in the dramatic style.

We should like to have been in the box where all our friends were seated during the performance, to have watched Hetty's flutter and anxiety while the success of the play seemed dubious, and have beheld the blushes and the sparkles in her eyes when the victory was assured. Harry, during the little trouble in the fourth act, was deadly pale—whiter, Mrs. Lambert said, than Barry, with all his chalk. But if Briareus could have clapped hands, he could scarcely have made more noise than Harry at the end of the piece. Mr. Wolfe and General Lambert huzzayed enthusiastically. Mrs. Lambert, of course, cried: and though Hetty said "Why do you cry, Mamma? You don't want any of them alive again; you know it serves them all right," the girl was really as much delighted as any person present, including little Charley from the Chartreux, who had leave from Dr. Crusius for that evening, and Miss Lucy, who had been brought from boarding-school on purpose to be present on the great occasion. My Lord Castlewood and his sister, Lady Maria, were present; and his lordship went from his box and complimented Mr. Barry and the other actors on the stage; and Parson Sampson was invaluable in the pit, where he led the applause, having, I believe, given previous instructions to Gumbo to keep an eye upon him from the gallery, and do as he did.

Be sure there was a very jolly supper of Mr. Warrington's friends that night — much more jolly than Mr. Garrick's, for example, who made but a very poor success with his Agis and its dreary choruses, and who must have again felt that he had missed a good chance in preferring Mr. Home's tragedy to our young author's. A jolly supper, did we say?—Many jolly suppers. Mr. Gumbo gave an entertainment to several gentlemen of the shoulder-knot, who had concurred in supporting his master's master-piece: Mr. Henry Warrington gave a supper at the Star and Garter, in Pall Mall, to ten officers of his new regiment, who had come up for the express purpose of backing Carpezan: and, finally, Mr. Warrington received the three principal actors of the tragedy, our family party from the side box, Mr. Johnson and his ingenious friend, Mr. Reynolds the painter, my Lord Castlewood and his sister, and one or two more. My Lady Maria happened to sit next to the young actor who had performed the part of the king. Mr. Warrington somehow had Miss Theo for a neighbor, and no doubt passed a pleasant evening beside her. The greatest animation and cordiality prevailed, and when toasts were called, Lady Maria gayly gave "The King of Hungary" for hers. That gentleman, who had plenty of eloquence and fire, and excellent manners, on as well as off the stage, protested that he had already suffered death in the course of the evening, hoped that he should die a hundred times more on the same field; but, dead or living, vowed he knew whose humble servant he ever should be. Ah! if he had but a real crown, in place of his diadem of pasteboard and tinsel, with what joy would he lay it at her ladyship's feet! Neither my lord nor Mr. Esmond were over well pleased with the gentleman's exceeding gallantry — a part of which they attributed, no doubt justly, to the wine and punch, of which he had been partaking very freely. Theo and her sister, who were quite new to the world, were a little frightened by the exceeding energy of Mr. Hagan's manner—but Lady Maria, much more experienced, took it in perfectly good part. At a late hour coaches were called, to which the gentlemen attended the ladies, after whose departure some of them returned to the supper-room, and the end was that Carpezan had to be carried away in a chair, and that the King of Hungary had a severe headache; and that the Poet, though he remembered making a great number of speeches, was quite astounded when half a dozen of his guests appeared at his house the next day, whom he had invited over night to come and sup with him once more.

As he put Mrs. Lambert and her daughters into their coach on the night previous all the ladies were flurried, delighted, excited; and you may be sure our gentleman was with them the next day, to talk of the play and the audience, and the actors, and the beauties of the piece, over and over again. Mrs. Lambert had heard

that the ladies of the theatre were dangerous company for young men. She hoped George would have a care, and not frequent the green-room too much.

George smiled, and said he had a preventive against all green-room temptations, of which he was not in the least afraid; and as he spoke he looked in Theo's face, as if in those eyes lay the amulet which was to preserve him from all danger.

"Why should he be afraid, Mamma?" asks the maiden, simply. She had no idea of danger or of guile.

"No, my darling, I don't think he need be afraid," says the mother, kissing her.

"You don't suppose Mr. George would fall in love with that painted old creature who performed the chief part?" asks Miss Hetty, with a toss of her head. "She must be old enough to be his mother."

"Pray, do you suppose that at our age nobody can care for us, or that we have no hearts left?" asks Mamma, very tartly. "I believe, or I may say, I hope and trust, your father thinks otherwise. *He* is, I imagine, perfectly satisfied, miss. *He* does not sneer at age, whatever little girls out of the school-room may do. And they had much better be back there, and they had much better remember what the fifth commandment is—that they had, Hetty!"

"I didn't think I was breaking it by saying that an actress was as old as George's mother," pleaded Hetty.

"George's mother is as old as I am, miss!—at least she was when we were *at school.* And Fanny Parker—Mrs. Mountain who now is—was seven months older, and we were in the French class together; and I have no idea that our age is to be made the subject of remarks and ridicule by our children, and I will thank you to spare it, if you please! Do you consider your mother too old, George?"

"I am glad my mother is of your age, Aunt Lambert," says George, in the most sentimental manner.

Strange infatuation of passion—singular perversity of reason! At some period before his marriage, it not unfrequently happens that a man actually is fond of his mother-in-law! At this time our good General vowed, and with some reason, that he was jealous. Mrs. Lambert made much more of George than of any other person in the family. She dressed up Theo to the utmost advantage in order to meet him; she was forever caressing her, and appealing to her when he spoke. It was, "Don't you think he looks well?"—"Don't you think he looks pale, Theo, to-day?"—"Don't you think he has been sitting up over his books too much at night?" and so forth. If he had a cold, she would have liked to make gruel for him and see his feet in hot water. She sent him recipes of her own for his health. When he was away, she never ceased talking about him to her daughter. I dare say Miss Theo liked the subject well enough. When he came, she was sure to be wanted in some other part of the house, and would bid Theo take care of him till she returned. Why, before she returned to the room, could you hear her talking outside the door to her youngest innocent children, to her servants in the upper regions, and so forth? When she reappeared, was not Mr. George always standing or sitting at a considerable distance from Miss Theo—except, to be sure, on that one day when she had just happened to drop her scissors, and he had naturally stooped down to pick them up? Why was she blushing? Were not youthful cheeks made to blush, and roses to bloom in the spring? Not that Mamma ever noted the blushes, but began quite an artless conversation about this or that, as she sate down brimful of happiness to her work-table.

And at last there came a letter from Virginia in Madam Esmond's neat, well-known hand, and over which George trembled and blushed before he broke the seal. It was in answer to the letter which he had sent home, respecting his brother's commission and his own attachment to Miss Lambert. Of his intentions respecting Harry Madam Esmond fully approved. As for his marriage, she was not against early marriages. She would take his picture of Miss Lambert with the allowance that was to be made for lovers' portraits, and hope, for his sake, that the young lady was all he described her to be. With money, as Madam Esmond gathered from her son's letter, she did not appear to be provided at all, which was a pity, as, though wealthy in land, their family had but little ready-money. However, by Heaven's blessing, there was plenty at home for children and children's children, and the wives of her sons should share all she had. When she heard more at length from Mr. and Mrs. Lambert she would reply for her part more fully. She did not pretend to say that she had not greater hopes for her son, as a gentleman of his name and prospects might pretend to the hand of the first lady of the land; but as Heaven had willed that her son's choice should fall upon her old friend's daughter, she acquiesced, and would welcome George's wife as her own child. This letter was brought by Mr. Van den Bosch, of Albany, who had lately bought a very large estate in Virginia, and who was bound for England to put his grand-daughter to a boarding-school. She, Madam Esmond, was not mercenary, nor was it because this young lady was heiress of a very great fortune that she desired her sons to pay Mr. Van d. B. every attention. Their properties lay close together, and could Harry find in the young lady those qualities of person and mind *suitable for a companion for life*, at least she would have the satisfaction of seeing both her children near her in her declining years. Madam Esmond concluded by sending her affectionate compliments to Mrs. Lambert, from whom she begged to hear further, and her blessing to the young lady who was to be her daughter-in-law.

The letter was not cordial, and the writer evidently but half satisfied; but, such as it was,

her consent was here formally announced. How eagerly George ran away to Soho with the long-desired news in his pocket! I suppose our worthy friends there must have read his news in his countenance — else why should Mrs. Lambert take her daughter's hand and kiss her with such uncommon warmth when George announced that he had received letters from home? Then, with a break in his voice, a pallid face, and a considerable tremor, turning to Mr. Lambert, he said; "Madam Esmond's letter, Sir, is in reply to one of mine, in which I acquainted her that I had formed an attachment in England, for which I asked my mother's approval. She gives her consent, I am grateful to say, and I have to pray my dear friends to be equally kind to me."

"God bless thee, my dear boy!" says the good General, laying a hand on the young man's head. "I am glad to have thee for a son, George. There, there, don't go down on your knees, young folks! George may, to be sure, and thank God for giving him the best little wife in all England. Yes, my dear, except when you were ill, you never caused me a heartache—and happy is the man, I say, who wins thee!"

I have no doubt the young people knelt before their parents, as was the fashion in those days; and am perfectly certain that Mrs. Lambert kissed both of them, and likewise bedewed her pocket-handkerchief in the most plentiful manner. Hetty was not present at this sentimental scene, and when she heard of it, spoke with considerable asperity, and a laugh that was by no means pleasant, saying, "Is this all the news you have to give me? Why, I have known it these months past. Do you think I have no eyes to see, and no ears to hear, indeed?" But in private she was much more gentle. She flung herself on her sister's neck, embracing her passionately, and vowing that never, never would Theo find any one to love her like her sister. With Theo she became entirely mild and humble. She could not abstain from her jokes and satire with George, but he was too happy to heed her much, and too generous not to see the cause of her jealousy.

When all parties concerned came to read Madam Esmond's letter, that document, it is true, appeared rather vague. It contained only a promise that she would receive the young people at her house, and no sort of proposal for a settlement. The General shook his head over the letter—he did not think of examining it until some days after the engagement had been made between George and his daughter; but now he read Madam Esmond's words they gave him but small encouragement.

"Bah!" says George. "I shall have three hundred pounds for my tragedy. I can easily write a play a year, and if the worst comes to the worst, we can live on that.

"On that and your patrimony," says Theo's father.

George now had to explain, with some hesitation, that what with paying bills for his mother, and Harry's commission and debts, and his own ransom — George's patrimony proper was well-nigh spent.

Mr. Lambert's countenance looked graver still at this announcement, but he saw his girl's eyes turned toward him with an alarm so tender, that he took her in his arms and vowed that, let the worst come to the worst, his darling should not be balked of her wish.

About the going back to Virginia, George frankly owned that he little liked the notion of returning to be entirely dependent on his mother. He gave General Lambert an idea of his life at home, and explained how little to his taste that slavery was. No. Why should he not stay in England, write more tragedies, study for the bar, get a place, perhaps? Why, indeed? He straightway began to form a plan for another tragedy. He brought portions of his work, from time to time, to Miss Theo and her sister: Hetty yawned over the work, but Theo pronounced it to be still more beautiful and admirable than the last, which was perfect.

The engagement of our young friends was made known to the members of their respective families, and announced to Sir Miles Warrington, in a ceremonious letter from his nephew. For a while Sir Miles saw no particular objection to the marriage; though, to be sure, considering his name and prospects, Mr. Warrington might have looked higher. The truth was, that Sir Miles imagined that Madam Esmond had made some considerable settlement on her son, and that his circumstances were more than easy. But when he heard that George was entirely dependent on his mother, and that his own small patrimony was dissipated, as Harry's had been before, Sir Miles's indignation at his nephew's imprudence knew no bounds; he could not find words to express his horror and anger at the want of principle exhibited by both these unhappy young men: he thought it his duty to speak his mind about them, and wrote his opinion to his sister Esmond in Virginia. As for General and Mrs. Lambert, who passed for respectable persons, was it to be borne that such people should inveigle a penniless young man into a marriage with their penniless daughter? Regarding them, and George's behavior, Sir Miles fully explained his views to Madam Esmond, gave half a finger to George whenever his nephew called on him in town, and did not even invite him to partake of the famous family small-beer. Toward Harry his uncle somewhat unbent; Harry had done his duty in the campaign, and was mentioned with praise in high quarters. He had sown his wild oats—he at least was endeavoring to amend; but George was a young prodigal, fast careering to ruin, and his name was only mentioned in the family with a groan. Are there any poor fellows nowadays, I wonder, whose polite families fall on them and persecute them; groan over them and stone them, and hand stones to their neighbors that they may do likewise? All the patrimony spent! Gracious Heavens! Sir Miles turned pale when he saw his nephew coming. Lady Warrington prayed for him as a dan-

gerous reprobate; and, in the mean time, George was walking the town, quite unconscious that he was occasioning so much wrath and so much devotion. He took little Miley to the play and brought him back again. He sent tickets to his aunt and cousins, which they could not refuse, you know; it would look too marked were they to break altogether. So they not only took the tickets, but whenever country constituents came to town they asked for more, taking care to give the very worst motives to George's intimacy with the theatre, and to suppose that he and the actresses were on terms of the most disgraceful intimacy. An august personage having been to the theatre, and expressed his approbation of Mr. Warrington's drama to Sir Miles, when he attended his R-y-l H-ghn-ss's levee at Saville House, Sir Miles, to be sure, modified his opinion regarding the piece, and spoke henceforth more respectfully of it. Meanwhile, as we have said, George was passing his life entirely careless of the opinion of all the uncles, aunts, and cousins in the world.

Most of the Esmond cousins were at least more polite and cordial than George's kinsfolk of the Warrington side. In spite of his behavior over the cards, Lord Castlewood, George always maintained, had a liking for our Virginians, and George was pleased enough to be in his company. He was a far abler man than many who succeeded in life. He had a good name, and somehow only stained it; a considerable wit, and nobody trusted it; and a very shrewd experience and knowledge of mankind, which made him mistrust them, and himself most of all, and which perhaps was the bar to his own advancement. My Lady Castlewood, a woman of the world, wore always a bland mask, and received Mr. George with perfect civility, and welcomed him to lose as many guineas as he liked at her ladyship's card-tables. Between Mr. William and the Virginian brothers there never was any love lost; but, as for Lady Maria, though her love affair was over, she had no rancor; she professed for her cousins a very great regard and affection, a part of which the young gentlemen very gratefully returned. She was charmed to hear of Harry's valor in the campaign; she was delighted with George's success at the theatre; she was forever going to the play, and had all the favorite passages of Carpezan by heart. One day, as Mr. George and Miss Theo were taking a sentimental walk in Kensington Gardens, whom should they light upon but their Cousin Maria in company with a gentleman in a smart suit and handsome laced hat, and who should the gentleman be but his Majesty King Louis of Hungary, Mr. Hagan? He saluted the party, and left them presently. Lady Maria had only just happened to meet him. Mr. Hagan came sometimes, he said, for quiet, to study his parts in Kensington Gardens, and George and the two ladies walked together to Lord Castlewood's door in Kensington Square, Lady Maria uttering a thousand compliments to Theo upon her good looks, upon her virtue, upon her future happiness, upon her Papa and Mamma, upon her destined husband, upon her paduasoy cloak and dear little feet and shoe-buckles.

Harry happened to come to London that evening, and slept at his accustomed quarters. When George appeared at breakfast the Captain was already in the room (the custom of that day was to call all army gentlemen Captains) and looking at the letters on the breakfast-table.

"Why, George," he cries, "there is a letter from Maria!"

"Little boy bring it from Common Garden last night—Master George asleep," says Gumbo.

"What can it be about?" asks Harry, as George peruses his letter with a queer expression of face.

"About my play, to be sure," George answers, tearing up the paper, and still wearing his queer look.

"What, she is not writing love-letters to *you*, is she, Georgy?"

"No, certainly not to me," replies the other. But he spoke no word more about the letter; and when at dinner in Dean Street, Mrs. Lambert said, "So you met somebody walking with the King of Hungary yesterday in Kensington Gardens?"

"What little tell-tale told you?"

"A mere casual rencontre—the King goes there to study his parts, and Lady Maria happened to be crossing the garden to visit some of the *other* King's servants at Kensington Palace." And so there was an end to that matter for the time being.

Other events were at hand fraught with interest to our Virginians. One evening after Christmas the two gentlemen, with a few more friends, were met round General Lambert's supper-table, and among the company was Harry's new Colonel of the 67th, Major-General Wolfe. The young General was more than ordinarily grave. The conversation all related to the war. Events of great importance were pending. The great minister now in power was determined to carry on the war on a much more extended scale than had been attempted hitherto: an army was ordered to Germany to help Prince Ferdinand, another great expedition was preparing for America, and here, says Mr. Lambert, "I will give you the health of the Commander—a glorious campaign, and a happy return to him!"

"Why do you not drink the toast, General James?" asked the hostess of her guest.

"He must not drink his own toast," says General Lambert; "it is we must do that!"

What? was James appointed?—All the ladies must drink such a toast as that, and they mingled their kind voices with the applause of the rest of the company.

Why did he look so melancholy? the ladies asked of one another when they withdrew. In after days they remembered his pale face.

"Perhaps he has been parting from his sweetheart," suggests tender-hearted Mrs. Lambert. And at this sentimental notion no doubt all the ladies looked sad.

The gentlemen, meanwhile, continued their talk about the war and its chances. Mr. Wolfe did not contradict the speakers when they said that the expedition was to be directed against Canada.

"Ah, Sir," says Harry, "I wish your regiment was going with you, and that I might pay another visit to my old friends at Quebec!"

What, had Harry been there? Yes. He described his visit to the place five years before, and knew the city and the neighborhood well. He lays a number of bits of biscuit on the table before him, and makes a couple of rivulets of punch on each side. "This fork is the Isle d'Orleans," says he, "with the north and south branches of St. Lawrence on each side. Here's the Low town, with a battery—how many guns was mounted there in our time, brother?—but at long shots from the St. Joseph shore you might play the same game. Here's what they call the little river, the St. Charles, and a bridge of boats with a tête du pont over to the place of arms. Here's the citadel, and here's convents—ever so many convents—and the cathedral; and here, outside the lines to the west and south, is what they call the Plains of Abraham—where a certain little affair took place, do you remember, brother? He and a young officer of the Rousillon regiment *ça ça*'d at each other for twenty minutes, and George pinked him, and then they *juré*'d each other an *amitié eternelle*. Well it was for George: for his second saved his life on that awful day of Braddock's defeat. He was a fine little fellow, and I give his toast: "*Je bois à la santé du Chevalier de Florac!*"

"What, can you speak French too, Harry?" asks Mr. Wolfe. The young man looked at the General with eager eyes.

"Yes," says he, "I can speak, but not so well as George."

"But he remembers the city, and can place the batteries, you see, and knows the ground a thousand times better than I do!" cries the elder brother.

The two elder officers exchanged looks with one another; Mr. Lambert smiled and nodded, as if in reply to the mute queries of his comrade: on which the other spoke. "Mr. Harry," he said, "if you have had enough of fine folks, and White's, and horse-racing—"

"Oh, Sir!" says the young man, turning very red.

"And if you have a mind to a sea-voyage at a short notice, come and see me at my lodgings to-morrow."

What was that sudden uproar of cheers which the ladies heard in their drawing-room? It was the hurrah which Harry Warrington gave when he leaped up at hearing the General's invitation.

The women saw no more of the gentlemen that night. General Lambert had to be away upon his business early next morning, before seeing any of his family; nor had he mentioned a word of Harry's outbreak on the previous evening. But when he rejoined his folks at dinner, a look at Miss Hetty's face informed the worthy gentleman that she knew what had passed on the night previous, and what was about to happen to the young Virginian. After dinner Mrs. Lambert sat demurely at her work, Miss Theo took her book of Italian Poetry. Neither of the General's customary guests happened to be present that evening.

He took little Hetty's hand in his, and began to talk with her. He did not allude to the subject which he knew was uppermost in her mind, except that by a more than ordinary gentleness and kindness he perhaps caused her to understand that her thoughts were known to him.

"I have breakfasted," says he, "with James Wolfe this morning, and our friend Harry was of the party. When he and the other guests were gone I remained and talked with James about the great expedition on which he is going to sail. Would that his brave father had lived a few months longer to see him come back covered with honors from Louisbourg, and knowing that all England was looking to him to achieve still greater glory! James is dreadfully ill in body—so ill that I am frightened for him—and not a little depressed in mind at having to part from the young lady whom he has loved so long. A little rest, he thinks, might have set his shattered frame up; and to call her his has been the object of his life. But, great as his love is (and he is as romantic as one of you young folks of seventeen), honor and duty are greater, and he leaves home, and wife, and ease, and health at their bidding. Every man of honor would do the like; every woman who loves him truly would buckle on his armor for him. James goes to take leave of his mother to-night; and though she loves him devotedly, and is one of the tenderest women in the world, I am sure she will show no sign of weakness at his going away."

"When does he sail, Papa?" the girl asked.

"He will be on board in five days." And Hetty knew quite well who sailed with him.

Monthly Record of Current Events.

UNITED STATES.

THE thirty-fifth Congress closed on the 4th of March. The customary votes of thanks to the presiding officers were passed: in the Senate without opposition, and in the House by a vote of 120 to 32. With the exception of the passage of the principal Appropriation Bills, and the admission of Oregon, all the important business brought before Congress at this session remains unadjusted. The Senate Bill for the construction of a railroad to the Pacific, cut down to a simple advertisement for proposals from contractors, never reached the House.—The Soldiers' Pension Bill, which passed the House by a large majority, was in the Senate referred to the

Pension Committee, who reported against it, as "inexpedient and unwise, whether considered in relation to those who must bear its burdens in taxation, or may enjoy its bounties in pensions."—A French Spoliation Bill, providing, in effect, for the payment of $5,000,000 in satisfaction for claims of American citizens who had suffered spoliations by the French prior to 1801, passed the Senate. A similar bill originated in the House, where it was apparently received favorably; but it was decided, upon a point of order, that as it virtually made an appropriation of money it must be considered in the Committee of the Whole. Thus disposed of, so many bills had precedence of it that it could not be acted upon. This Bill and that of the Senate were therefore tabled. The French Spoliation Bill has a singular history. In one shape and another it has been before Congress for half a century. Sometimes it has been passed by one House and rejected by the other; twice it has been passed by both Houses, and vetoed by the President; and now its final disposition seems as remote as ever.—The Senate refused, by a vote of 29 to 26, to take up Mr. Grow's Homestead Bill, which had passed the House.—A bill giving large quantities of public land to the several States and Territories, for the purpose of establishing Agricultural Colleges, passed both Houses by decided majorities, but was vetoed by the President.—Mr. Slidell's "Thirty Million Bill," with various amendments and substitutes, occupied a large share of the attention of the Senate until February 25. On that day Mr. Brown moved, as a test vote, to lay the Bill on the table, announcing that he should vote against his own motion. This was lost, by a vote of 30 to 18, Mr. Broderick being the only Democratic Senator who voted to table the Bill. The sentiments of the Senate being thus clearly ascertained, and the session being so near its close that it would be impossible for the House to act upon the Bill, it was withdrawn by Mr. Slidell, with the intimation that it would be brought forward again at the commencement of the next session.

The deficiency in the revenue was early brought before the House, and it seemed to be the opinion of the majority that an augmentation of the tariff was indispensable; and that no bill for a loan should be passed unaccompanied by an increase in duties. The Committee of Ways and Means could not agree upon any Tariff Bill to be presented, and up to the last day of the session it seemed probable that Congress would dissolve without making any provision for the means necessary to meet the deficiency. On that day a Message was presented from the President, appealing to Congress to preserve the public credit. "This," he said, "is the last day of Congress, and there is no appropriation yet to pay the outstanding Treasury Notes. From the information submitted by the Secretary of the Treasury it is manifest that the present receipts will scarcely meet the ordinary expenses of the Government. By the end of the fiscal year nearly eighteen millions will be due, with a considerable amount paid for duties at the various ports, and no means to meet them. Thus the American people will be dishonored before the world. It is impossible to avoid this catastrophe unless provision be made against it within the few remaining hours of the present Congress. If this was the first instead of the last session of Congress, it might be called together again. But if it reassembled tomorrow thirteen States will not be represented, and it will be impossible to reassemble all before the Treasury must stop payment." At length, just before the close of the session, the House, by a vote of 94 to 83, agreed to an amendment made in the Senate to the Miscellaneous Appropriation Bill, by which the issue of Treasury Notes to the amount of $20,000,000 is authorized.—The peril of general bankruptcy of Government was thus avoided; but owing to a misunderstanding between the two Houses no appropriations were made to meet the expenses of the Post-office Department. The Senate passed a Bill appropriating about $20,000,000 to defray the expenses of this Department and meet the existing deficiency. This was sent to the House, which slightly amended it, and returned it to the Senate. That body meanwhile had passed a Post-route Bill, upon which were engrafted provisions restricting the franking privilege and raising the rates of postage; these provisions were now appended to the Appropriation Bill; the House, thereupon, on motion of Mr. Grow, voted (117 to 76) that this was a virtual infringement of the Constitutional provision which directs that all Bills for raising revenue shall originate in the House of Representatives, and refused to entertain the proposition. The Senate affirmed that it was capable of judging of its own action. A joint Committee of Conference was then appointed, who recommended the passage of a new Bill, to be originated by the House, similar to the first passed by the Senate. This Bill passed the House; but upon being sent to the Senate for concurrence, the course of the Committee was objected to, as involving a surrender of the Constitutional rights of the Senate. While the matter was under discussion the hour for adjournment arrived, and no action could be taken. It is apprehended that this failure to provide for the wants of the Post-office Department may render it necessary to call an extra session of Congress. The appropriations for the year, as estimated by the Departments, amounted to about $70,000,000; these were reduced by the Committee of Ways and Means to $64,000,000, the principal diminutions being $2,924,000 for the Post-office Department, $1,111,000 for the Navy, $722,000 for the Army, $968,000 for Civil Expenses, and $655,000 for Fortifications. The total amount of appropriations made, including the $20,000,000 Treasury Notes, amounts to about $60,000,000. Adding to this the $20,000,000 required for the Post-office Department, the total revenue required during the present fiscal year, supposing no unexpected sums are needed, will be about $80,000,000.

On the 18th of February the President sent a special Message to Congress, recommending the passage of an Act authorizing him to employ the land and naval forces of the United States to prevent the obstruction of the Panama and Tehuantepec Isthmus routes. He also says that in the civil wars that have raged in the Southern republics outrages have been committed by all parties upon the persons and property of American citizens. The President has no power to enforce redress for these acts, for, without the authority of Congress, he can not direct any force to enter the territories of Nicaragua, New Granada, or Mexico; nor can he, without transcending his Constitutional power, direct a gun to be fired into a port, or land a seaman or marine to protect the lives and property of American citizens. "Recent experience," says the President, "has shown that the American Executive should be authorized to render this protection. Such a grant of authority, limited in its extent, could in no just sense be regarded as a transfer of the war-making power to the Executive, but only as an appropriate exercise of

that power by the body to whom it exclusively belongs. The knowledge that such a law exists would of itself go far to prevent the outrages which it is intended to redress, and render the employment of force unnecessary. Without this, the President of the United States may be placed in a painful position before the meeting of the next Congress. In the present disturbed condition of Mexico and one or more of the republics south of us, no person can foresee what occurrences may take place before that period. In case of emergency our citizens, seeing that they do not enjoy the same protection with the subjects of European governments, will have just cause to complain. On the other hand, should the Executive interpose, and especially should the result prove disastrous and valuable lives be lost, he might subject himself to severe censure for having assumed a power not confided to him by the Constitution."

Hon. Aaron V. Brown, Postmaster-General, died at Washington on the 8th of March, aged 64 years. He was born in 1795, at Brunswick, Virginia; and graduated in 1814 at the University of North Carolina. Having removed to Tennessee, he commenced the practice of the law in 1817, and soon became a partner with the late President Polk. He was a member at different times of each branch of the State Legislature. In 1839 he was elected to Congress, of which he remained a member until 1845, when he was elected Governor of Tennessee; but having been nominated for re-election in 1847 he was defeated. He was a member of the Democratic Convention at Baltimore which nominated Mr. Pierce for the Presidency; and was chairman of the committee for constructing the "Baltimore Platform." He was a member of the Nashville Southern Convention, and the author of the "Tennessee Platform," which opposes the idea of disunion, but advocates retaliation for what the South considers her wrongs. His theory was that the South could inflict more injury than the North, and that finally the principle of self-interest would force both sections to agree. Mr. Brown was appointed Postmaster-General at the commencement of the present Administration. The most prominent feature of his official course is his recommendation to augment the rates of postage, in order to make the Department self-sustaining.——Philip Barton Key, District Attorney for the District of Columbia, was killed at Washington on Sunday, the 27th of February, by Daniel E. Sickles, a member of Congress from New York. Mr. Sickles had learned that an adulterous intrigue had been for some time carried on between Mr. Key and his wife, who had on the previous evening confessed her guilt. In the afternoon of Sunday Mr. Key was seen passing the house of Mr. Sickles, apparently making signals to some one within. Sickles rushed out, overtook Key, charged him with dishonoring him, and said he must die, at the same time shooting him with a pistol, inflicting a severe wound. A brief struggle ensued, when Sickles fired again, Key begging him not to shoot. The ball passed completely through the body. Key fell mortally wounded, when Sickles shot a third time, and then put the muzzle of another pistol to the head of the dying man; but the cap exploded without discharging the weapon. Sickles then proceeded to the residence of the Attorney-General, surrendered himself, and waiving any examination was committed to jail to await his trial.

Hon. Joseph Holt, of Kentucky, late Commissioner of Patents, has been appointed to the post of Postmaster-General, vacated by the death of Mr. Brown.——Robert McLane, of Maryland, has been appointed Minister to Mexico, with full discretionary powers.——Lord Lyons, the newly appointed Minister from Great Britain has arrived in this country.——Count Sartiges, the French Minister, is removed, and the Viscount de Serre is appointed in his place.——The election in New Hampshire has resulted in the complete success of the Republican party, who elected the Governor, three members of Congress, and a large majority in both branches of the Legislature.——The accounts from the gold regions of Pike's Peak are encouraging, and a large emigration is expected to set out for that region during the present season.——The Legislature of California have passed resolutions disapproving of the course of Mr. Broderick as United States Senator, and requesting him to resign.——In New Mexico Indian outrages still prevail. A band of Apaches having stolen a number of horses and mules near San Elizaro, were pursued by a detachment of mounted rifles from Fort Bliss, under Lieutenant Lazelle. The Indians were overtaken after a pursuit of 160 miles, when an engagement took place between the Apaches, who numbered two hundred, and the rifles, who were only twenty-two. Our men were obliged to retreat with a loss of three killed and six wounded, among the latter being the commander, who was shot through the lungs. The Indians lost about a dozen.——The Legislature of Kansas has passed an Act of Amnesty, which was approved by the Governor. It provides that "No criminal offense heretofore committed in the counties of Lykins, Linn, Bourbon, M'Gee, Allen, and Anderson, growing out of any political differences of opinion, or rising in any way from such political differences of opinion, shall be subject to any prosecution on any complaint or indictment in any court whatsoever in the Territory; and that all criminal actions now commenced growing out of political differences of opinion shall be dismissed."——The officers and crew of the yacht *Wanderer*, which recently brought a cargo of negroes from Africa and landed them on our coast, have been indicted by the Grand Jury, and the vessel itself has been condemned as a slaver and sold.

SOUTHERN AMERICA.

From *Mexico* it is announced that President Miramon, while on his way to attack Vera Cruz, encountered a body of the "Liberal" forces and suffered a severe check, losing one hundred men, three hundred muskets, and a large quantity of ammunition. The Liberals also were concentrating for the purpose of making their long-threatened attack upon the capital while Miramon was absent attempting to capture Vera Cruz. At Tampico the garrison made an abortive attempt to pronounce in favor of Miramon. All the forces of the Liberals on the seacoast have been concentrated at Vera Cruz; and the contest between the two parties appears to be approaching a crisis. Meanwhile our new Minister to Mexico, Mr. McLane, has instructions to recognize and treat with any Government which he may find in the actual possession of the supreme authority, with any prospect of retaining it.

In *Hayti* the new Government of Geffrard appears to be going on prosperously. The property left behind by Soulouque has been confiscated; but the ex-Emperor had previously to his fall remitted large sums to Europe.

In *Jamaica* the proprietors of several estates have applied to the authorities for a large number of immigrants. They say that the cultivation of cotton could be profitably carried on if labor could be secured at the requisite moment; and they know of

no means of accomplishing this, except by establishing on the estates a sufficient number of emigrants. ——Coolies and African emigrants continue to be received in the French West Indies. One vessel brought to Martinique 466 Coolies, and another 278 "free natives" from Africa. These men were immediately distributed among the different plantations.

In *Peru* the projected hostile movements against Ecuador make little progress. The Government finds it difficult to procure the means of carrying on a war against a country which offers little hope of plunder in case of success.

Chili, which has for some years been the most prosperous of the South American republics, is now the scene of revolutionary struggles. The Administration is opposed by two parties—the ultra-Liberals and the ultra-Conservatives—who have no bond of union except hostility to President Montt. The whole country was declared in a state of siege, and an extra session of Congress was called in January to consider a law proposed by the Government granting extraordinary dictatorial powers to the President, authorizing him to arrest or banish suspected persons, to augment the army to any extent he should deem proper, to employ the public funds without limiting himself to the appropriations, and to remove at discretion all public functionaries. The law was promptly voted down. At the latest dates, which reach to the 1st of February, the insurrection was mainly confined to the city of Copaipo, which was held by the insurgents under the command of Gallo, and Talca which was in similar hands under the command of Artego. Communications, presumed to be unfavorable, had been received by the Government from the latter place, and considerable bodies of troops had been dispatched thither.

EUROPE.

There is little change in the aspect of the war question. At the opening of the French Legislative Body on the 7th of February the Emperor adverted pointedly to the disagreements with Austria, yet in such a manner as to convey the impression that he believed they would be amicably adjusted. England and Prussia are using every endeavor to avert hostilities, Lord Cowley having been dispatched on a special mission to Vienna. In the British Parliament Lord Palmerston called attention to the state of Europe, saying that there was a general apprehension that the coming spring would be marked by a great contest between the great military powers. It was well known that military stores were preparing, cannon were casting, horses purchased, troops moved from point to point, fortifications erected, ships of war and transports provided, as though the Governments making these preparations expected soon to be called upon to make some great military effort. He then proceeded to review the state of Europe, and came to the conclusion that Central Italy was the point of danger; that its real cause was the revival of the old jealousy between France and Austria, now aggravated by the joint occupation of the Papal States by the troops of these Powers. He thought that any arrangement calculated permanently to secure the peace of Europe must be founded, first, upon the retirement of foreign troops from Central Italy; next, upon an engagement that in no case should these troops be sent back; and, thirdly, friendly advice should be given to the Italian States to induce them to improve their domestic administration. He concluded by asking the Government if it was in possession of any information which could properly be communicated, which rendered it probable that peace would be maintained.—The Chancellor of the Exchequer replied that it certainly was not the interest of any of the great Powers to unsettle the treaty of 1815, and that he agreed with Lord Palmerston in looking upon the occupation of Central Italy by French and Austrian troops as the main cause of danger. He was, therefore, happy to inform the House that the Government had received communications which gave reason to believe that ere long the Roman States would be evacuated by the French and Austrian troops, and that with the concurrence of the Papal Government. He was not at liberty to state the precise character of the mission of Lord Cowley to Vienna, but it was one of conciliation. Under these circumstances, while an incautious word uttered in debate might produce great evil, he appealed to the House to postpone all further discussion of the subject, and trust to the assurance of Government that every effort would be made to maintain the general peace.—It will be observed that the view taken in Parliament wholly ignores the hostile feeling growing up between Sardinia and Austria, and the presumed purpose of the Emperor of France to support the former in case of war. Austria is concentrating immense forces in Italy under the command of the ablest commanders; at Venice three new forts were ordered to be constructed, to be completed in six weeks, for which purpose five thousand laborers were collected from all parts of Italy. Sardinia is also making considerable warlike preparations. A loan of $10,000,000 was granted by the Chambers, by a majority of 116 to 35, on the ground that the distribution and concentration of the Austrian troops had assumed the aggressive character of a corps of operations against a neighboring Power. In the course of the debate Count Cavour, the Sardinian Minister, said that "Austria had lately assumed a menacing attitude against us. It has increased its military forces at Piacenza. It has collected very large forces on our frontiers. Therefore the necessity arises for us to look for the means of defense of the State. The English alliance has always been the constant care of our whole political life. We have always considered England as the impregnable asylum of liberty. The cries of suffering coming from Bologna and Naples arrive still to the borders of the Thames; but the tears and groans of Milan are intercepted by the Alps and the Austrians; but the cause of liberty, of justice, and of civilization triumphs always. As regards England, Lord Derby will not tarnish his glory in making himself an accomplice of those who wish to condemn the Italians to perpetual servitude. Our policy is not defiant; we will not excite to war, neither will we lower our voice when Austria arms herself and threatens us."

Literary Notices.

A Critical Dictionary of English Literature, and British and American Authors, by S. Austin Allibone. Vol. I. (Published by Childs and Peterson.) Among the important manuals of bibliography which form such an indispensable guide to the student of general literature, this copious dictionary of authors and their productions is destined to occupy a distinguished place. Founded on a plan that is no less difficult of execution than novel in conception, it requires all the enthusiasm and persistency which the editor evidently possesses in singular combination to bring it to a successful issue. Nothing but a rare degree of literary zeal could have inspired the undertaking; but no less a degree of adamantine diligence was necessary even to its present stage of completion. Considered as the production of an individual who has thus far pursued the vast labor involved in its preparation almost if not entirely single-handed, it can find few parallels in literary history. It almost makes the bones ache to think of the ponderous folios that must have been handled, the musty documents that must have been turned over, the puzzling catalogues that must have been sifted, the mighty mass of crude materials that must have been laboriously threshed, in order to arrange and set forth such a treasure of information as is embodied in the pages of this copious volume. In the first place, it contains the names of the principal authors, living and dead, who have written in the English language from the earliest recorded history to the middle of the nineteenth century. We then have a list, more or less complete, of their various productions, brief biographical notices, and, what is claimed by the editor as the most valuable feature of the work, a selection from the leading criticisms of the day on their different works at the time of their appearance. The facility of reference is insured by a carefully prepared index of subjects, in addition to the alphabetical arrangement of the names. The number of authors whose works are noticed is about 30,000—a far greater number than has ever before been brought together in any, or, indeed, in all previous publications of a similar character. Compared with other standard works on the subject, the superior comprehensiveness of the present is displayed in a strong light. Chalmers's Biographical Dictionary, for instance, contains in all less than 9000 names, of which about 2500 are those of British authors. Watt's Bibliotheca Britannica has some 22,000 British names, and from 100 to 200 early American authors. Rose's Biographical Dictionary contains about 3700 names of British and American authors. Chambers's Cyclopædia of English Literature has less than 1000 names. Nor has Mr. Allibone confined himself to a dry and meagre catalogue of literary productions. In many cases the articles are of ample length, comprising interesting personal details as well as instructive criticisms, and forming a fund of readable matter which is not often looked for in a bibliographical dictionary. The general character of the work, however, as well as its intention, is that of a manual of reference for the scholar, without directly aiming at popular interest. It is obvious from the vast and complicated nature of the plan that immaculate correctness in such a work is out of the question; different readers will discover discrepancies and inaccuracies in the specialties with which they are the most familiar; and an approximate completeness must be the fruit of repeated revisions by the author as well as of suggestions from his students; but no intelligent person can fail to recognize the laborious research and patient industry of which every page of the volume bears the impress.

Trübner's Bibliographical Guide to American Literature, compiled and edited by Nicolas Trubner. (Published by Trübner and Co., London.) The editor of this volume has acquired a knowledge of the productions of the American press which is rarely exhibited on the other side of the Atlantic, and which must command the admiration of the best informed students of the subject in this country. His former work on American bibliography, though making no pretensions to completeness, was a valuable index to various branches of learning that had been successfully cultivated by our scholars; but neither in comprehensiveness of plan nor thoroughness of execution can it be compared to the elaborate and minute record of American literature contained in this volume. The duty of the editor required extensive research, vigilant discrimination, and untiring diligence; and in the performance of his task we are no less struck with the accuracy of detail than with the extent of his information. The period to which the volume is devoted comprises only the last forty years; but within that time the literature of the country has received its most efficient impulses, and been widely unfolded in the various departments of intellectual activity. In an introductory essay entitled "Bibliographical Prolegomena," we have an interesting account of catalogues of books relating to America; this is followed by a rapid but comprehensive sketch of the history of American literature, by Mr. B. Moran, of the United States Legation in London; and an exhaustive account of the public libraries in this country, by Mr. Edward Edwards. These essays, though subordinate to the leading purpose of the work, are valuable monographs in themselves, full of curious information, and presenting many points of interest to the general reader. The main body of the volume is occupied with a list of American books, arranged in thirty-one divisions, in the alphabetical order of their authors' names, and with brief, though usually sufficient bibliographical indications. An important feature of the plan is an analytical table of the contents of the Memoirs, Transactions, and Proceedings of learned Societies in the United States. Under the heads of Natural History, Comparative Philology, and American Archæology, Indians, and Languages, the information is especially complete, and of a character that is not readily accessible in other quarters. The General Index at the end of the volume has evidently been prepared with great care, and furnishes a convenient key by which the contents of the work are made known almost at a glance. If we were permitted to speak in behalf of American scholars, we should not fail to congratulate Mr. Trübner on the eminent success with which he has accomplished his plan, and the ample and impartial justice with which he has registered the productions of our native authorship. After a careful examination of his volume, we are bound to express our high appreciation of the intelligence, fairness, and industry which are conspicuous in its pages; for exactness and precision it is no less remarkable than for extent of research; few if any important publications are omitted on its catalogue; and although, as is inevitable in a work of this nature, an erroneous letter has sometimes crept into a name, or an erroneous figure into a date, no one can consult it habitually

without learning to rely on its trustworthiness as well as its completeness.

Biographies of Distinguished Scientific Men, by FRANCOIS ARAGO, translated by Admiral W. H. SMYTH, the Rev. BADEN POWELL, and ROBERT GRANT. (Published by Ticknor and Fields.) The distinguished translators of this work have not only performed their duty in rendering it into idiomatic and vigorous English, but have corrected several of the errors of the original. With all his eminence as a man of science, Arago had his full share of the national vanity, and not unfrequently yields to the suggestions of self-love both in his autobiographical confessions and his portraitures of his contemporaries. His statements accordingly often need modification, which his English translators have endeavored to furnish. Their statements are marked alike by intelligence and impartiality. The subjects of the memoirs, besides Arago himself, are the celebrated astronomers Bailly, Herschel, Laplace, the chemist Joseph Fourier, and several other well-known French and English physicists. In addition to a lucid account of their scientific discoveries, the writer has presented a variety of personal anecdotes and reminiscences which can not fail to be read with interest.

The Methodist, by MIRIAM FLETCHER. (Published by Derby and Jackson.) The scenes of which these volumes give a lively description are founded on incidents and characters in the Baltimore Conference. Class-meeting, love-feast, watch-night, and camp-meeting are successively brought before the reader in graphic and natural sketches, of which the reality is unmistakable. The Rev. Dr. Strickland, who has furnished the work with a well-written Introduction, remarks that "he has perused these pages with an absorbing interest, and that no work of fiction he ever read possesses half the charm which this does, and, what is vastly better, it can not fail to awaken the purest emotions and improve the heart."

The Empire of Austria, by JOHN S. C. ABBOTT. (Published by Mason Brothers.) The establishment of the House of Hapsburg on the throne of Austria, and its subsequent connection with European history, have furnished Mr. Abbott a congenial subject for his facile pen. Without venturing into the depths of antiquarian research, or aiming at minute critical exactness, he has given, in clear and rapid outline, the succession of events in the progress of the Austrian empire. The topics are of stirring interest, comprising the bloody conflicts with the Turks as the waves of Moslem invasion rolled up the Danube, the fierce struggles of the Reformation, the intrigues of secular and religious sovereigns, and the tragic political plots which characterized the age. The general reader will nowhere find a more compact or a livelier narrative of those eventful scenes, and if not of standard value as authority, it represents the current traditions in an agreeable and popular manner.

Opportunities for Industry and the Safe Investment of Capital, by a RETIRED MERCHANT. (Published by J. B. Lippincott and Co.) The title of this work might lead to the suspicion that it was one of the catchpenny productions which promise a violation of the laws of nature by the guarantee of a fortune without the exercise of sagacity, economy, and diligence. This, however, is not the case. The author lays no claim to the possession of any Aladdin's lamp. He discloses an abundant store of commercial and industrial information, accompanied with practical suggestions, which appear to be the fruit of a wide business experience, and are well adapted to guide the reader to the way of wealth.

The American Home Garden, by ALEXANDER WATSON. (Published by Harper and Brothers.) The most recent modes of cultivating the different varieties of vegetables and fruits are described with great distinctness in this practical manual. It contains a popular explanation of the physiology of plants, and enters sufficiently into the rationale of the methods which it recommends to redeem the business of the gardener from a mere mechanical routine. The volume is liberally illustrated with engravings of agricultural tools and the productions of the soil. It will prove of value to the amateur cultivator, especially by its copiousness of detail and the simplicity and clearness of its directions.

A New History of the Conquest of Mexico, by ROBERT ANDERSON WILSON. (Published by James Challen and Son.) The personal researches and observations of the author of this work in Mexico have led him to the conclusion that the usual accounts of the Spanish conquest are, to a great extent, founded on untrustworthy evidence, uncertain in their details, and indeed, as a general rule, fabulous in their character. He stoutly calls in question the accuracy of Robertson and Prescott, endeavoring to show that the former was guilty of rash and unfounded assertions, with little solicitude to ascertain the truth, and that the latter was the dupe of his imagination in relying on documents that had no claim to historical authority. The letters or dispatches of Cortéz, and the narrative of Bernal Diaz, are subjected to an unsparing criticism, with a view to proving that no confidence can be placed in their statements. In the opinion of Mr. Wilson, Cortéz was in the habit of presenting the grossest exaggerations in his reports to the Spanish Government, and the memoirs of Bernal Diaz are destitute both of authenticity and accuracy. After summarily setting aside the prevailing conclusions of historical research, the author undertakes to trace the ancient civilization of Central America to the Phœnicians, by whom he believes that colonies were planted on the American continent at a period of which history has not preserved the record. The volume will be read with interest on account of the boldness of its aim and the evident sincerity of its intention; although it is by no means certain that it will immediately supersede the labors of Robertson and Prescott.

Adam Bede, by GEORGE ELIOT. (Published by Harper and Brothers.) The scene of this excellent story is laid in a rural district of England about the commencement of the present century. Without indulging in extravagance of plot or sentiment, the author throws a vital human interest about his narrative, and produces a deep impression by fidelity to nature and force of illustration.

Symbols of the Capital; or, Civilization in New York, by A. D. MAYO. (Published by Thatcher and Hutchinson.) The institutions of the city of Albany are here made the basis of an earnest discussion of several important social and political subjects. In fact, the volume is devoted to the consideration of the privileges and obligations of American citizenship, and aims to aid the younger portion of the community in the formation of a character that shall justify our professions of republicanism, and the establishment of a national civilization which shall illustrate every principle of pure Christianity.

Three Visits to Madagascar, by the Rev. WILLIAM ELLIS. (Published by Harper and Brothers.)

The valuable "Polynesian Researches" by the author of this volume has made his name familiar both to the student of geography and the friend of missionary operations. Each of these classes of readers will be glad to renew their acquaintance with such an intelligent observer and so spirited and lucid a writer. Mr. Ellis was sent by the London Missionary Society, in 1853, on a friendly visit to Madagascar, in order to ascertain the condition of the people and the views of the Government. He arrived at the island in the month of July, but, on account of the political relations then existing with England, he was unable to protract his visit. On two subsequent occasions, however, he was received with great kindness, and treated with so much confidence by the authorities as to give him ample opportunity for extensive and accurate observation. His statements in regard to the sufferings of the Christian converts in Madagascar are full of interest. Not a little fresh and important information concerning the geography, natural history, and social condition of the island is presented in a very agreeable form. The volume will at once take rank with those travels which derive their value from the narrative of substantial facts, and not from the high-colored pictures of the imagination.

History of New England, by JOHN GORHAM PALFREY, Vol. I. (Published by Little, Brown, and Co.) The author of this work is one of the ripest and most accomplished scholars of Massachusetts. Combining the habit of exact research with profound and independent thought, he has won an eminent reputation in various branches of rare and difficult learning. His experience in the exercise of many responsible functions, both political and literary, the native aptitude of his mind for antiquarian and historical pursuits, his ample stores of general learning, tempered by a judgment equally remarkable for soundness and sagacity, and a taste which instinctively repels every thing extravagant and meretricious, give him high and peculiar qualifications for the important task which he has assumed. The first volume of the series of which the work is to consist gives a satisfactory foretaste of its character. It embraces the period from the first settlement at Plymouth, in 1620, to the confederation of the colonies, in 1643. The author has brought to the elucidation of the subject the lights of contemporary documents, many of which have never received such a thorough examination before; the results of personal inquiry and observation in England; and a diligent comparison of the statements of preceding writers. His view of the political designs and anticipations of the founders of the Massachusetts colony is of a more decided character than has usually been ventured by other historians. If not fully confirmed by the facts and reasonings which he brings to bear upon the case, it is at least presented in a strong light, and argued with signal force and ability. Although free from the influence of sectarian partialities, Dr. Palfrey does full justice to the character of the Pilgrims, and presents a vigorous defense of some of the more exceptionable features in their history.

Mr. J. W. Audubon proposes to publish, through Roe Lockwood and Sons, a new edition of AUDUBON'S *Birds of North America*. The plates will be printed from lithographic transfers from the original copper-plates, and are to be colored after the original drawings, which still remain in the family of the author. Audubon's great work was justly characterized by Cuvier as "the most magnificent monument which Art has ever reared to Ornithology." He commenced making drawings of birds solely for pleasure, without any design of publication. An accidental meeting, in 1810, with Wilson, the Ornithologist, convinced him of the value of his labors, and he set to work to complete the series. For this purpose he traversed almost every portion of the country from the everglades of Florida to the prairies of the West, and the borders of the great Northern lakes. His unerring rifle furnished him with specimens, which his pencil transferred to paper before the plumage had lost its brilliancy or the muscles their natural expression. A thousand drawings, the result of the labor of years, were destroyed by a pair of rats who had made their nest in the box in which they were deposited. Undismayed by this accident, rather comforted, indeed, by the thought that he could now make better drawings, he set himself to work, and in three years had replaced his collection. In 1826 he took his drawings to England, for the purpose of publication. One hundred and seventy-five subscribers, nearly half of whom were Americans, at one thousand dollars each, were soon obtained, and the author himself was warmly received by the most distinguished men of Enrope. As a painter of birds Audubon manifested the highest attributes of art. He individualized each as faithfully, and represented their passions and feelings as truly, as Landseer has done those of dogs, or Herring those of horses. His verbal descriptions are worthy of his pictures. He describes his objects in a graphic style, introducing innumerable passages of romantic and exciting personal adventure. He had spent half a lifetime among the tall grass of the Western prairies or the forests of the North, upon the bosoms of our vast bays and lonely inland lakes, enduring dangers, encountering disappointments, and surmounting difficulties which would have appalled one less earnest and enthusiastic than himself. His great work, the main labor of his life, has long been out of market, and only to be procured by the breaking up of the libraries of some of its original possessors. His son now proposes to re-issue it in 44 monthly parts, each containing ten plates; the volumes of the text to be delivered at intervals as the work advances. The numbers will be furnished to subscribers at Ten Dollars each, making the cost of the work less than half that of the original edition. The first number has been prepared as a specimen of the general character of the whole. It contains a magnificent portrait of the Wild Turkey, of the full size of life; a spirited group of a Hawk pouncing upon a covey of Partridges; a couple of Blackbirds regaling themselves upon a stalk of maize; a pair of beautifully colored Ducks couched among tall reeds; a gay Finch feeding upon a gorgeous cactus; with sundry Warblers, characteristically grouped upon their favorite plants. In brilliancy and accuracy of coloring these pictures surpass the corresponding ones of the original edition, and give abundant promise of the faithfulness with which the entire work will be executed. The work deserves, and we trust will receive, a success which will amply remunerate the publishers for the outlay which it must involve, notwithstanding the cost of the engravings has not now to be met.

Editor's Table.

MARRIED LIFE.—Marriage is the most significant fact in all those manifold relations that we sustain to one another. Our nature, in the offices of marriage, has a meaning little short of divineness. If, in some aspects, it bears a resemblance to other ties, it soon presents a distinctness of feature, a grouping of lineaments, that lift it entirely out of the circle of other human connections. Not only does it stand at the head of earthly relationships, but it occupies a ground of its own—a ground shared with nothing else. The two great facts of human history, as stated by Moses in the first chapter of Genesis, are, first, that man was created in "*the image of God;*" and, secondly, that "*male and female created He them.*" If these facts were worthy then to be associated, they are still, at least ideally, to be contemplated together. Man has fallen, and with his fall every thing earthly has sympathized. But nevertheless the two grand interests of his being and life are, first, the image of God; and, secondly, the relation of marriage. In many points they suggest a parallelism of thought. For if religion unites the soul to God, and by means of this spiritual alliance makes it a participant of the divine nature, it is equally true that marriage blends two human beings together, and, so far as they are mutually concerned, creates a personality that never before existed. Henceforth they are one—"one flesh"—not one in any sense that destroys their true individuality, but one in such a manner as renders each life the complement of the other, and combines them in full, beautiful completeness.

Marriage is not a Christian Sacrament; nor, on the other hand, is it a conventional thing that rests its authority and obligations on the usages of public opinion or the provisions of civil law. If it has not the peculiar sanctity, the direct exclusiveness shutting out the scope of human relationships, the near attitude to God, the simple but all-occupying idea of spiritual interests, that are embodied in a sacrament, it is as strikingly distinct from those arrangements which human wisdom, prompted by expediency or other motives, has been led to devise for the good of society. It is God's institution, ordained as one of His great means for the execution of the divine plan of existence. It is man's institution only in the sense of recognition, guardianship, and support. It is God's in origin, purpose, end; it is man's in possession, use, convenience, and accommodation. The authority of God over it, dating back to the time of its original introduction into the economy of creation—reaffirmed most impressively by Jesus Christ—enforced and illustrated by the teachings of inspired Apostles—is still maintained. Government has no moral right to legislate in its behalf except in subordination to the divine idea which God has set forth so prominently in its nature and design. Government can neither create nor abrogate the institution. All that it can do is limited to the faithful execution of the infinite purpose which it embodies. Fulfilling this office, it may take cognizance of its social aspects, so as to protect it against injustice and secure its rights. But in this, as in other things, government is mainly negative, guarding against abuses, and leaving it to itself to accomplish the moral ends for which it was ordained.

The significance of marriage is not found, therefore, in its civil or economic aspects. That, indeed, were a low view of its nature and aims which considered it only as the foundation of States. Man and woman are united not merely to preserve the order and virtue of society, but to fulfill the highest purposes of their being—each imparting and receiving strength, each aiding the other in that best nurture and truest discipline which are essential to the growth and maturity of character. Seen in this light, marriage most aptly represents the spiritual facts of redemption; and hence its frequent use as a symbol in the New Testament. Figurative language, as drawn from external and material objects, attains its utmost expressiveness in the Hebrew Scriptures. Those ancient books, written, as it were, in the vast picture-gallery of visible nature, leave no form of beauty or grandeur unappropriated. Tears and smiles, grief and joy, defeat and exultation, all find utterance in those varied scenes that make up the mystery and wonder of the natural universe. The eye of David, quickened to perceptions beyond the narrow range of earthly vision, saw the inward glory of landscape and firmament—saw the heart of Infinite Love, where others beheld the hand only—and, by virtue of the inspired insight, became the poet-laureate of the Church for all ages. We have no poet, therefore, in the New Testament. Such a poet is not needed. It were a work of supererogation to have one while David keeps for us the vigils of the night, and, from his watch-tower amidst the lonely hills of Judea, catches the passing lustre of every star for the themes of his hallowed muse. The elder religion made nature musical to the spirit of piety, and left the inner world, with its profounder symbols, to the presence of Christianity. Inspired mind, in the New Testament, turns to the heart and its outgoings of affection for the types of its supreme loveliness. Accordingly, we see marriage often introduced as the symbol of the union between Christ and the Church; and it is interesting to observe that Paul and John, in their intellectual constitution so different—in habits of thought and expression so diverse—both employ this image to represent the same fact. With Paul it is the conclusion of logic that believers are "married to another, even to Him who is raised from the dead;" but to his mind it is "a great mystery." John presents the more poetic side of the analogy, for he sees the "new Jerusalem coming down from God out of heaven, prepared as a bride adorned for her husband;" and again, "Come hither, I will show thee the bride, the Lamb's wife."

Marriage, then, is much more than a providential institution, designed to secure earthly convenience and comfort. It is something else besides a safeguard against polygamy and licentiousness. "Mother of States," it has well been called, but beyond this it has a deep meaning. Marriage is a great moral auxiliary to Christianity. It is a powerful incentive to virtue and piety, a divinely-appointed means to awaken and cultivate those sensibilities that religion needs for its service. If marriage merely contemplated the external existence of the household, if it looked no farther than the perpetuity of the race and the care of childhood, if it had no profounder import than political economy assigns to it, these objects could be easily attained without that early and vigorous awakening of the imagination, that intense glow of thought and feeling, that impassioned power, so unlike all other forms of strength and so prophetic of future activity, with which nature indicates the awaiting sphere of human life. The growing mind, as consciousness takes substance

and shape, scarcely knows, at first, the meaning of those mysterious movements that agitate its depths. It sees not the direction it is taking. It can not articulate its emotions. Dumb signs beckon it forward. A strange impulse drives it onward to a vailed destiny; but time soon explains the mystery. The one great epoch of humanity appears in the distance standing out in bold and broad relief, but not so brightly as to shut out the subdued and sober coloring that gives the back-ground to all earthly contemplations. A fancy and a fact, a thought, a hope, a swelling joy, how the soul pulsates under the sense of a new and mighty addition to itself, that quick enlargement of its vitality so suddenly establishing a new possessorship in itself and widening its proprietary reach over the world without! Nature always gives sign of an approaching necessity for the greatest and best of our qualities in action when she takes, as it were, the vast forces of our inward being, and stores up their energies beforehand against the season of action. We know what she means when we see her, with this careful providence, studying the forthcoming needs of man. Indeed, there is no surer rule to apply to her management of the creature man, than this constant effort to indicate what thoughts and feelings, what tastes and habits he will hereafter want, by gathering their elements with a royal liberality long ere they are required. Assuredly, if this test be applied, one can readily see where nature places the emphasis on human experience. Nothing possible to man, nothing within all the range of life and activity, nothing in contingency or certainty, not even death itself is so significantly brought into view, so prophetically shadowed forth in an early direction to the imagination and affections as the fact of marriage. Nor does religion leave this instinct to the simple workings of nature. Nay, religion intensifies its action. Where its serene and holy presence is felt, the high ideal of marriage that nature strives to set before the mind but never accomplishes fully, is always perfected. No soul can truly know its fellow until it knows God. Is it not in Him that instinct finds its interpretation? Is it not in Him that the mystic tracery, spreading its strange symbols over the tablets of the hidden nature, has its explanation? Forever stands this law —in His light we must see light; and never is its majesty more signally vindicated than in those affections which yearn for companionship such as love alone can give. How instructive the fact that Christ began both his ministry and miracles at a marriage-feast? The first institution that he honored with his presence and blessing, we are taught by that act his divine estimate of its purity and beauty.

Alas! we see dimly. The value of truth is often lost for the want of a little more clearness and breadth of view. It is not enough to see; we must see openly, fully, thoroughly. On such a subject as marriage we should certainly endeavor to have those exalted conceptions, and, what is of more worth, that spirit of right thinking, on which the nurture and growth of intellect and heart depend. Is it then true that, tried by a just standard of thought, there is a low state of opinion as respects marriage? We speak not of false opinions; of those cardinal errors into which so many fall who make marriage either a hypocritical mockery or a blasphemous lie. Of all sacrilege this is the most infamous, for it is a triple robbery—a robbery of God, who looks to marriage as a living type of His own nearness and preciousness to the spirit—a robbery of the soul, that deliberately cheats itself of its highest earthly blessedness—a robbery of the heart sought only in name, and left to perish in its sublimer aspirations. Setting aside all such as falsify the reliable instincts of humanity in this matter; dismissing, too, that class of persons who make marriage an affair of romance or recklessness; we take those who really regard it as a Divine institution, and sincerely desire to experience the measure of its completed bliss. Among them, few have those elevated views of marriage, that fervent and absorbing sympathy with its objects, that noble ideal of its offices, which are absolutely necessary to put the mind in a position to enjoy its full and perfect blessedness. The earthly idea predominates within them. Marriage, as a mode of life convenient and comfortable, is well enough understood. Mutual confidence and affection are not wanting. Forbearance and patience, kindliness and sympathy, even touching tenderness, are never absent in daily intercourse. The presence of religion, too, may hallow the household. Husband and wife may be priest and priestess before God, ministering at the same altar, offering the same thanksgivings, happy in the same hope of heaven. Yet, despite of all this, marriage may fall far short of its Divine aims.

It is difficult to state the precise point at which the higher and more truthful view of marriage, as a Divine institution, begins. But it was certainly designed to be a discipline of soul no less than of intellect; of spiritual affections, as well as of transitory attachments; of faith and love toward God. And to these great ends all its present uses are subordinate. Human love is not its final purpose. The most enchanting spectacle of devotion—a devotion cordially and intensely reciprocated between husband and wife—can not complete the picture. No; there must be something deeper and holier than a mere relationship, for marriage is intended to cultivate feelings, hopes, sentiments that lie in profounder depths than any love for human objects; but which depend on these objects for their earliest awakening and final perfection. In short, it calls forth our nature, with its keen sensibilities and energetic passions, as nothing else can develop them; in order that the soul, aroused to its utmost capacity of earthly feeling, alive in every part with the abounding fullness of love, may thereby be the stronger, the fitter, the better furnished for a reverential and earnest offering of itself to God. How beautifully is marriage adapted to this work! By giving us one dearer than self, it suppresses the selfishness that stands in the way of all genuine and generous growth, at the same time strengthening and expanding our personality by superadding the richness, the unutterable tenderness of another life to our own. The Creator has wisely ordered that this passion should be the master-passion of the heart. It opens a new existence; for no man, no woman, under its potent sway, is the same person as before. It is the true metempsychosis by which we are translated into another mode of being—sense, intellect, spirit, all responding to a fresher and fuller vitality. But all its offices are insignificant in comparison with the service which it renders to those great instincts that answer to no summons except its call. No other invocation will they obey save its sovereign voice. Love teaches man to confide in his instincts. It throws a revealing light far within; gives him to himself, so that he may know and cherish his own being; assures his consciousness of an inheritance already present, and certifies him of an immortality now in its morning dawn. These are the prompt-

ings of Nature toward something beyond herself. She is feeling after the Infinite. She is wrestling for her heavenly birth-right. It is in this way that marriage, if its full blessedness is attained, impels the soul beyond its immediate ends. Beautiful as an earthly union, it is more beautiful in those yearnings for the spiritual and the eternal, in that reaching forth of the affections toward God which it was designed to awaken.

Marriage should be viewed, therefore, as one of the highest means of spiritual culture. By spiritual culture we do not mean that mystical piety which retreats from the actual world, and dreads as contagious whatever has the least touch of human nature. Such virtue, if virtue it may be called, is a mere reverie of the conscience, for it rejects the sound, substantial facts of the soul, and serves God at the expense of common humanity. The spiritual culture of which we speak is not morbid, but healthy; not one-sided, but universal; not artificial, but real; not antagonistic to the true intent and purpose of human nature, but in deep harmony with its laws and ends. It is a solid, hearty thing that is competent to make good its claims on the ground of sturdy common sense. Never seeking to hide its weakness under cover of imposing abstractions—never indulging in that mock-heroism which contemns the present life in fancied homage to a future existence—it takes the world as God's world, believing it to be, as Christ said, the footstool of an Infinite Throne; happy in its senses as well as in its faith, only careful and eager to keep the earthly in its appointed vocation; standing on its own feet, mindful the while that a stronger than itself must hold their goings, lest they slide into evil. True culture respects all the material ties that bind us to the universe. If dust was not unworthy to be fashioned into a human form under God's hand, and if grace could stoop to redeem it, this is ample foundation for it to be honored and prized. Hence, all genuine culture consults the totality of manhood. It rejoices that we are men, and, expelling only the evil, perfecting the good as implanted from above, it would keep us men forever. Marriage prescribes the highest form of this culture. Earth's best estate, it aims to present manhood in conformity with its original type, vested with headship over all inferior and outward things. Marriage binds us closely to the world, but not too closely. If its ideal be obeyed, we shall have a firm, fast hold of the world, but not be worldly, carnal, sensual. Through what pure channels will the world make its way into our hearts, leaving behind its slime and sin! One of the greatest offices of marriage is to purify our relations to the external universe. It hallows the senses. A man's home does more to endear the material world to him than all other influences put together. We believe that the Creator intended this home feeling, subjected to religious control, to determine all our connections with the physical universe. The sentiments springing from home are healthy and refining in all their bearings on material interests. They tend to lift the mind above the avarice of the miser, the gold-worship of Mammon, the sensualism of trade and commerce. Any man, indeed, may make money his god; but it is a very rare thing for a man of family to be the slave of cupidity. No; you must take the unmarried if you are looking for misers. And the same law applies to all inordinate passions. Marriage is designed to restrain them. Nor is this its only benefit; for while it checks, it also purifies and exalts them. Certain it is, then, that home defines a man's status toward all outward objects. Here is the origin of his power over them. Here is the source of enjoyment no less than of strength. Home develops the true sense of relation to external things, and through no other means can Christianity cultivate in man that large, generous, hospitable nature which qualifies him to glorify the bounty and beauty of the Creator in his works as well as to dwell in his presence forever.

There is this, then, to be said of marriage, that it contemplates the best things without and the best things within. Short of the best, both outward and inward, its tastes and demands can not stop. False marriages, imperfect marriages, marriages that are living divorces, marriages like the whited sepulchres Christ spake of—these are not uncommon, but we speak of the institution itself, not of its abuses. Considered in its divine light, marriage looks to the best possible aspects of the world, and to the freest, fullest, richest development of our nature. It claims the very flower of life for itself. The original ideal God impressed on it, although marred and defaced, is still an ideal. Measured within those narrow limits, that dwarf and hedge in all other human relations, it sternly refuses to be—never yielding to the low expediency, the gross earthliness, the heartless fashion that would sink it into a badge of conventionalism, and always turning vengefully on such as would thus desecrate its sanctity. No other relation between human beings is an outlet toward infinity. Friendship, philanthropy, patriotism, these have had their heroes. They have written themselves in wonders; but marriage stands aloof from their arena. Its import is not expressed in the life, but herein is its glory—that while all other relationships make man an actor before the face of the world, driving him into contact with the pride of public opinion, and incorporating his acts directly and at once into the organic mass of society, it erects a grandeur in his heart as a heart shut out from all foreign companionship. Act as bravely, as successfully, as may be in the open world, what ungracious intermeddlings with one's individuality—what necessary abatement of light and joyous freedom—what tyrannical exactions on taste and temper—what martyrdom even of the better self to serve our race and time! True it is that a man often pays dearly for benevolence and good deeds. What is given to humanity is abstracted from himself. The force and fullness of his own nature are often impaired in service to others. Whether this is necessary or accidental we stop not to inquire; but all of us can recall instances in which men have injured their own culture in devotion to others. But marriage is exempt from these conditions of moral activity in the outward world. It educates the heart, not by impelling it into external life, but by drawing that life into itself; not by assimilating us to society, but by assimilating society to us; and thereby it puts a man in the loftiest earthly attitude toward what is without, and trains his capacity for nobleness, magnanimity, rectitude of being.

Look now at modern society. Look at American society. Look at the vast and cumbrous machinery of outward life. There is much to charm the fancy, much to gratify a true and loving heart. Every thing is brimful of power. Our senses are taken by storm. Intellect, that once lived like a monarch in the retirement of his palace, away from the public gaze, content to come forth on set occasions, has changed its residence. It tenants eye and ear. To be sure, some keep the old-fashioned brain as a sort

of country home, that they can occasionally visit, but most people carry their minds in their senses, ready on the outside, convenient to tongue and fingers. The world deluges us with its enormous mass of facts and fictions. A day originates more than one of the old centuries. Wonders are commonplace affairs. If we do not have them with our morning coffee, we have a sense of loss as if some evil genius had defrauded us of our rights. The firm earth stands, but ocean heaves, air heaves, living crowds surge hither and thither, night asks rest of the day, and when Sabbath comes it has a strange hush that startles us. Never were men so ruled by outwardness. Never did they tax land and water, atmosphere and sky, day and night, so heavily. Wants have multiplied a thousand-fold. The wealth of antiquity would hardly form the banking-capital of a single great city, and yet our resources are enumerated as a schedule of poverty itself, and if millions are not added to our exchequer in a year business is bankrupt and nations beggared. There is magnificence in these results. But let us not overlook the evils connected with them. Especially should we be mindful of the fact, that most men are now at the mercy of circumstances. Independent manhood is, in our time, the rarest of virtues. Few tread firmly. Few can calculate on to-morrow. And even where men are prudent and thoughtful, resisting the ultra excitements of the day and studious to nurture in themselves the private heart of strength, there is a prodigious degree of active influence always stealing into them from without, and shaping them, more or less, into the fashion of the times. A large share of this outward agency must be admitted into one's nature, and, unlike as men are in temperament, susceptibility, and intellectual habits, it would be impossible to lay down any precise rule to control this action of the world on us. But the general principle is indubitable, that whenever this extrinsic influence moulds one's tastes and habits, sets aside the determinative force of the will, and drifts him with the current of society, it is then a positive evil, and not the less frightful because its magnitude is rarely seen. Now this is just the present danger. We are formed and fashioned by the world. If any honest man, bent on knowing his own heart, would abstract from the sum of his opinions and tastes all that the world had deposited within him, he would find a small residue to be claimed as his own. Every man in certain things needs external control. Half his nature demands it. Law is not more necessary to him as a citizen than are public opinion, established usages, conventional rules, and even artificial forms of life, requisite to him in the daily direction and ordering of his manhood. Aside, however, from all this, it is obvious that in our day the prevailing modes of business, intercourse, society, have much too potent an ascendency over character and conduct.

There is but one true, effectual counteractive. That is found in the organization of home, and particularly in the relation of marriage. The best education of a man is derived from his wife. Woman as mother unseals the fount of thought and feeling; woman as mother first leads him to God and crowns all her other services as his earthly mediator at the mercy-seat; woman as mother ordains the law of his childhood and youth, and communicates those impulses which awake into action the slumbering man. But woman as wife acts more powerfully on mature manhood. Woman as wife is in intellectual and moral companionship with him. Insensibly to himself, his thoughts, sentiments, judgments, purposes, and aspirations are often recast in the more delicate mould of her mind and returned to him for acceptance and assimilation. Much of the beauty of life reaches him through her. She conveys a hundred-fold more to him than he ever receives at first-hand from the world. Providence has ordained her to be his chief educator. Moreover, she educates him in that most essential but most neglected part of his nature, viz., the instincts. A true, intelligent, devoted wife is invaluable to a man's intellect, but she is much more serviceable to his spiritual instincts. Good women seldom fail here. Full of instinct themselves; alive in thought, will, aspiration with its subtle and celestializing presence; what a work, what a ministry of sacredness they fulfill for man by calling out and intensifying these great intuitions, otherwise dead! That is a false standard which tests her intellectual value by such contributions to our stores of knowledge as we can critically measure. Women as novelists, historians, dramatists, poets, what are they compared with women as awakeners of man's deepest, truest, holiest instincts, as inspirers that breathe newness and freshness of soul through the cold, hard, flinty intellect, with its outward set faculties! Manly mind is essentially aggressive. It is a warlike, conquering power. Material objects must constitute its main sphere. It is God's agent to recover the physical world and restore it to its primal state as the habitation of his glory. Not so with womanly mind. It is the corrective that silently but mightily acts on the manly intellect and checks its excesses in material pursuits. And we shall be pardoned, we trust, if we express our belief that it is a far greater and nobler power in relation to man than it is in itself and in its own insulated action. The word "*helpmeet*" came from God, and it is not probable that we shall ever have a better term to characterize the offices of womanly nature, both as respects mind and character.

Man's best culture, as we have seen, comes from woman as wife. Living and working, as he must, for the most part, among material things—destined to subdue matter and convert the earth into a habitable place for a redeemed and spiritualized humanity—man needs her to develop those instincts on which the purity and perfectness of his nature depend. No other agency can perform this work for him. Schools, colleges, literature, society, are all impotent here. Nor can man do it for himself. Providence has solemnly, authoritatively, permanently, assigned it to woman. It is an irrevocable decree; and, whether it suit some of the modes of modern thinking or not, we have simply to submit to it as a great law in the economy of creation. Resting on this stand-point, and looking out on the progress of civilized society, we can scarcely fail to see that a new age of Womanhood is dawning. No movement could be more opportune — none more strikingly indicative of the superintending care of Providence—none so prophetic of that path of advancement on which Christian humanity is to tread. Woman has now a prominence, a position, an influence, not more profoundly felt than distinctly recognized. Although her status in the ongoings of civilization may not be as palpably defined as the office of statesmanship and diplomacy, nor located as ostensibly as the province of the agriculturist, manufacturer, or merchant, yet every man abreast with the age sees and feels that she is a potent, pervasive element in the present structure of society. Admit the excessive tendencies to materialism in our civilization; but how can Mammon

reign where woman has intellectual, social, spiritual influence? Now the point to be observed is this; viz., that as man proceeds in the work of subduing matter—as he marches with strong and stately steps to resume his lost sovereignty over the natural world—he is exposed to the hardening, brutalizing effects of these material pursuits; and therefore a kind Providence has ordained that womanly activity, springing vigorously and warmly out of the very heart of society itself, and simultaneously accompanying the wonderful achievements of manly enterprise, should interpose its mighty restraints on a material age, and arouse those instincts which preserve us from the curse of a gross and degrading earthliness. Destroy this divine guardianship, and we know not what could assume its place and perform its task. But with it there is no ground for fear. Man, with woman at his side, may safely walk the way of conquest. If she has a real, genuine, spiritual womanliness, she will more than balance the dangers of materialism; and hence, in our estimate of her influence, let it be observed that we do not rely on her intellectual accomplishments and social charms. No; far from it. Woman, as a conventional creature, as a fashionable belle, as a mere drawing-room attraction—sprightly, gay, and too often heartless—woman, like a tropical bird, sporting among luxuriant vegetation and gaudy flowers—woman in this character can not check the tendencies of a material age. Religion is a necessary part of her social nature. Destitute of it, she is powerless in the highest and noblest realm of life. Fortunately for us, the religious spirit of womanhood was never more earnest and operative than now. The proportion of good women was probably never so great as at the present period. And, without doubt, their active influence has been much less hitherto than it is at this day. A century ago, philanthropy could not have found such women as Mrs. Fry, Miss Dix, and Florence Nightingale. A century ago, the world was not ready for women like Hannah More, Mary Lyon, and Jenny Lind. A century ago, a woman could not have written the "Drama of Exile" and "Aurora Leigh." A century ago, woman's work, if she were liberated for a brief season from household cares, was to visit the sick, clothe the naked, feed the hungry. She was a mere messenger of kindness, a dispenser of charity. To-day she builds hospitals, founds observatories, establishes institutions of learning, writes books by scores, edits magazines, expatriates herself from home as a missionary in foreign lands. We often boast that "the schoolmaster is abroad;" but that is not so striking a fact as that the spirit of womanhood is abroad. Nor are all the schoolmasters of the land doing half as much for society as woman. They are educating the intellect; she is educating the heart of the world. They are enlarging the domains of Science and Art; but she, enthroned in a sublimer sphere, is cultivating the soul of the age and inspiring its loftiest endeavors.

If these are truths not to be disputed, what must follow? Surely in their light we can partially forecast the coming time. One conclusion, at least, seems to be warranted, viz.: *Our future manhood will receive a much larger accession of strength and beauty from womanhood than it has had hitherto.* The germs of this peculiar culture already appear, and, indeed, the present era of manly mind, signalized by many and striking features, is characterized by a decided tendency toward that spirituality which it is the special province of woman to create. Our recent literature illustrates this fact. Placed beside the literature of Queen Anne's age, it is far less objective and pictorial, but it has gained immensely in its intuitional aspects. Nor is it only in such writers as Wordsworth, De Quincey, Wilson, Tennyson, Coleridge, that this spirit appears. It is seen in Arnold of Rugby, the Brothers Hare, Channing. M'Cosh in his great work on the Divine Government, Niebuhr in History, Bunsen in Politics, Ruskin in Art, Hugh Miller in Geology, Guyot in Physical Geography, Owen in Science, all show the presence of that element of mind which lies beyond mere intellectuality. But we have beheld only the initial steps in this wonderful change. Manly mind, whether acting in Science, Art, Literature, is destined to be much more instinctive and spiritual. For it can no longer pursue its inquiries and construct theories on the ground of intellect alone, closing its avenues against the approach of just and truthful sentiment, scorning the aid of insight and leaving impulse to dreamers, romanticists, and knight-errants. No, it can not be so again. Women are now acting with momentous power on the intellect of the day, and through their agency a spirit has been breathed into it of most healthful and salutary vitality. Beautiful, in the vision of Dante, is that serene and sainted companionship which unfolds the meanings that lay hidden in the mysteries of Paradise, and, by quick intuition, opened his soul to grasp their wisdom. Nor is a measure of that beauty wanting here. Unconscious we may be of its subtle, penetrative, spiritual presence, unrecognized by our logical perceptions because of its exceeding fineness and ethereal delicacy; but, nevertheless, it is a mighty influence working in men far more deeply than the wisest apprehend. For this reason the future is a great hope to us. If we may be allowed to venture an opinion as to the operative scheme of Providence in its bearings on the progress of society, it would seem that manly mind is more intimately connected with the material interests of the universe and womanly mind with its spiritualities. We speak of them simply as agents in the work of Providence—of what they are to do, not of what they are to be. Left to itself, without the compensations of the other, each would be inadequate to its task. It would be extravagant, perhaps, to say that if manly mind were to lose the infusion of womanly mind, it would rush toward Atheism or Pantheism; but there would certainly be danger of materialism in some corrupting, chilling form. The future history of manly mind is, therefore, hopeful in a high degree. For the first time in its career, woman is in partnership with its growth and activity. For the first time in the lapse of the ages, it is beginning to be permeated with the instinctive and spiritual influences of Christian womanhood. It has required centuries to start the process, but thanks to the redeeming spirit of Christianity, it is started; the auspicious era is inaugurated, and hereafter man and woman walk side by side in the fulfillment of great and glorious purposes.

And now let Tennyson sing for us:

"For woman is not undeveloped man,
But diverse; could we make her as the man,
Sweet love were slain, whose dearest bond is this:
Not like to thee, but like in difference.
Yet in the long years liker must they grow:
The man be more of woman, she of man;
He gain in sweetness and in moral height,
Nor lose the wrestling thews, that throw the world;
She mental breadth, nor fail in childward care;
More as the double-natured Poet each,
Till at the last she set herself to man,

Like perfect music unto noble words;
And so these twain, upon the skirts of Time,
Sit side by side, full-summed in all their powers,
Dispensing harvest, sowing the To-be,
Self-reverent each and reverencing each,
Distinct in individualities,
But like each other even as those who love.
Then comes the statelier Eden back to men;
Then reigns the world's great bridals, chaste and calm;
Then springs the crowning race of human kind."

Editor's Easy Chair.

IF April fools were only known upon the first of April what a wise world it would be! But the game goes on despite the day and the month; and if your eyes are only sharp enough, you may see men with rags pinned on behind, and huge chalk marks upon their backs, any day in the year.

And the worst is that we make fools of ourselves. With great pains and pertinacity we adjust the most ridiculous rags in the most conspicuous parts of our persons, and forth we sally into the street; but as only men and women can see them, and children are blind to this kind of fooling, nothing is said, because politeness requires silence.

There is a man, for example, upon whom the eyes of his neighbors rest, who works hard in his business, and wishes he were very rich; thinks if he were only rich the world would be the loveliest of conceivable spheres; and so, tugging and toiling day and night, summer and winter, sacrificing his family enjoyment, his mental cultivation, his physical development, he digs away at the mine from which he hopes and prays to carry off a fortune.

His soul gradually contracts to the sphere in which he resolutely confines it. The elasticity of his nature yields to the grinding process. He becomes suspicious, sardonic, and mean. But money accumulates; houses and lands call him owner. He is sought by societies of every kind for his countenance and subscription, and he sits in the softest pew in the most respectable church. His children grow up around him, but not with him. He is their father, but not their friend. Coming home at evening their voice disturbs him, while they are young; and when they grow older they keep silence in the house by going out of it. They fall into those easy habits of spending the money which they have not earned, and doing nothing. The wife quietly fades away with a broken heart, or flaunts, and flares, and dries up in the hot breath of a purely artificial life. Money accumulates, white hairs glisten among the dark locks of the millionaire. Nobody's equipage so splendid, nobody's career more conspicuous; and yet a fly in amber as happy as he! Still drudging and delving and piling, Death taps him on the shoulder. His heirs are glad with a decorous sorrow. The ostriches whose plumes nod over his coffin are as sad at heart as they. Let the most ingenious sculptor chisel his mausoleum: hollow—vanity of vanities—and dust! Let the most skilled engraver carve, in gilt letters, under the figure of a Zany, "He made a fool of himself all his life."

How simple and sane, in comparison with this life and this man, would be an honest citizen who pinned a red rag to his coat-skirt, and went gravely walking in the street!

There are more All-Fools'-Days than the first of April, and no fools so foolish as those who fool themselves.

We all have our fling at rich men, and often enough, surely, they deserve it; because we all know how effective a little judicious knavery may sometimes be, and how free from it we are ourselves—as witness our poverty! People have a way of revenging themselves upon the superior condition of others by suspecting or implying some skillful rascality.

Not every body does so, dear Sir, of course; and there are rich men as far beyond this kind of secret innuendo as the sun is beyond fear of freezing.

And, indeed, in a country full of intelligent industry and general ability, to become a wealthy man is a kind of *prima facie* evidence of deserving to be so. Certainly a good use of money is an unerring indication of that desert; and a State has no nobler citizen than the rich man who, having industriously won, benevolently spends his money.

There are plenty of instances in New York familiar to us all, and honored; and we observe that Walter Harper, of Detroit, has recently given nearly a hundred thousand dollars to found a hospital for the relief of the sick and aged poor in Detroit. And, as means accumulate, there is to be a school for instruction in the mechanic arts.

We know nothing of Mr. Harper. We only find his act recorded in the newspapers; but we think how he must enjoy it! After all, he is a wise man who knows that money in a hoard pleases nobody but a miser; and that, in this country, even if a man has a score of children, it is really better for them not to be left superfluously rich. Our young men are not educated to be rich. Few know how to behave under a dispensation of money.

A boy comes to New York from the Green Mountains, when he is twelve years old, and falls to business. Frugal, thrifty, and shrewd, he is not very much educated, but he grows constantly richer. He has no great estate to maintain; no vast hereditary expenses to meet; no particular social position to fill; he has only to make fifty thousand dollars a year and spend twenty. His boys, of course, are *not* Green Mountain boys. They roll in luxury; and the system of our society offering them no career simply as rich men, they either vegetate in good-humored indolence or burn up their patrimony with the fire of youthful passion. Fortunes among us are generally dissipated by the third generation, and then the process of money-making begins again.

Whoever, therefore, has a large fortune does wisely in devoting it to some substantial, philanthropic purpose; and he does more wisely in securing its foundation before he is gone. How carefully Girard detailed his purposes in his will—and behold the Girard College! Mr. Peter Cooper is not an old man, but he sees the spacious edifice he has erected already devoted to great public uses. Mr. Astor carefully confided his wishes to the most competent of advisers, so that the work had in effect his personal supervision. And New York may freely forgive him for having been the richest man in the city, in view of the noble institution he founded.

The practical difficulty in endowing great public institutions is the management of them. They may be put under the charge of ex-officio trustees, but they are all men of various sectarian characters, and the majority inevitably give the management the color of their preferences. Thus, often enough, a man's intention is entirely thwarted, and his institution subserves the very purpose he deprecated.

In Mr. Harper's case the management is to be kept always in the hands of Protestants, and the Superintendent of the Hospital is to be a member

of some Allopathic Academy. These are not very stringent conditions, and if there be not too much complication in the detail, it will probably not be difficult to make the machine work smoothly. It is time that some of the great fortunes which have been accumulated in the West should begin to build themselves monuments of this noblest kind. The same broad, lavish generosity, which marks the hospitality and social spirit of that country, will appear in the munificent and magnificent scope of the Western institutions of charity, literature, science, and art.

What Western man will do for some Chicago or St. Louis what no Eastern man has done for any Eastern city—found a great gallery of casts from all the famous sculptures in the world? The marbles we can never have, but the most perfect copies possible in any art we may have in casts.

Whoever studies the publishers' advertisements, or watches the course and changes of the press, must have noticed the singular fact that the reputation of employing the best acknowledged talent is now considered the best capital. The point does not seem to be the probability that the readers will especially enjoy such performances, but that they choose to enjoy the consciousness of being served by the most popular and the best. Thus it may fairly be a question whether the diocese of Mr. Bonner's *Ledger* would not be more pleased upon the whole by Mrs. Southworth's novel than by Mr. Everett's Mount Vernon Papers. But there can be no doubt that the proprietor of the *Ledger* did shrewdly in engaging Mr. Everett to write.

But there has been, and is still, according to this old Easy Chair, a profound mistake in supposing that Mr. Everett, or any body, *condescends* when he agrees to write for a journal of any kind, which is of a right moral tone. For what had Mr. Everett been doing for the last two or three years? He had been appealing to his fellow-citizens to come forward and rescue Washington's tomb from Time and carelessness. That appeal had been to all classes, and thousands had been drawn by his reputation to hear him. When he writes for a journal he makes the same appeal by his pen instead of his tongue, and thousands would buy the paper to read him. What is it to the purpose that authors of less reputation wrote in the journal? So orators of less reputation appear upon the platforms where he stands. His works and his words stand by themselves. Take the dullest view of any paper or magazine, and you will grant that its reputation is made by its contributors. And it would be rather a poor argument against a man's writing for it who might increase its reputation, that other men of less talent had hitherto been engaged.

Besides, in this day, the periodical is the easiest and best method of occasional communication with the public. The day of pamphlets has gone; in fact it hardly ever came in this country; and if a man has a word to say, if he wants to make sure that it shall be heard, he will naturally say it in a paper or magazine.

Then consider what an advance has been made upon the yellow-covered literature of fifteen and twenty years ago. Compare most of the weekly papers, with their fullness of illustration and text, with the novels that not long ago formed the stock in trade of the dealers in "cheap literature," and which were thrust into your face on every railway train. It is true that in the papers there is plenty of romance, but it is of a different tone, and it is in company with an immense variety of clever reading.

Of course it is easy to take another view, and to compare the great achievements and the highest tone of literature with that of which we speak. But that is quite unnecessary. The true point of comparison is with what it has superseded. People in this country will read, and they will not read Shakespeare. It is therefore pleasant to see that they prefer what is harmless to what is prurient. It would be charming if we all preferred to read Shakespeare and Milton. But while the higher literature laughs at the *Ledger*, does it reflect that it is rather better to have the *Ledger* popular than such an author as Paul de Kock? And the two are the reading of corresponding classes.

In all estimates of the character of popular literature we are not to forget how very recently it is that every body has had either the time or the ability to read; and instead of planting himself upon some abstract dignity of position, every literary man is to reflect that the true dignity of his calling is in the degree of the positive good influence he can wield. If a preacher should insist that he would never preach except from a mahogany pulpit, he would find his audience wonderfully limited. The men like Wesley, and Whitefield, and Fox, who take to the fields when no building is at hand, and for whom a spreading oak is sounding-board, are the men who carry the popular heart and work religious revolutions.

It is a shrewd man who can eat his cake and have it—but that seems to be the game we are trying to play with Mount Vernon. It is considered a burning shame that the bones of Washington should be exposed to neglect and desecration—the whole country would protest with one voice against such a horror. But, somehow, there is a terrible tardiness in the work. There are many of the most thoughtful and intelligent men in the country—men who profoundly revere the memory of our great man—who are more than indifferent to the movement; who openly declare that they will have nothing to do with it.

Nobody can suspect their patriotism and generosity of feeling and action. There are among them men whose sympathy and aid we would all gladly enlist in any cause; and it is impossible not to wonder at their position and to ask what it means.

They say that the estate of Mount Vernon is actually worth only thirty or forty thousand dollars, and that the owner is compelling the country to pay him five or six times its value, under a threat, if it does not come to his terms, of allowing the remains of Washington to be scattered and dishonored by neglect, and so bringing disgrace upon the country and upon all sensitive American citizens.

But if this be so, what then? It may expose the character of the proprietor in an extraordinary light, but how can it affect the action of the citizens? Look at the affair, if you choose, as a ransom—shall we not pay it? Look at the proprietor as a bandit who has our friend in his power, and who demands an immense sum for his release—shall we not try to raise it? Shall we not be willing, at any price, to rescue our friend from the clutches of such a man?

And what can be called the fair value of Mount Vernon? Such an estate can not be regarded as a farm merely. It has the charm that always makes the highest value—that of august human associa-

tion. A piece of paper, with a name written upon it, is (if it be not a check) of little intrinsic value. Its worth can hardly be represented in money—it is so small. But let it be the name of Shakespeare, written with his own hand, and possibly a hundred dollars might not buy it. Mount Vernon is not marked to the eye by any sign-manual of Washington, but it is as full of him as Stratford is of Shakespeare; and as the birth-house of the poet could not be computed in value by the worth of the lumber, neither can that of the estate by any agricultural estimate of the land.

And when that principle is once established, at what sum shall we stop? Viewed as a farm, Mount Vernon may be worth forty thousand dollars; but as the cherished home of Washington, shall we call five times forty thousand dollars too much? Especially when it is to come from several millions of people who profess an idolatry of the man who owned it, and who is buried there?

But a man ought not to speculate in such a matter, it is urged; the proprietor disgraces himself when he trades in what ought to be his holiest pride and possession.

Yes, but if he *does* speculate—if he does *not* do what we think he ought to do—shall we punish him by conniving at the disgrace of all of us? for the desecration of the tomb would be nothing less. And, in fact, are we not speculating when we refuse his price, on the ground that he is extortionate? If it were a million that he demanded, we might justly say, No: we can not collect so much. But the difference of price makes all the difference of possibility in payment. The bandit might demand more money than we could possibly raise, and then our friend must die. But while his demand is possible to meet — however bald, extortionate, and wrong it may be—let us have our friend at any cost.

But, it is still urged, the proprietor may devote the proceeds of the sale to purposes that we do not approve.

So may your lawyer, your shoemaker, your doctor, your bookselier—so may every man and every body of men to whom you pay money. But your moral responsibility can not reach out into the lives of other men in this manner. Let us suppose that your wife lies ill, and you have good reason to believe that the doctor, who can save her, will gamble with the money you will pay him for his services. Unquestionably you will run the risk. You will say, "I prefer that my wife should live than that the physician should not gamble." So, in the case of Mount Vernon, let every man honestly decide for himself whether or not he will say, "I prefer to avoid the national disgrace, even at the cost of the risk of the proprietor's misuse of the money."

All the objections based upon value or the schemes of the proprietor seem to be futile. But the whole matter, as it stands, is a burning shame. There really seems to be danger that the incessant strain of the enterprise upon public attention will result in a popular disgust that will make the accomplishment impossible. A project that every body must approve, whose failure would be a public disaster, proceeds with such a total want of public enthusiasm—with such grinding and creaking machinery—that we are left in doubt whether the confessed failure or the reluctant achievement will be the greater disgrace. We paid more money in a year to hear Jenny Lind sing than we have been willing to give—in how many months?—to rescue the tomb of Washington!

And now let every body take a side. Let us all either say that the matter ought to stop at once—or that the whole amount shall be raised or subscribed before the autumn.

THE long and pleasant intercourse that subsisted between the historian Prescott and the publishers of this Magazine gives a peculiar propriety to the regretful mention of his name and illustrious career in this Easy Chair of reflection and remembrance. The death of no celebrated man among us has ever called out a stronger expression of personal regard than Prescott's, a uniform tenderness of recollection which is his most valuable monument.

The societies and learned bodies of which he was a member, the scholars and orators who were his personal friends, have wept melodious tears above his honored grave; but no tribute was so peculiar and significant as the detail of his daily habits of life and study furnished to the *Tribune* by Robert Carter, the former secretary of the historian.

There are not many men whose lives would bear to be seen in every detail from the moment they arose until they went to bed, and still leave untouched the affectionate respect with which they were regarded. Doubtless the natural sweetness and serenity of the historian's temperament made it easier for him to pass unruffled from day to day; but there was an equally remarkable heroism which sustained him through his unusual misfortune, and finally crowned his days with love, honor, and troops of friends.

The moral of his life is two-fold. For he was a rich man unspoiled by riches; and he was, practically, a blind man who was a rare scholar. The qualities implied in these facts show themselves every where in his works. Calm, sweet, and lucid, his simple narrative flows on with a quiet geniality, a sincere justice, which fascinates the taste of the reader while it persuades his judgment of the historian's accuracy and research. There is a transparent honesty in all his books. His fellow-historian and personal friend Bancroft, in his exquisite eulogy before the Historical Society, felicitously described "the beautiful disdain, like that of the Apollo," which characterized the expression of Prescott's countenance. But it was not peculiar to his face. It pervaded his character. His works every where are full of the same beautiful disdain of whatever is mean or unmanly, and were he known only by what he has written, he would be known as a simple, honest man.

The remarks of Mr. Ticknor in the Massachusetts Historical Society were also full of affectionate feeling and touching eloquence. He mentioned that the historian had expressed but one wish in relation to his remains, and it was that they should be laid for a little while, after death, in his library, in that sweet and silent society in which the choicest hours of his life had been passed. And so when the hour came the wish had become a sacred command, and the form that had been the life and light of that room was stretched among the books in solemn repose. Yet his works already shared the immortality of those that made the place precious to him, and it was only the beautiful presence, not the beautiful soul, that was borne away from the chamber.

Still later, Mr. Everett, who was Prescott's contemporary, and who had the closest scholarly sympathy with the historian, spoke of his reputation abroad, and of his future fame.

Nothing was wanting to Prescott—the gifts of eloquence, of friendship, of love; the wine, the cypress, the incense, they were all lavished upon his grave. His work was unfinished; but the work of every true-hearted man must always be unfinished, for such a man is always working—he despises sleep, and never feels that he has earned the right of idleness. And such lives are the points of light in national history, as they are the cheering illustrations of human character.

How lovely and enviable was the death of this scholar! The sweet light faded suddenly from his eyes as he sat at work. Where his life loved most to linger death found him; and when earth was given again to earth a city followed it with respectful regret, and the whole world of educated men, as it learns his death, deplores its own bereavement.

Nor should the Burns centennial festival be suffered by the Easy Chair to drop into the Past without a word of record.

In a letter to his friend Gavin Hamilton, after he has tasted the sweets of fame and popularity in Edinburgh, Burns writes, that he has grown to be such a great man that his birthday will doubtless be remembered and celebrated thereafter with the anniversary of Bannockburn. And here are a hundred years gone by, and it would have puzzled many of the eloquent orators and poets who said and sung some of the best things that have ever been spoken of Burns, to name the exact date of the famous battle.

And what a natural and beautiful homage it was! How the whole world loves a sweet singer who has spoken for the heart of every man and woman! We are all poets once, because we all love once; and we cherish forever the man who can put the song that our hearts then sing into immortal music.

That was what Burns did. He was the great singer, and the world repays him by loving him as it loves no other. No man had ever before such honor as he had, on the anniversary of his hundredth birthday. The wisest and best united to remember with speech and verse, not the wisest and best man that ever lived, but the generous, genial, loving heart that held the whole world—that yearned even toward Auld Nickie-ben—the man who was not indeed lovely because he sinned, but in whom faults did not obscure that sweet, affectionate, aspiring humanity which is the dearest bond among men.

The Easy Chair has long enough tried the patience of its friends who have written to it from month to month, and it will now relieve them and itself.

First, here is a line from beyond the sea which really seems hard upon our old wood. Surely it has always shown itself friendly to women—not in a fierce, polemical way, but in the manner in which it likes to discuss all questions. Surely it has not failed to say how much the sphere of work might be enlarged for women, and how many a task that is now confided to men might be more fitly given to women, and would be all the better done if it were. Surely the Easy Chair knows, and has often enough denounced, the laziness and Oriental self-indulgence of those who call themselves the Lords of creation; and has hailed with the warmest sympathy the efforts that have been made to establish libraries for women, and to enlighten public sentiment in regard to the question.

Indeed, as the Easy Chair has tried in its way to show its sympathy for the wrongs of men, wherever it has treated of them, it would be a miserable article of furniture if it had not taken the same position in regard to those of women. *Esther D.* writes with force and feeling; but she states the case, after all, rather strongly, when she asks if the Easy Chair "ever knew a woman who tormented a man for any other reason than that she had naught else to do?"

However, here is the letter:

"Paris.

"Dear hard-hearted Easy Chair,—The impudent-humble writer of this letter has often marveled in her own poor way why you, always ready to deal so wisely and so ably with the social errors and monstrosities of the present day, have never lent your strong arm to the aid of the woman's cause—have never spoken one word in favor of better educating and employing her mental powers, on the one hand, and in removing from her the helps, temptations, and necessities to prostitution on the other. It is well enough for common men—the world's carpet-dusters—to indulge their pleasing and feeble wits in silly proverbs and absurd inanities to the effect that, of the mysterious inhabitants of this planet, with all their wild and wonderful economy of brain, and heat, and body, one half of them were created solely for the purpose of darning stockings and making soup. Ought not the end to be worthy of the means? Would it not have been a foolish expense, for such a poor aim and object, to create the miracle of a single *eye*, or teach a single heart how to beat?

"Dear Easy Chair! *would* you build a Grecian temple to feed cows in? Honest Easy Chair! did you ever know a man who had never been tormented by a woman; and did you ever know a woman who tormented a man for any other reason than that she had naught else to do? That degrading and vitiating idleness to which the present system of social lies condemns the woman, takes inevitably its revenge on men. Death, Milton tells us, was born of Sin; so also are men's miseries born of women's wrongs. Most grave Easy Chair! will you not tell your brothers that there *are* some stones in heaven but what serve for the thunder? Yours, grievingly, Esther D."

And now *Zillah* wishes to know about the personality of the contributors to the Magazine; and says, in reference to the Easy Chair's remark that the feast should be eaten without inquiring the name of the cook:

"I suppose the literary Soyer very different from the sensual one (who, by-the-way, poor fellow! after preparing so many nice dishes for other people, is in a fair way to be eaten himself). In a luxurious apartment, for instance, with delightful flowers diffusing their fragrance around; a carpet, the treading on which is like walking on crushed roses; a bottle of delicious wine and a delectable cigar at hand to aid Fancy's flight; and now I do not wish to be invidious, but don't you think Miss Fancy often uses such pinions for her flight? I do."

Zillah is right. Such are the circumstances under which the delightful articles which charm her are composed. Every contributor also wears a full blue velvet suit, with collars and cuffs of Brussels lace, and pure gold buttons. His working hours are restricted to two, and if he surpasses that number he is liable to an instantaneous basket of Champagne from the publishers—always under protest from the head of the house. Here, for instance, is the bill-of-fare for lunch this morning. It is printed in blue and gold, upon parchment prepared from the skins of the sheep of Colchis—the Jason breed:

LUNCH.

FROM BREAKFAST TO DINNER.

AUTHORS' BRAINS *AUX CRITIQUES;*
PUBLISHERS' PURSES, AT DISCRETION;
PUNCH OF POETS' HEARTS'-BLOOD.

A simple but beautiful spread, as the immortal

Shakespeare says, and a light refection for the happy contributors! Does not *Zillah* see that to print their names would be merely to inflame needless jealousies? The Easy Chair fears already for the front-doors of his publishers, and prays they be not battered down by candidates.

N.B. PLACES ALL TAKEN (happy thought!).

F. G.'s verses are tender; but "the Gleaner" is poetic rather than poetry.

"THE object in addressing you is to ascertain if your list of contributors is already filled. Or would a few short sketches find a place in your Magazine should they gain your approval?"

Lebanon, Warner County, Ohio, makes this inquiry. It is a very frequent one, and the reply will be always the same; namely, that the list of contributors to no magazine is ever full so long as there is any body else who can contribute a desirable article. When Charles Lamb began to write in the *London Magazine* that periodical's list of contributors was not full. The only thing for every body who wishes to write for a paper or magazine to remember is this—that, if they wish their articles published, they must be sent for examination, and they will be accepted solely upon their merits. If they are very good and desirable, the author, by force of his talent and acceptability to the public, has become "a contributor."

DEAR EASY CHAIR,—I see you have given, in your gentle undulations for January (I take it for granted that you are upon *rockers*, from the manifest cloud of somnolency that sometimes shadows your venerable form), versions of Horace's celebrated Carmen IX., Liber 3, from two Cabinet Ministers of England; and you call upon some one of our statesmen to play up to these poetical renderings. Now General Cass is too busy with the Monroe doctrine to attend to Horace and Lydia; Sam Houston is thinking of another Texas in a slice out of Mexico—you could not expect him to find such a theme, "*beatior rege Texarum.*" So, if you choose, in default of these, to take the version of an old Virginia book-worm, who found it in his Horace this morning—made "long time ago"—you are welcome to judge whether, if not as *poetical*, it is not as close to the original as either of the versions in your January lucubrations. To this end I give you the Latin with the English.

CARMEN IX. AD LYDIAM.

DIALOGUS HORATII ET LYDIÆ.

HORATIUS.

Donec gratus eram tibi,
Nec quisquam potior brachia candidæ
Cervici juvenis dabat,
Persarum vigui rege beatior.

LYDIA.

Donec non alia magis
Arsisti, neque erat Lydia post Chloën,
Multi Lydia nominis
Romana vigui clarior Ilia.

HORATIUS.

Me nunc Thressa Chloë regit,
Dulces docta modos, et citharæ sciens:
Pro qua non metuam mori,
Si parcent animæ fata superstiti.

LYDIA.

Me torret face mutua
Thurini Calais filius Ornyti:
Pro quo bis patiar mori,
Si parcent puero fata superstiti.

HORATIUS.

Quid? si prisca redit Venus,
Deductosque jugo cogit aëneo?
Si flava excutitur Chloë,
Rejectæque patet janua Lydiæ?

LYDIA.

Quamquam sidere pulchrior
Ille est, tu levior cortice, et improbo
Iracundior Hadria;
Tecum vivere amem, tecum obeam libens.

BOOK III. ODE 9.

TO LYDIA.—DIALOGUE BETWEEN H. AND L.

HORACE.

While my love was accepted by thee,
While clasped in no other one's arms
That ivory neck; then for me
The Persian's crown had no charms.

LYDIA.

While your love for your Lydia was true
Cretan Chloe to Lydia gave place;
And I gave up all lovers for you,
Nor envied even Ilia her grace.

HORACE.

Ah, for Chloe alone do I breathe!
How she tunes her sweet lyre to love!
This world would I cheerfully leave
Could I dwell with my charmer above.

LYDIA.

The Thurian Calais and I
Both love with a mutual joy;
Were it possible—*twice* would I die
Could the fates spare my beautiful boy.

HORACE.

But suppose my old love should return,
And compel me to bow to your yoke?
Now, if Chloe's bright ringlet I burn,
Will you open your doors to my knock?

LYDIA.

What! forgive such a wretch as you are,
Unstable, and testy, and vain?
Well! my Thurian boy *is a star*—
But—I think I will try you again.

S. L. H., in Louisville, writes the Easy Chair a generous letter, of which the affectionate sympathy is not less felt because the letter is not printed. Indeed it is too private for any other eye than the one to which it is addressed.

And equally so is the one from *Dal Elf.* The Easy Chair is glad to hear from every part of the country of the warm welcome which constantly greets the monthly coming of the Magazine. A periodical which for so long a series of years has retained the regard of such a vast body of readers must have in it qualities of which any work should be proud. There are many stars in the sky, and one star differeth from another in glory. And when the Easy Chair remembers that from Nova Scotia to California there are those who, every four weeks, gladly hail the coming of the society of writers among which its legs are visible, if it is inclined to be weary it finds the thought as oil to its rollers, as fresh padding to its back, as new lining upon its arms—it feels invigorated, refreshed, and renewed.

WILL *Draper*, of Fort Justice, Virginia, read the foregoing as addressed to himself?

DURING the last summer, at the time of the stories about Mr. and Mrs. Dickens, *L. M. L.* sent from Pittsburgh to the Easy Chair an indignant accusation against the novelist, which the Easy Chair did

not publish. For what right has *L. M. L.*, or any body else who knows no more of the matter than may be found in the newspapers, to form or express an opinion upon such a grave question? Let *L. M. L.* suppose that he were a famous man, and that he and his wife were separated, and the newspapers had printed every rumor that any body chose to repeat. How much respect would he or his friends or any other sensible person have for a furious judgment formed upon such materials? "But the greatest of these is charity." It is not necessary to suppose Mr. Dickens to be a saint, in order to believe that he is no more a man than most others. And husbands and wives do not often separate after more than twenty years' union without some reason which is, at least, satisfactory to themselves, and therefore ought to be to other people. The whole affair is so purely private and personal that the Easy Chair has tried to avoid any unnecessary public discussion of it. To mention it was unavoidable when every body was talking of it, but we should be very sorry to have gossiped about it on the one hand, or to express violent indignation upon the other.

W. M. K. wants to know what gutta percha is, and all about it. It is an East Indian gum, found in the islands, and put to the same general uses as India rubber, but it is more brittle. Any work like Abbott's books on Common Things will give him all the information he wants.

In our February number there was an elegy upon George Steers, composed by the author of the following lines. His name was not printed at the foot of it, but another was substituted. The poet now sends us this poetic remonstrance:

In looking over your Feby. Number, What did I behold and See
The Poem on the Memory of Geo. Steers Composed by Me.
And as I looked over it I found under the same
What astonished me mutch a fictitious name

The Poem being written with a sad and smitten heart
It seems quite wrong for the sentiments and name to part
So . in whatever part of the world the same appears—
Let my name venerate the Genius of Beloved Steers.

The name of Homer sounds—truly verry good
But to say he Composed it would be telling a falshood,
If you wish to change my name to Homer please understand
Just give due notice in the—Land

And I will endeavor to give a description of Modern Troy
And what I saw . there when quite a boy,
And if you wish . hereafter any more description from me .
I will Try . and gratify you with a Modern Odyssey

So . My dear Friend good Mr. Easy Chair
Please Insert this and it will remedy the other affair
And drop . fictitious Wedgewood B. Homer without any Sputter
And place my name as . it was . Bloodgood H. Cutter

Our Foreign Bureau.

WE have watched from our windows the escort and the banners of a great bridal. Is it a happy one? Is this festal powder-burning any proof of joy? Who can see under the clouds of incense, and through the meshes of wedding garlands, and the heavy perfume of orange blossoms, what weariness or what lightness of heart is in the bride?

Every year and every day marriage is a mystery. Cleanthus is wedded to Cleantha in the palaces; Mr. Logwood is married to Miss Fustic in the justice's court; and there are delicate lace vails, and white tokens of purity, and songs of hope, and prayers of blessing, and greeting kisses: who knows what secret bitterness? It was a pretty feature of old heathen sacrifice to deck the victim with flowers; but all the suffering ended at the altar.

Did this young Princess Clotilde marry willingly and hopefully the gone-by Prince Napoleon? Was it not heathen sacrifice again—the suffering and the ignominy and the loss only beginning where the heathen sacrifice ended?

Of course we shall never know this by literal confession; for if there be sacrifice in this princely marriage, its worst portion must be concealment. To endure with royal heart-stiflings; to put proud, imperial resolve upon the utterance of all struggling regrets—this is her task. Not worse for her, perhaps, than for many another bride, except that princely rank must scorn the sympathy which humility craves and feeds upon.

Does sixteen ever marry itself lovingly to a stranger of near half a hundred? And is it not easy to believe true what some of the gossiping people whisper in our hearing, that this proud young girl of Piedmont (whose teachers are scarce banished yet) lamented and pleaded long against the sacrifice, with that ambitious father, King Emanuel, in whose regard (if we may credit popular belief) womanly virtue is only the plaything of an hour?

Poor young heart! if this be true. The long lineage, wherein we count the blazon of Stuart and Hapsburg and Savoy and Bourbon, leading only to harsh life-jointure with this *blasé* palace-idler of a new and uncertain dynasty. Poor young heart! Never opportunity for honest, open out-beat; never time or silence for secret, God-fearing question of its proclivities or capacities, but hustled away with diplomatic strategy into the diamond-decked clutch of a princely *roué*.

Fine feathers and silks and jewels, with infinite rejoicings; a processional entrée to the new home, that was brilliant with all manner of courtly display; dinner fêtes, and night fêtes that are not ended yet—all these the young Clotilde has had to cheat her into acquiescence. And for these things there be those who envy her—girls who would bargain their humanity against the jewels and the silks. Jewels and feathers and a crown, how we all love them!

It is not long since that the Paris world talked slyly and very persistently of certain doubtful intimacy subsisting between this princely bridegroom and a late tragic actress; the sleek Napoleon was a constant visitor at her rooms; his *bravuras* were the most impassioned at her rendering of Camille; and report said that the dashing equipage in which she appeared on the drives of the Bois de Boulogne was a royal gift. Report farther said that the reigning cousin interposed; he feared sacrifice of the family dignity; he counseled (as despots counsel) a period of travel. All that is over, and the Melpomene is now Savoy.

Will war come of it? Not indeed of the wedding, so much as of the alliance which has led to the wedding. Can you not interpret the Emperor's speech as well as we, and does not all hang upon the Imperial will? England does not want war, whether

we read her spirit in the objurgations of Mr. Bright, in the coldness of London bankers (for continental loans), in the declarations of Derby or Palmerston. Prussia does not want war, nor Austria, nor the Pope, nor the tyrant of Naples, nor the traders, our *bourgeois* of France.

On the other hand, the King of Piedmont does want it, and two-thirds of suffering Italy, and the whole army of France, and more or less of the great band of republican zealots scattered over Europe want it; and the Emperor himself wants it—provided a necessity shall seem to cover his longing.

And that necessity for war may come, as all such necessity does come, from some trifling outbreak of human passion.

As you go from Turin to Milan, upon a level and well-kept road, you come to high river banks, where is a station of the Piedmontese customs men and a little company of Sardinian soldiers. Traversing a bridge, you enter upon the opposite bank through an iron gate-way into the Lombard territory of the Emperor Francis. Here, too, are guard-houses, and a gaunt, inhospitable wayside inn, and the customs men and soldiers and police of Austria. There is no good-will between the men who live upon the two banks. Poor Italian women, passing from Piedmont into Lombardy, are rigorously searched, and often insulted; and Lombards passing into Sardinia are taunted with their slavish condition. A little more or a little less of taunt or insult upon either end of the bridge may change the face of Europe. Thus, the poor wife of a Piedmontese villager goes over the river to dispose of a few fowls or of a basket of eggs. She is insulted, and resents the insult; an altercation ensues, a friend or two rush over to her assistance, the guard turns out, the Piedmontese soldiers rally and hurry to the scene, and so war opens. Heated letters pass back and forth between the rival commandants. Diplomacy, already touched with rancor, can not chill the hot blood that is rising. The emissaries of Piedmont and of Mazzini are busy. Some Italian city, in fever of exultation, throws off the yoke of Austria and declares for Emanuel, King of Italy. The Piedmontese army pours over upon the rice plains. The eastern camp of France shifts its quarters for a friendly visit to the new allies of Turin. Thus all the garrisons are set free. A French fleet moves up the Adriatic, and hovers between Ragusa and Venice, watchful "for the interests of civilization every where." A swift ship or two from Toulon double the garrison of Rome "in view of possible eventualities." No French gun as yet, but the reversionary interest of Clotilde must be kept good, "for the peace of Europe."

Hard and bloody fighting all through the cockpit of Lombardy. Ill-armed, revolutionary Italians shot down by hundreds and thousands. Immense correspondence passing between all the courts of Europe. Perhaps a little bristling excitation of bayonets in Hungary, which makes diversion of the Austrian forces. Duke Constantine, with his Villafranca squadron, tacking about in the Maltese seas within day's sailing of Naples or Palermo.

Is all this impossible? Is it quite impossible that we may see a northern kingdom of Italy, embracing the Lombard and Venetian territory, and governed by a Count Cavour in the person of the good, easy, fun-loving, and *blasé* sportsman called King Emanuel—in which kingdom something like a political career should be opened, at length, to the ambitious young bloods of the old houses of Verona, of Padua, of Vicenza, and of Mantua?

Is it quite impossible that the old Pope (with that kind but weak face of his, whereby to read his destiny) should consent to abandonment of temporal rule, his Church authority and the august hierarchy of which he is the representative being secured *en permanence* by grand rent-roll, by splendid palaces, and by joint guard of Italian and French soldiery?

Next, we may conjecture that the states of Romagna are erected into a principality under the rule of some elective prince of Rome, and so old tribune, democratic pride quenched deftly under the name and the ermine cloak of a Rospigliosi or a Borghese. As for Naples, if we can only bring Russia to the compact, whose fleet hangs threateningly in the Maltese seas, we will re-establish a Murat, with a hereditary house of Calabrian nobles, and a popular house of such legislators as shall hold place by election. Sicily, woe-begone, suppose we give over to Ferdinand, and so narrow his dangerous tyranny to an island.

We put down this ideal presentment as giving, in paragraph shape, the current talk of the hour. But whatever may occur, we must confess that we see only a bloody path whereby Italy is to march toward any goal that its aspiring thinkers covet.

But we must not give all our month's budget to Italy. What, now, if we drag our news-net over England?

Any findings?

The old ceremonial pomp of a Queen's progress from Buckingham Palace, and a Queen's Speech, crimson, and jewels, and gold; the peers, and the usher, and the Commons; the wigs, and the mantles, and the crown; and every year more and more of Bright Quaker men to ask—why?

An elegant mummery of Queen's Speech, which is not Queen's speech; and yet if a certain amount of mummery and of decorative falsity prove to certain people the rallying centres of loyalism, and the symbols of national faith, must not we, who see differently, admit their value? *We* adore a written Constitution, which we break and abuse. Is this better than a showy royalism, which is sworn by and respected?

To our mind it is better to cherish a bauble honestly than to boast the grandest Declaration of Rights, which we abjure in practice.

But we must not slip into political talk. Who would forgive our wantonness?

When Burns toasted Washington, in those days when Liberty wore a red cap in France, the commissioners of his Majesty's realm put him down. Such matters did not concern an Excise officer; he must stick to his gauging.

But in our year of 1859—a hundred after the day the poet was born—in a palace of glass and iron, whose magnitude and riches would have startled all the Georges as much as they would have startled Tiberius or Nero, a poetess, in the hearing of ten thousand applauding people, sings thus of him:

"The God-made king
Of every living thing."

(Rather extravagant this; but the reason gives poetic sanction.)

"For his great heart in love could hold them all."

And then afterward:

"But when begins
The array for battle, and the trumpet blows,
A king must leave the feast, and lead the fight;

And with its mortal foes—
Grim gathering hosts of sorrows and of sins—
Each human soul must close.
And Fame her trumpet blew
Before him; wrapp'd him in her purple state;
And made him mark for all the shafts of fate,
That henceforth round him flew."

—"Must leave the feast, and lead the fight" is good; but did he?

And yet there is sweet, redolent wail in this half-heroic ode of Miss Isa Craig. You have seen it, of course; but shall we not put down a stanza or two more, were it only to give our tribute to the Scotch poet?

"Though he may yield,
Hard-pressed, and wounded fall
Forsaken on the field;
His regal vestments soil'd;
His crown of half its jewels spoil'd;
He is a king for all.
Had he but stood aloof!
Had he arrayed himself in armor proof
Against temptation's darts!
So yearn the good—so those the world calls wise,
With vain, presumptuous hearts
Triumphant moralize.

"Of martyr woe
A sacred shadow on his memory rests;
Tears have not ceased to flow;
Indignant grief yet stirs impetuous breasts
To think—above that noble soul brought low,
That wise and soaring spirit fool'd, enslav'd—
Thus, thus he had been saved!

"It might not be!
That heart of harmony
Had been too rudely rent;
Its silver cords, which any hand could wound,
By no hand could be tuned,
Save by the Maker of the instrument;
Its every string who knew,
And from profaning touch His heavenly gift withdrew.

"Regretful love
His country fain would prove
By grateful honors lavished on his grave;
Would fain redeem her blame
That he so little at her hands can claim,
Who, unrewarded, gave
To her his life-bought gift of song and fame!"

Who is Isa Craig?

It is not often that fame is achieved at a sitting; and yet the news-writers tell us that the poetess made up her memorial ode out of an evening's labor. To speak plainly, we do not believe it. The poem, though good, has none of that impulsive, illicit outburst which betrays the inspiration of the moment. It is both too good and too bad for an impromptu. It has the heroic look of armor that has been polished, and none of the homeliness of those deep but death-strokes which are made with homely weapons.

Yet Isa Craig, with those who knew her, had reputation before. She had written and published already a volume of poems—*ecce signum:*

SEBASTOPOL.

I.

She sat upon the shore,
And looked defiance from her hundred guns—
When France and England's warrior sons
Came the blue waters o'er.
'Twas harvest in the land—
Mid peaceful farms and piled sheaves,
And clustering grapes and autumn leaves,
They leaped upon the strand.
To meet the foe they rushed;
On Alma's slopes they trod the vine;
Each drank the fiercely mingled wine
From death's red vintage crushed.

II.

Before her granite walls
They came, and back her proud defiance hurled;
And their proud boast rang through the world—
"Oppression's strong-hold falls!"
The storied times of old
With battle and with siege are rife;
But this prolonged, gigantic strife
Mocks all that hath been told.
Immortal fields of fight
Those fiercely leaguered fields surround;
Each spot a bloody battle-ground—
River, and vale, and height.

There is more; but this is enough to show what the Burns poetess had written before.

There was popular rumor that Professor Aytoun would be a competitor, and that he would win the honor. His friends deny the impeachment. You know what his Scotch "Lays" are, and therefore you know his ability. But what you do not know, perhaps, are his latter tender and delicate renderings into English of some of Goethe's lesser poems and ballads. And for specimen, in advance of Messrs. Ticknor & Fields's pretty reprints in gold and blue, we give you this homely and touching specimen of

THE HAPPY PAIR.

Another wreath I plaited,
As well rememberest thou,
That day when we were mated,
And took the happy vow;
The world was all before us,
To make or choose our way;
And years have stolen o'er us
Since that most blessed day.

Ah, yes, I do not wonder
Your eye should rest e'en now
Upon the hillock yonder,
Where dark the fir-trees grow.
There lie our babes together,
Beneath the daisied sod;
But they have seen our Father,
And pray for us to God.

Much to Goethe crushed hearts owe for this; but much, again, to Aytoun.

All which puts us in melancholy, retrospective mood, so that we come naturally into mention of the death of Hallam, the historian. An honest, true man; not lively, or imaginative; calling up no pictures of national development that haunt us by reason of his picturesque power; nay, not so much as pouring the warmth of his true heart upon the affecting passages of history; but with the earnest integrity of a Judge, deciding, like Solomon, between the mothers of the dead and the living babe, with never a tear for either. The histories of Hallam will always be read for their marvelous justice, and their constant allegiance to the best authorities; but never for the splendor of their episodes, never for the engrossing interest of artistic treatment. He wrote in those times when historians ignored the individual, and gave us the development (if we may use the term) of a certain organic humanity. There is not an individuated soul or an individuated influence in all of Hallam's histories; but so far as he did work in tracing the progress of national organism he was consistent, he was just, he was true. What authorities he consulted he measured; what authorities he adopted he defended; what authorities he did not consult he *said* he did not consult.

So there is in Hallam, with all his dullness (if you call it dullness), with all his homeliness (if you call it homeliness), the rare heroism of—honesty.

But we must not count Hallam a man of no heart, though his heart is not thrust forward in his histories. He lived quietly to a serene old age; but he had great griefs to conquer.

His wife died suddenly. A daughter died suddenly. A son—Arthur Hallam—whom all the world knows through that magnificent epithalamium of Tennyson's, *In Memoriam*, died suddenly. The father was traveling with him in Germany. The son was fatigued, and lay down upon the sofa; he seemed sleeping quietly. The father went softly out. He came in after half an hour; still he seemed sleeping quietly. He felt his brow; it was cold. Sleeping quietly, to be sure; but it was a death sleep! He was buried beside his mother, in the Clevedon church-yard, which lies upon the borders of Bristol Channel, in Somersetshire; and there he buried, not long since, another son, Henry Fitz-Maurice, dying suddenly ("From sudden death, good Lord, deliver us!"), and there the old man, broken-hearted, has gone to sleep now in the same church-yard of Clevedon, with the waters of Bristol Channel fretting at the foot of the graves—

"And the stately ships go on
To their haven under the hill;
But, oh for the touch of a vanished hand,
And the sound of a voice that is still!

Break, break, break,
At the foot of thy crags, O sea!
But the tender grace of a day that is dead
Will never come back to me."

And now, is there any London gossip to tell? Gossip enough, such as it is, in that new book of Lady Morgan's (which we dare say will find some trash-loving American republisher); but yet, a most idle, vain, profitless book. As if the world cared, or ought to care, how my Lady Morgan has been received by nice people, and what dinner-table jokes she has made, and how she met Dr. Milman, and what Dr. Milman said to the excellent Lady Morgan, and how the Prince of Wales (that was) treated her so civilly, and how she received *billet-doux* from the vain old General Lafayette, and how Mr. Colburn offered her large sums of ready money for her books!

Then see our Lady Morgan's observing glimpse of Paris about the year 1818. We quote: "Dress is much dearer here than in London. A little dress of colored muslin, for which I paid ten shillings in London, I was here asked forty for; but, *en revanche*, I got four pairs of beautiful satin shoes for fifteen shillings. There is a *tricoté* silk scarf which they wear here round the head, *en turbane*, which is really very elegant.

"I have promised to sit for two pictures for Denon—one for engraving (seated, by-the-way, in one of his magnificent Egyptian chairs, with a curious lion's head on each side), and the other picture of the *Exposition du Louvre*, 1821."

There may be those whom this will interest. Another book is that of Cam Hobhouse (Lord Broughton), Byron's friend, about Italy, embracing the more considerable part of the Childe Harold notes, and much other matter, which, from cursory overlook, has hardly improved by keeping; else it must have been very poor.

Professor Masson, of the University College, London, and occasional writer for the *North British* and *Frazer*, has latterly published an installment of his Life of Milton; it promises to be ponderous and somewhat tedious, though painstaking and scholarly in execution.

Of course you remember all about the Circumlocution Office and Mr. Clennam; how papers of inquiry left at one office were referred to a second, and from this over to a third, and then referred back to another; a very confirmation of it all we find just now, curiously enough, in certain official remarks of Sir Bulwer Lytton. A committee waited upon him to inquire regarding the fate of certain petitions which had been sent to the Colonial Office, in reference to means for further prevention of the slave-trade. The honorable Baronet regretted that he had had no time for careful consideration of the petitions, excusing himself by saying that papers of importance passed through several departments, and required time for inspection; first, they might be sent to the Immigration Board; thence to another office, and thence to the Secretary of State, who might possibly refer it to *some other* department. Tite Barnacle could not have said it more honestly.

Another confirmation of one of Mr. Dickens's most startling fancies (we refer to the spontaneous combustion of the old man in "Bleak House") we find in a little incident recorded in the *Siècle* of a late date: "A widow, aged forty-six, named Henriette L——, who worked as a washer-woman, was well known for her propensity to the use of spirituous liquors. As she had not for some days made her appearance as usual, her sister, accompanied by the landlord of the house in which she lived, went to her room; but the moment they entered they started back in alarm, perceiving on the ground a human head half burned, and at a little distance two feet, and a slight train of animal charcoal, showing where the body had been. There also stood near a chair upset and half consumed, and a cup in which some spirit remained. It did not appear that any fire had been lighted in the chimney, and there is every reason to suppose that the spirit with which her system was impregnated caught fire on her lighting a candle with a match." It will be remembered that, on occasion of the publication of "Bleak House," my Lord Somebody, who undertook the defense of the great Court of Chancery against the assault of Mr. Dickens, thought proper, also, to characterize the combustion of the old soaker as a thing absurd and impossible.

Dealing as we are with literary matters this month, why should we fail to mention that Cardinal Wiseman has appeared as dramatist? It is not long since "The Hidden Gem," a work of the Cardinal's, was produced upon a Liverpool stage. A local paper says: "It is founded upon an incident in the reign of the Emperor Honorius, during the pontificate of Innocent I., when there lived on the Aventine a wealthy patrician named Euphemianus, who had an only son, Alexius, whom he educated in the principles of piety and charity. Ere Alexius had attained to manhood he was, by divine command, induced to lead the life of a pilgrim, and repaired to Edepa, where he dwelt for several years, his sorrowing father being unable to discover him. At length he was summarily ordered to return home, and was received as a beggar and a stranger into the house of his father. He remained there as many years as he had lived abroad, amidst the scorn and ill-treatment of his own domestics, until his death, when a voice, heard through all the churches, proclaimed his holiness, and a paper, written by himself and found upon

his person, revealed his history. A variety of accessory incidents complete the plot, which is well worked out. One of the scenes is exceedingly impressive, reminding one somewhat of 'Faust and Marguerite.' It is where the dying pilgrim's prayers are responded to by songs from celestial voices, while a halo of glory shines around the pale face of the weary man, who, after setting a wonderful example of consistent faith and noble self-denial, dies an unknown beggar in the house of his father. The dialogue brings before us the principles of unbounded charity and long-suffering piety, clothed in classical and elegant language."

And now, one word about the recent book of another religionist, the famous M. Coquerel, the Protestant preacher of Paris. There are few Protestant sojourners in the French city who have not at some time given their ears and their hearts to that impassioned eloquence with which he fills, Sunday after Sunday, the heavy vaults of the Oratoire. Hear now how he describes the teachings of a fellow-preacher in the Coliseum at Rome:

"At six in the evening an audience, almost entirely consisting of the common people, is already grouped around a low and very simple pulpit, before which is fixed a double barrier of some feet in length. The clock strikes; and soon you hear in the distance a low and prolonged chanting. It comes nearer. Here is a religious brotherhood, preceded by four *gray penitents* with their hoods drawn down, leaving only their eyes visible through two round holes. They each carry a lantern on the end of a stick with a wax light burning in it. Another *saccone*, or penitent, walks in the middle of them, carrying a wooden crucifix, painted after nature, which shocks at once the religious sense and the artistic. Behind the cross walks a monk of St. Bonaventure (one of the divisions of the order of Franciscans). He is a celebrated preacher known as Father Joseph of Rome. A number of men follow him, succeeded by women, the first of whom wear black vails, and one carries a long cross. All this pomp, I confess, left my Huguenot ears far from well-disposed toward the sermon of the reverend Franciscan. After doing homage to the cross set up in the middle of the Coliseum, all placed themselves before the pulpit, the men on the right, the women on the left, of the double balustrade. One of the penitents fixed the large crucifix upright in a groove on the right of the pulpit and the preacher ascended. This pulpit being unpaneled the preacher was visible down to his feet, covered with his brown robe, which was tied with a cord. He gave out his text without reading it from the Bible: here the book always vanishes behind the clergy.....All the sins that are committed through a regard for human opinion — such was the wide and useful subject treated by the orator. He did it with remarkable talent, without excessive emphasis or gesture; his diction was concise, his voice fine and sonorous, his style simple, energetic, popular, and full of repetition—not the repetition of ideas, but of words.....The substance of his preaching was full of appeals to the conscience of his hearers and of applications to their daily life. His introduction, quiet and short, was excellent, expounding this idea." Again: "The monk now seized the crucifix which stood on his right, and to which, in the course of his sermon, he had often appealed as if to Jesus Christ in person. Immediately the whole assembly threw themselves on their knees; it was easy to see that many persons were deeply moved, and that their conscience (as the Bonaventurian expressed it) was biting them to the quick.....He went on thus, confessing the sins of all assembled, and ended by throwing himself upon his knees and asking pardon from on high; recited a sort of confession which the people repeated with loud voice word by word; then rose from his knees and blessed his audience, making the sign of the cross three times with the crucifix. Hell on the one hand, and the crucifix on the other, had far too large a part in all this. Christianity was reduced to the condition of Catholicism; that is to say, materialized—but still it was there. The substance of the preaching was excellent, the feeling true and powerful, the tone seldom declamatory; it was too earnest for that. Earnestness is, in fact, the essential thing. It is what I had sought for in vain among the sumptuous displays of the Roman festivals. I saw that others, many others, were moved by the Christian truthfulness of this appeal. And....I did not revolt, minister of the Gospel as I am, against the Bonaventurian monk, but, rising above all the Catholic array of damnation, holy chrism, penitents, and crucifix, I said to myself he is right in essentials."

Is this good, hearty, outspoken charity, or is it what certain doctors would call with drawling unction—latitudinarian heresy? "Right in essentials." Yet we make no question that M. Coquerel would have commended himself more warmly to a large body of those who sympathize with his tenets if he had ridiculed the dress of the monk, and sneered at his crucifix, and doubted his sincerity.

Does any body ask for proof in these days, when the doctors all spend their eagerness in detecting flaws in the doctrines of their Christian brethren? And spend all their humor (ghastly enough oftentimes) in making ridiculous any possible lapse from old dogmas in the theologic labors of their good brethren?

If only the wit, and the erudition, and the clumsy task-work which goes now to the theologic duels of the doctors (who make the art of words reach almost to the brutality of bludgeons and bullets)—if only, we say, the doctors were content to spend this mad disputative energy upon enforcement and furtherance of the great doctrines of Christian charity, what a gain to the world (but what a loss of appetizing zest to them)!

Even here, in this far away parish of American preaching on the banks of the Seine, we have already two rival churches, who are giving to pugnacious Protestantism the compliment of a little newspaper war.

—As if pen-stabs might not be as fierce and as long in the healing as those with bowie-knives.

We have better talk than this about a new book of Michelet, a man whose earnestness in the lecture-room, and whose comprehensive generalizations and hard fact-hitting make one think of Carlyle; but the new book is not any way Carlylish—it is on love; and since the time when Cardinal Bembo wrote his famous "Asolani" no such philosopher has discussed so tender a topic.

It is too good a book for the French, and too bald for the English. By reason of its honesty it is worse reading than even Balzac's *Physiologie du Mariage*, or than Paul de Kock.

It is a natural and philosophic argument against celibacy. It offends French taste and French practice (very largely), by its claim that the purest and serenest, as well as the intensest and truest, love

should belong to marriage. Without it, there can be no wholeness of manly or womanly development.

In mere economic aspect he represents, in eloquent periods, how far a loving wife delivers a man from many servitudes.

First—of baseness: With happiness at the hearth there is no search for it in reeking ball-rooms (of Paris), or in the raptures of a drunken frolic.

Second—of weakness: No insidious approaches of an exhaustive and brutalizing dissipation.

Third—of melancholy: For he who leaves love and a loving one carries joy at his heart.

Fourth—of money: Two (fond Michelet!) spend less than one. Cigars, wines, restaurateurs cut off (prudent Michelet)!

But how will he console us for the belaced dresses of children, and for Tom's pony, and Charley's goat-cart?

No, we can not believe—whatever the enthusiastic Michelet may say—that love or marriage, or both, shall sweep the anxieties out of life; and to match one's self against the anxieties, and to bear them down, is a grander heroism than the heroism of loving.

One little episode more of the Paris life we have to record, and then our budget shall be closed.

M. Louis d'Assas, who lived quietly and comfortably in some old patrimonial house of the provinces, in an unfortunate hour conceived the idea of making himself famous by writing a play for the Paris stage.

He had youth on his side; he had cultivation; he had moderate income; he had an itch for distinction. So he wrote a comedy in verse, of the old classic style, called the *Vénus de Milo*. He had friends who wished him well; he had money to pay the *claqueurs;* therefore his comedy was received at the Odeon, was played, and applauded. His friends flattered him, and drank his wine.

Yet his work was not a success; it had poetic passages of rare merit, but it lacked adaptation to the exigencies of the stage. So, in the midst of that false fêting by which his flatterers deceived him, his comedy was withdrawn, and the author called upon to pay the expenses of decoration and equipment, such having been the condition of its acceptance in the event of failure.

But was it failure? Had not the manager been too precipitate? So the flattered gentleman instituted an action to compel further trial of his play. The manager yielded; the *claqueurs* were in force; all that startling posters could do was effectively done—but in vain. *Vénus de Milo* was a failure.

The mortified gentleman disposed of a third of his country estates to pay the costs, and devoted himself with such a crazy zeal to the accomplishment of some new work that should retrieve his honor that his brain faltered with the task.

Blighted hope and mortified vanity completed the ruin of him.

He took to his bed; the doctors came and leeched to no effect. Always the poor triumph he had seemed to win came back to him in his delirious fancies.

"See how they crowd the house! Bravo! bravo! And the author is called for—"

Called for, indeed, and must appear; but not before an enraptured audience.

He died of *Vénus de Milo;* died of hurt vanity.

"Sad affair!" says our friend Fortunio—and he takes snuff.

Editor's Drawer.

The Drawer man has no money, and nothing to do with it. His Drawer is not for such trifles and trash; and when its correspondents write on business matters—such as paying their subscriptions, and ordering magazines, books, and newspapers—they should write on a separate piece of paper, and not mix their worldly concerns with the pure, intellectual, and genial elements that belong to this department.

"Several years after the passage-at-arms, related in your January number, between Mr. Charles Chapman, the witty lawyer of Hartford, and the lady witness, he was called out of town to act in a case in which this lady was the principal witness. Her husband was present—a diminutive, meek, forbearing sort of man—who, in the language of Mr. Chapman, 'looked like a rooster just fished out of a swill-barrel;' while the lady was a large, portly woman, evidently the 'better horse.' As on the former occasion, she 'balked' on the cross-examination. The lawyer was pressing the question with his usual urgency, when she said, with vindictive fire flashing from her eyes, 'Mr. Chapman, you needn't think you can catch me; you tried that once before!' Putting on his most quizzical expression, Mr. Chapman replied, 'Madam, I haven't the slightest desire to *catch* you; and your husband looks to me as if he was sorry *he* had!' The husband faintly smiled assent."

Each college has its leaders of mischief, and so had the one of which Dr. Pleasants was President. One day the rogues brought a cow into the building, drove her up the stone-steps, in the passage, and further in the narrow range of the dormitory until, at the very door of the ringleader, it became impossible to move her backward or forward. The President got wind of it; and the next day, having heard of the active leaders in the scheme, he proceeded to lecture on zoology, of which, toward its close, the following is the substance:

"The instinct given by the Creator is wonderful in its various bearings upon the preservation and propagation of the animal kingdom; but the mammalia claim our highest attention. The cow is, in my estimation, above all other species of her class; for you all recollect the cow which, but on yesterday, surmounted every obstacle in order to find her *calf!*"

"Among my little friends there is a five-year-old boy who is very philosophically inclined. He is rarely satisfied with the fact that a thing *is*, but he wants to know all the whys and wherefores of its existence. The other day Joe was watching with eager interest the dismemberment of the body corporate of a defunct pig. He interrupted the operator with many questions as to the precise object and bearing of the different members, as he saw them separated one from another. Finally, the corpse was in the condition of many of our live politicians—it had lost its back-bone. Little Joe regarded this dissected member with close attention for a few minutes, and then exclaimed, with an air of triumph,

"'I know what *that's* for!'

"'What?' asked the dissector of the hog.

"'Why,' said the boy, '*that* is to hitch the tail to!'"

In the flush times of Vicksburg, when the phrase

"hard case" meant something more than it does now, Harvey Jenkins was admittedly one of the *hardest*. By some strange accident Harvey found himself at church one evening. The sermon being over, the preacher requested all who were friendly to religion to rise and hold up their right hands. The whole audience, apparently, were on their feet. After they were seated again, the minister continued:

"Now, if there is a single one here who desires to see Satan and his kingdom prosper, he will rise and hold up his hand."

Harvey, with some difficulty, got to an erect position, and said:

"Had the vote been less unanimous, I should have retained my seat; but I make it *a point of honor* never to abandon a friend under adverse circumstances."

A SUBSCRIPTION paper was recently circulated through the —— congregation with the following very charitable object in view:

"We, the undersigned, do pledge ourselves to pay the amount subscribed for the purpose of paying the organist and a boy to blow the same."

"IN 18— there raged, in our neighborhood," writes a new contributor, "a terrible epidemic—malignant typhoid fever. The deepest anxiety was felt by every one; every case terminated fatally. The four physicians of our village were continually together, held midnight caucuses to devise some means by which to stop the march of the dread invader. Every means had failed, as yet. One morning the four learned doctors, in their round, stopped to see an old negro man on whom Dr. G——'s plan of treatment was being tried. To their surprise he had passed the crisis and was pronounced out of danger. Joy and triumph were pictured in every lineament of Dr. G——'s face. He began, learnedly, to 'hold forth' on the excellences of his plan, and to urge its adoption in every case, describing very minutely the various little pills and powders he had used. Old Henry, all the while an attentive listener, raised himself on his elbow, and in faint, weak tones, said,

"'Massa Doctor, dere's all dem li'l truck ob yourn up dar in de crack.'

"Imagine the Doctor's chagrin and mortification."

JENKINS said that some persons were of opinion that a man could not be a lawyer and adhere strictly to the truth; but, for his part, he believed a man could.

Jones remarked that he hoped Jenkins would begin practice right away.

A GEORGIA teacher advertises the Marion High School, at Buena Vista, and adds:

"The subscriber takes pleasure in announcing to the public that there is no longer any necessity of sending young men to Colleges to have their morals and manners corrupted—*educate them at or near home.*"

OUR Benny has a little curly-pated visitor three years old who excited his great admiration a few days ago. After viewing her pretty face for some minutes, he said, deliberately,

"Carrie, you are a little angel! and if you ain't an angel, you are a *Moses in the bulrushes, any how!*"

THE following is as true as it is absurd:

An Irish woman in this vicinity had a husband lying at the point of death; again and again she declared that she would rather die than lose "darlin' Mike." A set of graceless scamps determined to try her conjugal affection. Having seized a large turkey, they stripped him entirely of his feathers. Biddy was alone, groaning and calling on death to come and take her and not Mike. Silently the shanty door opened and the hideous turkey entered, and, led by her shrieks, stalked to her.

"Oh! och hone! Howly Mary defind us! take Mike first, that's a good cretur! Howly Mary! how can I die before my time? Take Mike first!"

OUR Binghampton friend writes to the Drawer and tells a very good story:

"Some time during the past summer a 'case in law' of considerable interest came up and was tried before Justice Loomis, of this village.

"It seems that the orchard of one of our 'honest farmers' had been at different times visited, and many of the best trees robbed of their fruit. Of course, Farmer E—— had quite a curiosity to find out who was in the habit of appropriating his apples. So, cautiously concealing himself in the shadow of the fence, he discovered a fellow in the act of filling a bag with his best fruit. Farmer E—— started for the youth with his gun, but the fellow took to his heels and was in the act of getting over the fence when a discharge from the gun 'laid him low.'

"On the trial, the boy, who was present, testified to the shooting, that a large number of shot entered his back, and although many had been removed, still there were many left 'that plagued him considerably.'

"The Doctor, who was called, testified to the fact of finding a number of shot in the flesh, of extracting some, and of the impossibility of removing all, and of the strong probability that complainant would always carry about his person a supply of lead.

"The lawyers rested the case, and the learned Justice rose to instruct the jury, when, from the farther corner of the room appeared the form of a very benevolent but extremely seedy-looking individual, who, looking over a large and very rusty pair of iron spectacles, and pointing his long finger at the injured boy, exclaimed,

"'Young man! young man! you can truly say with the poet,

"'A charge to keep I have.'"

"The effect was irresistible. Justice, jury, lawyers, and audience were instantly convulsed with uncontrollable laughter, and for ten minutes or more business was completely suspended. The verdict when rendered, was, 'No cause of action.'"

A MISSISSIPPI correspondent testifies of his own hearing that the following is a true bill:

"At the close of a great meeting a Presbyterian minister gave notice that a collection would be taken up for Gospel purposes in the neighborhood. A Methodist preacher, also present, and who had just preached the sermon, it being his regular Sabbath at the place, then rose, and remarked that very little had been done toward the proper support of the Gospel or of himself; that he had begun his circuit with two horses—one was used; he expected the other would soon go, and he would have to go afoot. Charity began at home; and 'Besides, bretheren, Christianity is a *paying* business—it pays a profit even in this world. Did you ever hear the story of the infidel in the Tennessee camp-meeting? Well, I'll tell you: Up in Tennessee once there was a camp-

meeting held in a notorious bad neighborhood; and when, at the close of the exercises, the hat was sent round, a roll of notes, about fifty dollars, was found. The bretheren in those parts, in those days, being raather poor, considerable speculation was had as to whar that fifty dollars come from; and next year it was decided to keep an eye on *that* hat, and see if it was done over agin. Sure enough, next year's meeting there was another fifty just as before, and it was traced to an infidel reviling country store-keeper near the camp, and who was never known to say or do a good thing for God's people. So the elders called the man aside, and says, "Did you put that 'ere fifty in that hat?" "Well, I did?" "Mistake, ain't it?" "No, Sirs; I never makes mistakes. It's all right. Afore you chaps cum around these diggins preaching I couldn't keep ne'er a shoat, ne'er a yearling no whar, and I lost a powerful sight of truck; and now, gen-tle-men, I keeps the most of 'em! It's a *paying* business to keep you here, and I goes in for it!"'

"JONES was reported dead of Yellow Jack last summer; and being suddenly met in Mobile, was accosted by a crony: 'Hilloa, Jones! You? I heard you was dead.' 'Hush, Sam! speak low. You see, confidentially, I am dead; but being raather succumskribed, I'm walking about to save funeral *expenses!* I'll take a *leetle* of the spiritual, eeny how. Come in!'"

PATRICK M'QUILT is janitor of the Union School, in Jonesville, Ohio, and our correspondent in that celebrated emporium of literature writes to the Drawer that Patrick is very faithful in making the fires and keeping things in order.

Patrick wanted more wages; and the Board had the case before them. The President was given to "high falutin'," and thus addressed the Irish and hungry applicant:

"Well, Patrick, we all very well know how necessary you are to the existence and prosperity of the school; that the management of the whole concern is on your shoulders; but you shall have your reward, and when you go down to the grave it will be with a *halo* of glory—"

"Halo!" yelled Patrick, "it's not *halo* I want, it's *pertates!*"

Patrick's wages were raised.

THE man who opened the theatre in Lexington, Kentucky, lately, made a dead failure of it; and a correspondent of the Drawer gives the following sketch of the efforts made and the final retreat:

"The manager had secured the services of a splendid stock company and a few of the most attractive stars in the theatrical firmament. Every thing looked prosperous. The theatre was opened with Mr. and Mrs. Florence, supported by Davey's splendid company. But the Kentuckians did not fill the house. The week passed by, and the manager found himself out about three hundred dollars. The next week Miss Eliza Logan was engaged, and every body was saying what crowded houses she would draw. But it was no go. Davey said he believed nothing *would draw* in Lexington. Miss Logan's engagement terminated on Friday night; Saturday's rent was paid, and so they might as well play. At the top of the bills the next morning was a card from the manager stating that this evening was the last of the season. That he had brought a good company to Lexington, and some of the best stars; but they had failed to *draw*. He, therefore, had the pleasure to announce that, for this evening only, he had secured the services of two sheets of '*Poor Man's Plaster*,' who would appear in their great act of '*drawing blisters*;' to be followed by the great drama of the '*Poor of New York*.' Davey finding that even the plaster failed to *draw*, telegraphed to Frankfort for apartments in the State prison, but from the keeper received an answer that they had '*no room for actors!*'"

[*Written for Harper's New Monthly Magazine.*]

CHARADE.

YOUNG Frank and Di Vernon went walking one day,
Through sunshine and shade they wended their way,
Through orchards and meadows of new-mown hay,
The air with its fragrance perfuming;
At their feet a brook purled meandering along,
Babbling its murmuring, silvery song,
O'er pebble so smooth and rock so strong,
Its way to the ocean pursuing.

On his shoulder the maiden her head reclined,
And her curls like fugitives played with the wind,
While his arms her slender waist entwined
With the pressure of warm affection;
Their hearts were cinctured in love's embrace,
Both read in each happy, though saddened face,
The language of "hope deferred"—erased
Almost from their breasts—and dejection.

Said the youth to the maiden, "Both long and well
We have loved with such love no words can tell;
Then what hinders the sound of our 'marriage bell,'
Our ears with its music delighting?
Why shall you, sweet girl of my heart, leave my side,
My life and my love why longer divide,
Why longer delay to become my bride,
Our true hearts forever uniting?"

Then the sweet little maid, with a look of woe,
As only this dear little creature could show,
While the tears from their soft blue fountains flow,
In torrents of sparkling water:
"Dear Frank, it is wicked, inhuman, I say,
This hateful suspense—this protracted delay—
But you see how it is, my pa's in the way,
Intervening the son and daughter."

With a look of despair poor Frank raised his head,
Then my First and my Third successively said
In anger somewhat, and in haste, for he bled
With pain and vexation, I dare say;
"Let your cruel pa DO just what you ARE now,
And this riddle will solve and quickly show how
One and Four will make Two, and I and thou
Shall be One, Four, First, Last, and *vice-versa*."

But the answer Frank prudently kept to himself,
The worrysome, troublesome, mischievous elf,
Till his wish fully realized brought him of pelf
A full and abundant treasure;
Then my First was the joy and delight of his home,
My Third soon became a most exquisite tone,
For the looks of my Fourth so resemble his own,
That my Whole swelled in eloquent measure.

C.

ODESSA, DELAWARE, *February*, 1859.

FROM Tennessee, the State of Davy Crockett and many others who go ahead, this communication comes from a valued correspondent, who does not write so frequently as the Drawer would be pleased to have him. The first anecdote has had its like in print before:

"The Hon. William F——d, who was for many years a distinguished politician in West Tennessee, and who at the present time, in his old age, is shedding a lustre upon the judicial ermine, which he graces with the talent and learning of a profound and upright Judge, combined with the kindness and urbanity of an amiable and courteous gentleman,

once beat the celebrated Davy Crockett for Congress in this district.

"The rival candidates were, on one occasion during that excited campaign, addressing their constituents from the hustings, and Judge F——d was 'pinning it to Crockett pretty tight,' as the phrase goes, when the illustrious and lamented hero of the Alamo becoming angry and excited, arose to his feet in a menacing attitude, and with characteristic fearlessness interrupted his opponent, by telling him 'he could pin back his ears, grease his head, and swallow him whole!' Whereupon Judge F——d turned to him, and bowing and smiling blandly, retorted, 'If you do, Sir, you will have more brains lodged in your stomach than you ever had in your head!' The effect can rather be imagined than described. The anger of his generous and chivalrous rival was in a moment appeased, and, joining in the laugh against himself, he permitted him thereafter to continue his remarks without interruption."

"Another somewhat similar story is told of the great wit, orator, and statesman, Ben H——n, of Kentucky. He was once, while practicing at the bar, employed to aid in the prosecution of a man for hog stealing, who was reported to be a man of wealth, and up to that time had occupied rather a respectable social position, and whose pugnacious propensities were almost equal to his acquisitiveness. The prisoner at the bar, anticipating that he was about to receive a 'lambasting' at the hands of the Kentucky orator, had posted himself alongside of Colonel H——n with a big hickory stick in his hand, prepared for any emergency.

"H——n was speaking, pouring the hot shot into the formidable-looking culprit without mercy. In the language of Fred St——n, he 'not only lifted the hide off his back, but was pouring vitriol on the raw.' The prisoner could stand it no longer. He arose from his seat, with his eyes almost starting from their sockets, and, trembling with rage, lifted his young sapling over the learned counsel's head, and told him that 'if the Court did not stop his outrageous abuse he would take the matter into his own hands, and spatter the walls of the court-house with his brains!' The wit threw up his arms in an attitude of simulated terror that would have done no discredit to Garrick in his palmiest days, and, in a voice that rang clear and loud above the excited din of the court-house, exclaimed, 'Now, if I were a big fat porker I should have reason to be terribly alarmed for the safety of my bacon!' Amidst the roar of merriment that greeted this unexpected sally the proprietor of the hickory stick wilted into his seat, and the advocate was permitted to amuse himself with the process of dissecting his character without further comment."

"Mr. Drawer: Your Middletown correspondent, in your number for February, inquires the solution of Praed's charade beginning 'I graced Don Pedro's revelry.' The word is 'peacock;' and the charade has reference to the practice, in the times specially termed the Days of Chivalry, of toasting 'The peacock and the ladies.' From Mills's 'History of Chivalry,' page 64, I take the following extracts, which fully illustrate this point: 'Peacocks and pheasants were the peculiar food of knights on great and festival occasions.' . . . . 'The highest honors were conferred on these birds, for knights associated them with all their ideas of fame, and vowed by the peacock as well as the ladies to perform their highest enterprises.' A note from some chronicle of the times, referring to the serving up of these birds at great dinners, says, 'Some people, instead of serving up the bird in the feathers, carry their magnificence so far as to cover their peacock with leaf gold.'

"Now, as to the charade of Sir Hilary and his charge at Agincourt. For the last quarter of a century no five years have elapsed without an outbreak of attempts, more or less ingenious, at the solution of this charade. In point of fact, its success—so far as continued public attention constitutes success—is due to its faults. In the *London Illustrated News*, some ten or fifteen years since, appeared a communication, purporting to be from an uncle of Praed, in which the solution was stated to be '*Good-Night.*' The writer went on to say that his nephew had frequently expressed mortification that the imperfections of the charade, by leading anxious inquirers away from the true solution, and thus baffling conjecture, had given it an undeserved length of life.

"The fact that a charade may have success in exact proportion to its *de*merits is a great encouragement to young beginners. One of them requests me to transmit you the inclosed, with the assurance that he has at your disposal a number quite as bad:

"'His brows adorned with victory's wreaths,
His sword in peace the warrior sheathes;
And, trampling chains that he had burst,
His country hails him as my First.

"'Nor meaner joy, on tropic seas,
Thrilled "the world-seeking Genoese,"
When through the night rang forth the cry
That told my long-sought Second nigh.

"'Soldier, whose eye may scan this line,
Glory was theirs, and may be thine;
And points where'er the stars unroll
That gem the banner of my Whole!'"

ANSWER TO THE ORIGINAL ENIGMA IN "HARPER" FOR FEBRUARY.

I.

When tyrants sought to crush the rights
Of man, *Swords* first arose;
And in the hands of freemen then
Struck terror to their foes;
But though the patriot welcomed them,
His gallant heart elate,
Full many a joyous home their power
Made cold and desolate.

Feared by the coward, by the brave
They ever welcome are;
Honored when gentle peace takes place
Of fierce, relentless war.
And yet their strength can prostrate lie,
Their power may all be riven,
By breath of balmy summer air,
And gentle dew of heaven.

II.

But Swords are made by mortal hands,
Though beautiful and bright,
While *words* are messengers divine
Of truth, and life, and light.
Now gay and joyous, bringing peace
And comfort in their train,
Anon with gloom and bitterness
Filling the heart with pain.

They travel quickly through the air,
And glide beneath the sea,
Die trembling 'neath a maiden's breath,
Live through eternity.
Who have them not are looked upon
As beings most forlorn;
And those who rashly use them wish,
They never had been born.

Raymond.

ANSWER TO PRAED'S ENIGMA (DON PEDRO).

"Your correspondent from Middletown, Connecticut, sends you an enigma of Praed's which, he says, puzzles him terribly. It might have puzzled me also had I not met, in reading, an account of a Spanish feast in olden times at which a *peacock*, 'All dressed in fire and feather,' figured as one of the most prominent objects, which prompts the following solution:

"Don Pedro rode where every day
His horse and he got thinner,
Through mountains where a dainty *pea*
Would be esteemed a dinner;
Through deserts where to quench his thirst
He sought in every quarter,
And turned the *cock*, with aching eyes
Which looked in vain for water.

"When loveliness and chivalry
Were met to feast together,
A *peacock* graced the revelry,
All dressed in fire and feather;
For that was part of every feast
At Madrid and at Cadiz;
Esteemed by every Spanish knight,
Because it pleased the ladies.

"Raymond."

A "humble individual" in the West writes to the Drawer on this wise:

"In the fall of 1854 the 'Second Associate Reformed Synod of the West' met in the city of Lafayette, Indiana. It closed its sessions late one evening, and the next morning—a bright and beautiful one—all were on their homeward way in high glee. One car of the train for Indianapolis was for the most part filled up with delegates, sitting, standing, talking, and laughing; and the greater portion wearing the ministerial insignia—*white cravats*. The 'water boy' in his first round found me [one of the members] standing by the stove, and mistaking me for one of the few *outsiders* drew himself close, and whispered, very confidentially, '*Haven't* them *white cravats* been on a spree?' Nor did the relation of the facts, a few minutes afterward, lessen the evidences of 'spree.'"

An "Old Subscriber" copies for us, from the album of a friend, the following lines, written by a Scotch lady, who had crossed the ocean to visit Niagara:

"Great Spirit of the Waters! I have come
Forth from my own indomitable home,
Far o'er the bosom of the eternal sea,
To breathe my heart's deep homage unto thee;
And gaze on glories that might wake to prayer
All but the hopeless victim of despair.
Flood of the forest! fearfully sublime!
Restless, resistless as the tide of time!
There is no type of thee; thou art alone,
In sleepless glory, rushing on and on.
Flood of the forest! thou hast been to me
A dream, and thou art still a mystery.
"Would I had seen thee, days and years agone,
While thou wert yet unworshiped and unknown;
And thy fierce torrent, as it rushed along,
Through the wild desert poured its booming song,
Unheard by all, save him of lordly mood,
The bronzed and free-born native of the wood—
How would my heart have quivered to its core
To know its God, but half revealed before!
"In other times, when I was wont to roam
Around the mist-robed mountain-peaks at home,
My fancy wandered to this Western clime,
Where all the haunts of Nature are sublime;
And thou wert on my dream so dread a thing,
I trembled at my own imagining.
But I have come from far to gaze upon
Thy mighty waters, and that dream is gone.
"Flood of the forest! I have been with thee,
And still thou art a mystery to me.
Years will roll on, as they have rolled, and thou
Wilt speak in thunders, as thou speakest now;
And when the name that I inscribe to-day
Upon thine altar shall have passed away
From all remembrance, and the lay I sing
Shall long have been but a forgotten thing,
Thou wilt be sung, and other hands than mine
May wreathe a worthier chaplet for thy shrine."

At a recent trial of a cause before a referee, in Delaware County, New York, Hon. Daniel S. Dickinson was counsel for the plaintiff, and Mr. H——, of Binghamton, for the defendant. Mr. H——, albeit a lawyer of some eminence, was so interminably *slow* on this occasion as utterly to weary out the referee and witnesses. One of the latter, while waiting with eager impatience to give his evidence and be dismissed, perpetrated the following, and handed it to the ex-Senator for perusal:

"When Job was tempted by the devil,
His patience saved his soul from evil;
But were he living in our day,
And thrown by chance in H——'s way,
If forced to hear him try a case,
I fear poor Job would fall from grace;
He never could endure, I trow,
What we poor devils suffer now!"

Mr. Dickinson read the lines, and rapidly dashed off the following rejoinder:

"There were no lawsuits in those days,
As any one can plainly see;
For, had there been, the devil would
Have made poor Job a referee,
And sent for H—— to try the case,
And spin it out till Job would cry
'I give it up—my patience's gone,
And I will just curse God and die!'"

John Lundy was an inveterate toper. After a long spree John came to Dr. Homes and promised him that he would not drink any liquor for one month. But John soon forgot his promise or broke it, and took his bitters privately, that the Doctor might not know it. One day John undertook to drink a gallon of beer on a wager; and, while accomplishing it, Dr. H. came in. John saw him, and said, "Well, Doctor, I suppose you think I am a poor one to keep my promise?"

"Oh no," replied Dr. H., "I do not; for I see you are *fool filling* now."

A Southern correspondent writes that some years ago a celebrated doctor, a great admirer of music, was visiting the South, and was petted in society. A fashionable lady friend of his had two pretty daughters, who had just finished their education at a "boarding-school" in Philadelphia. Our friend, the doctor, was invited to dine and hear the girls play upon the piano. He was asked for his favorite tune, and he requested the fair performer to play *Duke of York's March*. It was performed, but with such grand flourishes and variations that he saw or heard but little or any of Duke of York's March in it. He was again asked for his preference. Thinking that he was misunderstood in the first instance, he again said, in a little louder voice, "Duke of York's March, madam!" It was again performed as at first, but he still could not make it out his favorite, the Duke of York's March. Upon being called

upon the third time, he spoke very loud: "Duke—of—York's—March!"

"Why, doctor," replied the lady, "the Duke of York's March has been played twice for you."

"Well, well," said the doctor, with great coolness, "the young ladies have played it so well I would be delighted to hear it a third time!"

"We have a judge in these parts," writes a Western correspondent, "the same one who adjourned court to see the elephant swim the river. He was holding court, and in the midst of a trial of some interest, which had drawn a large crowd into the court-house, an old man was seen pressing his way through the crowd, making a good deal of noise and confusion. The judge took his pipe out of his mouth and ordered the Sheriff to take the old man into custody and the clerk to fine him for contempt of court. Just at that moment the old man threw a handful of tobacco to the judge, which fell on his table, saying,

"'If you do fine me and send me to jail, take the tobacco, any how. I brought it to you, and was trying to give it to you.'

"The judge filled his pipe with the tobacco, and after a whiff or two had the fine set aside and the old man discharged, saying that throwing such tobacco at the head of the judge never would be deemed a contempt of that court."

"In a late number of *Harper* there is an amusing anecdote concerning Abram Mason and his brother, John. I know all the parties except Mr. Brent, who is said to have been the competitor of Joseph Lewis for Congress, in 1812. This is not so. I was in the court-house in London in April, 1812, while the election was progressing; his opponent was Mr. John Love, of Prince William. It was not long after Mr. Jefferson became President that Mr. Brent appeared in the field against Lewis. Mr. Brent's political life was ended in 1811, because, as a Senator from Virginia, he voted for the renewal of the charter of the old Bank of the United States in defiance of the instructions of the Legislature of his State.

"Lewis told me many years after the event that an immense crowd convened on the Sabbath before the election in the German settlement to witness the contest between Brent and himself. After the services were ended, Brent arose, and with all the powers of a rich and gorgeous eloquence, depicted in glowing terms the enchanting beauties of republicanism, the rising glories of our country under the prosperous administration of Mr. Jefferson, that our commerce whitened every sea, and our yeomen, mechanics, merchants, and professional men were all enjoying the smiles of fortune and growing wealthy under the benign influence of equal and constitutional laws.

"Some of the friends of Lewis (who had come there expressly to prevent his being crushed by the superior power of Brent) were alarmed for his safety. Not so with Lewis, who was a plain and poorly-educated man, read no books, scarcely ever spoke in Congress, but who was gifted with a strong, clear, powerful intellect, and above all, an intimate, profound knowledge of human nature—his temper perfectly unruffled in every position—calm and self-possessed in difficulty and danger.

"He arose and said:

"'Old friends and neighbors.—You all know me. I can not compete with my opponent in speaking, but can tell the truth.

"'He depends on Mr. Jefferson's good fortunes. Now, suppose one of you farmers cut down and clear a piece of woods—grub up the stumps—plow and sow the soil, and another man at harvest comes in and reaps the grain. Which of these persons deserves most credit?'

"'Why, be sure, he who sowed the grain,' said the whole Dutch congregation, in one universal chorus.

"'Well, just so with Mr. Jefferson. Washington cleared the field—Jefferson slips in and gets all the credit.'

"The work was done. Mr. Brent's fine speech was torn into atoms. He tried to answer, but the entire assembly rose in a body and refused to listen. 'We want to hear no more lies,' ran through the church. Lewis was elected, and continued in the House of Representatives until 1817, when Mercer was elected in opposition to General Mason."

Some years ago, when Building and Loan Associations were the order of the day, and each community was vying with its neighbor in the establishment thereof, two brothers met, and were discussing the value of such institutions, taking opposite views.

Old Aaron S—— sat by, conning over his newspaper, apparently not in the least interested. Presently, as the discussion grew warm, one of the brothers said, "I'll leave it to Aaron. Aaron, what's your opinion of Building Associations?"

The old man quietly laid down his paper and answered:

"The first Building Association of which we have any account was instituted on the Plain of Shinar; and we all know the result of *that!*"

This ended the discussion, and from that time forth it was not resumed.

ANSWER TO THE "DON PEDRO" CHARADE.

I lived within an orange-grove
Upon the Persian plain,
Where Bulbul sang his song of love
I spread my rainbow train.
'Twas there Don Pedro's men of blood
Slew five-score of my brotherhood!

Then unto Cadiz hied the horde
By many a mountain road,
To grace the castle's banquet board
With their ill-gotten load;
That dame and baron, page and priest,
Might revel in a lordly feast.

They stewed me up with wine and sage,
And spice of sweet perfumes;
And my golden dish the merry page
Decked with my silver plumes;
And the cook was knighted there and then
By all those valiant trencher men.

The monk grew pious while he ate,
The men-at-arms profane;
The jester o'er the savory paté,
Waxed in a merry vein;
But none, from belted knight to dame,
Recked of the riddle of my name.

My first doth grow by every hut
Where rustics plant the *Pea*,
My next the *Cock* of the water butt,
Oft dry in the desert sea!
My whole a gaudy *Peacock* sent
From out the sunny Orient. W. S. C.

"Before the advent of Know Nothingism in our town," writes a correspondent from Georgetown, D. C., "a more social feeling prevailed between the Catholic and Protestant clergy than at present. The

late Dr. Balch, who for more than half a century was pastor of the Presbyterian Church, was quite a favorite with the priests. On one occasion he was invited to dine at the Georgetown College. The dinner consisted of turtle soup, stewed terrapins, fresh fish, oysters, eggs, and every variety except meat; the dessert of custards, pies, cake, fried nuts, wines, etc. One of the priests apologized for the meagreness of the fare, stating as an excuse that it was *banyan* day. The old Doctor, who had considerable quaint humor, told them that he hoped when it was banyan day again they would send for him, for he never fared more sumptuously in all his life."

"A FEW days since," writes a Philadelphia correspondent, "while looking over an old *British Magazine* (year 1792), I came across the following 'rich and rare' combination of attractions that *one* woman should possess to entitle her to be the wife of the 'handsomest man in England.' Thinking it would be entertaining to your many lady readers I send it to you, presuming (of course) that *some of them are* what *he* wanted—'Perfection.'

"The names mentioned were all well-known celebrities of that period of the reign of George the Third. T. S."

A WIFE FOR THE DUKE OF BEDFORD.

SHE MUST HAVE THE

Marchioness of Buckingham's eyes,
Duchess of Rutland's..... mouth,
Lady Melbourne's..... smile,
Duchess of Devonshire's..... teeth,
Lady Glendore's..... hair,
Mrs. Anderson's ..... neck,
Princess Augusta's..... shoulders,
Lady Caroline Spencer's..... shape,
Lady Glendore's ..... arm,
Lady Elizabeth Lambert's... size,
Lady Lincoln's..... foot,
Mrs. Walpole's..... skill on the harp,
Lady Ann Lindsay's ..... art in song,
Miss Damer's..... perfection with the pencil,
Lady Sefton's..... dignity,
Marchioness Salisbury's ..... ease,
Miss Townshend's..... musical finger,
Lady Knatchbull's..... affability,
Lady Hillsborough's..... voice,
Mademoiselle de Sardine's... good sense;
and, above all,
Miss Scott's..... PURSE.

When all these accomplishments and qualifications are found united in one person, she shall be made a duchess by the "handsomest man in England."

LONDON, *May*, 1792.

WHEN man fell from his high estate,
As Eve *in sin* the apple *ate*,
Quoth Adam, "Woman's curse is great:
'Tis written in the book of fate,
Forevermore IN-SIN-U-ATE."

AN Iowa reader and writer says: "Miss Barbara *Ditto*, in the November Drawer, reminds me of a neighbor of mine in the Jarseys, long time ago. His bill at the store had been standing and running for several months. When it was rendered, it read on this wise:

To one gallon rum.....	$0 50
" " gallon ditto.....	0 50
" " pint of molasses.....	0 13
" " " ditto.....	0 13

"And so on. He took it home, and his wife wanted to know what that *ditto* meant; they hadn't had any of that stuff in the house, she knew. John said he would ask the store-keeper, which he did; and, coming home again, his wife demanded,

"'Well, what does that mean?'

"'Why, it means that you are a great fool, and I am just like you!'"

HERE is an early California lawsuit that has not been reported in the books or papers, but must be treasured in the Drawer for reference in future ages.

Juan Bargos had a cow, which he let to Yankee Jim for six months at the rate of two dollars per month. At the end of one month from the time Jim got possession the cow died. Juan then commenced suit against Jim for the value of the cow. There was no lawyer employed on either side, for the good reason that the article, like a number of other luxuries, was not yet introduced. Juan Bargos opened the case by stating the main points in it, and sustaining them with the proof. The cow was proved to have been worth ten dollars at the time Jim got her; and the fact of her death, which was considered sufficient by the plaintiff. The Court not perceiving any disposition on the part of the defense to say or do any thing, gave judgment for the plaintiff.

The uninitiated supposed the controversy ended; but not so the defendant. After a few moments had elapsed he arose very deliberately and said:

"May it please your honor, I have a few words to say, if I may be allowed the privilege. Sir, I have been in this town three years. I know all the people in it well, and they all know me. I know the Court well, and the Court knows me. I have played monte with the Court often. And, your honor, in addition to all that, I claim the credit of first showing your honor the mysteries of the game of poker—a game, gentlemen, as far ahead of the game of monte as can be. But these things are neither here nor there. I just mention them to show that I know what I am about, and the Court knows what it is about, and, gentlemen, I honor the decision of this Court. In the absence of any evidence on my side the decision is just and right. Gentlemen, I will now introduce some evidence myself. Harry Sanders, take the stand."

"Mr. Sanders, do you know of my hiring a cow of Juan Bargos?"

"I do, Sir."

"Do you know how much milk she gave a day?"

"She gave about ten quarts, Sir."

"How much was that milk worth a quart?"

"Two quarts would fetch a media; or, in Yankee currency, three cents a quart."

"Now, Mr. Sanders, tell the Court how many quarts of milk that cow would give in five months."

"Well, Sir, if she gave ten quarts a day, in five months she would give fifteen hundred quarts."

"How much would that come to, Mr. Sanders, at three cents a quart?"

"Why, it would come to just forty-five dollars?"

"Now, Mr. Sanders, take ten dollars, which was the value of the cow, and add it to what would be due Mr. Bargos at the end of five months, at two dollars per month for the use of the cow, and how much would that make?"

"Why, it would make just twenty dollars."

"Now, Mr. Sanders, take twenty from forty-five, how much remains?"

"Twenty-five, Sir."

"Exactly; your honor, there is the whole case. Juan Bargos is to pay me twenty-five dollars, and pay the costs, and that will square the yards."

Which the Court assented to without a moment's hesitation. Thereupon this correspondent walked out of the hall of justice, fully and favorably impressed with Yankee Jim's faculty of managing a lawsuit.

In Florida is a community of good Scotch, who esteem "the Family, the School, and the Church" the best institutions in the world. At a school-meeting it had been decided to remove the school-house about a mile. It was then proposed to change the name. In the negative, Mr. M'K—— said, "When *Daniel* came out of the whale's belly he was *Daniel* still." To this Mr. M'P—— replied, "When *Daniel* came out of the whale's belly his name was *Jonah*."

A friend who has been engaged on the United States Coast Survey relates to us the following incidents:

"It has been well said that all ideas of human happiness are *comparative*. Some years ago a countryman visited our encampment, and made many inquiries as to the purpose and execution of the work; and, among other questions, inquired how we employed our time in the winter, when out-of-door surveying was impossible? We told him that during the winter we were engaged in office-work, in Washington City, in constructing maps of our summer's surveys.

"'Do you ever see the President?' asked our interrogator.

"'Oh yes,' replied we, 'frequently; he rides out on horseback nearly every day' (it was during Mr. Van Buren's administration).

"At this announcement the countryman seemed lost in thought, and lapsed into profound silence, which he broke, after an interval of some minutes, with the exclamation, 'Wa'al naow, I s'pose that chap has chicken-pie for dinner every day of his life!'

"During that same season a very good retort was made by 'Mike,' our chain-bearer, to a pompous and inquisitive stranger who visited our field of operations, and, looking with some curiosity at the instruments which we had set up in place, asked, in a very supercilious tone, 'What are you trying to do here?' 'It's not *trying* at all, but it's doing it we are,' replied Mike."

In one of the small commercial towns of New England there lived, some sixty years ago, an African slave, of whose ready wit tradition has preserved some examples. One frosty morning, walking, after the habit of his race, with head buried in his coat-collar, he met a lawyer more distinguished for pomposity than brains.

"Good-morning, Pompey," said the lawyer.

"Good-morning, Massa C——."

"What makes you carry your head down so, Pompey? Why don't you walk with your head up, like me?"

"Massa C——, you ever bin tro' a field of wheat when he ripe?"

"Yes, Pompey."

"Well, you take notice, some of de head tan up, and some hang down; dem tan up got no grain in 'em."

Pompey loved a glass of rum, and observing the daily habit of an old and respectable merchant to take his morning stroll before breakfast along the wharves, Pompey happened always to be on hand at the moment when the old gentleman left his house, and immediately uncovered and saluted him with a profusion of bows. The consequence was an invitation to take something. This happened so regularly that the merchant concluded it was not accidental, and one morning lay in wait; and when he saw Pompey coming, issued suddenly from his door, took off his hat, and anticipated him by a low bow. Pompey, not at all disconcerted, drew himself up, and with a stately wave of his hand, said, "Put on your hat, Mr. Brown; I was a poor man once myself!"

"When a student in the late Judge Gould's law-school in Litchfield, Connecticut," writes an esteemed correspondent from Vermont, "thirty-five years since, I copied, *verbatim et literatim*, from the grave-stones in the 'old west burying-ground,' the six epitaphs below; and last July, on a visit to this charming village—once famous for its beautiful ladies, its literature, its talented lawyers and statesmen, and its wealth—I read the same old epitaphs, and others nearly as quaint, showing the taste and peculiarities of the ancestors of many of your readers nearly a century since. They are at your disposal:

"'Death conquers all
both young & old
tho' ever so wise discreet & bold
in *helth* and strength this youth did die
in a Moment without one Cry
Killed by a cart.'

"'Wife and children 12
Behold & see
Prepare in time
To follow me 1785.'

"'Beneath this stone lies children 5
Endearing objects when alive
Though long in silence they've lain
They certain will revive again.'

"'Beneath this stone
Deaths prisoner lies
The stone shall move
The prisoner rise 1762.'

"'Beneath this Ground
his body must lie
Until the resurrection day 1775.'

"'Lo here I leave this earthly clay
And fly beyond ethereal blue
Unchanged into eternal day
To sing praise of God anew 1790.'"

"Not a score of years ago," writes a correspondent, "there resided in Huntsville, Alabama, a single gentleman who had been raised to the desk, and was consequently *au fait* in double and single entries, but very slow in every thing else. He had passed his third decade, was fond of the girls, and very much in love with one of Huntsville's fairest and most accomplished daughters—to her infinite annoyance and confusion, as he was unusually attentive. He was very amiable, and, the girls said, very stupid; was their pet horror, but their standing convenience in last resorts; and known among them as 'Cousin T.' One Sabbath morning a number of bachelors, Cousin T. among them, had assembled in the back-room of the law-office of one of the number, when the following story was told:

"'In an adjoining county there was a desperate negro, who had frequently run off from his master and been as often captured. The last time he ran,

however, he provided himself with a double-barreled shot-gun, and swore he would not be taken alive. His master, knowing his desperate character, induced several of his neighbors to go along in the search for him. When they came up with him he killed two of the party before he was captured. He was tried, sentenced, and executed. After the rope was adjusted, he was asked what made him kill those men, and he answered, "Nothing at all;" and refusing to say more, was launched into eternity. Many good and reliable men, whom you all know, attest that, to this day, if you pass his grave and ask "What made you kill those men?" he will answer from the grave, "Nothing at all!"'

"The story was told with a gravity calculated to give it the desired *vraisemblance;* and some expressed astonishment, some doubt, and others entire incredulity. Cousin T., meanwhile, was reclining on the bed. Presently the joke was seen by one of the party, who burst into a hearty laugh at the 'sell,' and was soon joined by the rest, who detected it almost simultaneously. Not so Cousin T. During the loud and prolonged laugh Cousin T. maintained more than his usual gravity. When the merriment had subsided Cousin T. spoke, and said he didn't see any thing in it to laugh at. This, of course, produced new peals of laughter, until, finally, the joke was fully and fairly explained to him; whereupon he was thrown into a violent and almost interminable paroxysm of laughter, rolling over and over on the bed, and refusing to be quieted. Immediately after dinner, and before his *inamorata* had taken her wonted *siesta*, he posted to her house, his heart dancing to the hope that this time, at least, he would be very agreeable to her. Without preface, and with much solemnity, he began:

"'Miss S——, there is the strangest thing down in Lauderdale you ever heard of. A negro down there run away from his master, and when they tried to take him he killed two of the men, and was hung for it. And if you go by his grave now, and ask him what made him kill them men, he won't say nothing at all!'

"Here he burst into a rude laugh, while the lady looked at him in blank amazement, and quietly remarked that she saw nothing strange in it whatever. His laugh subsided into a foolish grin; and, covered with confusion, he stammered out that he reckoned he didn't tell it right, for it seemed mighty funny to him; and, taking his hat, he left abruptly, leaving his sweet-heart under the full conviction that he was not only a bore but a stark fool."

A PIOUS lady in Virginia was in the habit of having family worship every evening, and it was a rule of hers that all the servants should attend. On one occasion a Dutchman, fresh from Pennsylvania, staid all night at the house, and was much struck by the assembling of the negroes at prayers. After they had all left the room except a small boy who remained to light the guest to his chamber, the Dutchman inquired of the lady why she brought "the niggers to prayers?" She replied that she felt herself responsible for their religious training. The Dutchman then asked her if she really thought they had souls; and she, beginning to be rather excited, told him she certainly did, "and that she felt a deep interest for their salvation."

The Dutchman then turned to the negro boy, and asked him, "Boy, do you think a nigger has got a soul?"

"Oh, yes," said the boy; "I reckon they got souls."

"Well, boy, do you think you would be allowed to go to heaven?"

"Yes, Sir, I 'spec I will; I 'lows to git in."

"Now, boy, whereabouts do you think they'd put a fellow like you in heaven?"

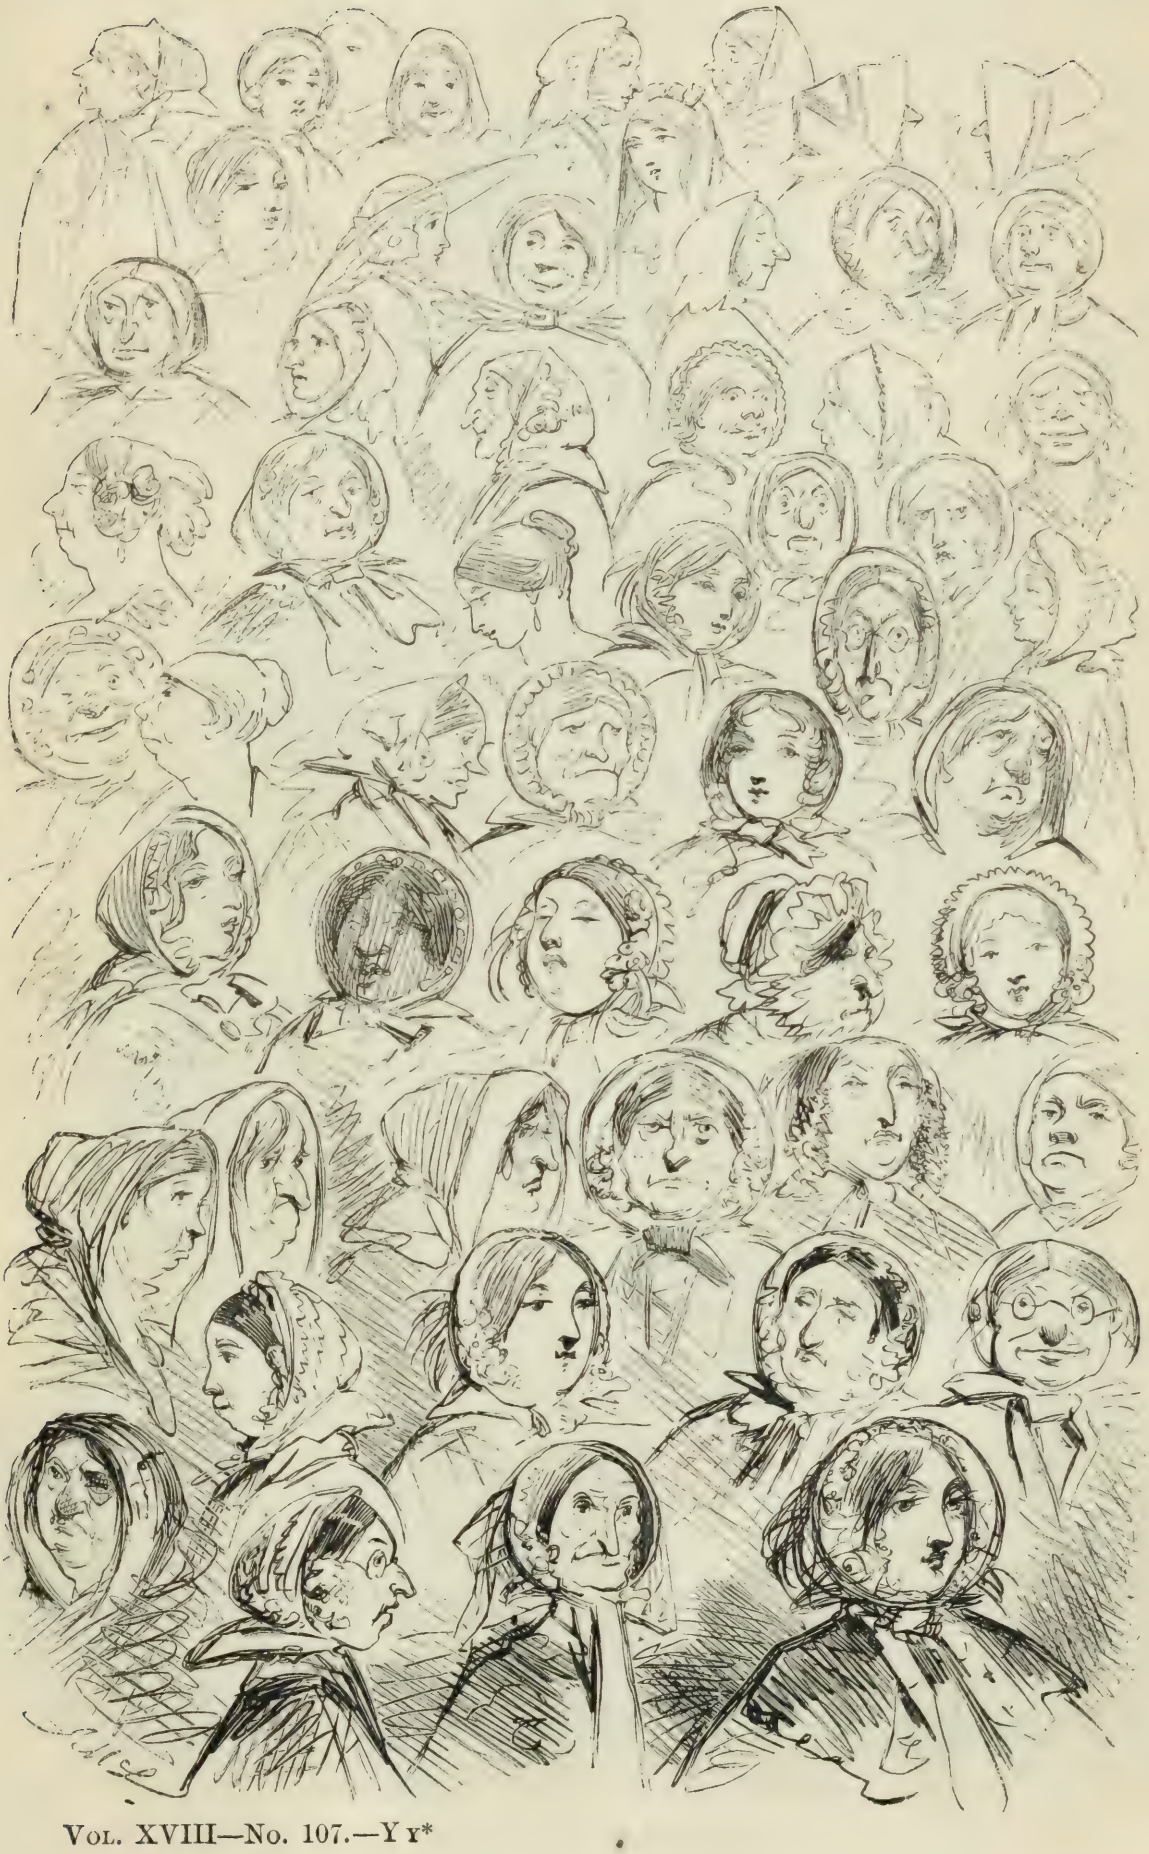
"I dunno, Sir," said the boy; "but I reckon I'll git in somewhar 'tween de white people and de Dutch!"

"SOME thirty years since," writes a Georgia correspondent, "Thomsonian doctors were made in Georgia by patent. Twenty dollars obtained a right; a book was the guide; steaming, lobelia, composition, and Number 6 were the universal panaceas. Doctors were as plenty as blackberries: they were pretty successful. When a patient died, it was considered as the will of God—his time was come; when he got well, the doctor got all the credit. But few remain of the original planting. Those botanical plants have been elevated; they are now made regular by college diplomas.

"In Walton County, Georgia, one of the original class was called to testify in a mill-pond nuisance case in Doctor M'Caffers' neighborhood. Medical evidence was required, and the Doctor was on the stand.

"ATTORNEY FOR THE PLAINTIFF. 'Dr. M'Caffers, you will please state to the Court and jury the effects of malaria as arising from extensive moisture, particularly mill-ponds.'

"DR. M'C. 'Wa'al, I reckon the jury mought understand me best not to speak in doctor phrases. In this case it wasn't eggsactly *malearia*, for my patients was wimmen; it was *femalearia*, and ager and fever—all caused by a green scum on the mill-pond, which raised sich a *smell* as made all the neighbors sick.'



"'That's enough,' said the Judge; 'the evidence is plain and pointed; the jury can take the case.'

"The mill-pond was ordered to be cut loose. Professors of chemistry may here learn a lesson. That *smell* of Dr. M'Caffers was better understood than a long explanation of the contact of oxygen and hydrogen and atmospheric poison.

"He was very successful in curing a troublesome case of St. Vitus dance. A young lady (whose parents were members of the Church) was taken with this troublesome disease in a slight form. The Doctor being called in, the young lady's fingers and hands were twitching about. Her mother, being very uneasy, asked the Doctor the cause. 'Why, you see, marm,' said the Doctor, 'your darter has a nateral desire to dance, and she knows you are opposed to it, and her desire has broke out like the itch does, and she's dancing with her hands instead of her feet. But there's another cause: a worm is wriggling between her brain and her skull, and I will soon physic it out.'

"Steam, lobelia, composition, and Number 6 soon cured her; and Dr. M'Caffers attained an eminence which many might envy. He is now liberally patronized as the Steaming Botanical Doctor. He says 'None dies under his practice until their time comes, and then they ought to die.'"

Heads of the People.

Fashions for April.

Furnished by Mr. G. Brodie, 300 *Canal Street, New York, and drawn by* Voigt *from actual articles of Costume.*

Figure 1.—Out-Door Costume.

THE PARDESSUS which we have selected for our illustration is the most elegant novelty of its class which has come under our observation. It is composed of black silk, with flounces of black lace. It fits easily to the form. The sleeves, which are rather close at top, with sufficient fullness below to permit a graceful flow, are slashed through their whole length to the shoulder, the sides being held together by a cross cording. A trimming *à la cadet* occupies the whole breadth of the chest, graduating toward the waist, where it is four inches wide, thence enlarging, and lying flatter until the last row, which passes entirely round the skirt, forming a beading for the first lace fall, which reaches to the bottom of the silk, just covering the top of another, which is sewed upon the bottom of the garment. —The DRESS is of plain silk, with a high body and round waist. The sleeves, which are flowing, reach midway to the wrist; the under-sleeves are ornamented with a small *nœud* of ribbon, and have cuffs turned back.—The BONNET is of peach-blossom taffeta, trimmed with clusters of white lilacs, and white and purple crocus-flowers. Like most of the recent productions of our best *modistes*, it comes considerably farther over the head, with a narrower curtain, than those worn of late. The face trimming consists of a flood of blonde.

FIGURES 2 AND 3.—YOUNG LADY'S MORNING DRESS AND CHILD'S COSTUME.

The YOUNG LADY'S MORNING DRESS consists of a bodice similar to the one described above, closed to the neck, with round waist and a belt. The sleeves are closed at the elbow, with plain collar and cuffs. The noticeable feature of the dress is a nun's pelerine, cut straightway of the stuff, seamed on each shoulder all the way down. It is slightly raised at the sides, and somewhat bias. The sleeves, body, and skirt are confined by buttons placed on the vandykes, by which they are indented, the scollops having a border of passamenterie.

The EVENING FICHU consists of a body and *ruches* of illusion, with bouquets of lilies of the valley on each shoulder and in the centre, with a bow and streamers at the back.

HATS, which were growing into favor last summer, will be still more in vogue in the next. The true beauty of this style of head-dress consists in simplicity; an excess of ornament is out of character. The most beautiful which we have seen are trimmed simply with a slight wreath of blush-roses.

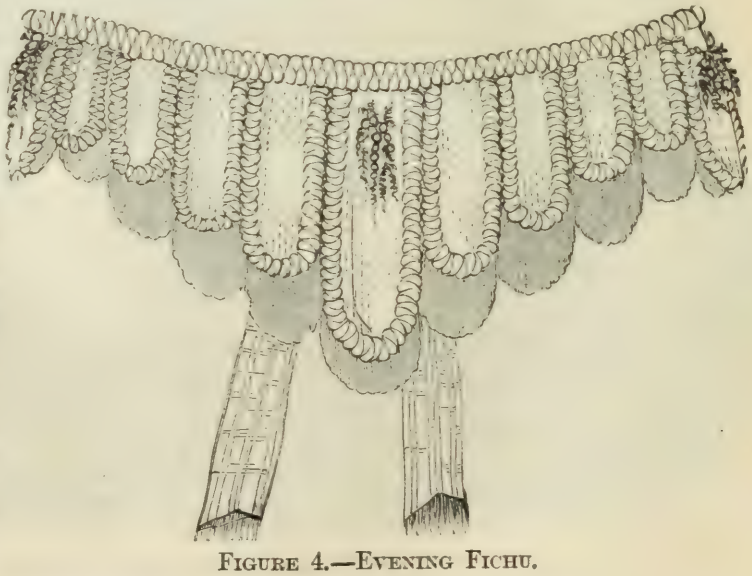


FIGURE 4.—EVENING FICHU.

HARPER'S
NEW MONTHLY MAGAZINE.

No. CVIII.—MAY, 1859.—Vol. XVIII.

"COASTED DOWN HILL IN THE SNOW."

THE LAMENTABLE COMPLAINT OF KATHARINA MARIA POPPELLE, SPINSTER.

(NÉE KATE MARY POPPLE.)

I WAS born in the deep green country,
Not many long years ago;
I ran for the cows in summer,
And coasted down hill in the snow.
The dear old Mother Nature
Gave me her roses wild,
My pretty brown hair curled softly,
My eyes were bright and mild.

Entered according to Act of Congress, in the year 1859, by Harper and Brothers, in the Clerk's Office of the District Court for the Southern District of New York.

I grew like a vine in the forest,
  Tall and slender to see;
And I sung like the little robins
  That lived in our apple-tree.
But Aunt Malone from the city
  Came down for country air;
She thought my cheeks were painted,
  And asked who made my hair.

"AND SEEN JIM BRUCE MAKE HAY."

And when she found it grew there,
  She called for ink and pen;
She made her will, and bought me
  For one of the Upper Ten.
Good-by to Father and David!
  Good-by to the grave-yard green!
If Mother had never slept there
  My grandeur had never been.
I'd rather have staid by Mother,
  And seen Jim Bruce make hay;

But Aunt Malone from the city.
  Carried their Kate away!
Once I walked of a Sunday;
  Now in a carriage new
I'm carried up to a temple
  And shut in a rosewood pew.
I hear the finest music,
  I see the latest style,

"I'M BOUND TO MISS LA MODE."

The hats just out from Paris,
  And silks that swarm the aisle.
I'd never mind the dresses,
  Or care if I walked or rode,
If I hadn't a maid for a mistress—
  I'm bound to Miss La Mode!
I can't get up in the morning,
  And put on a simple gown;
She twists my hair in cables,
  With ribbons dangling down;

She decks me in skirts embroidered,
A silken robe and cord,
Slippers of silk and tinsel,
And I dare not say a word.
If I ask for a muslin wrapper,
Then Aunt puts on a frown—
"Katharina Maria, the fashion
Forbids such things in town!"

"FOR A DRIVE ON THE HARLEM ROAD."

Scarce am I robed and slippered
Before there comes La Mode,
To do the whole thing over
For a drive on the Harlem road.
I dress for the shiny carriage
With flounces shinier still,
A little hat with feathers
I'd burn if I had my will.
Once I had a bonnet
That covered the end of my nose;

Now my freezing ear-tips
  Just under the brim repose.
My feet are cramped in gaiters,
  My hands are squeezed in kid;
I dress in red or yellow,
  Just as La Mode shall bid.
She hoops me round like a barrel,
  With rings of bone and steel,

"SIMPER, AND BOW, AND SMIRK."

And wisps of woven horse-hair,
  A species of Katharine wheel.
They bring me back from driving,
  They dress my hair anew,
And set me up in the parlor
  After my lunch at two.
In come men and women,
  Simper, and bow, and smirk,
Tell me I'm sweet in a whisper,
  Or talk of new French work;

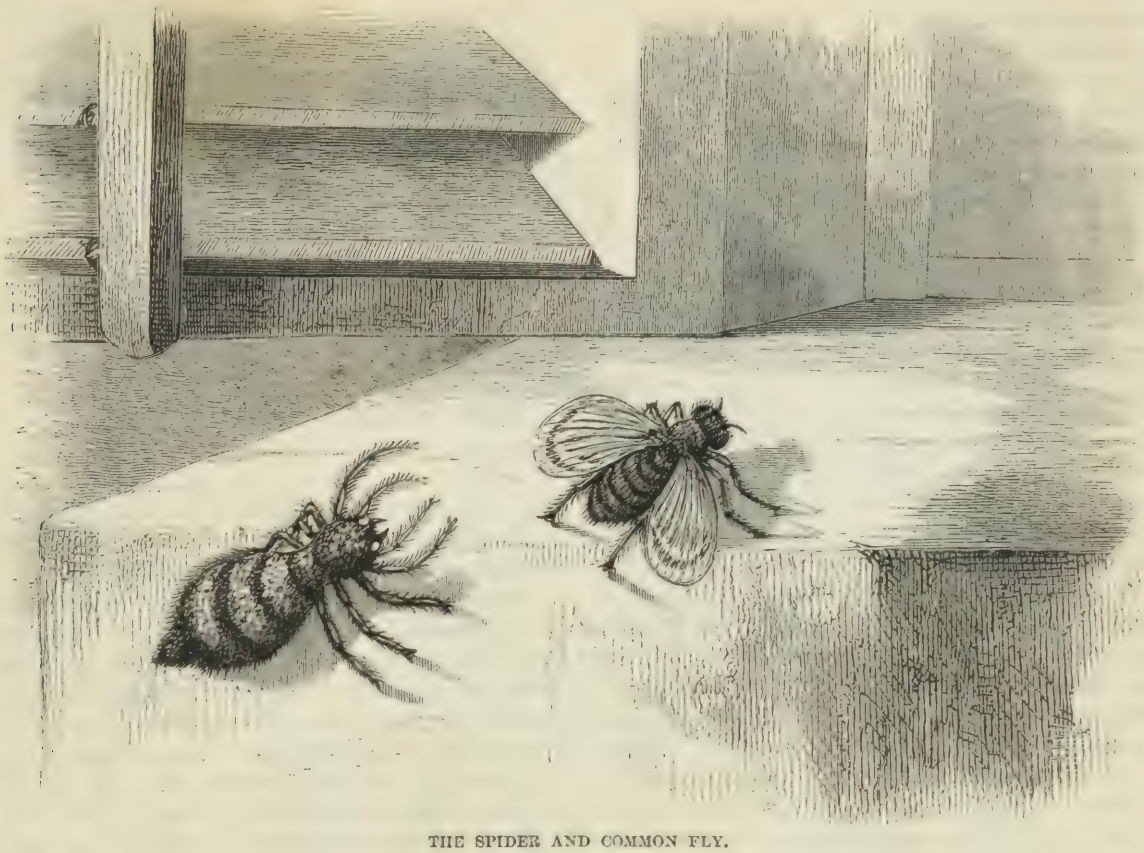
How Mrs. Smith at Newport
  Lost her whole back hair,
And how Miss Jones in Lenox
  Was burnt by the sun and air;
Or, with a solemn titter,
  How Mrs. A. and P.
Went out to drive before dinner
  And never came home to tea.

"AND I LONG FOR JIM AND MOTHER."

I hate them all together!
  The dandies slim and fine,
That scent the house with millefleurs,
  And curl their hair like mine;
The women vain and silly,
  A heap of silks and lace;
And I long for Jim and Mother
  Till the tears run down my face.
Away they go for dinner,
  And I go out for mine,

Re-dressed in pink and silver,
La Mode says quite divine.
My arms stripped to the shoulder,
To freshen in winter air!
My neck, warmed with a necklace,
Blushes to be so bare.
I sit and sulk till it's over;
I go and dress again,

"I DANCE BEFORE THEM ALL."



In clouds of gauze and ribbon,
With brooch, and clasp, and chain.
La Mode ordains a party—
It used to be a ball—
Curled, and hooped, and jeweled,
I dance before them all.
The girls look cold and pretty,
The men have been to dine,
They're half perfumed with Lubin,
And half with smoke and wine.

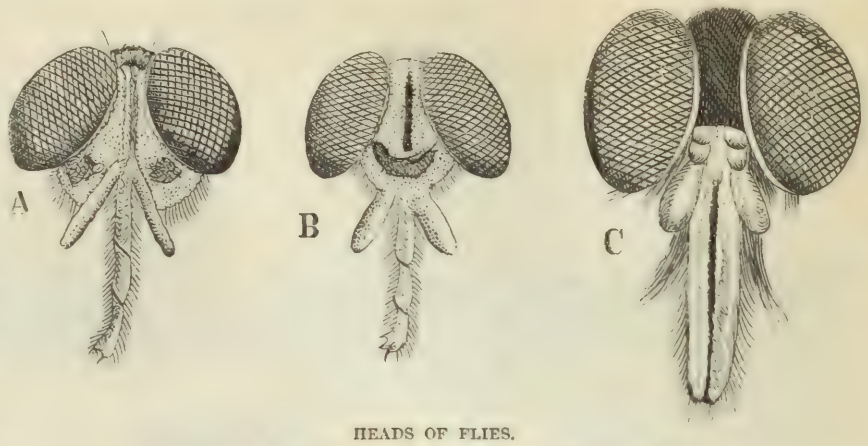
I dance Schottische and Polka,
With an arm about my waist,
And think, if Jim should see me,
Or Mother, so disgraced!
I go to bed at morning,
I breakfast when it's noon,
I eat my dinner by candles,
I never sing a tune.

"TAKE ME HOME AGAIN."

I hate their city fashions!
I'm tired of the Upper Ten!
Jim, and Father, and David,
Take me home again!

THE SPIDER AND COMMON FLY.

FLIES.



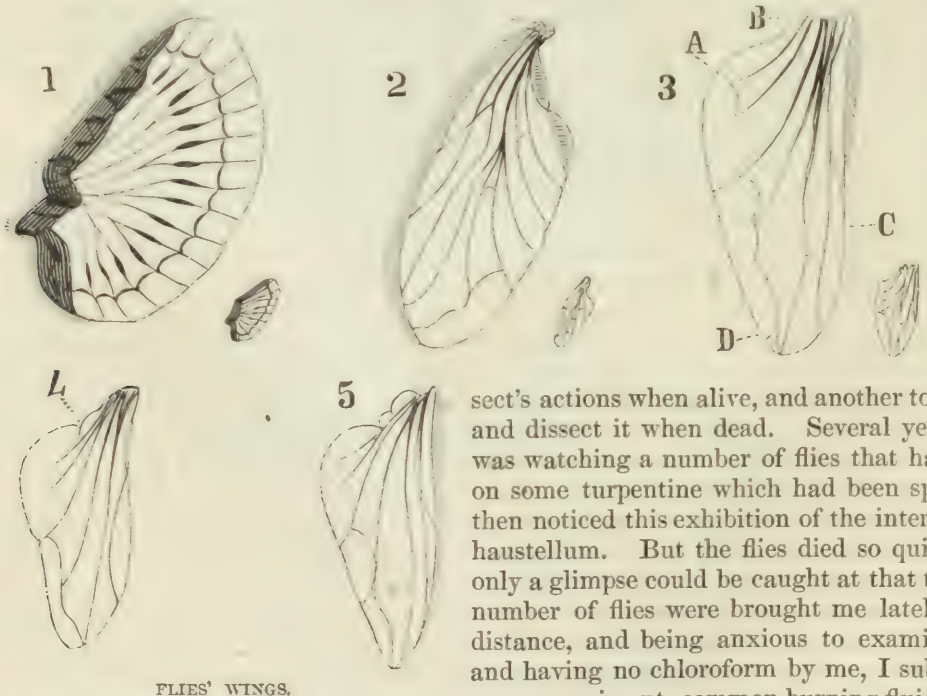
YOU must not think I am about to introduce you to the whole Fly family. Cuvier said, on hearing of Desvoidy's paper (read before the Academy on the subgenera he proposed of the *Diptera*), "Well may the young student become alarmed." Meigen, who is the best authority on the European *Diptera*, divides them into two genera—the first containing 315 species, the second 213. These are not all *Muscidae* however, although the greatest portion is. Add to these the hundred varieties we have in America; then look at Australia, listen to the groans of travelers and miners who have to live with vails tied over their heads, and who become "fly-blown and breed maggots if one alights on them." Howitt gives most terrific accounts of their persecutions. But these are merely country cousins to our fashionable and universal acquaintance now present. I will introduce our little friend to you. He deserves the appellation of "common-fly." He is found every where on this continent, though in some seasons not as numerous as at others: a sharper-winged insect intervenes, which, until a better name be found, I have called the *Harpyia tenuis* (the slender Harpy). The common fly is called by Dr. Harris, of Cambridge, "the *Harpyia*," or Harpy Fly—why, he does not say; but I may presume for the want of another name. The type of the flies of this continent as well as of those of Europe is the *Musca domestica*, the common fly of Linnæus, monographed by several entomologists as such. This insect differs much from the Harpyia, being shorter in the abdomen, and a very cunning-looking, dumpy thing. Her wings are round and short, the nervures running neatly and systematically down them. They are very prismatic and beautiful in a full light. Her eyes are dark and she is browner in hue. Here she is, chased by her inveterate foe, the little spider familiarly called the Zebra. (*Salticus scenicus.*) You see her daily, during summer, on your windows leaping, hunting, and glancing in the sunbeams like a drop of gold embroidered on black velvet. She looks here very much darker in color than usual. She is raised from last winter, and is now near her last moulting, when she will reach her maturity. If you could see her in her new dress you would say she is charming!

Pshaw! A spider charming!

She is, in the face of your superciliousness. Her stripes are a most exquisite fawn color, her legs a golden brown, her eyes are as brilliant as those of a Newport belle, and express something of the same sentiment, when— The biped fly escapes a skillful manœuvre.

This fly is very metropolitan in her taste; but of late years I have come across very few. Last year at South Windham I encountered by accident a number, and brought home with me some of my old friends. I kept them all winter wrapped in some cotton packed away in a crack. When spring came and I liberated them, were they not forlorn-looking things! their wings all slit up, gray, and worn. It took some days in the warm sunshine to make their toilets presentable. One bright morning they went a Maying, and they are the last I have seen this year. The specimen here illustrated came from the South. I have made every effort to discover their re-

treats hereabouts, but hitherto without success. Compare these two—the Harpyia and Domestica. Their heads and *haustellums* (proboscis) look very much alike, but if you look closer you will discover a great difference. The third is that of the common house fly of England—called the *Musca domestica* by Messrs. Samuelson and J. Baxton Hicks, in a late work on this insect. Examine the wings Nos. 2, 3, and 4. Observe how very closely they resemble each other; the only positive differences are the cross veins marked by the letters. No. 4 is the exact counterpart, except that it is so sharp at the end. No. 5 is nearer the English fly in the nervures. This last I named years ago the *Harpynia*, keeping as close to Harris's nomenclature as possible. It is as much in our houses as either of the others. It always hastens in on the approach of rain. I consider it, and so would Harris, on account of its having lancets which prick very severely at some seasons of the year, a stable fly. He says: "We might mistake them for house flies were it not for the severity of their bites, which are often felt through our clothing, and are generally followed by blood. Upon examination, they will be found to differ essentially from house flies in their proboscis, which is long and slender, and projects horizontally beyond the head." "They lay in dung. The larva and pupa do not differ from those of the common house fly." The Harpynia carries her proboscis elevated when the thirst for blood is upon her, but at other times it is retractile, and is often seen pressed against her thorax. It is quite as straight as that of the English fly.



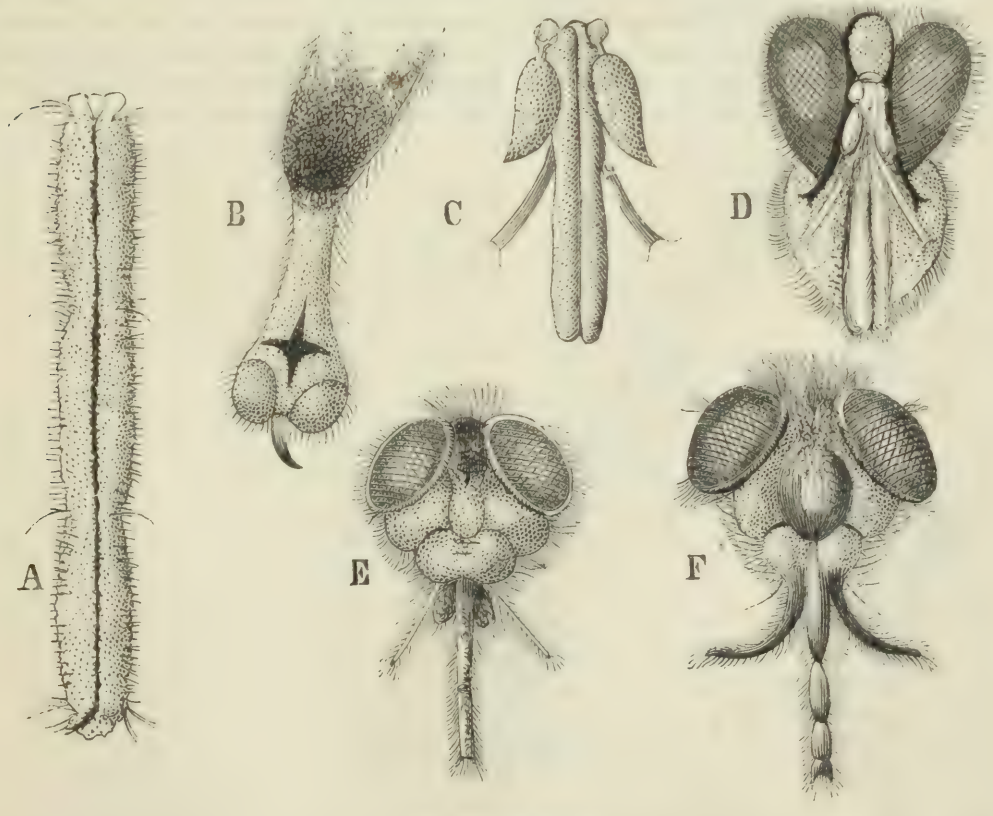
HEADS OF FLIES.

A. Harpyia.—B. Linnæus's Musca Domestica.—C. The English Musca.

For your amusement, and, I hope, instruction at the present time, I will examine the Harpyia, our most common house fly. Let us first examine the *haustellum*, or proboscis. This tube is a soft, spongy muscle, divided into several sections exteriorly, and capable of being doubled up, elongated, left exposed, or drawn within the head, as it may please the insect. It is by this tube it obtains its nourishment. A muscle extends its length, like a small hose, and is exceedingly elastic. It appears to be filled with very minute cilia or hairs. At the extreme end it has two flattened lips, which you will perceive more plainly by examining the extension of the proboscis.

I must tell how I had the luck to obtain this view *during life*, probably never seen by another entomologist. After my experiment others may follow up with magnifiers of greater power. You must bear in mind that it is one thing to see an insect's actions when alive, and another to examine and dissect it when dead. Several years ago I was watching a number of flies that had settled on some turpentine which had been spilled. I then noticed this exhibition of the interior of the haustellum. But the flies died so quickly that only a glimpse could be caught at that time. A number of flies were brought me lately from a distance, and being anxious to examine them, and having no chloroform by me, I substituted, as an experiment, common burning fluid. What was my astonishment to perceive within my

FLIES' WINGS.



1. Musca Domestica.—2. Harpyia.—3. Harpynia.—4. English Musca.—5. Harpyia Tenuis.

reach a sight I had so often wished for! The flies were seized with a kind of asthmatic affection; they fanned their wings — their bodies became distended. The proboscis was kept in constant action, being forced out and drawn in, alternately—the distress and the desire of obtaining air became greater and greater. The agony appeared intense, and the proboscis might be said to be almost turned wrong side out. Now I was enabled to see the termination inflated and exposed I was not lazy with my glass and pencil, and completed my sketches with the loss of but one fly. The others I threw into a tumbler of water and they soon recovered from the agony, but were stupid and lifeless the remainder of the day.

THE HARPYIA.

It had been long suspected that insects possessed a fluid similar to our saliva. Among other experiments confirming this hypothesis is the following experience of Professor René: "Eager to solve the difficulty, for there could be no doubt of the fly's sucking the dry sugar, we watched its proceedings with no little attention. But it was not till we fell upon the device of placing some sugar on the outside of a window, while we looked through a magnifying glass on the inside, that we had the satisfaction of repeatedly witnessing a fly let fall a drop of fluid upon the sugar in order to melt it, and thereby render it fit to be sucked

HEADS AND BILLS.

A. Haustellum open, to show the muscle.—B. Haustellum expanded.—C. Haustellum of Harpynia.—D. Head of Harpynia.—E. Head of Harpyia Tenuis.—F. Head of Harpyia.

up, on precisely the same principle that we moisten with saliva, in the process of mastication, a mouthful of dry bread, to fit it for being swallowed." I verified all this very easily. I confined some flies under a glass for nearly a week, feeding them on blackberry jelly. I then removed this, substituting lumps of fine white sugar, which were soon blackened with minute spots where they had ejected their saliva to moisten the sugar. The "fly-spots" observable on freshly ironed clothes, if left exposed, arise from their desire of obtaining moisture. Like Beau Brummel, they evidently think "there is nothing in nature equal to the perfume of clean linen," and try to extract it with their proboscis.

PALPUS.

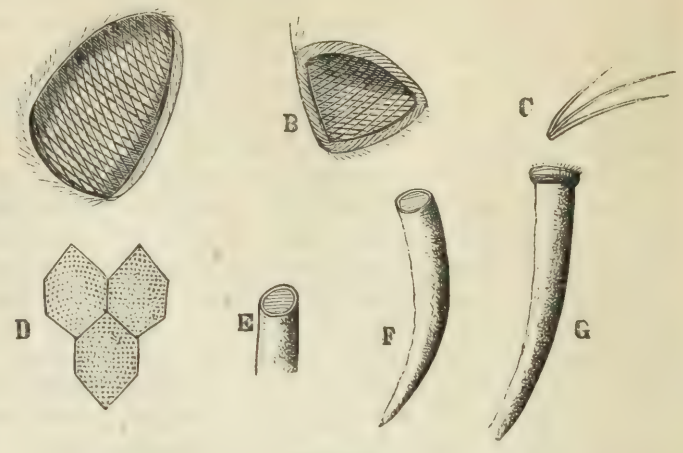
The proboscis has attached to it a pair of maxillary palpi, which are, no doubt, designed as nerves of touch for the detectors of food. They are covered with long strong black hairs, which increase their sensitiveness, and serve likewise, I think, to protect the proboscis from any sudden violence. The fly is very epicurean in taste. Watch her when she is selecting a beverage; how she will dip into each, then fly off a short distance, brush up her corselet, clean her proboscis, and, having apparently made a choice, returning, and alighting with decision upon the one selected, and proceeding to regale herself. Lehman, who spent a long time studying insects and solving the mysteries of the senses in them, mentions the following circumstance: "He was ill at one time, and was using the decoction of worm-wood. A fly alighted on a lump of sugar which had been moistened with this bitter drug. He began to suck the sugar, but presently flew off to a vase of water near by, and made every effort to eject the nauseous dose." It is quite necessary, I believe, to make the various fly-poisons used palatable. Harris says the safest and the best is *black tea*.

There is a very important pair of members attached to the head which are called the antennæ. In flies having the power to pierce, these have on the last joint "feather bristles." The use of this pair of instruments has been "a bone of contention," and still remains unsettled among entomologists. I consider the antennæ the source of all intelligence and sensibility in insects. I am convinced they possess three senses—touch, sight, and taste. Hearing and smelling, in the manner understood relative to ourselves, they know not, and have not. Look at the antennæ magnified—you see a long hair to which are attached a number of lesser hairs. These I consider as answering to cilia (our eye-lashes are cilia susceptible to every touch and communicating to the eye any impending danger). It has been proved that all these hairs in the antennæ communicate with the large tube (similar to the tube running through a hair of your own head). The entire antenna is intersected with valves, pores, and nerves, which can be traced to the brain or the ganglion performing this function.

After an insect arrives at maturity it has two functions to perform—to search for food, and to propagate its kind. The eyes I consider of very little use for the first purpose. I am convinced an insect can not look straight forward; but of this farther, when we come to consider the eye. When the insect is in search of food this hair touches it, communicates the sensation to the globular joint beside it, the intelligence is conveyed to the brain, the palpi test it, and finally the proboscis receives or rejects it. In all insects

ANTENNÆ.

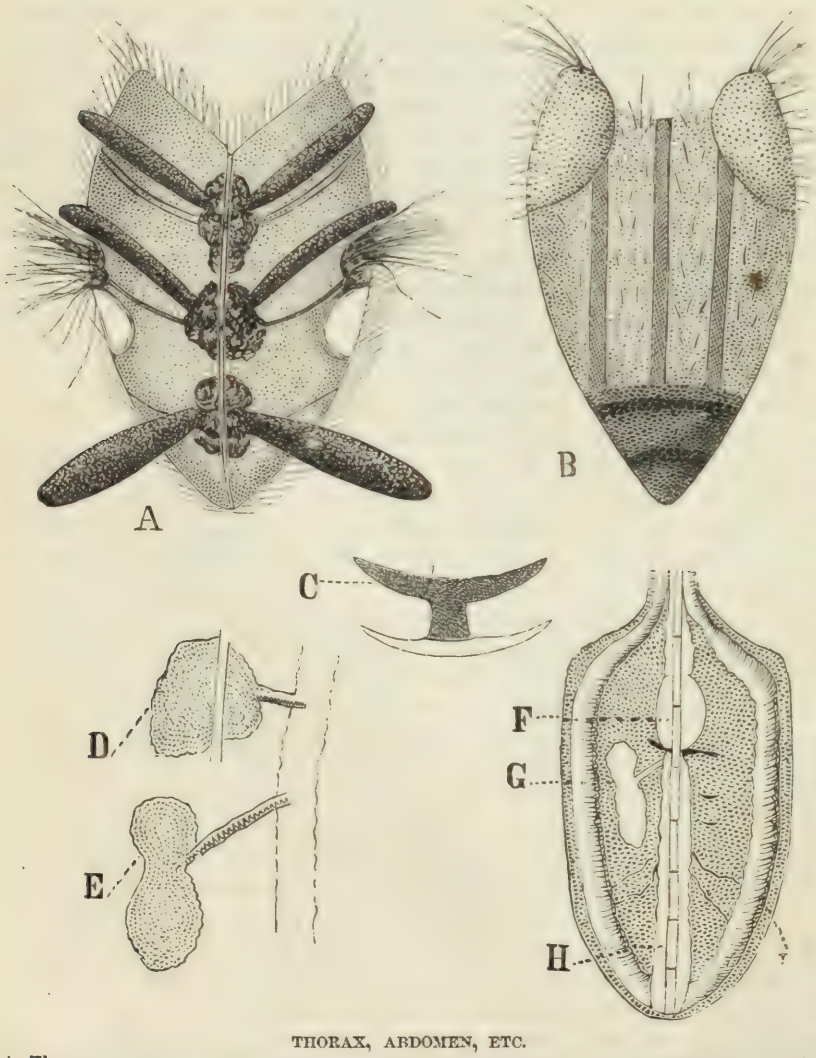
A. Antennæ depressed.—B. Antennæ elevated.—D. Last Joint of Antennæ.—E. Cilia.—C. Cilia touching any thing.



the antennæ are "designing rods;" they feel their way with them as does a blind man with his stick; they point out dangers and disagreeable rencontres; but I do not at all think them nerves of *hearing*. Take two butterflies, touch them equally with chloroform; when still, and apparently dead, *cut* off the antennæ of one, leaving them on the other. Now apply your glass; see every limb is quiescent in both. Presently take a piece of window-glass of some length, put each end on a tumbler half full of water, lay both of the butterflies on this glass, antennæ downward; nay, even be very careful to press those of the one in possession of these members close to the glass. Dip your finger into the water and play them a tune as if on musical glasses; the one with no antennæ will revive, be up and away long before the other begins to move. How would you account for this? I esteem the process simple enough, that they hear from the shock communicated to the nervous system. The butterfly without antennæ having been mutilated, the nerves become exceedingly susceptible to sounds; it was, consequently, the soonest acted upon. If the antennæ were nerves of hearing, the one without them must have been deaf. *Therefore I consider the seat of hearing spread over the ganglions, nervures, large and small valves and cavities of the whole nervous system.* How often have I tried this experiment the past winter on one of my pets, a large golden beetle! I fed her on apple and cake. About every three days I would take her from her burrow, bathe her in cold water, and place her on her food. While she would be in the act of eating, intent on the enjoyment of her repast, with utter silence around, I would blow a blast from a shrill penny trumpet over her. Not even a nerve seemed startled, not the "wink of an eye-lash" would show she had heard any thing more than common. The soft music of a musical-box gave her no pleasure; she never condescended to notice my efforts. But take a penknife or pencil, rap suddenly on the table beside her, and she was over in a flash flat on her back—dead; ah, yes, quite dead to all appearance; and there I might keep her *dead* any length of time by rapping. Watch noiselessly; presently one pair of legs would move, then all of them; a struggle over on to her legs, and away she would scurry to her box of sand, and the manner in which she would make her claws dig it up was astonishing; in a second she was hid out of sight and away from all danger. Descend into a cellar where the *Blatta* (roaches) are numerous; make the most hideous noises you like without touching the floor or walls, and they will stand perfectly unconcerned; but step on the floor, walk a few paces ever so stealthily and silently, away they go; the *nervous system has felt danger*, and flight is the instinct.

That hearing is conveyed to the system thus, in some of the crustacæ even, circumstances have shown. Old people assert that the bay of Charleston, South Carolina, was, before 1812, the rendezvous of the finest lobsters in the world. After the heavy cannonading off the mouth of this harbor during the last war the beaches around were strewn with dead lobsters; they have never been known to visit that port since. The same occurrence took place when the British bombarded Copenhagen; lobsters have never since been caught in those waters. Of course no one would affirm that cannon fired over water would cause vibration enough to kill them; it must have been the shock to the entire nervous system by feeling the concussion of sound which caused their death.

As for smell, there is no doubt this is conveyed to the insect in the atmosphere absorbed through the air-tubes; from them, through the respiratory nerves, the sensation is conveyed to the brain. Some people are not susceptible to perfumes until they *taste* them. If a room is perfectly free from gas and a dozen people affirm that there is none on its atmosphere, if it ever has been there I shall taste it as sensibly as I would a strawberry. Put onions near an invalid who has no appetite, and in a very short time he will complain of hunger; the salivary glands begin to flow, for he tastes the perfume. Thus with the insect—there are in all, more or less, sacs called salivary glands, which absorb a perfume, and communicate to the brain the proximity of food, whatever it may be; else how can you account for the mistake made by the blow-fly (*Musca vomitoria*), whose instinct it is to deposit her eggs on tainted meat? It is a frequent occurrence that she mistakes fetid fungi for carrion. "Look close," says René, "over any of the very singular family of plants, the stapelias, in hot-houses, and you will perceive them invaded by a host of maggots, laid there in the egg by her, and hatched only to starve." In fact, between a piece of tainted meat and the flower of the *Arum-dracunculus*, when in recent bloom, she will select the latter. No meat, in its worst state, can excel in nauseous stench this flower; and it being so much stronger, she assumes from the atmosphere it must be the proper place of deposit for her eggs. These examples must suffice.



Let us consider the eyes of the fly. It has five; two compound and three simple, placed in a triangle on the top of the head. They are all closer together in the males than in the females. The compound eye in the Harpyia is a pretty sight, but not so brilliant as in many others. The aureal coloring matter is of a dark brownish red. Under the microscope it resembles blood under absorption. This eye is a singular affair. In some lights it has a dark green tinge; in others again it looks golden; but when compared with many others it may be called dull. The shape is convex, covered with 4000 facets with cones corresponding to each. Mr. Parsons, in the account he gives of Professor Müller's experiments on the vision of insects, says, "Each nervous filament conveys to the bulb of the optic nerve the impression of the ray which it has individually received; and as all the nervous filaments, at first insulated by the pigment, are at length united together into one common and

continuous bulb or nervous expansion, the impression received by each filament is united to those of all the others in the bulb of the optic nerve, and so a common and continuous image is produced." I am certain the fly, like the bird, only sees with one eye at a time, and that these compound eyes are meant for use in a powerful light; consequently are valueless to the insect in the dark or twilight. In fact they can get along without these compound eyes as well as with them. Those that remain over the winter seldom have both compound eyes left. Toward the fall when they get old, the sphere of the eye sinks entirely, and it becomes quite concave. There are several about me now, with the compound eyes entirely sunken, and still they fly about, not very actively to be sure, but they are not disabled, and appear to find their food easily. If you varnish the simple eyes the fly *can not see* at all at night; you may advance a candle near enough to burn him, and the compound eyes will not convey the fact to the brain. Hence we may presume that the simple eyes are meant for night, while the compound eyes serve for the garish light of day. Moreover, the fly can not see straight forward. I have plucked off the wings of one and placed him before the little spider *Salticus scenicus*. She would go close up to him in front and touch him before he would be aware of her presence; but let her move a hair's-breadth to either side, and he was off as fast as his legs could take him. A few days ago I tried the experiment on the window sill. After more than twenty minutes' dodging and doubling between the two (for she can not spring upon the fly's back unless she does so from behind, so as to thrust her fangs into the small neck joining the head on to the thorax), I kept his head turned toward her by showing him a little straw I held, whenever she was about to "surround him," as our friend of the Emerald Isle would say. At last the spider paused, as if considering what to do; before I could comprehend her manœuvre she crept along the under edge of the sill, and, watching her chance, ascended to the surface *behind* the fly, and with a leap measuring all of two inches was on his back, and had got fairly off with him in her capacious jaws before I had recovered from my astonishment.

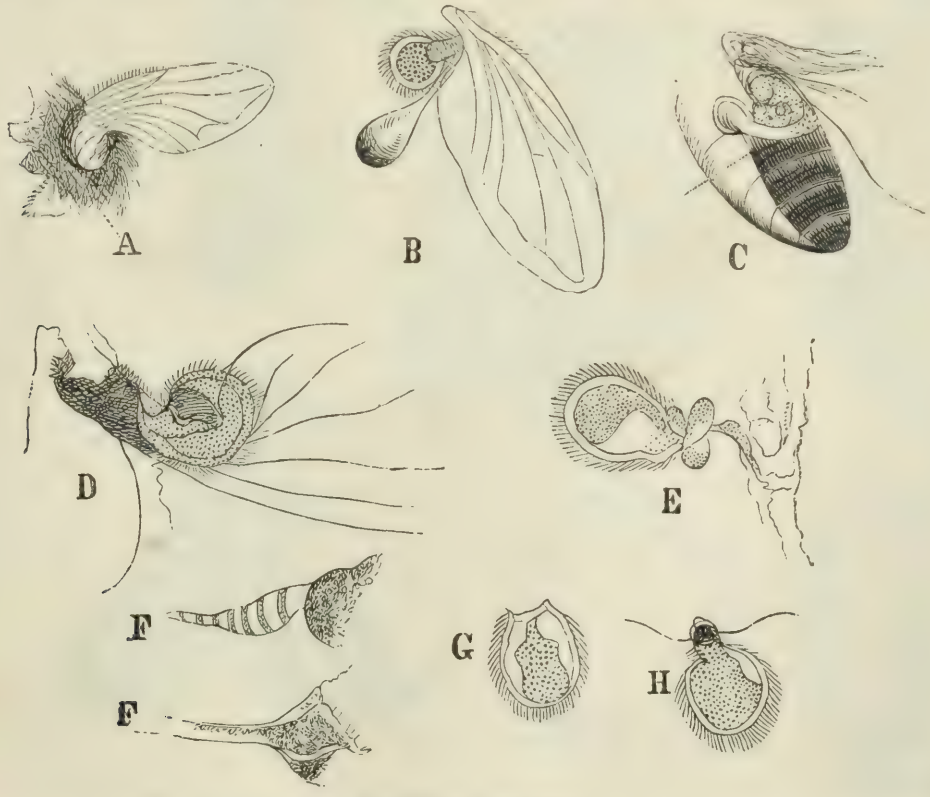
THORAX, ABDOMEN, ETC.

A. Thorax, under side.—B. Thorax, upper side.—C. Neck Socket.—D, E. Digestive Sac.—F, G. Salivary Sac.—H. Stomach.



There is a fly on a book before me now. I take a knitting-needle and move it straight up to him, and he does not move until the long hair of the antennæ is touched; then away he flies. Let him alight again, and move the needle to either side; before it has progressed a quarter of an inch he sees it advancing and flies up. I could relate such experiments by the dozen, but these must suffice.

The fly's body is divided

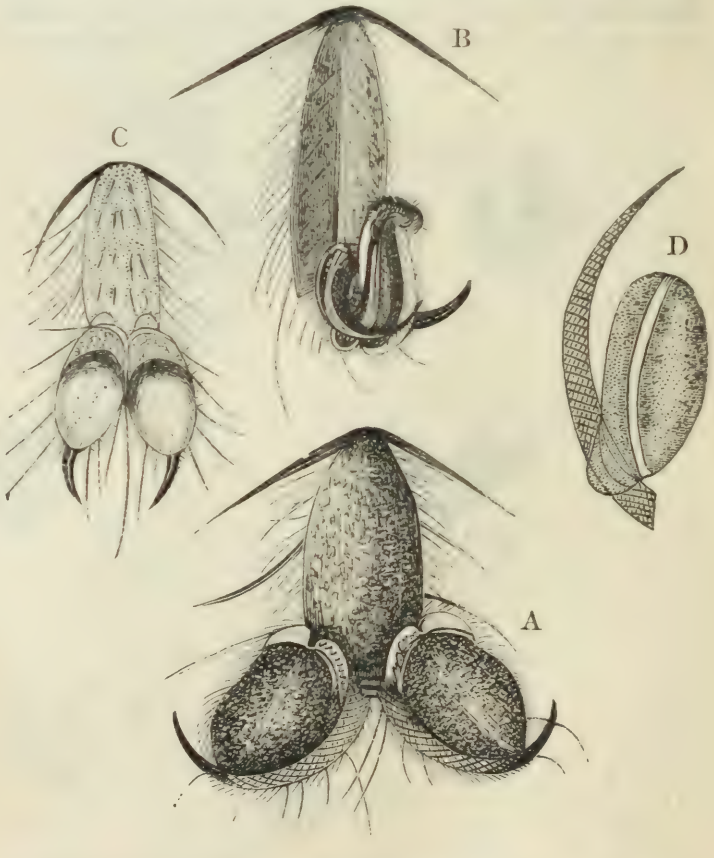
into three parts—the head, the thorax or breast, and the abdomen. The thorax is the portion between the head and the abdomen. The French call it corselet. On the under side there are three rings—if you examine the illustration you will perceive that the upper side, called the shield or escutcheon, has three stripes running perpendicularly, and very hairy and darker than the rest of the body. There is nothing peculiar about this part; but if you examine the under portion you will find on the first ring the coxa or hip joint, joining the legs to the body; this is the shortest pair. On the second ring are found larger hip joints, and a longer pair of legs, and the two wings. On the last ring are placed the longest pair of legs, and the halteres or poisers, which we shall view farther by-and-by. Besides these are two pairs of stigmata or breathing tubes on this side of the thorax. Cutting off the top of this corslet you see, under this rough skin or shell, first, two long respiratory muscles, called trachea, connected with the long, nervous chord running the whole length of the body, from the head to the anus. By the side of the left one is a sac, which is the salivary sac from which she *pumps*, with the aid of the capillary nerves of her proboscis, the fluid she requires to moisten any hard substance she wishes to feed upon. Defour has been translated calling this "a sac for the *ruminating process*"—a strange accomplishment for an insect with a proboscis. At the top, not far from the neck, is another sac, communicating with the stomach, and called "the crop" by several authors. This is a little laboratory where the digestion takes place. The pure fluid retained evidently possesses corrosive qualities, for it rusts any fine instrument touching it. This fluid runs into the large salivary sac, while the coarse fluids pass from it into the stomach. There are, besides these, a large number of nerves—bundles of small tissues which there is not space here to describe. So we will turn to these fairy-like appendages, the wings. Those of the fly have six nervures running nearly their length, and several shorter ones intersecting these. The filament encasing them extends above and below, being double; it is a network, coarse and stiff beside others, but looked at in a good light you will find it highly prismatic; the rays of a summer's sunset are all reflected in its tissue. These nervures, small and large, are air-tubes filled from the trachea, principally by the movement of the little halteres—small vesicles placed at the sockets and joints of the wings for this purpose.

These little halteres or balancers are air tubes themselves to the body, furnishing the respiratory muscles and the pulmonary sacs with fresh air; and doubtless through these is communicated the perfume *tasted* by the insect, which constitutes their sense of *smell.* From these halteres extend ramifications all over the body. A haltere is simply a hollow thread terminating in a globular mass, which is always vibrating. It is protected by two horny scales, "which resemble," says Latrielle, "two shells of a bivalve mollusc." They are called alulets, *cueilleron*, or winglets, and are surrounded, covered, and protected by delicate cilia.

The poisers play an important part in the existence of the insect. They are thought to be rudimentary wings, or balancers, or poisers to the true wings. If you cut *one* off the insect flies sideways, and will thump itself against the glass

WINGS AND HALTERES.

A. Wing put back to show the Socket.—B. Haltere.—C. Place of Haltere.—D. Winglets.—E. Vesicles inflated with chloroform.—F, F. Socket and Valve of Haltere.—G. Upper Winglet.—H. Under Winglet.

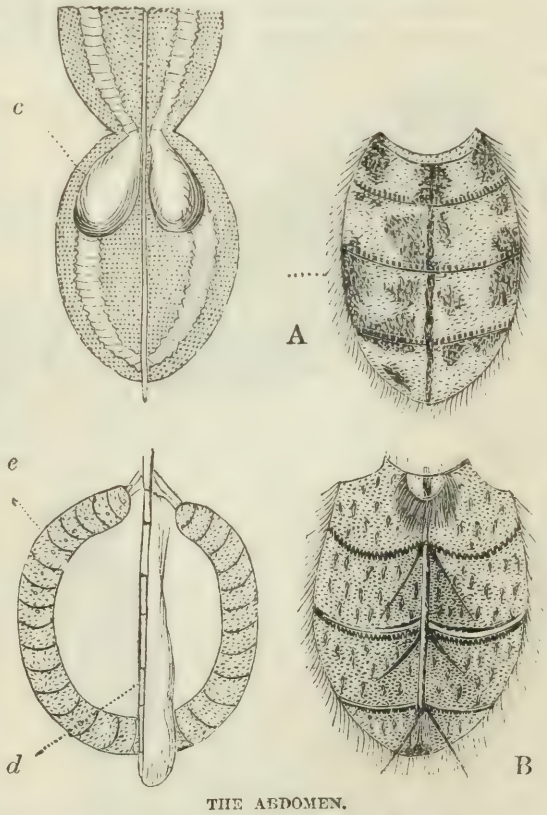


of the window or the wall most helplessly; if you cut off both it can not fly *at all*, and falls to the ground; not for the want of the wings being balanced, but because the insect has not the power to inflate the nervures of the wings without the assistance of the halteres. Next to the antennæ, I consider these little halteres the most important members of the fly's body—performing the parts of air-suppliers to the body, the informant to the taste that food is near, constituting themselves as almost and literally olfactory nerves by aid of the atmosphere in which they have their vibratile action, and certainly performing the work of inflating the wings. When the fly is under the effects of chloroform they are exceedingly vibratile. You can not quiet them, nay, even pick them out from the body, and they will continue to move hours after.

The leg is the next member before us. Examine the illustration, and you will see the various joints. Under the glass the limb looks as if beset with thorns, the hairs are so coarse and strong. Although the femur, or thigh, is the largest of the five joints, it is in reality the weakest, being subject at times to the growth of a strange tumor. Seven years ago I perceived a great mortality among these insects, at a time when they should be enjoying their palmiest days. I examined a number, and found on all these excrescences at both ends. In some instances the legs dropped off at the coga, or hip, some days before they died. I have seen it on a few several times since. I feel assured it was a collection of parasites, but exactly of what nature the powers of my glass were too low to show.

Let her now "put her foot down." It is far more celebrated and talked over by men than was ever that of Cinderella. Here it is; it looks worthy of some consideration. The walking against *gravity* is not an accomplishment belonging to the fly alone; many other insects possess it; beetles, spiders, frogs, and several individuals of the Sauria family, particularly some of the little Geckotians at the South. There is a Katydid (*Platyphyllum cancavum*) before me now, who, having finished her breakfast, is hanging in repose, back downward, from the top of the glass. I consider this decidedly an achievement; but some inequalities in the glass evidently assist the hooks in retaining her position. Abbé de la Pluche's suggestion, "that the fly has a fluid in the sponges on her feet which she compresses against the glass, which fixes her in such a manner as to prevent her falling without diminishing the facility of her progress," though very much ridiculed among his contemporaries, has been revived within the last four years by Mr. Hepworth, who remarks "that there is at the termination of each of these numerous hairs that cover the surface of the bottom of the foot a minute expansion which is kept moist by a fluid exuding from the extremity." But if you follow the footsteps of a fly with a magnifier, as she traverses a superior mirror, there is not a shade left behind them. Moreover, you may split these sponges, and no microscope I have seen will show the slightest root or pore of a hair on the other side. Consider the number of steps taken daily by the fly; what a drain this would involve upon her system! Where is

THE LEG.



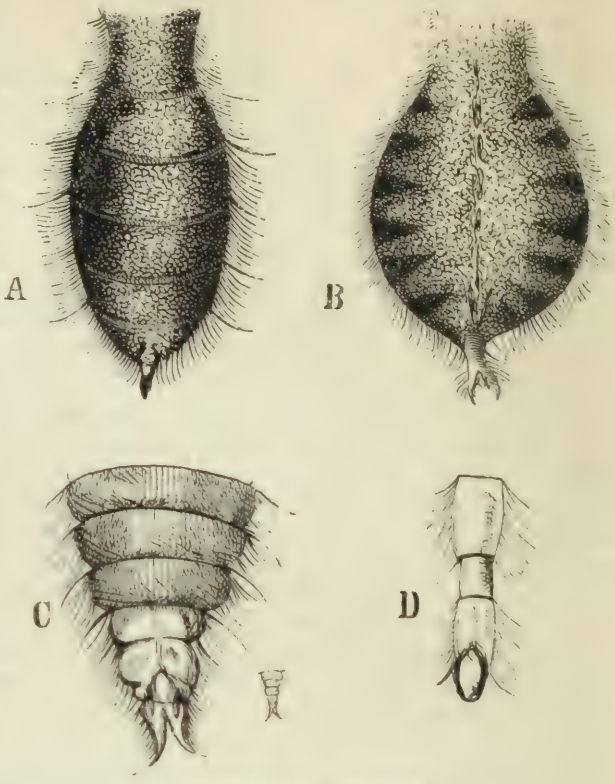
THE FOOT.

A. Front view.—B. Side view.—C. In repose.—D. Reflected in a mirror: Hook turned back.

the fluid generated, and how is it communicated to the foot? There is a strong, harsh fibre connecting the joints of the foot; but it is not tubular, and could not convey fluid. The hairs are arranged on the pads very systematically, and they are very strong. Their points coming first in contact with a substance, the pressure becomes *equal* all over the cushion, thereby rendering the *vacuum* complete and tight; whereas, if the skin was not pressed down *equally all over the pad at the same time*, air bubbles would exist, weakening the suction and rendering the footing insecure. Put a fly under a glass early in the season, and feed her. She is old at the end of October. Examine her feet then, and you will find the hooks flaking off in particles. They soften at the tops when age advances, which causes the flies on the approach of winter to lose their hold, when they fall on their backs and die. It is only the second brood whose hooks are sound, and these show, on emerging in spring, their inability to serve for any length of time. Derham, White of Selborne, Bennett, and others, concluded it was by "the pressure of the atmosphere that the fly retained its position." "After the manner," says the first, "boys carry heavy stones with only a wet piece of leather clapped on the top of the stone." Shaw suggests, "She hooks her claws to the tarnish on the glass, or the dirty, smoky substances adhering to the surface." But it is now ascertained beyond cavil, that "the apparatus in the feet of the fly and its congeners consists of two or three membranous suckers connected with the last joint of the foot by a narrow neck, of a funnel shape, immediately under the base of each claw, and movable in all directions. These suckers are convex above and hollow below the edges, being margined with minute serratures, and the hollow portion covered with down. In order to produce the vacuum and the pressure, these membranes are separated and expanded, and when the fly is about to lift its foot it brings them together and folds them up, as it were, between the two claws." If you confine a fly in a tumbler, or place something tempting on a hand-mirror, you can easily, even with an inferior glass, convince yourself of the justice of these remarks. Have you never watched her performing her toilet? These pads and hooks serve as combs and brushes. She is very cleanly, and such an active little body must gather a quantity of dust during her various rambles. She never pauses for rest a second but they are passed over her person and rubbed against each other, and after her feet have been in fluid you can, if you watch her, see her with the lips of her proboscis *sop* the pads, if I may use the term, until they are relieved of the adhering moisture.

We have now remaining only the abdomen or body. This is encircled by several rings, which recede into each other or distend, according to the wants of the insect. Down the centre of the abdomen, dividing these rings, is a flexible muscle. On each ring are two very minute holes, called the stigmata, pores, admitting air into the body, whereby the fluid called the blood is rendered fit for breathing and sustaining the viscera of the fly's membraneous system. In the interior you will find, if you like the investigation, the trachea attached to the abdomen, through which respiration is performed by contraction and dilatation of the abdomen. There are two large pulmonary sacs, opening at the will of the insect into the trachea of the thorax. From experiments I have made on these insects while under the effects of chloroform, I am convinced that the fly, on alighting, forces all the air from the pulmonary sacs into the large tracheal muscles, thereby nearly doubling her weight; but as she rises on her wings, their action forces the air back into the sacs, which adds to the buoyancy of the insect, and assists her to rise.

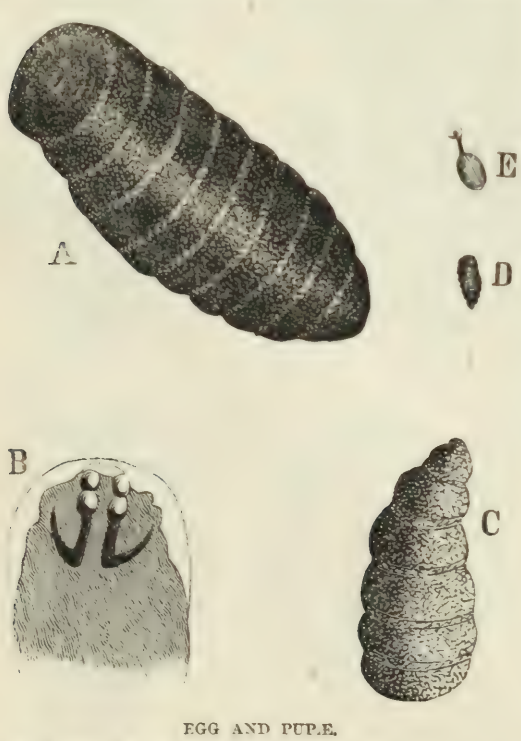
The brain, which is simply a couple of masses called ganglions, of course very minute to be concealed in this small head, has a number of nerves attached to it, which communicate with other members: two to the eyes, two to the antennæ, several to the proboscis, the palpi, and probably others. Many may be seen branching out and convoluting every where, but all eventually communicating with the mass called the heart; which is a dorsal vessel extending only the length of the body, closely attached to the external shell. It is of such a mucous nature that it can not be effectively represented on paper. One little vein I must mention, feeling assured that it is of importance in the economy of the insect. It is very long and thin, runs in and out under large tubes, and gets tied up in the small arteries, but always reappears. Its use I could never ascertain. It springs from the brain and terminates in some of the inaccessible valves



THE ABDOMEN.

A. Upper side.—B. Under side.—*c*. Pulmonary Sacs.—*d*. Intestinal Canal.—*e*. Abdominal Trachea.

of the heart. It is easily traced through all its evolutions in flies killed by poison, if observed the moment they fall. In some it is of a gray and blue tinge, in others a bright copperish red, owing to the qualities of the poison, I presume; but it is not so easily detected when they are killed with chloroform.



You would not suppose, looking at this atom, there was such a world of complicated machinery working within so confined a space, all performing their various functions at the command of Him who made the tiny animal for His own purposes. You can not fail of feeling amazed at such an embodiment of marvels. It is in its construction the most harmonious and systematic in the insect kingdom, and beautifully has every joint and nerve its appropriate use and action.

We have arrived now at the point where that important question can be asked with propriety, "Where do all the flies come from?" Many authors assert that the eggs are deposited in any substance of a moist nature. This I think decidedly erroneous. Those choosing flowers and decayed vegetable matter belong to the large family of the *Anthomyzides* (flower-flies), which resemble the common house-fly so closely in some of the genera that a very experienced observer can be deceived. Three individuals out of four could see no difference between two flies I showed them until I pointed out the almost invisible celulets, the exposed halteres, the principal nervures running parallel to the outer edge of the wings. This fly had been depositing her eggs on the decayed and glutinous leaves of some potted bulbs now faded out of season.

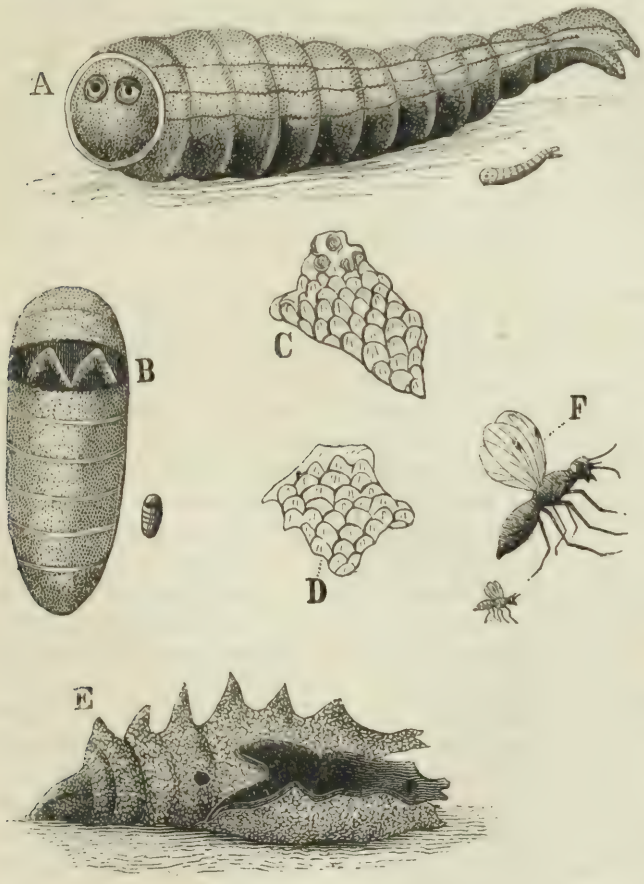
EGG AND PUPÆ.

A. Pupa Case.—B. Puparium opened to show Hooks.—C. Pupa Case, second day of closing Rings.—D. Pupa Case, natural size.—E. Egg of Harpynia.



The *Musca domestica* (Linnæus) confines herself to fresh stable manure of the horse. I never found her eggs in any substance but this. She generally averages about two hundred eggs the season, but at one time seldom deposits more than seventy. She then rests about six weeks, and makes another deposit, always retaining some within her ovary. The *Harpyia* deposits her eggs in decayed fish manure; and farmers who use it without covering it with lime may expect it to be devoured. This is the reason they are found so intolerable at the watering-places. The progeny of one fly will devour a moderate-sized fish in seven hours. Away from the coast, where this manure is difficult to be obtained, the "slush" of the cow and pig-pens will answer her purpose. The *Harpyia tenuis* keeps her company. There are, besides, seven species of *musca* choosing fish manure as a deposit. The *Harpynia* I have hitherto found only in horse-manure *within the stable*. I never found her depositing out of doors. Her egg has a small neck or handle to it, serving, I presume, as a mouth for air or moisture. This disappears on the third day, but whether it drops off or is absorbed I never discovered. The fly I have illustrated held, as far as I could count with the glass through the distended skin, one hundred and ten eggs ready for being deposited. The mass at the top of the ovary is evidently not impregnated at the same time. I have had two flies under observation lately; one contained only a few eggs around the mouth of the ovipositor; the other's ovary was about a third full, showing by its bright yellow tinge how far the mass of eggs extended. Those remaining over

the winter have the eggs impregnated in the fall, and remain thus until the warmth of early spring induces the mother fly to come forth and deposit them—about the beginning of May. If the season is warm and late there are three broods of the *Harpyia* during the summer, not including those who come forth late, which are those who hybernate.

The fly's ovipositor is retractile, and can be closed up like a telescope and drawn within the body. During the time she is depositing her eggs she has a peculiar hairy aspect. When she dies after the last deposit, which is almost immediately, her position for half an hour or more is very strange. At first she is singularly stretched out; the body afterward contracts and eventually resembles any other dead fly. The larva emerges in never less than six days, and sometimes not for twenty, according to the weather; and never during rain. The chosen time is just as the sun is rising and the earth moist with dew. It is an exceedingly ugly grub, with its head at the small end of its body. No eyes: he always appeared to me to resemble a blind puppy wriggling along. He has no feet, but only a pair of hooks with which he feeds himself, about as sufficient for the purpose, one would think, as a pair of chopsticks; but he manages to consume his food with the same rapidity and voracity a Chinese does his rice. The large end of his body is truncated like a barrel's head. When he has eaten sufficiently he descends into the earth and commences to contract his thirteen rings until he resembles a mustard seed made of leather.

Within this shell he reposes, separated from its skin, as a young bird within the egg. His hooks are now cast away as quite useless.

When ready to come forth as a perfect insect the *Harpyia* proceeds in a peculiar manner. If you perceive a movement in the pupa case and open it, you will find the fly with his head pressed apparently against the thinnest end of the puparium, so as to force an opening for his body. This operation with the common blow-fly (*Musca carnaria*), and some others, is safe enough, for the head is covered with a sort of bladder, which can be inflated until it forms a kind of muzzle or snout, gradually enlarging until it resembles a ball, with which it ruptures the pupa case; but with the genera which possess such prominent eyes, projecting much beyond the division between them, which may be termed the forehead, it always appeared to me a decided risk to use the tops of these discs, with their tender facets so fragile, to force an opening through such a tough material. After years of observation, I discovered that with the *Harpyia*, after the head has been projected so as to make room for the movement of the legs, these are gradually pushed up, while the head is drawn down between them, when their joints, doubled like an elbow, force an opening. When this is accomplished the legs must be drawn back, which consumes probably a day; but at last the head obtains its right position, pushes the dilapidated end apart, and the body easily emerges. This observation was confirmed thus: I had been for some days anxiously watching the bursting of a caterpillar chrysalis. I anticipated seeing a fairy step out at almost any moment, when unexpectedly one day I perceived a black imp protruding his feelers from a puncture the size of a pin's head at the top of the chrysalis. Out he scrambled, then another, and another. At last I got tired seeing this army of little black imps pouring out. I took a penknife and ripped up the case a short distance. Those near the opening had their heads placed (resembling minute glass beads) ready when their turn should come; but those beyond and farther in the case had their heads sunk down and their legs elbowed, as if making an effort then to force more of the case. As room was made for them, by the egress of the advanced column, the heads protruded and the legs were drawn back to their natural position. Out of this chrysalis came 286 flies, counted after my curiosity had been excited to know how many there were. At least fifty made their escape before I began to take account. Those beyond the rings were golden green Ichneumon flies with most beautiful prismatic wings; those at the lower end of the case were very minute black insects with violet-colored wings. I have never met with either of

LARVA, ETC.

A. Larva, enlarged and natural size.—B. Pupa Case.—C. Point of Egress.—D. Preparing to come out.—E. Chrysalis.—F. Ichneumon Fly.

them before. It is very evident this caterpillar had been used by two species of this fly; it is a rare and uncommon occurrence.

A full-grown fly will live throughout the summer under a glass, if fed with cake or fruit; but it must have some cooked juicy meat at times and clear water to keep it healthy. It is believed that flies die at the close of the season with a disease which has been honored with the name of *Empusa Muscæ*. They are seen standing as if just alighted, with proboscis extended, looking as if about to fly. When examined they are found covered with fungi, and crumble to dust on being touched. Goethe noticed and described this disease in some of the German papers. It had been suggested and described by De Geer as far back as 1782; but I am skeptical enough to confess my conviction that authors have grasped a result with too much haste.

Living upon fluids, of course you may suppose there is nothing very material about a fly. A little chemical effort will enable you to dissolve him, and throw him away, literally "spill him" in a few drops. Old age—the Nemesis of biped as well as insect—overtakes them, the cold blast of winter chills them, and clinging to appearances to the last, as we do, they stand up to it and die like heroes. The evaporation of living fluid now commences, and from it springs this fungus—as mould does from darkness on furniture in a room from whence light has been long excluded. To say this causes the death of the insect would be wrong. Kill a dozen of flies, young and healthy, cork them up from the air, and in a short time they will be so thickly covered with this fungus that you can not see the insects. Not many weeks ago a friend sent me, from some distance, a spider, a splendid specimen, related to the Lycosa family (ground-spiders), a new species. This was a most brilliant and unique dame, in magnificent black velvet and gold embossments. She was placed under a glass, every delicacy was offered her—gnats; nice, tender little flies; a *bonne bouche* in the shape of a young verdant grasshopper. All in vain. She would not deign even to look at them, unless they annoyed her, when she gave them a nip, and sent them, with a jerk, some distance from her. I put in, at various times, several large flies, removing the carcasses of the slain. On the fourth day she deposited three eggs, which, during the day, she enveloped in a silken bag. I now placed under the glass a small pot of earth, thinking she might construct a new home; but she took no notice of it. On the fifth day she caught all the flies then under the glass, five in number, and tied each of their wings and legs together. She then drew up the silken bag containing the eggs beside them. Now she commenced taking life in earnest, spinning day and night. A beautiful little tent began to be evolved, one end pinned against the side of the pot containing the earth, the other three gummed to the paper on which the glass was placed. It was conical in shape, sloping gently down to the foundation. Under this silken canopy reposed the three eggs and five imprisoned flies, hermetically sealed up—for the tent was glued, on examination, tightly all round to the paper. Four days from this time, seeing her very stationary, I examined her, and found her dead. She had evidently died of a disease I once heard a sad *emigrée* describe as "Une maladie de l'amour de la pâtrie et de la maternité pour les morts"—"A malady of love of country, and a maternal love for the dead." On removing her she fell to pieces, there remaining only a thin shell. She had spun up the materials of existence in this last effort for her offspring. She had evidently been captured at the time she was depositing her eggs, and her captors had overlooked her deep-seated love for her young, and neglected to retain her egg-bag. They always pine and die when separated from this. Otherwise they are content, and will thrive, and eventually bring out a fine brood of young ones. I loosened this tent to see what effect confinement had on the flies. They were covered thickly with a fungus, a prolific mould, some spores of which were nearly ripe. The flies *were all alive.* After two hours' work I loosened one from his trammels, but he could not rouse himself effectually to use his liberty. He had evidently received a gentle narcotic, which was to serve for a specific time—when the eggs were hatched. In this instance, you perceive, the fungus covered these flies while *they were yet alive.* As for "crumbling into dust," the sound and healthy flies I have had under examination these few weeks past, if touched with a needle, are but dust. Putting one of their abdomens, as I write, under the glass, there is not a single atom of the complicated interior remaining; nothing to be seen but a mere dry shell.

DEAD FLY.

The *use* of the fly is a question some people refuse to have solved for them. These house flies consume an immense quantity when they are numerous—and permit me to say they are positively *necessary* where they are found; thus they never or seldom appear unless the *negligence of housekeepers invites them.* They are the food of swallows, robins, and sparrows; barn-yard poultry are fond of them; they are medicine to the dog and cat, serving as poison to the intestinal worms which trouble these animals; and there must be a variety of other uses for them, which our finite vision can not penetrate, but which are ordered by Him who knoweth all things. Linnæus tells us the larvæ of three females of the *Musca vomitoria* (common blow-fly) will devour the carcass of a horse as quickly as would a lion. This being the case, consider how indispensable the whole family of *Muscidæ* is in the removal of decayed matter and fetid substances, particularly in warm climates and closely built up cities. Therefore, if not for the beauty of the fly, at least for his usefulness,

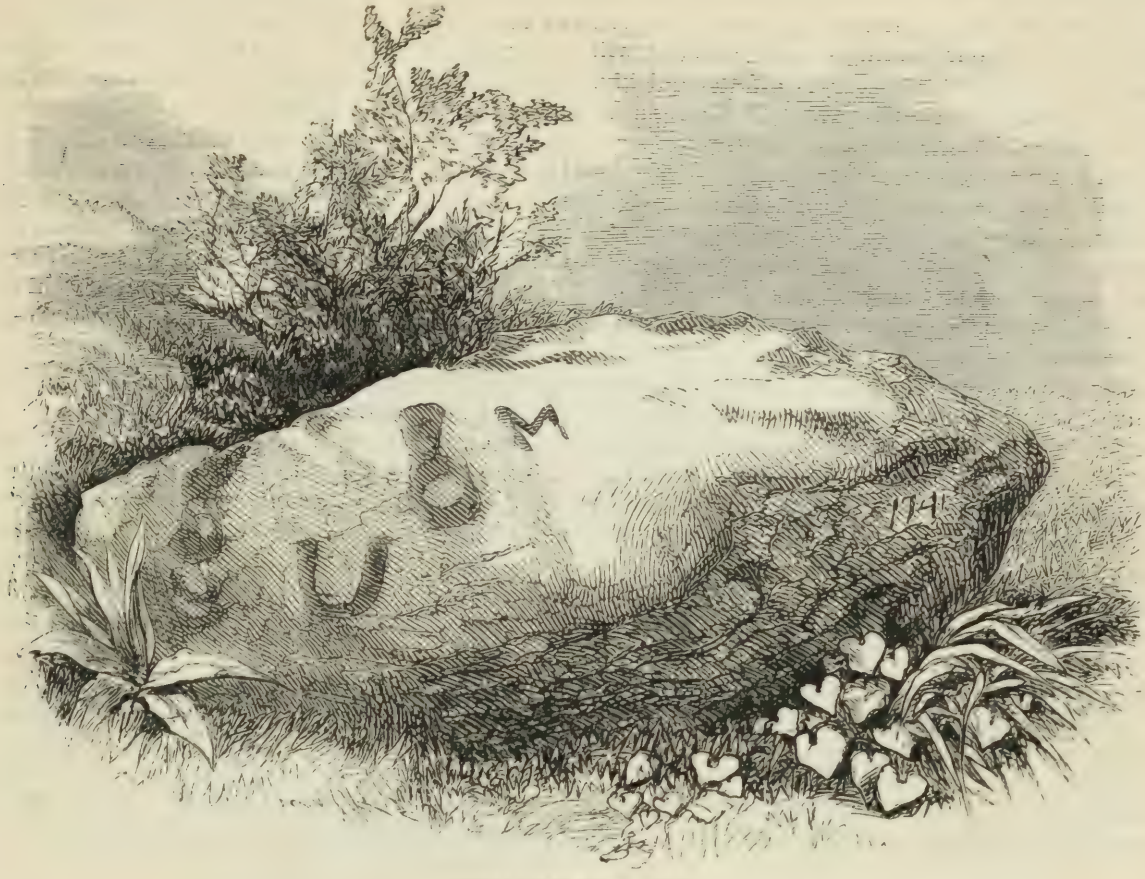
"Hinder him not, he preacheth too."

RICHMOND.

LOUNGINGS IN THE FOOTPRINTS OF THE PIONEERS.

"THIS city hath 'a pleasant seat,'" wrote from Richmond the Great Expounder. The early beams of the October sun, which furnished him the inspiration of the moment, dallied, as he wrote, with the dew-drops on the lindens, elms, and aspens around him, cast their buff coat over the birches, maples, and willows of the middle ground, and blended in the distance, on the transfluvial hills, the autumn mist and the gregarious but unsocial pines. The rushing river, curbed and bewildered from time immemorial by seams and boulders of unyielding granite; the masts and spires and thronging walls, overlooking rock and water and the gently swelling plain beyond; the amphitheatre of hills, equal in height but infinitely diverse in form—"distinct as the billows but one as the sea"—holding watch and ward over them and over all, made up a scene certainly worthy of leading forth into expression the latent poetry of that great soul. Had not intellect so strongly outweighed, or at least repressed, fancy in him, with how brilliant a procession would he have peopled the landscape! To one "of imagination all compact," each departed century would have furnished its representatives of names which will never die. Close by were the walls still vocal with the tones of Randolph, Madison, Leigh, and their compeers. On the nearest eastward eminence rose, through clustering trees, the old white church which rang to Henry's appeal for liberty or death. Still further eastward, but nearer the river, was visible the site of the Indian town which formed the chief residence and bore the name of Powhatan. For miles beyond glimmered the stream whose abounding waves nurtured the first germ of Anglo-Saxon civilization in America.

The scene from which Webster turned, if not



the reflections it must have suggested to him, has been, and will be, the luxury of many an humbler traveler. Most of its natural elements, and all its historical associations, will be changeless throughout time. The pickaxe will continue to modify somewhat the buttresses of the main hills, and new bridges will be added to the three which now thread so straightly the island-labyrinth. Rectangular and loop-holed piles of brick will swarm over many bluffs and ravines as yet "unimproved," and factory chimneys will flaunt their white and black pennons in wider and denser array. But the islets of rock, with the birches and willows which monopolize their rifts of scanty soil, will be long untouched because untempting. And the pines which now fringe the horizon will fringe it, in all probability, until agriculture shall have altered for the better the ground on which they grow, as decidedly as, since their predecessors first felt the white man's axe, it has been altered for the worse.

One of the aforesaid buttresses, running directly across the course of the principal street, has brought it to an abrupt and premature end. Main Street, Richmond, Virginia, thus appears to the eye to have its exemplar in Emerson's broad and beaten highway, that ended in a squirrel-track and ran up a tree. Tracing, however, the mystery more closely, we find that it swerves from the hill and darts suddenly down, rocket-like, to Rocketts. Here congregate those who go down to the deep in brigs and schooners. Passing through this settlement of a most unsettled race, we reach, within half a mile, the locality noted as Powhatan's capital. It is to the south of the road which runs parallel with the river, and on the verge of the second bank, or upper level of alluvion, some forty feet above the lower. The ground falls abruptly on the front or river side, and more gradually on the other quarters. On the east the deep channel of a brook separates it from the most commanding point of the upland. A situation of this description was, as is well known, a favorite with the Indians every where. Sufficiently removed from the higher hills by a comparatively level interval, and overlooking the rich bottoms mostly selected for their primitive farming operations, it best fulfilled the conditions of convenience for industrial purposes and for defense. We are familiar with a similar spot on the South Branch of Potomac, or Wappacomo—one of the loveliest streams in America—where the ground is absolutely strewn, for a space of several acres, with arrow-heads and bits of aboriginal pottery. Tradition there locates an Indian fort.

Immediately on the selection of Jamestown for the seat of the colony, "Newport, Smith, and twentie others, were sent to discover the head of the river: by divers small habitations they passed, in six dayes they arrived at a Towne called Powhatan, consisting of some twelve houses, pleasantly seated on a hill; before it three fertile Isles, about it many of their cornefields, the place is very pleasant, and strong by nature, of this place the Prince is called Powhatan, and his people Powhatans, to this place the river is navigable; but higher within a myle, by reason of the Rockes and Isles, there is not passage for a small Boat; this they call the Falles."

POWHATAN.

POWHATAN'S TOMBSTONE.

This brief description is of itself ample to identify the locality. The falls are about a mile above. Directly in front are the three islands, though one of them has been reduced by freshets to the humble station of a sand-bar. Of them there can be no question, since no other islands exist between the falls and the immediate neighborhood of the Appomattox—a distance of forty miles.

For considerably more than a century *Powhatan*, as it is still styled, has been in the hands of the same family. Taste, time, and wealth have combined to enhance the natural beauty of the spot. The *genius loci* has never been neglected. What few relics of the red man existed have been by the present possessors carefully preserved. Beyond, however, some of the ordinary arrow-heads, axes, etc., these remains are few indeed. One granite boulder, perhaps a ton in weight, bears many traces of rude carving. A row of symmetrical holes, an inch or more deep, runs along the top. On the sloping side are graven marks of the shape of a child's and an adult's foot, a horse-shoe, and others less distinguishable. These are obviously of far greater age than other cuttings on the same surface, which are dated 1741, and which give in two or three places the initial (M) of the family in possession: Mayo. The block is termed popularly "Powhatan's Tombstone;" but we could learn no distinct evidence justifying that designation. It lies where it has always lain, near the brink of the front declivity. Some eighty paces distant is another fugitive stone, more imaginatively termed Captain Smith's Rock. The discoverer himself disposes of its claims in these words: "At Werowocomoco, on the north side of the river Pamaonkee (York), was his residence, when I was delivered him prisoner, some fourteen myles from Jamestown."

The originator of the tradition argued, doubtless, from the form of the stone. It has a smooth concave depression, finely adapted for the reception of the unfortunate adventurer's head and shoulders. Its obvious suitability to the general purpose in question must have often struck the grim chieftain and his grimmer followers. Doubtless, in their moods of peaceful musing, when nothing intruded to disturb the calm serenity of their minds, or to divert them from the invention of new tortures for their neighboring foes, the Manakins, many a wistful glance was cast at this admirable head-smashing arrangement, and the war-club whirled, with professional precision and enthusiasm, over the head of the imaginary "subject." We can fancy the astute old king, on a fine summer's morning, the matutinal nibble at the body, or rather the ear, of Mondamin over, ditto the matutinal pipe, an hour's lazy overseeing of his corn-hoeing harem grown tedious, stalking pensively forth in a brown study and a gray "mantell of Rarowcun skinnes." This granite boulder arrests him. Speculations, partly utilitarian and partly theological, seize his brain. "*Cui bono?* When, how, or why, did the Great Spirit bring this big pebble from the falls yonder, and lodge it here, fifty feet above the water? For pounding hominy its shape is objectionable, and it is too hard to be hammered into the right one. For dress-

ing deer-skins it might answer, were it higher. For receiving our oblations to Manitou it will hardly do. They would pass off too quickly. For crushing a rascally Monacan it might be serviceable; but the stake is the time-honored doom of those fresh-water scamps, and I, as constitutional king, must uphold the customs of the realm. But—let me see—that way lies its use, methinks. By the Big Bear, I have it! It was sent to await the coming of the pale-faced crew, whose thunder insults the Thunder-bearer. It is reserved for vengeance on them. See how beautifully the upper half of one of the iron-shelled varlets would fit that hollow! How the two-legged terrapins would crack, breast and back! Let me once catch the fiercest reptile of them all, and the name of John Smith shall be heard no more in the land." Certainly, if the hero's head never rested there, it was merely because he did not happen to be here at the time.

A clew to the use of these boulders, as of others existing in the neighborhood, may be found, perhaps, in the following statement of Smith:

"They have also certaine Altar-stones they call *Pawcorances;* but these stand from their Temples, some by their houses, others in the woods and wildernesses, where they have had any extraordinary accident or incounter. And as you travell, at those stones they will tell you the cause why they were there erected, which from age to age they instruct their children, as their best records of antiquities. Vpon these they offer bloud, Deere-suet, and tobacco." This interpretation does not necessarily interfere with the character ascribed to the stone we first referred to. An old sacrificial block may well have been dedicated to the memory of his race. True, the Indians were not pagans enough to deify their dead emperor, as the Romans did theirs. The act would have been more analagous to the occasional practice of Christian nations in making a mausoleum of a church.

Two senile elms, the largest we ever saw, are pointed out as the site of the royal wigwam. That structure is reported to have stood between these two trees. They look as if they might be three centuries old. Their branches must have withered and died with the people whose daily life they witnessed, whose decay they typify, and whose graves they mark.

Could the Virginia Company have maintained its existence as long as its contemporary, the monster monopoly whose Sepoys are now murdering and being murdered in good old Mogul style, it would now be luxuriating in the fruits of a land speculation unmatched by Mariposa or

POWHATAN ELMS.

HENRICOPOLIS.—LOOKING DOWN THE RIVER.

Fort Snelling. Smith purchased *Powhatan* village and "all that countrey for a proportion of copper." The exact value of a "proportion" we do not know; but it must have been small, like the proportion of his dues a stock-holder or depositor recovers from the débris of a bogus bank. Copper was a legal tender in Virginia then, as tobacco virtually became not long after. This snug investment included, besides the present corporate limits of a city of 50,000 people, "neere two hundred acres of ground ready to be planted, and no place we knew so strong, so pleasant, and delightfull in Virginia, for which we called it *Non-such*."

Ten miles farther down the James, on the same side, is the deserted site of Henricopolis, so named after the Prince of Wales, who escaped the fate of Charles I. by preceding good King Jamie to the grave. Good is an epithet the enlightened reader will concede, or at least pardon; if he don't, he ought to. The worst things established against this well-abused monarch are, that he had pedantry and hadn't dignity. Just compare these failings with the *best* things recorded of any one of the Hanoverian dolts who have replaced the Stuarts. He founded the magnificent American empire, which the most respectable of them lost. He likewise founded, with his expedition of four royal ships, in 1612, the more gorgeous and populous empire on the opposite face of the globe, which mainly supports the greatness of their actual representative. He accomplished, of his own motion, and through his own constant oversight, that translation of the Bible which all the learning and acumen of the most learned and critical age has failed to overthrow. Practically, he fully maintained the dignity and power of England. He had the refusal of a daughter of Spain for his first son, and married his second to the daughter of France's greatest king. And were there any thing more needed to prove him an able monarch, we should have it in the fact that he staved off for a quarter of a century the English revolution, sustaining the contest against the very ablest leaders of that great movement. Henrico City, whence this little digression has carried us, was the chosen location of the first college ever endowed within the limits of the United States. Besides money contributed in the mother country, fifteen thousand acres of land were reserved for the fund. The massacre of 1622 brought the plan to a stop.

Here, also, was the residence of Rolfe and Pocahontas. Tradition still points to the spot where most of their brief married life was passed. Here was the cubiculum of that enormous family which, though herself the mother of but one son, she sent down to future ages. As Burke, writing in 1804, says: "There is scarcely a scion from this stock which has not been in the highest degree amiable and respectable." Had John Randolph, one of these scions, grown into notice when this was penned, perhaps the worthy chronicler would have selected some other term than amiable, though his general eulogy might have been more glowing. Hundreds of Virginians boast this strain of native American blood. It is shared by such men as James Madison, Zachary Taylor, and John C. Breckinridge, be-

sides a host of lesser lights noted in the local history of Virginia. Royal and republican rule are here united. The chiefs of the Confederacy are the heirs of the forest monarchs of the Old Dominion. Comminuted as the blood of Powhatan has been by time, it still now and then displays itself in lineaments too markedly Indian to be ascribed to any other origin. Of this recurrence of "the old heroic strain" the features of Randolph's mother afford a brilliant example, though one much less decided than we have seen in some living individuals. Physicians and ethnologists are familiar with the fact that old features, after having disappeared for generations, will often show themselves with startling exactness in a remote descendant; and many who are neither doctors nor savans must have noticed it.

Henricopolis and its dependencies spread over a space of four or five square miles. A palisade, two miles long, running in a slightly curved line along a range of still wooded hills, and abutting at each end on the river, amply protected it on the land side. In front the river projects from its general course in a bend five miles around, though the neck of the peninsula is little over a hundred yards across at the narrowest point. This neck bears the name of Dutch Gap, as most accounts say, from an attempt of Hollanders to cut a canal through it. Another tradition refers the designation to a boat race between an English and a Dutch skipper from City Point to Richmond, wherein Bull outwitted Mynheer by dragging his boat over the neck. A deep ravine cuts nearly half through, and has every appearance of being artificial. It is shown in both our sketches. One of them shows the surface of the ground to have been removed the whole way across. At the lower end it runs down quite to the water. Looking down the river, we see the modern house erected on the plantation of *Varina*, an ancient seat of the Randolphs. Rolfe's house is said to have stood not far from that point.

The contemporary description of the settlement is: "This toune is situated vpon a necke of a plaine rising land, three parts inuironed with the maine Riuer; the necke of land well impaled makes it like an Ile; it hath three streets of well-framed houses, a handsome Church, and the foundation of a better laid, to bee built of Bricke, besides Store-houses, Watch-houses, and such like. Vpon the verge of the Riuer there are fiue houses, wherein liue the honester sort of people, as Farmers in England, and they keep continuall centinell for the towne's securitie. About two miles from the towne, into the Maine, is another pale, neere two miles in length, from Riuer to Riuer, guarded with seuerall Commanders, with a good quantity of Corne-ground impailed, sufficiently secured to maintain more than I suppose will come this three yeeres."

The land—both the peninsula and the slope thence to the brow of the upland—is very fertile, and was, when we saw it in early June, one luxuriant expanse of corn, wheat, and clover, unbroken by a fence or hedge. In two centuries and a half the plow has, of course, obliterated all traces of buildings. A few scattered bricks along the sides of the Dutch canal, where stood the nucleus of the settlement, were all we found.

HENRICOPOLIS.—THE PENINSULA.

JAMESTOWN.

An old negro, whom we found at work, said that thirty-four years ago, when he first came to the plantation, he recollected some traces of a house near the Gap; but neither he nor the intelligent gentleman, a resident of the immediate neighborhood, who accompanied us, knew of any now. The beauty of the tranquil landscape, and the associations of the ground we trod, sufficed to atone for the want of more palpable holds for the imagination.

Be not alarmed, reader. It is no part of our present purpose to hand-book the lower James River, rich as is the promise of such an undertaking. Almost every curve brings us in sight of some new memento of antiquity. Only the most time-honored of these scenes come within the purview of the present article, in addition to those already noticed.

Midway between City Point and Norfolk, on the northern side of the river, the voyager by steamboat will observe a projecting point, which will remind him of the banks of the Mississippi with their ever-crumbling alluvium. Most of the site of Jamestown village has thus disappeared, and the rest is slowly but perceptibly yielding to the current. Ere the lapse of a great many years, unless protected by piling or some other engineering resource, the ground on which the first successful American settlement had its centre will have disappeared forever. It will be established on the map only by its bearings, as longitude and latitude fix the place where some gallant and richly-freighted ship went down. Timely measures should be taken to prevent this. One-tenth of the sum secured by the efforts of women for the purchase of Mount Vernon would suffice to keep above water the soil of Jamestown. Let art interfere to prevent the reclamation by Nature of her own work, and the spot where Smith first set up the meteor-flag will remain as plain to the eye of coming generations as the landing-place of his successors on Plymouth Rock.

While the northwestern point, where the village—"two rowes of houses of framed timber, and some of them two stories, and a garret higher, three large Store-houses, joined together in length"—stood, is thus in process of degradation by the waves, which have reached within a few yards of the ruins of the church, the great mass of the island will, of course, resist material change for an indefinite number of years. The encroachments of the water in the rear have indeed made an island of what was a peninsula in 1607; but a tract of fifteen hundred acres can hardly be much cut in upon for centuries, judging from the alterations hitherto observed. The settlement extended over the five hundred acres of dry land, and a detached post was maintained on Hog Island, a few miles below, on the opposite side of the river. The Cincinnatians should establish an annual festival on Hog Island, as it was the Jamestown of the porcine race—the centre from which light, in the shape of lard-oil and stearine, hath irradiated the continent. The materials of the feast might well be furnished from the neighborhood. Smithfield hams are certainly the best produced any where at this

end of Mr. Field's cable, and as the Westphalia grunters know not the taste of a nubbin, probably better than the boast of Europe. To jump from hog to hominy—from pork to wheat—we have an *apropos* word for the croakers over Virginia decay. Each of the three localities we have described is clothed with the fruits of scientific and improved agriculture. The average crop of the owner of most of Henricopolis is six thousand bushels of wheat and as much of corn. His thirty-five field-hands export cereals enough to feed fifteen hundred whites, or more than thirty times the population of the old settlement: "thirty-eight men and boyes," according to Rolfe's letter to King James. There is little doubt that, year after year, the yield per acre on each tract is nearly twice that in the Genesee valley. And—more important—the former average is rather improving, while the latter is diminishing. The course of events, which begins with palisadoed towns and ends with large farms, is the direct reverse of that witnessed in the Northern colonies, where the early towns have held their own, and where the rural population is more and more agglomerating into villages, as in France. Which of the two tendencies is the more conducive to rational and durable liberty, is a question we respectfully resign to the politicians. Those sovereigns of the sovereign people will, however, permit us to notice here, as incidentally and curtly as worthy Master John Rolfe does, the commencement of African immigration: "About the last of August [1619] came in a dutch man of warre that sold us twenty Negars."

This was a year and a half before, as the sturdy Smith rather testily remarks: "About some hundred of y^e^ Brownists of England, Amsterdam, and Leyden went to New Plimouth, whose humorous ignorances caused them for more than a yeare to endure a wonderfull deale of misery with an infinite patience; saying, *my books and maps were much better cheape to teach them than myselfe;* many other have used the like good husbandry, that have payed soundly in trying their selfe-willed conclusions." Our italics show the secret of the Captain's passing crustiness toward the Pilgrim Fathers. They preferred paying a few shillings to a bookseller for the fruits of his New England explorations to placing him personally at the head of their pious enterprise. Nowhere else does he manifest the least ill-feeling toward them. On the contrary, he fails not to do full justice to the iron energy that carried the infant colony of the North through its early days of trial. Such a spirit was sure of his sympathy. He indicates a genial interest in the prowess of Miles Standish. Gallantly would those two primal representatives of North and South have fraternized at feast and fray—in the "long and solemn draught" from Wendell Holmes's bowl, and in the stirring up of the Pequot that followed the stirring up of the punch.

This same year of 1619 was signalized by another event more memorable than the advent of Cuffee. On the 30th of July convened at Jamestown the first free parliamentary body the New World ever saw. The discovery of its recorded proceedings, until within a year or two past, supposed to have been irrevocably lost, if indeed they ever existed, is due to the Virginia Historical Society, through its agent, Conway Robinson, an eminent jurist, and draughtsman of the Revised Code of the State. From the State Paper-office in London he exhumed the manuscript journal, covering some thirty pages. It is headed:

"A report of the manner of proceeding in the General Assembly convented at James City, in Virginia, July 30, 1619, consisting of the Governor, the Council of Estate, and two Burgesses elected out of each incorporated plantation, and being dissolved the first of August next ensuing.

"First, Sir George Yeardley, Knight, Governor and Captain-General of Virginia, having sent his summons all over the country, as well as to invite those of the Council of Estate that were absent as also for the election of Burgesses. they were chosen and appeared.

"1. *For James City*—Captain William Powell, Ensign William Spense.

"2. *For Charles City*—Samuel Sharpe, James Jordan.

"3. *For the City of Henricus*—Thomas Dowce, John Potintine.

"4. *For Kicciotan*—Captain William Tucker, William Capp.

"5. *For Martin Brandon, Captain John Martin's Plantation*—Mr. Thomas Davis, Robert Stacy.

"6. *For Smyth's Hundred*—Captain Thomas Graves. Mr. Walter Shelley.

"7. *For Martin's Hundred*—Mr. John Boys, John Jackson.

"8. *For Argall's Plantation*—Mr. Powlett, Mr. Gourgerny.

"9. *For Flour de Hundred*—Ensign Poppingham, Mr. Jefferson.

"10. *For Captain Lannis's Plantation*—Captain Christopher Lannis, Ensign Wisher.

"11. *For Captain Wirt's Plantation*—Captain Wirt. Lieutenant Gibbs.

"The most convenient place we could find to sit in was the quire of the church, where Sir George Yeardley, the Governor, being set down in his accustomed place, those of the Council of Estate sat next him on both hands, except only the Secretary, then appointed Speaker, who sat before him; John Frome, Clerk of the General Assembly, being placed next the Speaker, and Thomas Pearce, the Sergeant, standing at the bar, to be ready for any service the General Assembly should command him.

"But forasmuch as men's affairs do little prosper when God's service is neglected, all the Burgesses took their place in the quire till a prayer was said by Mr. Bucke, the minister, that it would please God to guide and sanctify all our proceedings to His own glory and the good of this plantation. Prayer being ended, to the intent that, as we had begun at God Almighty, so we might proceed with due respect toward his lieutenant, our most gracious and dread sovereign. all the Burgesses were instructed to retire themselves into the body of the church, which being done, before they were fully admitted they were

NEWPORT NEWS.

called in order, and by name, and so every man (none staggering at it) took the oath of supremacy, and then entered the assembly."

All things, it will be noticed, were done in order, all parliamentary forms observed, in this Wittenagemot of the woods. The thoroughly democratic style of General Assembly is still the official name of the Virginia Assembly. This prelude to the brief session is all we have occasion to quote. It serves to show the spirit, worthy of serious, practical, and God-fearing Anglo-Saxons, in which our forefathers went to work at the task which found its period in 1781, when, on this very island of Jamestown, Cornwallis was headed in his retreat, and forced to the place of his final destruction. Read the identical spirit in Smith's words: "As they can make no Lawes in Virginia till they can be ratified here (in England); so they think it reason *none should be inacted here without their consents*, because they only feele them, and liue under them." Here we have, in three lines, the pith and substance of the thousands of resolutions, complaints, addresses, and orations which immediately heralded the Revolution.

Newport News, so named after Captain Christopher Newport, the commodore of the little fleet of three vessels, of the aggregate burden of one hundred and sixty tons, which brought over the adventurers, and who "returned for England with newes" "the 15. of June 1607," is the sister promontory to Jamestown. Its pine-clad spit divides James River from Hampton Roads. The water-view at this point, east, south, and northwest, is superb. When "Master Gookin, out of Ireland, with fifty men of his owne, and thirty Passengers," baptized the shamrock in its blue and teeming waters, it was deemed a small paradise. "The cotten-trees in a yeere grew so thicke as one's arme, and so high as a man; here any thing that is planted doth prosper so well as in no place better." The soil is doubtless as good as it ever was, since the moisture from the neighboring ocean prevents land in this region from being permanently exhausted, even under the most reckless system of tillage; but we hear of no such growth now. Cotton-planting has given place to oyster-planting, as the leading culture. Master Gookin must have shared the hydrophobic propensities of his countrymen, or he would have delved in the waves for riches and comfort. We wonder if those quaint-spoken antiquities in bands, Spanish hats, and buff coats really learned the mysteries of "fried, roasted, and stewed." From the Indians they could have gathered little. Those gentry never shone as epicures. "A brasse kettle, as bright without as within, ful of boyled Oisters," was the truly heathenish entertainment offered the whites on the eastern shore, not far from Onancock only, though far enough from the "jowl and turnips" of its present distinguished denizen. A brass kettle of boiled oysters! Copperas and cholic! Verdigris and leather! Every fine instinct of our nature rises in arms at the bare recital! "Lo the poor Indian!" would have died on the lips of even Pope, little as he knew of oysters, could he have seen a group of the unfortunates discussing such a repast. If only to rescue from misuse and profanation the

noblest gift of nature—a fat Lynnhaven or York River—the extirpation of such a people was a rational act.

We are now in the heart of Oysterdom. The subaqueous metropolis of that luscious realm slumbers beneath our paddles. In the waters surrounding Hampton Roads the marvelous mollusk hath its supreme court and citadel. *The* oyster does not exist elsewhere. From the British Channel the Dutch, English, and French extract an unsuccessful caricature of the animal—a bad Daguerreotype, so to speak—little, hard, black, and brassy. The Gulf of Mexico produces something several shades better, which bears the name among New Orleans gourmands; and, sooth to say, the art of eating is passably understood in the crescentic strip of swamp wherein Old Hickory grew his laurels. On the Atlantic coast of the United States every thing that deserves the name comes, directly or indirectly, from the mouth of Chesapeake Bay. The Princess's Bay and Shrewbury pets of the Gothamites are any thing but "natives" at the localities which christen them. They are merely adopted citizens. As with some other immigrants to the port of Manhattan, their main improvement is external—in appearance and dress. Raciness, vigor, and individuality they leave, in great measure, in the land (or water) of their origin. There the student must seek them; and there, until another winter, we leave them. Till then the peace of the bottom brine, "under the keel, five fathom deep," be theirs!

Would he who has accompanied us thus far like, in this helter-skelter day of rattle, dust, cinders, lightning expresses, and headaches, to luxuriate in the true poetry of travel? Would he cut "the sweeping curve of the glancing rail" and go out on the face of the deep, where nothing more poisonous than water loads the air? Would he relieve his sole and soul from the hard contact of real estate, and exchange rocks, mud, and pavement for blue water, blue sky, and all that they generate? Would he step thus into the property-room of the poet, and enjoy, after his own fashion, the medley of raw material, the waves, the moon, the clouds, wherewith Ποιητής, the Creator, works? Let him spend the dusky half of twenty-four hours on a Chesapeake "bay boat." There are other bits of water-travel equal, or superior, in some respects. Long Island Sound most nearly approaches it, perhaps, in all points. But that is not, like this, a gradual descent from the bosom of the mountains to the ocean. The water does not become bluer and broader, the foam whiter, and the roll deeper and more majestic, with every whirl of the wheels. You are not invigorated by the same sensation of steady and regular expansion. And you are not, finally, welcomed to the glowing South and to the tameless sea that whitens toward Hatteras by such a sunrise as ushers you through the portals of the Powhatan into its sail-crowded anteroom. But here the voyager will sink from poetry to prog. Thoughts of breakfast, and, if he has been there before, of the unapproachable breakfasts of Old Point, the Ocean House, or the National, will steal over him as the embrasures of Fortress Monroe speckle the horizon. The inner man asserts its supremacy over the reflective department. *Edo* takes the place of *cogito* in the Cartesian formula. And he will be satisfied. The beatific consciousness of a day well begun will overspread his soul as he lays down the fork and takes up the cigar.

Supposing our friend to have digested his first impressions of Elizabeth River, sometime "the brooke of Chisapeack," and of the fine and hearty old city that stands upon its banks, we shall take him southward a space into a *terra incognita*.

CHESAPEAKE BAY.

IN THE CABIN.

On a fine morning in late May, eighteen hundred and fifty-eight, there might have been seen, etc. But the gallant G. P. R. is in some sort an American now, and therefore capable of holding a patent right; so we shall not pirate on him. It is a fact, nevertheless, that, at the day and hour aforesaid, those who were up early enough might have seen a party, "fit though few," rolling through the main street of Norfolk toward the decidedly fashionable and as decidedly odoriferous terminus thereof known as the draw-bridge. Passing that structure, the party in question continued to roll, by favor of a colored youth and a team of the same tint, dark bay, through the any thing but rolling country that stretches southward between the two branches of the Elizabeth. To say the landscape we sped through was flat is a weak expression. The few points in it which are eight feet above tide have the air of commanding eminences. A resident will tell you that mosquitoes are quite troublesome in the low grounds, but that his house is fourteen feet above water, and they seldom soar to his eyrie. The effect of this condition of things on horse-flesh is unfavorable. The gait of walking is unknown to a sea-board horse. A trot, a canter, and, in specimens of extra training, that particular pace which gives you the idea of the animal's making an insane attempt to shake his tail off, are the only styles of progression recognized in equine circles. The roads are generally smooth, however, and the four-footed machine stands the everlasting jog better than could be supposed. Excellent horses are often met with. Ours performed well. The end of seventeen miles saw our equipage and its various contents safely at the North Landing Bridge, after a run, stoppages included (to herbalize among some wayside mint), of two hours, six minutes, and thirty-seven seconds, nearly.

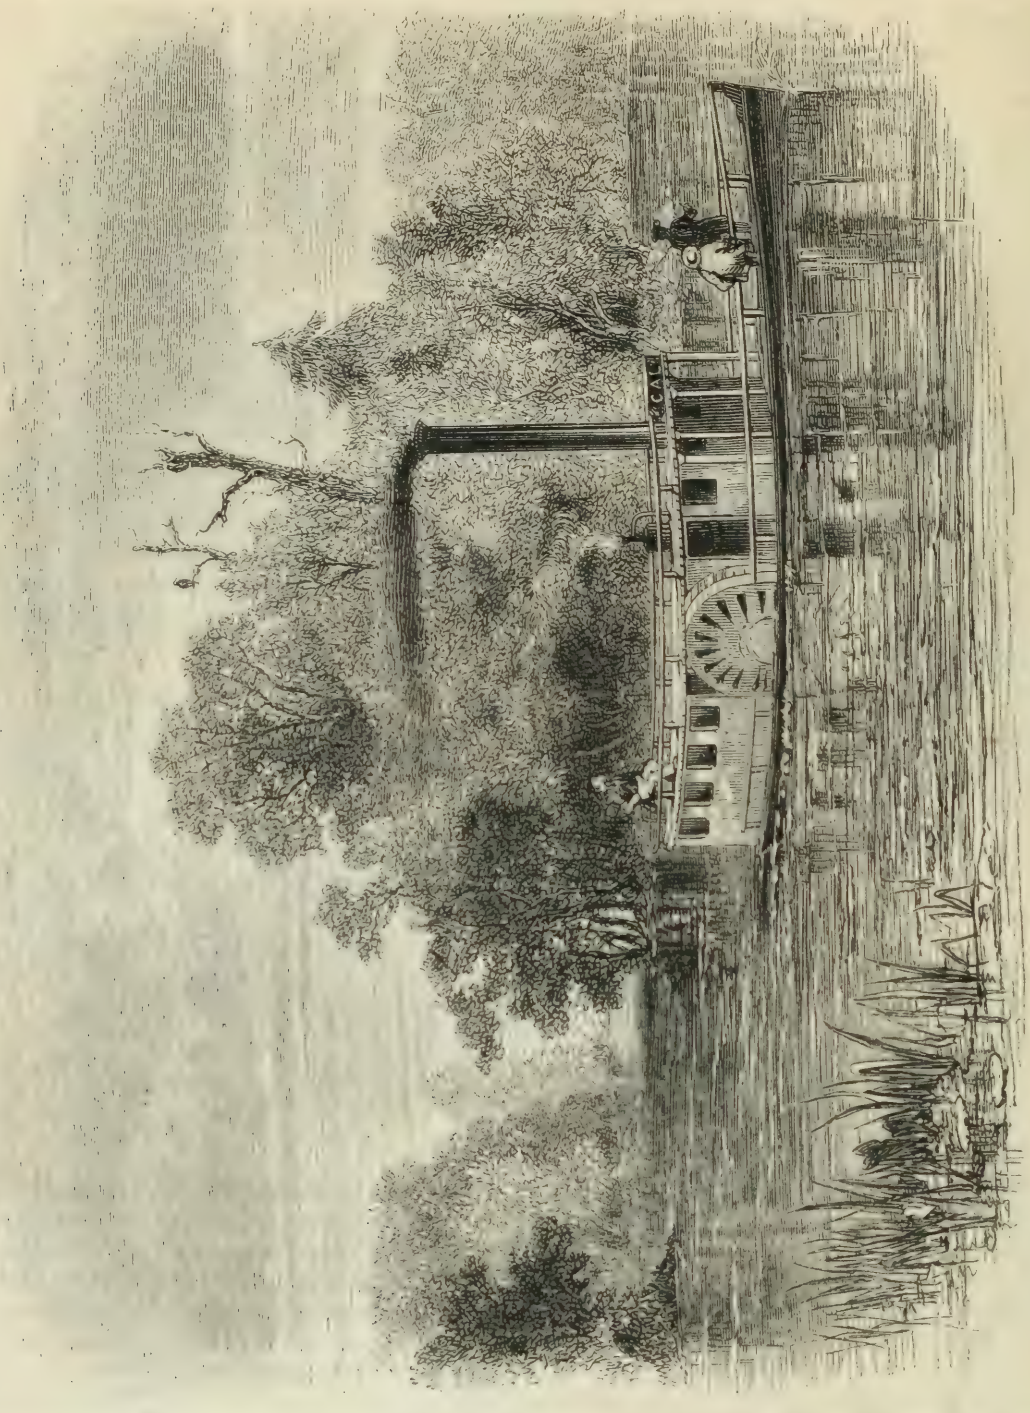
We found the bridge well; ditto the woods of cypress and pine; ditto the swamp and its inhabitants, batrachian, ophidian, ornithic, and ebo; ditto the steamboat *Calypso* and her crew of one; ditto the lockers of the same (*videlicet*, the steamer), with their contents edible and bibulous.

The number of those who "assisted" (a Gallicism appropriate enough here, for the physical resources of each and all of the party were at one time or another called into requisition) at the jaunt was six. *Imprimis:* Mr. Meadows, a hale, cherry-faced gentleman of five feet eleven, weight one hundred and eighty pounds more or less, high in office in the Albemarle and Chesapeake Canal Company. Second: Mr. Blank, smaller and more Cassius-like in physique, with black eyes and a red mustache, also an attaché of the corporation. Third, Mr. Quien, a keen and bright blade from the Empire State, with intelligence and efficiency as far above as his shirt-collar was below his (y)ears. Fourth, *we*. Fifth, Cy, dock-yard, crew to the *Calypso*, cook, stoker, steward, house-maid, boot-black, etc., etc., and so on, all in one dark parcel. Number six had not yet turned up.

In advertisement style, our boat was high-pressure, fifty feet long, nine wide, side wheel, oscillating engine, cabin accommodations for (on a pinch) ten, speed ten miles an hour. She was in prime condition, and played, puffed, and whistled her part nobly throughout.

As is not uncommon in the season and place, the weather was warmish. Thirst had its claims to attention. By consequence a unanimous motion to the cabin was put and carried. The absorption of a glass of sherry-colored fluid (all the swamp water derives that color from saturation with vegetable matter, and there is no finer water in the world) followed. This duty to our vital forces performed, several of the party, with Mr. Quien, Sen., entered a row-boat, to go above the bridge, along the North River and the canal to the point where the steam excavators were at work, a mile and a half distant. Our passage thither, if not altogether as imposing as Cleopatra's rows on the Nile, led through a finer colonnade of Nature's architecture than Thebes or Luxor could have matched. Our path was an avenue of water, a hundred feet wide, straight as an arrow, walled in with cypresses of primeval growth, their enormous boles sustaining at the summit a mass of the most delicate, feather-like foliage; the black but perfectly clear water overhung by varieties of flowers, grasses, and shrubs innumerable. The blue flag, the coral honeysuckle, the magnolia-like and richly perfumed blossoms of the laurel conspicuous. Animal life was less profuse. Now and then a moccasin would glide under the shore, or a gay-colored lizard dodge rapidly round a stump. The mocking-bird, its cousin the ubiquitous cat-bird, the blue jay, a stray heron, and—*horresco referens*—the buzzard, constituted the powers above. The great dredges, brandishing their black arms among the fallen Titans of the wood, and dragging up the remains of long departed vegetable giants, saluting the while, as if in derision, the surviving patriarchs with rapid puffs of steam, contributed more than any thing else to give life to the scene. More efficient and powerful pioneers never invaded the virgin wilderness. They work in pairs, one machine a little in advance of its mate. Each cuts a path forty feet wide and

ALBEMARLE AND CHESAPEAKE CANAL.



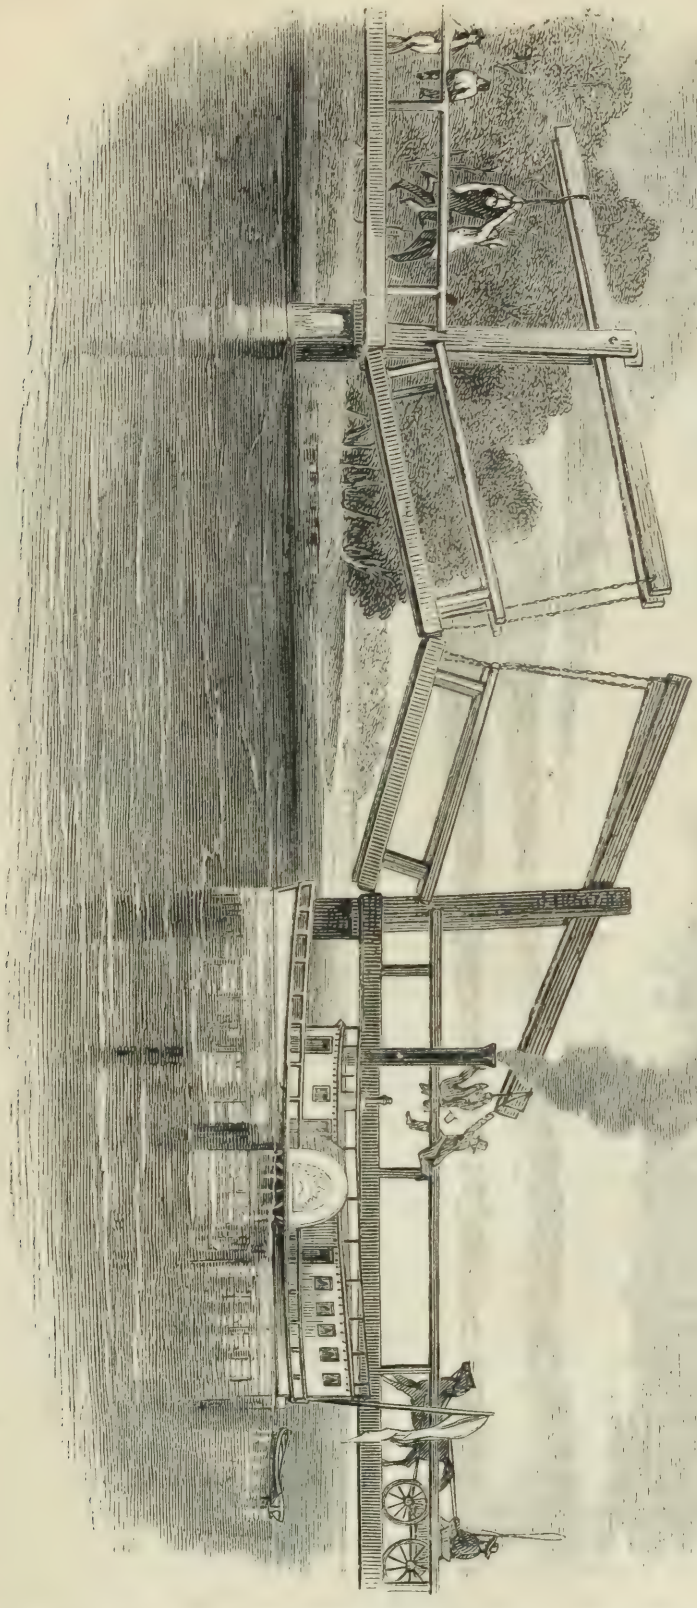
SAIL HO!

eight feet deep, piling up the black chaos of mud and stumps on either hand in long ramparts. Altogether, there are nine at work on the line, which embraces eight and a half miles of canal in Virginia, and five and a half in North Carolina, eighty feet wide and deep enough for vessels drawing eight feet water. These dimensions will allow the passage of craft of a much larger class than those navigating the Dismal Swamp Canal. Over that work it claims many additional advantages, one of which is that only a single lock, of two or three feet lift, is needed in the whole distance. There will be an abundance of trade for both.

The importance of this improvement to the State of North Carolina may be estimated by the fact that she has subscribed near half the calculated cost. When completed, as it may be in 1859, a very extensive navigation within her borders which has been cut off from access to sea since the closing of Currituck Inlet in 1829, will have a better channel than ever. More than this, all the rest of her sounds and rivers, north of Hatteras and south of Elizabeth City, instead of being dependent on a single dangerous passage eastward, Oregon Inlet, or on the crooked and narrow channel of the Pasquotauk River northward, will be connected with Chesapeake Bay by a route nearly an air line, and traversible by the largest craft those waters will float. Nor is the enterprise of much inferior moment to Norfolk, to or by whose wharves all the trade secured by it must pass. It is one of the most promising of those new works which, if her merchants show a spirit at all commensurate with the occasion, must infuse new life into the commerce of that city, and make her what the finest harbor south of New York should have made her long ago.

Returned from the swamp excursion, we were ready to unhitch our pony steamboat and steer for the south. But delay unlooked for occurred. A passenger was behind time. Number six was an "auncient marinere" of the neighborhood, who was to accompany us to Currituck Court House, and enlighten Meadows on the way as to the chart of the river and the Sound. Many an anxious glance was cast up the perfectly straight and perfectly level road by which we expected the advent of the veteran. High noon had long passed when the unbroken perspective was intersected by an apparition which gave the momentary impression that the old gentleman was voyaging in the manner of his youth, and bearing down on us in a sloop. When the mysterious

UNDER WAY.



craft first hove in sight, she was hull down. The horse soon rose above the horizon, and the mystery was solved. What the ignorant stranger had taken for mast and sail proved to be the upper works of a top-sulky, principally top. We are afraid to guess the altitude of the two-wheeled sentry-box; but it entirely overshadowed the little horse, and wagged to and fro, backward and forward over him, in a way calculated to inspire the most distressing fears of his personal safety. But all went, or rather came, well. Our worthy old sea-dog, Captain Perse, still had his sea-legs on, and kept his perpendicular despite sundry desperate wrenches administered to his turn-out by some corduroy road near the bridge. We need not say that he had a warm welcome, nor that the song of *Calypso* speedily changed from a fizzle to a snort. She commenced operations by thoroughly sprinkling, in two or three well-directed puffs, a solution of soot over the clothes of the passengers. This preliminary through, she struck down the centre of the canal-like stream, the overhanging branches almost brushing her wheel-houses. The water having the color of brown stout, the sensation was somewhat that of navigating the torrent that swept away a London street some years ago, when one of Whitbread's vats gave way, except that there was no torrent.

"Fine stream this!" said Meadows.

"Narrowish," said we.

"Rather; the fact is we want width more than depth, though the channel here is generally as wide as the river, and that is wide enough for a vessel as long as our locks to warp around in."

"It hardly looks so to the eye. The semi-sunken canal-boat above the bridge just reaches from bank to bank, bating the five feet through

FUNGO BRIDGE

which we rowed. Hard indeed is it to realize that the desolate spot we have just left should have been once a mart."

"It was, nevertheless. Vessels from the West Indies used to lie under these cypress-boughs. The city of New York was then fed with early potatoes by fast-sailing schooners from this river. It was on the deck of a North Landing trader that the lord of a score of steamships, the potentate of the paddle, the august Vanderbilt himself, imped his wing for the flight of greatness and gain?"

"This pool would hardly fill the boilers of his big and rapid namesake."

"But it will help to bear cargo to fill the holds of larger steamers, I hope," replied Meadows, "to follow her transatlantic track from a Virginia port."

"So mote it be! May the Old Dominion, in reconquering her wildernesses, reconquer the sea! Two centuries ago this region was not wilder than it now is. She was then, and for a century more, the first of the colonies in commerce. The two modes of progress may again go together.

But speaking of steamers, this must be the first the North River—of Virginia, not of New York—ever whitened under."

"The very first. She is our *Clermont*, though I don't claim to be a Fulton."

"Then the natives will be as much startled at the novelty as those of Queen Bess's days were when Raleigh's men sought access this way to the country of the Chesapeake tribe."

"Natives are as scarce here now as they were then, or more so. We shall astonish few this afternoon but muskrats."

"And they, to judge from their dress, are not natives, but furryners," chimed in Mr. Quien, from the helm.

"Good Heavens, young man!" objurgated M.; "another pun like that, and you'll have us hopelessly aground."

It proved as Meadows said. Solitude reigned supreme. Large tracts, now covered with pines, were pointed out by our white-haired Palinurus as having been productive corn-fields in his day. In the first sixteen miles we passed but one house, and its two occupants were the only discernible human beings. The rats were decidedly in the majority. They dived under our bows with a calmness that savored more of philosophy than fright, and perhaps more contempt of the intruders than either. A few fishing nets drying on the bushes were the outward and visible signs, however, of more bipeds than we saw. If the musical ideas of the two beings whom we did scare were not expanded by the scream our whistle greeted them with, the fault was not on board.

Two hours' run brought us to Pungo Bridge, near the mouth of the river, and the heart of a sort of rural Five Points or Alsatia. The hour we spent here in trying to make the draw respond to the repeated pulls of the entire ship's company, afforded some opportunity for studying the manners and physiognomy of the people. Repeated peals and appeals of the whistle elicited from an adjacent cabin two men and a woman. One of the men was old, and the other very old. The woman was an unhappy medium. None had any teeth. The males triturated tobacco incessantly with their gums. The elder one, according to tradition—which may have wronged him—was a homicide; his crime having been committed, we suppose, in the infancy of the country, ere hanging was invented. Every thing about the place looked old, even the puppies. The two leaves of the draw, from long and undisturbed association, stuck so closely to each other that the divorcing of them sufficiently to let the smoke-pipe slide through was a work of time and patience. Justice to the Pungotese demands the confession that they surveyed the process with untiring interest, and would, when a rope broke, a chain got fast, or the whole of us were unavailingly suspended by our hands, encourage our labors with a smile.

Below this eligible location our watery track gradually broadened into Currituck Sound, a fresh-water lake some eighty miles long north and south, and from five to fifteen wide. It heads the chain of inland bays, parallel with the sea-shore, which stretches from Cape Henry to Southern Florida.

A PUNGOTESE.

The sun sank into the distant marshes on our right, and the sea-breeze came fresh and cool from the left. It was a thing to be enjoyed in silence—sitting on the hurricane-deck and swaying to the dance of the fair *Calypso* as she capered over the waves. *Musing* arose with the voluptuous swell. Like the solitary boat's-crew of 1585 we were explorers—sent out, indeed, not by the Virgin Queen, nor the pink of chivalry, but by one of those entities described by Randolph as having "no breech to be kicked, and no soul to be damned." Raleigh, with all his knightly ardor, was in search of gold. So was the joint-stock company part of us had the honor to represent. Why not as sacred the *sacra fames* now as then? Does the substitution, in its missionaries, of cassimere tights and stove-pipe hats for trunk-hose and ostrich-feathers, make it less respectable? Or does the charm of antiquity work all the difference? Is the gulf between the chivalric and the sordid to be gauged by the tailor or the almanac? On this subject we came to a very self-soothing conclusion. We felt superior to our precursors. Unlike them, we carried no rapier, saker, arquebuse, or other weapon more deadly than a high-pressure boiler. True, friend Meadows's armory contained some pocket-pistols; but they were not dangerous. We did not contemplate killing any of the aborigines. Peaceful conquest was the object of the expedition. Our leader's aim was to draw North Carolina and Virginia together, and ours — individually and personally speaking—to draw them apart. Our motto was one: *Nulla dies sine linea*, differently translated, his version being "Every (canal) line has its day"—ours, "Let every day have its line." How nobly different such an

SHIFTING BALLAST.

animus from the shooting, burning, and baptizing spirit of Layne, Grenvil, Drake, and the rest of the "old original" flibustiers!

The nineteenth century, proceeded our soliloquy, does not get justice. Its children seem more ashamed of it than the eternal superstition that the former days were better than these days avails to explain. Its great achievements in material progress—greater than those of its fifty or sixty predecessors all together—every body boasts of. But, coupled with the boast is an ever-ready and sweeping ascription of them to selfish motives, and to such alone. Mammon, Mammon, is the declared root of it all; as if that Californian deity had been wholly unworshiped by any preceding age. Doubtless this self-depreciation hath its advantages; but modesty and truth are two different things. And truth requires the statement, startling as it may seem, that, human nature being much the same as in the year one, human motives are not materially different; that scarcely an instance is furnished since the first Crusade, even by the days of chivalry, of a nation's having acted from purely disinterested and exalted motives, with the men who compose them; that but a solitary man, Columbus, of all the old discoverers, was wholly actuated by impulses distinct from personal aggrandizement, and that he, perhaps, alone of them all was paid with sneers at first and chains at the last; that Washington, one of the few other self-forgetters, was better appreciated by his lucre-loving contemporaries than the world-seeking Genoese by those who lived with and immediately after him, though the stimulus of benefits conferred operated in favor of the one as well as the other; that the romance of scientific and geographical discovery is shaming the novels every day; that Kane, Franklin, and the French doctor in Egypt who slept in the sheets of a plague-patient, are fair offsets to Bayard and Balboa; that the merchants who have just sent their money to the bottom of the sea in the shape of wire and tar, carried the heroic in mercantile adventure as far as the German, Fugger, who entertained Charles V. with the perfume of his own bond for millions burned in a pyre of cinnamon; and that, in fine, the doing away with so many prejudices that cramped and warped the heart and mind of man must favor not only a more general, but an actually higher, development of the finest capacities of both.

The prevalent idea that the diffusion of knowledge and intellectual culture has nourished the critical faculty at the expense, and almost to the annihilation, of the creative, means, when translated, that because every body can understand and enjoy the sublime, nobody can produce it. Surely in an age so commercial the axiom that supply equals demand ought to be more familiar. We have no Homer, but ours is simply one of twenty-seven centuries that have been equally unfortunate. Thorwaldsen and the rest have not matched the Apollo or the Discobulus, but they have come nearer it than any of their Christian predecessors, and, in our private opinion, as near as any body ever will. Sheridan Knowles and Scribe are some distance behind Shakspeare, and neither Southey, Bailey, nor Barlow will outlive Milton; but though Shakspeare's con-

temporary dramatists are also superior to ours, we have better poets than Dryden or Waller. The fact is, that those we have named, and who are usually adduced in support of the delusion spoken of, are wonders who stand alone, independent of the influences of their day, and who might have appeared in any age. The reign of the merry monarch was not a period remarkable for pure, healthy, fresh, and vigorous life and feeling. There was not more of primeval artlessness and enthusiasm than now, and therefore no cause, according to the fashionable theory, why Milton should have been coeval with Nell Gwynn more than with Fulton. The Iliad, the Apollo, Richard III., and Paradise Lost have more admirers and more students now than they ever had before. Thus they may be said to belong to ours more than to the epoch which produced them. What becomes, then, of the allegation that such efforts are the mere concretion or crystallization of the contemporary popular mind, and that yet we do not duplicate them *because* we understand them better and sympathize with them more?

Apparently the strongest argument in behalf of the creed in question is furnished by the revival of the fine arts between the middle of the fifteenth and the beginning of the seventeenth century. There flourished then not one merely, but many painters who have not been approached since. But it is equally certain that art-critics were as numerous and profound then as now, and, consequently, that Meinherrs Winckelmann and Mengs are not responsible for having frightened genius back into mediocrity, and extinguished the grand style. It is apropos that filthy lucre had a powerful hand in the renaissance, and that much of its glory is due to the commercial cities of Italy and Holland, and the vast influx of gold from the new Spanish colonies. Why may not similar conditions now favor similar results?

The mistake consists in judging this, that, or the other era by the very first of its great men, and not by those who form the leading *class*. As we have said, the superlatives are to be thrown out of the case altogether. Centuries separate them, and they can not be the property of a day. Follow this rule, and our age is seen fully to hold its own in every walk of intellect.

Why should increased analytic skill obstruct literature more than increased microscopic skill retard the natural sciences, or the dissecting-room be the grave of medical art? Great original minds it aids without fettering, while to those of inferior cast it is the *sine qua non* of existence.

Let, then, the eighteen hundreds, as they file on, each with its contribution of light and knowledge to the ever-heaping, never-waning stock, march proudly among the other children of time. The mystic glow of "the light that never was on sea nor shore" plays not less brilliantly around their path. They bring home the beautiful forms and thoughts of all the others to every village and every fireside. They are daily turning into palpable reality some wild poetic dream of their departed sisters. And as they extend the domain of the actual, they extend, still in advance of it, the sphere of the imaginary. At-

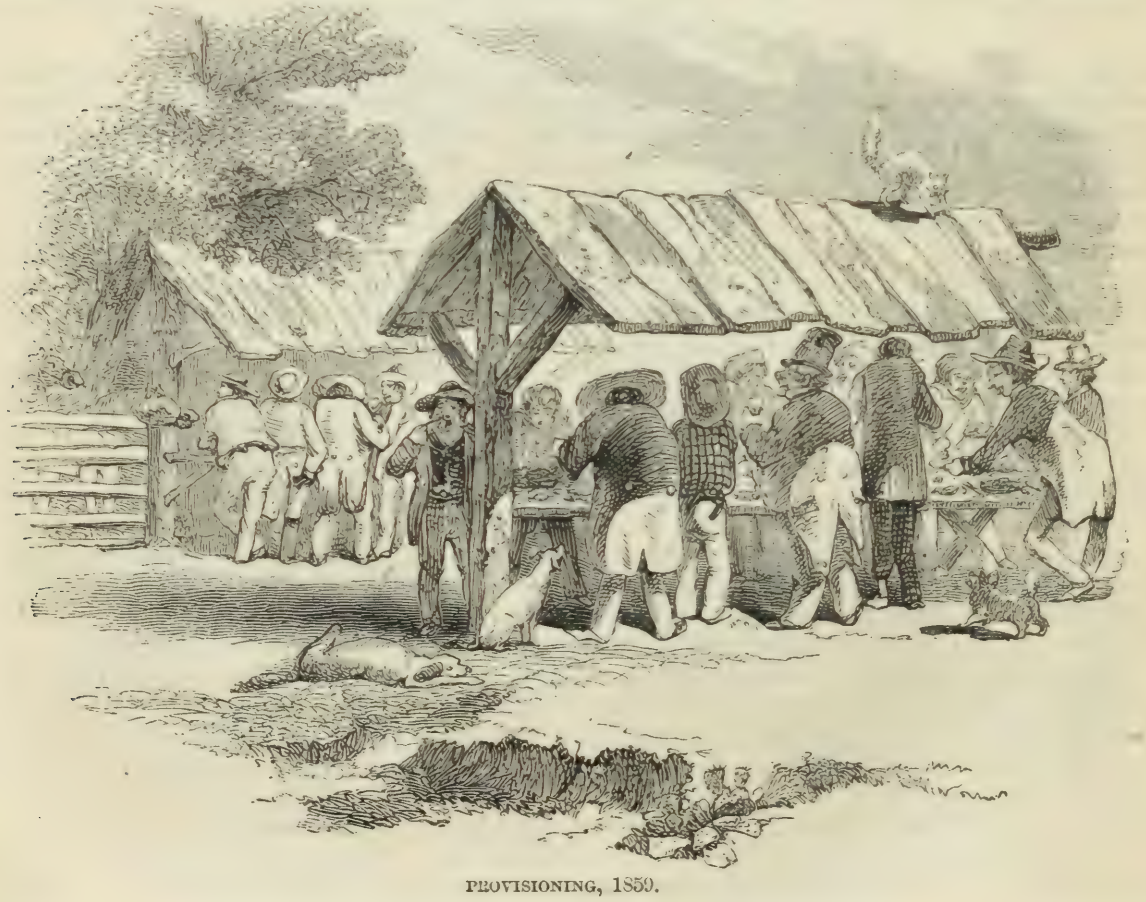
CURRITUCK.

WOOD AND WATER.

lantis, Cathay, and El Dorado are peopled now with beings of flesh and blood, and are the goal of fire-breathing monsters compared to which the dragons of old fable were playthings. Along the bottom of the ocean words flash back and forth with a speed never fancied for the mandates of Olympus. The antipodes are dotted with astronomic and magnetic observatories, from which hundreds of eyes watch through the night to disentangle worlds that swarm beyond the stars, and to trace the workings of a fluid more impalpable than light. And the wider universe and the subtler forces of human passion and human polity engage a not less ardent or less successful band.

"Yes, Meadows, a fig for antiquity! 'Cock up your beaver, lad; cock it fu' brawly,' in the face of the sea-rovers of old. The chaps who plundered the Spanish galleons in time of peace, and burned the friendly Indian villages of Croatan in revenge for the disappearance of a stew-pan, were not more respectable than Lafitte, and far less than Lopez. Huzza for the age of steam! Blank, shove her along a little faster. Captain, shift your stool to the centre of the deck, and get her in better trim."

Darkness was upon the face of the waters, unbroken save by three fourpenny dips which illumined the city of Currituck Court House, distant one mile. The Sound beneath us had become thick and slab with grass as we wheeled shoreward. We were paddling through the vastest of duck-ponds; for hither, in winter, throng the canvas-backs, lured by the *valisneria*.



Grass-grown streets are familiar things, even in many parts of our young country; but grass-grown harbors are seldom heard of. We were now in one, the densely-flourishing-stems, eight and ten feet long, washing against the sides of the half dozen sail-boats that constituted the visible marine. When, with the freshening of the waters thirty years ago, grass came in, oysters went out. The white shells of the defunct glare sadly up through the shallows. Currituck oysters, once famous, have no other memorials than these. The light of other days shines only in the terrapin and the crab.

The ancient village before us is the shire-town of a county some eighty miles long, and embracing the scene of the earliest attempt at colonizing the present territory of the United States. The representative of the county in the House of Commons of the State resides on Roanoke Island, not far from the site of Captain Layne's fort. Little of the town was to be seen from the boat, or, indeed, as we found afterward,

from any other point. Half a dozen loungers might be made out on shore. Considerations connected with said loungers and their fellow-citizens the mosquitoes, induced the anchoring of the *Calypso* a hundred yards from the land. The evening meal and the subsequent cigar dispatched, the silence was soon unbroken in our little cabin, save by the tremulous bass of some tired snorer, or the tremulous treble of an adventurous gallinipper, whom interest in the visitors had tempted an unwonted distance from *terra firma*.

The morrow was made locally momentous by the meeting of the county court and a political convention. From dawn till noon, therefore, did the yeomanry of Currituck and the attorneys of the nearest villages, twenty miles distant, pour in. Among the whole procession "a solitary horseman" would have required hard search to find. Every body went on wheels. The principle of rotation was universally recognized. The roads are too good to waste time in the saddle. Vehicles of every description, with some hitherto undescribed, resembled each other uniformly in one respect—that of being the lightest of their class. The Currituckians seem long ago to have solved the problem of finding the smallest possible quantity of raw material consistent with the required strength, in animals not less than carriages. For freedom from redundant weight they might challenge the world to match their buggies, sulkies, rockaways, carts, horses, mules, and shaft-oxen. There are no wagons. "Slow-draught" horses would be out of place. The carts, with the small but well-formed and clean-limbed little animals which draw them, convey a very fair load. Like every thing else here, they—the carts and horses—are amphibious. Scorning the superfluous luxury of a wharf, they meet the boats half way. Backing into three feet of water, the vehicle is tilted into the vessel, which, on its part, is strongly inclined to meet its terrene visitor. The wharf, being three feet wide and a foot and a half high, and strongly resembling the spring-board of a circus, is calculated more for show than use. On the present occasion it groaned under some corn and several barrels of cherries. May Court is known as "Cherry Court," from the quantity of that fruit then and there consumed. "The more we gazed the more the wonder grew" that any of the population ever lived till June. At the most moderate estimate, May Court ought to decimate it with the bowel complaint.

As the town comprises but five houses, independent of the court-house and jail, it became a curious and interesting question where and how the sovereigns and their horses were to be accommodated. It turned out that the latter were, in one respect, better provided for than their lords. Most of them could look out from the extensive stables and scan their riders recreating *al fresco* under rude booths, composed of three poles and a clapboard roof. Successive detachments crowded into these romantic retreats. To them were dispensed, in tin pans, a dinner of corn bread, stewed oysters, and divers incomprehensible forms of bacon. Contemplating this peaceful scene of substantial enjoyment, it was impossible for a lover of modern civilization to avoid contrasting the present with the past, and calling up the images of our illustrious predeces-

sors, the first white explorers of this shore. They were obliged to pick up a precarious subsistence in the shape of an occasional bag of corn or peas —sometimes, no doubt, when their treasury of glass beads and tenpenny nails ran low, in a something hurried way. Their boat, "with 4 ores, *would* carry but 15 men, with their prouisions for 7 dayes." We are not told that it *did*. In any case, they must have been brought to short commons ere their return if they depended on their own resources; and the savages, albeit timid, must have gained courage from numbers.

SCUPPERNONG GRAPE-VINE.

A forlorn-looking juggler added to the attractions of the day by fishing eggs from an empty bag and expectorating ribbon. But we are proud to say that the *Calypso* beat magic, and was decidedly the lioness. An unbroken stream of visitors poured into her miniature cabin. It was constantly filled to its utmost capacity with men and boys, according to their respective idiosyncrasies either vacantly admiring the "gorgeous" furniture, or earnestly and intelligently discussing the new era of commercial activity which seemed to be opening on their beautiful country. And we must here say that, for average culture, intelligence, and physical vigor, the people of this "kingdom by the sea" will hold their own with most other communities, North or South. With great facility of inter-communication by land and water, a soil easily cultivated, cheap, and productive of a great variety of luxuries and necessaries; the fresh sea-breeze to checkmate the miasma of the swamps; light taxation; and a healthy ignorance of, or contempt for, isms of every kind, they enjoy happiness, comfort, and content in no ordinary degree. Saith Master Ralph Layne: "This territory, being fifteen myle from the shoare, for pleasantness of seate, for temperature of climate, fertility of soyle, and comoditie of the sea, besides beares good woods, saxefras, walnuts, etc., not to be excelled by any other whatsoever." The broad waters of the Sound, and its tributaries which leave few points more than a few miles distant from sloop navigation, gives old and young, male and female, a semi-amphibious turn. It is rather startling to a mountaineer to see a party composed of two or three women and one man lift anchor and hoist sail in the gloaming, and steer straight into the dusk toward a horizon all of water. And wind and wave at times make matters quite lively on the surface of the Sound. The six or eight feet of sand, swelling at regular but distant intervals into isolated cones fifty feet high, which is piled up along the sea, offers slight obstruction to the east wind, and north and south the sweep is as free. This universal familiarity with sails possessed by what may be called our inland coast people, from Nantucket to the Rio Grande, furnishes the Union with an element of naval strength by no means contemptible, though it may figure but feebly in our marine statistics. It is common to speak of the insular conformation of Great Britain as a perpetual guarantee of her maritime superiority. But, compared with ours, her coast-line is bluff and unbroken by indentations. Between fresh water and blue water she has nothing intermediate. Almost the whole of our Atlantic

WIND-MILL.

border, on the contrary, has a double or treble line of shore. Innumerable bays and estuaries, running parallel with or at right angles to the beach proper, navigable and more or less land-locked, carry mast and sail into the heart of the country, and, as it were, to the thresholds of a large portion of our people. If the two islands of Britain, with their two or three thousand miles of shore-line, make her mighty on the sea, how much more should our tiers on tiers of islands, with their thirty thousand miles of beach, do for America? True, the English seas are more uniformly rough; but the school they give the mariner is hardly severer than that furnished by the trials of a winter on the American coast.

But we are falling into the Fourth of July vein. A truce to squibs and crackers till the next annual eruption of the national volcano.

Looking landward, see that other type and earnest of national vigor—that immense grape-vine, covering a small field from a single stem. It is the scuppernong, a North Carolina specialty. No other American grape so resembles the European varieties in freedom from pulp and twang. Let us make our own wine, and plenty of it, saith the creed of St. Nicholas of Cincinnati (and a saint of true and long worth he is, as his name betokens). Then no more Sagerac, no more baldface, no more tinctures of cocculus Indicus, no more poor-houses, no more temperance societies, no more Goughs. Perhaps so; or rather, certainly so, to a certain or uncertain extent. Cheap wine and cheap beer will do good. But our varied climate and varied idiosyncrasy demand a varied stimulant. It is absurd to suppose that any one tipple shall satisfy the universal Yankee throat—that to the popular question, "What will you take?" one unanimous response shall be sent up, alike from the semi-polar log-cutter of Maine, the semi-tropical *merveilleux* of New Orleans, the lean speculator of Minnesota, or the piazza-lounging planter of the Palmetto State.

Divers lively excursions across and down the Sound occupied our little boat for the two days of our stay. Neither crinoline nor obesity were possibilities contemplated by her builder. Consequently she had not always more space or more steadiness than the occasion demanded. On the third morning we (individually) were awakened by the noise of the engine. A glance showed the city of Currituck, sufficiently concise before, to be growing small by degrees and beautifully less, the grass settling itself sluggishly over our retreating track, and the deserted wind-mill, that makes the main landmark, rearing its skeleton arms more and more dimly. We were once more "to the northland heading."

Our limit in point of time forced us to defer the prosecution of our intended visit to Roanoke Island. Save for a month or two in the year, access to it is occasional only and uncertain. The watering-place on the beach opposite it was not yet open, and the tide of steamboats and fashionables was but preparing for the flow.

THE MERCHANT.

I.

THERE is a Farm-house fringed with vines,
And o'er its roof the sunlight shines;
Where swallows sail the summer air,
And pour their notes of music there.

The wifely wren hath built her nest
Snug 'gainst the roof's low, modest crest;
While 'round each plant and blossoming tree
Swings in and out the humble-bee.

The house-dog suns his shaggy side
Nearest the porch the cat beside;
While robin redbreast chants his song,
And mocking-birds the notes prolong.

There is a face within the cot—
Oh! blessed face, and ne'er forgot!
Her beauteous eyes turn on her boy—
The mother's hope, the widow's joy.

A playmate of the birds he seems,
A shape that comes to us in dreams;
The shadow from the broken tree
Ne'er fell as yet, my child, on thee!

II.

There is a House within the town,
Rich carvings o'er its portals frown,
And silken curtains bar the way
Of rising sun and noontide day.

Old paintings hang along the wall,
Stained lights upon the carpet fall;
Rich mouldings here and there are fret,
Carved woods in blue and gold are set.

Upon the buffet silver gleams
Where Art hath carved her choicest dreams;
The liv'ried valet hovers 'round
With muffled feet that wake no sound.

A face beneath the lights is there,
Its lines deep graved by grief and care;
His hand, long used to count his gold,
Is thin and long, and lean and cold.

There is a Ship upon the sea—
A golden-freighted argosy—
Bearing the golden fleece from far
To port where sets the Evening Star.

III.

The merchant's thoughts are not with thee,
Oh! golden-freighted argosy;
But with the Farm-house fringed with vines,
Upon whose roof the sunlight shines.

He sums his long life o'er and o'er,
His wealth, his credit, social power;
But still his thoughts will wander there,
Where swallows sail the summer air.

'Mid all the notes and bonds that stand
His memory 'round, like silver band,
His fancy fondly 'scapes to thee,
Thou robin's-note from out the tree!

Along the chambers of the past
Are busts in bronze and marble cast;
Still are his thoughts within the cot,
And mother's name is ne'er forgot.

THE BURNING OF SALTONE VILLA.

THE mansion-house or villa of Saltone was built by William Saltone, of Georgia, in the years 1832, '33, and '34. In the winter of 1832 the proprietor sold his plantations in Georgia, at the persuasion of his wife, who, though a young woman, was known, by a custom of family and neighborhood, as "Madam Saltone," and built a villa in Eastern Massachusetts, near one of the interior villages of that State. He was the last representative of an ancient family of Virginia, which for several generations had given signs of decay by melancholia and insanity. The two younger brothers of William had lived unmarried, and died in middle life by their own act. Madam Saltone was a second cousin of her husband, and though a lady of superior manners and rare education, was of a severe and compressive temper, haughty in general society, and dwelling much upon ideas of aristocracy. She had been eminently beautiful, and when I first saw her at Saltone villa, one year after the sudden demise of Mr. Saltone, who was found lying dead of apoplexy in a field near the house, during the absence of his wife on a visit to the South, she retained the full splendor of a majestic countenance and figure, with a manner and bearing the most queen-like I had ever seen in woman. She was then in her thirty-fifth year.

At the completion of the second year of her widowhood Madam Saltone was privately married to Mr. William Davenant, of Boston; a gentleman of fortune, ten years her junior, and of singularly winning and amiable manners. Being the business manager and legal adviser of the family, I enjoyed the confidence and conversation of Mr. Davenant and his lady, and the characters and personal peculiarities of both were well known to me.

Three years had elapsed, and the second marriage of Madam Saltone promised, like the first, to be a childless one. Neither Davenant nor his wife had any near relatives who would naturally be the heirs of their large estates. The husband became gloomy, abstracted, and desponding. I attributed the change to his disappointment in regard to offspring, and advised him to adopt a son. He thanked me for the suggestion, and said that he would certainly provide himself with an heir, if it were possible, for the sake of the name, if for nothing more.

Mr. Davenant then informed me that he was making preparations for a journey to Europe, where he intended to collect pictures, plate, and works of art for a new house in the city, which Madam Davenant was building. He would be absent perhaps a year.

Soon after this conversation I was sent for by Madam Davenant to her room. She was in bed, attended by her physician, and seemed ill. She informed me of the projected journey; said that "she had no desire to accompany her husband, but would remain and superintend the building of the new house, which," she added, with a sigh, "might be an amusement." Madam Davenant looked pale and sad, which was noticeable, as her expression was usually clear and decided. She gave me a bundle of documents to examine and copy. I retired immediately to my room and opened the package. It contained three legal instruments; the wills of Davenant and his wife, mutually leaving all they possessed to each other, and a power of attorney for myself to manage the personal affairs of the husband during his absence. They were drawn up carefully in the bold, angular handwriting of the lady, whose talent for affairs suited well with the pride and firmness of her disposition.

The next day these papers were executed and given to me. Mr. Davenant advised that I take them with me to Boston, and lodge them in a place of security. After some demur, the lady consented, and I left the house, glad to escape from an atmosphere of gloom and suspicion, which all the luxury and splendor of Saltone villa and the elegant conversation of its master had not power to dispel.

The mansion stood upon the slope of a broad hill facing the sunrise. On a clear day, with a powerful telescope, the site of Boston, Milton Hill, and the ocean were faintly discernible from the upper windows. It was separated from the village by an arm of the forest which extended eastward from the mountains. The lawn in front of the mansion was a grand crescent, fringed on its outer curve with fine elms. A carriage-way, after winding through the forest, entered the lawn upon the right. The view in front overlooked the summits of the highest trees of the plain, and presented a prospect of more than twenty villages, far and near, white marks on the green bosom of the land. Orchards, copses, corn-fields, and silver streams added interest to the view.

The side doors of the villa opened into rose-bowered paths, which terminated by long gradations in shady shrubberies; and these in hickory groves, which mingled insensibly with the natural forest. The viny porticoes, hung with woodbine, clematis, and rare creepers; the long conservatory, a palace of glass, resting upon rows of Moorish columns, under which a vast assemblage of flowering plants of the tropics sated the eye and sense with beauty and odor; cases of exquisite shells, coins, and books, in the interior rooms; a hall so light and brilliant it seemed almost a continuation of the painted porticoes; carpets and furniture in keeping with the rich colors of the wall, and exquisitely ornate; instruments of music, which stood, mute servants of melody, in their pictured recesses; paintings of all ages, whose subject required no explanation, not even a verse of Scripture, fixing and charming the gaze at the first view; the quiet but sombre richness of the rooms, all different, characteristic, and supported by a decorative art that neglected nothing, and relieved while it satisfied the eye; the vastness and variety of the immense house where a king's retinue might

have been entertained; in the midst of all moved two rare and beautiful figures, childless, joyless, polished as the statues of their halls, and cold as they; tending in weariness toward a future without aim or hope, and dreaming always of "what might have been."

It was my habit, when approaching the villa, to take a by-road that led over the low range of mountains overlooking its western front. I did this to get the view, which was at all seasons attractive; not so much for those extended features of cultivated landscape scenery, which, I maintain, surpass, in some parts of lovely Massachusetts, the fairest scenic reputations of France and England, but for the view of Saltone through an opening in the forest.

All beauties, even those of the human form, depend much upon association. The velvet lawns of baronial manors delight the Englishman, and the heavy and somewhat tame architecture of his country-seats pleases him more than they do another: he loves them through an educated taste; they are the first impression, the ideal of youth, the pride of manhood, the prejudice of age. No less charming and sacred to me, for the same reasons, are the beauties of my native land.

The last time I saw Saltone through the oak opening on the mountain road the glory of sunrise had illuminated its crystalline roofs, on whose numerous angles, and over the Moorish chimneys, the green masses of the creepers were made transparent by penetrating sunbeams. Over the great doors stalactitic canopies, rich with flowers, covered shaded entrances, cool and lustrous as the caves of the sea. Each window seemed a deeply carved frame, fit for some living portrait of pensive loveliness. The indescribable pale brown of the walls made a rich ground-work for the foliage of living green which clung to it or floated around it.

I had passed the night at the village tavern and rode over at sunrise. The inn-keeper, my querulous and venerable friend, Deacon Satterlee, poured out a muddy stream of talk touching the villa; the absence of "Squire" Davenant in Europe; Madam Davenant, her charities, her pride, her quarrels with a Swiss housekeeper; the jealousy of the neighbor farmers and their people, who teased and annoyed the "villa folks;" Madam Davenant's habits; she was a late sleeper; ate little or nothing; read a great deal; played a little on the guitar; sang gloriously when no one was near; was often "sick," or seemed to be so, and would shut herself weeks together in her chamber; how many "helps" she employed, and how they "wasted and stole every thing!" My pity and sympathy were excited, and the next morning, when I met the lady at her breakfast-table, grave, elegant, and overpowering as usual, I could not avoid expressing some interest in her lonely situation, and advised her to leave Saltone and live in the city till Mr. Davenant should return.

She received my advice with a courteous acknowledgment, and handed me in reply a letter from her husband, in which his return was fixed for the next spring. Madam Davenant conversed with seeming freedom. She spoke of her relation with her husband; which, she said, had not been productive of happiness for either. "They were both exclusive, both rich, and predisposed to melancholy." . . . "Mr. Davenant occupied himself of late in scientific pursuits, and practiced chemistry and mechanics as a recreation." She smiled when she informed me that he had mended the great Dutch clock that stood in her bedroom.

"My husband," she said, "if a poor man, would have been a famous mechanic. You would not believe how ingenious he is; and with admirable taste in all things. He paints well; many of those pictures are his. I have a guitar of his making. He is a good farmer, gardener, architect; in short, there is nothing he can not do. What a pity," she added, sighing, "that Davenant had not been a mechanic, and married some poor, uneducated girl, who would worship his genius, and cry 'Oh Heavens!' to every act of his. We were not suited to each other; we had both of us outlived the possibility of enjoyment."

"At your years!"

"Yes. I had exhausted life at thirty. I married a young man for the sake of a new excitement. By a strange accident we found that we were alike; and both drew blanks. Neither is able to give happiness to the other. Had Mr. Davenant been poor and ignorant we should have made a paradise of Saltone."

"But his taste, his genius?"

"A natural gift, Sir. The greatest geniuses in art and science are almost all poor and ignorant at first: in that lies their happiness and their success."

"I had imagined that your marriage was a love affair."

"Oh! you thought so because I was so much older than he. Nothing of the kind, I assure you. Had it been so I might be happy in being jealous. No; Davenant is in love with a poor girl—Deacon Satterlee's daughter."

"Bessy Satterlee?"

"The same."

"She is pretty, but coarse."

"Not at all coarse; you mistake simplicity for coarseness. I wish Davenant could marry her, but I see no means of arranging a separation; we never quarrel—that is the misfortune. I would do much to give Davenant his freedom; but our laws are ridiculously framed. Perhaps you could suggest?"

"You are beautiful," said I, looking once into the eyes of Madam Davenant, "and still young. Could you not arrange some scandal?"

She smiled. "Impossible. No man will attempt it. I am too cold and proud. Besides, I will not sacrifice the honor of my family even by a rumor. I could endure any thing better than a scandal."

While we conversed over our coffee the Dutch clock above stairs in Madam Davenant's bedroom chimed the hour of ten, and played a deli-

cious air—the music, the odor of the flowers and hay fields, wafted in by the morning breeze, the songs of innumerable birds, the glow of pictured beauty from the walls of the apartment, and the stir of jasmine vines that looked in at the windows, contrasted, all of these, with the strangeness of the melancholy conversation, left a weird impression upon my imagination.

At twelve that day—it was a hot, still noon of August—I rode over to the village, having some business to arrange for Madam Davenant. This occupied the rest of the day, and, after the customary evening chat with Deacon Satterlee, I retired early to my bedroom in the tavern.

The heat of the summer night and a restless fancy kept me awake. At two in the morning, after a short, uneasy slumber, I rose and went to a window that looked eastward in the direction of the villa. The pale, calm features of the beautiful Madam Davenant rose before me, and I seemed to see the long vista of miseries that awaited her course on the downhill of existence. I thought of Davenant himself; the singular fate that had heaped upon him all possible wretchedness in the guise of brilliant fortune and a proud alliance. Was he merely indifferent to his wife, or did a stronger feeling interpose between him and the woman who looked down upon him, pitying and disappointed, from the superior height of her own supreme misery?

While I was indulging these painful speculations a few large drops of rain, pattering on the roof, accompanied with a puff of cool air, signaled the beginning of a storm. I leaned out of the attic window and saw a black arch of cloud which had already reached the zenith, and was rushing down upon the eastern half of the sky. A moment more, and the heavens were lighted with a blinding flash, followed by intense darkness, a burst of thunder, and torrents of rain. The rain fell without abatement, the lightning and thunder were almost continuous, a wind rushed wildly over the forest, tearing off the leaves, and whirling before it a mingled tempest of driving rain and flying ruins of the trees.

In the midst of this conflict of the elements I was startled by a gleam of ruddy light above the foliage of the wood in the direction of the villa. I watched it vaguely. The light grew larger and shot upward, until at length a tongue of flame and a whirl of lurid smoke convinced me that either the villa itself or the large barns in its vicinity were on fire. I hurried on my clothes, wakened the inn-keeper, and sent off the stable-boy, who slept in the loft above me, to ring the church bell. I then went to the stable and saddled my horse. Before I could put foot in the stirrup the bell had been tolling several minutes and the village was awake. Cries of fire, above the war of wind and rain, issued from casements far and near; and I saw, by the flashes of lightning, a number of men, half dressed, with buckets in their hands, rushing along the road in blind haste, in the direction of the villa. I soon overtook and distanced them, and in five minutes reached an opening in the forest through which I could see the conflagration.

Arms of solid flame reached out from the windows and under the sculptured eaves, and clasped their fiery hands together, writhed and twined above the roof. The rush of the wind carried the flame from window to window, in great leaps, to every angle and recess; and the entire mass soon became a volcano of fire, roaring and whirling high against the bosom of the lowering thunder-cloud.

The rain that fell in torrents seemed only to intensify the fire, and added to the red light of the conflagration a blue halo of burning water, like the violet-colored vestment of the flame of a candle in the damp air of a mine. All around and above was sable darkness, relieved only by ruddy gleams reflected from the lawn and the semicircle of elms. Quick repeated flashes of lightning, hiding half the fire for an instant in white light, the volleyed roar of thunder, peal after peal, drowning the rush and murmur of the conflagration; an occasional fall inward of roofs and turrets; and the moving figures or groups of terrified villagers, driven back between rain and fire, by the fury of both elements, and seen only at intervals by flashes of electric illumination—these strange and vivid appearances occupied me for a moment. It was impossible to save any part of the group of buildings. If any persons were in the mansion they had perished. All had probably escaped. In less than an hour the princely mansion of Saltone—that unrivaled work of art and taste, the home of elegance and vertu—in an hour, all, pictures, statues, vases, cabinets of gems and coins, the rare library of books and works of the graver, furniture of graceful pattern, satin hangings, carpets of Brussels and Turkey, the viny porticoes, the enchanted rose-gardens; the conservatory, rich with exotic perfumes of a hundred kinds—all would be a heap of vile and smouldering ashes. A sensation of intense and choking regret oppressed me, for such irreparable loss of what all desire and few ever enjoy. I did not think at that moment of the inhabitants or owners of the villa: their wealth would enable them to replace what they had lost. It was I who suffered, more than they: insensibly I had become attached to Saltone—more, perhaps, than if it had been my own; I had enjoyed all, from the first stone of the corner to the last decoration of the hall, without the burden or the care of proprietorship. The villa with its beauties had gradually seated itself, through years of intimate acquaintance, in that passion with which men seem to be endowed, in common with animals—the love of places, of odors, and of things; an attachment of whose intensity till then I had been unconscious.

While I stood watching with unspeakable regret the fall of the last of the four square towers, as it plunged sullenly into the smouldering ashes of the ruin, and sent up a volley of pointed flames and rolling clouds of smoke, I heard an anxious female voice calling my name. It was Sarah Behn, Madam Davenant's Swiss housekeeper,

moving about bare-headed in the rain, half crazed with terror and excitement.

"Oh, Sir! can you tell me where I will find Madam Davenant?" she exclaimed, running up and seizing the bridle of my horse.

The question was alarming. "When did you last see her?" I asked. "I heard it said she was safe in the farm-house."

"Oh! I am afraid she is burned; I have not seen her. It was I who ran to the farm-house. I had on a dress of hers, and they mistook me for Madam."

At the same instant Deacon Satterlee came hobbling along on his crutch, panting and speechless with haste.

"Is Madam Davenant at the village?" I asked.

"At the village! Madam Davenant? How should she get there at this hour?"

"I know, I know she is burned!" screamed Sarah Behn, clasping her hands. "Oh, it is horrible, too horrible! It all comes of that wicked John Cisco; he ran away with the rest, and no one went to waken Madam Davenant. She is dead—she is burned—burned!"

Crazed with horror and grief, the woman threw herself down upon the wet turf, and lapsed into a succession of hysterical spasms, rolling over, shrieking, and tearing her hair like a maniac. Her outcries drew together a crowd of idlers and lookers-on. I advised a general search for the missing lady, in the vague hope that, wandering off in the darkness, she might have lost her way and fallen exhausted in the forest. A score of active boys and men, and even women, acquainted with the paths and by-ways of the vicinity, started in pursuit.

The old Deacon, feeble and rheumatic, begged me not to leave him alone with the housekeeper, who came out of one spasm only to fall into another. With much difficulty, for she was fat and heavy, I dragged her under a summer-house that had escaped the conflagration, and rode back to the village to procure a vehicle. Luckily I found a wagon and harness in the tavern-stable, and so drove back with my own horse before it. The searchers had returned unsuccessful, and were gathered in gloomy groups under the summer-house.

It was now broad daylight, and the wind and thunder had cleared away. The fires of the burning ruin were nearly quenched by the heavy rain. Knowing the situation of Madam Davenant's bedroom, I sent to the farm-house near by for spades, axes, and rakes; and we began working in good earnest, a dozen together, in that part of the cellar which was directly beneath her bed. The heavy oaken beams of the frame had fallen inward. These, still burning, we cut away and drew out of the pit, and aided the quenching rain with buckets of water. The fire, flashing up at intervals, hindered our progress, but by evening of that day, after repeated delays by the fire, we had thrown out all the ashes and rubbish from the pit. Fragments of half-burned books, silver candelabras melted into fantastic forms, a shapeless lump of gold, recognized as the case of Madam Davenant's watch, which hung at night at her bed's head; portions of the gilded bed-posts, bundles of singed feathers, the barrels of a brace of pistols that lay usually in the drawer of a light-stand between the bed and the wall, and, among other relics, the wheels, and the enameled copper dial-plate of the great clock, which had once played the airs of Rossini, were successively drawn forth. I had these all taken to the summer-house and a guard placed over them.

No human remains could be found. Meanwhile Sarah Behn, the housekeeper, had recovered from her hysterics, and came over from the village in a tearful but composed condition. She recognized, with many sobs, each article of her mistress's bedroom and wardrobe, as the remnants were shown to her. The other servants of the household—a groom, two or three housemaids, and the cook—assisted in the identification. All the servants of Saltone were present. If any one of these, and not—as was generally believed—the lightning of heaven, had been the destroyer of Saltone, I thought I should detect some difference of behavior, some proofs of a guilty conscience in the criminal. All were seemingly innocent, and gave no signs but of interest and regret.

The morning of the next day villagers again dispersed through the forest, but the last of them returned at noon with the report that no traces could be found of the missing lady. As I was known to be the legal guardian of the property my orders were listened to with respect, and fresh relays of men began again to clear out the ashes and ruins of the cellars, in hope of finding the mortal remains of Madam Davenant, who, it was now certain, must have perished in the villa.

The mansion had been built over a double tier of deep excavations, the lower tier vaulted and used as wine-cellars. A large iron trap-door, opening over a flight of stone steps, led into these vaults; but as this trap was not in that part of the cellarage which lay under the bedroom of Madam Davenant, but opened under the turret of the northeast corner, fifty yards distant, it was long before we reached it in the course of our excavations.

Each of the four upper cellars was about ten feet in depth and fifty feet square, separated from its neighbor by a brick party wall, with an iron door. Full four days' labor were consumed in searching and clearing three of these. The laborers began to grow weary and discouraged, and on the fifth day I had only three left, who consented for double pay to aid me in the work. The fourth cellar, in which was the iron trap leading down into the vaults, was filled up by the falling of the observatory, in which had been the amateur work-room, the laboratory, and private library of Mr. Davenant. The removal of the relics of these costly luxuries was a tedious and laborious task, and it was only on the Monday following, eight days after the beginning of our search, that we succeeded in lifting and cut-

ting away the ruins from the entrance of the vaults.

I raked away the ashes with my hands from the padlock of the trap, and seized an axe to break open the ring. A sensation of terror smote through me when I saw the remnant of a key in the padlock and the catch slipped from the bolt. The trap had been opened.

Had Madam Davenant escaped out of the burning house she would have been found. It was therefore certain that she had perished in the house. But if so, the bones and charred remnants of a human form ought to have been discovered among the ruins.

That she had risen from her bed at the first alarm and had gone into another part of the building was then equally certain, and she could only take refuge in the vault. The key of the wine-cellar was always in her possession. No person ever unlocked or raised the trap-door but Mr. Davenant or his wife. Although the hinges were corroded with the heat, the trap yielded easily to my hand; and as I raised it, a close, mouldy, putrescent smell issued from the subterranean recesses. Terrified by my visible agitation, my assistants hesitated to follow as I descended the steps. In the sudden change from light to dark I could see nothing. Candles were sent for, and, provided with these, a number of persons volunteered, though the dread of what they might behold made them silent, and we passed on under the damp arches hesitating and afraid. At the entrance of the second vault we found a package of old letters lying under the archway. Entering the fourth cellar, we saw a white object against the opposite wall. It was the rigid, nearly upright corpse of Madam Davenant, seated on a treasure-chest facing the entrance of the vault, and dressed in dishabille costume such as she wore usually in her chamber. In her haste, searching in the chest for valuable papers, the unfortunate lady had thrown others that impeded her search here and there over the floor of the vault.

That the heat of the burning house had not penetrated her tomb we were satisfied by the coolness of the air, the appearance of the dress, and the natural, death-like hue of the corpse. In one hand was a letter tightly grasped, and crushed in the hollow of the palm. That she had been dead many days was evident from the condition of the body, which had begun to show marks of decomposition, and exhaled a putrescent odor. Endowed by nature with a good constitution, abstemious as she was, it could not have been hunger that deprived her of life; cases and casks of wine, and cheeses stored in the second and third vaults, made it impossible that she had failed through want of sustenance.

Madam Davenant had died suddenly in a sitting posture, and, beyond a doubt, by the effects of some powerful moral impression. A lamp, burned out, stood upon a block at the side of the treasure-chest. Was it not probable that Madam Davenant had passed during the night from her room into the wine-cellar, under the influence of some great emotion, before the breaking out of the fire—had become absorbed in the perusal of letters and papers filled, perhaps, with memorials of her past life? The trap-door, meanwhile, had fallen down unperceived; the fire broke out, inaudible to her in her abstraction under the heavy stone arches of the vault; that when she attempted to escape she found the trap closed by the fallen beams. She had then returned and seated herself upon the chest, leaning back. Death came suddenly upon her in that position. Our examination of the paper which she grasped in her dying hand assisted in confirming this opinion and verdict of the coroner's jury—of which I was one—over the body of Madam Julia Saltone Davenant.

The remains of the decedent were that day interred in the village church-yard with the solemn services of the Episcopal Church, of which she had been a communicant. No tears fell upon her grave, but the incidents of her death left a deep and saddening impression upon the minds of all the witnesses. Deacon Satterlee and his daughter stood at the grave's head as the coffin was lowered, and many significant glances were directed toward the fair-haired country maid, the reputed and real rival of the late Madam Davenant.

As in duty bound, I took possession of the papers found in the vault. Among these were several letters, worn with frequent unfolding. They were from the former husband of Madam Davenant to "his darling Julia." Their language glowed with vivid descriptions of the passion that consumed his ardent nature during absence from his "adorable wife." They were evidently the work of an accomplished writer and man of society, enamored beyond the tempered medium of happiness. These I inclosed again, and sealed for delivery to the survivor. The paper which was taken from the hand of the deceased was the last of this series of letters—one written by William Saltone to his Julia on the day of his supposed voluntary death; a few lines of passionate farewell, commending her "to the care of angels," and himself "to the pardon of a merciful God."

Struck with the singular aptness of her death to the passion of grief which this letter might have inspired, I pondered long and deeply upon all the circumstances and connections of events investing the melancholy history of Madam Davenant. Her death seemed to have become a moral necessity for the completion of a life so wretched. That Davenant hated her I had begun already to surmise, more from the tone of her conversation, which was so guarded, and from the laws of nature, than from any positive evidence. He was a creature of whim and prejudice, and still more of hobbies; deep and bitter in his aversions, circumspect and full of covert satire in conversation. Addicted to mechanical and mathematical studies, his days at Saltone were passed in the garden and conservatory, and entire nights in the workshop and observatory. On one occasion he had showed me a book of in-

ventions, in which more than three hundred distinct improvements were suggested and described by himself, in mining, agriculture, chemistry, and the higher branches of mechanical art. His observatory was constructed upon novel principles, and furnished with instruments of the best makers. Madam Davenant despised the occupations and tastes of her husband; she wished him to be a leader of society. He must have hated, equally, society and the woman who lived upon recollections of the place she had once held in it. By unquestionable testimony I knew that Davenant was madly in love with Bessie Satterlee, and had even made dishonorable proposals, wishing her to elope with him to Europe. He was mad enough to try the integrity of the honest old Deacon, offering him a large sum to allow his daughter "to complete her education" in Paris, under the direction of her married lover. The old man, incapable of comprehending such wickedness, told me that he regarded Davenant as a lunatic, and sincerely pitied his misfortune.

It was evident that Bessie had been powerfully impressed with the rare personal beauty of young Davenant, who was only four years her senior.

His jovial forehead, and fair temples surmounted by a coronet of dark curls; large brown eyes; under-brows straight, fine, and black; a nose and mouth haughty, and sweetly matched with a chin of Antinous, and the neck and shoulders of a Paladin. These noble features, mated with a bland and graceful manner and a voice full of meaning and penetration, might well conquer the heart and possess the fancy of a handsome country coquette, ardent, ignorant, and ambitious —for such was "the Deacon's daughter."

I believe I was not deceived in observing an ill-concealed uneasiness in the air and carriage of Bessie during the week that I remained at the tavern after the funeral of Madam Davenant. On my return to the city these circumstances and suspicions were forgotten or obscured by the interest of legal business. Not until the arrival of Davenant in Boston, the second month after I had written to him the particulars of the accident and death at Saltone, did they again recur to me. As he entered my office I noticed a remarkable change in his features and expression. He had become thin to emaciation. His eyes, usually steady and lustrous, wandered in fitful, suspicious glances. When we were alone he entered immediately upon the subject of Madam Davenant's decease, and drew many deep sighs of relief when I had satisfied him that she did not perish in the fire. He listened with motionless attention while I described to him the discovery in the vaults. Until all had been minutely described not a word escaped his lips. He sat pallid, or rather leaden-visaged, and breathless, with his eyes cast down. An irresistible, perhaps inexcusable, desire to note the effect made me bring in a few words, toward the last, about Satterlee and his daughter. At the mention of her name he moved slightly, and a burning spot appeared, and as quickly disappeared, in his hollow cheek. At length he spoke.

"I thank you for this kindness and attention. As for Saltone, I do not regret its loss. The years of misery I passed there made it seem to me more like a hell than a paradise, as you used to style it. It is idle for me to deny that I did not love Julia; her thoughts were entirely occupied during the few past years with the memory of her former husband. I believe I may say that her death, horrible as it was, will prove a great and necessary relief to me," he said, looking full in my eyes as if to solicit sympathy, if that were possible; "for it is no secret to you that we did not live happily together. Whether her death or mine was the more desirable I often pondered. Providence decided that question for both of us; and now *I shall live.* Had she lived longer I should have followed the example of William Saltone. Life would have been too great a burden."

"You surprise me," I said, "by this confession—pardon the word; but I saw nothing in Madam Davenant to excuse so desperate a course on your part. William Saltone loved her passionately."

"And died by his own hand!"

"Yes," I said, "but he was insane. Her affection for him was profound; he speaks of it in their correspondence which I have just given to you. It proves that an ardent attachment existed between Julia Saltone and her husband. His suicide was not, then, caused by unhappiness in the marriage relation."

A lurid flash illumined the eyes of Davenant. He raised his hand impatiently. "Listen to me," he said, "and I will try to explain something which has never yet been explained or even expressed by living man. You may have read somewhere the allegorical story of the Vampire—a human being, to appearance, but human in form alone; a body inhabited by a demon, prolonging its existence in the flesh by draining the heart's blood of a lover through a small invisible wound. Madam Davenant was not a vampire in that sense; but William Saltone, her lover and beloved, destroyed himself; and I should have done the same but for the blessed accident of her death. Whether it was a physical influence, like the pretended power of magnetism, I know not; perhaps it may have been her vast strength of will, aided by an abysmal subtlety and cunning. Conjecture is vain in such matters. We do not understand the laws of these forces—nevertheless we live or die by them. Madam Davenant killed William Saltone: she first destroyed his reason by this nameless and subtle power; she exhausted his vitality; she drew his life and soul into herself, and left him without character or force. The struggle of the natural man against this horrid influence, which seemed to him only a phase of his passion, inordinate and absorbing, sapped the reason of the victim, and his death became necessary. Like myself, William Saltone was a man of high aspirations, but they were social and ambitious as

mine are intellectual. His wife, a woman of strong passion, loved him with ardor because of this and other harmonies and agreements in their moral and physical natures. In spite of these, I repeat it, he fell under the Vampire influence of her iron will, exercised with absorbing cruelty and selfishness. Madame Davenant controlled every person within her reach. She did this without effort. The moral power was so intense and immediate, to be in contact with her was to yield almost without an effort. As I have before said, the strong and cultivated nature of the man revolted, and this conflict ended in loss of reason and of life. He died loving and hating the same object. My passion was only hate."

"But with you?" I asked, wondering and curious.

"With me it was the same. Julia Saltone willed that I should marry her: and I did so. She had better have taken my life. Every action she willed it was impossible for me not to perform. There was infernal magic in it. I struggled in vain against her: at length I discovered that, whatever might be the case with my actions, intellect was still free; I could plot and devise; I could maintain silence and secrecy; in mind I was not a slave. In social relations I was, in fact, a tool—an idiot—the servant of her will. Worse—still *worse*—she *knew* this and exercised her power consciously. She would even speak of it to me. Believe me or not, if she discovered any purpose of mine and opposed it, I could not act. Imagine the horror of my situation. It was death—worse than death."

"Did you never quarrel?"

"Quarrel? What! with an elephant that could play at chess with you as if you were a pawn? As well might the needle have quarreled with the magnet! Enough; I have told you all. Let us forget it now," said he, with a feeble effort at a smile.

"Perhaps," I said, as he rose to leave me, "there is a better life for you in the future."

"Ah!" he answered, looking at me with a timid expression, "I dread the future. I will try, but there are remorses I can not forget."

As Davenant appeared too much agitated and fatigued with this painful explanation I refrained from pressing business upon him, but merely said that I would call the next day evening at his hotel. It was necessary for him to look over the accounts of the estate. The city house, planned by Madam Davenant, was unfinished, and I had suspended the work until the proprietor should return. He consented to receive me at his rooms at the hour I proposed, and there to arrange every thing to my satisfaction.

Early in the evening of the next day I entered his apartments. Here, as always, he was surrounded, buried, in luxuries of art and taste. Two of the suit of four rooms were filled with pictures, statuettes, and engravings; mostly unpacked and lying without order or arrangement as they were taken from the cases. Davenant was kneeling upon the floor in the middle of the room, under a gas candelabra, intently studying an old and smoky-looking picture. "At Paris," said he, without looking up, or even saluting me, "I became acquainted with an intelligent connoisseur who fancied he had discovered the material used by the Italian masters as a vehicle for color in painting. I was at once interested in that subject, and I think I can now tell a genuine old picture from a modern imitation by the quality of the varnish."

"Before you left us," said I, venturing an idle remark, in keeping with his own, "you were deep in horological mechanism, and, if I may believe the housekeeper, Sarah Behn, you were making improvements in Dutch clocks. Sarah says that the monthly movement added to the clock at Saltone was of your invention."

Davenant rose up instantly and turned upon me as I spoke with a look at once terrible and penetrating.

"What does Sarah Behn know about it?" he exclaimed, in a thick voice. "Tell me the truth now; you have been lying to me about the fire. *She* was burned, man—burned in the fire, and it was—" He paused and turned away.

My astonishment at the violent emotion of Davenant, excited by such a trifling cause, must have been visible, for his manner became instantly calm. "This affair," said he, "has unsettled my nerves. Come into the bedroom; I will lie down, and we will talk of business. I am not well; pardon my violence; old scenes, bitter recollections."

When he had composed himself upon the couch and swallowed a customary opiate I drew forth my papers. He examined all intelligently, and gave directions, which I wrote down. My expenses were reimbursed, and funds appropriated for clearing away the ruins of Saltone and building a new villa, more splendid, if possible, than its predecessor.

"You will be solitary," I suggested, "in so large a house."

"No," said he, his face radiant with a smile of hope, "I shall be happy—I mean to marry Bessie Satterlee; we have loved each other these many years. She will be mine—she will be mine! The other was a demon, but this one is an angel."

"Bessie," said I, "is a handsome girl, but uneducated. You will be an admirable instructor, however, and she can not but learn from a person she loves."

"Uneducated, did you say? Curse on education. Was not the other—*she*—educated?—pah! Give me innocence and goodness of soul; I ask for nothing more."

"Reasoning with lovers or madmen," thought I, "is equally a fault." It was now late, and I rose to depart.

"Stay," said he, "what have you done with the papers—I mean those that were in the vault? There were some memoranda of inventions."

"The iron chest is at my office," I answered. "It was filled with documents. Those that were sealed were of course not opened."

"Send them all to me to-night—all. I shall not sleep till I have them."

Late as the hour was—past midnight—I found it necessary to comply with this absurd requisition. By three in the morning, after infinite trouble, I succeeded in getting the cumbrous iron chest into the hotel and bedchamber of the mad Davenant. He insisted upon my staying with him while he looked over the papers. I lay down on the sofa and fell asleep, leaving him eagerly and anxiously unfolding and searching. Suddenly I was awakened by a rude shake. Davenant stood over me. In the expression of his haggard features was a dreadful mixture of horror and suspicion. "Get up, Sir," he repeated, dragging me by the collar, "and say what you have done with the paper. You have it—no lies or I will kill you—up, I say: you have read it, I see it in your eyes — confess — wretch—confess, or I strangle you!" Fortunately for me the madman was my inferior in strength. Seizing both his wrists I thrust him backward to the bed, where he fell exhausted and fainting with the violence of his emotions. A physician seemed to be more needed than a lawyer for such a crisis; and, as soon as the proper attendance could be procured, I left the hotel and retired to my room in no very agreeable state of mind.

The next evening my client presented himself, but not in a mood of threatening or violence. I received him coldly, and gave him to understand that our business connection was terminated by his conduct of the preceding night.

"Sir," said he, in a pleading tone and a manner almost abject, "you have in your possession a secret so dreadful to me, your knowledge of it deprives me of all hope—even of the possibility of life. The paper which you have taken from the chest—"

"Mr. Davenant, before you make any further betrayal of this dreadful matter, the nature of which I can not even guess, I give you the word of a Christian and a gentleman, that I have neither read, nor do I possess, any documents of yours saving those of which we have already spoken or which you have communicated."

"Then," said he, "I am the more surely lost, since the paper must be in the possession of some other, who will use it less mercifully than you. Pardon my violence," said the unfortunate man, "and promise that, whatever happens, you will be my friend and adviser in extremity."

"It is not necessary for me to make such a promise," I replied, "since it is included in the duty of a legal counselor. But I must caution you that, unless I am made acquainted with the nature and extent of your crime or misfortune, I shall be unable to advise you how to avoid its consequences."

"Must I then confess all? and will you assist and defend me when you know all?"

I assented.

He seated then himself opposite to me, and continued for a time silent, as if struggling with the terrible secret that refused to be expressed in words.

"I have told you," said he, speaking in a slow and hesitating manner, and avoiding to meet my eyes, "that I hated Madam Davenant, but the word hate conveys only a faint intimation of the intensity of fear, loathing, and detestation with which I regarded that woman. Her beauty was to me like that of a serpent, and her intelligence diabolical. As early as the second month after my marriage, the idea of compassing her death used to present itself to me in dreams, and had I been a somnambulist I should have stabbed her as she lay beside me in my sleep. An idea born so inwardly, and suggested by nature itself, could not fail to expand and become a part of daily and habitual meditation. I would frequently pause and stand motionless, regarding her with a fixed but passive look. This condition was like a trance, and did not seem to originate from my will. It was forced upon me by every circumstance of her life. If she ate or drank in my presence I meditated the possibility of poison. Then that idea becoming familiar and ordinary, I would devise its execution; and finally reject it as not feasible, or involving the danger of detection. At other times I would plan trap-doors, secret panels, and pitfalls, which would serve to hide the evidences of a violent death. Absurd and impossible methods of effecting my desire occurred to me, as ordinary topics of meditation. I imagined visits to precipices, over which I could thrust her unseen; bathing on a dangerous shore; ascending in a balloon; and a hundred dreams of equal absurdity and wickedness.

"Madam Davenant apparently divined what was passing in my thoughts, and kept a strict and severe watch over my actions. Without betraying in any manner her real fears, she made me sleep, after a time, in a separate apartment, never allowed herself to take food or drink with me until I had partaken of the same. These precautions were indeed unnecessary; her overpowering character was always a sufficient protection. I could do nothing directly aimed at her life; for with my hatred went evenly along a degree of respect which no lover ever felt for a mistress, no idolater for the god of his adoration.

"Madam Davenant attended generally to household matters and the business of her estates. She had a shrewd and calculating head. I was consequently free to occupy myself in my workshop and observatory.

"Early in the last year the idea occurred to me of an improvement in astronomical clocks, the time of which should be regulated by magnetism.

"The foundations of Saltone rest upon magnetic rocks, which also powerfully attract atmospheric electricity. I had caused rods of iron to be placed within the walls at short intervals, which served as a safeguard against lightning. You were mistaken in supposing that the destruction of the villa was by lightning. My precautions had made such an accident impossible. By means of this powerful electrical apparatus, bedded in the frame-work of the house, I was enabled to communicate a regular and invariable motion to the pendulum of my great clock, which

stood in the bedroom of Madam Davenant, and also by a galvanic connection moved an oscillating index in the observatory. It was only necessary to communicate an annual instead of an eight-day movement to the clock, and the apparatus would be the most perfect in the world.

"I was several months employed in completing a machinery which should mark off sidereal time upon the dial-plate by a small interior wheel, corresponding with a duplicate movement in the observatory, also with a galvanic connection.

"I worked at these beautiful inventions with a childish interest, which caused me to forget for entire months my schemes of vengeance against Madam Davenant. I saw that she despised my enthusiasm; and when all was finished, the murderous dreams began again to visit me nightly, and served as food for reverie during the day. Meanwhile my intercourse with her was calm and reserved. There was even an air of mutual confidence, which deceived all persons but ourselves.

"The old fear now took possession of her, and, growing weary of continual watchfulness, she slept with her chamber door locked against me at night—a vain precaution had I chosen to effect an entrance. She proposed that I should go to Paris and select pictures and furniture for the new house which we, or rather she, was building in the city. To hear was to obey. I went, but before going the diabolical idea occurred of which I will now make you the confidant.

"Madam Davenant never left her room during the night. She retired early, and rose regularly at sunrise. That she would not leave Saltone in the summer appeared to me morally certain. I had then only to adjust the sidereal index of the clock, which stood near the head of her bed, and this unconscious machinery would, if I chose, accomplish her death while I was on the other side of the Atlantic. The idea inspired me with horrid delight. My moral nature, if I have any, made no response, conscience was asleep or extinguished.

"I placed a magazine of explosive combustibles, composed and prepared with the utmost care to avoid the possibility of failure, in the case of the clock. It was the work of a minute to do this during her absence. I then established a connection by simple means, so that at two in the morning on the thirtieth day after my departure a violent explosion and conflagration was sure to take place. No person would be injured except the one I wished to destroy. She slept always alone, entertained no guests, and the servants occupied a remote wing of the mansion.

"The murderous machinery worked surely to its appointed hour, but, by a strange and unlooked-for chance, Madam Davenant was not in her room when the explosion took place. The storm of that night completed the singularity of the event. A clap of thunder must have joined with and disguised the sound of the explosion. No one, therefore, could discover the means by which Saltone was destroyed."

"What, then," I asked, "is the cause of your anxiety? Why do you fear a discovery?"

"The paper, the memorandum! It is not in the chest."

"What was the nature of this memorandum?"

"It was a fixed habit of my life to write in full each night the acts and incidents of the day. My scientific discoveries and inventions were in this manner minutely recorded. After I had completed the arrangement of the clock, I went as usual to the observatory and wrote down all in detail. You will ask why I did this? It is impossible to account for such folly; and still more strange that I should have filed this fatal paper with the record of the month, and placed it in its natural order in the iron chest. It is no longer there. Some person has removed it."

"Do you find the other papers in the order of their dates as you yourself placed them?"

"Yes, nearly; that is the only one missing."

"Did you find the seals broken?"

"The seals were broken."

"Then you may rest assured Madam Davenant herself removed the paper. She could have done that, could she not?"

Davenant made no reply.

"Your secret is safe, Mr. Davenant, with me and with the elements. The paper was taken away by the only person who could have discovered it, and was destroyed in the fire."

The miserable man sat mute before me, shuddering and cowering at the consciousness of his own wickedness; but while his heart seemed to shrivel like burning parchment in the intensity of remorse, his ingenious mind worked over the incidents of the dreadful story, seeking an explanation of the whole.

"Early on that night," he at length said, speaking half to himself, "she must have gone to the chest. She examined the record of the last month. There must have been something in my manner that excited suspicion."

He paused, and after a long silence, which I did not care to interrupt, continued:

"She broke the seals of the journal, discovered the paper dated the 30th of May, and secured it. She then knew that, at two in the morning, the explosion would happen. It was near the precise moment. To escape unharmed she must remain in the vault; she did not know what might be the degree of danger. She had no fear for the servants, as they were not in the main building. She went to the trap and shut it down to escape the horror of the sound; she had a nervous dread of thunder and of all violent noises. The explosion would naturally throw open all the doors. At the foot of the cellar stairs was a door opening inward; it swung over the trap and prevented its being raised from beneath. In her mortal agony and despair, thinking to die there in that dungeon, she would take out the last letters of William Saltone and read them; for Madam Davenant believed that she would join him again in heaven—mistaken woman! The fire that destroyed the building destroyed also the iron frame-work bedded in the

house; the smoke furnished a conductor for the electric fluid; she sat upon the iron chest and was killed by the lightning, and not by me," said Davenant, looking up with an expression sad and terrible, beyond the power of any art but the painter to delineate. He leaned back in his chair and spoke in a feeble voice.

"You are wrong, Sir, about the memorandum. It must have been in Madam Davenant's possession, and was taken from her person by some one. Tell me," he added, fixing a grieved and anxious look upon my face, "who was it that took the clothes from the corpse after you removed it to the village?"

I dared not reply.

"I understand all, now," said he; "Bessie has that memorandum, and she was the first to know that I am a murderer!"

"Yes," I replied, "but she has kept your secret, and it is safe with her; for I am sure she loved you."

Davenant made no reply. His eyes were closed, but as I looked intently upon his motionless features the lids opened slowly a little way, disclosing the dull glaze of dissolution.

MRS. MARGARET'S HOBBY.

IT is good for the young heart when it finds one whom it can love and reverence with single and unfeigned trust; better still, when a great and living kindness establishes a bond of obligation which the favored one may acknowledge by the continually outspoken gratitude of daily service. Mrs. Margaret Wood, an excellent spinster past the prime of her age, had acquired her matronly title—not often bestowed upon single ladies in this country—by the dignity of her character and circumstances, and by the praiseworthy and protective benevolence of her disposition. I have known her many years, at first by observation, when she was to me like the bright star far away in the cool depths of evening; afterward I was permitted to approach her for blessing and comfort, as men draw closer to the cheerful and beneficial fire upon the hearthstone when the night is dark and the weather is chill. And thus it was:

After months of painful watching and much sorrow my mother and I were left alone in the great world—what a weary vastness it seemed! My mother had a pretty talent for fancy-work; I was well instructed and tolerably skilled in music; and we thought that with our little property and our pleasant industry we could do well in the city. It was the old story, illustrated too often by living examples to need repeating. Our recommendations were not of the sort to secure valuable patronage; we lost opportunities of helping ourselves through timidity and lack of enterprise, and we suffered on in daily bondage of spirit to the increased expenses of living, while our tedious waiting grew into fearful, hopeless waiting, and a sick despair crushed my dear mother down into the very grave.

Just opposite our tenement, that was small but respectable—my mother said two lone women should have due regard to appearances—was a large and handsome establishment which, to begin with, filled our prospect; and, as we grew acquainted with the various indications of its domestic arrangements, insensibly gained much of our attention.

We learned in time about its inhabitants, as interested observers will. I hope we were not blamably curious; it certainly did us a great deal of good to think of something besides ourselves. So we waited with a childlike pleasure every day for the hour when Mrs. Margaret appeared for a walk or drive, and we thought it specially fortunate if she stopped on the pavement to speak with a passer-by, or went out upon a terrace where a few plants tried to grow in the cool shade—it was bitter to think that human beings were struggling in the same way—for then Mrs. Margaret would always glance up at our windows, just as if her poor, pale blossoms reminded her of our existence.

My mother had not been able to sit by the window for many weeks, and, as my place had been at her bedside during that period, we had ceased to see and almost to think of Mrs. Margaret, and it was for a moment as if a stranger had entered when she suddenly made her appearance in our parlor one day. She had heard we were sick, and therefore came. She asked me a few questions, nodded little sharp answers, and from that time seemed to understand us as well as if she had known us from childhood. To be sure a few general facts were enough, for we were plain, simple persons, and easily comprehended. Her continued friendship was the dayspring of consolation: alike we needed it, the living and the dying.

It was all over, the suffering of the dear departed one, the first agony of sorrow, the visits of the undertaker, the bustling services of attendants, the funeral; and I sat alone in the forsaken parlor, compelling my mind, so tossed and smitten, to some practical consideration of the future. My bills paid, and I had but ten dollars, a scanty wardrobe, and the world before me, yet nothing in it I might choose. In dismay I uttered some wrong and bitter words, and was shocked that they had reached the ears of Mrs. Margaret, who stood unexpectedly beside me.

She spoke kindly. "My dear little Lettice, you must not think of dying now, for I have set my heart on having you live with me. I never envied any body but the parents of good children, and I have heard much of your filial love and duty. Heaven has not given me a natural claim to the blessed title of mother, but *your* mother told me that for her sake you would be to me as a daughter. Will you? Will you come to my arms, Lettice?"

"For her sake, and for yours!" I cried, throwing myself upon her loving breast, where I lay in convulsive weeping. Mrs. Margaret's tears fell also upon my cheek. Presently she took me to her own house.

Lettice Gray was soon at home in the grand old mansion, like one born there. She found no fictitious display to intimidate her inexperience. The tone of the establishment was graduated on principles of utility, fallen a little into disuse at the present day, she has since found. The richly-carved mahogany furniture was disposed for comfort and convenience, somewhat oddly, perhaps; the thick curtains and carpets kept out the cold, the abundant plate and old painted china had no recognized value in point of ostentation, but at all times adorned the table with its sober glitter.

And Lettice soon found her employment. Mrs. Margaret was not exacting. Such portions of the mornings as she spent at home were passed in the library, where Lettice often read aloud, a new book sometimes, but more frequently selections from the English classics. Several hours before dinner were occupied by plain sewing, and the evening was enlivened with music, which Mrs. Margaret greatly admired. All this was pleasant to Lettice, who loved books, her old songs, and the routine of quiet industry.

There was but little variety in the household, and no company, if I except the regular visits of Mrs. Margaret's nephew and foster-son, who was reckoned at home with us, although, to meet with more facility his engagements of business, he lived elsewhere. He always dined with us on Sundays, and took tea in our large and stately parlor once or twice a week besides. Mr. Herbert Eldred, a very handsome gentleman, not quite thirty years of age, was well educated and sensible. Mrs. Margaret said that he was prosperous in his affairs, and that he possessed consideration and accomplishments that obtained for him a good reception in the best society. But I cared more for his agreeable home qualities. His visits were the events and epochs of the week, both because of his own vigorous, inspiriting presence, and that he brought with him new periodicals, or music, or a popular book; in short, something always that infused a freer, fresher element into our life, that otherwise might have become somewhat stagnant and morbid. He had a pleasant, cultivated voice, which he was fond of exercising, partly since it gratified Mrs. Margaret; so it happened that our concerts, as we called our enjoyable rehearsals, came to be an understood thing, and always followed the removal of the tea-table. We sung until Mrs. Margaret fell asleep, when Mr. Eldred would ask me to play something soft and low, if I pleased, just to keep up the soothing sound of the instrument, when he would read or more frequently write letters, until the dear old lady awoke with many apologies, which made us all laugh as she had to repeat them so often.

After a few months of this sort of living, Mrs. Margaret afforded us a change by dispensing with her evening nap. She seemed a little anxious and restless, and an indefinable something in her manner diffused a feeling of constraint upon our trio. This was especially so whenever Herbert brought me music, or noticed me more than usual, or if I said a great deal to him in a familiar way, which our long acquaintance and his kindness seemed to authorize. This vague pressure upon our movements was rather a matter of feeling than explanation. I had an instinctive sense of its locality, and soon learned to prevent the causes of derangement; so that we were very happy, only Mrs. Margaret did not appear inclined to sleep while Herbert remained.

One evening Mr. Eldred spoiled every thing by bringing a set of jet ornaments, which he presented to me. They were very beautiful, and Mrs. Margaret had said only two evenings before that she wished me to have them; but she was much displeased to see them coming in the way they did, so that I could not tell whether I ought to accept them or not, and was greatly embarrassed, and doubtless looked very foolish. Mrs. Margaret was then more kind, and told me to receive them from her, and that Herbert had only anticipated her orders a little—she should have given him special directions about them in a day or two. Mr. Eldred insisted upon slipping the bracelets over my hand, and as he did so said something complimentary about contrasted colors and the like; whereupon Mrs. Margaret rung the bell energetically to order the tea brought in. When it was over, she suddenly recollected that she had omitted sending some promised jellies to a sick woman, who lived in a narrow lane not far from our house; and she gave me directions for making up a basket of nice things, and finally begged me to go with the servant to see if the invalid required more substantial attention. This was altogether an irregular proceeding in our household, and could be explained only on the supposition that Mrs. Margaret desired a private conference with Herbert without using the formality of requesting it. I felt annoyed and intrusive, and was only too glad to escape for a while into the free night air.

When I returned Mrs. Margaret looked very happy and contented; we had music as usual. After Mr. Eldred had gone the dear old lady talked with me a great while, for it required so long for her to get at the point without implying any thing unkind and offensive.

You have imagined, courteous reader, that she feared it would happen with Herbert and me, as it so often does with young people in close proximity. She told me how she had cared for her nephew from his infancy; that he was to her as a son; that he would be her heir; and then she spoke of his future, which, in some important respects, was yet undetermined. She wished him to make a suitable marriage, but the conditions of fitness were so arbitrary and numerous it seemed that nothing short of a miracle would constitute them realities. Herbert possessed ability, family, and wealth, and had been formed and refined by a public education and foreign travel. It was necessary that his wife should have shared in all these advantages, besides exhibiting the more subtle adaptation of temper and spirit to his own.

"In brief, that they love each other," said I.

"More than that. People can always love each other when their tastes and circumstances correspond. The proper way is to keep the fancy free until the judgment approves, when it is safe to listen to inclination. You see, dear Lettice, that I want you to consider Herbert just as a brother. You are both my dear foster-children, and when he has chosen him a wife you will have a sister. Does that please you, my child?"

Mrs. Margaret held my hands, and sent a piercing gaze through my eyes into my inmost soul. I met her gaze fearlessly, for it did me good to have her talk so explicitly in order to clear away the shadows of suspicion that had darkened our atmosphere somewhat.

"It does please me entirely," I replied, fervently. "I ask only to be loved and trusted by you, and to know how I can make you happy."

"My darling Lettice"—I lay in the dear, kind lady's arms—"you are plain and unpretending, but you are good and lovable. I will provide for your future. You will be happier with me than in a situation too brilliant and exacting for your previous training and quiet abilities. What will you say?"

"Only my great thanks. You have chosen for me as I would for myself."

After that, for a long time, Mrs. Margaret was quite at ease. Herbert was kind and sincere, but uttered no compliments. Had my good friend seen all my heart she would have feared no treacherous romance beneath her roof; nor yet, could she have heard my unwearied prayer, sent up night and morning, during five long years, in behalf of one who had left me for an unknown fate—of one who could not be living, and who yet must not be dead: so said my poor heart, that prayed unweariedly night and morning against reason, almost against hope and faith, beseeching the good Lord, with earnest cry, to succor, help, and comfort all who are in danger, necessity, and tribulation; to preserve all who travel by land or by water, and to show pity upon all prisoners and captives; for who can tell, hope pleaded, but that somewhere on this wide earth he yet lives, longing for a blessed release that he may return to break the silence of years with the story of his misfortunes and sufferings. Thus my faith received a little strength, and sent up still its unwearied prayer.

Almost always, as men and women advance beyond the maturity of life, they seek some compensation for the decay of physical force in a more intimate contact with the freshness and vigor of nature. Thus Mrs. Margaret, wearied of the monotony of her systematized town residence, where nothing but heat and cold indicated the passing seasons, fancied her idyl somewhere among our New England hills and vales, and pictured the combined attractions of great trees and running water, the broad blue sky and clover meadows, the lowing of herds and the peeping of young fowls, the fragrance of orchards, and gardens of lavender and thyme, sage and rue. Our pastoral enthusiasm ran high all winter, and our wishes took such a positive direction that, when spring came, Herbert was assiduously engaged in locating Mrs. Margaret with all her rural anticipations. I omit the prosy details of preliminaries and removal, and pass at once to Elton Corner, where Herbert had found an estate, which, in most respects, suited Mrs. Margaret, and whither we went on a smiling May day.

A portion of the house, containing the parlors, dining-room, and the airy chambers above, was quite modern; while attached to these, in picturesque connection, was the commodious remnant of a quaint and roomy structure, the preservation of which added greatly to the domestic convenience of our household. We had the projected garden well stocked with all desirable fruits and herbs, the orchard full of music and swelling buds; a terrace of green sward, where we could set the parlor roses and geraniums in the summer; the runlet, which rushed or tinkled according as it was high or low, and a row of maples on either side of the public road, extending as far as we cared to walk without the formality of usual outer coverings. It seemed that we should be very happy. There was at first a great deal of pleasant labor. Herbert would spend his long summer vacation at Elton Corner; then would succeed the gorgeous, dreamy beauty of autumn, beyond which I would not anticipate; for I dreaded inexpressibly the unbroken, solitary winter, the heaviness of storm-imprisoning weeks, and, above all, the invariable loneliness of Sundays. I feared that Mrs. Margaret's philosophy would not be a satisfactory substitute for our usual visitor even for herself, much less for another.

Elton Corner was not a village, only a loose cluster of houses so wide apart that the most adventurous chickens were rarely able to trespass on a neighbor's supply of grubs. The inhabitants, like their dwellings, exhibited no conspicuous characteristics; accordingly, in the egotism of our own engagements, we scarcely thought of them at all. Southward from the windows of my room there was visible a broad, low farm cottage, against a back-ground of glistening mulberry-trees. As the position was pretty and the edifice quaint, I was tempted to essay a pencil-sketch of it, which Mrs. Margaret was pleased to admire and to hang just over her writing-table in a scraggy frame of larch cones. This picture excited our interest in the cottage, and we used to watch it analytically every time we went by in our chaise. We had not discovered any thing particularly entertaining or remarkable, either in the garden or large yard, or in the two little children who were always playing under the mulberry-trees a good ways from the road, until, one day, when they came down to swing on the gate, close by which we passed. Their sun-bonnets were thrown back, and revealed such wonderful childish beauty as I could not believe existed save in the fancy of artists and poets. Those little upturned faces were exquisitely human and rich in bloom, by no means

suggesting conventional cherubs, and a prospective translation from this to more congenial celestial abodes. They looked as indigenous to their homes as the straggling bouquets which their pretty fingers clasped, made up of clover, buttercups, and dandelions, the rude sweetness and gayety of our New England fields. Mrs. Margaret, who is always attracted by children, guided our fat, lazy horse close up to the gate to make the acquaintance of such pleasant neighbors, when I saw that the elder girl was much more beautiful than her sister, and that lurking somewhere in her full lips, violet eyes, and bright brown hair was an expression that irresistibly reminded me of one of the angels in the Sistine Madonna. So I loved the child from my heart henceforth.

Mrs. Margaret was a diplomatist in her own way, and she soon became very popular with Mr. and Mrs. Branch, the owners of the cottage, and with the children, whom she privately called the little Twigs. We had a long stool placed in the chaise at our feet, whereon the Twigs rode when we trotted along the highways and by-ways, and proved themselves very agreeable and well-behaved companions, and not communicative beyond the capacity of their observation and memory.

One day their heads were nearly turned with news in prospect of a summer boarder, who was to have the parlor and the best bedroom leading out of it for everyday use. It was to be a lady from Boston, in all respects worthy of such resplendent accommodations. Mr. Hendrick had been there to make these arrangements, and Mrs. Hendrick would follow in a day or two.

"That is all very nice. We will make her acquaintance if we like her," said Mrs. Margaret to me.

Mrs. Hendrick abundantly satisfied the condition of our favor, and with the brevity of prelude which the country air authorizes, we established a familiarity that promised the reciprocal advantage of good company in a locality that had little experience of the refinements of town life. Mrs. Hendrick charmed me at once. She was stylish in her plain French prints and ginghams; she was thoroughly well-bred to the last in all the provoking contrarieties and the apologetic fatigues of country-rambles; she evidenced by a fascinating indirectness a high culture and wide observation; but, above all, she touched my heart by the strange sweetness of her smile, and by an occasional deep cadence that reminded me of more in my far away past than it would be well for me here to write.

About this time Herbert made a most delightful accession to our society, and introduced an indescribable geniality into our household, with the only drawback that he must leave us with the summer sun. Butterflies, perhaps, would not always flit from flower to flower if they could think of the coming snows. I resolved, like them, to be happy in the warmth and gladness of the to-day.

"How fortunate it is that Mrs. Hendrick is a married lady!" remarked Mrs. Margaret, confidentially to me. "Mr. Herbert could not help falling in love at once. Sentiment is so apt to run away with young heads in the country."

"If you think her so lovable, we ought rather to be sorry that she is not free, for granted that Herbert should have a wife, whom could he find better than one *like* Mrs. Hendrick?"

"You are very sensible there," returned Mrs. Margaret, meditatively. "I have nearly resolved to adopt Mrs. Hendrick as my standard for the future Mrs. Eldred, or rather, as the basis of my ideal prospective niece, for Mrs. Hendrick has two or three little faults."

There succeeded a silence, during which I pondered whether Mrs. Margaret ever included in her ambitious calculations for my *brother* any estimate of the mighty force of that love which, wherever it exists between married persons, as in all other human intercourse, will hide a multitude of shortcomings. I wondered very much if Herbert looked forth upon the same artificial future with the life of living left out. Mrs. Margaret commenced talking.

"I am a believer in family resemblances, dear Lettice. Sisters and cousins are often much alike in essential characteristics. Mrs. Hendrick pleases me so well, I would fain have you make such inquiries of her as courtesy will permit in reference to her family, in which we may find somebody for our Herbert."

Mrs. Margaret, thoroughly exhausted from the gardening and drive of the morning, always slept two or three hours after an early dinner, which time I happily spent with Mrs. Hendrick, generally under the maple or mulberry trees, with any variety of plan our caprice suggested. On the earliest opportunity—for our vagabond Herbert had a habit of taking us in his way when he strolled off with his gun or geological hammer, or his indefinite seven-league boots, and contrived to stay as long as I did; and lest he should lack ability to make his presence desirable, he always brought a racy new book in his pocket, and sat reading by our feet, while we knitted and sewed. It was wonderful how quietly and easily we got on, just as if we had all been real brother and sisters! As I was saying, on the earliest opportunity I talked with Mrs. Hendrick about her family, as best I might, and found out something which seemed to my surprised delight like a resurrection from the dead, like the opening of the skies. She was the friend and cousin-german of Robert Harrington, the lost one for whom I prayed unweariedly night and morning. This discovery bound us very closely together. She had heard somewhat of me from Robert, and knew that I had been greatly loved. How I hung upon her lips for that deep-toned cadence! How I compelled my sad heart to the invention of amusing conceits that I might catch the rare beauty of that smile again and again!

But I found nothing wherewith to encourage Mrs. Margaret. There was not a floating sister or female cousin among all the Harringtons. I

did not think it worth while to trouble her with my dead past.

As our acquaintance advanced, and the weather grew warmer, Herbert laid aside his pretentious excuses of sport and science, which had incurred the satirical notice of Mrs. Hendrick, and accompanied me in a straightforward manner whenever I went to Branch Cottage. As soon as Mrs. Margaret retired for her siesta I found my hempen reticule, in which there was always plenty of work, and Herbert also, who always stood waiting, and went with him under the maple-trees till we met Mrs. Hendrick and the little Twigs, who were always expecting us. If it was not too warm, we diversified our encampments beneath the mulberry-trees by a walk. The Twigs showed us a green, clover-flecked lane, which led us to an inclosure of woodland, in the midst of which, at the bottom of a curved dale, we met our runlet strayed, gliding along very quietly between mossy, slimy banks, and beneath the solemn shadows of thick summer foliage. In that untrampled retirement we found rich aromatic odors, pale flowers, brilliant fungi, and fairy-like ferns; and, better still, two low granite boulders that just supplied our party with rest, while we could look over into a broad, clear pool which the runlet stopped to make, and smooth our hair, or define the tints and study the design of the pebbled mosaic revealed below.

One day, when we were all going down the lane, the Twigs being very frolicsome, my Sistine angel turned an awkward and unwilling somersault off a bank, and tore her dress disastrously. I bade my friends go on, and staid to repair the damage as best I might with the materials in my reticule; after which, with a noticeably chastened temper on the part of the Twigs, we hastened quietly along the soft, turfy path to the pool. I was thus the unexpected witness of a tableau that flashed a world of meaning to my deepest soul, and made me tremble in every limb. Herbert sat at the feet of Mrs. Hendrick, holding her hand, and looking up into her face as only lovers can; while she bent over him, and with her free hand caressed his hair. A glance was enough. With the quickness of thought I turned and called loudly to the Twigs. When we advanced together to our companions that burning transfiguration had faded—they sat conversing as friend with friend.

The horrible spectacle that I had seen almost crazed me, filling my body even with uncontrollable agitation, which I strove vainly to hide by continual movement. I vexed the placid waters of the pool with tossing pebbles. I made little garlands and scattered them pettishly, and ground the juicy herbs into the soil with my foot.

The Twigs avoided me, and hovered around Mrs. Hendrick, who, laughing, said I was bewitched with a spirit of restlessness. It made me angry to hear her. I almost hated her, the unscrupulous, the sorceress! Herbert sent troubled glances at me, as if he conjectured what I had seen. It was wholly a miserable afternoon. I complained of headache. Herbert proposed a return, to which I gladly assented; and having conducted Mrs. Hendrick and the little children to Branch Cottage, we went home very early. I hastened to my room, called myself indisposed that I might have time to think, and did not go down again that night.

As I pondered the stupendous sin and shame that had betrayed themselves, I remembered that a shadow had been coming over Mrs. Margaret during the previous fortnight. Had any thing excited her suspicions, and was she watching and waiting for proof, and ought I to tell her what I knew? I had not regarded her trouble very much, partly because I had been so engrossed with my newer friend, and partly because a domestic cloud in the free life of the summer is less gloomy than when you are shut up with it by the winter fireside. I little thought the tempest would culminate on the morrow, and that the thunder-bolt would fall upon my head.

The morning was very dull. I was greatly distressed at dinner to hear Mrs. Margaret say every thing in praise of Mrs. Hendrick, while Herbert replied with that expression of tender and eager interest which the commendation of a loved object is sure to excite. I wondered at his ease and freedom of expression, and that he should be unsuspicious of a trap which Mrs. Margaret evidently laid for him. With what self-possession and clearness she also spoke! I alone was confused, and blundered.

When she had retired, as usual, Herbert asked me to go into the parlor; he wanted to talk with me. My poor head reeled in expectation of I knew not what. Herbert placed me on the sofa beside him.

"It is not necessary, dear Lettice, that I should discourse to you of my aunt's pet hobby. She wants me to marry a wife more perfect than the world has seen since Eve's temptation. It is not enough that I am suited; she fears every delusion. Years ago I paid my incipient addresses in various quarters; but my slightest exhibition of preference excites a jealousy which blinds her to every perfection. I do not wish to displease her by my marriage. I wish to satisfy myself. Let me tell you how I am endeavoring to manage my affair. Can you keep a profound secret?"

"If it is right."

"I pledge you my honor. Have I your promise?"

"Yes," I gasped; for I could not wholly distrust the open face into which I looked.

"For a few days only. I want your counsel. Last winter I met in society a beautiful, brilliant, and wealthy widow—Mrs. Hendrick."

Herbert looked curiously at me as he said this. I saw it all then, and laughed and cried hysterically. Herbert quieted me, and made me lean my poor tired, happy head upon his arm, while he went on: "I saw her frequently, and we loved each other. I did not know how to break the matter to my aunt. I could not bear to proceed

without her approval. This Elton project suggested a contrivance. Her favor to my bride, if ever obtained, must be beguiled from her, not requested openly. Louisa's brother-in-law came hither to bespeak her rooms. Their supposed relationship, luckily, was taken for granted, and did not require an assertion. You know the rest. She has won my aunt's esteem as none have ever done, unless it is my dear Lettice here. I want you to help me break the secret to her. I am in a regular *cul de sac*, and must cut my way out somehow. Advise me with your wisdom."

We discussed twenty plans; but I was yet much confused, and requested time to think.

Herbert clasped me to his breast and kissed my cheek. "Only help me through this, and I will love you fondly all the days of my life!"

I suddenly felt a dreadful consciousness, and, raising my eyes, beheld Mrs. Margaret in the door-way, frowning like a fearful retribution. I sprang to my feet. She passed on.

"Good!" exclaimed Herbert, laughing.

"Unmitigatedly bad," said I, almost crying.

"I have an idea," said Herbert.

"I shall never have another," returned I, as I left the room, and following Mrs. Margaret to her chamber, determined to make peace; for I perceived how greatly she misunderstood Herbert and me. I was not admitted.

When I came down I saw Herbert under the maples going to Branch Cottage. I wandered about the house during the whole afternoon. Mrs. Margaret took tea in her room, but late in the evening she sent for me.

"Can you explain what I witnessed just after dinner?" inquired she, with a severity that made me tremble. I remembered my promise, and stammered, "I could if you would give me time. You will not be displeased when you know."

"I must be my own judge as to that. After all, your position was sufficiently significant. Make no excuse. Rise to your feet! Obedience is better than fawning. I requested your presence to let you know that the stage-coach will call at six to-morrow morning, by which you will travel to R——, a half-day's journey, and give a letter to my old friend, Mrs. Grant, who will treat you kindly until I make some farther disposition in your behalf. We will not protract our interview. You require every moment to prepare for your journey. The housekeeper will assist you." Thus, like a felon, I was sent from Mrs. Margaret and Elton Corner. I could only patiently wait the hour of reconciliation, which I knew must soon come.

I will not enlarge upon my temporary residence at R——, which can have no more interest for the reader than it had for me.

On the third day of my banishment the stage-coach drew up at the door, and Mrs. Margaret, alighting, marched with rapid strides into the sitting-room, where I was alone, and clasping me to her heart, wept over me tears of joy and filled my ears with self-accusations.

When we were more calm, Mrs. Margaret told me a long and minute story, from which I learned that matters had turned out very much as I had conjectured they might.

Herbert had taken advantage of the dear old lady's chagrin to introduce Mrs. Hendrick as an element of reconciliation and safety. After twenty-four hours' suspense, Mrs. Margaret resolved to be not only satisfied but delighted.

We went to Elton Corner on the next morning, where we had a festival of happiness that lasted many days. Mrs. Margaret sent Herbert to fit her town residence for the suitable reception of his bride. When he returned there was a quiet wedding at Elton Corner, the rolling of carriage-wheels, and Mrs. Margaret and I remained to meet the approaching autumn.

I can not believe that the world has a wonder more deserving of admiration than the glorious death of summer greenery in its brief acme of proud splendor as we see it in our New England, nor a spectacle more dispiriting than the sudden fading of the lavish diffusion of crimson and gold into the melancholy hues of crisp and ruined verdure. I had sufficient leisure to note these changes in the period that succeeded the festive departure of our friends, and if I had loved Mrs. Margaret less I should have been very miserable and desolate. On pleasant afternoons I used often to take the old walk to the pool. As I sat there one day foolish regrets subdued my courage. Light breezes stirred the tree-tops, and the dun leaves dropped in lazy showers, and I thought of "dead hopes falling" in like manner. The curled leaves rustled behind me. How is it that surprise and joy do not petrify and kill us? I saw Robert Harrington as if I beheld a vision —there was a chasm of oblivion, and I awoke to behold him a reality, older and worn with hardships, but otherwise unchanged.

We were not again separated. It is impossible to describe the beautiful love of Mrs. Margaret which illumines our daily life; it is even less easy to paint the serene happiness of our winter days and the delight and conscious peace of their long evenings, when Mrs. Margaret forgets to ask for the accustomed music as she listens during the flying hours to the wonderful and stirring adventures of our Ulysses.

QUARANTINE AND VENTILATION.

THERE are, perhaps, no practical questions of greater importance to a mercantile community, subject to the introduction of yellow fever, cholera, and other diseases by the vessels visiting its ports, than the right administration of quarantine. Visions of the Oriental plague, of *cordons sanitaires*, and of those lazarettos into which Hope may have entered, but from which it never returned, flit across the imagination in considering such a subject, and the hospitals where every wound and every puncture turned to gangrene and death. Nor can we forget the case where a patient, oppressed much more by the atmosphere with which he was surrounded than by the disease from which he was suffering

recovered when his apparently lifeless body was transferred to the dead-room, where he had no other attendance than the free play of an unrestricted atmosphere.

To the weary sailor and the worn-out passenger, confined within the walls of a wooden prison, suffering from the effects of disease, and low in spirits, also, from the recollection of comrades whose bodies they have had to bury in the ocean, no sound grates so heavily on the ear as the ominous order of the inspecting physician at the port of arrival consigning them to the quarantine anchorage. Cut off from friends and relatives eagerly waiting to welcome them, or pursuing their solitary way in a foreign land, they all recoil from the new infliction. They have doubts of its justice and necessity. They have fears and apprehensions of the hospital to which they may be transferred. They are still more alarmed when they take their station in the vicinity of other infected ships, from which they may receive a new infection that might be escaped on shore.

But if the enforcement of quarantine regulations raise sorrow and regret on board ship, ruthlessly breaks up all engagements, whether of pleasure or business, and often embarrasses the traveler with expenses he was not prepared to meet, parallel evils and anxieties arise on shore. The merchant and the ship-owner are incommoded, and subjected to increased expense. The one is deprived, for a time at least, of his goods. They may be perishable, and lose much of their value from detention; in some cases they may be rendered useless by the delay attending their delivery. The ship-owner may lose a freight. Ship and life insurances may both be affected.

But the public gains by the sufferings and losses of individuals. It is protected from the influx of plague and pestilence. A ten-fold suffering is prevented, that might otherwise lay thousands and tens of thousands in the grave. There is no doubt as to the importance of quarantine. The country pays cheerfully all its share of the expenses. The great question is, "What is the best system of quarantine; and in what manner can the necessary regulations be enforced with adequate security to the public service, and without unnecessary severity upon individuals?"

Again, quarantine, in some places, is a progressive question, affected by the increasing population in the ports in which it is enforced, their influence on the surrounding land and water, the increasing number of ships at anchorage, and the position that it may be necessary to assign to them.

Further, the progress of medicine and other branches of science, more especially in modern times, has dispelled many illusions as to the origin of disease, and accumulated facts of the utmost importance in regulating practice. It may have been, and probably still is, true, notwithstanding the discoveries of recent times, that, as Sir Isaac Newton said, we are only "gathering pebbles on the shore." Still, in reference to the matter under consideration, many goodly pebbles have been gathered, with which the skillful marksman may generally hit his aim at a reasonable distance, even though he may not be always provided with a sling or a Minié rifle; and if the machinery and power of modern science be brought into the field, it will soon be seen to have as extensive a bearing on quarantine as on any other material question to which it has hitherto been directed.

Though the precise and actual causes of such diseases as plague, yellow fever, and cholera may still be wrapped in mystery, the days have disappeared when they were attributed to a mysterious dispensation of Providence, operating in a manner that left nothing to man but to submit to the infliction. Malaria, contagion, and infection are now better understood—in their effects and action upon the human frame at least, as well as the causes in which they originate, and the means of preventing, to a greater or less degree, their extension and reproduction. There is a key, then, to the manner of arresting them in their fatal progress; of circumscribing, under special circumstances, the limits within which they can be confined; and even in some localities, where they may have prevailed for ages, of eradicating the seeds from which they spring. This is not a fanciful hypothesis; it is a matter that sanitary investigations have placed beyond all doubt. It is becoming a matter of daily demonstration, though there may be districts in which the temperature, moisture, and abundant sources of malaria may forbid us entertaining the expectation that they will ever be permanently free from danger, except to those that are acclimated. Even there, however, in the course of ages, geological changes, an extended system of vegetation, and other improvements, may in time reduce, if it do not altogether destroy, the evil.

Though it may not be affirmed that it can be positively demonstrated, still there is as much reason to believe as is sufficient to guide us in all the ordinary affairs of life, that the poisonous matters that reproduce and extend such diseases as come within the scope and jurisdiction of quarantine are all derived from the animal and vegetable kingdom; and whether composed of countless myriads of invisible animalculæ, of minute fungi, or of special products not endowed with any organization, it is equally admitted that they can be destroyed by fire, altered or rendered innocuous by extreme heat or cold, dissipated by air, changed or suspended in their action in some cases, if not altogether rendered inert, by extreme dryness and the consequent separation of moisture; while each of them may be also more or less subject to decomposition and decay from the reaction of its own elements under favorable circumstances or the corrosive influence of chemical agents.

Purity in air and water, wholesome food, and cleanliness in person, clothing, ships, and habitations, are admitted to form the great basis on which all preventive measures must rest, and

such practice and material aid as professional services and modern science can supply.

Reviewing, then, the present position of this subject, it naturally divides itself under three prominent heads and the measures that respectively belong to each.

1. The provisions desirable at the port of embarkation.

2. The importance of systematic ventilation during the voyage.

3. The administration of quarantine at the port of arrival.

In considering these questions we do not propose, in this place, to enter into professional details, but rather to give an outline that may assist in leading to a more general apprehension of the nature and bearing of the principal points at issue, and of the imperative necessity of that more general and active support without which neither the Legislature, the commercial interest, the ship-owners, nor the citizens generally, can be expected to give the medical profession the aid which the public service requires. In its leading features the case will be found to be abundantly clear when fully and carefully investigated. But we must begin at the right end if we desire to trace it satisfactorily. Abstract theoretical considerations may be shrouded in darkness that professional men have not been able to penetrate, while great landmarks, guiding actual practice, may be rendered patent to all who take any care in studying them.

The winds of heaven on the wild and stormy ocean, as well as the atmosphere at sea on a mild and calm summer day, bring nothing but health and purity to the human frame. A voyage should rather tend, when duly regulated, to dissipate any seeds of disease imbibed at the port of embarkation than to nourish it into a pestilence equally fatal to those on board and dreaded by those on shore. How is it that the bark which reaches us from the wide and open sea is the cause of so much anxiety at the port of arrival? Has not our attention hitherto been too exclusively directed to this point, while our duties at the *port of embarkation* have comparatively escaped attention, as well as those that should be enforced on the *voyage?* And are there not questions connected with this subject that require the moral aid of public opinion, as well as the material assistance of science and the good offices of international arrangements in matters where diplomacy can be brought into effective operation, and in a cause where it would excite neither suspicion nor jealousy, but facilitate commerce and promote benevolence in ministering to the wants of the sailor and the traveler? And when State is estranged from State on such a topic, and citizen from citizen, so that even the hand of the incendiary is not stayed from attacking the hospital—sacred hitherto, in all ages and among all nations, to the sick and to the agonies of death—while military authority has been found requisite to restore order, and the reconstruction of its walls has been effected solely at the point of the bayonet, surely it is time that the whole question should receive the broadest consideration of which it is susceptible. The popular mind rarely proceeds to such extremities, however reprehensible and unjustifiable, without some consciousness of injury or misapprehension of matters of fact, and it is only right in maintaining the supremacy of law and order, to give a calm, deliberate, and full inquiry, that shall probe the root of the evil, and unvail all the causes that have contributed to such results.

I.—THE PROVISIONS DESIRABLE AT THE PORT OF EMBARKATION.

The condition of the port of embarkation, and of any other port at which a ship may touch during its voyage, forms one of the first elements of consideration at all quarantine stations. It is a cause of suspicion and distrust, or leads to a very favorable interpretation of the case, in the absence of the visible emblems of pestilential disease. Nevertheless, no cause is more productive of injury and annoyance to the crew, the passengers, the ship-owner, and the merchant than the wholesale condemnation of every ship to quarantine that comes from a suspected port. It is not necessary that such severity should be practiced. It may even subject a ship, under present circumstances, to infection from contiguous vessels; though it may have arrived without any disease, and without any just cause of detention.

Let it be remembered that no ship is necessarily contaminated because the port from which it sailed may have been infected. It may, notwithstanding, be as free from disease as any of the inhabitants of a distant city though small-pox, typhus, or even cholera or yellow fever may, on minute examination, be traced in some of its hospitals. To do justice, every case must be individualized. Here the Legislature may very advantageously step in and define, with a more discriminating care than has hitherto been given to this point, the circumstances that should lead to the detention of any vessel without disease on board. If there be nothing suspicious in the nature of the cargo, or in the condition of the crew and passengers, there can be no reasonable cause for detention, especially if it shall have followed the course recommended at sea in the following section, and can present a well-authenticated log that shall be satisfactory to the inspecting physician.

All final action on this point devolves, as a matter of necessity, on the authorities at the port of arrival. The captain of a ship at the port of embarkation should, nevertheless, endeavor to ascertain as many authenticated facts as he can safely gather in relation to any prevailing disease. This will often enable him to take important precautions before sailing, or on the voyage; and to become acquainted with details that may exert a favorable influence on his case at the port of arrival. In particular, in all seasons of anxiety and doubt as to the condition of the port and contiguous ships—and, still more, during the prevalence of pestilential disease—he should not only be doubly vigilant in reference to the wholesome condition of his ship, the quality

of the water supplied and the food provided both for the crew and passengers, but examine also carefully into the following circumstances:

a. The condition of the water in the well of the ship as discharged by the pumps. It is, in general, a good indication of the state of the hold, and of the most inaccessible portions between it and the stem and the stern.

b. The condition of the atmosphere of the ship, and if it be subject to a rapid deterioration when the hatches are closed to the same extent as on the voyage. In this case the ship ought to be carefully inspected, cleansed, and fumigated; particularly any special closets, cabins, or other places that are either apt to accumulate bad air or subject to the imperfect circulation of air.

c. The method of rigging up a temporary air-pump or fanner for artificial ventilation, to be worked by hand or other power, should the ship not be already provided with such an instrument. Nothing is found more valuable on board ship when a storm renders it necessary to batten down hatches that are otherwise left open, and at a time when the ordinary resources of wind-sails, and opening hatches, ports, and scuttles are altogether unavailable, and only an occasional entrance from the deck permitted.

d. The condition of the intended cargo, particularly if other vessels with similar cargoes have been subjected to quarantine; and, still more, if they have presented cases of pestilential disease at sea.

Does any portion of it evidently require fumigation or cleansing by any other means?

Is it damp, or largely charged with moisture? Can it, in this case, be dried before it is placed on board ship? If not, can quick-lime be safely stowed in iron barrels or tanks, only partially filled, and placed in the vicinity of such portions of the cargo, so as to absorb moisture slowly as it slakes, and prevent it from running to putrefaction?

e. The health of the crew and also of the passengers. Are there any of them who, in common justice to the rest, should receive medical attention in the first instance, and be placed under special supervision; or, on deliberate consideration, be altogether excluded from the ship?

The captain should also consider if he has a sufficient supply of quick-lime, chloride of lime, muriate of zinc, and of any other chemicals or disinfecting materials that he may be in the habit of using, to meet any unusual condition of the ship and cargo, or of the number of passengers he may carry. Nor should he omit to make inquiry as to the state of health at any lodging-house or habitation from which they may proceed, when he has reason to believe in the presence of pestilential disease. A few timely precautions in such cases will sometimes enable him to prevent great disasters, and check the first outbreak of any symptoms of disease.

But the resources available for improvement at the port of embarkation should not be left solely to the captains and owners of individual ships. There are ports in which it would be difficult to apply, and still more difficult to arouse the citizens to a just appreciation of the many benefits which sanitary improvements have conferred on cities as well as individual habitations. Time and opportunities may be required before much advantage can be expected from such means in all localities. The strong convictions of a single mind may often, however, act as a ferment, and awaken whole communities to a right understanding of the magnitude of the issues at stake.

In many places the health, the duration of life, the commerce, the wealth and prospects of a whole population, may be inseparably associated with the same causes that may ameliorate the shipping interest and diminish the severities of quarantine. An omniscient and an omnipotent Providence has created the world in which we live with more advantages and capabilities than the careless, the indifferent, and the ignorant are apt to suppose; and it may be justly questioned, on grounds which we shall not stop to discuss at present, whether a careful and judicious treatment would not even at present largely reduce some at least of those formidable evils that tend so much to produce or aggravate pestilential disease.

Proceeding on these views, the citizens at all ports where quarantine stations are established are practically interested not only in sanitary measures at home, but also in awakening and stirring up the question of sanitary reform at infected ports, as one of the most important means of alleviating the loss and sufferings that spring from such sources. How great have been the results in many places from a right system of cleansing and drainage! How gigantic are the results that may be anticipated by bringing the powers of vegetation into action in absorbing the impurities of some malarious districts! And when this can be combined with drainage, and by the regulated combustion of vegetable matters returning the mineral products to the soil, it is difficult to estimate the extent to which such a practice may be introduced in reducing malarious exhalations in the immediate vicinity of large cities. The practice of combustion has often been resorted to for the local destruction of decaying impurities. Its use by the ancients, even in respect to the bodies of the dead, is familiarly known. And though this may be a harsh sounding practice in the present day, there is perhaps no question deserving of more serious attention in some American cities. It is not essential, however, to resort to the extreme measure of actual combustion and incineration as practiced by the ancients. A body buried in ground kept in a vigorous state of vegetation, and having the mould sprinkled with some quick-lime, would perhaps satisfy every important object. At all events this should be a matter of calm and deliberate investigation. The accounts that have been given of burials at New Orleans, within the last twelve months, rival those that were given a few years ago of some of the grave-yards in London, before Parliament interfered and took steps

to prevent the burial of the dead from continuing a source of destruction to the living. And now that steamboats and locomotives have so largely facilitated the means of transport, no city should permit any burials in its vicinity that are not conducted in a manner entirely in unison with proper sanitary regulations.

There are reports of some remarkable aquatic plants in districts in South America, which are said to have a great power in purifying air and water, and to have rendered the places in which they were observed perfectly salubrious, though exposed to conditions from which the prevalence of fever was anticipated. There is perhaps no more fertile or interesting field of sanitary improvement than the application of the powers of vegetation to such an object. The animal and the vegetable world, more especially since the researches of modern chemistry have unfolded the leading facts as to the decay of organic matter, and the growth of plants and animals, particularly in connection with the function of respiration, are considered mutually to balance either, especially in maintaining the atmosphere in a due state of equilibrium—the one restoring to it what the other takes away.

There are other considerations that should not be omitted at ports of embarkation, which are also quarantine stations in self-defense at particular periods. They should establish measures for assisting in the purification of vessels loading for other ports, as well as for those that may arrive with pestilential disease; and as this part of the subject will necessarily be discussed in speaking of the port of arrival, we shall refer to it for details on this point.

Lastly, in taking a general view of the whole subject, it becomes abundantly manifest that there are few international questions in which the practice, experience, and skill of different nations could be rendered more eminently useful to each other than in relation to quarantine. Were they to do nothing more than to supply each other with their regulations for this purpose, and a careful exposition of the practice enforced, and of the general progress of sanitary improvement, a great step would be made that would lead to the most beneficial results. Were they to proceed further, still more important ends would be attained by the appointment of a Commissioner from their respective governments to draw out a cosmopolitan code of regulations, so far as this might be practicable and desirable, and to erect hospitals and sanatoriums for the sailor and passenger that would have some apartments at least constructed in a manner more suitable to foreign constitutions, and supply the whole institution with more extended measures for the alleviation and cure of disease.

An international policy for such a purpose would also have the important result of enabling the professional men of one country to point out the evils and the advantages arising from the practice of another, and to submit points for investigation that could be carried on with peculiar advantages in different localities.

How many and how large are the appropriations annually made for objects that can not secure such important results as would necessarily flow from the labors of Commissioners embodying, for the universal benefit of mankind, the experience of the principal nations of the globe that have made such matters the subject of inquiry?

Nor could such proceedings take place without materially improving the condition of the sailor, the comfort and accommodation of passengers, and the extension of those Sailors' Homes which promise, if they shall be more widely supported, to be of such inestimable benefit to society as well as to the service. Again, were proper opportunities given to mates and captains, as well as intelligent sailors, for becoming familiar with the principal facts bearing on the chemistry of daily life on board ship, where they have not hitherto had any such instruction, this information would not only tend to promote health and comfort at sea, but also assist in preventing the most serious of accidents at sea—the destruction of a ship by fire.

II.—THE IMPORTANCE OF SYSTEMATIC VENTILATION DURING THE VOYAGE.

It is contended that the captain will never have adequate resources for insuring ventilation at sea until ships shall be provided with one ventilating tube at least, running fore and aft from stem to stern in the hold, with an upright central discharge at any convenient place on deck, and capable, by apertures at different sites, of leading off with certainty vitiated air from any part of the ship where it may tend to accumulate.

It may be put in operation by the action of heat, by a mechanical power worked by hand (or by a small engine having the power of a man or boy), by a steam-tube from a small boiler at the galley fire, by a weight or spring wound up at regular intervals, or by any other equivalent arrangement where there is neither an engine nor any other source of power.

Due and adequate ventilation is the great restorative and preventive power at sea, in improving indifferent health among those who may have been subjected to a malarious atmosphere, and in preserving all from the evil influence of a confined air.

The wind-sail, however useful for general purposes, is inoperative in calm weather when the external temperature exceeds that of the cabin, hold, or other compartment to which it is led. It is frequently pushed aside when in the way, or tied up by those upon whom it may more immediately cast an offensive current. The fixed ventilatories for the injection and extraction of air, however important for general use, are liable, where they have no artificial power, to some of the same objections as the wind-sail. Placed fore and aft at the bow and stern of a ship, they undoubtedly tend to insure a general change of atmosphere; but even in such circumstances they are prone to increase the natural tendency of vitiated air to pass to the stern of the vessel, so that the cabin passengers or others sometimes

suffer from a constant accumulation of bad air from every part of the ship in its progress to the discharge. During a storm, as well as at all other periods when ventilation is specially desired from the ports and hatches being closed, and during sickness, nothing is so sure and certain in its action as a tube penetrating to the inmost recesses, cavities, and corners where vitiated air may accumulate, and capable of being forced out by power, whatever may be the condition of the external atmosphere. From the time of Dr. Hales to the present day this system has been gradually gaining ground, though in many cases the size of the tubes and apparatus employed has been so small as to bear no adequate proportion to the magnitude of the effects expected from it.

For a merchant ship the single tube and central discharge, with an aperture fore and aft, and another connected with the well, are the essential desiderata. Valves at the respective apertures can direct the power of the apparatus either upon the well, the stern, the bow, or any other part of the hold.

Where the peculiarity of the cargo or any other cause renders a more extended arrangement necessary, it can be augmented within any desirable limits. In ships carrying passengers a more complete system, based on the same principles, is desirable.

It is not intended that the vessel should be deprived of any of the ordinary resources which hatches, ports, and scuttles can afford. On the contrary, it is desired at all times that full advantage shall be taken of every natural movement of air that can be promoted on board ship.

Such arrangements are not incompatible with the certain action of a specific power that can be rendered useful when they are of no avail. Who has ever been at sea in a crowded ship, during a storm with hatches battened down, who has not felt the want of such a provision?

In steamboats it is not difficult to obtain any amount of ventilating power from the action of the fire-shaft; but engineers are generally opposed to any interference with the working of the fires, especially where bellows are used to augment their power. There is, however, no real objection to such arrangements, except where it is determined to push the power of the boilers to the utmost possible degree—a course that is rarely if ever pursued, except where it is subject to the disastrous results that have so frequently attended racing at sea.

In ships of war ventilating arrangements are still very imperfectly introduced, except where steam power gives a great moving force in the hold. No large ship of war has been provided with more extensive ventilating apparatus than the Russian ship, the *Grand Admiral*, now in process of construction at the building-yard of Mr. W. H. Webb, in this city. The design for the ventilation was given by the author of this paper. It is based on the principles explained above, and in unison with examples given of the ventilation of other ships of war executed under his superintendence. In one of these, many years previous to the introduction of his apparatus, a singular accident occurred in the well that demonstrates the importance of every ship having a specific ventilating power, that can be brought to bear at once upon any space or cavity, and extract any accumulation of vitiated air. The following is the sailing-master's account of this accident, as given in my "Illustrations of Ventilation," published in London:

"On board H.M. ship *Minden*, bearing the flag of Admiral Sir Richard King, in the harbor of Trincomalee, in the years 1819–'20, a boatswain's mate was ordered to see the pump well swabbed out. A man was accordingly sent down with a bucket and swab, but as he neither filled the bucket nor answered when called to, a second man was sent down to see what he was about. He also refused to answer immediately. Three more rushed down into the well, who all, like the first two, remained silent. It was then reported on the quarter-deck that the men in the pump well were supposed to have got into the spirit room. The master, on entering the cockpit, suspected the true cause of the men's silence, and ordered a lantern to be lowered into the well, the light in which went out when half-way down. It was let down a second time, and the light burned long enough to show the whole of the men lying over each other in the kelson. On being lowered down a third time the light was found to burn dimly at about six feet above the men. The master, with a bowling-knot under his arms, descended the well, leaving directions to haul him up the moment he could not answer. He succeeded in slinging the men, who were hauled up and laid on the main-deck, to all appearance quite dead. In a short time they began to respire, the lips and face became black; they foamed at the mouth, and the whole were fearfully convulsed. None of them recovered their usual health, and some of them were invalided. The man who descended the well first was the first who recovered.

"(Signed) JOHN MILLER.
"Late Master of the *Minden*.

"LONDON, *December*, 1842."

We desire to direct very special attention to this accident, as it is the type, not merely of a whole class of causes connected with emanations of vitiated air from the wells of ships, but because similar deteriorations of atmosphere, to a greater or less extent, take place in all cavities, cabins, forecastles, holds, and other places that have only one communication with the external atmosphere, or with larger open areas which have free access to it. In particular, nothing is more common in some merchant ships than a forecastle having no aperture for the ingress and egress of air except the ladder hatch or entrance to it. We have ourselves had to attend a sick sailor at sea for whom there was no accommodation but the bunk in which he slept, while others above and around on every side vitiated the air to such an extent that death appeared inevitable without a better provision for ventilation than the ladder hatch secured. A wind-sail was considered a perpetual cause of offense by the men who had continually to push it out of the way in passing and repassing. A ventilating tube from the peak of the forecastle, discharging continuously the vitiated air, might easily have been introduced in the original structure. Few stop to consider how feebly the flame of life flickers in a frame borne down by sickness, and surrounded with the dead weight of a vitiated atmosphere. How prone also are the seeds of pestilential disease to extend under such circum-

stances, even before the true character of the malady that may have attacked the first patient shall have become apparent!

Who can be considered equal to the duties of his position who can not fit up a temporary ventilating power, whether a pump, a bellows, a fanner, or a screw for such important occasions? Are not cases familiar where all the passengers of a ship have been suffocated by battening down hatches where there was no other provision for ventilation? Have not foreign vessels put into New York, even within the last few months, with crews disabled by death from yellow fever? But where is the fair chance of arresting disease at sea, if there be no system of ventilation provided that can be depended on when it is most imperiously demanded?

We do not desire to cast reflections on any man, and still less on the officer at sea. The captain of a ship at sea has perhaps a more extended, peculiar, onerous, and arduous responsibility cast upon him than is experienced in any other occupation. He requires the power of a despot, the benevolence of a philanthropist, the energy of a warrior, the coolness of an engineer, and the quick perception of a swordsman, to do justice to the varied difficulties with which he has at times to contend, when shipwreck, pestilence, fire, famine, a mutinous crew or passengers encroach upon the labors of an ordinary voyage. And though these are the accidents, and not the ordinary concomitants of voyages, some of them occur too frequently not to lead to this great and important question, What has society done for the education of men who have such responsibilities? Is it just or reasonable that they should be considered adepts in ventilation—a matter that is still very imperfectly applied even in our public buildings and in our habitations at home? Is it not reasonable to anticipate, then, that when this subject shall have been more thoroughly investigated, no merchants will be found who will deny the captain of the ship that carries either goods or passengers the simple ventilating tube that has been recommended, and the means of putting it, when requisite, in full operation?

There may, undoubtedly, be times and places in which it may be desirable to prevent ventilation—as in the bread-room, particularly when the atmosphere is largely charged with moisture, or in conveying particular goods and cargoes. But these form the exception, not the rule; and so long as men shall continue to breathe, as hitherto, upward of a thousand times an hour, no such rule can ever apply either to the berths of the crew or the cabins of the passengers. Excessive ventilation may be as intolerable to some constitutions as a deficiency of air is to others. Every thing is liable to abuse. But one point can not be too strongly impressed on those who are intrusted with the ventilation of ships, viz.: "Wherever there are special sources of vitiated air, as in the well and in closets connected with passengers' cabins below deck, the best mode of ventilating does not consist in blowing fresh air into them—which merely dilutes it at first, and too often distributes it to the offense of those in the vicinity; but rather let a vitiated air discharging tube proceed from the point where it accumulates most largely and discharge it directly into the external air." Fresh air necessarily enters to supply its place, if the cavity to be ventilated shall be in communication with channels or areas leading to the open air.

When the ventilating apparatus is so constructed that its action can be reversed on special occasions, and fumigating gases and vapors thrown into any part of the ship from a given centre, it becomes still more valuable. But the continued action of a power drawing away perpetually the vitiated air from the most offensive cavities of a ship during its voyage must always constitute the most important use of the ventilating tube, and that which should have the greatest weight with the authorities at quarantine in diminishing the period of detention when it may be considered proper to enforce this regulation, or to liberate the ship at once from any further delay.

III.—THE ADMINISTRATION OF QUARANTINE AT THE PORT OF ARRIVAL.

The less the perfection of sanitary regulations at the port of embarkation, the more frequent the cases of pestilential disease it sends forth; and the more neglected and careless the condition of goods, passengers, and crews, the greater the necessity for vigilance in the administration of quarantine at the port of arrival. The merchant justly complains of every unnecessary expense and fetter imposed upon commerce, and its tendency to drive it to other cities not subjected to parallel burdens; but he sometimes omits to consider how much the question is in his own power, and the extent to which the Legislature might be called on to reduce the burdens so often cast upon him, if he would take a little more trouble in securing the means for bringing his ship, with its cargo, passengers, and crew, in a better condition into port. Nor is it to be doubted that such a limited expenditure as has been proposed for these objects would many times repay the original cost, by maintaining the crew in a more healthy and able condition for every emergency, by rendering the ship a more eligible conveyance both for passengers and goods, by reducing, more or less, its chance of detention and the amount of its expenses at quarantine.

The Legislature can have no object whatever but the protection of the public health; and it is therefore the interest of all parties to reduce expenses to the standard requisite for any emergency which it may be called to meet. But the evil may at any time assume gigantic proportions if not adequately met by proper provisions secured by the State; and there is no mode by which a merchant can so much reduce the tax that may otherwise fall upon him as by improving the condition in which the ship arrives at its destination. Even where he may have come from infected or suspected ports, he may often, if not always, be able to show that, by care at

the port of embarkation and during the voyage, he has not only brought home his ship without any evidence or just suspicion of pestilential disease, but that it is for the interest of the public service, as well as his own, that he should not be placed among a crowd of vessels where he may run the risk of that infection from which he may at first be free.

This ought to be the aim and object of every merchant, of the captain and every officer on board ship, as well as of the passengers and crew; and we confess that we have more hope of a reduction of expense to the merchant and in the administration of quarantine from this course than from any other proceeding, while it enhances all the securities which the public service requires.

At the same time it must be remembered that every case of pestilential disease imported and escaping detention at quarantine must be dangerous in proportion to the facilities it may have for communication and the fitness or disposition of the population on shore to receive infection. It is therefore considered essential that there should be no relaxation in the means provided by the public service for the detection and prevention of disease. These should rather be increased in proportion to the increased facilities secured for the relief of the shipping interest; and the same arguments that apply to the improved condition of ships and ports of embarkation apply equally to an improved sanitary condition in the port of arrival. It tends to prevent the origin of disease on shore, and to oppose its communication from outward sources of infection, or to limit its extension when infection may actually have taken place. A high state of health and an ample but not excessive supply of food have ever been considered among the most powerful repellents of disease. A proper degree of fullness in the blood-vessels is often a safeguard against the absorption of poison from without. They are in one sense already full; they have a greater tendency to exhale than to absorb. But too great a reliance must not be placed on such a state of the system, as the history of pestilential diseases unfortunately testifies.

In providing for the administration of quarantine, and applying appropriate remedies to the ships, crews, cargoes, and passengers which it may be necessary from time to time to detain, nothing is more important, in the first instance, than the selection of suitable sites for anchorage, for hospitals, and for all the necessary appurtenances that ought to belong to such an establishment as the city of New York requires. Its past progress points out also the necessity of attending to its probable magnitude in future years, and, at all events, to the natural progress of its own commerce as well as that on contiguous shores. We take it for granted that every effort will be made to determine and secure the best site, on geographical and commercial data, apart from any political difficulties, as the only correct basis for such a selection must depend upon geographical and economical facts. Winds and currents, land and water, shelter and security from the storm, and a sufficient proximity to the port, must ever constitute the leading elements of a question that interests all the States and nations that send their ships and cargoes to the port of New York. It is very different from any purely local question; and if contiguous States can not agree as to what each may deem most advisable for its special interests, the question will naturally be raised how far it may be within the compass of the National Legislature to render such a point the subject of Federal consideration instead of its being confined exclusively to the jurisdiction of individual States. In some sanitary questions, for instance, in other places, local rights that were utterly incompatible with a proper system of drainage and sewerage had to be abandoned before it was found practicable to secure those channels and levels that were absolutely indispensable for a satisfactory result. The reports by Dr. Elisha Harris, when physician chief at Quarantine, give very valuable facts on this point, that must command the most earnest attention, particularly in connection with the progress of disease in the direction of certain winds and tides from infected ships.

The first step desirable in every infected ship detained at quarantine, is the application of a sufficient ventilating power capable of sweeping out at once, and entirely controlling the vitiated air in any ordinary ship, and of so heating all deleterious products, whenever this is desirable, as to render them perfectly innocuous to all contiguous ships or buildings.

There are different modes of effecting this object, according to the opportunities of each quarantine station. Much the best and simplest consists in forming an air-drain or tunnel in a quay at any quarantine station, when this is practicable, and connecting the hold and well of the ship with this air-drain, after securing it alongside. A powerful ventilating chimney, a steam-engine, a fall of water, or any other mechanical power being put in operation, as a wheel driven by the tide, the bad air is rapidly exhausted. Fresh air passes through the ship with any requisite rapidity, and according to any required course. In a few minutes by such an apparatus the atmosphere may be more thoroughly cleansed than by days and weeks of anchorage at the quarantine station with any corresponding power.

The process may then be reversed by the use of the engine alone; and ordinary dry, warm, cold, or medicated air, may, by appropriate arrangements, be passed through the ship and cargo, if the latter be sufficiently open for this purpose: if not, an effort should be made to render it more open. If it is of such a nature as to admit of this being done, a portion may be advantageously removed temporarily, or altogether, to facilitate this process. It is considered that many ships and cargoes may be liberated altogether, after being subjected for one or two hours to the power that can thus be brought to bear on them. It can, in favorable cases, be rendered equivalent to all that is effected by the lighterage of the cargo,

particularly if the captain, having this in view at the port of embarkation, disposes and arranges his cargo in the manner most suitable for such an operation.

A quay a thousand feet in length would accommodate a number of vessels at the same time. It would also be practicable to have a floating air-drain moored at some ports where a quay could not be constructed, and placed between it and a ventilating power, erected in a special floating structure at one extremity, or conveyed directly to a building on shore with proper facilities for this plan. Where no such arrangements are carried into execution, or, until the necessary preparations are made, the construction of a ventilating steam-tug is recommended, which can be fitted up for parallel duties. A decided preference is given to the quay with the ventilating and fumigating air-drains in connection with a building on shore, wherever the locality permits such arrangements to be made.

Where the state of the ship, the condition of the hold, timbers, or cargo, or any other circumstances may render a prolonged detention necessary, the vessel may be moved to a special aperture connected with the ventilating and fumigating drain, at which still more power can be directed upon it, or it may at once be ordered to the anchorage appointed for vessels requiring the most extended cleansing, and other means of purification to be directly applied within.

In connection with the ventilating and fumigating power on shore, a series of warehouses should be constructed, into which any goods can be placed when it is absolutely necessary to remove them from an infected ship, and objections are made to their disposal in any other manner.

In the same place a furnace should be built in such a manner as to consume absolutely all the materials which it may be agreed to destroy at once, and in such a manner that no offensive or dangerous emanations can proceed from them. Such furnaces have been constructed as have secured the object in view with unerring certainty; and when it is recollected that the same principle can be applied to the emanations from every individual ship or building, the apprehension of danger from such sources may be entirely averted.

Even in individual ships, where there may have been extreme disease, it is quite practicable to erect a temporary ventilating stove on deck, and to cause the vitiated air from the ship to be so heated and consumed as to be a source of no danger to contiguous vessels. Such instruments, which may be termed controlling ventilators, should be adapted to all ships, when many are crowded together at a quarantine anchorage unprovided with the resources of a ventilating quay or a ventilating steamboat. Where ships are already provided with the ventilating tube described in Part II., the addition of a controlling ventilator renders its action still more complete.

In the preceding observations having given an outline of resources available for the ship and the cargo, we may now advert to the crew, the passengers, and the hospital, in explaining such peculiarities as a ventilating and cooling power can secure and connect with appliances for the certain destruction of noxious emanations, and the prevention of their escape to the injury or apprehension of those without.

In the construction of a ventilated quarantine hospital a shaft is preferred to an engine, it being an object to prevent the escape of all vapors, exhalations, or other emanations, except by such channels as shall convey them to any required altitude for dissipation at a distance, or subject them to the still more complete operation of decomposition by heat before they are permitted to escape into the external air.

With such a power the air can also be inclined from every patient to the wall behind and above his head (without any sensible or objectionable draught), in such a manner as to reduce the chance of infection to the physician, the nurses, and other hospital attendants. Every ward, room, and individual cavity can be so constructed as to prevent any of the atmosphere that enters it from ever returning, or passing to any contiguous rooms or passages. The bath-room, the dead-room, the closets, the store-rooms, and the washing-rooms form no exception to the rule. Even the physician's house, and all the offices in connection with the establishment can be placed under similar circumstances; so that there both he and his family, when he is in constant attendance on the sick, would be as secure from any infection conveyed by the atmosphere as they could be in an external and isolated building. Precautions from infection by clothing or other materials would require the usual attention.

Further, in a ventilated hospital there are facilities for details of practice that can not so readily be applied in ordinary rooms. Artificial atmospheres can be produced and sustained for the cure of disease. A cold atmosphere may be introduced and maintained even in the warmest climates; and this forms an item of peculiar importance in the case of yellow-fever, a disease that has been hitherto characterized as being always accompanied by a moist and warm atmosphere. Air may even be deprived of much of the water held in solution, and in this dry condition be also reduced in temperature.

The effects of a high as well as of a low temperature can be directed with great power upon all articles of clothing and combined with the action of any fumigating agent.

Where a crew and passengers are transferred to an hospital, not so much from any direct and absolute proof of the actual presence of pestilential disease as from strong grounds of precaution which it may be just and proper to take under existing suspicious symptoms, and the general history of the case, it is a great satisfaction to know that this can be done without in any way exposing them to the actual danger of an infected atmosphere. There is no class of buildings in which ventilation can be rendered so important as in the quarantine hospital.

Again, all such hospitals should possess the

utmost facilities for giving air and medicated vapor, as well as warm or cold shower-baths in one and the same chamber. By such means the utmost rapidity can be secured in bringing such agents to act upon the person. Nor can we see, at least as a general rule, with what justice any one free from symptoms of disease, and from any other just suspicions of being under its influence, and subjecting himself to such a bath, and his clothes to the most approved system of heating and fumigation, should be detained for a single day at the quarantine hospital, whatever may have been the condition of the port from which he may have sailed.

When a quarantine establishment shall have been erected in unison with the principles sketched in the preceding pages, and a series of ships provided with the ventilating tube explained, it will be practicable to advance still further in the field of improvement, and to establish a series of records as to the influence of the resources described on persons, ships, and cargoes. These will probably elucidate many important facts that may facilitate future practice, and contribute to the formation of a more precise and accurate series of rules than are the guide at present in regulating practice at quarantine.

It is important, for example, that more information should be procured than could be given in reply, at present, to the following queries:

1. What temperature is essential for the absolute decomposition of the *fomites* or materials attached to clothes, cargoes, or ships that communicate and reproduce pestilential disease?

2. Have the experiments recorded as to the destruction of all such fomites by a temperature of 212° been found by subsequent experience to be unexceptionable and universally applicable?

3. Will any less degree of heat produce a similar effect on some species of fomites, if not on all; and what is the necessary temperature, and what are the conditions, under which dependence may be placed on the success of the result?

4. What reduction of temperature will render all or any varieties of fomites innocuous?

5. When disease has disappeared in consequence of a reduction of temperature to the freezing-point, or to any lower temperature, is the poison that may have previously produced it capable of being revived in its action with returning warmth, or is it so completely altered or destroyed as to be no further a source of danger?

6. In fumigating ships, what materials and modes of application have been found most largely successful?

7. What quantities of materials are usually employed in relation to the tonnage of the ship, its cubic contents, or any other standard of proportion; or is the fumigation regulated solely by the sense of smell, and by the apparent condition of individual ships?

8. What special treatment has been adopted with the principal varieties of cargoes conveyed from ports in vessels usually subjected to detention at quarantine?

9. What cargoes ought to be entirely exempt from detention at quarantine?

10. What peculiarities have been pointed out in different classes of ships that render particular places difficult of cleansing and fumigation?

11. To what extent, in the ordinary practice of fumigation at different ports, are effective measures taken to penetrate the tubular spaces left between the ribs or timbers of a ship, and the external and internal planking?

12. In what classes of ships or cargoes is sulphureted hydrogen apt to accumulate in the hold or well, from the decomposition of the sulphates in sea-water?

The above queries are merely examples of the range and variety of information, the want of which is often experienced by those who are intrusted with the direction of quarantine, and in respect to which a medical commission could render invaluable service to the country, though no international investigations should be authorized. If no other case be cited, the history of the *Susquehanna*, during the last year at the port of New York, affords a memorable example of the position in which this question stands, even where the resources and authority of Government are brought to bear on the question; and the country, when in want of ships, was deprived of the services of one of its most valuable frigates.

We can not conclude these remarks, and place the whole bearings of the quarantine question in a satisfactory point of view, without stating that other influences, less direct in their operation, but powerful in the results to which they must finally lead, should not be forgotten on the present occasion. In a city such as New York nautical education should receive some of that assistance from the Legislature or the municipal authorities which is accorded to it in other great commercial capitals. We do not refer merely to such museums as may be seen at London, both at the Admiralty and at the United Service Institution, or to the models that may be inspected at the Louvre in Paris. But we refer more especially to the great school for training young boys as sailors at Greenwich, on the banks of the Thames, and all parallel European schools, and such as has been commenced recently at Baltimore. These may be made the media of extending largely every important improvement in the construction and management of ships, especially if provided with a hall, library, museum, and lecture-room for adults. Nor should the subject of naval architecture be forgotten—an art that has still more formidable difficulties to contend with than architecture on shore. How many are the models and how large are the results of individual experience that are often lost to the public from the want of a building to preserve records that would be freely presented to it! Who would not be gratified by the opportunity of inspecting such models of naval

progress as this city has already sent out on the ocean from the hands of a Steers, a Webb, and other eminent ship-builders? The museum at the Navy Yard at Brooklyn has its interesting relics as well as important specimens and models; but it is too distant for frequent reference, and not fitted up in the manner that would be most advantageous to the commercial marine of this city.

The general introduction of the elements of science in schools and academies is also essential for the right progress of practical science, and the management that falls within the scope of boards, committees, municipal authorities, and governments that have to deal with such questions as quarantine and other matters involving details in science. Though the actual responsibility of advice and construction may be thrown upon professional men, how often are great institutions fostered by the care of one man, trampled on and subverted by another, who, from the want of some information that a few elementary lessons would have communicated, could not comprehend the data on which they were based. We could, if necessary, quote from another country instances where the ventilation of ships has at one period received the most careful and elaborate attention, and, notwithstanding, fallen so rapidly into neglect, that nearly a hundred individuals perished in one ship in a single night from causes among which defective ventilation formed an important item. But we must forbear enlarging on a topic that would require a special paper for its full elucidation. The progress of the country may be on the whole steady and uniform, though the power and efficiency of individual departments must often ebb or flow with the knowledge and ability of those under whose direction they are placed.

IN THE OLD CHURCH-TOWER.

I.

IN the old church-tower
Hangs the bell;
And above it on the vane,
In the sunshine and the rain,
Cut in gold Saint Peter stands,
With the keys in his two hands,
And all is well!

II.

In the old church-tower
Hangs the bell;
You can hear its great heart beat,
Ah! so loud, and wild, and sweet,
As the parson says a prayer
Over happy lovers there,
While all is well!

III.

In the old church-tower
Hangs the bell,
Deep and solemn. Hark! again,
Ah! what passion, and what pain!
With her hands upon her breast,
Some poor soul has gone to rest
Where all is well!

IV.

In the old church-tower
Hangs the bell—
A quaint friend that seems to know
All our joy and all our woe:
It is glad when we are wed,
It is sad when we are dead
And all is well!

THE ROTHSAYS.

AUNT HELEN had that afternoon been discoursing of Uncle Philip, saying how brave and generous he always was, and what pride she used to have in him when he came home for the vacations; at what risk he once saved the widow Leech's eldest son from drowning, when the little fellow had fallen through the ice on Chesterfield pond, and every one else thought the attempt to rescue him worse than useless; how grateful Mrs. Leech was; and that was the way her son, now a man grown, came to be called Rothsay; for hitherto the child's name had been Habakkuk, or, as the boys abbreviated it, Koot. Notwithstanding Habakkuk's Scripture appellation he had never been christened, but now that he had been at death's door his mother bethought herself that no time should be lost, so she collected her seven children, every one, and making them as tidy as possible, stood them up in a row in church and had them all christened together the very next Sunday morning. A very fine group of children Aunt Helen said they were, when once, through much painstaking, their real faces had become visible; the boys were swart as gipsies, with glittering eyes and hair black as jet, whereas the girls were all fair-haired and blue-eyed. From this time forth it had gone well with them; the neighbors lent a helping hand, and the widow Leech, instead of living in a perpetual worry to find bread for so many little mouths—for the eldest was not yet ten years old—had grown younger and cheerier, till Isaac Vail, the sexton, a man well-to-do in the world, and not so very old, though indeed the whole neighborhood had set him down as a foredoomed old bachelor, took herself and her seven children for better for worse; and after this there was not a more reputable family any where around. The boys grew up orderly and industrious; the girls pretty, modest, and tidy; and Isaac Vail had great satisfaction in sending them to schools as good as the best, so that they came to be a credit to themselves and their friends.

"And about Uncle Philip, Aunt Helen?"

She said he was the most self-denying person she ever knew in her life, and at the same time the most liberal toward others. He earned all he expended during his college life; his father would gladly have aided him, but Philip knew how they were straitened at home—that was before grandfather's Western land became valuable—and so he would accept nothing at the risk of diminishing the family comforts. Such strict economy as he must have used! But Aunt Helen said they never had a fear that it would affect

his character unfavorably, since the more he stinted himself the more he managed to bestow on others. Then so good judgment as he had too! If he could not give his sisters many books, he took care that those he sent them should be of the very best. This had enabled them to acquire a better education than otherwise they could have had.

"Was Uncle Philip well-looking?" I asked.

Oh yes! at least before he went abroad; he was of a good height, and though rather slight, yet he was so compact and well-made that he seldom found his equal in strength. Still Aunt Helen could not say that people would call him handsome. Only he had fine eyes, the true Rothsay eyes (Aunt Helen had those); and then he had so much intelligence and goodness of expression: for her part, she prized far more highly beauty of expression than mere regularity of features. He had the family hair too; all the Rothsays had tolerable hair.

Aunt Helen's was certainly very beautiful; not a white thread in its dark sheen, though she was I don't know how many years old. I do not know, because, when I was a very little girl, she taught me that it is ill-bred to ask people about their age, if they are older than ourselves. I was sure she was older than myself.

"Did he stay at home when he was through college?"

He just came home for a week; and then Mr. Livermore, his father's friend, found him a situation in Washington as private tutor, with a great salary—she believed as much as a thousand dollars a year; and there he remained three years, all the while studying, studying; and observing too, for Mr. Livermore took care that he should know the people best worth knowing. So it was by no means lost time; he was only twenty-three when he left Washington. Then he came home again for a few weeks, and directly afterward went abroad; and though they often heard from him, they never saw him for five years. This time, when he returned, he brought a wife with him. She was a Genevese; a lovely, slight young creature; beautiful and gracious as a moss rose-bud, with a voice clear and sweet in singing as a robin's, and a speech far above singing; and then such a silvery, ringing laugh; and though she had many accomplishments—she could speak in three or four languages, and could play charmingly on several musical instruments; she would take a bit of paper and a pencil, chatting all the while, and before one would think what she was doing, there it was!—a picture just as natural as life, of any person or any thing she chose. And for all this she did not in the very least value herself upon it; only she pretended to be very proud of her English, which she had learned for Philip's sake, and so that she might talk with his friends when she should come to see them. "My sister Helen," she would say, "do I not speak English just as good as Philip? No? Ah! that is because you love him so much." And when the sisters remonstrated against the thick chestnut beard which they said spoiled his face, Eloise—that was her name—said, "Ah, no! it was charming; that made him exactly beautiful." Though they staid only a month, every body in the neighborhood knew and liked Philip's little wife. His father, mother, and sisters took her into their heart at once. She had no mother of her own; but she had been most kindly and judiciously reared. They went to live in Havana, in the West Indies. The distance seemed much greater then than now, because of the difference in facility of travel. After they had left the house seemed lonely enough; and only that my father and mother had then come to live at the old home, Aunt Helen did not know how it would have gone there. A great sorrow had befallen herself soon after this, and for a time a dark gloom gathered over the homestead. First the mother was called away. She died suddenly; no one had thought of her as dangerously ill. For years her health had been delicate; but the day on which she died she had risen as usual. It was Sunday morning; and she told them all to go to church, while she would remain at home. When they returned she was lying on the sofa, a book in her hand, and they thought she had fallen asleep; so they spoke with hushed voices and moved silently, that they might not waken her. She would never waken more! The calm smile on her face was there still when they shut the coffin lid upon it. The peace of God doubtless it was which made her grave-sleep blessed.

Then came the father's turn. One wish haunted him—to look once more on the faces of all his children. Letters were dispatched to all, and in a few weeks they were assembled there; Philip last, as his home was farthest. It was a sad meeting, yet not comfortless, for no breath of discord had ever come among them. The old father, gratified in his last wish, full of love and trust, lay down to his final sleep. A few days more and the children were again separated, only my father and mother remaining with Aunt Helen. Months passed and brought no tidings of Philip; then intelligence came, and of the saddest. During his absence a pestilence had devastated the city. His wife, who had gone to reside, while he should be away, in the house of a friend, had perished among the first, leaving their little daughter, then in her third year, in the care of this friend. Within a few days the latter had died also. Madeline, his wife's servant, had used unwearied but unavailing efforts to preserve the child, and had then herself disappeared. There was no certainty, but it was supposed that she, too, had become a victim to the infection. The house, like others which had been similarly desolated, was closed by official authority. This was the welcome which awaited him.

He sought alleviation of his own suffering in the attempt to mitigate that of others. At length he took the disease; but he was kindly cared for and recovered. Then once more he returned to his old home at the North. Trouble and illness in a few months had done the work of years; he

had grown prematurely old, his hair was thinned and whitened, he was meagre and sallow, his figure was bent, and at first no one, not even his sisters, recognized him. Gradually he regained his strength; but he never looked young again. The ensuing autumn he went to New Orleans, and there, eventually, he took up his residence.

Aunt Helen was never weary of recounting these events, nor I of listening to her recital. They had all occurred before I was old enough to retain a distinct remembrance of them; nor could I recollect ever to have seen my uncle Philip; nevertheless, I had a very definite and vivid idea of him, which was just about as accurate a likeness as imaginary pictures are wont to be.

It was just sunset. I was sitting on the doorstep, and, absorbed in a new book, I did not observe the approach of a gentleman who entered the gate until he had traversed the walk and was quite near me; nor then did I guess at all who it was. He inquired for my father and mother. The latter, who was busily stitching in the parlor, looked up at our entrance, and with a cry of joyous surprise came hastily to meet him. There was so much gladness in her welcome that I did not need her exclamation, "Dear Philip! dear brother Philip!" to inform me who was the new-comer.

Now there had always come occasional letters from my uncle, and at intervals not very remote; but the one which should have advised us of this visit happened not to reach its destination; so it was regarded as a signal piece of good fortune, his arrival at this juncture. For my father had received an appointment requiring him to be away for several years. My mother was to accompany him, and they were to take their departure in less than a month. It was a somewhat sudden arrangement, and Uncle Philip, who had left New Orleans several weeks before, had missed the letters which would have informed him of the plan. So, through these failures, it looked like the merest chance that there was any meeting at all. It proved a very pleasant chance for me. It had appeared that the best disposal to make of me would be to send me to school, and this was resolved upon. Hartford was the place selected, and Aunt Helen was to go there too; not to school, certainly, but in some sort as my guardian, for my mother did not think too highly of boarding-schools. Uncle Philip demanded a change of programme—that the school plan should be summarily dismissed, and another adopted in its stead. This, which met my own cordial approbation, was to the effect that Aunt Helen and myself should accompany him home, and remain his guests during the period of my parents' absence. A few objections were skillfully met; we were assured that instruction in all desirable forms was just as attainable in New Orleans as elsewhere. Another inducement, the probable benefit to my health—I had grown rapidly the last few years, and was really not strong—was very influential. It was conceded that, instead of spending two years at a Northern school, I should return with Uncle Philip to New Orleans. Aunt Helen shared fully my preference for this arrangement. So, one bright September morning, we all left the old homestead to go together as far as New York; thence our paths diverged.

My uncle's residence was in a quiet part of the city; the house was large and handsome; every thing in and about it was on a scale liberal and even luxurious in my eyes, accustomed as I was to the frugality of a New England country home. Our mode of life would, perhaps, have seemed to most persons monotonous, but to me every phase of it was replete with zest. At first, indeed, my own pleasure was somewhat marred by the apprehension that it was obtained at a sacrifice on my uncle's part, but he soon reassured me. Aunt Helen found a little more difficulty in adapting herself to her new surroundings, but she was, on the whole, well pleased. She had always much consideration for others, and possessed a quiet cheerfulness of temperament which was infectious; and then she abounded, beyond most women I have known, in a ready tact, which gave her ease and grace every where. If it be true of home-keeping youths that they have ever homely wits, it is not always true of home-keeping women. Driving, walking, sight-seeing of every kind, Aunt Helen held in aversion. An appeal to her kindness, so the want were genuine, was electric; she was at once attracted by it out of her love of ease, or rather she then found her ease in painstaking. For the rest, her tastes and habits chimed excellently with Uncle Philip's. His drawing-room was simply and handsomely furnished, but books had accumulated there until it was drawing-room and library both in one. When we came he proposed a reform, but Aunt Helen liked it as it was, and so no change was attempted.

On Sundays we had company to dinner. Sometimes there were ladies, but usually only gentlemen. Two or three of these were habitual guests; one of them, M. Vallière, a native of France, was an intimate friend of Uncle Philip; they had first met in Switzerland while the latter resided in Europe. Afterward they had renewed their acquaintance in Cuba, and finally M. Vallière, incidentally meeting Uncle Philip in New Orleans, had been induced to make his own home there. He had come to the city to make disposal of some property which had fallen to him; and having become the possessor of a valuable plantation a few miles distant, he resided alternately there and in the city. He was slight, dark as a Moor, and his eyes had a wonderful variety of expression, appearing even to change color with his moods. Commonly they were gray, but when he grew earnest they darkened; and again, when he became angry, as indeed I saw him but once or twice, the dilated pupil overspread the whole iris, and emitted such glances as, were they aimed at me, I should shrink from encountering. He was often at the house during the week, and on Sundays invariably occupied his seat at the dinner-table. He talked

a great deal, speaking English with as much apparent ease as if it were his native language. At first I hardly knew whether to like or dislike him most; something about him indicated that no person who had any thing to conceal would be exactly safe under the quiet scrutiny of his eye. But at home I had been encouraged always to openness, my faults being patent as daylight, and I had nothing that I knew of to hide, so presently the distrustful feeling departed at once and forever.

"And so, Miss Janet," he said, one evening, several weeks after we had first met, "it is decided that we are to be friends."

"Yes, Monsieur," I answered; "but I doubted it at first."

"So I perceived; but giving you credit for penetration, I did not allow myself to be anxious, since it was certain that you would, sooner or later, recognize my merit. I knew that we were destined to become fast friends. And as the first-fruits, Dr. Rothsay"—turning to my uncle—"I have found a French teacher for Miss Janet here; one who possesses the two-fold recommendation of ability and necessity; a countryman of my own, of whom an unfortunate process of litigation has made a poor man. When I knew him in France he was the proprietor of a large estate, and one of the most actively benevolent individuals I have ever known. Deeply religious, he is without a tincture of fanaticism. I think no person has ever won from me more unreserving respect. He was just the man to bear reverses admirably; he avers that this change from abundance to slenderness of means has only very slightly diminished his personal comforts."

"Were there none to suffer with him?"

"No; he has only one son, a young man who is full of capacity and excellence of every kind; he is in South America now, and the father has come here to gain a livelihood in whatever way may present itself. He mentioned teaching as that of which he felt himself most capable, and I immediately bethought myself of this young lady, your ward."

And it was settled accordingly. We all felt interested in M. Henri; even Aunt Helen avowed her willingness to furbish up her knowledge of French for the sake of enlarging his income; and thenceforth Uncle Philip managed to induce M. Henri to give us the pleasure of his company at our Sunday dinners.

These gatherings came to be among the pleasantest occurrences of the week. Frequently there were strangers, sometimes travelers who had spent years in foreign countries, and who dealt out freely their gathered treasures. Occasionally, too, we made visits, sometimes to my uncle's friends in town, and sometimes to plantations a few miles away.

For music I had a love which, though wholly uncultivated, was nevertheless intense, and to indulge and encourage this was Uncle Philip's good pleasure. One evening, at a concert, my attention was attracted toward a party just opposite to a degree that I felt to be scarcely consistent with courtesy; nevertheless, do what I would, my eyes reverted almost immediately, as if drawn by a power beyond my own control, to the trio of persons who, though occupying a position by no means conspicuous, were yet noticeable amidst the assembled multitude. Had the gentleman been alone there was nothing perhaps in his aspect to challenge a second regard; he was large, high-shouldered, with light hair, eyebrows, and eyes, and red mustache. The features were not in themselves repulsive, but their expression was stolid. Of the ladies the elder was eminently handsome; but while I observed her the face changed. In looking around, her glance, so I imagined, fell upon us, and thereupon a lurid light kindled in her black eyes, burned in her cheeks, and for a moment made her face ferocious; then suddenly, as it had come, it was gone again, and the features were in repose, proud, impassive, handsome as before. Could I have mistaken? At least I could not deter myself from noticing if the phenomenon recurred. It did: once more that defiant gleam shot athwart the beautiful face, imparting to it a manifest fierceness; and this time the gentleman's look, fixed full upon the lady's, seemed to wear an answering expression. In both instances the flash came and went with electric swiftness. I observed that the brilliants on the lady's bosom rose and fell with no quicker motion, that the glittering fan in her jeweled hand never paused nor wavered in its steady, equal swaying.

The younger lady could scarcely have been older than myself. Her face was somewhat pale, but this pallor only heightened the purity of her look; the brown hair was laid back from the low, pearly forehead in a way which would have marred any face but the loveliest; the beauty of this it seemed to enhance; the eyebrows were delicate yet well-defined and mobile. The whole face was faultless, but its exquisite charm, as it impressed me then and as it came into my mind afterward, was in the blue, dark eyes, fringed with the most beautiful lashes in the world. Once her glance met my own, and then, by one of those mysterious experiences which sometimes, I suppose, come to all persons, I was conscious of a momentary recollection of that face; it seemed a familiar, well-remembered object.

Twice afterward, during the winter, I met the elder lady; once with her young companion, and once alone.

The habitation nearest our own was unoccupied. It was an old-fashioned structure, elegant once, perhaps, still picturesque, but somewhat gloomy of aspect. A balconied window from my own room commanded a view of it. The grounds bore marks of former care; they were filled with rare and beautiful shrubs, groups of orange and lemon trees, and a profusion of flowering climbers, all of which had attained a rank luxuriance indicative that nature had there resumed absolute control. It seemed probable that the whole house, grown over with exuberant vegetation, would, like the castle of the sleeping Dornrö-

schen, become effectually secluded from the outer world.

I have my full woman's share of curiosity, and should have liked well to penetrate into this lonely house around which there seemed to me to hover a certain mystery. In the early spring I did once attempt to effect a passage through the hedge of dwarf pomegranate which divided its garden from our own, but the thorns were too much for me. I indemnified myself for this failure by a free use of my opera-glass. My uncle had occupied his present residence only a few years. He had heard that the owner of the premises was a M. Dupressin, for a long time non-resident, and that the house had remained vacant since he left it. This was all Uncle Philip could tell me. M. Vallière knew no more, but he promised to lose no opportunity of enlightening himself thereupon.

Accordingly a month or two afterward, he said he had heard that we were to have neighbors in the Dupressin house.

Uncle Philip asked who they were.

French, he said; recently from Marseilles; the name, Montargis; and there was a young lady, a neighbor for Mademoiselle Janet.

Now this intelligence was pleasant. With heightened interest I looked next morning through the catalpa boughs that shaded my favorite window, effectually shaded it, insomuch that it was a perfect "coigne of vantage;" one might sit there, bowered in green, and overlook the whole vicinage. One particular window I had assigned to the young lady; it reached to the floor and opened on an extended balcony; musk-roses and cape-jasmine overran the railing and fastened their sprays above the upper edge of the window; a thicket of oleanders grew so near that some of the branches had thrust themselves through the balcony and flowered there. Every thing about the place looked to me more attractive than ever, and I strongly wished the new-comers might harmonize with all this beauty which awaited them.

After all I did not witness the arrival, which must therefore have occurred while I was asleep.

There were soon unmistakable signs that my favorite room was occupied. One morning the transparent curtain was put aside and a young girl came out on the balcony; her face was turned away from me, but I saw that her figure was slight and graceful; she reached up and broke off a branch of jasmine, and her sleeve falling back showed a round, white arm. While she carelessly inhaled the odor of the flowers another person came out—a lady also. This must be Madame Montargis. Certainly I recognized that face, so coldly handsome, and yet with such capacity of evil expression! It was one of those which had so enchained my attention early in the winter. As she addressed the young lady she passed a hand caressingly over her cheek. Was it, then, the same with whom I had previously seen her? Yes; as she turned I knew her; paler, and to my thought lovelier, than before.

Immediately I set up an exalted and unchangeable friendship for the younger lady, on the strength of the qualities with which my imagination invested her, and toward the elder an uncompromising hostility. Moreover, I succeeded tolerably in enlisting Aunt Helen's sympathies on the side of my own prejudices. M. Vallière also listened encouragingly to the outpouring of my thoughts, and pledged himself to all possible aid in eliciting confirmation of my various and opposing theories in regard to the relations existing among our new neighbors. To do him justice, it was long before he furnished any substantial elucidation of the mystery of this dove and vulture fellowship—for so I chose to regard it.

A friend of Uncle Philip had asked us to spend a few days at a residence a little way up the river, and Aunt Helen yielding to our united persuasion, it was decided that we should avail ourselves of the invitation. Uncle Philip accompanied us, and would come for us again the ensuing week. This new phase of existence—life on a plantation—I found charming, and would willingly have prolonged it. Nevertheless, at the time appointed we were on our way homeward. One of the first passengers that met my eye on the boat by which we returned was M. Montargis. Where, then, were the ladies? possibly elsewhere on the vessel, and I determined not to overlook them if only they should come within the range of my vision. But first it was necessary to establish Aunt Helen in her state-room, for she invariably became sea-sick with the first motion of the boat; so leaving her to seek in sleep forgetfulness of suffering, we went to the saloon. Not there was my quest successful, but we had not yet been on the upper deck, and we presently went thither.

I scanned carefully the groups around me, at first to no purpose; but perseverance is usually rewarded, and so it was in this case. There, just before me, stood the tall, dark lady. In my hand I had a gay, beautiful bunch of flowers, which I had brought on board, and, moved by a sudden impulse, I offered them to her. She accepted them with suave courtesy and a brilliant smile, which, passing swiftly away, left on her face an expression so care-worn and troubled that I made up my mind directly to forego hostilities. A few minutes afterward she had disappeared, and I saw her no more.

We had just reached home. M. Vallière, who met us at the landing and accompanied us to the house, had been gone scarcely five minutes, when the bell rang sharply and he re-entered, to call away Uncle Philip. M. Montargis had been thrown from his carriage just there by his own door, and it was feared fatally injured.

It was evening before we saw Uncle Philip again. M. Montargis, his wife, and the young lady were all three in the carriage at the time of the accident. The horses had become restive, and M. Montargis had opened the door and attempted to assist the driver in controlling them; they made a sudden turn, and the carriage was overset. Besides a wound on the head, the gen-

tleman had received severe internal injury, and the result was doubtful.

Weeks passed; our life went on in its customary routine. My interest in our neighbors had taken a definite form, and by no means diminished. Physically, M. Montargis was slowly amending, but there was reason to fear that his mind was permanently disordered. His wife did not for an hour resign the care of him to any other person.

Had Uncle Philip ever seen the young lady?

Not once; he had inquired for her, had ascertained that she suffered no ill consequences from the accident. I imagined that she now occupied a room in another part of the house, for I saw her no more at the window.

One day Uncle Philip announced that the Montargises were going away on a journey; they would travel by easy stages, and would be governed in their plans entirely by the effect on the health of M. Montargis. A day or two afterward I saw a carriage brought to the door, and the sick man slowly and carefully borne to it; a lady in traveling-dress, shawled and vailed, followed, and it moved away. Then came another carriage, into which two female figures entered; one of them I recognized, the other, doubtless, was a servant. Then there was a great passing to and fro, and adjusting of luggage; finally all were gone, and its old, lonely stillness had settled around the Dupressin house once more.

The sickly season approaching, Uncle Philip proposed that we should make a visit to the Northern States. M. Vallière accompanied us. It was a leisurely, pleasant tour, and after a month of loitering wherever we liked, we found ourselves in Boston.

The very next morning after our arrival M. Vallière and myself saw, for an instant, in the hall of the Revere House, our New Orleans neighbor, Madame Montargis. M. Vallière remarked that he had an indefinite impression of having met her long ago, though when and where he could not recollect.

We had just told Aunt Helen, when Uncle Philip came in; he brought a harvest of letters, some of them for M. Vallière, and both gentlemen sat and read them.

"Philip—brother! what is the matter?" exclaimed Aunt Helen. "Are you ill?" For, looking toward him, she saw that he had grown very pale.

He did not reply at first—not until, having gone to him and laid her hand upon his shoulder, she repeated the question—and then he hardly answered; but he gave her the letter which he had been reading.

She looked first at the signature. "Montargis! But, Janet, you just now told me that Madame Montargis was in this house."

I averred that I had seen her within the hour. Uncle Philip seemed incredulous; M. Vallière confirmed my assertion. They talked apart a little while, and then left the room.

Aunt Helen and I read the letter together; it was in French, and it was this:

"If Dr. Rothsay will look back through a period of twelve years, to the time of his residence in Cuba, he will, perhaps, recall to mind that his little daughter, then two years of age, conceived a strong regard for Madeline, a French servant in the service of Madame Cazneau, the friend of Madame Rothsay; and that, influenced by this childish fancy, Dr. Rothsay engaged Madeline as an attendant on Mademoiselle Eloise. Madame Montargis, wife of the gentleman whom Dr. Rothsay recently so kindly and unweariedly attended in New Orleans, and Madeline, the French servant, are identical.

"And Mademoiselle Eloise Etienne, the reputed niece of Madame Montargis, is Dr. Philip Rothsay's daughter, left, on the death of her mother, in the charge of Madame Cazneau.

"From Madame Rothsay I received only kindness; and in her illness I nursed her faithfully. On the death of Madame Cazneau, which followed in one week that of Madame Rothsay, Mademoiselle Eloise was left in my sole care. Just at this time I determined to avail myself of an unexpected opportunity to return to France. Deeply attached as I had become to Mademoiselle Eloise, I should still have left her in Cuba, had I known any person to whom I might safely have intrusted her. But I knew none such; therefore I took her with me to France—to Marseilles.

"The confusion attending the fatality of the fever that season in Havana facilitated my departure, and enabled me to furnish myself with means of defraying the expenses of the voyage and of a maintenance afterward.

"In Marseilles I met the gentleman who afterward became my husband.

"And in proof of what I have asserted, Dr. Rothsay will probably remember an incident which occurred on his child's second birthday. She was playing with a perfume-bottle, taken from Madame's stand; she broke it, and received in her little hand a deep, bad wound. Monsieur dressed it himself. The mark is still there.

"Besides this, among my fellow-passengers from Havana was M. Vallière, now a resident in New Orleans, and, I believe, the friend of Dr. Rothsay. It is possible that this gentleman will recollect a little girl whose beauty and caressing ways won his attention; and that one day the eager delight which she manifested at the play of light on an opal which he wore induced him to take off the ring and attach it to a little coral bracelet on her arm. I wished to return the jewel, but the gentleman courteously begged that she might be allowed to retain it. The bracelet, with the ring attached, are still in the possession of Mademoiselle Eloise.

"It may be that these circumstances, with one more—the singular likeness of the young lady to her mother—will yield to Dr. Rothsay conviction of the truth of what I have stated. [I might have placed it all beyond a doubt by making myself known to him before leaving New Orleans; but circumstances which

I could not control rendered this step injudicious. I have, therefore, deferred this revelation, which, indeed, I have long wished to make, until now that we are about to take our final departure from this country.]

"Mademoiselle Rothsay will await in the residence of Madame Clerc, Mount Vernon Street, Boston, communications from her father."

The letter bore date three weeks preceding, and had been forwarded from New Orleans.

For the first time in my life I think I should have been vexed with Aunt Helen, sitting there so quietly after reading this letter, if I had not seen, at a second glance, that her tears were dropping fast.

Interminable seemed the suspense. It was at last ended by the entrance of M. Vallière. I plied him well with questions, and elicited these particulars:

A relapse on the part of M. Montargis, just on the eve of departure, had detained him in Boston.

When M. Vallière and Uncle Philip had sent up their names to Madame Montargis there had been a little delay. She received them, however, notwithstanding the inevitable surprise, with a cool equanimity, through which flashed now and then a fierce glitter of the eye that made her look dangerous. This ceased when she ascertained that their errand was exclusively in relation to Eloise. Both gentlemen fully recognized her, and both expressed wonder that they should have failed to do so sooner.

Of the meeting of father and daughter M. Vallière did not tell us. He began, but broke off; and rising suddenly, went to the window, where he seemed to have found something interesting.

When, at length, Uncle Philip came in, leading the gentle, beautiful young girl, who clung to him already, and sent timid glances, through fast-falling tears, toward the new-found friends—when he brought her to us, and just said, "Helen — Janet — my daughter," and could say no more—Aunt Helen, without speaking, folded her closely in her arms, and made her feel herself most dearly welcome. I am sure I have not often in my life felt so glad, but I could not help crying too. Uncle Philip did not try to comfort us; but he drew Eloise toward him and smoothed her hair, and soothed her gently as a mother could have done, and he said something to her in a low voice which she alone heard, and which made her give him, through her tears, a look which must have gone to his heart of hearts.

One morning while we were still in Boston, wishing to show Uncle Philip how long and beautiful was Eloise's hair, I undid the fastening and let it fall, a shower of bright curls, around her face and shoulders. It was just as if the lovely picture in Uncle Philip's room at home had taken life! I know that he remarked the likeness from the way in which he kissed her forehead, and then turned gently away.

Madame Montargis, with her husband, left Boston for Havre three days after the restoration of Eloise to her father. Intelligence came of the safe arrival of the vessel in which they had gone, and then for several years all attempts to gain farther information of their movements were ineffectual. At length M. Henri, the friend of M. Vallière, and my *ci-devant* French teacher, received the announcement that a valuable estate in the south of France had devolved upon him; and not many weeks after his departure, in a letter to M. Vallière, he stated that the preceding proprietor of the estate was M. Montargis, our former neighbor, and that the death of that gentleman's wife, a few weeks previous to his own, was supposed to have had a fatal effect upon his health, already for a long time precarious.

Eloise, amidst all her new-found happiness, grieved deeply at this intelligence. She had a sincere regard for Madame Montargis, from whom, indeed, she had received always the most affectionate indulgence.

Aunt Helen's home is now at the South, and she is now Madame Vallière. Herself, Uncle Philip, and my cousin Eloise—the dearest cousin in all the world—come in the summer and make us the most delightful visits, marred only by a too early termination; and then again, as the cold weather advances, we, too, often go South; so that we manage to be together full half the time.

LYNCH LAW.

I THINK I had never heard of Lynch law until about the year 1834, when the citizens of Vicksburg organized themselves into a Court of Uncommon Pleas, with special reference to certain men in their midst who were, or were said to be, "living on the borders of the law." And I well remember, boy as I was, the sensation with which the news of the hanging of the Vicksburg gamblers was received in the old States, and how soon the terms "Lynch law" and "lynching" became familiar as household words. While the excitement was still high, and the Vicksburg tragedy was the main staple of conversation, the expression "Lynch law" was used by one of several gentlemen who were on a visit to Mr. Richard Venable, of Prince Edward County, Virginia. I give the name because what follows may start inquiry, and may possibly elicit further information.

Mr. Venable, at the time of which I speak, was and had long been in feeble health, and often sat for hours to all appearance unconscious alike of what was said or done in his presence; when, all at once, generally when least expected, his eye would kindle, and his originally strong masculine mind would seem to renew the vigor of its youth. Such was the effect of the sound of these two words, "Lynch law." He had been gazing abstractedly into the fire from his arm-chair in the corner, when he turned quickly to the speaker, and remarked,

"I do not like to hear that name."

When asked the reason, he was silent for a moment, and seemed to be relapsing into apathy.

Presently, however, and as if speaking to himself, he said, "Such a name connected with such deeds!" and then, in a still more abstracted manner, he added, "How strangely may men be damned to everlasting fame!"

After another short pause, he turned again to the gentleman whom he had interrupted, and said, in substance:

"I knew Mr. Lynch well—as well as a stripling could be expected to know a dignified and venerable gentleman. He was for many years the senior and presiding Justice of the County Court of Pittsylvania, whose terms he attended with remarkable punctuality. His advanced age prevented him from taking the field during the War of Independence, but no man more heartily embraced or more zealously supported the cause of the colonists. His judgment made his enthusiasm practical; his head and his heart worked well together.

"Some of you know, though none of you can remember, that before and during the war there was but one criminal court for the final trial of murders and felonies in Virginia; that court sat at Williamsburg, some two hundred miles from Pittsylvania court-house.

"Our war, like all wars, was an *Alma nutrix* of depredations and felonies. The prices paid by both armies for fine horses rendered that species of property particularly insecure; and contemporaneously with, or rather in advance of, the Southern invasion by Cornwallis, an organized band of horse thieves had established posts and dépôts, from far away North, through Virginia into the Carolinas. They were headed by a man of some notoriety, fitted by nature to shine in any office or profession. He was said to be a man of strikingly handsome face and elegant person, of most courtly manners, and easy, graceful conversation. His life was a mystery, and so his fate remains, I believe. He was known as Captain Perkins, and his name was as perfect a terror in the nursery as was that of the Douglas when English nurses were wont to quiet their babies with the lullaby,

"'Hush ye, hush ye, little pet ye;
The Black Douglas shall not get ye!'

"These thieves were frequently arrested, often *flagrante delictu*. They would be committed, examined by a bench of Justices, and remanded to Williamsburg for final trial. Even before the occupation of the country by the English, the distance of the court rendered the attendance of witnesses uncertain; and when they appeared to prosecute they would be confronted with any number of contradicting witnesses the occasion might require—men, too, of equal or superior appearance of respectability to themselves, thoroughly instructed as to what they should swear, and as thoroughly capable of strictly obeying their instructions."

I thought, *par parenthese*, the old gentleman laid a double emphasis on the word "instructions." I might have been mistaken, but about that time his kinsman and friend, Benjamin Watkins Leigh, was making manly fight against the Virginia Legislature in regard to what they both (I mean both these gentlemen) called a mutilation of a certain record of the United States Senate. But to resume. Mr. V. proceeded:

"The conviction of these outlaws being thus rendered next to impossible, sufferers had become averse to add the cost of time and money to the loss of property, even before the enemy entered the country. The advent of the British troops gave a new impulse to the operations of this gang by bringing the market to the seller, by rendering the chance even of transporting the criminals to Williamsburg more than doubtful, and making the sessions of the Court itself very uncertain. The horse-thieves, when they and their guard would be intercepted, were always ready to take English bounty, and being, for the most part, young, wiry, active fellows, acquainted with all the highways, and still better with all the by-ways of the country, they were gladly enlisted in that service, while their guards would, probably, be held prisoners of war. As long as the escape of these miscreants was attributable only to the imperfection of the criminal jurisprudence—was, in other words, the fault of the law—no one thought of overstepping the barrier which that law interposed.

"But when a state of things existed which enhanced the evil ten-fold, and took away even the semblance of a remedy, the cry of a whole community suffering under the accumulation of pillage and fire from the enemy, and the loss by theft of what property they could hide from that enemy, came up to the only tribunal to which they could look for relief, the only tribunal, in fact, which might be said to have been left possessed of vitality—the county magistracy—a body of men who, at that time, would have compared favorably with Rome's proud '*Patres Conscripti*' in the purest days of that republic.

"In obedience to this call for relief, and impelled by this stern necessity, the Justices of Pittsylvania County were summoned specially to be in attendance at one of the regular terms of their court—a large majority, perhaps the whole bench, being present. The presiding Justice, Mr. Lynch, having plainly but forcibly reminded them of the extraordinary condition of the country, the entire insecurity of life and property, and the complete suspension of the administration of justice, exactly when stringent laws required most vigorous enforcing, submitted a proposition, that in consideration of the fact that the Criminal Court at Williamsburg had ceased to exist, at least in so far as related to the border counties, the County Court of Pittsylvania should undertake to try finally all cases of murder and felony occurring within that county which were required to be sent to the court at Williamsburg for trial, by the words of the law. That in such trials the accused should have the same rights as to the impanneling the jury, the peremptory challenge, the challenge for cause, etc.; the same rights as to all pleadings, general and special; as to the summoning and compel-

ling the attendance of their witnesses, and the cross-examination of witnesses for the Commonwealth, and of being heard by counsel, as were secured to them by the law giving jurisdiction of their cases exclusively to the court at Williamsburg. In short, he simply proposed to change the forum. The plan was adopted and recommended to the neighboring counties, by some of which it was also adopted. As may be imagined, the effect was felt at once. A few were caught, tried, and hung—hanging was the legal penalty then—the rest sought a more congenial clime. The gang was dispersed in fact.

"Mr. Lynch was a man of enlarged mind, great decision of character, fixedness, almost sternness of purpose, but most eminently a law-loving and law-abiding man. He had thoroughly counted the cost, and carefully weighed the consequences; he took his position with full knowledge of its responsibility, and maintained it with firmness and dignity. He continued to preside over the county court long after it had laid down the powers it had so bravely assumed; and he carried to the grave the love and veneration of all good men. Our flourishing town of Lynchburg received its name in compliment to his worth. Do you now wonder," said Mr. V. again, turning to his guest, "that I dislike to hear his name connected with the lawless acts of men probably as worthy of the rope as their victims?"

This report from memory may look somewhat like an oration rather than fire-side talk—it probably does so look to most readers. I wish any such could have heard it told as I heard it, and could report it more faithfully. Mr. Venable had been for many years a lawyer with extensive practice, and had been frequently in the Legislature of his State; he was a man of great precision both of thought and language, a gentleman of the old school, with a little, not much, of the stately formality of the ante-revolutionary period. I have tried, as I promised, to "tell the tale as 'twas told to me." This was his account of the origin of Lynch law.

The conversation of the evening took the turn of this diversion. Vicksburg was forgotten, and Captain Perkins became the theme of talk. Let me try to remember some of the stories that were told of him and his exploits.

One of the gentlemen present had heard a lady-relative tell how, in the most disturbed state of the country, she had left home on horseback, unattended, to visit a sick friend at some five miles' distance. As she emerged from a private lane into the public road she met a well-dressed and elegantly mounted horseman traveling in the direction she was herself going; he saluted her gracefully, and soon fell into conversation. After thus traveling together for some distance, the stranger asked the lady if she did not feel some apprehension in traveling thus unprotected when the enemy were overrunning the country; and, what was still worse, there was a report that Captain Perkins was in the very neighborhood. She replied that she had no apprehensions from the enemy, none of whom were near; and that from all she had heard of Captain Perkins, she was led to think that, whatever might be his notions of rights of property, a lady in distress should rather fly to him for succor than from him through fear. Some two or three miles were thus traveled in pleasant converse before their roads diverged. In parting the stranger doffed his hat, and bowing to his saddle-bow with a grace that would have done honor to Grahame of Claverhouse, took his leave, assuring her that Captain Perkins would ever hold in grateful memory her too flattering opinion of his gallantry and chivalry.

Another was told, in which that great lover of horses and prince of good livers, Archy Randolph, bore a part.

Mr. Randolph, whose desire was to have the best of every thing, and who would have the best horses at any cost, had in his stud a favorite riding horse, at once the admiration and envy of his acquaintances. Of great power and great action, unequaled at any gait beseeming such a cavalier, it is enough to say the bright sorrel was worthy to be bestrode by Archy Randolph. This horse was stolen, spirited away so adroitly that all efforts to trace even the direction the thief had taken utterly failed. Mr. Randolph had to bear his loss with what philosophy he could command—a very small modicum, unless he has been sadly belied. At any rate the horse was gone, and had been gone some weeks, when one day, as Mr. Randolph was standing in the tavern-porch at the Bowling Green, a stranger rode to the door and dismounted from a beautiful dark-brown horse, of most elegant carriage and action. There was but one thing amiss about him; he had been nicked. Mr. Randolph was in conscience opposed to curtailing horse-nature of any of its fair proportions, but so perfect was this horse that even nicking might be forgiven. Mr. R. lost little time in ascertaining that the stranger might be induced to sell, and still less in mounting the horse and trying his gaits. The result may be guessed. The horse was certainly not equal to Fencer, but came nearer to him in figure and action than any horse he had ever expected to see. The stranger named the price, and Mr. Randolph rode home almost consoled.

The next morning as Mr. R. was paying his usual call at the stable his head groom approached him with a very unsettled expression of face, as if he would have given the world for a good old nigger guffaw, but had some misgivings about a suspicious-looking implement, meant for horses, but which might be, and sometimes was, otherwise used, and which his master "*then and there held in his right hand.*" So, bringing his face into the expression of proper respect, Cuffey modestly remarked,

"Massa, I does b'leve you done gone buy Fensa back agin."

"Buy Fencer back again! Why, what do you mean?" said Mr. R.; and the whip showed a rising disposition.

"Dat hoss you bring home yistidde frum de

Boln Green—" said Cuff, falling modestly back about a yard, a yard and a half, or two yards.

"Well, what about him?" said Mr. R., advancing, the whip now exhibiting a more decidedly upward tendency, with a motion slightly spasmodic.

"Wy," said Cuff, still retreating, "dat hoss Fensa, sho's you bawn."

"Fencer!" roared Mr. R., and the whip came down with a run; "Fencer!" and the whip came down again almost before it had recovered from its first sudden fall.

Cuff looked as much hurt as if his fulled linsey jacket had possessed acute sensibilities; but as his master was now speechless and powerless he took courage, and said,

"Yes, massa, dat hoss Fensa. He know he stable; he know me same as you; he know him own stall. Go straight da; you go to de stable, massa, an call dat hoss same like you use to; he know you, sho's you bawn."

Mr. Randolph strode into the stable, and, as he entered, called, "Ho, Fencer! Fencer, boy!"

A quick turn of the head to the call, and a pointing of both ears forward, were succeeded by a merry whinny.

"Bring him out!" shouted Mr. R.; and the bright morning sunlight enabled him to detect the dye in his hair, though it had been colored by a master; and a close inspection showed that the cut which the nicker had given his tail was not yet quite healed.

"Dat hoss Fensa, sho's you bawn."

Mr. Randolph's breakfast meditations were by no means agreeable. The money he had disbursed gave him no concern; he would have given, perhaps, ten times the sum to reclaim his horse; but that he, Archy Randolph, the leader of every hunt, the oracle of the turf—that he should have been deceived—deceived in a horse—deceived in his own horse—his own favorite riding-horse—shocking! most shocking! And then came the reflection that it could not be concealed. Before the sun went down the whole country would ring with the story. Mr. Randolph dearly loved a joke; he was a joker—a laughing, practical joker—and, like all men of that turn, was very restive under a joke of which he was the victim. But the chalice was commended to his lips, and, poisoned as it was, he was compelled to drink.

Some two weeks passed, during which he was forced to grin ghastly smiles at every variety of jocular comment on his knowledge of horseflesh. The joke was beginning to grow stale, and Mr. R.'s wrung withers were slowly losing their soreness, when he was met one morning, just as he left his chamber, by Cuffey, who stood before him holding his hat in one hand and a soiled note in the other. His eyes seemed starting from their sockets, his face had assumed an ashy hue, and he shook in every joint.

"Well, what now?" said the master.

Cuff found courage to hand him the paper, as the words, "Fensa gone agin—find dat papa in he troff," came rattling through his shivering jaws.

Mr. R. rushed with the unopened note to the stable, where he had the satisfaction of seeing Fencer's stall. It was after many moments of paralyzed silence that he remembered the paper found in the stall, which he still held clutched in his hand. Walking to the stable-door, he examined the note, which was sealed carefully, the device being a winged horse. Upon opening it, his eyes were delighted with a perusal of a communication nearly in these words:

"Captain Perkins presents his compliments to Mr. Randolph, and hopes he will be believed when he assures Mr. R. that when he unexpectedly met him at the Bowling Green and sold him the horse Fencer he sincerely intended never to interrupt Mr. R. in the quiet possession of that valuable animal. Captain P., however, finds that every day makes him more and more regret having ever consented to part with him; and now, business of a pressing nature calling Captain P. to a distant part of the country, he finds himself constrained, however reluctantly, once more to rely on the speed and endurance of the best horse he ever had the pleasure of backing. Before Mr. R. receives this Fencer will be many miles distant, and will probably not return to Virginia."

Fencer never returned to Virginia, so far as is known; but the second loss was not the subject of jocular remarks in Mr. Randolph's presence for years after. The kindly feelings of some, and a suspicion of unpleasant correspondence on the part of others, saved him from any superadded pain.

Captain Perkins is said to have been several times taken, but always to have effected his escape before reaching jail. He seemed never to have been out of observation of some of his trustiest followers. One instance was mentioned. He was entrapped in one of the lower counties of the State, and taken without resistance. After he had been securely bound upon a horse, his captors hurried toward their county jail. Captain P. beguiled the weary ride by pleasant conversation; among other things, assuring the sheriff's officers that he purposed leaving their society before they reached the county seat.

Thus pleasantly talking, they arrived at an old Virginia ordinary — called "*ornery*" for short. The tavern porch was unusually full, and Captain P. was the engrossing theme of conversation. None of the company but had lost one or more horses; and right welkin-ringing was the shout that went forth when the veritable Captain was exhibited, bound hand and foot. While the officers were taking the customary refresher — metheglin was the proper name of "peach and honey" in the days of our Revolutionary sires—they informed their friends of the cool manner in which the Captain assured them that he had no intention of going to jail.

Their first amazement over, several of the party volunteered their services as an additional escort. One or two were going that way anyhow; to some others a few miles more or less made no sort of difference; while yet more would travel afoot to the world's end to see him hanged. The sheriff left the tavern with a goodly company of well-mounted and pretty-well-armed

special deputies, who, after traveling a few miles, drew their weapons, unbound their Captain, dismounted the law officers, and dashed off, "right merrilie," into the pine-woods.

If these random recollections of one among many evenings spent under that same hospitable roof should be an incentive to others, and bring out some of the many similar stories which, though unpublished, are still treasured traditions in the old families of Virginia, I will have done a good work. If not witty myself, I would be gratified to think that I was "the cause of wit in others." Should the surviving relatives of Mr. Venable desire to know who has taken the present liberty, their memories will recall the real name of one who, while he resided among them, was sometimes called COHEE.

CRITICISM FORESTALLED;

OR, RHYME *VERSUS* REASON.

WITH COPIOUS NOTES BY THE AUTHOR.

[THE ARGUMENT.—*The Poet, in turning over the contents of an old desk, encountereth one of his own juvenile effusions, and weakly stoppeth to read and comment thereon.*]

HE reads:

"ODE TO SPRING.

HAIL spring! sweet spring! young nurse of summer's roses!
Now o'er our land thy glorious smile is shed;
'Neath its soft beam the violet's eye uncloses,
And the pale primrose lifts its perfum'd head.
I scent afar the cowslips on the hill,
And the rich honey-suckle's breath floats by;
Loos'd from its silvery fetters, sings the rill,
And dream-like shadows flit along the sky."

There, now; that's good—but it must have been indited a *long* time ago—in the early ages, probably, before steel-pens came into use, for it was evidently written by a *bit of a goose!* A vivid description of spring—very! A most wonderfully striking likeness—only a little too highly-colored for modern times. Nevertheless, I consider it a very clever picture of what a spring *should* be; and I would have it Daguerreotyped for the use and benefit of all future springs on their "first coming out," if sunshine was not so uncommonly scarce in the market at present. "Sweet spring" indeed! If this is a *sweet* spring, I do wonder what a *sour* one would be. I thought I *knew*, but I suppose I do not. But as to bidding spring "hail," I *should* say *that* was a work of supererogation, for she does not do any thing else.

"Young nurse of summer's roses!"

Yes! a very young and very inexperienced nurse, indeed! I do not wonder so many of summer's young ones "drop off" under such nursing; and if I was she, the next time I looked out for such a commodity I would require some recommendation from the last place she came from.

"'Neath its soft beam the violet's eye uncloses."

Now there *is* some sense in *that; that's* according to Scripture. Yes, I suppose there *is* such a thing as "a beam in the eye;" but I did not know that violets were particularly subject to this kind of ophthalmia.

"The primrose rears its perfum'd head."

Does it? I wonder what kind of hair-oil the primroses use!

"The cow slips on the hill."

Yes, indeed, I dare say she *does*, and in the valley too; it would take more than *four* legs to keep up beast or body in these slippery times, *I* know. I have heard that "man was made upright;" but I rather think he finds it difficult to keep himself so nowadays.

"The honey-suckle's breath floats by."

Well, live and learn! *Spring honey-suckles!* quite a rarity! I had not studied Botany then, I suppose; for I evidently did not clearly distinguish between honey-suckles and icicles! But let us see—what comes next?

"It is the childhood of the growing year,
And the calm azure of yon smiling skies,
So softly bright, so luminously clear,
Is like the questioning glance of childhood's eyes.
What shall the *future* be of this bright birth?
We fear to ask. The year before us stands—
An infant mystery—holy, yet of earth—
Fresh from the touch of the Creator's hands!"

Mercy upon us! that *was* written before I came to years of discretion, *certainly!*

"An infant mystery—holy, yet of earth!"

And was I ever "so green" as that? Well, yes, I suppose I was; but I was not so much to blame either, for times are changed. Children *were* children then; but, bless my soul! I have grown wiser since that time. Children, indeed! Why, children used always to think and believe that their father was made of diamond dust, and mamma of the veritable attar of roses—that grandpapa was a glorified amalgamation of Father Abraham and General Washington, and a living and walking compendium of all the virtues of all the ages between, and grandmamma an illuminated presentation copy of bounteous Eve, with the very becoming addition of liberal and capacious pockets! But they do not believe so *now*. Now they *know* that parents and grandparents *are only human;* made, the very best of them, of only skin, bone, blood, flesh, sinews, *obstinacy*, and *disobedience*. Catch a *child now*—a real *child* (an innocent, natural, naughty, honest, wondering, loving, credulous, rolly-polly sort of a child, such as they used to bring "before the Revolution")—and it would be a greater curiosity than both the Aztec children; and I, for one, should rather have it.

Talk of

"The questioning glance of childhood's eyes!"

All nonsense! Children do not *question* now; they *answer!* Childhood is now "a dreamer of dreams, an expounder of the prophecies," and knows far more about the animal, mineral, and vegetable kingdoms than it does of the kingdom of Heaven. Why, there is not a child of six summers to be found in all Christendom that will not feel competent to contradict its grandfather in theology, and its father in mathematics, and complain that mamma cuts the apple-pie into *too acute triangles!*

Children indeed! Who cares for nursery tales *now?* They *may* listen to

"Turn again, Whittington, Lord Mayor of London town,"

for that is a tale of commercial enterprise and money-making speculation; or to "Robinson Crusoe," for he was a land discoverer and a colonizer: but who cares now for the "Babes in the Wood," or for that itinerating and vituperative female who made night hideous with alternate entreaty and imprecation, calling on all the powers of earth and nature to help her, simply because, as she repeatedly tells us, she

"Saw by the moonlight 'twas half past midnight,
And time kid and she were at home an hour and a half ago!"

Call your little ones round you and try them with

"Pussy cat, pussy cat, give me my long t-a-i-l again!"

If they are girls, they *may* be ignorant enough to ask, gravely, whether pussy cat ever did make restitution of the caudal extremity of her victim; but if boys, ten to one they will talk of an action for damages, or remind you that the law of *entail* is opposed to our free American institutions.

Dare not to insult the intellectual acumen of your four-year-old boy by the sad fate of little "Red Riding Hood," or that dearest, best, and grandest of all nursery traditions, "The Three Bears," though still, in the inmost recesses of your own memory, are ringing the very tones of the dear old voice in which you heard from long withered lips the gruff inquiry of the two old bears, "*Who's* been lying on *my* bed?" and "*Who's* been lying on *my* bed?" and the sharp, childish treble of the amiable *little* bear piping out, "Who's been lying on *my* bed, and *broke it all down?*" Dare not to do it! Better tell him of the Bulls and Bears of Wall Street, and of banks all broken down; he will understand it better.

Yet the children have an ancient mythology of their own, too; there *are* myths they still cling to tenaciously; they still talk, at certain periods and stated times, of "Santa Claus" and "the giving man;" still retaining these empty names as older children do the "John Doe and Richard Roe" of the English law; knowing perfectly well all the while that they are only solemn, time-honored old humbugs, yet finding it for their own convenience and advantage to retain their names. Oh! the children of these times are very wise in their generation.

They have a fund of lip-learning, and can handle the sciences just as familiarly as they would young rabbits. They can explain to you the nature and properties of heat and cold; the articulation of the joints, and the circulation of the blood. They can talk of their thorax and their pericranium, and lay their fingers on the exact region of the lungs, liver, and spleen; but as to their *hearts* and *brains*, neither they nor their teachers seem ever to have taken the trouble to even try to find out where *they* are hidden! Well! so be it; possibly they might not find them if they did search, and it's wrong to waste time.

He reads again:

"But spring-time melts to summer—in the skies,
More fervid, day by day, the splendor grows—
As childhood, daily brightening 'neath our eyes,
Bursts forth to womanhood—the perfect rose!
Resplendent summer! gloriously fair,
Pale by *thy* side, spring's earlier beauties fade;
A witching glory fills the noontide air,
And forms of love and beauty haunt the shade!"

"Forms of love and beauty haunt the shade:" "Oh! this love, this love!" Now I have no doubt that was written when I was so deeply in love with pretty Ellen Anderson, and just nineteen. Good while ago, bless my heart and soul! And can "*I*, by myself *I*," be the same poor fellow who was then so fairly immersed, over head and ears, in that most sweet delusion? who "fell into the honey-pot up to his ears," and was "found drowned, dead;" beyond the reach of any humane society? Ah! me; hardened sinner that I am, I can scarcely believe it, but I suppose I must be! What a beauty she was though—no such girls about nowadays! Why her six daughters, all put together, have not a tithe of their mother's beauty! Eyes and teeth like cut steel! and such a merry, ringing laugh! And then how she could sing, and play, and dance, and draw: and she *did* draw *me* just where she chose!

Ah! I thought her a piece of perfection *then*—ethereal as the rainbow, sparkling like the galaxy, brilliant and bewildering as the northern lights! (I met her in a hardware shop last Tuesday and she bought a box of tallow-candles and a chopping-knife, and inquired the lowest price of hard soap!) Ah! well, never mind; but I thought *once* that love was—I can't say just *exactly what*, you know, but certainly something *very* different from the article in common use nowadays, when hands and hearts go to the highest bidder, and a lover is won, like a game of chess, by a studied and complicated series of sagacious manœuvres; when marriages are made up like a ship's reckoning or a Newmarket betting-book, all figures and calculation; when *dénouements*, elopements, and divorces, are the fashionable pastime, and wedded people seem to change partners with as much nonchalance as they used to for a quadrille! True, you may say there is a difference of opinion upon *this*, as upon almost all other subjects. Solomon,

"The wisest man the world e'er saw,"

thought his seven hundred wives too *few;* and worthy Job, the most *patient* man on earth, found *one* a little too much: but these are extreme cases. I suppose the "*juste milieu*" is yet to be found out; and if we may trust to the many experiments said to be going on around us, it is probably reserved for Yankee shrewdness to solve the problem; and in so doing, to add a fresh laurel leaf to our national glory only inferior to steam-engines, lightning-rods, sewing-machines, and cucumber-slicers. But for my own part, *I* hold to the opinion of Job.

He reads again:

"But on—still onward—speeds the rolling year;
The spring's glad childhood, summer's glorious prime
Fade into autumn—while we garner here,
Triumphantly, their gifts for future time;
The woods grow gorgeous in decay's first stage—
But gone are singing birds, and clustering roses,
While, calm and tranquil, like time-honor'd age,
The weary autumn on our hills reposes."

"*Time-honored age!*" There now, there is another fallacy. There is not any such thing existing; old men and old women have disappeared—*gone*, like behemoth and the mastodon! There used to be such things I know, and what has become of them I can not say: but I *do* say, there are none about *now;* I suppose they are out of fashion. There is nobody old now but just "the old Harry," and I believe it is rather good breeding to speak of *him* as the *senior Henry!*

People do not grow old *now*, as they used to do; they keep themselves in better repair. "When the grinders cease, because they are few," "the mourners" *don't* "go about the streets" until they have got a new set. But I can remember when women of threescore years and upward used to *give in* and acknowledge themselves to be elderly people, and repose *like* the "weary autumn."

And yet they were not just idle either. They could not do *much*, to be sure; but they used to wash the cups, knit and darn the stockings, roast the coffee, shell the pease, string the beans, pick the currants, pare apples, pound spice, stone raisins, cut loaf-sugar, pick roses, kill flies, dry herbs, make pickles, distill rose-water, make holders and patchwork, and render themselves generally useful. But there are no old men and women now.

We hear of our great-grandfathers in their cocked hats, and scarlet cloaks, and flowing powdered wigs. Ay, more, we have even seen their wig-boxes, and handled their gold snuff-boxes, and played with their gold-headed canes. We stand before their pictures, and can imagine their dignified steps, and grave and stately bearing, when, under the weight of sixty years, or *less*, they demurely walked abroad as reverend seniors, and gracefully accepted, as their just due, the respectful salutation of the young men who rose up to do them honor. "All very well," we say. "That was as it *should* be; would it were the fashion *now!*" But let such a fashion return again, and where should we find actors for this part of the drama? Who among the present generations would be found ready to come forward as candidates for these once coveted honors? Not our grandfathers, for they are out with our grandmothers skating on the common or coasting down the hill ("the post-meridians," as a clever writer has called them). The professional men are steaming round the world, or yachting, or driving fast horses: they are all in motion, at "two-forty" speed, and

"Panting time toils after them in vain."

No! I say it again, we have no old men and women *now!*

Bless me! can that be the dinner-gong? Yes—and I have wasted full twenty minutes over this absurd trash. I must be a greater fool now than I was when I wrote it. Surely length of years has brought *me* no wisdom.

(He tears the paper, and goes down to dinner with what appetite he may.)

SUCH A MISTAKE!

I.

"AND now, my dear," said Mrs. Mayfield as she clasped Rosalie's bracelet and gave the last few finishing touches to her attire, "be very careful not to dance too much this evening. I know it is very delightful and exhilarating, but there's nothing that injures a girl's appearance more, in my opinion. Walk quietly through a few sets, if you like, but don't run the risk of getting red and heated. How painful it is to see a young lady led to a seat by her partner, with her face in a perfect flame, and her breath so hurried that she almost pants! And be very sure not to eat any ices, you are so delicate. I really tremble every time you go out lest you should get sore throat, or bronchitis, or something of that kind. Now wrap up warm, my love, for the night is cold, and you know it isn't as if you had only to sink back in a carriage and ride home when the party is over. There's the evil of being poor!"

"Not a very terrible evil, I think, mamma," said Rosalie, smiling; "at least there are plenty of instances about us much more distressing, and plenty who would wonder what poverty *we* had to complain of."

"There you are, my dear, just as usual!" exclaimed her mother; "as if that made any difference! If I am tired and cold as I walk home at two in the morning, it doesn't make me any warmer to reflect that there may be people somewhere in the cellars around who are colder yet."

"No!" thought Rosalie; "but it might make a person more patient with a discomfort that would be removed as soon as home was reached." She made no comment, however; but presently remarked, "Poor Mrs. Taylor! I should not like to be in her place just now! I suppose they are in the last agonies of preparation, lighting up and going about to see that every thing is *comme il faut*."

"I don't know why you should say *poor* Mrs. Taylor," replied her mother. "I should like nothing better, Rosalie, than to see you at the head of just such an establishment as hers, and suffering no greater trial than she undergoes in giving this very entertainment."

"Indeed, mamma, you could not wish me a more unwelcome lot! I consider Mrs. Taylor one of the most unfortunate women of my acquaintance!"

"Unfortunate!" thought Mrs. Mayfield, "and with an income like hers! What insane idea has Rosalie got into her head now? I can't see," she added aloud, "what there is in Mrs. Taylor to call forth especial commiseration."

"I'll tell you, mamma. She married a man she never would have thought of had it not been

for his money—a man inferior to her in mind, manner, education—one with whom she could not pass a single evening pleasantly—and she must spend her whole life with him! The perfect absence of all domestic happiness drives her to seek enjoyment in dress and display, and these produce rivalries and heart-burnings innumerable. Then the sort of life she leads makes her heartless. I really do not think she cares half as much for her children as unfashionable mothers do—my friend Mrs. Wood, for instance."

"We must not be censorious, Rosalie! That is a very bad spirit, my child; and there's no need of being heartless just because one happens to be rich, even allowing that Mrs. Taylor is a trifle so. As for her husband's inferiority, she doesn't feel it so much, because you see, my dear, Mr. Taylor is down at the counting-house so late, and then at her parties he just stands somewhere very quietly, and does not make himself at all conspicuous. I don't believe she is often mortified by his appearance."

"My dear mamma," cried Rosalie, laughing, "you would make an excellent special pleader; but you have not convinced me, after all. If I ever have a husband I shall take care that he is not one with whom I shall dread to pass an evening *tête-à-tête;* nor shall he be of the sort whose chief virtue consists in keeping quiet and not making spectacles of themselves. No, indeed! He shall be one whose company and conversation I can enjoy when we are alone, and whom I shall be proud to present to all my guests."

"Very well, my love," said her mother, kindly, "I hope you may some day find him. But I shall take good care," she added, mentally, "that he has something to depend upon more substantial than all these agreeable qualities which you seem to consider the only things of importance."

Mrs. Mayfield was one of a class perhaps as much to be pitied as those who undergo privations of a more absolute nature. Her position and associations ever since her marriage had been with people of means greatly superior to her own, and the endeavor to maintain a footing among them taxed to the very utmost her powers of economy and management. Her husband, now some years dead, had been an amiable, intelligent, and well-bred man, but lacked, alas! the faculty, so essential in these days, of making money speedily. Industrious in his profession, affectionate in his family, esteemed among his friends, he was such a husband as any woman might have valued; yet it is to be feared that his wife sometimes overlooked these sterling qualities, and would have preferred to see him more like various A's and B's of her acquaintance, who, beginning with nothing, had risen, by means not to be too closely scrutinized, to splendid houses on the Avenue and country-seats up the river. Poor Mr. Mayfield! He felt, in some degree, what were his wife's sentiments in this respect, and tried ever and anon to remedy affairs by sundry bits of speculation. But his was not the gift of Midas, and these little attempts generally ended in loss and disappointment. Mrs. Mayfield sighed to find that the regular income of his business, and her own tact in expenditure, were all she could rely upon. Often when keenly conscious of deficiencies which she was powerless to supply, she thought, 'If I were only a man I am sure I could do something, just as those around me do." It seemed so very hard that when she was not in the least trying to vie with rich people—which would be, of course, the height of folly—but only desiring to have things *just respectable*, she should find it impossible to compass her end.

Rosalie had been from babyhood extremely pretty, and no pains were spared to render her accomplishments equal to her personal charms. Mrs. Mayfield hoped and believed that her child was not destined to drudge through life on insufficient means, as she had done. That Rosalie should make a wealthy match; that her graceful form should be arrayed in silken robes and draped in velvets and Cashmeres; that her lovely face should look forth from Paris bonnets; that she should eat from silver and Sèvres, and ride out in a splendid carriage with servants in livery—this was the climax of her mother's ambition. Perhaps she was not so much to blame. If she had known any of the great evils of life—if she had had a dissipated or unkind husband, or rebellious, ungrateful children—if she had suffered from the loss of health or friends, or the disgrace of those dear to her—she might have estimated more lightly the inconveniences that she endured. As it was, it seemed to her that to have plenty of money, never to be obliged to save, and calculate, and contrive, and do without, must be the sum of human felicity. But she never imparted her designs to Rosalie. There were several reasons for this. She had respect to the fresh, unworldly nature of the young girl, and shrank from instilling therein mercenary or prudential maxims. She knew, moreover, from good use of her eyes during a series of years, that husband-hunting girls are soon found out, and that Rosalie's chances of the desired match were not at all lessened by her perfect unconsciousness and *naïveté*. Her extreme beauty won admiration wherever she appeared, and the mother trusted to her own good management to turn this admiration to account in time. Meanwhile there was no haste; for Rosalie was only nineteen, and in the first bloom of her beauty. She had been kept free, thus far, from any undesirable entanglement, and her destiny would no doubt declare itself in the course of a year or two.

Heroines have been so often described that I hardly dare inflict Rosalie's portrait on my readers; yet she was lovely enough to claim attention, even amidst a crowd of beauties. Rather tall and slight, yet redeemed from the least suspicion of thinness or meagreness by the full and rounded outlines of her form, with a small, exquisitely-shaped head, and features delicate and regular. Large brown eyes, pensive and affec-

tionate, were shaded by the longest and blackest lashes, and her cheek had a deep, bright bloom, like the heart of a rose. Then she moved so well; she stood, or sat, or leaned as no one else did. Her dresses always fitted her so perfectly, her garments fell in such full and graceful folds, that she appeared better attired in the cheapest material than other people in rich or costly apparel. She was gentle and good, a little romantic perhaps, and entirely unaware of her mother's views for her. Of the evils of limited means she knew but little; for Mrs. Mayfield was the queen of managers, and made her few hundreds do full service down to the very last cent; and Rosalie, happily, was not one of those covetous spirits who can never see any thing handsome or desirable in the possession of other people without straightway feeling themselves very ill-used because they can not have one like it. But all this time we are forgetting Mrs. Taylor's party.

When Rosalie doffed her wrappings and shone forth in the glory of her pretty pink silk, her mother glanced around the dressing-room, full of ladies in almost every stage of the toilet, and decided in her own mind that though there were several more expensively dressed, there was not one who looked half as well. With which comfortable reflection she drew on her gloves, shook out her handkerchief, and descended the stairs accompanied by the fair object of her meditations.

There was the customary display; a blaze of light, a wilderness of exotics, a hum of voices, soft odors of millefleurs and violet, bright eyes, sparkling jewels, etc., etc. There were meagre arms and necks, uncovered to the pitiless gaze and cruel sneer; there were plump forms exposed much more than was necessary or desirable. Conspicuous amidst the brilliant throng was the hostess. She was one of the night-blooming plants; seen by daylight she was a tall, sallow, plain woman, on whom you would never have bestowed a second glance. But enchant her with the magic of full dress, shed over her the soft bloom and fairness of rouge and pearl-powder, brush and oil her hair *à discretion*, and add a few false braids and bandeaux, lace her up and fill her out, put flashing gems upon her neck and arms, rich lace in her berthe and flounces, then give her *quantum suf.* of gaslight and excitement, and look you! she shone forth splendid among belles; a perfect extinguisher to many a one who would completely put her out in truthful sunshine. She was all smiles, grace, and courtesy; a striking contrast to her liege lord. He was, perhaps, very respectable in his own proper province of making the money, but decidedly out of place where his wife was spending it.

"You've seen the two lions, I suppose," said Mrs. James, a chaperon, who, having duly disposed of her charges, had retreated to a sofa and Mrs. Mayfield.

"No," returned that lady; "I was not aware that there was any unusual attraction present."

"Oh yes; a great author and a great fortune. Mr. Henry is the fortune, and Mr. Irwin the author."

"Irwin? I do not remember any such name," said Mrs. Mayfield, who was tolerably *au fait* of the literary world.

"I presume not; he writes under a *nom de plume*, and has only been very recently found out. He has just published some wonderful thing that every body is wild over: strange that I can't recollect his title, nor that of his book! Mr. Henry is excessively handsome."

"And a great fortune, I think you said?"

"Yes, immense—so they say, at least. I can't speak from personal knowledge, never having seen either of the young men until to-night. But they were talking of it in the dressing-room, and saying what a splendid match he would be for somebody. He bears the highest possible character, too, which is what you can not often say of these rich young men. There he is now, talking with Rosalie; that tall, distinguished-looking man; and there is Mr. Irwin, across the room with Amy Sandford."

Mrs. Mayfield looked with interest, and thought the term "distinguished" extremely applicable to that favored son of fortune. He was tall, dark, with very black hair and mustache, and a very fascinating mien. He seemed much absorbed by Rosalie, and straightway the mother's mind ran over a long line of delightful possibilities. He could not fail to be interested and to admire her child: of that she was certain; and as for Rosalie, why he was just the sort of interesting, romantic-looking personage that the dear girl would be sure to fancy. And, ah! if he should fall in love—and, oh! if he should propose, and Rosalie should accept him! (Accept him! of course she will; I can't have her refuse such an offer!) And then the engagement-ring—diamond solitaire from Tiffany's—she saw it already sparkling on Rosalie's snow-white hand. No doubt he would want a short engagement—lovers are always so impatient, particularly rich ones; and how was she ever to provide Rosalie with a suitable trousseau. Never mind, she would sell out a portion of her bank stock; for, of course, after the marriage she would live with "them," and a few hundreds, more or less, wouldn't matter. And then the laces, the silks, the ribbons, the embroideries! She saw herself deep in consultation with milliners and mantua-makers; and Rosalie a perfect martyr to trying on bonnets and fitting dresses, and all the delightful business of preparation. And so her child's fate would be fairly accomplished; she would be secure from poverty and its long train of attendant evils; and that great object once gained, the mother could sing "Nunc dimittis" with a grateful heart. So interested was she in this airy architecture that she hardly noticed Mr. Irwin, the author. She merely observed that he was a slight and rather good-looking young man; there was nothing in his literary celebrity to make her note him more closely. Mrs. Mayfield held the traditionary opinion of authors; they were, in her mind, inseparably connected with garrets, dipped candles, and empty pockets.

The party went off splendidly, every one said.

There was the supper with a profusion of dainties, set forth with all the radiance of silver and crystal; there was the best band in the city to furnish music for the dancers; there were twinkling feet and gliding forms, gayety, excitement, pleasure, heartaches. In all this was nothing to distinguish it from similar gatherings of the season, except to those with whom, as with Mrs. Mayfield, some new interest had then and there arisen.

II.

Mr. Henry called the next day, and was, as he esteemed it, fortunate enough to find Rosalie alone; Mrs. Mayfield had taken cold the evening before, and, feeling quite unwell, kept her room. When his card was brought up Rosalie wished to send word that she was engaged, but her mother would not hear of such a thing. "It is nothing, my dear," she said; "I shall be entirely well to-morrow, and I can not have you deny yourself a pleasant call for such a trifle." So Rosalie descended, not sorry, perhaps, that her mother insisted upon it, for she had found Mr. Henry very agreeable the evening before.

He made the very longest call that etiquette would allow, as Mrs. Mayfield, who lay in her chamber watching with pleased anxiety for any movement below, did not fail to observe. What would they talk about? she wondered; and how would Rosalie look to the rich man's eyes? Would she be as captivating in her simpler home dress in prosaic daylight as he had found her the evening before? She had not many fears. The young girl's beauty was not of the order that depended on judicious concealment or artificial aids. She could stand in broad sunshine, or sit in a cross-light even, without bringing to view any material defects. The mother awaited with interest and satisfaction the close of the hall-door and Rosalie's reappearance.

"Well, dear," she asked, when the light form was again at her side, "did you have a pleasant call?"

"*Very*, mamma," was the emphatic reply.

"I thought he seemed an intelligent young man," continued Mrs. Mayfield.

"Much more than that," said Rosalie; "he has a very fine mind indeed."

"Then you must have enjoyed his conversation, of course; you have always such a passion for intellect."

"Yes, dear mamma; but there is a little pain mingled with the pleasure I take in such society — I feel my own inferiority so keenly."

"Well, my child, I am your mother, and perhaps partial; but I can't see what call you have to feel inferior to any one."

"Thank you, dear mother," replied Rosalie, laughing. "I don't think I have often cause to reproach myself with undue humility; but Mr. Henry is very different from other gentlemen."

"Beautiful!" was Mrs. Mayfield's inward comment. "Just the husband she was determined to have, and just the one I should have chosen for her."

"You have not told me what you talked about," she went on. "He made a very long call."

"Oh, we spoke of the party, naturally—people always do the next day."

"And what else? You must soon have exhausted that subject."

"And of the weather—and one or two new books—and Dr. H——'s lecture."

"And nothing else?"

"No, ma'am. At least, it was nothing—I mean, nothing to speak of. Indeed, mamma, you must believe me, it was nothing at all," stammered Rosalie, with deepening color, as her mind reverted to the look and manner which had given meaning to the commonplace words.

"I feel rather tired, my love; draw down the curtain and wrap the blanket a little closer round my feet. I think I could sleep if the room were quiet," was the mother's only comment.

Pleasant visions floated round her pillow and lured her to repose. She saw plainly that Rosalie was interested; she had never known her flush or hesitate before at the calls of any number of gentlemen acquaintance. As for Mr. Henry himself, there was little doubt of the state of his feelings; she had not watched him the whole of the previous evening, to the exclusion of all other interests, to be ignorant of his sentiments now. Every thing was going on charmingly—precisely as she could wish. She only longed to be up and well, and furthering the matter by every means in her power.

This was not soon to be. The cold which she had regarded as a trifling affair proved a very serious one, and a long and dangerous illness followed. Rosalie's bright eyes grew dim with watching, and her fair face thin from anxiety and confinement. Many a time during those weary weeks did she look forward with a boding heart to the dreadful possibility of her mother's death. But she was spared that heavy trial; good care and a good constitution at last prevailed; and when spring began to breathe once more upon the frozen earth Mrs. Mayfield was convalescent.

During her illness Mr. Henry had been all attention. He had called very frequently, quite undiscouraged by the fact that he seldom saw Rosalie, and even then but for a very few minutes. Mrs. Mayfield, who amidst all her suffering did not forget her daughter's interests, would occasionally insist that she should go down to the parlor for a time; and then the sight of her sweet and sorrowful countenance appealed more touchingly to the heart of the lover than the most brilliant beauty could have done. He longed to fold her in his arms and shield her through life from every trouble. He would not speak of love at such a time, yet he anxiously awaited the moment when he should be at liberty to declare his feelings and seek a return.

One pleasant morning Mrs. Mayfield sat in the great easy-chair near the bed-head, propped

with pillows and wrapped in shawls. She was very pale and wasted, yet to the eyes that had watched her so anxiously for weeks there was a perceptible improvement in her face. A like change was visible in the room: the windows, no longer darkened, admitted the sweet spring sunshine; Rosalie's canary sung from his gilded cage; a bouquet of beautiful hot-house flowers stood in a vase on the table, instead of the vials and powders that had so lately covered it.

"How pleasant it is to feel one's self really better!" said Mrs. Mayfield. "It seems almost like a new world to me. I believe the sky never looked so blue, nor the grass down in the little plot so green, before.

"And the sky never looked to me so dark and threatening as during these last few weeks," said Rosalie, with emotion, as she kissed her mother's forehead. "I almost feared, mamma, it would never be bright again." There was a pause of deep feeling. "I don't think you have sufficiently admired Mr. Henry's flowers, mamma," said Rosalie at length, in a more cheerful tone. "See this geranium, and those lovely roses. They have such a rich, creamy tint, and are so deliciously fragrant!"

"Yes, they are beautiful, and I'm sure I'm much obliged to Mr. Henry for that and all his other kind attentions. Not that I am vain enough to fancy, Rosalie, my dear, that they are all meant for an old woman like me."

The young girl colored, but made no reply.

"What book is it that you have been reading this morning?" inquired the mother, presently.

"Here it is," said Rosalie, producing it, and smiling, though she looked a little conscious.

"'Leaves and Mosses, by Frederic Shoberl,'" read Mrs. Mayfield, aloud. "Oh, I know Mr. Shoberl very well already by his writings. That must be an assumed name, I fancy. Do you know who it is? Any one of consequence?"

"I thought you knew, mamma. It is Mr. Henry himself."

"Mr. Henry? Why no! I never dreamed that he had written any thing."

"Certainly he has. I supposed you had heard of it. He is the very person whose poems we have admired so often. But now I think of it, he has only very recently declared himself. His identity was discovered about the time of Mrs. Taylor's great party, and you have been too ill ever since then to notice such things."

"Yes, and I haven't seen any of our acquaintance either: we shall begin to have plenty of calls now that I am getting so much better. But about these poems, it is a very pretty name for a book: don't you think so?"

"Rather pretty, but a little too much on the 'Winnie Wildwood' and the other fanciful and alliterative styles. I rallied Mr. Henry on the title, and he confessed that it was rather of the romantic order, but alleged in excuse that he wished to use a name suggestive of nature, and yet without pretension. Moss and leaves are certainly unostentatious."

"Suppose you read to me a while: I should like to hear what these poems are like." Rosalie obeyed, and her mother listened with pleasure. She was fond of poetry, and the "Leaves and Mosses" had a sweet and natural charm that had fascinated minds of a much higher order than her own. "Why, Rosalie," she exclaimed, with enthusiasm, "Mr. Henry has real genius!"

"So I think, mamma."

"And I never dreamed of it in him! What a graceful accomplishment it is to write so well! I admire it more than almost any other." Poor Mrs. Mayfield! not a shadow of suspicion crossed her mind. And to be an author—a crime in a poor man—was a charming thing in a rich one.

"Has Mr. Henry any business?" she presently inquired.

"Oh yes, he is a lawyer, mamma."

"That is very well, too. I like to see that sort of spirit in a young man. He should have some profession, some steady occupation, always."

"You are quite right, dear mamma."

"Because if one is ever so rich employment is desirable. I don't know how it may be in Europe, but in our country I am sure that a young man of the largest fortune is much better off to have something practical and important to take up his mind."

"I have no doubt it is so," assented Rosalie, who thought the conversation was taking a rather speculative turn.

A familiar ring was now heard at the door. "Yes, my dear, go down, of course," said Mrs. Mayfield, in answer to Rosalie's inquiring glance. "I feel extremely well to-day, and shall amuse myself perfectly with Mr. Henry's book while you are gone."

Our young friends found their *tête-à-tête* this morning somewhat embarrassing. While her mother was so very ill, and Rosalie had only come down for a few minutes to answer in person Mr. Henry's inquiries, there had been no time for awkward consciousness; but now, when he had asked after Mrs. Mayfield's health and received the gratifying assurance that she was rapidly convalescing, his mind at once reverted to the avowal he had determined to make so soon as that point was reached. Rosalie, half aware of his feelings, half awakened to the state of her own heart, found little to say. Conversation proceeded by very slow and easy stages.

"Have you ever read this little book?" said Rosalie, at length, making a desperate effort after self-control as she took up the "Loves of the Poets," which lay in "blue and gold" upon the centre-table. "It contains a great deal of information about the 'gentle craft' and the fair ladies who inspired them."

So Mr. Henry had heard; he had never read the volume in question, however, and did not care to. He preferred such knowledge of the poets as he could gain from their own writings and contemporary authors. Statistics in these matters were not to his taste.

"You have acted with prudence," said Rosa-

lie, smiling mischievously, "if you wished to retain your enthusiasm. Do you know I used to think, when I was younger, that it was a glorious thing to be loved by a poet and immortalized in his verses? But this little book has sadly undeceived me. Who would care to be Beatrice, and have her praises chanted years after her death by the husband of the ill-tempered Gemma Donati? Or 'Highland Mary,' with one's memory recalled and apostrophized when her adorer was most happily married to another woman? Only to think of the circumstances under which 'Mary in Heaven' was composed!"

"What were they?"

"Have you never heard them? The excellent Robert, it seems, had been working all day in harvest, apparently in fine spirits; but as night came on he 'grew very sad about something,' and wandered out into the barn-yard, whither his affectionate wife followed him, urging him to come in, as the air was cold, and she feared for his health. He promised again and again to come, but still delayed compliance; at last she went out and found her bard 'stretched upon a heap of straw;' his eyes fixed on a 'beautiful planet that shone like another moon.' This time she prevailed on him to come in, when he immediately sat down and wrote the stanzas to 'Mary in Heaven.'"

"After which he probably had a chat with his wife, and perhaps a 'drap' of something to cheer his drooping spirits," said Mr. Henry, laughing. "Really, Miss Mayfield, it was shameful; Mrs. Burns should be indicted for the cruel blow her recital has inflicted on all romance-loving young ladies like yourself."

"Indeed," said Rosalie, shaking her pretty head, "I don't blame her in the least. Do you suppose it was very pleasant for her to have her husband writing those beautiful, passionate verses to another woman? She did quite right to give a simple detail of the facts in the case."

"But 'Mary' was dead, you must remember."

"I think such a rival must be almost worse than a living one; because with the latter there is always a possibility that she may reveal defects that shall cure her lover of his devotion. But the dead are safe: their faults are forgotten; their virtues alone remembered; and there is a sort of poetic halo thrown about them with which any woman might dread to contrast herself."

"What other instances do you feel disposed to carp at among these unlucky poets?"

"Oh! very many. How poor and artificial a thing is Waller's passion for his Sacharissa, for example. In almost every case you will find that the lady was indifferent to her adorer, or hopelessly beyond his reach; or else that he celebrated her charms at leisure, while he was comfortably espoused to some one else. I must say that I should rather have been Mrs. Donne, or Habington's Castara, than any of the Stellas, Lauras, or Leonoras. I should very much prefer inferior poetry, accompanied by truthful feeling."

"So you think," said Mr. Henry, seriously, after a short pause, "that you could not value any poetic celebrity that was not founded on a mutual attachment?"

Rosalie, for the first time conscious of the dangerous ground she had been treading upon, knew not how to retreat; she blushed violently, and could not reply.

"And you would rather," he added, drawing nearer, and taking in his her unresisting hand, "be the dear wife of a humble poet than the distant heroine of the greatest?"

Every one can guess at Rosalie's answer.

III.

Not many hours had elapsed since the above interview ere Rosalie, with smiles and blushes, had confided to her mother its substance and result. Great was Mrs. Mayfield's inward exultation. Surely she might now consider herself a favorite of fortune. Her child, her beautiful Rosalie, had accomplished a destiny more brilliant than she had ever predicted for her. Wealth, that would secure her luxury and leisure; fashion, position, and more than that—a husband whose virtues she could esteem, whose genius she must admire, and whom, to crown all, she evidently loved with all her heart. Very complacently did the mother recall those words of Mrs. James: "He bears the highest possible character." To be sure, in her former estimates of what Rosalie's husband was to be, character and mind had not very largely entered; but she now felt and acknowledged their value.

"As soon as you are well enough to see him, mamma," said Rosalie, "Mr. Henry will call to ask your consent."

"And that will be to-morrow, my love," said Mrs. Mayfield. "I feel myself immensely better. The sight of your happiness has done me more good than all the physician's visits."

The next day, at a quite early hour, Mrs. Mayfield might have been seen ensconced in the depths of a luxurious arm-chair, going through in form the interview with her daughter's *futur*. It was delightfully satisfactory. Mr. Henry was so respectful, yet solicitous. He spoke with such tenderness, such delicacy, of Rosalie, and asked her hand with as much diffidence as if he feared a refusal—as if, in short, he were asking a favor instead of conferring one. But then, Mrs. Mayfield suddenly recollected, he could not know how glad she was to give him her child; and, on the whole, it was quite as well he could not. He set her heart at rest, too, on the only subject that disturbed her. In all her plans for Rosalie's settlement she had arranged, as a matter of course, that she should live with the young couple; but when an actual engagement was under consideration she began to experience some misgivings. She was well aware of the common prejudice against mothers-in-law; and suppose Mr. Henry shared in it? Well, it would be hard for her, but she *could* live by herself; at any rate, she would have her dear child's happiness to rejoice in. These misgivings made the present arrange-

ment all the more agreeable. Mr. Henry said with so much feeling that he could not think of asking a mother to give up her only child, and that she would confer the greatest possible favor on both himself and Rosalie by consenting to share their home. She must not consider that, in the proposed marriage, she was to lose a daughter, but only to gain a son, etc., etc. All of which had in it nothing very striking or original, but was not on that account less pleasing to the proud and gratified mother. So happy was she that at times a doubt came over her whether it were not all a dream, and she pinched her arm quite cruelly to make sure that she was enjoying a "sober certainty of waking bliss." When the filial elect had taken his departure she was profuse in her praises to Rosalie of his delicacy, his generosity, his nobleness; all of which, we may be sure, the young lady echoed in her heart, though outwardly she disclaimed for him any special virtue.

"Why, what did you expect of us, mamma?" she asked. "Did you suppose we would leave you alone, widowed and invalid as you now are? You paid me a poor compliment if you fancied I should forsake the mother who had loved and cared for me all my life for a person I had known but a few weeks."

"Oh, my dear, I didn't doubt you at all; but you know how men sometimes feel about these things."

"Mr. Caudle, for instance. Well, mamma, I hope Mr. Henry is no more like him than I like his wife, or you like that lady's 'dear mother.'"

"You may laugh, Rosalie, but it is a very common prejudice, and not altogether without foundation. Such being the case, you may imagine how I was touched by Mr. Henry's noble behavior. He will find it no loss to him, either. Even in the richest household a person of experience can prevent much irregularity and waste; and against all waste I set my face decidedly, no matter how great the means are."

"If experience is valuable in a rich household it will be doubly so in ours," remarked Rosalie, "for I opine it will not be at all of that description."

Mrs. Mayfield was so absorbed in delightful visions that she did not hear this comment, or it might have provoked unpleasant explanation.

The business of preparation now began in earnest; the lover had pleaded for a short engagement, and the marriage was to take place in three months—there was plenty to do. As soon as Mrs. Mayfield could venture out a hackney-coach was hired by the day, and the mother and daughter spent hour after hour at Beck's or Stewart's, examining, selecting, purchasing, the innumerable beautiful and costly articles that compose the *trousseau*. Reversing the rule on such occasions it was the fair *fiancée* who hinted of economy, who thought such and such things unnecessary or extravagant; it was the parent who insisted that the various elegances were not only suitable, but indispensable.

"Now, dear mamma," said Rosalie, one morning, "about the dress for the ceremony; we shall not have a large party, so something simple and pretty will be all that is required."

"No, it will not be a large party, to be sure, because our house is small, and a crowd in a small house is decidedly vulgar. A jam in a great house, on the contrary, is entirely different; it shows such an extensive circle of acquaintance. But though the party will be small I intend it to be brilliant, and I wish your dress to correspond. However, let me hear what your own ideas are."

"I think, mamma, a good silk—not *too* rich, because it would be wasted with an overdress—with double skirts of tulle, looped with flowers, a puffed tulle berthe, and a tulle vail, very long and ample, would be what I should like. These, with a wreath, bouquet, etc., would be quite sufficient."

"Why, my child, half the brides in town this winter wore just such a dress."

"I know it, mamma—that is the very reason. It is pretty and becoming, and would be considered entirely proper. I do not care for any thing more."

"But *I* do, Rosalie. Now I think a rich moire antique, with a Honiton berthe and vail—I wouldn't venture on flounces, they *are* rather extravagant—would be beautiful."

"But oh, mamma, so expensive!"

"Leave that to me, my dear. I always supposed you would be married some day if you lived, and have made provision for it. I don't expect to have it happen more than half a dozen times, and I can afford to give you things suitable to your future station."

"I don't see how my station is to be altered in any way, mamma; we shall have probably the very same circle we know at present."

"Simple little thing!" thought the mother. "It's just as well to let her go on so. If *she* has no idea that she is elevating herself at all, he will be much less likely to fancy hereafter that he has done her an honor. True, my dear," she added, aloud; "but you know brides always dress a good deal. If after a time, when you have your husband's money to spend, you choose to practice economy, it will be all very well. But now I shall get what I think proper. I told the man to be here with the hack at eleven; and we will drive straight to Miss Lawson, and get that love of a bonnet you admired so much yesterday. No remonstrances, Rosalie, for they'll not be of the slightest use."

Few girls require much urging to accept of such luxuries as their elders choose to provide, and Rosalie smilingly yielded. She had a great love of beautiful things, and was, besides, accustomed to pay implicit obedience to the constituted authority. Never being admitted to her mother's pecuniary confidence she was quite ignorant, too, of their real circumstances, and took it for granted that Mrs. Mayfield would do every

thing as it should be. As they rolled along to Lawson's, the mother, leaning back against the cushions, saw with her mind's eye future drives she should take in Rosalie's company, not, as now, in a "shabby hack," as she internally designated the vehicle in question, but in their own carriage drawn by steeds of mettle, driven by coachmen of bulk. Sweet visions! how soothing to maternal pride!

Good society is like the Russians; it has a great horror of sickness, and indeed of distress of any kind. While Mrs. Mayfield was ill very few of the "dear five hundred" came near her, and most of these contented themselves with inquiries at the door. Now that she was well again and the fact of Rosalie's engagement was bruited abroad, callers became plentiful, and on their return from shopping expeditions there would be found quite a litter of cards on the centre-table. Every one congratulated Mrs. Mayfield! It was such a charming match for Rosalie! Such a handsome young man, so perfectly suited to her in person! And then such a genius! and do you know Mr. —— tells me he is succeeding nobly in his profession? He is thought one of the most promising young men at the bar! And his character! ah, there you are fortunate, dear Mrs. Mayfield! I'm afraid you don't half appreciate it! Young men nowadays, particularly these literary characters, are apt to be so dreadfully unsteady. But certainly if any one deserves to do well, it is Rosalie; such a sweet girl, and so extremely beautiful. On these themes were the changes rung unceasingly, and the delighted auditor was never weary.

"What an excellent thing," she often remarked to herself, "good breeding is! Every one of these people knows that it is a splendid match for Rosalie, but nobody even hints, ever so delicately, what an advantage it will be to her in the way of money. They only talk of Edgar's talents and reputation, and all that, just as if she had been used to a fortune from her cradle, and it was not worth mentioning." Very solacing were these thoughts; all the days passed in a delicious flutter of excitement and anticipation.

There had been, it is true, a slight decadence of bliss when the engagement-ring was first shown her. She had imagined its splendors so radiantly beforehand that the pretty little *gage d'amour* which Rosalie one day exhibited seemed to her almost shabby. No diamond *solitaire* this, blazing like the Koh-i-noor cut down a trifle. It contained three stones: the central one of fair size; those on each side much smaller. Mrs. Mayfield's experienced glance told her in a moment that it could never have cost over seventy-five or a hundred dollars.

"Only think, mamma," said Rosalie, who, with all the pleasure of a pretty girl in a pretty ornament, was turning the ring on her finger and watching its sparkle, "that I should have a diamond ring! I am sure I never expected to."

"But I expected you would," thought the mother, "and a much handsomer one than this." She examined it more closely; the stones were good and clear, but she could not conscientiously exceed her first estimate of their value. "It is very strange," she said to herself; "quite unaccountable. It would be a very pretty ring for a clerk on a salary to give; but for Mr. Henry!" and the dreadful suspicion crossed her mind—"If he should be mean!"

Such a thought could not, however, hold out long against Edgar's frank and manly bearing. Mrs. Mayfield settled it in her own mind that it was owing to his literary tastes'—these author-people never seemed to be quite of sound mind on common matters. In the first place, he probably knew nothing about how costly a ring he ought to give; in the second, he had, no doubt, been terribly overreached in the price. That was the worst of authorship; it was well Edgar was a rich man. With these unpractical ways she should tremble for Rosalie's future if he were not.

Meanwhile, the *promessi sposi* troubled themselves very little about matters of worldly wisdom. They had, at present, no care even of house or furniture hunting; for it had been arranged that after the wedding-jaunt they should stay with "mamma," and look up such a house as suited them at their leisure. Mrs. Mayfield thought this an excellent plan, as she should feel so much more at liberty to suggest and advise when they were actually married. Besides which, there was really so much to do with Rosalie's own preparations that there was no time for any thing else. The lovers passed all their evenings together; sometimes Rosalie showed the pretty things she had bought during the day; all of which, indiscriminately, Edgar admired with enthusiasm on hearing them commended by such lovely lips or exhibited upon so beautiful a form. Sometimes they sang together, or Edgar read aloud; or, seated near each other, talked in confidential whispers of matters vastly interesting to themselves. All this Mrs. Mayfield could see from her station on the back-parlor sofa, where she often reclined of an evening, and where, it must be confessed, she occasionally "napped" a little, overcome with weariness from the day's exertions.

Time passed, and it was within a week of the wedding. Fast and furious flew the needles of the dress-makers, and at home Rosalie was equally busy with many little personal matters. The bridal presents began to come in; not so plentifully as in the case of richer people, but still with creditable profusion. There were plenty of silver pie-knives, pickle-forks, porte-monnaies, card-cases, napkin-rings, butter-knives, salt-cellars, and such small gear. Mr. Henry's sister, married to a wealthy merchant in Boston, sent a real camel's-hair shawl, and his brother, at the South, ordered a splendid tea-service from Ball and Black. Rosalie's godfather sent her a set of pearls; and there were point-lace handkerchiefs and Mechlin handkerchiefs; there were collars and sleeves; there were rings and brooches, rich or plain, according to the taste or means of the donors. Rosalie was delighted; it seemed

to her like a fairy-tale, that she was the owner of all these pretty things. She said as much as she stood looking at them one evening with her mother and betrothed. They both smiled at her childish pleasure; and Mrs. Mayfield thought what an excellent thing it was that this was only the beginning of the fairy tale.

"Your friends have been most generous, Edgar," she presently remarked.

"Have they, indeed? I did not know it," he answered.

"Certainly they have," and she pointed out various articles which had come from cousins, uncles, and aunts on the Henry side. "Our family is not as well represented here," she continued. "To tell the truth, we have not many rich connections. I wonder what Mr. Bushe will send you, Rosalie."

"I can't tell, mamma; nothing at all, perhaps."

"I dare say. At his niece's wedding he gave her a little silver filagree watch-case. A charming present! only fit to use at night when she could not see it! And when Miss Tomkins—old Joshua Tomkins's daughter—was married, he sent a handsome piece of plate that cost a large sum, and he had never even seen her—was only a business acquaintance of her father! Cousin Anne remonstrated with him then; she said she *did* think it was downright extravagance. But Mr. Bushe insisted that it was necessary to his business standing, and that was his reason for doing it."

"It is a pity Miss Tomkins could not have known that," said Rosalie. "She would have prized the gift very highly."

"Oh, for that matter," remarked Mrs. Mayfield, "silver is silver, and the pitcher was just as good as if the motive had been better. I shouldn't wonder, Rosalie, if he sent you a Parian figure, or perhaps a china card-receiver."

"Very well," said Rosalie, smiling, "we shall do very well, I doubt not, if he sends nothing at all."

That night Mrs. Mayfield dreamed that thieves had broken into the house and stolen every vestige of the bridal presents. She awoke with a feeling of blank amazement and horror, and could scarcely persuade herself that it was a dream. She afterward regarded it as a presentiment.

IV.

Seldom is a visitor more cordially greeted than was Mrs. James when she came next morning to make a congratulatory call. Her footing with the Mayfields was rather that of a friend than a mere acquaintance; but as she had been spending some months in Washington and had only returned a few days before, the approaching marriage was still a fresh topic to her. She asked a great many questions, and offered numerous good wishes; and in proof of these last, took from her pocket a little case containing the prettiest of Geneva watches and the richest of chains, which were offered for Rosalie's acceptance. In requital of this courtesy she was shown all the bridal presents and such items of the *trousseau* as had come home from the several modistes. When every thing had been inspected and criticised, and admired, and lingered over with that loving reluctance which women feel to quit an article of finery, the three ladies sat down in the back parlor a while.

"So Miss Rosalie," said the visitor, "you have acted out your romantic fancies—it was love at first sight, I hear."

"I was not aware of it," returned the smiling girl. "Pray, who told you so, Mrs. James?"

"A little bird. Not that it was necessary, for any one who saw you together the evening of Mrs. Taylor's party knew all about it. By-the-by, there is another engagement in consequence of that party; there must have been something fatal in the air."

"Who is it, may we ask?" inquired Mrs. Mayfield.

"Mr. Irwin and Amy Sandford. You may remember seeing them a good deal together. It is a great match for her; you know the Sandfords are quite poor. However, Mr. Irwin can afford to consult his own taste, and his family are very well pleased, I hear. And speaking of them reminds me of the funny mistake I made in talking to you that night."

"I don't now recall any mistake," said Mrs. Mayfield, smiling pleasantly, and ready to excuse with graciousness whatever it might have been.

"You have forgotten all about it, I suppose, having so many important matters to think of since; but don't you remember my telling you that Mr. Henry was the fortune, and Mr. Irwin the author; and our both agreeing that Mr. Henry was so distinguished-looking, and that we should have known from his appearance that he 'was to the manner born.' I have laughed twenty times since to think of it. I didn't know either of the young men myself, and whether somebody told me wrong, or whether I confused the matter—"

What was the end of this sentence no one will ever exactly know, for at this juncture Mrs. Mayfield fainted dead away. There was a terrible confusion and alarm, cutting of stay-laces, dashing with cold water, and application of salts to the nose of the sufferer. In the midst of it all Mrs. James took her leave, averring that it made her so nervous to see a person in that state that she could do no good, and was only in the way.

When Mrs. Mayfield returned to consciousness she was lying on the couch in her own room, and Rosalie was bending over her. The sight of her daughter brought all her woes to the mind of the unhappy woman. She groaned, and turned her face away.

"Leave me, Rosalie! leave me, child! I can't bear to see you or any one. Close the shutters, and don't come up till I ring."

"But, mamma, you are ill; can I not do something for you? Let me stay in the room, at any rate; I will be perfectly quiet."

"No, child, no—I can't have you. I shall

do very well, but I want to be by myself;" and Rosalie, sadly perplexed by her mother's sudden illness and strange behavior, was fairly driven from the room.

Left alone, the poor mother had to face the conviction of her terrible mistake and its consequences. Alas! alas! and she had been the means of binding Rosalie to the very fate that, of all others, she dreaded most for her! Her child was to marry a poor man, and, worse than that, a poor author! Where were all those blissful visions—those bright anticipations—that had upheld her from earth during the past few months? All gone in a moment! She had plunged Rosalie into the same life that she herself had suffered so long, and from which it had been her firmest purpose to preserve her child. Rosalie must do as she had done; forego all luxury, curtail even necessaries, and, after all, find it a hard matter to live within her income! Her beautiful child must manage and drudge; must see things getting shabby, and have no means to renew them; must find her clothes worn and out of fashion, and have no money to replace them. She must use delf where other people used china; must walk where they rode; must wear calico where they wore silk or satin. She must keep inferior servants, and do half the work herself; must undergo privations, mortifications. The nursery must be her opera, and the kitchen her ball-room; and amidst these sordid cares her beauty would fade and her youth depart. Oh, it was dreadful! and poor Mrs. Mayfield wrung her hands in despair. How differently had she hoped! how differently believed! She thought Rosalie was safe, forever safe, from the faintest shadow of want or poverty. But it was not too late yet; she would break off the engagement.

Then came the thought of the publicity—the scandal. It was so near the wedding-day—all the preparations made—every one would wonder so what the reason could possibly be—and Rosalie might refuse to give up her lover, or, if she consented, would be so unhappy. Then the true cause would be sure to leak out, and they would be laughing-stocks for life. No, the engagement could not be broken off. She must abide by it, however dreadful the result.

How she had misunderstood and mistaken Mr. Henry's words! On asking her consent, and making a statement of his affairs, he had told her that he had a "small property," entirely independent of his profession and authorship. She had supposed it to be a modest way of alluding to his fortune, and had made no inquiries, not liking to show curiosity upon the subject. She now recurred to his words with ironical bitterness. "Small property!" she thought; "small enough I dare say. I wonder how much it is; twelve or fifteen hundred dollars perhaps!"

Then there was that ridiculous *trousseau!* She fairly shuddered as she thought of the sums already spent, and the bills that were yet to come. Why had she been so deaf to all Rosalie's remonstrances, so blind to all she might have seen? "A thousand dollars have gone for her clothes," she thought; "I might much better have bought her steel knives and forks, and ingrain carpeting."

Hours passed in these bitter self-upbraidings and fruitless repining; but at last Mrs. Mayfield's native good sense awoke to the folly of lamentation. "What's done is done," she said, "and all I can hope for now is that Mrs. James will not spread the story of her call this morning all over town, and make both Rosalie and myself ridiculous. At any rate I will not give her any clew to the mystery of my sudden illness if I can possibly help it. This business must be gone through with, and I will do it bravely." So saying she arose, bathed her eyes and smoothed her hair, and descended to the drawing-room. She was unusually grave and quiet all the evening, but that was easily accounted for by her not feeling so well as usual.

The wedding came off in due time, and was quite a *recherché* affair; the bride, in particular, being pronounced *the* bride of the season. When the happy pair had set off, and the house was clear of guests, Mrs. Mayfield found leisure to examine a little packet which Mr. Bushe had placed in her hand at parting. It contained a check for $5000 payable to Rosalie's order. So the rich cousin had opened his heart for once.

By the time the newly married had returned from their journey Mrs. Mayfield had grown quite reconciled to the state of affairs; quite willing to admit that it might have been much worse. When they had been at home two or three weeks, and her good-will had been yet further propitiated by numerous little filial attentions from Mr. Henry, you could hardly have persuaded her that any thing could be better. Rosalie had a good husband, a talented, a loving husband; and, after all, happiness did not consist in having money to spend. This pleasant view of things was not lessened by the discovery that the "property" already spoken of, though small, was not paltry, and would form an acceptable addition to their income.

A house was purchased, after suitable hunting, not indeed in the Fifth Avenue or Madison Square, yet within the enchanted limits of Upper Tendom. It was not a "palace," but was sufficiently spacious and convenient for a small family. They furnished it prettily, not extravagantly; there was not an Aubusson carpet, a buhl cabinet, a Claude or a Titian (so called) in the building from top to bottom. There were plenty of books, however, and fine engravings; and such carpets and furniture as they had were thoroughly swept and nicely dusted. They had no fine or fashionable servants; but, on the other hand, they possessed their souls in peace, and were never cut to the quick by a sneer from a lady's maid or a foreign cook. Life went very smoothly with them; and, as a natural consequence, with their happy and sympathizing mother.

One evening when she was sitting by the

nursery fire with a little Rosalie on her knee, while a fine boy played at her feet, she related to Rosalie *mère* the story of her mistake, and the woeful distress it caused her.

"But I recovered from it long ago," she added, laughing, "and I would not exchange Edgar now for any millionaire of them all. And Rosalie, my love, I often think of what your poor father used to say—that it is better to have desires according to our means, than means according to our desires; since, in the first case, we very soon reach a limit, but in the second our fancies so grow and expand that the wealth of Crœsus himself would not content us."

THE GOLDEN ELEPHANT.

MR. KELLEY—or, to be more explicit, William Kelley, Esquire, Barrister, of London—in the year of grace 1853, abandoned the musty inns of English courts for the dusty highways of Australia, with the purpose of seeing for himself what El Dorado was like. He frankly confesses that he meant to make a book of his tour; but ere he had gone far on his way the daily sight of lucky miners, digging and spending their precious dust, proved too much for his soul's equanimity, and he dropped note-book and betook himself to the spade and cradle, which seem to be the more important gold developers of that auriferous region.

To land in Melbourne at that time was to be transported to a new world, where all the amenities and many of the decencies of life were for a time intermitted, and the social organization resembled, more than any thing else, a vast "free and easy," in which every man dressed, acted, and lived as best suited his case-hardened idiosyncrasies. Fancy a spruce and elegantly-got-up cockney set down in the midst of a city of millionaire ragamuffins, who wore calico shirts open at the neck, parti-colored trowsers stuck into cowhide boots, and a *jumper*—a kind of Australian blouse—instead of coat; who talked in a hideous but expressive slang, wherein the mild term for whisky was "strip me down naked," and to be "stuck up" meant to be the unfortunate subject of a highway robbery; where every body drank, at all times and for all imaginable causes; and the ingenuity of the entire population, male and female, seemed to be devoted, with a perseverance worthy a better cause, to the invention of new and outré oaths and curses; "D–mn you!" being the commonplace salutation between friends, strengthened, on meeting after a lengthened separation, by an added force of adjective profanities, which the reader will excuse us from here jotting down, as to do justice to the subject would require that they should be printed in red ink—fancy, we say, a white-shirted, kid-gloved gentleman from the fashionable quarter of London set down in such a concourse, and you have Mr. Kelley's situation.

"Here, my lad, do you desire a job?" he inquired of a young fellow who was complacently watching the landing of the passengers.

"What sort?"

"Just to carry a carpet-bag."

"Will it want two to take it?"

"No."

"Then take it yourself," was the cool reply, which ended this initiatory colloquy.

A search for lodgings disclosed the architectural condition of the town. Where frame shanties had taken the place of tents—which was by no means generally the case—these huts were built in the slenderest manner, just sufficient to shed the rain, but freely admitting air and light. The partitions between the different houses in a block were invariably of sized cotton cloth, which admitted the convenience of conversing with your neighbor without the trouble of leaving your apartment. Mr. Kelley notices, however, this indelicate drawback, that, if your candle happened at bed-time to be extinguished first, you were likely to be startled by the shadowy phantom of Mrs. or Miss A B C, next door, in her night-dress, preparing for the slumber of innocence. For one of these rather social tenements the moderate sum of $1000 per annum was charged, and at this rate they were eagerly snatched up. The most convenient feature of these houses was the floor, which was laid upon the hen-coop principle, with proper gaps between the planks, through which all garbage as well as various smaller articles of household use were prone to disappear.

Being lodged, our friend devoted himself assiduously to obtaining glimpses at the Australian "Elephant." With gold so plentiful and necessaries so scarce, of course every thing was high. The first essay at marketing revealed the facts, portentous to a moderate purse, that a small load of green fire-wood was worth $17; a small barrel of water, $2; a pair of fowls, $8; eggs, $4 per dozen; cabbages, 60 cents per head; potatoes, 12 cents per pound; while turkeys were held at altogether fancy prices, seventeen dollars being refused for a fair sample. Such prices were readily paid by men and women whose wealth was as boundless as sudden. In the fashionable shops (and there were such) no article was ever found fault with or rejected, unless, in a fit of absence, the shopman happened to ask a low price for it—say two hundred per cent. above cost. Mr. Kelley relates a funny story of a generous digger, shopping with his dulcinea, and overhearing a lady (a *real* lady), after examining a piece of dress-silk, put it down, with the remark that it was too expensive; whereupon the gallant fellow immediately ordered two dress-patterns to be cut off, and tried very hard to force them upon her as a free gift.

The lion of the neighborhood in which our traveler had temporarily established himself was a digger, who seems to have been a fair specimen brick of the Australian social edifice. His wife had "evenings at home" in her shanty, and every day, about noon, a Clarence and pair of horses drew up in the deep mud opposite the shanty door, to take them out for a suburban airing and a round of the fashionable drinking saloons, whence this generous couple generally

brought back a select circle of beery friends. These were kept for a strong (mixed) tea, and sent off in a private coach, kept for that purpose, as soon as drunkenness supervened; the coachman receiving general instructions to drop his fares "any where on the north side of Prince's Bridge." These jaunts cost the moderate sum of twenty-five dollars per day. When the digger was laid up with a headache, his lady employed herself in "getting up a few of her light things;" and for this purpose she arrayed herself in a satin gown stained with beer and rum, a pair of massive bracelets, and a heavy watch-chain about her neck, to which was attached a heavier gold repeater. Thus dressed, with her hair done up in a hard knot and stayed with a pearl-headed gold pin, this virtuous woman stood at the wash-tub before the front door, up to her elbows in soap-lather, and proudly "did up her light things."

Business could not, of course, be more brisk than in a community where every other man was a millionaire. But the trade in horses was more money-making than any other. The common practice in the outlying districts of misappropriating horse-flesh, of course made the trade all the livelier. "Planting" horses — which means stealing an animal and surrendering it upon receipt of a proper reward—was a common practice, which every horseman expected to submit to. Yet good horses were not to be purchased under from four hundred to twelve hundred dollars; and a year's keep cost not less than two thousand dollars. With this, the great horse auctioneer of Melbourne netted an income of eighteen thousand dollars per *week*, as commissions on sales, and this the whole year round!

The law was also remunerative, and in this wise, as a certain shrewd barrister explained it: An ordinary criminal case was as good as a year's income; for a cut-throat-looking client, in ragged apparel, by a simple surgical operation on his waist-band, would half fill his hat with gold-dust, or extract from a patch on his coat a flake of fifty pound bank-notes which would paper a room — both probably harvested on the highway. If there was an acquittal—which, *for the sake of society*, was not desirable—the enfranchised culprit did not stop to settle accounts; and if Justice asserted herself, there were rarely heirs to divide the plunder with the lucky lawyer. As for bankruptcies, here is a statement of accounts on which an enlightened court *granted a first-class certificate:* Liabilities, £5319 11*s.* 3*d.*; assets, £29 6*s.* 6*d.*; cause of insolvency, having accepted (but not paid) accommodation-bills.

As for other trades and professions, to each, it was remarked, was joined the business of drawing teeth—all the shop-signs, whatever may have been advertised for sale, ending with a notice that "teeth were extracted inside," some "safely," others "expeditiously," all "cheaply." The liberality of public sentiment was sufficiently indicated by an advertisement which appeared on the windows of an apothecary:

"TO BE DISPOSED OF, ON MODERATE TERMS,
"The first-class Dublin Diploma of the late Dr. T——r. Apply to his disconsolate Widow, at the Old Surgery in the Tent next the European National Restaurant,
"Clarendon Street,
"Emerald Hill."

But the great speculation of the day was in liquor. Bar-rooms, taps, publics, drinking saloons of every name, and all grades of non-respectability, turned up on every corner, and oftener. Champagne — sham in every sense of the word—sold at four dollars per bottle, ale at sixty cents, and the "nobbler" of brandy or other ardent spirit (nobbler being equivalent to a dram) was charged at twenty-five cents—all change to be taken in cigars. The most important business of the community was to have drinks around, and the minor affairs of everyday life were discussed while this first matter was being duly attended to. The theatres and all the other public places were literally surrounded with rum-shops, and wherever you poked your nose you were met with an invitation to "walk up and liquor"—a request by no means to be refused, the digger code being, "Drink or fight." Ladies out on shopping expeditions were not above stopping by the way to "take a drain," and indeed sometimes invited their male friends to join them in the social glass. On such occasions there was no lack of toasts. "Here's the health of Molly Connor," roared out one of her boarders, remarking at the same time that "it would be all the better if there was a little more stringth in her tay, but not quite so much in her butther." To which Molly, after due acknowledgment of the preliminary spirituous honor, replied that she "was no ways behoulden to Dennis Brady, for the divil's mother wouldn't plaze him. Tay nor coffee was no good if the spoon didn't stand up in the middle of the cup; though the drop he got onct a year in Mayo was too weak to run out o' the spout!"

"Here's to your hearty d——tion!" said a digger, nodding smilingly at the landlord, a companion adding soberly, "Soon and suddint," as he drained his glass.

Of course there was a theatre; and a very popular place of amusement it was. Its front was illumined by a plentiful supply of fat-cans with rags for wicks — serving instead of gas. These shed a lurid light upon a huge mud-puddle which covered the area in the immediate front of the doors. Through this puddle sturdy diggers waded knee-deep, with their dulcineas *in* their arms, to the dress-circle entrance. A favored few, owning private boxes, had the right of a private entrée through an adjoining bar-room, where, of course, there was a preliminary Champagne "shout;" a *shout* being, in the Australian vernacular, a call for drinks around at the expense of one of the company.

The play was Hamlet. Paying five shillings into an aperture which smelled like the bung-hole of a stale brandy-cask, our sight-seer made

his way into the pit. He found the chandelier lights obscured by a cloud of tobacco-smoke, through which he perceived, in front of the curtain, the orchestra, consisting of a cracked flageolet, a wheazy violin, and a bass drum. The pit was filled with mechanics and their colonial wives. The dress-circle was monopolized by florid-looking women with too low satin dresses, some in their smeared hair, with their pinned bonnets dangling in front of the boxes; others crowned with tiaras, like rose-bushes in full bearing; all hung round with chains, watches, collars, and bracelets of ponderous gold. Their lords in waiting were habited either in tartan "jumpers," or in red flannel shirts, and killed the dreary hour before the play by smoking short pipes, and offering occasional delicate (or indelicate) attentions to their companions, which frequently brought down the house before the rising of the curtain. The upper tier was filled with shrieking Bedouins of the streets, acting as bear-leaders to stupid stock drivers from the interior, or to a heavy class of digger, who gaped and stared in hiccuping admiration at nothing in particular, d—ing, by turns, every portion of his internal anatomy, from the liver all around, "if ever he seed any thing like it afore." There was an unintermitted and tumultuous uproar, consisting of yells of recognition, such as "d—— your bloody eyes, Bill, is that you?" and "Polly, bless your ugly mug, how's your coppers?" These mixed with groans, barks, crows, and a thumping and stamping which made the chandelier quiver.

In the midst of this hurricane a man in the pit was seen to stand up on his seat, with his back to the orchestra, and gesticulate earnestly as if to obtain a hearing. At first his object was misunderstood, and he was variously suggested as a "target for an empty bottle," a "subject for cowhiding," or an embassador to the infernal regions; but there was about him a pertinacious suavity, which, after a time, induced a general silence. With a profound bow, he then said, "Ladies and gemmen, I thank you for your kindness—I am, in fact, obliged to you. [Loud cheers.] I suppose you all recollect me; if not, I beg to inform you that I am Tim Jones who kept the shaving shop in Flinder's Lane. [Applause.] I'm just come from the famous Eagle Hawk, where I dug up one hundred and fifty ounces; and I'll be ——, for the future, if ever I'll shave another of the lot of ye." [Thunders of applause. "Bravo, Tim! what'll you take?" and a tempest of tender inquiries after the health of the speaker and his nearest relations.] In the midst of this the curtain rose; but Bernardo, Marcellus, and Horatio failed to divide attention with Tim Jones until the ghost made his appearance in an absurdly comical rig. This produced a roar of laughter, with shouts of "Well, I'm blowed!" "Holy Moses!" "Does your mother know you're out?" In vain the ghost came to the footlights and pantomimically besought silence; the first act proceeded in dumb show, but amidst immense applause.

The fall of the curtain was the signal for renewed pleasantries, explosions of Champagne, and demands for nobblers. Toasts given in the pit were warmly responded to from the galleries; and healths were interchanged, in regular digger vernacular, across the house.

The second act began without attracting the slightest attention. The entrance of Ophelia was, however, the signal for a tempest of clapping and savory compliments, which lasted until the King and Queen and their train stalked in. This new party was greeted with another storm of ironical applause and Victorian *double-entendres*, provoking bursts of general laughter, during which an enthusiastic god was so impressed with the jolly-good-fellowed-ness of the King that he sent him down from the gallery a bottle of brandy by the thong of a stock whip. The second act of Hamlet was accordingly concluded by an exchange of hob-nobbing between the house and the stage.

The third act was transformed into an absurd colloquy between the Danish grave-digger and the gold-diggers from Eagle Hawk, made up of mutual inquiries about the depth of the sinking and the return to the tub, which so tickled Hamlet that he gave up his soliloquy and joined in the joking. After this there was a fierce row, caused by the accidental falling of a brandy bottle from the gallery into the pit, which was resented as an intentional insult. An escalade was essayed, and two sailors succeeded in climbing up the pillars which sustain the boxes; but instead of a display of bloody hostilities a festive scene ensued, which soon spread into a regular epidemic, during which brandy bottles were let down and hoisted up by lines made of knotted handkerchiefs, amidst a tempest of sentiments, toasts, and hip-hip-hurrahs. The manager at length came forward to invoke a hearing; but nobody seemed aware of his presence. Then poor Ophelia, with straws in her hair, endeavored to bring these lunatics to reason. After a world of courtesying, she did indeed effect a momentary silence, which was immediately taken advantage of by a riotous sailor, who roared out, "Come, give us 'Black-Eyed Susan,' old gal!" This produced such an unconquerable relapse that it was found necessary to cut down the remainder of the performance to the last scene, where the poisonings and sword practice brought the evening to an agreeable conclusion. But Hamlet, Ophelia, and the Ghost were obliged to appear before the curtain in undress, and there sustained the shower of half-ounce nuggets, which were then the convenient substitute for bouquets among digger audiences.

Meantime a dense crowd was guzzling Champagne in the "tap," which formed the most private and aristocratic entrance to this temple of Thespis, at the expense of a half-boozy digger of decent appearance, who "shouted" at the rate of two dozen bottles of the sparkling liquid at a time, remarking to his guests, as he threw down sheaves of bank-notes in payment, "Drink on, shipmates; I'm only a poor digger from Ballarat!"

Having satisfied himself with town sights, Mr. Kelley started for the nearest diggings, distant some days' travel. He remarked that the price of nobblers increased in regular ratio with the distance from Melbourne; and indeed enters on his journal, log-book wise, the course and distance made, with such affirmatory remark as, "The nobbler had now advanced to two shillings." He arrived safely, with no worse adventure than an unsuccessful attempt on the part of some highway gentry at "bailing up" his party. This is an ordinary process in the gold region, and not infrequently performed upon a houseful of people by a single courageous man. The feat is thus managed: The robber enters with arms in his hands, swearing to shoot down the first person who makes a hostile movement, and *carrying the threat into effect promptly* on the slightest motion toward resistance. He then orders one to *tie up* his neighbor, and goes the rounds till all are fettered, when he binds the last and perpetrates the robbery at his leisure. "Bailing up," though entailing somewhat of a loss and inconvenience, is by no means a dangerous adventure for a sensible man.

Arrived at Ballarat, Mr. Kelley found his friends by means of a notice stuck up on the post-office; and was speedily inducted into the mysteries of *fossicking* (which is the Australian synonym for prospecting), shafts and drives, windlass, tub-puddling, and shepherding, the last a phrase signifying the keeping passive possession of a hole, waiting for your neighbors to determine by their labors the luck at the bottom. He was brought into intimate acquaintance with the "Joes" (policemen), and was shown how an unproductive hole may be judiciously *salted* (sprinkled with gold dust), and sold as a valuable property to an unsuspecting *lime-juicer* (greenhorn). He saw the celebrated hole whence was dug by a lucky fellow a chunk of solid gold weighing 137 pounds. The fortunes of this hole show sufficiently the uncertainties of gold mining, and how near an unlucky man may come to a fortune without grasping it. It was first opened for a few feet, and then shepherded by three different parties, each going through the ceremony of taking out a few shovelfuls of earth to establish their claim, and then watching their neighbors. The last party sunk it sixty feet, and then, finding no promise, left it. It lay untouched for some time, until a party of "new chums" entered it, more to try their hands at shaft-sinking than with the hope of making any thing. But lo! after digging three feet, one of the *lime-juicers* struck his pick on a lump of something not hard enough for stone, nor soft enough for clay. Digging away the earth they saw before their eyes the glittering lump. After obtaining a guard to protect the treasure, it was quietly pryed out. Around it was found a litter of little nuggets, to the value of $1500. The big lump was worth over $33,000! and all obtained in a few hours.

Another celebrity was the "Blacksmith's Claim," a slovenly ill-sunk shaft, dangerous to go down, yet producing an almost incredible quantity of gold. The blacksmith's party, who were green hands, took out $64,000 worth, and then sold the hole and their tools for $360, to a party of ten, who, between noon of Saturday and next Monday evening, took out $60,000, then sold out for a week's spree, to come in possession again next Monday. The new temporary proprietors, twelve in number, took out $82,000, and surrendered to their predecessors, who after getting $45,000 more, in a week, sold out to a storekeeper for $500. He put men in to work the hole, who in a fortnight raised $25,000. One of the gang, an old hand, now secretly undermined the props which sustained the drift, on a Saturday night, and the whole workings fell in. He immediately staked out a new claim on the surface of the crooked ruin, went down straight as an arrow, and striking the old gutter, raised in the first tubful forty pounds of gold! He emptied the hole, getting altogether over $20,000. Thus a space of twenty-four feet square yielded the vast sum of over $292,000; an event unprecedented in the annals of gold mining.

The prodigious wealth of the celebrated Ballarat diggings may be inferred from these and other stories of lucky *finds*. From a patch of "waste ground" (*i. e.* the narrow strip necessarily left between two claims) Mr. Kelley saw fifty-seven pounds of gold washed out of a single tub! And this was only the first tubful from a space so narrow as hardly to admit the sinking of a shaft. From another claim $100,000 were got; while a party of Mr. Kelley's friends took out from theirs $180,000.

But if the returns were generally large, the labor required in sinking narrow shafts to the depth of often one hundred and fifty feet—the miners working twelve hours at a time up to their middles, often up to their arm-pits, at the dark bottom, in a yielding mixture of water and slimy mud—was utterly exhausting; and when to this was joined the chance, too often resulting in certainty, that the fairest prospects would be blasted—a rich vein turning suddenly from its direct course, and leaving a number of arduous miners at their bottoms in the lurch—it will not be denied that all earned faithfully their golden wages. In fact, Ballarat digging was no amateur work. A brace of jolly sailors, singing "Britons never shall be slaves," were interrupted by a yellow digger, just returned to daylight from a deep, wet hole, with "Shut up, you pair of bloody fools! Only take my place, below there, for six hours, and see whether Britons ever can be slaves or not!"

While a good many reaped rich returns for their hard and dangerous work, not a few persistently drew blanks in the great lottery. One tragic story was related of a company of young English gentlemen, all younger brothers of good families, who came fresh from Oxford to try their fortune at Ballarat. They had a moderate joint-stock capital on landing, and set themselves down industriously to dig. Claim after claim they dug

down faithfully, but always came to a barren bottom. Meantime, live sparely and temperately as they would, their scant means were exhausted. Their few trinkets were sold, and they tried again, and with the sympathy of all the miners, for they were general favorites, and their ill-luck was known. Cheerful to the last, they worked down, down with a steady rapidity which augured of success; and one day, as the evening hour was approaching, a cry, a tone of exultation came up from the bottom of the shaft: "Haul up, my boys! haul away! The time is come at last!" They did haul heartily, and with gladsome hearts, feeling the heavy weight coming up. But, alas! when it came to the surface, instead of a bucket of gold it was the dead body of their dear companion! He had struck the barren bottom during his spell below; and detaching the bucket, in despair, fixed the windlass-rope about his neck and called upon his friends to strangle him. There was a sorrowing funeral; but ere the generous diggers could collect the sum of money with which they could have been started again —the same night, in fact—the company left the place. Let us hope they had better luck thereafter.

Besides fields such as Ballarat, there were a few spots, such as Mount Korong, where the nuggets lay loose upon the surface. But these were still riskier than the mining spots; for though a few very lucky hunters got immense wealth—one man having found a monster nugget, weighing one hundred and fifty pounds, and worth over thirty-five thousand dollars—the great mass spent their money in a fruitless search, and returned, beggared and half-starved, to hard work but surer returns. This Mount Korong place was discovered accidentally by a traveling party, whose teams got stuck in the mud of its vicinity. Impatient to get to the Bendigo diggings, the party spent their idle time in profitless prospecting, until, being about to make a start, and hunting up their stray bullocks, they came suddenly upon a conical, sparsely-wooded hill whose surface was literally strewed with big nuggets. How much this party got was never discovered; but they returned home without farther delay. Their secret was discovered by their imprudent boasts when out on a drinking jollification. A rush was made by a few hundred miners in the immediate neighborhood, who took off, without delay, all the auriferous pebbles they could find; many getting as much gold as they could carry, and one small child being seen toddling along with a fifteen-pound chunk in his diminutive arms. The strangest of all was, that though the ground was immediately riddled by ardent miners, no speck of gold was ever found below the surface.

Another rich district was the Woolshed. Here all who secured claims made large fortunes. Hands were employed by claim-holders at the wages of ten dollars per day, and found; and parties took out often five thousand ounces per week from a single claim. Here the greatest extravagance prevailed. It was no unusual thing for "bosses" (claim-owners) coming into town, after a week's work, to spend five hundred dollars on drinks round for their hands. One "boss" *shouted* to the tune of fifteen hundred dollars, "for which," remarks Mr. Kelley, "the value received was probably within fifty dollars." It is evident that if miners made money liquor-sellers made more. The gains were so large at these Woolsheds, that though the overseers received from bosses one hundred and twenty-five dollars per week salary, if, on paying off hands on Saturday, they had from two hundred to four hundred dollars over in loose change, it was etiquette to make them keep it as pocket-money. And when Mr. Cameron was, in 1855, elected Member of Parliament for this district, the men not only subscribed his property qualification at once, but shod his riding-horse with shoes of solid gold.

Luckiest among the lucky in the Australian diggings were children and sailors. So unfailing was this, that even a party of drunken tars who had been led by a shrewd knave to purchase a "salted" hole, digging manfully down, came upon a rich and paying bottom—to the rogue vendor's infinite disgust. And Mr. Kelley speaks of two ragged urchins, mere children, bringing to his quartz mills a bag of rocks they had picked up, which, on pounding out, produced no less than thirteen pounds of gold! The little fellows refused to tell where they picked up this stuff, and so shrewdly concealed their tracks that no one ever found out. But a few days after they returned with a barrow-load so rich that they were immediately offered six thousand dollars for it. This time the mill-hands determined to dog their steps; but the astute youngsters, instead of returning immediately, announced that "they were going to *shout* for all hands at the Harp of Erin," a tavern near by, and there continued their shouts till the self-constituted detectives were in a state which rendered the finding even of their own tents an elaborate puzzle; whereupon the lucky children disappeared.

Among the slight drawbacks to the entire felicity of Australian digging life must be mentioned fleas and flies. Beds, blankets, shirts, and persons were covered with the former; and Mr. Kelley's first experience of their powers and numbers disclosed to him the fact that a tent in the gold districts was only a flea-hole, millions on millions of these brisk little animals swarming in the warm sand around every fire. To new-comers this was an intolerable pest, but old stagers paid no attention to it. There seems, however, to be a difference even in fleas—a gentleman digger, on being offered a bed, when out on a visit, replying, "Thank you, no; I can't get on with strange fleas, though I don't mind my own swarm now I've got used to them." To catch these pests by the common method of running down individuals would have been a waste of literally *golden* opportunities. An ingenious digger naturalist, however, discovered a way of clearing a blanket or opossum-skin by wholesale, which deserves mention here. Ant-hills were

numerous in the land; and before this digger went to work in the morning he spread his blanket over an ant-hill, and over this his opossum-skin rug, the flesh side uppermost. The heat of the sun striking on the hard skin, drove the fleas to the blanket, where their mortal enemies, the ants, stood prepared, in vast numbers, to pounce upon them and carry them off to subterraneous dungeons. The whole process was found to occupy but a few minutes, and the blanket and rug were "fit for immediate use;" as the ants only remained long enough to carry off the fleas.

Fleas by night, flies by day, and by myriads. In such vast swarms, indeed, that in the town-houses the use of a poison for their destruction became a nuisance from the numbers continually falling dead into and upon every thing eatable and drinkable. When the poison was used it was necessary to sweep out bucketfuls of flies two or three times a day. In the diggings they not only persecuted the men overground, producing by their bite a species of ophthalmia called fly-blight, but they descended after them in the holes, a larger species of the bluebottle persistently flicking out the dim light by which the men worked at depths of over a hundred feet. A most singular fact was, that these bluebottles increased in numbers as the symptoms of foul air became evident at the bottoms of deep shafts, seeming to grow more lively as the atmosphere became more intolerable; and so sure an indication were they of danger that their presence in numbers grew to be regarded by miners as a premonition of danger. It is remarkable that as the country was settled up the flies decreased, until, in 1857, the diggings were almost flyless.

Highway robbery was a profitable profession during the earlier years of the gold discovery; and great cruelties were sometimes committed on stubborn diggers who refused to give up their gold. Two young fellows being beset, had time to hide their precious dust, and resolutely declined giving it up. Hereupon the robber party placed one upon a frying-pan over a fire. The other, when he heard his comrade's flesh fizzing, could hold out no longer, but surrendered. Mr. Kelley was himself "stuck up," but by a gentle band. Riding along a lonely road he was overtaken by a party of horsemen, who pleasantly passed the usual compliments of strangers on meeting. After remarking on the fineness of the morning, the best-looking of the three handed over a well-filled cigar case, saying, "Bound for town, I suppose?"

Mr. Kelley. "Yes. But I do not smoke, thank you."

Gentlemanly Robber. "Well, Sir, as our lines diverge just here, be so good as to favor me with an inspection of your pocket-book."

The language was so good, and the voice so mild, that it seemed at first a joke. A glance at the eyes of the party told the story, however, and Mr. Kelley without hesitation handed over his porte-monnaie and note-book, which were received with a politeness worthy a better cause. A transient shade passed over the robber's countenance as he remarked their emptiness; but asking, with a keen glance, "All, 'pon honor?" and receiving an assurance to that effect, he handed the empty receptacles back, saying, "When we next have the pleasure of meeting I trust your valuable possessions will exceed the sum of sixteen and sixpence;" after which speech the two cantered off. The best part of the joke remains. Charmed with his encounter, Mr. K. journeyed on and reached a small inn toward nightfall, when he determined to stop. Ordering supper, it was served in the common room, where he found three gentlemen seated enjoying the same meal. A close examination showed them to be his friends of the road. They invited him to a rubber of whist, and this produced a confidential talk, in which, while acknowledging themselves professional "overseers of the highways," they lamented "the unprofessional manner in which the business was generally conducted in the colony, and the unworthy persons embarked in it," which prevented them from giving Mr. K. even a safe-conduct.

A party on the same road, carrying gold dust on horseback, did not fare so well. They were shot, robbed, and tied up in the bush, where they might have starved to death had they not been luckily found. And beyond this, one of the robbers when tying up his man, happening to feel the ball he had put into his hip, had the cool cruelty to cut it out with his knife, remarking, "This will do for another customer."

We leave Mr. Kelley with two anecdotes of fashionable life at Melbourne. In the hotels, and at the balls and receptions of the rich but unpolished residents, the most curious scenes constantly took place. A sturdy digger, sitting at the dinner-table of the "Criterion," heard a French gentleman calling, "Garçon, bring me the carte." Whereupon the indignant digger proceeded to remind him "that he was up stairs, and if he wanted his cart to go down into the yard and get it himself, and be —— to him, for an ill-mannered cub." But the richest display of digger ingenuousness must have occurred at a ball given by a certain alderman to Sir Charles Hotham, then newly appointed Governor. An elated alderman and his spouse carried off the Governor and Lady Hotham to the refreshment saloon; the alderman affably remarking, on the way, "It's —— hot, my lady." What followed was thus literally reported:

Alderman (thumping the counter). "Now, then, what'll your Excellencies have—stiff or limber?"

Aldermaness (giving a suggestive pluck to Lady Hotham's gown). "Take an old hand's advice an' try a brandy cocktail; it's mate, drink, washing, and lodging, all in one."

It was a trying moment for the Governor, a prim, well-starched old gentleman. But Lady Hotham was equal to the emergency, and, determined to achieve the good-will of the people, drained the cocktail as per advice.

THE VIRGINIANS.

BY W. M. THACKERAY.

CHAPTER LXVIII.

IN WHICH HARRY GOES WESTWARD.

OUR tender hearts are averse to all ideas and descriptions of parting; and I shall therefore say nothing of Harry Warrington's feelings at taking leave of his brother and friends. Were not thousands of men in the same plight? Had not Mr. Wolfe his mother to kiss (his brave father had quitted life during his son's absence on the glorious Louisbourg campaign), and his sweet-heart to clasp in a farewell embrace? Had not stout Admiral Holmes, before sailing westward with his squadron, the *Somerset*, the *Terrible*, the *Northumberland*, the *Royal William*, the *Trident*, the *Diana*, the *Sea-horse*—his own flag being hoisted on board the *Dublin*—to take leave of Mrs. and the Misses Holmes? Was Admiral Saunders, who sailed the day after him, exempt from human feeling? Away go William and his crew of jovial sailors plowing through the tumbling waves, and poor Black-eyed Susan on shore watches the ship as it dwindles in the sunset.

It dwindles in the west. The night falls darkling over the ocean. They are gone: but their hearts are at home yet a while. In silence, with a heart inexpressibly soft and tender, how each man thinks of those he has left! What a chorus of pitiful prayer rises up to the Father, at sea and on shore, on that parting night: at home by the vacant bedside, where the wife kneels in tears; round the fire, where the mother and children together pour out their supplications: or on deck, where the sea-farer looks up to the stars of heaven, as the ship cleaves through the roaring midnight waters! To-morrow the sun rises upon our common life again, and we commence our daily task of toil and duty.

George accompanies his brother, and stays a while with him at Portsmouth while they are waiting for a wind. He shakes Mr. Wolfe's hand, looks at his pale face for the last time; and sees the vessels depart amidst the clangor of bells and the thunder of cannon from the shore. Next day he is back at his home, and at that business which is sure one of the most selfish and absorbing of the world's occupations, to which almost every man who is thirty years old has served ere this his apprenticeship. He has a pang of sadness as he looks in at the lodgings to the little room which Harry used to occupy, and sees his half-burned papers still in the grate. In a few minutes he is on his way to Dean Street again, and whispering by the fitful firelight in the ear of the clinging sweet-heart. She is very happy—oh! so happy!—at his return. She is ashamed of being so. Is it not heartless to be so, when poor Hetty is so melancholy? Poor little Hetty! Indeed, it *is* selfish to be glad when she is in such a sad way. It makes one quite wretched to see her. "Don't, Sir! Well, I *ought* to be wretched, and it's very, very wicked of me if I'm not," says Theo; and one can understand her soft-hearted repentance. What she means by "Don't" who can tell? I have said the room was dark, and the fire burned fitfully—and "Don't" is no doubt uttered in one of the dark fits. Enter servants with supper and lights. The family arrives; the conversation becomes general. The destination of the fleet is known every where now. The force on board is sufficient to beat all the French in Canada; and, under such an officer as Wolfe, to repair the blunders and disasters of previous campaigns. He looked dreadfully ill, indeed. But he has a great soul in a feeble body. The ministers, the country hope the utmost from him. After supper, according to custom, Mr. Lambert assembles his modest household, of whom George Warrington may be said quite to form a part; and as he prays for all travelers by land and water, Theo and her sister are kneeling together. And so, as the ship speeds farther and farther into the west, the fond thoughts pursue it: and the night passes, and the sun rises.

A day or two more and every body is at his books or his usual work. As for George Warrington, that celebrated dramatist is busy about another composition. When the tragedy of Carpezan had run some thirty or two-score nights other persons of genius took possession of the theatre.

There may have been persons who wondered how the town could be so fickle as ever to tire of such a master-piece as the Tragedy—who could not bear to see the actors dressed in other habits, reciting other men's verses; but George, of a skeptical turn of mind, took the fate of his Tragedy very philosophically, and pocketed the proceeds with much quiet satisfaction. From Mr. Dodsley, the bookseller, he had the usual

complement of a hundred pounds; from the manager of the theatre two hundred or more; and such praises from the critics and his friends, that he set to work to prepare another piece, with which he hoped to achieve even greater successes than by his first performance.

Over these studies, and the other charming business which occupies him, months pass away. Happy business! Happiest time of youth and life, when love is first spoken and returned; when the dearest eyes are daily shining welcome, and the fondest lips never tire of whispering their sweet secrets; when the parting look that accompanies "Good-night!" gives delightful warning of to-morrow; when the heart is so overflowing with love and happiness that it has to spare for all the world; when the day closes with glad prayers and opens with joyful hopes; when doubt seems cowardice, misfortune impossible, poverty only a sweet trial of constancy! Theo's elders, thankfully remembering their own prime, sit softly by and witness this pretty comedy performed by their young people. And in one of his later letters, dutifully written to his wife during a temporary absence from home, George Warrington records how he had been to look up at the windows of the dear old house in Dean Street, and wondered who was sitting in the chamber where he and Theo had been so happy.

Meanwhile we can learn how the time passes, and our friends are engaged, by some extracts from George's letters to his brother.

"From the old window opposite Bedford Gardens, this 20th *August*, 1759.

"Why are you gone back to rugged rocks, bleak shores, burning summers, nipping winters, at home, when you might have been cropping ever so many laurels in Germany? Kingsley's are coming back as covered with 'em as Jack-a-Green on May-day. Our six regiments did wonders; and our horse would have done if my Lord George Sackville only had let them. But when Prince Ferdinand said 'Charge!' his lordship could not hear, or could not translate the German word for 'Forward;' and so we only beat the French, without utterly annihilating them, as we might, had Lord Granby or Mr. Warrington had the command. My lord is come back to town, and is shouting for a Court Martial. He held his head high enough in prosperity: in misfortune he shows such a constancy of arrogance that one almost admires him. He looks as if he rather envied poor Mr. Byng, and the not shooting him were a *manque d'égards* toward him.

"The Duke has had notice to get himself in readiness for departing from this world of grandeurs and victories, and downfalls and disappointments. An attack of palsy has visited his Royal Highness; and *pallida mors* has just peeped in at his door, as it were, and said, 'I will call again.' Tyrant as he was, this prince has been noble in disgrace; and no king has ever had a truer servant than ours has found in his son. Why do I like the losing side always, and am I disposed to revolt against the winners? Your famous Mr. P——, your chief's patron and discoverer, I have been to hear in the House of Commons twice or thrice. I revolt against his magniloquence. I wish some little David would topple over that swelling giant. His thoughts and his language are always attitudinizing. I like Barry's manner best, though the other is the more awful actor.

"Pocahontas gets on apace. Barry likes his part of Captain Smith; and, though he will have him wear a red coat and blue facings and an epaulet, I have a fancy to dress him exactly like one of the pictures of Queen Elizabeth's gentlemen at Hampton Court: with a ruff and a square beard and square shoes. 'And Pocahontas—would you like her to be tattooed?' asks Uncle Lambert. Hagan's part as the warrior who is in love with her, and seeing her partiality for the Captain, nobly rescues him from death, I trust will prove a hit. A strange fish is this Hagan: his mouth full of stage-plays and rant, but good, honest, and brave, if I don't err. He is angry at having been cast lately for Sir O'Brallaghan, in Mr. Macklin's new farce of Love A-la-mode. He says that he does not keer to disgreece his tongue with imiteetions of that rascal brogue. As if there was any call for imiteetions, when he has such an admirable twang of his own!

"Shall I tell you? Shall I hide the circumstance? Shall I hurt your feelings? Shall I set you in a rage of jealousy, and cause you to ask for leave to return to Europe? Know, then, that though Carpezan is long since dead, Cousin Maria is forever coming to the play-house. Tom Spencer has spied her out night after night in the gallery, and she comes on the night when Hagan performs. Quick, Burroughs, Mr. Warrington's boots and portmanteau! Order a chaise and four for Portsmouth immediately! The letter which I burned one morning when we were at breakfast (I may let the cat out of the bag, now puss has such a prodigious way to run) was from Cousin M., hinting that she wished me to tell no tales about her; but I can't help just whispering to you that Maria at this moment is busy consoling herself as fast as possible. Shall I spoil sport? Shall I tell her brother? Is the affair any business of mine? What have the Esmonds done for you and me but win our money at cards? Yet I like our noble cousin. It seems to me that he would be good if he could —or rather, he would have been once. He has been set on a wrong way of life, from which 'tis now probably too late to rescue him. *O beati agricolæ!* Our Virginia was dull, but let us thank Heaven we were bred there. We were made little slaves, but not slaves to wickedness, gambling, bad male and female company. It was not until my poor Harry left home that he fell among thieves. I mean thieves *en grand*, such as waylaid him and stripped him on English high-roads. I consider you none the worse because you were the unlucky one, and had to deliver your purse up. And now you are going to retrieve, and make a good name for yourself;

and kill more 'French dragons,' and become a great commander. And our mother will talk of her son the Captain, the Colonel, the General, and have his picture painted with all his stars and epaulets, when poor I shall be but a dawdling poetaster, or, if we may hope for the best, a snug placeman, with a little box at Richmond or Kew, and a half-score of little picaninnies, that will come and bob courtesies at the garden-gate when their uncle the General rides up on his great charger, with his aid-de-camp's pockets filled with gingerbread for the nephews and nieces. 'Tis for you to brandish the sword of Mars. As for me I look forward to a quiet life; a quiet little home, a quiet little library full of books, and a little Some one *dulce ridentem*, *dulce loquentem*, on t'other side of the fire, as I scribble away at my papers. I am so pleased with this prospect, so utterly contented and happy, that I feel afraid as I think of it, lest it should escape me; and, even to my dearest Hal, am shy of speaking of my happiness. What is ambition to me, with this certainty? What do I care for wars, with this beatific peace smiling near?

"Our mother's friend, Mynheer Van den Bosch, has been away on a tour to discover his family in Holland, and, strange to say, has found one. Miss (who was intended by maternal solicitude to be a wife for your worship) has had six months at Kensington School, and is coming out with a hundred pretty accomplishments, which are to complete her a perfect fine lady. Her Papa brought her to make a courtesy in Dean Street, and a mighty elegant courtesy she made. Though she is scarce seventeen, no dowager of sixty can be more at her ease. She conversed with Aunt Lambert on an equal footing; she treated the girls as chits—to Hetty's wrath and Theo's amusement. She talked politics with the General, and the last routs, dresses, operas, fashions, scandal, with such perfect ease, that, but for a blunder or two, you might have fancied Miss Lydia was born in Mayfair. At the Court end of the town she will live, she says; and has no patience with her father, who has a lodging in Monument Yard. For those who love a brown beauty, a prettier little *mignonne* creature can not be seen. But my taste, you know, dearest brother, and . . . ."

Here follows a page of raptures and quotations of verse, which, out of a regard for the reader, and the writer's memory, the editor of the present pages declines to reprint. Gentlemen and ladies of a certain age may remember the time when they indulged in these rapturous follies on their own accounts; when the praises of the charmer were forever warbling from their lips or trickling from their pens; when the flowers of life were in full bloom, and all the birds of spring were singing. The twigs are now bare, perhaps, and the leaves have fallen; but, for all that, shall we not remember the vernal time? As for you, young people, whose May (or April, is it?) has not commenced yet, you need not be detained over other folks' love-rhapsodies; depend on it, when your spring-season arrives, kindly Nature will warm all your flowers into bloom, and rouse your glad bosoms to pour out their full song.

CHAPTER LXIX.

A LITTLE INNOCENT.

George Warrington has mentioned in the letter just quoted, that in spite of my Lord Castlewood's previous play transactions with Harry, my lord and George remained friends, and met on terms of good kinsmanship. Did George want franks, or an introduction at Court, or a place in the House of Lords to hear a debate, his cousin was always ready to serve him, was a pleasant and witty companion, and would do any thing which might promote his relative's interests, provided his own were not prejudiced.

Now he even went so far as to promise that he would do his best with the people in power to provide a place for Mr. George Warrington, who daily showed a greater disinclination to return to his native country, and place himself once more under the maternal servitude. George had not merely a sentimental motive for remaining in England; the pursuits and society of London pleased him infinitely better than any which he could have at home. A planter's life of idleness might have suited him could he have enjoyed independence with it. But in Virginia he was only the first, and, as he thought, the worst-treated, of his mother's subjects. He dreaded to think of returning with his young bride to his home, and of the life which she would be destined to lead there. Better freedom and poverty in England, with congenial society, and a hope perchance of future distinction, than the wearisome routine of home life, the tedious subordination, the frequent bickerings, the certain jealousies and differences of opinion, to which he must subject his wife so soon as they turned their faces homeward.

So Lord Castlewood's promise to provide for George was very eagerly accepted by the Vir-

ginian. My lord had not provided very well for his own brother to be sure, and his own position, peer as he was, was any thing but enviable; but we believe what we wish to believe, and George Warrington chose to put great stress upon his kinsman's offer of patronage. Unlike the Warrington family, Lord Castlewood was quite gracious when he was made acquainted with George's engagement to Miss Lambert; came to wait upon her parents; praised George to them and the young lady to George, and made himself so prodigiously agreeable in their company that these charitable folk forgot his bad reputation, and thought it must be a very wicked and scandalous world which maligned him. He said, indeed, that he was improved in their society, as every man must be who came into it. Among them he was witty, lively, good for the time being. He left his wickedness and worldliness with his cloak in the hall, and only put them on again when he stepped into his chair. What worldling on life's voyage does not know of some such harbor of rest and calm, some haven where he puts in out of the storm? Very likely Lord Castlewood was actually better while he staid with those good people, and for the time being, at least no hypocrite.

And, I dare say, the Lambert elders thought no worse of his lordship for openly proclaiming his admiration for Miss Theo. It was quite genuine, and he did not profess it was very deep.

"It don't affect my sleep, and I am not going to break my heart because Miss Lambert prefers somebody else," he remarked. "Only I wish when I was a young man, Madam, I had had the good fortune to meet with somebody so innocent and good as your daughter. I might have been kept out of a deal of harm's way. But innocent and good young women did not fall into mine, or they would have made me better than I am."

"Sure, my lord, it is not too late!" says Mrs. Lambert, very softly.

Castlewood started back, misunderstanding her.

"Not too late, Madam?" he inquired.

She blushed.

"It is too late to court my dear daughter, my lord, but not too late to repent. We read, 'tis never too late to do that. If others have been received at the eleventh hour, is there any reason why you should give up hope?"

"Perhaps I know my own heart better than you," he says, in a plaintive tone. "I can speak French and German very well, and why? because I was taught both in the nursery. A man who learns them late can never get the practice of them on his tongue. And so 'tis the case with goodness; I can't learn it at my age. I can only see others practice it, and admire them. When I am on—on the side opposite to Lazarus, will Miss Theo give me a drop of water? Don't frown! I know I shall be there, Mrs. Lambert. Some folks are doomed so; and I think some of our family are among these. Some people are vacillating, and one hardly knows which way the scale will turn. Whereas some are predestined angels, and fly heavenward naturally, and do what they will."

"Oh, my lord, and why should you not be of the predestined? While there is a day left—while there is an hour—there is hope!" says the fond matron.

"I know what is passing in your mind, my dear madam—nay, I read your prayers in your looks; but how can they avail?" Lord Castlewood asked, sadly. "You don't know all, my good lady. You don't know what a life ours is of the world; how early it began; how selfish Nature, and then necessity and education have made us. It is Fate holds the reins of the chariot, and we can't escape our doom. I know better: I see better people: I go my own way—my own? No, not mine—Fate's; and it is not altogether without pity for us, since it allows us, from time to time, to see such people as you." And he took her hand and looked her full in the face, and bowed with a melancholy grace. Every word he said was true. No greater error than to suppose that weak and bad men are strangers to good feelings, or deficient of sensibility. Only the good feeling does not last—nay, the tears are a kind of debauch of sentiment, as old libertines are said to find that the tears and grief of their victims add a zest to their pleasure. But Mrs Lambert knew little of what was passing in this man's mind (how should she?), and so prayed for him with the fond persistence of woman. He was much better—yes, much better than he was supposed to be. He was a most interesting man. There were hopes, why should there not be the most precious hopes for him still?

It remains to be seen which of the two speakers formed the correct estimate of my lord's character. Meanwhile, if the gentleman was right, the lady was mollified, and her kind wishes and prayers for this experienced sinner's repentance, if they were of no avail for his amendment, at least could do him no harm. Kind-souled doctors (and what good woman is not of the faculty?) look after a reprobate as physicians after a perilous case. When the patient is converted to health their interest ceases in him, and they drive to feel pulses and prescribe medicines elsewhere.

But while the malady was under treatment our kind lady could not see too much of her sick man. Quite an intimacy sprung up between my Lord Castlewood and the Lamberts. I am not sure that some worldly views might not suit even with good Mrs. Lambert's spiritual plans (for who knows into what pure Eden, though guarded by flaming-sworded angels, worldliness will not creep?). Her son was about to take orders. My Lord Castlewood feared very much that his present Chaplain's, Mr. Sampson's, careless life and heterodox conversations might lead him to give up his chaplaincy; in which case, my lord hinted the little modest cure would be vacant, and at the service of some young divine of good principles and good manners, who would be con-

tent with a small stipend, and a small but friendly congregation.

Thus an acquaintance was established between the two families, and the ladies of Castlewood, always on their good behavior, came more than once to make their courtesies in Mrs. Lambert's drawing-room. They were civil to the parents and the young ladies. My Lady Castlewood's card assemblies were open to Mrs. Lambert and her family. There was play, certainly—all the world played—his Majesty, the bishops, every peer and peeress in the land. But nobody need play who did not like; and surely nobody need have scruples regarding the practice when such august and venerable personages were daily found to abet it. More than once Mrs. Lambert made her appearance at her ladyship's routs, and was grateful for the welcome which she received, and pleased with the admiration which her daughters excited.

Mention has been made, in a foregoing page and letter, of an American family of Dutch extraction, who had come to England very strongly recommended by Madam Esmond, their Virginian neighbor, to her sons in Europe. The views expressed in Madam Esmond's letter were so clear that that arch match-maker Mrs. Lambert could not but understand them. As for George, he was engaged already; as for poor Hetty's flame, Harry, he was gone on service, for which circumstance Hetty's mother was not very sorry perhaps. She laughingly told George that he ought to obey his mamma's injunctions, break off his engagement with Theo, and make up to Miss Lydia, who was ten times—ten times! a hundred times as rich as her poor girl, and certainly much handsomer. "Yes, indeed," says George, "that I own: she is handsomer, and she is richer, and perhaps even cleverer." (All which praises Mrs. Lambert but half liked.) "But say she is all these? So is Mr. Johnson much cleverer than I am: so is, whom shall we say?—so is Mr. Hagan, the actor, much taller and handsomer: so is Sir James Lowther much richer: yet pray, ma'am, do you suppose I am going to be jealous of any one of these three, or think my Theo would jilt me for their sakes? Why should I not allow that Miss Lydia is handsomer, then? and richer, and clever, too, and lively, and well bred, if you insist on it, and an angel if you will have it so? Theo is not afraid: art thou, child?"

"No, George," says Theo, with such an honest look of the eyes as would convince any skepticism, or shame any jealousy. And if, after this pair of speeches, mamma takes occasion to leave the room for a minute to fetch her scissors, or her thimble, or a boot-jack and slippers, or the cross and ball on the top of St. Paul's, or her pocket-handkerchief which she has forgotten in the parlor—if, I say, Mrs. Lambert quits the room on any errand or pretext, natural or preposterous, I shall not be in the least surprised if, at her return in a couple of minutes, she finds George in near proximity to Theo, who has a heightened color, and whose hand George is just dropping, I shall not have the least idea of what they have been doing. Have you, madam? Have you any remembrance of what used to happen when Mr. Grundy came a-courting? Are you, who, after all, were not in the room with our young people, going to cry out fie and for shame? Then fie and for shame upon you, Mrs. Grundy!

Well, Harry being away, and Theo and George irrevocably engaged, so that there was no possibility of bringing Madam Esmond's little plans to bear, why should not Mrs. Lambert have plans of her own? and if a rich, handsome, beautiful little wife should fall in his way, why should not Jack Lambert from Oxford have her? So thinks Mamma, who was always thinking of marrying and giving in marriage, and so she prattles to General Lambert, who, as usual, calls her a goose for her pains. At any rate, Mrs. Lambert says, beauty and riches are no objection; at any rate, Madam Esmond desired that this family should be hospitably entertained, and it was not her fault that Harry was gone away to Canada. Would the General wish him to come back; leave the army and his reputation, perhaps; yes, and come to England and marry this American, and break poor Hetty's heart—would her father wish that? Let us spare further arguments, and not be so rude as to hint that Mr. Lambert was in the right in calling a fond wife by the name of that absurd splay-footed bird, annually sacrificed at the Feast of St. Michael.

In those early days there were vast distinctions of rank drawn between the Court and city people: and Mr. Van den Bosch, when he first came to London, scarcely associated with any but the latter sort. He had a lodging near his agent's in the city. When his pretty girl came from school for a holiday, he took her an airing to Islington or Highgate, or an occasional promenade in the Artillery Ground in Bunhill Fields. They went to that Baptist meeting-house in Finsbury Fields, and on the sly to see Mr. Garrick once or twice, or that funny rogue Mr. Foote, at the Little Theatre. To go to a Lord Mayor's feast was a treat to the gentleman of the highest order: and to dance with a young mercer at Hampstead Assembly gave the utmost delight to the young lady. When George went to wait upon his mother's friends, he found our old acquaintance, Mr. Draper, of the Temple, sedulous in his attentions to her; and the lawyer, who was married, told Mr. Warrington to look out, as the young lady had a plumb to her fortune. Mr. Drabshaw, a young Quaker gentleman, and nephew of Mr. Trail, Madam Esmond's Bristol agent, was also in constant attendance upon the young lady, and in dreadful alarm and suspicion when Mr. Warrington first made his appearance. Wishing to do honor to his mother's neighbors, Mr. Warrington invited them to an entertainment at his own apartments; and who should so naturally meet them as his friends from Soho? Not one of them but was forced to own little Miss Lydia's beauty. She had the foot of a fairy; the arms,

neck, flashing eyes of a little brown huntress of Diana. She had brought a little plaintive accent from home with her—of which I, *moi qui vous parle*, have heard a hundred gross cockney imitations, and watched as many absurd disguises, and which I say (in moderation) is charming in the mouth of a charming woman. Who sets up to say No forsooth? You, dear Miss Whittington, with whose h's fate has dealt so unkindly?—you, lovely Miss Nichol Jarvie, with your northern burr?—you, beautiful Miss Molony, with your Dame Street warble? All accents are pretty from pretty lips, and who shall set the standard up? Shall it be a rose, or a thistle, or a shamrock, or a star and stripe? As for Miss Lydia's accent, I have no doubt it was not odious even from the first day when she set foot on these polite shores, otherwise Mr. Warrington, as a man of taste, had certainly disapproved of her manner of talking, and her school-mistress at Kensington had not done her duty by her pupil.

After the six months were over, during which, according to her father's calculation, she was to learn all the accomplishments procurable at the Kensington Academy, Miss Lydia returned nothing loth to her grandfather, and took her place in the world. A narrow world at first it was to her; but she was a resolute little person, and resolved to enlarge her sphere in society; and whither she chose to lead the way, the obedient grandfather followed her. He had been thwarted himself in early life, he said, and little good came of the severity he underwent. He had thwarted his own son, who had turned out but ill. As for little Lyddy, he was determined she should have as pleasant a life as was possible. Did not Mr. George think he was right? 'Twas said in Virginia—he did not know with what reason—that the young gentlemen of Castlewood had been happier if Madam Esmond had allowed them a little of their own way. George could not gainsay this public rumor, or think of inducing the benevolent old gentleman to alter his plans respecting his grand-daughter. As for the Lambert family, how could they do otherwise than welcome the kind old man, the parent so tender and liberal, Madam Esmond's good friend?

When Miss came from school, grandpapa removed from Monument Yard to an elegant house in Bloomsbury, whither they were followed at first by their city friends. There were merchants from Virginia Walk; there were worthy tradesmen, with whom the worthy old merchant had dealings; there were their ladies and daughters and sons, who were all highly gracious to Miss Lyddy. It would be a long task to describe how these disappeared one by one—how there were no more junketings at Belsize, or trips to Highgate, or Saturday jaunts to Deputy Higgs's villa, Highbury, or country dances at honest Mr. Lutestring's house at Hackney. Even the Sunday practice was changed; and, Oh abomination of abominations! Mr. Van den Bosch left Bethesda Chapel in Bunhill Row and actually took a pew in Queen Square Church!

Queen Square Church, and Mr. George Warrington lived hard by in Southampton Row! 'Twas easy to see at whom Miss Lyddy was setting her cap, and Mr. Draper, who had been full of her and her grandfather's praises before, now took occasion to warn Mr. George, and gave him very different reports regarding Mr. Van den Bosch to those which had first been current. Mr. Van d. B., for all he bragged so of his Dutch parentage, came from Albany, and was nobody's son at all. He had made his money by land speculation, or by privateering (which was uncommonly like piracy), and by the Guinea trade. His son had married—if marriage it could be called, which was very doubtful—an assigned servant, and had been cut off by his father, and had taken to bad courses, and had died, luckily for himself, in his own bed.

"Mr. Draper has told you bad tales about me," said the placid old gentleman to George. "Very likely we are all sinners, and some evil may be truly said of all of us, with a great deal more that is untrue. Did he tell you that my son was unhappy with me? I told you so too. Did he bring you wicked stories about my family? He liked it so well that he wanted to marry my Lyddy to his brother. Heaven bless her! I have had a many offers for her. And you are the young gentleman I should have chose for her, and I like you none the worse because you prefer somebody else; though what you can see in your Miss, as compared to my Lyddy, begging your honor's pardon, I am at a loss to understand."

"There is no accounting for tastes, my good Sir," said Mr. George, with his most superb air.

"No, Sir; 'tis a wonder of nature, and daily happens. When I kept store to Albany, there was one of your tip-top gentry there that might have married my dear daughter that was alive then, and with a pretty piece of money, whereby—for her father and I had quarreled—Miss Lyddy would have been a pauper, you see: and in place of my beautiful Bella, my gentleman chooses a little homely creature, no prettier than your Miss, and without a dollar to her fortune. The more fool he, saving your presence, Mr. George."

"Pray don't save my presence, my good Sir," says George, laughing. "I suppose the gentleman's word was given to the other lady, and he had seen her first, and hence was indifferent to your charming daughter."

"I suppose when a young fellow gives his word to perform a cursed piece of folly he always sticks to it, my dear Sir, begging your pardon. But Lord, Lord, what am I speaking of? I am a speaking of twenty year ago. I was well-to-do then, but I may say Heaven has blessed my store, and I am three times as well off now. Ask my agents how much they will give for Joseph Van den Bosch's bill at six months on New York—or at sight maybe—for forty thousand pound? I warrant they will discount the paper."

"Happy he who has the bill, Sir!" says George,

with a bow, not a little amused with the candor of the old gentleman.

"Lord, Lord, how mercenary you young men are!" cries the elder, simply. "Always thinking about money nowadays! Happy he who has the girl, I should say—the money ain't the question, my dear Sir, when it goes along with such a lovely young thing as that—though I humbly say it, who oughtn't, and who am her fond, silly old grandfather. We were talking about you, Lyddy darling—come, give me a kiss, my Blessing! We were talking about you, and Mr. George said he wouldn't take you with all the money your poor old grandfather can give you."

"Nay, Sir," says George.

"Well, you are right to say nay, for I didn't say all, that's the truth. My Blessing will have a deal more than that trifle I spoke of, when it shall please Heaven to remove me out of this world to a better—when poor old Gappy is gone, Lyddy will be a rich little Lyddy, that she will. But she don't wish me to go yet, does she?"

"Oh, you darling, dear grandpapa!" says Lyddy.

"This young gentleman won't have you. (Lyddy looks an arch 'Thank you, Sir,' from her brown eyes.) But at any rate he is honest, and that is more than we can say of some folks in this wicked London. O Lord, Lord, how mercenary they are! Do you know that yonder, in Monument Yard, they were all at my poor little Blessing for her money? There was Tom Lutestring; there was Mr. Draper, your precious lawyer; there was actually Mr. Tubbs, of Bethesda Chapel; and they must all come buzzing like flies round the honey-pot. That is why we came out of the quarter where my brother tradesmen live."

"To avoid the flies, to be sure!" says Miss Lydia, tossing up her little head.

"Where my brother tradesmen live," continues the old gentleman. "Else who am I to think of consorting with your grandees and fine folk? I don't care for the fashions, Mr. George; I don't care for plays and poetry, begging your honor's pardon; I never went to a play in my life, but to please this little minx."

"Oh, Sir, 'twas lovely! and I cried so, didn't I, grandpapa?" says the child.

"At what, my dear?"

"At—at Mr. Warrington's play, grandpapa."

"Did you, my dear? I dare say; I dare say! It was mail day: and my letters had come in: and my ship the *Lovely Lyddy* had just come into Falmouth; and Captain Joyce reported how he had mercifully escaped a French privateer; and my head was so full of thanks for that escape, which saved me a deal of money, Mr. George—for the rate at which ships is underwrote this war time is so scandalous that I often prefer to venture than to insure—that I confess I didn't listen much to the play, Sir, and only went to please this little Lyddy."

"And you *did* please me, dearest Gappy!" cries the young lady.

"Bless you! then it's all I want. What does a man want more here below than to please his children, Mr. George? especially me, who knew what was to be unhappy when I was young, and to repent of having treated this darling's father too hard."

"Oh, grandpapa!" cries the child, with more caresses.

"Yes, I *was* too hard with him, dear; and that's why I spoil my little Lydkin so!"

More kisses ensue between Lyddy and Gappy. The little creature flings the pretty polished arms round the old man's neck, presses the dark red lips on his withered cheek, surrounds the venerable head with a halo of powder beaten out of his wig by her caresses; and eyes Mr. George the while, as much as to say, There, Sir! should you not like me to do as much for you?

We confess—but do we confess all? George certainly told the story of his interview with Lyddy and Gappy, and the old man's news regarding his grand-daughter's wealth; but I don't think he told every thing; else Theo would scarce have been so much interested, or so entirely amused and good-humored with Lyddy when next the two young ladies met.

They met now pretty frequently, especially after the old American gentleman took up his residence in Bloomsbury. Mr. Van den Bosch was in the city for the most part of the day, attending to his affairs, and appearing at his place upon 'Change. During his absence Lyddy had the command of the house, and received her guests there like a lady, or rode abroad in a fine coach, which she ordered her grandpapa to keep for her, and into which he could very seldom be induced to set his foot. Before long Miss Lyddy was as easy in the coach as if she had ridden in one all her life. She ordered the domestics here and there; she drove to the mercer's and the jeweler's, and she called upon her friends with the utmost stateliness, or rode abroad with them to take the air. Theo and Hetty were both greatly diverted with her: but would the elder have been quite as well pleased had she known all Miss Lyddy's doings? Not that Theo was of a jealous disposition—far otherwise; but there are cases when a lady has a right to a little jealousy, as I maintain, whatever my fair readers may say to the contrary.

It was because she knew he was engaged, very likely, that Miss Lyddy permitted herself to speak so frankly in Mr. George's praise. When they were alone—and this blessed chance occurred pretty often at Mr. Van den Bosch's house—for we have said he was constantly absent himself on one errand or the other—it was wonderful how artlessly the little creature would show her enthusiasm, asking him all sorts of simple questions about himself, his genius, his way of life at home and in London, his projects of marriage, and so forth.

"I am glad you are going to be married, oh, so glad!" she would say, heaving the most piteous sigh the while, "for I can talk to you frankly, quite frankly as a brother, and not be afraid

of that odious politeness about which they were always scolding me at boarding-school. I may speak to you frankly; and if I like you, I may say so, mayn't I, Mr. George?"

"Pray, say so," says George, with a bow and a smile. "That is a kind of talk which most men delight to hear, especially from such pretty lips as Miss Lydia's."

"What do you know about my lips?" says the girl, with a pout and an innocent look into his face.

"What, indeed?" asks George. "Perhaps I should like to know a great deal more."

"They don't tell nothin' but truth, any how!" says the girl—"that's why some people don't like them! If I have any thing on my mind it must come out. I am a country-bred girl, I am—with my heart in my mouth—all honesty and simplicity—not like your English girls, who have learned I don't know what at their boarding-schools and from the men afterward."

"Our girls are monstrous little hypocrites, indeed!" cries George.

"You are thinking of Miss Lamberts? and I might have thought of them; but I declare I did not then. They have been at boarding-school; they have been in the world a great deal—so much the greater pity for them, for be certain they learned no good there. And now I have said so, of course you will go and tell Miss Theo, won't you, Sir?"

"That she has learned no good in the world? She has scarce spoken to men at all, except her father, her brother, and me. Which of us would teach her any wrong, think you?"

"Oh, not you! Though I can understand its being very dangerous to be with you!" says the girl, with a sigh.

"Indeed there is no danger, and I don't bite!" says George, laughing.

"I didn't say bite," says the girl, softly. "There's other things dangerous besides biting, I should think. Aren't you very witty? Yes, and sarcastic, and clever, and always laughing at people. Haven't you a coaxing tongue? If you was to look at me in that kind of way I don't know what would come to me. Was your brother like you, as I was to have married? Was he as clever and witty as you? I have heard he was like you: but he hadn't your coaxing tongue. Heigho! 'Tis well you are engaged, Master George, that is all. Do you think if you had seen me first you would have liked Miss Theo best?"

"They say marriages were made in heaven, my dear, and let us trust that mine has been arranged there," says George.

"I suppose there was no such thing never known as a man having two sweet-hearts?" asks the artless little maiden. "Guess it's a pity. Oh me! What nonsense I'm a-talking; there now! I'm like the little girl who cried for the moon; and I can't have it. 'Tis too high for me—too high, and splendid, and shining: can't reach up to it nohow. Well, what a foolish, wayward, little spoiled thing I am now! But one thing you promise—on your word and your honor, now, Mr. George?"

"And what is that?"

"That you won't tell Miss Theo, else she'll hate me."

"Why should she hate you?"

"Because I hate her, and wish she was dead!" breaks out the young lady. And the eyes that were looking so gentle and lachrymose but now, flame with sudden wrath, and her cheeks flush up. "For shame!" she adds, after a pause. "I'm a little fool to speak! But whatever is in my heart must come out. I am a girl of the woods, I am. I was bred where the sun is hotter than in this foggy climate; and I am not like your cold English girls, who, before they speak, or think, or feel, must wait for Mamma to give leave. There, there! I may be a little fool for saying what I have. I know you'll go and tell Miss Lambert. Well, do!"

But, as we have said, George didn't tell Miss Lambert. Even from the beloved person there must be some things kept secret; even to himself, perhaps, he did not quite acknowledge what was the meaning of the little girl's confession; or, if he acknowledged it, did not act on it; except in so far as this, perhaps, that my gentleman, in Miss Lydia's presence, was particularly courteous and tender, and in her absence thought of her very kindly, and always with a certain pleasure. It were hard indeed if a man might not repay by a little kindness and gratitude the artless affection of such a warm young heart.

What was that story, meanwhile, which came round to our friends, of young Mr. Lutestring and young Mr. Drabshaw, the Quaker, having a boxing-match at a tavern in the city, and all about this young lady? They fell out over their cups, and fought, probably. Why did Mr. Draper, who had praised her so at first, tell such stories now against her grandfather? "I suspect," says Madame de Bernstein, "that he wants the girl for some client or relation of his own; and that he tells these tales in order to frighten all suitors from her. When she and her grandfather came to me she behaved perfectly well; and I confess, Sir, I thought it was a great pity that you should prefer yonder red-cheeked countryfied little chit, without a half-penny, to this pretty, wild, artless girl, with such a fortune as I hear she has."

"Oh, she has been with you, has she, aunt?" asks George of his relative.

"Of course she has been with me," the other replies, curtly. "Unless your brother has been so silly as to fall in love with that other little Lambert girl—"

"Indeed, ma'am. I think I can say he has not," George remarks.

"Why, then, when he comes back with Mr. Wolfe, should he not take a fancy to this little person, as his Mamma wishes—only, to do us justice, we Esmonds care very little for what our Mammas wish—and marry her, and set up beside you in Virginia? She is to have a great

fortune, which you won't touch. Pray, why should it go out of the family?"

George now learned that Mr. Van den Bosch and his grand-daughter had been often at Madame de Bernstein's house. Taking his favorite walk with his favorite companion to Kensington Gardens, he saw Mr. Van den Bosch's chariot turning into Kensington Square. The Americans were going to visit Lady Castlewood then? He found, on some little inquiry, that they had been more than once with her ladyship. It was, perhaps, strange that they should have said nothing of their visits to George; but, being little curious of other people's affairs, and having no intrigues or mysteries of his own, George was quite slow to imagine them in other people. What mattered to him how often Kensington entertained Bloomsbury, or Bloomsbury made its bow at Kensington?

A number of things were happening at both places, of which our Virginian had not the slightest idea. Indeed, do not things happen under our eyes, and we not see them? Are not comedies and tragedies daily performed before us of which we understand neither the fun nor the pathos? Very likely George goes home thinking to himself, "I have made an impression on the heart of this young creature. She has almost confessed as much. Poor artless little maiden! I wonder what there is in me that she should like me?" Can he be angry with her for this unlucky preference? Was ever a man angry at such a reason? He would not have been so well pleased, perhaps, had he known all; and that he was only one of the performers in the comedy, not the principal character by any means; Rosenkrantz and Gildenstern in the tragedy, the part of Hamlet by a gentleman unknown. How often are our little vanities shocked in this way, and subjected to wholesome humiliation! Have you not fancied that Lucinda's eyes beamed on you with a special tenderness, and presently become aware that she ogles your neighbor with the very same killing glances? Have you not exchanged exquisite whispers with Lalage at the dinner-table (sweet murmurs heard through the hum of the guests, and clatter of the banquet!), and then overheard her whispering the very same delicious phrases to old Surdus in the drawing-room? The sun shines for every body; the flowers smell sweet for all noses; and the nightingale and Lalage warble for all ears—not your long ones only, good Brother!

CHAPTER LXX.

IN WHICH CUPID PLAYS A CONSIDERABLE PART.

We must now, however, and before we proceed with the history of Miss Lydia and her doings, perform the duty of explaining that sentence in Mr. Warrington's letter to his brother which refers to Lady Maria Esmond, and which, to some simple readers, may be still mysterious. For how, indeed, could well-

regulated persons divine such a secret? How could innocent and respectable young people suppose that a woman of noble birth, of ancient family, of mature experience—a woman whom we have seen exceedingly in love only a score of months ago—should so far forget herself as (Oh, my very finger-tips blush as I write the sentence!), as not only to fall in love with a person of low origin, and very many years her junior, but actually to marry him in the face of the world? That is, not exactly in the face, but behind the back of the world, so to speak; for Parson Sampson privily tied the indissoluble knot for the pair at his chapel in May Fair.

Now stop before you condemn her utterly. Because Lady Maria had had, and overcome, a foolish partiality for her young cousin, was that any reason why she should never fall in love with any body else? Are men to have the sole privilege of change, and are women to be rebuked for availing themselves now and again of their little chance of consolation? No invectives can be more rude, gross, and unphilosophical than, for instance, Hamlet's to his mother about her second marriage. The truth, very likely, is, that that tender, parasitic creature wanted a something to cling to, and, Hamlet senior out of the way, twined herself round Claudius. Nay, we have known females so bent on attaching themselves that they can twine round two gentlemen at once. Why, forsooth, shall there not be marriage-tables after funeral baked-meats? If you said grace for your feast yesterday, is that any reason why you shall not be hungry to-day? Your natural fine appetite and relish for this evening's feast shows that to-morrow evening at eight o'clock you will most probably be in want of your dinner. I, for my part, when Flirtilla or Jiltissa were partial to me (the kind reader will please to fancy that I am alluding here to persons of the most ravishing beauty and lofty

rank), always used to bear in mind that a time would come when they would be fond of somebody else. We are served *à la Russe*, and gobbled up a dish at a time, like the folks in Polyphemus's cave. 'Tis *hodie mihi, cras tibi:* there are some Anthropophagi who devour dozens of us—the old, the young, the tender, the tough, the plump, the lean, the ugly, the beautiful: there's no escape, and one after another, as our fate is, we disappear down their omnivorous maws. Look at Lady Ogresham! We all remember, last year, how she served poor Tom Kydd: seized upon him, devoured him, picked his bones, and flung them away. Now it is Ned Suckling she has got into her den. He lies under her great eyes, quivering and fascinated. Look at the poor little trepid creature, panting and helpless under the great eyes! She trails toward him nearer and nearer; he draws to her, closer and closer. Presently there will be one or two feeble squeaks for pity, and—hobblegobble—he will disappear! Ah me! it is pity, too. I knew, for instance, that Maria Esmond had lost her heart ever so many times before Harry Warrington found it; but I liked to fancy that he was going to keep it; that, bewailing mischance and times out of joint, she would yet have preserved her love, and fondled it in decorous celibacy. If, in some paroxysm of senile folly, I should fall in love to-morrow, I shall still try and think I have acquired the fee-simple of my charmer's heart, not that I am only a tenant, on a short lease, of an old battered furnished apartment, where the dingy old wine-glasses have been clouded by scores of pairs of lips, and the tumbled old sofas are muddy with the last lodger's boots. Dear, dear nymph! Being beloved and beautiful! Suppose I had a little passing passion for Glycera (and her complexion really was as pure as splendent Parian marble); suppose you had a fancy for Telephus, and his low collars and absurd neck: those follies are all over now, aren't they? We love each other for good now, don't we? Yes, forever; and Glycera may go to Bath, and Telephus take his *cervicem roseam* to Jack Ketch, *n'est-ce pas?*

No. *We* never think of changing, my dear. However winds blow, or time flies, or spoons stir, *our* potage, which is now so piping hot, will never get cold. Passing fancies we may have allowed ourselves in former days; and really your infatuation for Telephus (don't frown so, my darling creature! and make the wrinkles in your forehead worse)—I say, really it was the talk of the whole town; and as for Glycera, she behaved confoundedly ill to me. Well, well, now that we understand each other, it is forever that our hearts are united, and we can look at Sir Cresswell Cresswell, and snap our fingers at his wig. But this Maria of the last century was a woman of an ill-regulated mind. You, my love, who know the world, know that in the course of this lady's career a great deal must have passed that would not bear the light, or edify in the telling. You know (not, my dear creature, that I mean you have any experience; but you have heard people say—you have heard your mother say) that an old flirt, when she has done playing the fool with one passion, will play the fool with another; that flirting is like drinking; and the brandy being drunk up, you—no, not you—Glycera—the brandy being drunk up, Glycera, who has taken to drinking, will fall upon the gin. So, if Maria Esmond has found a successor for Harry Warrington, and set up a new sultan in the precious empire of her heart, what, after all, could you expect from her? That territory was like the Low Countries, accustomed to being conquered, and forever open to invasion.

And Maria's present enslaver was no other that Mr. Geoghegan or Hagan, the young actor who had performed in George's Tragedy.. His tones were so thrilling, his eye so bright, his mien so noble, he looked so beautiful in his gilt leather armor and large buckled periwig, giving utterance to the poet's glowing verses, that the lady's heart was yielded up to him, even as Ariadne's to Bacchus when her affair with Theseus was over. The young Irishman was not a little touched and elated by the high-born damsel's partiality for him. He might have preferred a Lady Maria Hagan more tender in years, but one more tender in disposition it were difficult to discover. She clung to him closely, indeed. She retired to his humble lodgings in Westminster with him, when it became necessary to disclose their marriage, and when her furious relative disowned her.

General Lambert brought the news home from his office in Whitehall one day, and made merry over it with his family. In those homely times a joke was none the worse for being a little broad; and a fine lady would laugh at a jolly page of Fielding, and weep over a letter of Clarissa, which would make your present ladyship's eyes start out of your head with horror. He uttered all sorts of waggeries, did the merry General, upon the subject of this marriage; upon George's share in bringing it about; upon Harry's jealousy when he should hear of it. He vowed it was cruel that Cousin Hagan had not selected George as groomsman; that the first child should be called Carpezan or Sybilla, after the Tragedy, and so forth. They would not quite be able to keep a coach, but they might get a chariot and pasteboard dragons from Mr. Rich's theatre. The baby might be christened in Macbeth's caldron: and Harry and Harlequin ought certainly to be godfathers.

"Why shouldn't she marry him if she likes him?" asked little Hetty. "Why should he not love her because she is a little old? Mamma is a little old, and you love her none the worse. When you married my Mamma, Sir, I have heard you say you were very poor; and yet you were very happy, and nobody laughed at you!" Thus this impudent little person spoke by reason of her tender age, not being aware of Lady Maria Esmond's previous follies.

So her family has deserted her? George described what wrath they were in; how Lady

BEHIND MONTAGUE HOUSE.

Castlewood had gone into mourning; how Mr. Will swore he would have the rascal's ears; how furious Madame de Bernstein was, the most angry of all. "It is an insult to the family," says haughty little Miss Hett; "and I can fancy how ladies of that rank must be indignant at their relative's marriage with a person of Mr. Hagan's condition: but to desert her is a very different matter."

"Indeed, my dear child," cries Mamma, "you are talking of what you don't understand. After my Lady Maria's conduct, no respectable person can go to see her."

"What conduct, Mamma?"

"Never mind," cries Mamma. "Little girls can't be expected to know, and ought not to be too curious to inquire, what Lady Maria's conduct has been! Suffice it, miss, that I am shocked her ladyship should ever have been here; and I say again, no honest person should associate with her!"

"Then, Aunt Lambert, I must be whipped and sent to bed," says George, with mock gravity. "I own to you (though I did not confess sooner, seeing that the affair was not mine) that I have been to see my cousin the player, and her ladyship his wife. I found them in very dirty lodgings in Westminster, where the wretch has

the shabbiness to keep not only his wife, but his old mother, and a little brother, whom he puts to school. I found Mr. Hagan, and came away with a liking, and almost a respect for him, although I own he has made a very improvident marriage. But how improvident some folks are about marriage, aren't they, Theo?"

"Improvident, if they marry such spendthrifts as you," says the General. "Master George found his relations, and I'll be bound to say he left his purse behind him."

"No, not the purse, Sir," says George, smiling very tenderly. "Theo made that. But I am bound to own it came empty away. Mr. Rich is in great dudgeon. He says he hardly dares have Hagan on his stage, and is afraid of a riot, such as Mr. Garrick had about the foreign dancers. This is to be a fine gentleman's riot. The Macaronis are furious, and vow they will pelt Mr. Hagan, and have him cudgeled afterward. My cousin Will, at Arthur's, has taken his oath he will have the actor's ears. Meanwhile, as the poor man does not play, they have cut off his salary; and without his salary, this luckless pair of lovers have no means to buy bread and cheese."

"And you took it to them, Sir? It was like you, George!" says Theo, worshiping him with her eyes.

"It was your purse took it, dear Theo," replies George.

"Mamma, I hope you will go and see them to-morrow!" prays Theo.

"If she doesn't, I shall get a divorce, my dear!" cries Papa. "Come and kiss me, you little wench—that is, *avec la bonne permission de Monsieur mon beau-fils.*"

"Monsieur mon beau fiddlestick, papa!" says Miss Lambert, and I have no doubt complies with the paternal orders. And this was the first time George Esmond Warrington, Esquire, was ever called a fiddlestick.

Any man, even in our time, who makes an imprudent marriage, knows how he has to run the gauntlet of the family, and undergo the abuse, the scorn, the wrath, the pity of his relations. If your respectable family cry out because you marry the curate's daughter, one in ten, let us say, of his charming children; or because you engage yourself to the young barrister whose only present pecuniary resources come from the court which he reports, and who will have to pay his Oxford bills out of your slender little fortune; if your friends cry out for making such engagements as these, fancy the feelings of Lady Maria Hagan's friends, and even those of Mr. Hagan's, on the announcement of this marriage.

There is old Mrs. Hagan, in the first instance. Her son has kept her dutifully and in tolerable comfort, ever since he left Trinity College at his father's death, and appeared as Romeo at Crow Street Theatre. His salary has sufficed of late years to keep the brother at school, to help the sister who has gone out as companion, and to provide fire, clothing, tea, dinner, and comfort for the old clergyman's widow. And now, forsooth, a fine lady, with all sorts of extravagant habits, must come and take possession of the humble home, and share the scanty loaf and mutton! Were Hagan not a high-spirited fellow, and the old mother very much afraid of him, I doubt whether my lady's life at the Westminster lodgings would be very comfortable. It *was* very selfish perhaps to take a place at that small table, and in poor Hagan's narrow bed. But Love, in some passionate and romantic dispositions, never regards consequences or measures accommodation. Who has not experienced that frame of mind? what thrifty wife has not seen and lamented her husband in that condition, when, with rather a heightened color and a deuce-may-care smile on his face, he comes home and announces that he has asked twenty people to dinner next Saturday? He doesn't know whom exactly; and he does know the dining-room will only hold sixteen. Never mind! Two of the prettiest girls can sit upon young gentlemen's knees; others won't come; there's sure to be plenty! In the intoxication of love people venture upon this dangerous sort of house-keeping; they don't calculate the resources of their dining-table, or those inevitable butchers' and fishmongers' bills, which will be brought to the ghastly housekeeper at the beginning of the month.

Yes. It was rather selfish of my Lady Maria to seat herself at Hagan's table, and take the cream off the milk, and the wings of the chickens, and the best half of every thing where there was only enough before; and no wonder the poor old mamma-in-law was disposed to grumble. But what was her outcry compared to the clamor at Kensington among Lady Maria's noble family? Think of the talk and scandal all over the town! Think of the titters and whispers of the ladies in attendance at the Princess's court, where Lady Fanny had a place; of the jokes of Mr. Will's brother officers at the usher's table; of the waggeries in the daily prints and magazines; of the comments of outraged prudes; of the laughter of the clubs, and the sneers of the ungodly! At the receipt of the news Madame Bernstein had fits, and ran off to the solitude of her dear rocks at Tunbridge Wells, where she did not see above forty people of a night at cards. My lord refused to see his sister; and the Countess in mourning, as we have said, waited upon one of her patronesses, a gracious princess, who was pleased to condole with her upon the disgrace and calamity which had befallen her house. For one, two, three whole days the town was excited and amused by the scandal; then there came other news—a victory in Germany; doubtful accounts from America; a general officer coming home to take his trial; an exquisite new soprano singer from Italy; and the public forgot Lady Maria in her garret, eating the hard-earned meal of the actor's family.

This is an extract from Mr. George Warrington's letter to his brother, in which he describes other personal matters, as well as a visit he had paid to the newly-married pair:

MR. WILL IS PRESENTED TO HIS SISTER-IN-LAW.

"My dearest little Theo," he writes, "was eager to accompany her Mamma upon this errand of charity; but I thought Aunt Lambert's visit would be best under the circumstances, and without the attendance of her little spinster aide-de-camp Cousin Hagan was out when we called; we found her ladyship in a loose undress, and with her hair in not the neatest papers, playing at cribbage with a neighbor from the second floor, while good Mrs. Hagan sate on the other side of the fire with a glass of punch, and the Whole Duty of Man.

"Maria, your Maria once, cried a little when she saw us; and Aunt Lambert, you may be sure, was ready with her sympathy. While she bestowed it on Lady Maria, I paid the best compliments I could invent to the old lady. When the conversation between Aunt L. and the bride began to flag, I turned to the latter, and between us we did our best to make a dreary interview pleasant. Our talk was about you, about Wolfe, about war; you must be engaged face to face with the Frenchmen by this time, and God send my dearest brother safe and victorious out of the battle! Be sure we follow your steps anxiously—we fancy you at Cape Breton. We have plans of Quebec and charts of the St. Lawrence. Shall I ever forget your face of joy that day when you saw me return safe and sound from the little combat with the

little Frenchman? So will my Harry, I know, return from his battle. I feel quite assured of it; elated somehow with the prospect of your certain success and safety. And I have made all here share my cheerfulness. We talk of the campain as over, and Captain Warrington's promotion as secure. Pray Heaven, all our hopes may be fulfilled one day ere long!

"How strange it is that you who are the mettlesome fellow (you know you are) should escape quarrels hitherto, and I, who am a peaceful youth, wishing no harm to any body, should have battles thrust upon me! What do you think actually of my having had another affair upon my wicked hands, and with whom, think you? With no less a personage than your old enemy our kinsman, Mr. Will.

"What or who set him to quarrel with me, I can not think. Spencer (who acted as second for me, for matters actually have gone this length; —don't be frightened; it is all over, and nobody is a scratch the worse) thinks some one set Will on me; but who, I say? His conduct has been most singular; his behavior quite unbearable. We have met pretty frequently lately at the house of good Mr. Van den Bosch, whose pretty granddaughter was consigned to both of us by our good mother. Oh, dear mother! did you know that the little thing was to be such a *causa belli*, and to cause swords to be drawn, and precious lives to be menaced? But so it has been. To show his own spirit, I suppose, or having some reasonable doubt about mine, whenever Will and I have met at Mynheer's house—and he is forever going there—he has shown such downright rudeness to me, that I have required more than ordinary patience to keep my temper. He has contradicted me once, twice, thrice, in the presence of the family, and out of sheer spite and rage, as it appeared to me. Is he paying his addresses to Miss Lydia and her father's ships, negroes, and forty thousand pounds? I should guess so. The old gentleman is forever talking about his money, and adores his grand-daughter; and as she is a beautiful little creature, numbers of folk here are ready to adore her too. Was Will rascal enough to fancy that I would give up my Theo for a million of guineas, and negroes, and Venus to boot? Could the thought of such baseness enter into the man's mind? I don't know that he has accused me of stealing Van den Bosch's spoons and tankards when we dine there, or of robbing on the highway. But for one reason or the other he has chosen to be jealous of me, and as I have parried his impertinences with little sarcastic speeches (though perfectly civil before company), perhaps I have once or twice made him angry. Our little Miss Lydia has unwittingly added fuel to the fire on more than one occasion, especially yesterday, when there was talk about your worship.

"'Ah!' says the heedless little thing, as we sat over our dessert, 'tis lucky for you, Mr. Esmond, that Captain Harry is not here.'

"'Why, miss?' asks he, with one of his usual conversational ornaments. He must have offended some fairy in his youth, who has caused him to drop curses forever out of his mouth, as she did the girl to spit out toads and serpents. (I know some one from whose gentle lips there only fall pure pearls and diamonds.) 'Why?' says Will, with a cannonade of oaths.

"'Oh fie!' says she, putting up the prettiest little fingers to the prettiest little rosy ears in the world. 'Oh fie, Sir! to use such naughty words. 'Tis lucky the Captain is not here, because he might quarrel with you; and Mr. George is so peaceable and quiet, that he won't. Have you heard from the Captain, Mr. George?'

"'From Cape Breton,' says I. 'He is very well, thank you; that is—' I couldn't finish the sentence, for I was in such a rage that I scarce could contain myself.

"'From the Captain, as you call him, Miss Lyddy,' says Will. 'He'll distinguish himself as he did at Saint Cas! Ho, ho!'

"'So I apprehend he did, Sir,' says Will's brother.

"'Did he?' says our dear cousin; 'always thought he ran away; took to his legs; got a ducking, and ran away as if a bailiff was after him.'

"'La!' says miss, 'did the Captain ever have a bailiff after him?'

"'Didn't he! Ho, ho!' laughs Mr. Will.

"I suppose I must have looked very savage, for Spencer, who was dining with us, trod on my foot under the table. 'Don't laugh so loud, cousin,' I said, very gently; 'you may wake good old Mr. Van den Bosch.' The good old gentleman was asleep in his arm-chair, to which he commonly retires for a nap after dinner.

"'Oh, indeed! cousin,' says Will, and he turned and winks at a friend of his, Captain Deuceace, whose own and whose wife's reputation I dare say you heard of when you frequented the clubs, and whom Will has introduced into this simple family as a man of the highest fashion. 'Don't be afraid, miss,' says Mr. Will, 'nor my cousin needn't be.'

"'Oh what a comfort!' cries Miss Lyddy. 'Keep quite quiet, gentlemen, and don't quarrel, and come up to me when I send to say the tea is ready.' And with this she makes a sweet little courtesy, and disappears.

"'Hang it, Jack, pass the bottle, and don't wake the old gentleman!' continues Mr. Will. 'Won't you help yourself, cousin?' he continues, being particularly facetious in the tone of that word cousin.

"'I am going to help myself,' I said, 'but I am not going to drink the glass; and I'll tell you what I am going to do with it if you will be quite quiet, cousin!' (Desperate kicks from Spencer all the time.)

"'And what the deuce do I care what you are going to do with it?' asks Will, looking rather white.

"'I am going to fling it into your face, cousin,' says I, very rapidly performing that feat.

"'By Jove, and no mistake!' cries Mr. Deuceace; and as he and William roared out an oath

together, good old Van den Bosch woke up, and, taking the pocket-handkerchief off his face, asked what was the matter.

"I remarked it was only a glass of wine gone the wrong way, and the old man said: 'Well, well, there is more where that came from! Let the butler bring you what you please, young gentlemen!' and he sank back in his great chair, and began to sleep again.

"'From the back of Montagu House Gardens there is a beautiful view of Hampstead at six o'clock in the morning; and the statue of the King on St. George's Church is reckoned elegant, cousin!' says I, resuming the conversation.

"'D— the statue!' begins Will: but I said, 'Don't, cousin! or you will wake up the old gentleman. Had we not best go up stairs to Miss Lyddy's tea-table?'

"We arranged a little meeting for the next morning; and a coroner might have been sitting upon one or other, or both, of our bodies this afternoon; but, would you believe it? just as our engagement was about to take place, we were interrupted by three of Sir John Fielding's men, and carried to Bow Street, and ignominiously bound over to keep the peace.

"Who gave the information? Not I, or Spencer, I can vow. Though I own I was pleased when the constables came running to us, bludgeon in hand: for I had no wish to take Will's blood, or sacrifice my own to such a rascal. Now, Sir, have you such a battle as this to describe to me?—a battle of powder and no shot?—a battle of swords as bloody as any on the stage? I have filled my paper, without finishing the story of Maria and her Hagan. You must have it by the next ship. You see, the quarrel with Will took place yesterday, very soon after I had written the first sentence or two of my letter. I had been dawdling till dinner-time (I looked at the paper last night, when I was grimly making certain little accounts up, and wondered shall I ever finish this letter?), and now the quarrel has been so much more interesting to me than poor Molly's love adventures, that behold my paper is full to the brim! Wherever my dearest Harry reads it, I know there will be a heart full of love for

"His loving brother,

"G. E. W."

CHAPTER LXXI.

WHITE FAVORS.

The little quarrel between George and his cousin caused the former to discontinue his visits to Bloomsbury in a great measure; for Mr. Will was more than ever assiduous in his attentions; and, now that both were bound over to peace, so outrageous in his behavior, that George found the greatest difficulty in keeping his hands from his cousin. The artless little Lydia had certainly a queer way of receiving her friends. But six weeks before madly jealous of George's

preference for another, she now took occasion repeatedly to compliment Theo in her conversation. Miss Theo was such a quiet, gentle creature, Lyddy was sure George was just the husband for her. How fortunate that horrible quarrel had been prevented! The constables had come up just in time; and it was quite ridiculous to hear Mr. Esmond cursing and swearing, and the rage he was in at being disappointed of his duel! "But the arrival of the constables saved your valuable life, dear Mr. George, and I am sure Miss Theo ought to bless them forever," says Lyddy, with a soft smile. "You won't stop and meet Mr. Esmond at dinner today? You don't like being in his company? He can't do you any harm; and I am sure you will do him none." Kind speeches like these, addressed by a little girl to a gentleman, and spoken by a strange inadvertency in company, and when other gentlemen and ladies were present, were not likely to render Mr. Warrington very eager for the society of the young American lady.

George's meeting with Mr. Will was not known for some days in Dean Street, for he did not wish to disturb those kind folks with his quarrel; but when the ladies were made aware of it, you may be sure there was a great flurry and to do. "You were actually going to take a fellow-creature's life, and you came to see us, and said not a word! Oh! George, it was shocking!" said Theo.

"My dear, he had insulted me and my brother," pleaded George. "Could I let him call us both cowards, and sit by and say, 'Thank you?'"

The General sate by, and looked very grave.

"You know you think, Papa, it is a wicked and un-Christian practice; and have often said you wished gentlemen would have the courage to refuse!"

"To refuse? Yes," says Mr. Lambert, still very glum.

"It must require a prodigious strength of mind to refuse," says Jack Lambert, looking as gloomy as his father; "and I think if any man were to call me a coward I should be apt to forget my orders."

"You see brother Jack is with me!" cries George.

"I must not be against you, Mr. Warrington," says Jack Lambert.

"Mr. Warrington!" cries George, turning very red.

"Would you, a clergyman, have George break the Commandments, and commit murder, John?" asks Theo, aghast.

"I am a soldier's son, sister," says the young divine, dryly. "Besides, Mr. Warrington has committed no murder at all. We must soon be hearing from Canada, father. The great question of the supremacy of the two races must be tried there ere long!" He turned his back on George as he spoke, and the latter eyed him with wonder.

Hetty, looking rather pale at this original remark of brother Jack, is called out of the room by some artful pretext of her sister. George started up and followed the retreating girls to the door.

"Great powers, gentlemen!" says he, coming back, "I believe, on my honor, you are giving me the credit of shirking this affair with Mr. Esmond!" The clergyman and his father looked at one another.

"A man's nearest and dearest are always the first to insult him," says George, flashing out.

"You mean to say, 'Not guilty?' God bless thee, my boy!" cries the General. "I told thee so, Jack." And he rubbed his hand across his eyes, and blushed, and wrung George's hand with all his might.

"Not guilty of what, in Heaven's name?" asks Mr. Warrington.

"Nay," said the General, "Mr. Jack, here, brought the story. Let him tell it. I believe 'tis a —— lie, with all my heart." And uttering this wicked expression, the General fairly walked out of the room.

The Rev. J. Lambert looked uncommonly foolish.

"And what is this—this d—d lie, Sir, that somebody has been telling of me?" asked George, grinning at the young clergyman.

"To question the courage of any man is always an offense to him," says Mr. Lambert, "and I rejoice that yours has been belied."

"Who told the falsehood, Sir, which you repeated?" bawls out Mr. Warrington. "I insist on the man's name!"

"You forget you are bound over to keep the peace," says Jack.

"Curse the peace, Sir! We can go and fight in Holland. Tell me the man's name, I say!"

"Fair and softly, Mr. Warrington!" cries the young parson; "my hearing is perfectly good. It was not a man who told me the story which, I confess, I imparted to my father."

"What?" asks George, the truth suddenly occurring. "Was it that artful, wicked little vixen in Bloomsbury Square?"

"Vixen is not the word to apply to any young lady, George Warrington!" exclaims Lambert, "much less to the charming Miss Lydia. She artful—the most innocent of Heaven's creatures! She wicked—that angel! With unfeigned delight that the quarrel should be over—with devout gratitude to think that blood consanguineous should not be shed—she spoke in terms of the highest praise of you for declining this quarrel, and of the deepest sympathy with you for taking the painful but only method of averting it."

"What method?" demands George, stamping his foot.

"Why, of laying an information, to be sure!" says Mr. Jack; on which George burst forth into language much too violent for us to repeat here, and highly uncomplimentary to Miss Lydia.

"Don't utter such words, Sir!" cried the parson, who, as it seemed, now took his turn to be angry. "Do not insult, in my hearing, the most charming, the most innocent of her sex! If she has been mistaken in her information regarding you, and doubted your willingness to commit what, after all, is a crime—for a crime homicide is, and of the most awful description—you, Sir, have no right to blacken that angel's character with foul words: and, innocent yourself, should respect the most innocent as she is the most lovely of women! Oh, George, are you to be my brother?"

"I hope to have that honor," answered George, smiling. He began to perceive the other's drift.

"What, then, what—though 'tis too much bliss to be hoped for by sinful man—what, if she should one day be your sister? Who could see her charms without being subjugated by them? I own that I am a slave. I own that those Latin Sapphics in the September number of the *Gentleman's Magazine*, beginning *Lydiæ quondam cecinit venustæ* (with an English version by my friend Hickson of Corpus) were mine. I have told my mother what hath passed between us, and Mrs. Lambert also thinks that the most lovely of her sex has deigned to look favorably on me. I have composed a letter—she another. She proposes to wait on Miss Lydia's grandpapa this very day, and to bring me the answer, which shall make me the happiest or the most wretched of men! It was in the unrestrained intercourse of family conversation that I chanced to impart to my father the sentiments which my dear girl had uttered. Perhaps I spoke slightingly of your courage, which I don't doubt—by Heaven, I don't doubt: it may be she has erred too, regarding you. It may be that the fiend jealousy has been gnawing at my bosom and—horrible suspicion!—that I thought my sister's lover found too much favor with her I would have all my own. Ah, dear George, who knows his faults? I am as one distracted with passion. Confound it, Sir!

What right have you to laugh at me? I would have you to know that *risu inepto . . . .*"

"What, have you two boys made it up?" cries the General, entering at this moment, in the midst of a roar of laughter from George.

"I was giving my opinion to Mr. Warrington upon laughter, and upon his laughter in particular," says Jack Lambert, in a fume.

"George is bound over to keep the peace, Jack! Thou canst not fight him for two years; and between now and then, let us trust you will have made up your quarrel. Here is dinner, boys! We will drink absent friends, and an end to the war, and no fighting out of the profession!"

George pleaded an engagement as a reason for running away early from his dinner; and Jack must have speedily followed him, for when the former, after transacting some brief business at his own lodgings, came to Mr. Van den Bosch's door, in Bloomsbury Square, he found the young parson already in parley with a servant there. "His master and mistress had left town yesterday," the servant said.

"Poor Jack! And you had the decisive letter in your pocket?" George asked of his future brother-in-law.

"Well, yes"—Jack owned he had the document—"and my mother has ordered a chair, and was coming to wait on Miss Lyddy," he whispered, piteously, as the young men lingered on the steps.

George had a note, too, in his pocket for the young lady, which he had not cared to mention to Jack. In truth, his business at home had been to write a smart note to Miss Lyddy, with a message for the gentleman who had brought her that funny story of his giving information regarding the duel! The family being absent, George, too, did not choose to leave his note. "If Cousin Will has been the slander-bearer, I will go and make him recant," thought George. "Will the family soon be back?" he blandly asked.

"They are gone to visit the quality," the servant replied. "Here is the address on this paper;" and George read, in Miss Lydia's hand, "The box from Madam Hocquet's to be sent by the Farnham Flying Coach; addressed to Miss Van den Bosch, at the Right Honorable the Earl of Castlewood's, Castlewood, Hants."

"*Where?*" cried poor Jack, aghast.

"His lordship and their ladyships have been here often," the servant said, with much importance. "The families is quite intimate."

This was very strange; for, in the course of their conversation, Lyddy had owned but to one single visit from Lady Castlewood.

"And they must be a-going to stay there some time, for Miss have took a power of boxes and gowns with her!" the man added. And the young men walked away, each crumpling his letter in his pocket.

"What was that remark you made?" asks George of Jack, at some exclamation of the latter. "I think you said—"

"Distraction! I am beside myself, George! I—I scarce know what I am saying," groans the clergyman. "She is gone to Hampshire, and Mr. Esmond is gone with her!"

"Othello could not have spoken better! and she has a pretty scoundrel in her company!" says Mr. George. "Ha! here is your mother's chair!" Indeed, at this moment poor Aunt Lambert came swinging down Great Russell Street, preceded by her footman. "'Tis no use going farther, Aunt Lambert!" cries George. "Our little bird has flown."

"What little bird?"

"The bird Jack wished to pair with—the Lyddy-bird, Aunt. Why, Jack, I protest you are swearing again! This morning 'twas the Sixth Commandment you wanted to break; and now—"

"Confound it! leave me alone, Mr. Warrington, do you hear?" growls Jack, looking very savage; and away he strides far out of the reach of his mother's bearers.

"What is the matter, George?" asks the lady.

George, who has not been very well pleased with brother Jack's behavior all day, says: "Brother Jack has not a fine temper, Aunt Lambert. He informs you all that I am a coward, and remonstrates with me for being angry. He finds his mistress gone to the country, and he bawls, and stamps, and swears. Oh, fie! Oh, Aunt Lambert, beware of jealousy! Did the quarrel ever make you jealous?"

"You will make me very angry, if you speak to me in this way," says poor Aunt Lambert, from her chair.

"I am respectfully dumb. I make my bow. I withdraw," says George, with a low bow, and turns toward Holborn. His soul was wrath within him. He was bent on quarreling with somebody. Had he met Cousin Will that night it had gone ill with his sureties.

He sought Will at all his haunts, at Arthur's, at his own house. There Lady Castlewood's servants informed him that they believed Mr. Esmond had gone to join the family in Hants. He wrote a letter to his cousin:

"My dear, kind cousin William," he said, "you know I am bound over, and would not quarrel with any one, much less with a dear, truth-telling, affectionate kinsman, whom my brother insulted by caning. But if you can find any one who says that I prevented a meeting the other day by giving information, will you tell your informant that I think it is not I but somebody else is the coward? And I write to Mr. Van den Bosch by the same post, to inform him and Miss Lyddy that I find some rascal has been telling them lies to my discredit, and to beg them to have a care of such persons." And, these neat letters being dispatched, Mr. Warrington dressed himself, showed himself at the play, and took supper cheerfully at the Bedford.

In a few days George found a letter on his breakfast-table franked "Castlewood," and, indeed, written by that nobleman.

"Dear Cousin," my lord wrote, "there has been so much annoyance in our family of late,

that I am sure 'tis time our quarrels should cease. Two days since my brother William brought me a very angry letter, signed G. Warrington, and at the same time, to my great grief and pain, acquainted me with a quarrel that had taken place between you, in which, to say the least, your conduct was violent. 'Tis an ill use to put good wine to—that to which you applied good Mr. Van den Bosch's. Sure, before an old man young ones should be more respectful. I do not deny that Wm.'s language and behavior are often irritating. I know he has often tried my temper, and that within the 24 hours.

"Ah! Why should we not all live happily together? You know, cousin, I have ever professed a sincere regard for you—that I am a sincere admirer of the admirable young lady to whom you are engaged, and to whom I offer my most cordial compliments and remembrances. I would live in harmony with all my family where 'tis possible—the more because I hope to introduce to it a Countess of Castlewood.

"At my mature age, 'tis not uncommon for a man to choose a young wife. My Lydia (you will divine that I am happy in being able to call mine the elegant Miss Van den Bosch) will naturally survive me. After soothing my declining years, I shall not be jealous if at their close she should select some happy man to succeed me; though I shall envy him the possession of so much perfection and beauty. Though of a noble Dutch family, her rank, the dear girl declares, is not equal to mine, which she confesses that she is pleased to share. I, on the other hand, shall not be sorry to see descendants to my house, and to have it, through my Lady Castlewood's means, restored to something of the splendor which it knew before two or three improvident predecessors impaired it. My Lydia, who is by my side, sends you and the charming Lambert family her warmest remembrances.

"The marriage will take place very speedily here. May I hope to see you at church? My brother will not be present to quarrel with you. When I and dear Lydia announced the match to him yesterday, he took the intelligence in bad part, uttered language that I know he will one day regret, and is at present on a visit to some neighbors. The Dowager Lady Castlewood retains the house at Kensington; we having our own establishment, where you will ever be welcomed, dear cousin, by your affectionate humble servant, CASTLEWOOD."

From the *London Magazine* of November, 1759:

"Saturday, October 13th, married at his seat, Castlewood, Hants, the Right Honorable Eugene Earl of Castlewood to the beautiful Miss Van den Bosch, of Virginia. £70,000."

Monthly Record of Current Events.

UNITED STATES.

AFTER a protracted discussion in the Cabinet it was finally determined not to call an extra session of Congress, the Postmaster-General thinking it possible to carry on the business of the Department until the opening of the regular session. He states that the "deficiency to be provided for will amount to $4,385,281 95, distributed as follows: For the quarter ending December 31, 1858, $749,841 68; for that ending March 31, 1859, $1,964,156 26; for that ending June 30, $1,671,285 01. The amount due for the first of these quarters will be paid by the Department within 60 days of the date of this statement; the effect of which will be," says Mr. Holt, "to divide the entire deficit of $4,385,281 95 between the quarters ending 31st March and 30th June, and payable 31st May and 31st August, so that the suspension of payment on no part of this indebtedness will exceed, beyond a few days, six months before the regular meeting of Congress; on nearly one-half of it the suspension will be but for a few days more than three months. The debts due, and to become due, to the contractors are of a sacred character. The contracts out of which these debts arise have been entered into under the express authority of existing laws of Congress. To appropriate money for their payment is as obligatory and binding upon Congress as it is to provide for the principal and interest of the national debt. There never will be—and never can be—a repudiation of this debt by the representatives of the American people. After the amount due to each contractor shall have been ascertained and finally settled according to law, this amount becomes a specific debt of record against the United States. Its payment is inevitable; and if the contractor desires to borrow money upon it, the lender could have no better security." "A system of retrenchment," continues the Postmaster-General, "so far as it may be practicable under existing laws, is now an imperative duty in the administration of the Department. By the act approved June 14, 1858, Congress established 695 new post-routes, the service of which—including the St. Paul's and Puget Sound route, established in March, 1855, but not yet put into operation—it has been estimated would require an annual appropriation from the Treasury of $604,088 over and above the receipts accruing therefrom. Not a dollar, however, has been appropriated for this purpose, and, as a necessary result, the contracts for these routes, though they have been advertised and proposals received, can not be closed until the necessary funds shall have been provided by law."

In *Connecticut* the Republicans succeeded at the late election in carrying their entire State ticket, and four members of Congress, being a gain of two.—In *Rhode Island* the Opposition elected their State officers and one Representative in Congress; in the other district, though largely in the majority, they ran two candidates, and there was no choice.—In *Michigan* the election for Chief Justice shows a large Republican majority.——It is now claimed that the Republicans have already elected 117 Representatives in the next Congress; adding to these two more of which they are confident in Minnesota, they claim a clear majority in the next House of Representatives.

The Legislature of *Louisiana*, by a vote of 37 to 17, have refused to pass the "African Apprentice

Bill," which was in effect designed to legalize the opening of the foreign slave-trade to that State.——In *California* a Committee of the Senate have reported that the State and County treasuries have lost about $6,500,000 since July, 1853, owing to the inefficient manner in which the poll-tax and the tax upon foreign miners has been collected. They say that there are at least 40,000 foreign miners in the State, and that the tax, at $14 each, should have yielded at least $160,000 per month, after deducting all the expenses of collection; making an aggregate of $7,175,000 between July, 1853, and December, 1858; whereas the total receipts actually paid in have been but $1,475,659. The poll-tax, at $3 each, should have produced $1,550,000, but only $607,000 were received.——In *Indiana* the divorce law has been amended so as to require that the applicant shall have been a *bona fide* resident of the State for a year; and in case of a divorce on account of the misconduct of the wife, the husband has the same title to her property as though she were dead.——The general purport of the intelligence from the Pike's Peak gold region continues highly favorable. The best diggings are found on Cherry Creek, Dry Creek, Platte River, and Vasques Fork. Old Californians, who have visited the diggings, report that the indications promise that great discoveries of the precious metal will yet be made in the mountains. A very large emigration has already set in for this region.——The Legislature of *Utah* have petitioned for the admission of that Territory into the Union as a State. In their memorial they represent that, on the 16th of February, 1856, the qualified electors of Utah appointed delegates to a Convention which met on the 17th of March, and framed and adopted a Constitution and a republican form of Government for the Territory of Utah, under the name of the "State of Deseret," and prepared a memorial to be forwarded to Congress; that this Constitution and memorial were submitted to the people on the 6th day of April, and unanimously approved; that this Constition was submitted to Congress without receiving any favorable action. They represent that the people of the Territory are abundantly able to support a State Government; and pray that the State of Deseret may be admitted into the Union "on an equal footing with the original States, thereby to avoid in a great measure the difficulties which naturally hinder the advance of the glorious principles of true republicanism, or government by the people, the only sure basis of permanent government and true liberty." Also, in view of the probability that their petition may not be immediately granted, they have prepared another memorial, praying Congress "to so amend the organic act of the Territory of Utah as to extend to the people of this Territory the right of the elective franchise, authorizing them to elect their own Governor, Judges, Secretary, as well as other officers." They say that "the appointing of strangers as officers over the citizens of the United States in Territories (though a time-honored custom) is, to say the least, a relic of British colonial rule, and a direct infringement upon the rights of self-government, and opposed to the genius and policy of republican institutions." Congress, they add, must be "well aware that no persons can be so well qualified to administer justice, make laws and execute them, in a Territory, as those citizens who have reclaimed it from a wilderness.

SOUTHERN AMERICA.

In *Mexico* the "Liberal" party are once more in the ascendant. Miramon, after his recent check, advanced upon Vera Cruz, reconnoitred the city, but retired to Orizaba without venturing an attack. From thence he dispatched 1300 men to the capital, which was surrounded by the Liberals, who had cut off the supplies of water and provisions. On the 2d of April they made an unsuccessful attack upon the city; a thousand men on both sides are said to have been lost in this attack. Mr. McLane, our Minister, having arrived at Vera Cruz, immediately recognized the Juarez Government.

Advices from the island of *Jamaica* indicate a disposition on the part of the negroes to give trouble. A new tax was recently imposed in the parish of Westmoreland, to which they were not willing to submit, and some of the boldest among them raised the standard of revolt, and committed some excesses in the village of Savannah. Four or five of the ringleaders were arrested, but this only served to exasperate the rest, who insisted upon the release of the prisoners. Five hundred troops were then dispatched against them, who found it necessary to resort to bloodshed before the disturbance could be quelled.

From *Nicaragua* intelligence, not wholly reliable, has been received, that Sir William Gore Ouseley has succeeded in negotiating a treaty which amounts to a virtual protectorate on the part of Great Britain; and that, after innumerable delays, the Government of Nicaragua has at length ratified the Cass-Yrrisari treaty with the United States, with certain modifications.——M. Belly, with a corps of French engineers and laborers, has arrived for the purpose of commencing the construction of the canal undertaken by him. A dispute has arisen between him and the Nicaraguan authorities respecting the quantity of land to be granted to him. He claims, under his contract with President Martinez, three leagues on each side of the canal; but the Nicaraguan Senate hesitate to ratify this grant, wishing to limit him to the quantity necessary for the work.

It is announced that our difficulties with Paraguay have been adjusted. The Governments of Brazil, Montevideo, and the Argentine Confederation took a special interest in the matter. General Urquiza, President of the last-named State, proceeded to Paraguay, upon the invitation of Lopez, in order to exert his influence to bring about an accommodation. The steamer *Fulton*, having on board Commissioner Bowlin, ascended the river; on reaching the Paraguayan fortress of Humaita a boat was sent on shore, announcing that their destination was Asuncion. The commander of the fortress replied that President Lopez was awaiting the Commissioner. The steamer then proceeded to Asuncion, where Mr. Bowlin, in an interview with General Urquiza, declared that his instructions did not permit him to accept the official mediation offered by the Plenipotentiaries of Brazil and the Argentine Confederation; but that, in a spirit of conciliation, and as a tribute of personal consideration to the President of the Argentine Confederation, he accepted his personal intervention, and would open preparatory confidential conferences, so as to arrange the manner of a settlement. On the 26th of January Mr. Bowlin was officially received by Lopez, who stood during the whole interview, and, contrary to his well-known custom, was uncovered, holding his famous feathered hat under his arm. Mr. Bowlin's speech was conciliatory, expressing the warm interest taken by the United States in the prosperity of Paraguay and the other South American republics, and the desire of the Government for an amicable adjustment of the existing difficulties. Lopez replied that he duly esti-

mated the sincerity of the desire of the United States to cultivate amicable relations with Paraguay; he regretted that the former harmony had been interrupted; and was assured, from the "honorable discourse of the Special Commissioner, that the pending questions between the two Governments would be settled in a manner honorable and satisfactory to both." Several interviews subsequently occurred, General Urquiza being present, and the terms of adjustment were agreed upon. The precise nature of these has not been made public; but they are understood to be an indemnity to the family of the seaman killed on board the *Water Witch*, and to the American Commercial Company, which was broken up by President Lopez.

EUROPE.

The question of war or peace remains undecided, though there is less apprehension of an immediate breaking out of hostilities. The Pope has requested that the French and Austrian troops should be withdrawn from Rome; but no movements in that direction have been made. The *Moniteur*, the French official paper, while declaring that the state of things in Italy, although of old date, has recently assumed a character of gravity that has aroused the anxiety of the Emperor, declares that Napoleon "has promised the King of Sardinia to defend him against any aggressive act on the part of Austria. He has promised this, and nothing more; and it is well known that he keeps his word." The same journal denies that any considerable warlike preparations are making in France. "The regular effective force of the peace footing, adopted two years ago by the Emperor, has not been exceeded." The activity in the French arsenals is thus accounted for: "We have to change all our artillery, and to transform our entire fleet. This last undertaking, long since decided on in order to give our fleet its normal strength, is sanctioned by the annual votes of the Legislative Body, and notwithstanding the most praiseworthy activity, several years will still be necessary to complete the operation." The French navy is now, in point of strength, fully equal to that of Great Britain; and the most marvelous accounts are given of the efficiency of the new artillery, which is entirely to supersede the old guns. Without at all increasing the regular standing army, the Emperor Napoleon is in a condition to enter upon active hostilities at a moment's warning.—The military preparations of Austria and Sardinia are urged forward with a vigor that would seem to indicate that both Governments thought a war inevitable. The Austrian forces in Italy now number about 230,000 men. Fortifications are being constructed in various places, and at Venice large hospitals are being erected for the sick and wounded. The German Federal Assembly has voted supplies for arming the Federal fortresses with the necessary artillery. Meanwhile the secret mission of Lord Cowley to Vienna has produced results which may avert, or at least postpone, hostilities. This mission, according to the statement of Lord Malmesbury, on the 27th of March, in the British Parliament, was undertaken with the entire approbation of the French Government. He was to ascertain from the Austrian Government what points they considered in the same light with the French, and in what way he might assist in restoring friendly relations between the two Empires. Count Buol, the Austrian minister, professed himself willing to withdraw the Austrian troops from Rome at the same time with the withdrawal of the French army; was willing, in conjunction with the other European Powers, to make such representations as would lead to the better government of the States of the Church; and declared that Austria did not intend, and never had intended, to invade Sardinia; he was also ready to enter into communications with Great Britain and France, with a view of removing those dangers which threaten Italy and Europe, and restoring the certainty of peace. Upon his return to Paris, Lord Cowley found that the French and Russian Governments had entered into communications, in consequence of which the latter, with the consent of the former, undertook to recommend to the Five Great Powers to hold a Congress to consider and settle the matters in dispute. This proposal was formally made, and accepted by Russia, France, Great Britain, and Prussia, and subsequently by Austria. Lord Malmesbury said that the details and composition of this Congress had not been agreed upon. He had no hesitation in expressing it as the opinion of Her Majesty's Government that, "considering that the subjects which are about to be discussed in that Congress are intimately connected with the political and social happiness of the Italian people, those States of Italy should, one and all, have an opportunity given to them of expressing their opinion, in some way or other, upon the subjects which will there be discussed. Our object will naturally be, not to impose—either upon the question of reform or on any other point—any conditions upon the Italian States and people, but to *recommend* to them what we consider for their own benefit and for the safety of Europe. Though the disarmament, which I should heartily wish to see take place immediately as preliminary to the Congress, is not yet decided on, yet both Austria and Piedmont have formally made a declaration that they will not attack one another, and that they will abstain from hostilities. Therefore, unless some untoward and almost impossible accident should occur, we may hope that peace will not be broken, and that the Congress, which will probably assemble at the end of next month, will eventuate in those results which your lordships and all Europe desire." Later accounts say that Baden has been fixed upon as the seat of the Congress, and that Sardinia and the other Italian States will be allowed to take part in the discussions, but not to vote.

In *Great Britain* a new Reform Bill was introduced into Parliament on the 28th of February by Mr. Disraeli. This Bill proposes to extend the right of voting to the following classes: Those who have an income of £10 a year from Government, India, or bank-stock; or a pension of £20 for military, naval, or civil services; those who have for a year had £60 deposited in a savings' bank; those who occupy tenements for which they pay not less than eight shillings a week. The right of voting is also extended to clergymen of all denominations, graduates of universities, registered medical men, members of the legal profession, and a certain class of schoolmasters. The Bill proposes to reduce the representation of fifteen small boroughs from two Members of Parliament to one, and give these fifteen seats to boroughs and counties which are at present inadequately represented. Besides extending in a considerable degree the right of suffrage, the Bill proposes to establish a uniformity between the suffrages in counties and boroughs. The Bill came up for a second reading on the 21st of March, and was opposed by several leading members, especially by Lord John Russell, who moved, as an amendment, "That it is neither just nor politic to interfere in the manner proposed

by this Bill with the freehold franchise in England and Wales; and that no readjustment of the franchise will satisfy this House or the country, which does not provide for a greater extension of the suffrage in cities or boroughs than is contemplated in this measure." Lord John supported this amendment in a speech in which he set forth the wrong which the Bill would inflict upon county freeholders, and while deprecating the principle of universal suffrage, advocated the lowering of the franchise below its present rate of £10.—Lord Stanley replied, affirming that the amendment was made merely for effect, the real issue being whether political power should pass from the present Government into other hands. He defended the Bill, affirming that at the present time the choice lay between having a moderate measure or none at all. Sir Edward Bulwer Lytton also spoke in support of the Bill. The House of Commons, he said, was not a popular, but a deliberative assembly; and the Bill had not lowered the franchise below the standard which the Government thought a necessary qualification for a constituency that would return such a house. He did not care how wide the suffrage was, provided it was accompanied by intelligence. He was not afraid of the working-classes, but was not for admitting their numbers to overbear the property and intelligence of other classes.—Mr. Gibson opposed the Bill. He said if the working-classes were not fit to enjoy the franchise, tell them so, but do not mock them by £60 in a savings' bank, or any such paltry suggestion.—In the course of the debate Mr. Disraeli said that had it not been for the promise in the Queen's speech, the Reform Bill would not have been introduced at all, considering the circumstances under which the present Government came into power.——Sir John Pakington, in moving the navy estimates, made some striking statements respecting the comparative strength of the English and French navies. He said that in 1760, during the Seven Years' War, England had 113 line-of-battle ships and 86,000 seamen and marines; in the American war 186 ships and 105,000 men; in 1799, during the first Revolutionary war, 120 ships and 110,000 men; in the French war of 1809, 113 ships and 144,000 men; in 1856, during the war with Russia, when there was no enemy at sea, 42 line-of-battle ships; last summer there were but 29 ships in commission, now increased to 33, with a prospect of three more during the year, making a total of 36. In July last, the French had also 29 line-of-battle ships, equal in number to those of England, but superior in power and efficiency. In July, 1859, England would have 36 line-of-battle ships, with 3400 guns and 19,750 horse-power; France would have 40 line-of-battle ships, with 3706 guns and 27,510 horse-power. In respect to steam frigates, the comparison was still more unsatisfactory. Last autumn the English navy contained 17 screw and 9 paddle frigates, while that of France contained 15 screw and 19 paddle frigates. Some of the French frigates were inferior to the English in steam power, but were superior in armament. He then proceeded to detail the measures now in progress for increasing the English navy: he hoped that next year there would be 48 line-of-battle ships, and that the number would increase in ensuing years with the increasing requirements of the nation. He also hoped that Parliament would sanction a continued increase in the number of frigates.——Sixty-six Italian political prisoners, among whom are Poerio, Settembrini, and others who bore a prominent part in the troubles of 1848–'50, and were condemned to long terms of imprisonment, have been set free by the King of Naples. The intention was to transport them to America. They were sent to Cadiz, and there put on board the American ship *David Stewart*, bound for New York. The vessel was towed 200 miles to sea by a Neapolitan war-steamer, which then cast off, and left them with a fair wind from the east. The exiles then delivered to the Captain a protest against being carried to New York, and demanded that he should take them to the first British port he could reach. The Captain refused to break his contract. On board was a young Italian, who had shipped as a seaman and had done duty as such. He now made his appearance dressed as a mate of the Galway line of steamers—a position which he had actually held—and announced himself as Raffaelle Settembrini, a son of one of the exiles, who had taken this course to effect his father's escape. The exiles again demanded to be taken to a British port. They said that they had been two months at sea before reaching Cadiz; that many of them were old or infirm, and all greatly weakened by their protracted imprisonment; that a long voyage would be fatal to some of them; that being under the American flag, they were free to go where they chose; and said that they would go to Great Britain, if they had to take the ship out of the hands of the Captain and crew. The Captain yielded, and took them to Cork, where they were received with great enthusiasm.

Mr. Preston, the American minister to *Spain*, was received by the Queen on the 12th of March, in a private audience. He assured Her Majesty of the President's desire to maintain friendly relations with Spain, and expressed his own personal convictions that the people of the United States wished to do all in their power to avoid any misunderstanding between the two countries. The Queen replied in terms of great courtesy.—In the Chamber of Deputies, a call having been made for the production of the papers relative to the negotiations between the United States, France, and England, for the acquisition of Cuba by America, the Minister of Foreign Affairs replied that some Deputies had expressed a desire to see the administration of Cuba improved, and the President of the United States expressed the same wish. The opinion of the President was that Spain did not administer Cuba well, and that the United States, on account of their higher intelligence, had a moral duty to fulfill, which was to purchase the Island. The Government could not allow this idea about Cuba to remain uncontradicted. All Governments had labored to improve the condition of that Island, and the present Cabinet had been constantly occupied with the measures calculated to give the inhabitants of the Island the share they ought to possess in their internal administration, without compromising the ties which unite them to the mother country. The best reply to the representations of certain orators of the United States was the prosperity of the Island of Cuba. That the question of the acquisition of the Island was imposing and menacing could not be denied. Nevertheless, the Government declared that it felt all the security which its great national resources were calculated to inspire. It had not, however, rendered insult for insult, as that would probably have aggravated the question. It had conducted itself with prudence and dignity, and had not applied for assistance to any other Power. If any other foreign Power had offered assistance the Government would have felt grateful, but it would not have accepted of it because it did not think any aid was necessary.

Literary Notices.

The Life of Frederick William Von Steuben, by Friedrich Kapp. (Published by Mason Brothers.) The memory of the brave German soldier whose military experience and talent rendered such essential service to the American army in the war of the Revolution has, thus far, mainly rested on tradition rather than on any precise knowledge of his character and career. It is a valuable service to the history of the United States which the author has performed in the composition of this volume. He has been prompted to the task not merely by the suggestions of national pride, but by a cordial interest in the fortunes of his adopted country. With a truly Teutonic passion for exhaustive research, he has ransacked every source of information within his power, faithfully examined a mass of contemporary documents, gathered up the remains of fading tradition, and faithfully embodied the fruits of his labors in a vigorous and intelligent, if not a perfectly smooth and flowing narrative.

Baron Steuben was born at Magdeburg, a large Prussian fortress on the Elbe, on the 15th of November, 1730. His father was a captain of engineers in the Prussian service, and bore the reputation of an able and scientific officer. Young Steuben was distinguished at school for his proficiency in mathematics; and although the standard of education at that time was not high, he laid the foundation of solid learning by his devotion to study, and—what was then a rare attainment—became intimately acquainted with ancient and modern history, and perfectly familiar both with the French and German languages. While yet a boy of scarcely fourteen years of age he served under his father as a volunteer in the campaign of 1744, and was present at the celebrated siege of Prague. From his earliest infancy, in fact, he was brought into the most intimate relations with military affairs. Most of the persons whom he saw were soldiers. The chief topics of conversation at home were the martial traditions of his family and the exploits of his immediate relatives. As the son of a poor officer, his only prospect of success in life was to gain distinction on the battle-field. At the age of seventeen, accordingly, he entered the army as a cadet. Two years afterward he was promoted to the rank of ensign, in 1753 was made lieutenant, and in 1755 was appointed first-lieutenant, in which capacity he served at the commencement of the Seven Years' War. He was present at the battle of Prague, May 6, 1757, on which occasion he received his first wound; and also took part in the splendid victory over the French at Rossbach, November 5, 1757. He was appointed adjutant-general in 1759, and was wounded in the memorable battle of Kunersdorf, August 12 of that year. His good conduct soon attracted the attention of the King, and in 1762 he received a highly honorable appointment on the royal staff. He made one of a select number of officers whom Frederick personally instructed in the most abstruse branches of the military art—a distinction which was accorded only to young men of remarkable talent and promise. Soon after the close of the Seven Years' War, however, Steuben quitted the Prussian service, for some reasons not fully explained, and accepted the offer to become grand marshal of the Prince of Hohenzollern-Hechingen, a post which he held for about ten years. It was a part of his duty to accompany the Prince on his travels; and in this capacity he visited the court of France in 1771. After his return he incurred the enmity of certain Catholic priests, who were jealous of his influence, as a Protestant, over the Prince and other members of the court which adhered to the Catholic faith. On this account he decided to retire from the service of the Prince of Hechingen, and repaired to the court of the Margrave of Baden, at Carlsruhe, where he was appointed to a military office of an honorary character. His life here was inactive and without excitement, and to relieve its monotony he made occasional trips to the capitals of Germany and to France. Failing in an attempt to procure military employment in the service of the German Emperor, he received a proposal from the Count St. Germain in Paris, in 1777, to embark in the cause of America, which had then begun to be a subject of general interest at the French Court. It was urged upon Steuben that the colonies presented the best field for the acquisition of glory—that they especially stood in need of his military experience for the organization of the army and the establishment of scientific discipline—and that without some speedy aid of the kind their resources would be exhausted and their cause become desperate. After much deliberation he decided to accept the overtures. Having obtained from Franklin letters of introduction to Washington, Samuel Adams, and other prominent men, he embarked from Marseilles, September 26, 1777, and arriving at Portsmouth, New Hampshire, on the 1st of December, immediately offered his services to Congress as a volunteer in the American cause. His offer was accepted, and he joined the camp at Valley Forge in February, 1778, at the moment when the army was in the midst of its fearful struggle with famine, pestilence, and destitution. Nothing but singular firmness of mind could have kept him from abandoning his purpose. The utmost disorder prevailed, and it was difficult to know where to commence the work of reform. The arms of the soldiers were in a horrible condition, covered with rust, half of them without bayonets, many from which a single shot could not be fired. The pouches were quite as bad as the arms. Many of the men had tin boxes instead of pouches, others had cow-horns; and muskets, carbines, fowling-pieces, and rifles were to be seen in the same company. As to clothing, the men were almost literally naked, some of them in the fullest sense of the word. The few coats which the officers had were of every color and make. On occasion of a grand parade several were obliged to mount guard in a sort of dressing-gown made of an old blanket or woolen bed-cover. In this deplorable state of things Steuben commenced his operations as Inspector-General. It was not long before the excellent effects of his discipline became apparent, although his influence, as a foreigner, was soon regarded with jealousy, and subjected him to various annoyances. The Commander-in-chief fully recognized the value of his services, but found it a difficult task to reconcile his position with the apparently conflicting claims of American officers. This difficulty continued throughout the war, and, added

to the impetuous and uncompromising disposition of Steuben himself, proved a source of perpetual excitement, and doubtless contributed to prevent the generous appreciation of his aid at one of the most critical epochs of the Revolution. Nor after the establishment of peace did Congress readily admit the demand of Steuben for an adequate remuneration. It took no less than seven years to arrive at a final settlement, and at length he received an annuity of $2500, to be continued during life. He was now nearly sixty years of age, with little experience but what he had gained in the field, and too old to acquire a livelihood in a civil capacity. He accordingly retired to a tract of land in Oneida County, New York, some twelve miles from the present city of Utica, which had been granted to him by the State Legislature. Here he regularly spent the summer months, attempting to subdue the stony soil of his farm, and dispensing his gifts with a liberal hand to the Revolutionary soldiers who needed his assistance. In the autumn he would return to New York, to spend the winter among his old acquaintances. Four years thus glided away when he was suddenly attacked by paralysis, which in less than three days put an end to his life, November 28, 1794.

In his elaborate biography Mr. Kapp has done ample justice to the memory of Steuben, and, at the same time, thrown new light on many passages of our Revolutionary history. After perusing his narrative no one can doubt that the advent of Steuben was at a fortunate moment for the success of the American arms. His integrity, good faith, military enthusiasm and capacity, no less than his zeal in the cause of freedom, are fully attested by unimpeachable evidence. He was equally bold in action and punctilious in discipline. His courage was exhibited in many a scene of imminent peril; he never failed to place before his troops the soldierly example which he urged by his counsels; and though austere and unyielding on the parade, his generous and kindly nature was conspicuous in the eyes of the whole army. He certainly failed to secure the admiration and love which waited on the illustrious career of Lafayette, but his name will be held in grateful remembrance by the nation, whose liberties he helped to establish. Mr. Kapp has injudiciously, we think, attempted to cast obloquy on the fame of Lafayette—an attempt which will find no response in the American heart.

The Life of North American Insects, by B. JAEGER. (Published by Harper and Brothers.) The most striking feature of this attractive volume is the almost child-like *naïveté* with which the author discourses about the habits and character of his insect favorites, as if he were taking you into his confidence with regard to the peculiarities of certain personal friends. He is sometimes, no doubt, a little garrulous, but this is easily pardoned to his love of nature and of every living thing. He discourses both wisely and freely on the varieties of beetles, grasshoppers, butterflies, mosquitoes, and so forth, with which he has become acquainted in this country, and often draws interesting comparisons between their history and what he has noticed of similar insects in strange lands. His descriptions aim less at scientific technicality than at popular effect, and apart from the value of their information are rich in entertainment.

The *Last of the Mohicans* is published in W. A. Townsend and Co.'s splendid library edition of Fennimore Cooper's novels, with Darley's characteristic illustrations. This new impression of the works of the great American novelist as it advances satisfactorily fulfills the promise of its commencement. Mr. Darley has admirably succeeded in reproducing the spirit of the author, and given a fresh interest to the narrative by his masterly designs.

Speeches, Messages, and other Writings of the Hon. Albert G. Brown, edited by M. W. CLUSKEY. (Published by James B. Smith and Co.) The publishers of this volume announce the intention of issuing a series of the speeches and writings of several of the most eminent public men of the United States. In the present volume a judicious selection has been made from the productions of the distinguished Mississippi Senator, which can not fail to be read with interest by his constituents and to increase his national reputation. A compact memoir of Mr. Brown forms an appropriate introduction to the work.

More about Jesus, by the Author of "Peep of Day." (Published by Harper and Brothers.) In this little volume the writer has aimed to furnish parents with a useful aid in the religious instruction of their children. It consists of a series of brief narratives, founded on historical passages of the New Testament, and accompanied with questions adapted to the comprehension of learners from eight to sixteen years of age. The most recent and trust-worthy authorities have been consulted for the description of Oriental customs, which are also illustrated by a profusion of appropriate wood-cuts.

A Treatise on the Theory and Practice of Landscape Gardening, by the late A. J. DOWNING, with a *Supplement*, by HENRY WINTHROP SARGENT. (Published by A. O. Moore and Co.) The wide circulation of the previous editions of this work has given a powerful impulse to the progress of ornamental gardening in the United States. Mr. Downing was no less remarkable for his severe practical sense and his sound judgment in the recommendation of details than for his enthusiasm for rural embellishment. His writings have, perhaps, contributed more than any other cause to enlightening the public taste and giving a wise direction to the zeal for improvement in gardening and architecture. In the present edition of his standard work Mr. Sargent has given an interesting account of the progress of this branch of rural economy since the death of Mr. Downing, with a variety of original directions and general historical notices.

The Romance and its Hero, by the Author of "Magdalen Stafford." (Published by Harper and Brothers.) With no pretensions to an exciting plot or to far-fetched incidents, this novel wins upon the reader by its natural delineations of character and its pleasant and unaffected narrative.

Science and Art of Chess, by J. MONROE. (Published by Charles Scribner.) The principles of the game of chess are here explained in a novel and lucid manner. The writer evidently possesses a thorough acquaintance with the subject, and a happy talent of communicating his knowledge by acute analysis and forcible illustration.

Ticknor and Fields have increased their list of gold and purple duodecimos by the issue of *Motherwell's Poems*, with a biography of the author. Many of his sweet and tender lyrics are already familiar to readers in this country, who will gladly extend their acquaintance with one who possessed such high claims to poetic inspiration. The same house have brought out a new volume of *De Quincey's Writings*, containing a story called the Avenger, additions to the Confessions of an Opium-Eater, an Essay on China, and several other papers in the true De Quincey vein.

Editor's Table.

PULPITS AND PREACHERS.—We Americans are considered a church-loving and a church-going people. Like all generalizations about character, this is partly true and partly false; but, on the whole, it must be acknowledged that Sunday is not a dull day, and attendance on religious service not a wearisome penance to the most of our people. How far the fear of *ennui*, the love of show, and the passion for a crowd—to say nothing of the wholesome dread of that whip of scorpions, public opinion—may be concerned with our outward devotions, we leave to the cynic and semi-cynic to determine. The fact is patent enough that we go to church; that we generally pay and are paid for the going; that we sometimes go with the odds largely against us; and, moreover, that we persist in the habit with a minor sort of heroism, regardless of bad weather, wet feet, and dull sermons. No doubt respectability, custom, fashion, have much to do with it. But it is equally certain that sincerity and honest zeal are main elements in the good old usage. Nor would it be extravagant to affirm that, beneath the living tide flowing on every Sunday into our sanctuaries there is a heartfelt enthusiasm for the pulpit, and for what the pulpit represents—the gracious Gospel of God. Unlike the currents of the ocean, the warmer stream is here the lower, and the upper flow feels its life-giving virtue.

It is the part of the best motives to do the best work; but, nevertheless, inferior motives have their place in all human affairs. If men will not act from the highest motives, it is something to act on the impulse of less worthy considerations; for there is then at least some hope that the lower motive may give way to the higher, and human nature be thus lifted into a truer and nobler dignity. To attend church from conscientious convictions of duty, and because of a genuine interest in religion, is a Christian virtue; but it is a wise thing to reverence the Sabbath, and sit under the instructions of the ministry, even if the spirit is enslaved to worldliness and folly. You are the unconscious recipients of benefit. And just as many men are large debtors to the beauty and glory of visible nature who never cast a thoughtful look or exercise their poetic sensibilities on the loveliness and sublimity of creation, so those who wait on the ministrations of Christianity are insensibly ennobled. The fragrance of God's paradise, if it fail to penetrate their souls, will yet linger about their garments, and they will not quite lose the odor when they lay off their Sunday apparel.

These circumstances are favorable, as far as they go, to the success of the pulpit. Every Sabbath a multitude gather to hear the Divine Word as expounded by the preacher, and the larger part are more or less interested in the services. The few may have come for spiritual nourishment; and the majority, fixed in habits of worldly thought and feeling, may have little sympathy with the profound significance of the hallowed hour. But they are there; they are there with all their earthliness upon them; they are there with some intellectual and moral tastes, open to instruction and within reach of influence. If the vast mass are spiritually dead, they are alive intellectually and morally; they have ears that can be made to hear, hearts to be moved, consciences on the side of truth and righteousness. So far as these are concerned it is the work of the preacher to arouse the attention, to quicken the dull and listless sense of spiritual things, and, by means of his own keener perceptions and deeper sensibilities, aided by God's strength, to make Christianity an instant and living reality to their consciousness. The moral characteristics of this large class of church-goers, as seen in the light of the Divine Word, are easily defined. Allowing for differences of habit, taste, and temperament, they are all, in one respect, grouped together under the same family likeness. They are without decided religious convictions, walking after their own will, and pursuing their own selfish ends in the affairs of life. Christianity may be accepted as the religion of Christ, but it is a cold and unaffecting assent, which never penetrates the depths of the heart or rules the conduct. The relation of the preacher to these persons is one of profound interest; for it is his office to awaken their souls to a vivid appreciation of those unseen objects that constitute the grand and impressive realities of Christianity. His work is to create within them a true and hearty sympathy with these objects; to lift them out of the dimness and obscurity in which they are involved to their feeble vision, and to give them the shape and attitude of the most real and palpable of all substances; to conquer, by his own free and energetic spirit, their insensibility to the claims of truth and goodness. So far as human agency is involved in their salvation, the living preacher is to draw them within the circle of his sympathies, to lead them into a partnership with his own thoughts and emotions, to bring them to see as he sees, to feel as he feels, to act as he acts, in view of the great and glorious verities of Christianity.

Looking, then, to the mere human side of his office, the spirit of the preacher, as a source of sympathy between himself and the audience, is a point of vital significance. By that spirit, we mean more than a state of mind in general keeping with the doctrines and experience of Christianity. We mean more than a heart of truth and love toward God; for it is obvious that his own soul may be right, in regard to personal character, in the sight of Heaven, and yet he may be strikingly disqualified for the peculiar calling of the pulpit. Sympathy with religion, as a private and individual sentiment, is one thing; sympathy with it in its bearings on others is, practically at least, another thing. The distinct feature of this sympathy is derived from the fact that he stands in the pulpit to convince, to persuade, to subdue the will and the affections to God. It is, therefore, a sympathy that involves the laws of the intellectual and emotional nature in its action on other minds. It is a sympathy that, whatever it may be in itself, must consult the art of natural and forcible expression. It is a sympathy that can not rest on mere thought and feeling, considered as the private property of the spirit; but must fully conform itself to such modes of utterance and representation as are divinely adapted to create a corresponding state of reflection and sensibility in others. Without doubt the individual experience of the preacher is the basis of this relative action of mind. But it is the foundation merely of his pulpit work. Standing there in the presence of men, and, to a large extent, holding their destinies in his hands, it is not simply what he is in his own private heart and in his personal life that decides his fitness for the solemn task confided to his care. No; he stands there as God's orator; and hence it is by the laws of the speaking mind—by the principles of adaptation to the art of persuasion—that the preacher is to be

judged. Not what the man is, but what manhood is in the preacher; what degree and force of soul can embody themselves in living words; how he can feel, look, act as a Divine messenger to his frail and erring brethren: this is the standard by which he must be tried and known.

It is easy enough for ministers of the Gospel to see this fact. But it is not so easy to feel it. Commonplace truths are often the hardest to get into the heart. They nestle in the outward eye, and persuade the facile intellect to believe that they are living things, when they are only dead images. Now, certainly the most of preachers do not seem to be impressed by the idea that the work of the pulpit is a distinct and definite work. Do they not rather look upon it as a part of an extensive piece of machinery—a prominent part, it may be, but still nothing more than a co-ordinate part of the arrangements of Providence for the recovery of man to goodness? In one sense this is true; in another sense it is false. The work of the pulpit is connected with the economy of God's mercy, as that mercy reveals itself in a vast system of means and agencies. But in another, and we think a more correct, view of its true nature and legitimate functions, the pulpit is marked off from all other instrumentalities of doing good, and occupies its own select and exclusive ground. If the pulpit be first seen and appreciated as it is in itself, reared close beside God's throne, and conveying His word to mortals, then it may be safely regarded in the inferior aspect of its connections with the general system of pious and philanthropic usefulness in the world. A preacher, therefore, ought not to enter the pulpit as he would enter on any other sphere of benevolent service. If he enters its sacred precincts in this way he may be, for aught we know, a kind, clever, good man; but, certain it is, he is no preacher. The everyday man may be amiable, genial, and devout—a good example of Christian virtues—but this everyday man must rise into the Sabbath man if he expect to stand up as a bold and successful witness for God, and convert men to the knowledge and practice of the truth. Why have any pulpit, if it is to be nothing more than a conversational fireside, a well-stored library, a drawing-room talking place of easy and familiar chat? Call this what you please, it is not Christ's pulpit. For that pulpit, according to the idea of the New Testament, is a seat of transcendent power. Around it hangs the cloud of God's special presence, and the awaiting thunders of His voice and the lightning of His eye are gathered within its folds; subject, in obedience to His sovereignty, to the bidding of the humble, honest, skillful preacher. Let us have the everyday man for everyday work; but let us have the Sabbath man for Sabbath work. The parallel is not a figment of forced rhetoric. No; it is a real, truthful, genuine parallel. The preacher is to the everyday man what the Sabbath is to this everyday working world. We need a special manhood for the day as much as we need the special sanctity of the Sabbath itself. If the preacher require the Sabbath, it is just as true that the Sabbath requires the preacher. They are one in union, one in end; and hence, if the Sabbath is born to us out of heaven, and spreads over landscape and firmament a soft and beautiful radiance such as sunshine never gives, the preacher ought likewise to surpass, in depth of earnestness, in scope of comprehension, in fullness of power, in spirituality of eloquence, all the manifested forms of intellect, language, heart, as witnessed and felt in the common intercourse of human life.

But generalities will not answer. Let us be more specific. Does the preaching of the Gospel, then, demand a special adaptation of the intellect, a special office of the whole mind? This is simply equivalent to asking whether the Gospel has any individuality. If the Gospel is characterized, as we believe, no less by its forms and modes of thought than by the thoughts themselves; if its style of address, illustration, and enforcement is as distinctly marked as the subject-matter of its appeals; if it comes to the heart through avenues that neither poet nor philosopher can ever tread; then it is apparent that the preacher who proposes to be a just and faithful exponent of Christianity must be intellectually, emotionally, suited to his work. No one, certainly, would expect a scientific man to use his mental faculties as a poet or artist. If Milton and Newton had employed their intellects in accordance with the same laws and in pursuit of the same objects, we should never have had Paradise Lost and the Principia. Had Bishop Butler and Dante observed the same methods of thought and expression, we should not now possess the Analogy and the Inferno. All of us know that a slight infusion of the poetic element into the metaphysical philosopher generally gives us the product of an erratic fancy and an unreliable logic. Nothing is truer of mind than the distinctness and jealous exclusiveness of its operations, whenever directed to different departments of study. The eye might as well undertake the offices of the ear as for imagination to assume the capacity of reason; and in all other respects the line of individuality is not more clearly drawn between the senses than between the operations of the mind in obedience to the law of adaptability. Now this is obvious enough in other connections. Science calls for the scientific mind; art requires artistic tastes, sensibilities, and talents. Even dissimilar branches of science and art demand the most marked peculiarities of mental organization and training. We have no idea that Hugh Miller would have made a great astronomer, nor do we imagine that Coleridge could have written a standard history. Blackstone had early proclivities toward poetry, and Foster tried teaching, but they both found out their mistakes and turned to fitter work. So intent is Nature on the execution of this paramount law of fitness that, by a variation in the imaginative faculty, she ordains one man to be a painter, another a sculptor, and a third a poet. A slight change in the power of the seeing eye and the constructive hand, a little more sensibility in the nerves of the ear and a fuller perception of the sense of tune, and, agreeably to the law, one becomes a Sir Christopher Wren, a second is a Thorwaldsen or a Chantrey, a third a Handel or Beethoven. The same truth applies to pulpit-mind. It is not enough that we have in the pulpit a mind of scope, earnestness, and power. Nor is it enough that we have that particular form of talent which distinguishes the speaker from the thinker, and the thinker from the writer. Not only does the work of the ministry demand the distinctive qualities of the speaking mind as different from every other kind of mind, but it requires an eloquence of its own—a mode of perceiving, stating, and applying the great and stirring truths of the Gospel and a style of expression (using the word in its higher sense) that are *sui generis* to the Christian orator.

The special vocation of the preacher is to speak to the conscience and to the consciousness of his hearers. Holding in his hands the violated law of God, he addresses the conscience as the faculty that per-

ceives the obligations of duty and summons the heart to instant and unwavering obedience. It is not the law as announced on the Mount of the desert, but that law as reannounced, confirmed, and enforced by Jesus Christ, that he urges on the attention and reverence of his congregation. Nor is it conscience as the moral instinct, with its law of nature and sensibilities to the phenomena of ordinary experience, but conscience as Christ's witness, conscience under the probing power of the Gospel with which he deals. Aside, too, from conscience, in the broader realm of human consciousness the preacher works. What a world is here! What strange and shadowy memories haunt it! What dim and indistinct visions float through it! What mysteries thicken and darken through all its thoughts and images! How many voices are here that speak in unknown tongues! How many fragmentary syllables as of words torn asunder in the strong convulsions of the spirit! How many yearnings that long for guidance, and prophecies that ask for fulfillment! Far down in the depths that the daily intercourse of life never sounds, what pathos sweeps its mournful music! what strains of a lost anthem! One can not listen without emotion to the throbs of his heart; but when he hears the mighty palpitation of that other heart—not of the flesh, but of the soul—beating its strong pulses against the future, an awe comes over him that silences the outward din of life, and bows his pride and selfishness before the tremendous realities of his inward being. Were we to picture a blind eagle soaring toward the sun, driven far upward by his instinct, and yet denied the sight of that orb whose warmth played upon his eyeball but gave no image of itself, we might have an emblem of the struggling, sorrowing, wrestling mind, when it is swayed by those mysterious visitations of thought and feeling that so often startle our consciousness. To that consciousness the preacher comes, or ought to come, as a divinely-sent interpreter. Weary and heavy-laden souls are before him — hearts bowed down under the pressure of sadness, and the still sorer pressure of conscious guilt—spirits on which

> "The heavy and the weary weight
> Of all this unintelligible world"

is resting; knowing not themselves, they know not his message; and understanding not the voice within them, they are deaf to the tones calling from the Cross. What a work is this, to give clearness and significance to the language of our better instincts! Men have been who have restored dead languages, and evoked their meaning in living words. Men have given import to the hieroglyphics of Egypt, and in other lands the mystical inscriptions over temple-doors and on temple-altars have brought to us the fancied utterances of heathen gods; and far down in the ancient strata of the earth the lost dialect in which Nature used to record her expectations of the coming of Man, and register her hope of the dwelling of God within her own Paradise, has been deciphered. But what are these compared with the symbols within the heart? Where are the types like these? Where are there such hints, such intimations, such harbingers of things great and high, worthy to be known and needing to be felt as the familiar pulses of daily existence? None but Christ's preacher can fulfill this sublime task. None but he can have the companionship that encircles our spirits—the all-penetrating insight springing from tenderness and subtlety of sympathy—the oneness with our toil and tears, which are essential to the noblest office one can perform for another; viz., *giving us to ourselves.*

The practical problem, therefore, for the preacher to solve is to reach the conscience and the consciousness of his hearers. To act on these is his calling. To touch their secret sources, to quicken them into vitality, to put men in close and immediate contact with them, is his divine business as an embassador from God's unseen court. The art of accomplishing this object constitutes his adaptation to the ministry of reconciliation. How, then, must he speak? What words shall he utter? We reply, let him speak the language of conscience, and let him utter the words of consciousness. It seems hard for some to understand that conscience and consciousness have a language of their own; but these persons comprehend the fact that the sense of beauty has a language peculiar to itself, and they are equally cognizant of the truth that science has its own exclusive terms. It would be ridiculous to have a select vocabulary, to be entitled "A Dictionary of Conscience and Consciousness," and it is hardly possible that any of our readers will imagine that we are advocating such an intellectual romance as this would imply; but what we do mean, and what we wish to urge home to the hearts of our ministers, is this: that addressing conscience and consciousness is plainly and palpably different from addressing the logical understanding and the sensuous imagination. You are not in the pulpit, preacher of Jesus Christ, to appeal to the abstract faculty of the intellect. Kant, Coleridge, Sir William Hamilton, can do this work. You are not in the pulpit to charm the sense of beauty. Cowper, Thomson, and Wordsworth were set apart for this mission. You are not in the pulpit to be a subtle analyst like De Quincey, to portray visible Nature with the rapt eloquence of Ruskin, to furnish abridgments, cut and fashioned to the hour, of the wonderful epic of Milton and the magnificent tragedies of Shakspeare. The specialty and solemnity of your office, preacher of Jesus Christ, shuts you out from the powers and privileges of general intellect. Use your reason, imagination, understanding, and memory; keep your very senses busy in collecting images and illustrations from the external world; store your brain with all kinds and forms of truth and knowledge; but be sure that you melt and fuse all your treasures in the glowing furnace of a genuine pulpit-heart; and, further, be sure that you employ all your faculties in one solid phalanx to act on conscience and consciousness. General action on mind is not your task. Men are not made Christians by a wholesale business. Our moral guilt, with its present curse and fearfully-overhanging judgments; the divine remedy through the atonement and mediation of the Son of God; the gift of the Holy Ghost, and the return of the soul to the favor and love of its Father in heaven—these are your themes, and they are to be unfolded, urged, applied to conscience and consciousness in the spirit and with the language that are directly, distinctly, divinely adapted to their connections and bearings.

Now we can not see why every preacher who is at all suited to his office can not acquire, in a greater or less degree, the peculiar form of mind that we have designated as pulpit-mind. First of all, let him understand that his preparation for the pulpit is a great work; let him take ample time and give ample thought to his discourse; and let him particularly remember that it is not profound thoughts, logical thoughts, sublime thoughts, which are needed, but specifically and exclusively those thoughts

that constitute the staple of a genuine sermon. Just here the work of adaptation begins. Just here the preacher must sift and winnow, choose and select, fit and adapt. Many trains of reflection, religious in nature and tendency, calculated to give us grander ideas of God and to elevate our conceptions of humanity, are totally unsuitable to a sermon. The intellectual bullion can not be converted into the currency of the pulpit and circulated among the multitude. A preacher must learn the sternest sort of self-restraint here, and be closely watchful lest he mistake his own interest in truth for what is adapted to popular impression. If he is a man of culture, of select tastes, of strong biases in any given direction, he will be inclined to reproduce this kind of personality in the ministrations of the sacred desk. But let him beware. His private mental pleasures, his favorite pursuits, even in Biblical study, may be utterly at variance with his work in the pulpit. The first and last thing for him to feel, in the intellectual part of his preparation, is this, that it is not truth as it strikes him, but truth as suited to strike the popular mind, differing widely from his own in point of strength and degree of cultivation, that he is bound to present. How many well-meaning preachers are sadly at fault in this matter! How many conclude most unwisely that because a train of reflection, a chain of argument, a novel mode of illustration moves them, and perhaps overwhelms them with emotion, it is therefore adapted to move and overwhelm a popular audience! A sermon is designed to reach the hearer. If it is prepared with common honesty of purpose it is prepared for this end. A minister, then, is not to allow himself to seek his private gratification, or to set up himself as a standard for the audience. This is ruinous to success. No; let him know what the popular mind is, its average ability, its low spirituality, its gross and sordid earthliness, and let him prepare his work in full view of the difficulties before him. Appreciating the peculiarities of his position, alive to the touching tenderness of his trust, oblivious of self, dead to all motives not connected with his hallowed vocation, he will use God's truth as God's truth—as a divine instrumentality committed to human hands to change the hearts of men. A sermon constructed on these principles is not a debate with an opponent, not an abstract discussion, not an elegant essay, not a prose poem, but simply, thoroughly, heartily, a sermon, speaking the language of one sinning, sorrowing, struggling soul to other souls, and pouring forth, in warm and blessed words, the sentiments and feelings of a fellow-thinker and a fellow-sufferer. It has the everyday aspects of humanity as they are related to the final issues of our being, in all its doctrines, rebukes, exhortations, entreaties. Broad sympathies, large views, comprehensive truths, generous affections, abound in all its displays of God's mercy and justice.

To place this idea more prominently and impressively before us, let us suppose a preacher reading a portion of one of Foster's celebrated Essays to his Sabbath audience. In such an extract, we have a grand outgoing of thought, sustained by strength of style and affluence of fancy. Nor is there wanting that sincerity of purpose, earnestness of feeling, and scope of statement, which perform so important a part in all those profounder efforts of mind that propose the highest instructions in written literature. Or, turning to a very different type of mind, let us imagine a preacher, filling the allotted hour of the Sabbath, with one of Isaac Taylor's magnificent Essays in "Saturday Evening." Here, the philosophic intellect. the brilliant imagination, the wide historical research, the eloquent rhetoric, the whole array of faculties in a profound Christian thinker, are found. Here, too, metaphysical science, laying aside its accustomed coldness, speaks to the conscience and affections. But who could expect these Essays, however well read, to move a promiscuous throng and answer the purposes of a preached Gospel? Vain would be any such hope. Every hearer, although unable to define his impressions, would instantly feel that the power of the sermon was utterly lacking. Yielding a cordial assent to the grandeur of the intellectual display, and, perchance, deeply moved in those emotions that are intimately related to the operations of the intellect as distinguished from the more specific and intense feelings of the moral nature, he would emphatically declare that his spiritual life was not invigorated, his hungerings and thirstings after divine truth not satisfied, as the preaching of the Gospel in the happiest of his Sabbaths has fed and nourished him. And why? The richest stores of truth, yea, religious truth, the wonders of heavenly science, the gorgeous images of imagination, are all abundantly unfolded. But the specific element of the sermon—the true, earnest, living sermon, that the heart craves—the sermon as something by itself and wholly remote from the fellowship of essays, discourses, orations—the staple of the sermon is entirely absent.

Such a criticism would be perfectly impartial, truthfully just, and beyond the reach of sophistry. All men are conscious that the preaching of the Gospel is, in some way, the power of God and the wisdom of God. Unable they may be to express their precise views, but their own sure instincts teach them that when the strange spectacle of the God-Man rises before them, when all the wonderful mysteries of his birth and being throng their minds, and when, most of all, the solitary One passes by the homes he had blessed, and the haunts he had hallowed, and keeps firmly on his way to Calvary and offers himself on the cross, they feel that these sublime truths are infinitely above all logic and argument—above the cold formalities that men observe when there is no common bond between them. A writer is not an embassador from the court of Heaven. A mere essayist, a critical philosopher, are not the representatives of Christ in the proclamation of the Gospel. Doubtless these often do a divine work, but it is not the work of the ministry. "*Go ye*" into the homes of the cultivated and learned; "*go ye*" into the halls of legislation; "*go ye*" into the lurking-places of skeptical science and erudite infidelity, may have been spoken by the voice of Providence to Christian poets such as Klopstock, Milton, Cowper—to Christian essayists like Sir Thomas Browne, Mackintosh, Foster, and Taylor—to such Christian historians as D'Aubigné and Arnold of Rugby. But "*Go ye into all the world*" is not their commission. The former class, whatever its genius, approaches men on their own level, while the preacher of the Gospel, sent of God to execute a special task, and, in theory at least, anointed for His glorious mission, is clothed with the majesty of infinite truth, and speaks in behalf of the ascended Christ to the world that His blood has redeemed. The messenger borrows power and dignity from the message with which he is charged. No need has he to avail himself of the superstitions of men, or to arrogate claims that are inconsistent with the humility and self-renunciation of his office.

Let him be true to the spirit of his high credentials, and he will stand high enough in the regards and honors of mankind.

If the preacher would acquire the divine art of addressing the conscience and the consciousness of his fellow-men, he must learn it, not in the schools of this world, but in the school of Christ. The great Text-Book of the heavenly Teacher, preserving His discourses, and showing the manner in which He approached the human mind and dealt with its infirmities and sins, is open before him. "*Never man spake like this man*"—words true then and true forever. But while none may hope to approximate His wisdom, or catch the faintest tone of His voice, it is the duty of the preacher to study this perfect model, and, so far as practicable, imitate the intellectual no less than the moral character of this great Minister of the Word. Now let any man calmly set himself to the task of studying Christ's discourses. Can he escape the instant and quick-flashing conviction that he is in the presence of a new order of mind? Can he help feeling that, here as nowhere else, truth mirrors to his eye the profoundest realities of his nature? There is a marked difference between the Sermon on the Mount and the Parables; and both these are unlike the farewell discourse to the disciples. But the truest and deepest unity pervades them all. There is a thorough humanness in them. Every word is born in the heart, and carries the strength of the heart to the listening ear. How like breathing is His language! The voice of familiar life, of common scenes in the household and abroad in the world, of daily sorrows and daily joys, is heard in every utterance. And why may not the preacher speak, in some humble measure, like his Master?

In this age of doubt and darkness whither shall we turn for guiding light and inspiring hopes? Literature is doing a great work. Philanthropy is reforming old abuses and securing new blessings. Education is becoming more and more auxiliary to Christianity. But the pulpit is still and forever the throne of the moral world; and to it men must look for the sceptre that rules the destinies of mankind. Preach the Gospel rightly, and every thing will come right. Preach the Gospel, and skepticism, pantheism, and heathenism will get their death-blow. Preach the Gospel, and the tabernacle of God shall indeed be with men; and its far-stretching folds, like a new firmament gathering the nations beneath its blessedness, shall be resplendent with the glory of Christ.

Editor's Easy Chair.

THEY have come again! This morning they were singing every where in the budding boughs. The trees are not yet in leaf; and where they are clustered their branches look at a distance like a mist of quick, delicate green. But with the first song of the first blue-bird or song-sparrow comes the old feeling—the old and ever new—the feeling that is the earliest and latest recorded in books, which keeps us all fresh and sweet in the midst of passion and prejudice.

All through the meadows and up and down the hills the birds were singing this morning. How full and tenderly sweet was the sound! How gently it fell upon the ear and the heart, too, like a warm south wind made audible! Twee! twee! twee! they chirp, they carol. Before the old psalmist exhorted them they were in full choir, and every green thing *was* praising Him in the gush of song on every spray. What a completion of nature! What a resurrection from the long death of silence into the life of sound! If the song of the early birds came floating in through the open window upon a domestic dispute, can you not fancy it hushed in a moment—unconsciously rebuked by the viewless voices of God that fill the spring morning with music? If a man were stealing along to some dark deed through the sunlight and fresh air, can you not imagine his heart melted in the melodies of the birds?

Are not the birds and the flowers upon the earth what the stars are in the sky? What, then, should we think of energetic people who climbed up somehow to extinguish the stars, and called it sport? What should we think of great lumbering louts going about in May through the green woods and the gay meadows, and carefully trampling down the flowers? Should we not say that brutes were gentler; or, if destructive, ignorantly so?

Will somebody please explain how it is more manly, decent, or tolerable that human beings, for whom this splendid spectacle of the year is unrolled—the earth adorned and the sky spangled—should kill the birds than that they should put out the stars or destroy the flowers? Is it not just as reasonable to walk into the garden with a long stick and whip off the roses from the bush, or along the brookside and behead the lilies, as to stumble through marsh and brier to pop and bang at poor little twittering birds, or birds of exquisite song, who, as they enjoy a more conscious life, so give us a more conscious enjoyment?

The people who do this, who make the woods and fields and streams a slaughter-house, do it, as Mr. Beecher says in his racy lecture upon the Burdens of Society, "for fun." They do not even pretend to do more than gratify a whim of restlessness. Their very name shows how mean and aimless is the murder they do, for they are simply *sportsmen*. Your groves may be vocal with the happy robin; sparrows and thrushes may pour their song into your heart as you sit writing or reading in your room, or as you wander silently in the woods. But you enjoy them by permission of the sportsman. You may hear while you can, and thank your stars if the concert of the day, in which your heart kept time with the voices of the birds, is not suddenly turned into a terrified whirr of hastening wings—the frightened call of the songsters, and the sharp, angry report of a gun in the hands of something in velveteen jacket and high boots, who finds it "capital sport," and is vindicating his claim to be thought a gentleman by popping over little birds.

At this very moment there are plenty of young gentlemen who are feeling monstrously important because they are going out for a week's shooting. Fine manly youth! Fine manly sport! Generous game, in which they are only less skillful than their own dogs when tracking hares! It is a cheerful and edifying sight! Go forth, young men, upon your noble work! The finest sympathies of men and of nature attend you! This fair green globe was graced with trees, and veined with brooks, and spread with fields—this sky was hung, these flowers spring and bloom, these birds, on every bough, lilt and sing, that you may devastate the whole; silence, sound, and scene, all are destroyed by you; and you prove conclusively that you are no milksop or spooney. Undoubtedly you do. You couldn't prove it in any other way. Besides, don't you bring home the game for supper?

There is a favorite argument against every body who speaks a word for the birds. It is roundly asserted that men and women must live by the flesh of inferior animals, birds, and fish—that the universal law of nature is destruction of inferior life by the superior.

Yes, but for what purpose? The anaconda swings himself upon the running horse, or deer, or ox, or rabbit, or dog, and having consumed them, *for the support of life*, rests until hunger drives him again to his prey; and, according to the argument, any other taking of life than what the necessities of life require is unjustifiable. Moreover, if sporting is to be defended on the ground of taking life to support life, why is snuffing out a poor little bird's life sporting, and knocking an ox on the head butchery? If that were the real reason, brave young gentlemen would cut the throats of pigs and smite mighty bullocks, rather than which they would dispense with animal food.

No, the dirty business of shooting birds is not to be defended by any argument of the necessity of life to life. That necessity is subserved by the butcher, not by the sportsman—at the shambles, not in the woods; and when a man takes his gun and game-pouch it is, first of all, his own amusement, and not at all his bodily nourishment, that he has in view. The mere appearance of destroying life for pleasure, or even playing with a necessary destruction, strikes us as horrible in an animal. There is not a young gentleman about starting forth to have a little sport with the birds whose blood has not boiled when he has seen a cat having a little sport with the mice.

Of course the complacent sportsman will fall back upon Izaak Walton, the honest citizen and fisher. Well, listen to old Izaak:

"These I will pass by, but not those little nimble musicians of the air that warble forth their curious ditties, with which nature hath furnished them to the shame of art.

"As first the lark, when she means to rejoice, to cheer herself and those that hear her, she then quits the earth, and sings as she ascends higher into the air; and having ended her heavenly employment, grows then mute and sad to think she must descend to the dull earth, which she would not touch but for necessity.

"How do the blackbird and throstle with their melodious voices bid welcome to the cheerful spring, and in their fixed months warble forth such ditties as no art or instrument can reach to?

"Nay, the smaller birds also do their like in their particular seasons, as, namely, the laverock, the titlark, the little linnet, and the honest robin that loves mankind both alive and dead.

"But the nightingale, another of my airy creatures, breathes such sweet, loud music out of her little, instrumental throat that it might make mankind to think miracles are not ceased. He that at midnight, when the very laborer sleeps securely, should hear, as I have very often, the clear airs, the sweet descants, the natural rising and falling, the doubling and redoubling of her voice, might well be lifted above the earth, and say, 'Lord, what music hast thou provided for the saints in heaven, when thou affordest bad men such music on earth?'"

Bad men! Izaak? Yes; and what proves their badness more conclusively than that they call it sport to kill those singers? What would you say if those saints should take to showing their saintliness by throttling the choiring cherubim?

Nay, was it not a dove who first announced the restored earth to the human race? And yet the human race eats potted pigeons to this day!

Well, it is better, perhaps, that men should kill birds than each other. The groups that circle and change about the Chair are still full of excited discussion of the terrible tragedy in Washington. The first impulse was an absolute justification of the deed, on the ground that a man who had offended as Mr. Key had, justly owed his life to the husband of the woman he had seduced.

That first impulse is, undoubtedly, the general feeling still. Christendom, in many ways, is just as absolutely under the old Jewish practice of an eye for an eye, and a tooth for a tooth, as ever the Hebrews were. And it is not the least amazing incident in the bloody Washington story that many of the so-called religious newspapers have not hesitated to assert that what they call the curse of God upon the crime of adultery has fallen upon the adulterer suddenly and awfully.

Now Christian preaching is not especially the province of this Easy Chair, but yet as a citizen of a Christian commonwealth, and a Chair of ordinary common sense, it would like to quote certain words to the religious journals which think the adulterer was served just right, and to take a little advice upon those words.

"Ye have heard that it hath been said, Thou shalt love thy neighbor and hate thine enemy.

"But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you and persecute you."

Is not the spirit of these words the spirit of the Christian dispensation?—and if so, ought any Christian teacher, as such, to declare that whoever hates his neighbor, and shoots him who despitefully uses him, serves him just right, and executes upon him the just wrath of God?

Also, when a woman was actually taken in adultery, and the neighbors began to stone her, and the same voice said,

"Let him that is without fault among you cast the first stone," did He mean to except the people most interested, or did He mean that in a world where all are so sinful no sinner should presume to execute upon another sinner what he calls the justice of God?

In fine, do the religious papers which virtually defend Mr. Sickles for shooting Mr. Key, on the presumption that he was guilty, mean to say that Christianity is only a highly-colored metaphor, and that Christ did not mean what he said, but meant only that we should be as good as we could be, without inconvenience to the animal and lower instincts of our nature? And as science in every department is simplified, are we to understand that the moral law is altered, or receive a Christian principle made easy, for the use of sinners?

There is another very important view of this kind of justification.

A crime is committed, which, when proved, is reason enough for annulling the marriage bond; and is justification enough in the popular sentiment for the immediate and violent murder of the offender. It is by no means an infrequent crime, but is familiar to all civilized society.

But if society provides a sufficient penalty for the crime of stealing and forgery, and will not justify shooting the thief or forger—if society insists upon

judicially proving the murder, before it will allow violent hands to be laid upon the murderer, and then only with the utmost preparation, solemnity, and reluctance, and despite the sober protest of grave and thoughtful people in the State—by what conceivable inconsistency has it failed to provide a proper punishment for this other crime? It justifies the murderer in his assault upon the vital principle of social peace, on the ground that the crime which he revenges itself strikes at the very life of society. But is not society competent to its own protection? If the crime be so enormous and dangerous let society provide the surest punishment, and not virtually remove it out of the catalogue of crimes by not even frowning upon the criminal.

For, with the most exquisite inconsistency, while on the one hand "society" insists that the offender has been served right by being shot, on the other hand "society" in the form of a court of law is bemoaning the setting of a sun at noon, drawing the vail of tears over "frailty," and adjourning out of respect to the memory of the dead, with its face in a cambric pocket-handkerchief.

Now, how is all this? The man has committed a crime, or he has not. If he has not, why was he served right by being shot in cold blood? If he has, why does a court, expressly instituted to punish crime, adjourn out of respect to the memory of the criminal?

The truth is, it is *not* considered a crime, and therefore all this talk about serving him right is idle. Is there probably a club in Washington from which the knowledge of what is called his crime would have excluded the late Mr. Key? How many gentlemen would have declined his acquaintance—how many ladies would have refused to dance with him—how soon would the President have removed him from office?

If a man be detected picking his neighbor's pocket, or forging his name to a check for five dollars, or telling lies of him in a newspaper, or setting his hay-stack on fire, he is a criminal, and is criminally punished by the law. If a man cheat at cards, or billiards, or be caught jockeying a neighbor, he is sent to Coventry and exiled from the society of gentlemen.

But if he destroy the happiness of a home—if he put a man's and woman's soul in peril—if he cloud a family with perpetual shame, and nobody's body be hurt, and nobody in danger of being a penny poorer—he is a "gallant," "a gay Lothario," "a roué," "a lady-killer," "a dangerous fellow," "who knows the world," and "has had affairs," welcome to the club, welcome to the ball-room; an object of curious envy by young men, of curious interest among young women.

Bang! he is shot dead in the street; "Served him right," says the Club. "The court will now adjourn out of respect to the memory of the deceased," says the Judge upon the bench.

So long as society does not consider adultery a crime sufficiently black to be capitally punished by solemn and legal execution, why does it tolerate its hasty and violent capital punishment? Or, if it forgive exasperation in the murderer in this case, why not in all others, where he considers his rights invaded? If his rights *are* invaded, then it is the duty of society to punish the invader. If they are not, then it is a crime in any body to punish him.

"Dear Easy Chair," writes a friendly correspondent, "in your last number I observed some remarks upon what you call *Ledger* literature. Like a good many other men who perceive that the literary vehicle of to-day is the weekly newspaper, and who also observe that that vehicle must be illustrated to satisfy the popular demand, I should be very glad to hear your opinion of the proper domain of an illustrated family weekly newspaper. You know there are at least a dozen, perhaps twenty, published in New York and Boston. Please give me your views, and in so doing you will give them to the million readers of *Harper's Monthly*."

The Easy Chair complies very willingly with this request. Nobody can complain that the Chair has not always given its honest opinion of every subject it has discussed during the years it has stood in this sanctum, the centre of a busy world, with eyes, ears, and nerves all about it, and it will not begin to break that honorable rule.

An illustrated family newspaper properly claims to be an illustrated history of the current times. It undertakes to supply its readers not only with a record of the course of political movements in the world, but of all scientific, literary, and social movements. It means to mention the prominent men who control the time and impart an impulse to it—to bring home to every man the results of remote exploration and discovery—to show him foreign places and foreign life—to discuss cheerfully events in which we are all interested, and of which we are all talking; and it proposes to heighten the interest and impression of all this varied talk by pictures of those men, women, places, discoveries, and events.

Now this enterprise is not undertaken from pure philanthropy any more than men embark in the India trade, or in cotton manufactures, or in stock speculations for the good of humanity at large. It is undertaken by the proprietor, as all other business is, primarily for his own pecuniary advantage, and then for all the other possible results. It will, therefore, be conducted in the way which he thinks will most surely promote that advantage.

But then every man's character is part of his capital, so that he can not pursue his money-making without regard to his reputation, upon which, in a degree, that very money-making depends. If, for instance, the India merchant connives at the Coolie trade, there will be plenty of people who will decline to deal with him, and the merchant will, therefore, calculate whether, in the first place, he can make as much money by losing their good opinion and continuing the trade; and, secondly, whether, even if he can do so, life would not be pleasanter to him with a little less money and the good opinion of his friends and the world.

The object of the merchant, then, who engages in the illustrated family newspaper will be to make the most money he can, consistently with retaining an honorable character, and the general conviction that he understands the peculiar responsibility he has assumed.

That is to say, he admits at once that, although he proposes to give an illustrated history of the times, yet he also proposes to exercise his discretion in deciding what events he will select, since it is impossible to give them all. A subscriber, for instance, might say to him, "Look here! you promised to furnish me with illustrations of the history of to-day, and yesterday my next neighbor, in a frenzy, seized a butcher's knife and disemboweled his entire family—a wife, five daughters, seven sons, three maid-servants, a man, a boy, and the baker, who happened to be in the kitchen. He then hung himself out of his third-story window. The whole

town is ringing with it. It is an immense event. Here is your prospectus—you promised an illustrated record of the day. I demand at least ten pictures of the disemboweling from different points of view."

To this the proprietor would doubtless reply: "My dear Sir, I *did* promise you an illustrated paper of current events; but I promised in the same breath a *family* paper. Now what is a family paper? Is it not one which may be willingly read, and studied, and looked at by the entire family without injury? Is it not a paper which any parent may toss among his children, and say, 'Here, girls and boys, here's the *Weekly*. I have not looked at it, but let me see it when you have done with it.' Is it not a paper which the parent is not obliged to inspect carefully when it comes through the mail, or when he buys it of a boy, to make sure that it will not poison the minds or imaginations of his children—to assure himself that its stories are not prurient, nor its illustrations such as to fill the young fancy with fearful or improper images?

"Is not that a family paper? Well, then, how could I excuse myself to the parents who buy my paper if I sent into their homes next Saturday the representations of this horrid butchery with which, as you say, the town rings? How could it possibly amuse or instruct any body? What could it gratify but the most morbid and prurient appetite for crude horrors? What would any honest father or mother do but fling the paper into the fire at once? And what should I be doing but pandering to the same diseased curiosity and bestial appetite which sends people by thousands to stare and gloat at a hanging? My impetuous friend, I should have one account in this matter to settle with my fellow-men, as a citizen, and another with my God, as a man. And even if my fellow-men allowed that a man who pandered to such tastes could be a good citizen, I am pretty sure that my God would hardly allow me to pass for a good man.

"Besides, when I promised to furnish an illustrated record of the time, I did not promise to give every thing—which is impossible—but *to make selections;* and those selections must depend upon my self-respect and conscience. You say your neighbor in a fit of frenzy disemboweled his family. Yes; but at the same time the good old clergyman of my parish, ripe in years and virtue, softly sank away into his last sleep, surrounded by his family, whom his sweet humility consoled as it stole the sting from death. Of the two scenes I choose to represent that; and I might choose to illustrate neither.

"You will please to remember that the publisher of an illustrated family paper has a character to maintain as a man, and a country to serve as a citizen, as well as a fortune to make as a merchant. I have the honor to be, Sir," etc., etc., etc.

"Yes"—we can hear that incredulous subscriber muttering to himself—"Yes, that's all very fine, about your duties and responsibilities, and your country, and your family friendships and reputation, and the deuce knows what about decency, and pruriency, and pandering. I don't know any thing about principle, but I do know that it would pay to put in the disemboweling; especially if you just colored the blood on the under-clothes, and gave a picture of the FATAL KNIFE, with great clots of gore upon it, and a piece of the wife's apron sticking to it. 'Pon my soul, Sir, the sale would be something immense! I do believe you could push off nine hundred thousand copies. Nine hundred thousand! Why, Sir, I engage to sell a million and a half if you'll announce that a piece of the petticoats of the 'murdered young ladies will be presented to every body who purchases a copy of the paper!'"

Why, yes; so he might. But if an illustrated paper chose to give accurate pictures of incidents that are a constant part of current history in every city in the world, it might sell an incredible number of copies, and it would give away the character of the proprietor gratis. The proceeding would be indecent, but the paper would unquestionably sell, and the proprietor could truly say that he was only illustrating the life of the day.

Would not any honest man rather say, "No, no! I can afford not to publish a paper, but I can not afford to lose the respect of all generous and thoughtful men."

For nobody is bound to publish a paper; but every body is bound to preserve and promote public decency and morality.

Precisely the same argument holds against the elaborate reports of trials for licentious crimes, with which the daily papers fill their columns; and, when reproved, turn round with such deprecating innocence, and announce that their mission is to give the news; and that so long as people are not all fabulous innocent swains and shepherdesses, so long the news will sometimes be naughty.

Now, it is one thing to give the news, and a very different one to devote columns to the details of a trial whose sole interest is its pruriency. And it is a very ludicrous and absurd thing for the paper which consciously and deliberately does this to make money, and which every body knows to be acting from that motive—a very ludicrous and asinine thing to roll up its eyes and talk about public instruction and warning to youth! Why are not the innumerable trials every day occurring served up with the same unctuous detail? Is it only necessary to warn youth against licentiousness? Would the adultery trials be printed in such high colors if they injured the sale of the paper? Would the news, and the warning, and the public instruction, hold their own against a reduced demand?

The virtue of the fourth estate is very great. That part of the world must be deaf which does not believe it. But such tremendous virtue! Come, come; any thing in reason.

The result of the whole is, that the proprietor of an illustrated family paper is like every other merchant. He uses his discretion as to what, where, and how, he will sell. A confectioner does not cease to be such because he refuses to sell a certain kind of candy which is very much in demand and known to be poisonous. He says he prefers not to injure other people. "Yes," say other people, "but we know what we are about. We will take the risk of injury." "All very likely," replies the confectioner; "but arsenic is arsenic, and you shall not buy it of me. You may take the risk of your being injured by what I ought not to do; but I don't believe you will take the risk of *my* being injured by it. If I sell you a little arsenic in my sugar-candy now, by-and-by I shall put a little strychnine in it; and then a little more. No, thank you: I am a confectioner, but I am a man; I have candy, not conscience, to sell!"

The friendly correspondent will not have much difficulty in comprehending the opinion of the Easy Chair upon the subject of illustrated family newspapers. They are almost indispensable. The facility of printing, the universality of the taste for reading, the constant gratification of curiosity at a cheap

rate which they supply—all these make them universal and welcome visitors. Parents will judge of them as of all other visitors. If they find them honest, active, interesting, intelligent, and entertaining, they will ask them to call whenever they come to town. If they find them coarse, brutal, debasing, licentious, the parents may meet them in their offices and in railroad cars, to gratify their prurient tastes; but they will despise the visitor that panders to them, and those who made him a pander.

In the late month of March there was a great deal of excitement in Boston because some of the scholars at a public school, who were Roman Catholics, had been punished for refusing to read the Ten Commandments according to the Protestant version.

Let us for a moment put the boot on the other leg. Suppose a boy had been whipped in a public school in Boston or New York for declining to repeat a Paternoster, or to say an Ave Mary—suppose a boy whose parents were of the prevailing Unitarian faith in Boston had declined to join in an ascription to the Trinity—what a re-echoing row-de-dow we should have had!

But there is no more reason in requiring a Romish boy to say the Ten Commandments as they are translated by Protestants than in insisting that the Protestant boy shall say Paternosters. The citizens of Boston, whether Romish or Protestant, pay taxes to support schools in which their children are to be taught reading, writing, grammar, arithmetic, and such other branches of human science as may be determined. But the Methodist does not agree to have his child exposed to Presbyterian influences; nor the Unitarian to have his liable to be—as he deems it—perverted to Episcopacy; nor does the Romish parent mean to expose his child to the danger of Protestantism. They pay for entirely other and different purposes. And any religious instruction (of course we do not mean the moral law) is just as impertinent as it would be for a Sunday-school teacher to instruct his class in Comparative Anatomy.

It is a good thing that children should have all kinds of instruction. But no teacher has a right to devote the school-hours to the practice of gymnastics with his pupils, on the ground—which is undeniable—that exercise of the abdominal muscles is a good thing for children. So it is—but the parent chooses to select his gymnasium and teacher. He pays the other man to teach his children grammar. It is a good thing that there should be muslin curtains over the windows—but what would the head of the house say to a plumber called in to repair the water-works who should undertake to regulate the curtains?

As long as we allow perfect liberty of conscience and of worship, so long we shall have to confess that the Protestant Bible is to the Romanist a Protestant religious book, and, as such, not justly to be imposed upon his children in the public schools. We may insist upon it that it ought not to be a Protestant book—that our translation is better than the Romish—and so on. But we might as well say grace over the whole barrel at once, and insist upon it that people ought not to be Romanists. Why are we to decide for them any more than they for us?

Certainly the only fair, the only honorable way is to grant that in institutions for specific scientific purposes there shall be no intrusion of doubtful subjects. For they do most wisely and Christianly who practice what John Wesley preached in his famous sermon upon the Catholic spirit:

"I dare not, therefore, presume to impose my mode of worship upon any other. I believe it is truly primitive and apostolical; but my belief is no rule for another. I ask not, therefore, of him with whom I would unite in love, 'Are you of my Church, of my congregation? Do you receive the same form of Church government, and allow the same Church officers with me? Do you join in the same form of prayer wherein I worship God?' I inquire not, 'Do you receive the Supper of the Lord in the same posture and manner that I do?' Nor whether, in the administration of Baptism, you agree with me in admitting sureties for the baptized, in the manner of administering it, or the age of those to whom it should be administered. Nay, I ask not of you (as clear as I am in my own mind) whether you allow Baptism and the Lord's Supper at all. Let all these things stand by: we will talk of them, if need be, at a more convenient season. My only question, at present, is this: 'Is thine heart right, as my heart is with thy heart?'"

The Easy Chair must say a word, and but a word, to the many correspondents who have been so long waiting. Let it be understood that it is almost always impossible to print the letters—although they are often welcome and suggestive.

—L. C., of Columbia, California, sends a poem for the New Year, which arrives a little late.

—Bella, Alexandria, Virginia, thinks the story, "What was it?" in the March number, "horrible!" Such things, she declares, prevent sleeping. We should think it highly probable, especially if they fall very heavily.

—F. C., Ross, Ohio, insists that Thackeray, in "The Virginians," has made Dr. Franklin Postmaster-General twenty years too soon.

—A friend in Chicago, who greatly admires Thackeray, complains that in his account of Braddock's defeat, in "The Virginians," he is unjust to the Colonial troops, and makes no proper mention of the efforts of Washington in covering the retreat. The whole burden of the day, he contends, fell upon the Colonial troops, and Washington, as aid-de-camp.

—M. L. B., Rome, New York, is informed that the Easy Chair has lighted his cigar with "St. Sylvester's Eve."

—M. M., Louisville, Kentucky. The editor respectfully declines "Petty Cares."

—The Easy Chair sincerely thanks the Rev. D. W., of Covington, Kentucky, for his letter, which has remained a year unacknowledged!

—German, Northwest, Missouri, complains that a sketch called "A Christmas in Hamburg," in the Magazine for February, does injustice to his countrymen. The Easy Chair differs; for while there is a little humorous exaggeration in the article, there is no attempt to throw ridicule upon the Germans; and the effect of the sketch upon the American reader is to show how the German is a simple and

good-hearted, and, if not a very brilliant, yet a very enjoyable people.

—Miss Muff, of Lynchburg, has eaten a philopena with a gentleman, and is to give him a book. What shall she give him? asks Miss Muff. Suppose we say the Works of John Calvin, in fifty volumes—or the Poems of L. E. L., in one volume.

—Delta, New York, speculates upon "the great problem of Utilitarian Education." Yes, dear Sir, but this is an *Easy* Chair! Thanks for the letter.

—V. C. sends from California an article upon Old Bachelors, and is glad he was married before women married for establishments, etc. When were you married, venerable Sir?

—J. P. R., Bridgewater, Massachusetts, is thanked for his "Fantoccini Boy," for whom, however, the Easy Chair finds no room.

—So with F. G., Starkville, and the "Paragraph on the Seasons," which the Easy Chair has kept, in hope.

—Annie D., Philadelphia, sends a little translation of "The Professor of Signs." But the conceit is as old as Rabelais, who is fond of it.

—Lula, New York, who thanks the Easy Chair for what it said in February about unfortunate women, will understand how grateful her commendation is. For the privilege of this Chair is that it speaks not for one, but for many.

Our Foreign Bureau.

At the Bourse people talk of the war; on the street-corners people talk of the war; in the papers people talk of the war; and before this reaches the eye of our far-away readers, it is not impossible or improbable that people may be fighting out the war upon the newly-springing rice-fields of Lombardy. There are rich and tenderly beautiful scenes on those fields of Upper Italy in this April of the year. Wide orchards of mulberry-trees, with soft, velvety, budding tufts of leaves that week after week unroll and stretch out into a thousand barbed points of shining greenness; there are long lines of poplars and of lindens, with vines hanging in luxuriant festoons from tree to tree; there are broad canals of silvery water, whose banks are so old, and so grassy, and so knotted with coppices of gnarled shrubs that they look like straight rivers which God himself laid down; there are grain patches (the rice chiefest), that have an emerald hue, and that in this time are just tall enough to take their first wave in the spring wind, and to carry it and repeat it in emerald ripples till the eye loses it in the shadow of some April cloud; there are old Lombard towns that steal upon you unsuspiciously as you hurtle over the shaded roads, and presently awe you with the gaunt, grim masonry of some old presiding Lombard tower; there are hills that are steeped in a misty violet color until you bear down among them and find gray olive orchards, and white spires of churches, and bald faces of limestone cliff, and patches of heather which, in August, will be all purpled with downy bells of bloom; there are lakes so calm, so tranquil, with such soft wooded shores that it seems as if you might talk across its whole reach to the people who live yonder in the white country-house upon the farther bank, and which is repeated—campanile, and balcon, and rounded window—in the middle of the lake. And then, far away, so far that a long day's drive will not change the violet tint into the green and gray of near mountains, are jagged outlines that may be jutting spurs of Alps or Apennines—full of wealth of Carrara marble, full of old memories of battle perhaps, full of glorious beauty always.

But on the highways, as you pass, there meet you companies of soldiers, who wear white coats and speak a foreign language. In every town you enter these foreign people demand your passport, and every where they look defiance upon the humbled, wan peasantry who possess the land, and who till it with doubt and trembling. Plodding faithfully about all the lesser villages, since their daily bread depends on their labor; but having those who represent their griefs and their hopes in the little knots that gather about the church-doors or the street-corners of the towns; having others who represent their griefs loudly in the Government Chambers of Piedmont; and others, again, who spend sympathy, loudly but vainly, wherever freedom is loved or oppression detested.

Do we forget our great Imperial sympathizer, Louis Napoleon? No: there is no forgetting him; for say what we will of his oath-breaking (which every Revolutionist virtually does), he makes a large part of the present European fermentation in respect of oppressed Italy. Those who are greatest foes to him, by reason of his despotic action, by reason of his curtailment of all liberty of the press, are ready with arguments to show that his apparent sympathy is only matter of policy—that he would instigate a war for the sake of putting his own limitations to German rule as well on the Rhine as in Lombardy—that he is only a selfish, managing despot, eager to use any outcry of oppressed humanity for the sake of extending and magnifying his influence.

And shall we who see him (or seem to see him) day after day, driving out from yonder archway of the Tuileries palace, accompanied by that lovely-faced Empress of his—shall we join in the cry of those revolutionists who have just now put forth their manifesto in London, as representatives of the Liberal interest of Europe, declaring him utterly outcast, and a fit subject for assassination? Shall we adopt what Felix Pyatt says, and believe that we might achieve glorious martyrdom by slaying the Emperor?

Let us keep in mind that if there be a meanness in despotism there may be meanness in the foils to despotism; and if history shall declare that Louis Napoleon sought only personal aggrandizement, at the sacrifice of honor and of truth, let it also brand, as they deserve to be branded, those members of the Revolutionary Committee of London who, at safe distance themselves, counseled covertly the furtive assassination of the Emperor.

But all this has nothing to do with the question we have started—how far the French Emperor sympathizes with the oppressed people of Italy? Over and over we are taught that a man's active humanities may lie a long way from his home; that he may be capricious and tyrannical in his family, and yet be the source of certain outgoing charities that spend themselves on very distant objects—charities that are open to more or less of suspicion, without doubt—and yet shall we ignore them, or accept them as a certain Providential compensation for

home tyranny? At best, or at worst, character is a riddle, and must have crooked readings to interpret its harmonies, and its balance of bad against the good. It is not inconceivable that a man who should deny to Paris thinkers the liberty to utter their thought, and who should keep the iron barb of exile thrust into such a warm heart as Victor Hugo's, should subscribe liberally to the plaintive beggarhood of Lamartine, and worry himself into a Quixotic exaltation of championship when the proud Teutonic master of Hapsburg tramples so ruthlessly as he does upon the liberties of a hopeful and excitable nation.

It must be remembered too, that Louis Napoleon, with all his harshnesses of rule, is very boastful and observant of certain democratic formulas, such as wide voting; and observant, too, of certain democratic prejudices in favor of new-made men, such as Pelissier, and Walewski, and Persigny, whom he loves to thrust, with a bitter kind of insistance, upon the mouldy aristocratic prejudices of England: and all these democratic formulas and democratic obstinacies of his are nowhere so spurned as in the high Court of Hapsburg; nowhere so contumeliously ignored as in the Austrian Government of Italy.

Why not admit, then, that Louis Napoleon may have sympathies with the Lombards? The sympathies may not, indeed, spring from the purest source — not from an earnest and instinctive detestation of wrong; but surely it may be admitted that even our imperturbable and silent Emperor may have some fellow-feeling and hearty indignation for the sufferings of that crippled people of Lombardy without reckoning him a saint or a philanthropist. Believing all the harm of him that we know, why ignore the possibility of any accidental humane intent?

But a far larger reason for Louis Napoleon's coy insistance upon this Italian matter is his dread of the revolutionary tendencies of Italy. No man better than he knows that while that harsh handling of Vienna is upon the cities of Milan, and Verona, and Venice, and Padua, that the explosive revolutionary power of the peninsula is gaining force and a terribly-dangerous intensity by confinement. He knows that a liberalism which Austria will not grant is the only safety-valve. He can well afford to direct that explosive force toward the old myth of Italian unity; and would rejoice to see the Southern spirit of revolution converted into Piedmontese loyalty.

Every year that the students of Padua are narrowed to the discussion of only barren dogmas—every year that fresh young minds in Brescia and Mantua are cramped and clogged and fevered with their weary and aimless unrest—every year that a Poerio wears dungeon fetters, is a year full of upspringing protests against absolutism every where. Mazzini and his men know this; and they know further, that any imperial leadership in Italy just now will be fatal to present republican dreams.

Shall poor Lombardy endure meekly, hoping those dreams may come true; or shall she batter away for more breathing space, even at the risk of achieving something for royalty? It seems to us, looking on from this near stand-point, that no humane man can have a doubt as to how that question should be answered.

And England—whose sympathy with oppressed nationalities is oftentimes so bold and free, whose anti-slave-trade-ism is so persistent and authoritative, whose earnest liberalism is at times so radiant and demonstrative—what says England?

England is doing a capital business in these times; there is a night and day hum through all her great manufactories; she can not pile down her ships with goods enough for the new-opened regions of India; and shall we worry this fine merchant, who is coining money, with pestering talk about those shiftless Lombards and Venetians?

What says England now, when more than ever before there is occasion and opportunity to teach Austria, by brave and swift words, that she is doing a most damnable work there in Italy, and should have done with it for aye? What says she to little chivalrous Piedmont, whose sympathies are fast bubbling up into fierce, wild overflow; which little Piedmont she has so long petted and patted, and fostered all those liberal sympathies that now challenge humanity every where?

Why England, piling down her ships with Stockport cottons, says, "Don't, pray, interrupt us, gentlemen; it's a very silly thing to fight. And then, Louis Napoleon is an ambitious mad-cap; who knows what will come of it all? Besides, there are the treaties, and the Lombards are, after all, used to this sort of thing."

It is only Doctor Antonio again, who, by his kindness and his suffering and his faith, has won some warm hearts here and there; and if he presumes so much upon the warm-heartedness as to count it an enduring lien of fellowship, is presently met by some brutal baronet who kicks him out of all communion with an oath.

The Italians are a sentimental people, and the English are a practical people; and what right have sentimental people to blubber out their griefs in the ears of practical people?

Savoyard finds his brother Lombard imprisoned in his own house, and allowed scant breathing-place and no liberty.

He says this is infamous, and he sets about finding what help he can to thrust away this foreign interloper. He is not strong enough to do it by himself, but his cousin Paris has given a half promise of assistance. Liberal England says, "It's true this Lombard is in a bad way; but we won't help him, and we won't help the Savoyard relieve him, because (who knows?) perhaps this Savoyard only wants to take possession; besides which, this cousin Paris is a subtle fellow, and possibly means to get a share himself. Upon the whole, we don't know what we can do, except to send down old Lord Cowley, and give our compliments to Francis Joseph, and ask him if he won't be so good as to take his grip off the throat of those poor devils in Italy, for a *little while?*"

If liberty and union are secured to North Italy in these days, there will be no commemorative column to Lord Derby—whatever may be decreed to Napoleon, or Emanuel, or Garibaldi.

And now let us leave our prognostics, and our office musings, and slip away suddenly for a fast drive into Piedmont, and a glance at its chief city and its chief man. There will be many travelers upon that road before many months go by. It is not a long one; forty-eight hours, or thereabout, will take us fairly to Turin; and we have a mountain to climb upon the way. A little portmanteau, a spy-glass, a passport, a note-book, and perhaps a *buffet de poche*, are all we need. Lyons is in the track, and we swim over the road from Paris thither as if wings carried us. Fortifications of Paris, hewn stone and grassy rampart, outlying houses, glimpses of river — Seine or Yonne — shining domes, among

which the Invalides and Pantheon are chiefest, slip out of sight behind us; poplars, scattered villages, long white streaks of road, where asses with panniers jog on; brown lanterns of churches; sheep lying under trees; copses, pollards, still water; men in blue shirts; plains, poplars, copses, pollards, still water again; is there any other way of describing French landscape—such French landscape as lies between Paris and Lyons (saving always the mountain gaps as you approach Chalons, and so go over into regions of Burgundy wine, where lie Beaune, and Mâcon, and the yellow front of the Côte d'Or)?

Who, except the silk buyers, stops at Lyons? Who should, with Savoy and Savoyards and the wild drive of the Mont Cenis in prospect? Would you, who live in the West, have some picture of the wild drive of Mont Cenis? Follow us, then, through pleasant Savoy villages that have their meadows, their brooks, their fringing fir-woods, and their tall-hatted idlers; follow us through rough-paved courts of Savoyard inns, reeking with strange medley of smells; follow us to the stout deal tables of small hostelries, where boiled chamois meat is smoking, while fresh horses are put to the lumbering carriage in which we are to pass the mountain. Fir-trees, and orchards, and walnut groves beyond the villages, and rising country more broken, and with brooks that have wrought ravines, and have no longer pleasant margins of meadow; rising and toiling by solitary houses, where waiting grooms stand ready with fresh teams; a yoke of oxen attached in front of the horses, and the ascent becomes serious. Zigzagging beside precipices; seeing your road of two hours back grown into a merest footpath; curses, in rolling, mellifluous Italian, out of the mouth of the Savoyard postillion mingling with the tramp and the clamp of horses, oxen, and carriage; while peaks to the right and to the left of you; the grass grown thin and juiceless, and only heather, or lichens, or perhaps an Alpine rose; a barn-like, gaunt stone house, with narrow windows, which is a hospice, and they tell you the summit is reached. March-like winds whistle around you, carrying stray snow-flakes and sharp chills. Then comes a long and swift zigzag descent; you shudder at the turnings—that mad postillion is so reckless! Rocky, barren valleys at first, and then quieter and greener ones; and precipices, and clattering hoof-falls, and the smack of the postillion's whip, and air warmer and warmer (will he overset us in this mad speed of his around the zigzags?), and hot sunshine blazing yellow on far-off cliffs of limestone, and rosy sunshine on all the snow-peaks northward and eastward; zigzag on zigzag; the leaders are positively in a gallop; and you could toss your hat into the valley-bottom, where a white brook (fed from glaciers high up) sparkles and flashes through the firs; warmer and warmer, and sight of gray olive orchards, and suddenly a great plain, so soft under the April haze, and with such mellowness of tone that you know it to be Italy.

We reckon nothing more until we are set down under the arcade of the Hotel Feder at Turin. A mouldy room in the front of the house; a window that looks out upon the old palace square. It is not the King's home we see, but an old palace, belonging to a period when palaces were half castles—a quaint, homely affair, with only a picture-gallery that is worth seeing about it; and in this gallery (if it were worth your while to look in) some of the rarest works of Albano that you can see any where. It is a large square under your window, the palace occupying the centre, the pavement scrupulously clean, and under the surrounding houses an arcade like those of Bologna or of Rivoli.

And if we ramble about under this arcade (as we shall after a quiet dinner, wetted with a flacon of the wine of Asti) we shall find old booksellers with quaint editions of old Italian poets, with song-books, with portraits of Italian patriots; and we shall see knots of men talking here and there, and soldiers passing, from time to time, with a hurried and business-like air, as if war were astir. And if you listen to talk (having ear for the *dolcezza meravigliosa*), you will hear brave and heated words about Cavour, and Marmora, and Verona, and the Austrians; very much doubt of England, perhaps; somewhat of France; but none at all of Italian capability and Italian destiny.

There are fewer marks of antiquity than a stranger of the West might look for in the city of Turin; there are streets of modern largeness, long vistas of houses of uniform architecture, and great array of columns and of artistic foppery.

King Emanuel (easy to be seen in carriage or on horseback) might be a "good fellow" at your club; not intellectual of look; but ease-loving, and with great stock of *bonhomie*.

The Count Cavour, however, is the man who will be looked after with most interest; and he may be seen any day in the Piedmontese Chamber. Not fifty yet, and a man of middle height, wearing spectacles, and somewhat of sarcastic, keen expression about the mouth that might remind one of M. Thiers.

We go on to quote from a careful observer:

"The Count has all the carelessness and self-confidence of a man born to a considerable fortune, and to whom power is not a means of insuring respect, but of employing his talents in the service of his country. At the Chamber, on ordinary occasions, the First Minister of Piedmont somewhat resembles the intendant of a rich family giving a plain and simple account of his stewardship. He seems, when speaking, to be conversing with such or such a member, such or such a party, and gives, in the most unornamental style possible, explanations of his views or conduct, always listened to with interest. Being a man really well versed in every thing relative to government, and particularly to what concerns Piedmont, he is always ready to provoke discussion in order to explain every thing clearly. In the Piedmontese Chamber the deputies, in general, speak from their places, and the Ministers reply in the same manner. The Ministerial bench, which is of a circular form, is placed opposite the tribune, as it is in France, with the back turned to the assembly. Count de Cavour, sitting carelessly with one leg over the other, seeing and hearing every thing, has all the appearance of attending to nothing. But should any thing be said which relates to him personally, or to his department, he is up in a moment, and fixes a magnetizing look on some unfortunate deputy, appears to address him alone, and to crush him with his arguments. At other times he becomes animated, turns to one side, then to the other, and cries, gesticulates, and almost menaces. And when an opposition member has spoken, and at the moment when a vote is about to take place, the President of the Council hurries about the assembly, supporting one waverer, enlightening another, and rallying his partisans by his attitude and gesture, like a general bringing up his squadrons. But when the subject is a really serious one, and when the Count

has to ascend the tribune, he is no longer the same man. His phrases then become studied, and his voice sonorous; his ideas are brought forward with order; his oratorical gestures are united with a well-depicted emotion; the statesman unvails himself to the full extent of his views; and the transfiguration is complete and worthy of admiration."

In full sight of Turin (and a magnificent view may be had from the old convent yard, a mile from the city) is a jagged horizon outline of snow-capped mountains — snow-capped, at least, as late as this month of April—and the wind from thence comes down at nightfall so piercing and keen that in our room of the Hotel Feder we have kindled a blazing fire of fagots. Bartolomeo has brought in a pannier full of sticks and placed it by the hearth; he has given, besides, a dish of good English tea, and a curiously twisted tea-cake, which Mr. Murray tells us can not be found outside of the Piedmontese capital.

Bartolomeo is of a talking humor; and we encourage him. "Would Signor like to see the Egyptian collection, a very curious one; mummies, Signor, nobody knows how many centuries old, that have their own hair, and faces, and eyeballs—*una meraviglia*, Signor?" (And so it is, to be sure; for we see it afterward—hair, and dried skin, and plump full hand, of some old Pharaoh's handmaid or daughter.) But Bartolomeo is encouraged to talk politics; he has fears of being drafted for the wars.

"What wars may those be, Bartolomeo?"

"Ah, Signor, the wars with the Austrians—the beasts: we shall drive them out of Italy, Signor. It is just."

"And you fear to go to such war?"

"Fear! we don't know that word when the war comes; but *la mia madre*, a mother, *eccola*, Signor, she lives yonder, poor, and no one to help her only Bartolomeo."

So he talks, while the fagots crackle, and the harsh night-wind whistles under the arcades and around the walls of our new home in Turin.

Candles are burning beside the tea-tray, and Bartolomeo has brought up a fresh number of our gossipy friend *Galignani*.

A new opera by Felicien David; and what do we hear of it? Let us read:

"The scene is laid in the city of Herculaneum, almost on the eve of its destruction, but then flourishing in all its glory under Olympia (Mme. Borghi-Mamo), sister of Nicanor, the proconsul of Græcia Magna, whom he has invested with royal authority, and who has been crowned at Rome. The first scene discloses the palace of the Queen with a crowd of courtiers and populace displaying the various costumes of the Asiatics, Greeks, and Latians who peopled this ancient Grecian colony now fallen under the Roman sway. Two Christians have been seized by the people in the act of praying, and are dragged before the authorities for condign punishment. These are Helios (Roger), an Eastern prince who has embraced the new faith, and the other Lelia (Mme. Gueymard), his affianced bride. Olympia, who is a kind of incarnation of the spirit of Astarte, resolves to reconvert Helios from his new religion and commences a scene of seduction in which she is but too successful; he abandons his promised bride and becomes a slave to the beauty of Olympia. We are next transported to a sombre valley, with barren rocks surmounted by a rude crucifix, where the persecuted Christians assemble to worship, but they are dispersed by Nicanor and his soldiery. The chief, left alone with Lelia, declares an ardent passion for her, and, being rejected, is about to employ force, when the cross is suddenly lighted up with electric fire, and a thunder-bolt strikes the ravisher to the earth. These unlooked-for miracles seemed to create much surprise among the spectators, which was not at all decreased when they beheld a rocky tumulus open like the crater of Vesuvius, and no less a personage than Satan, *in propria persona*, starts up therefrom. The evil one speedily gives the auditory to understand that he is at war, tooth and nail, with the Christians, and commences the campaign against them by awaking the jealousy of Lelia, who has already dark forebodings of the dangers of her lover's faith, exposed to the fascinations of her beauteous rival. On expressing a wish that her eyes could pierce the walls of the 'Palais Maudit,' the demon causes the rocks to sunder, and the interior of the glittering boudoir of Olympia is shown to her, with the voluptuous queen reposing on a luxurious couch surrounded by slaves, and Helios at her feet, repeating a tender love-strain he had sung to her (Lelia) in the first act. The effect of this air, with the Oriental splendor of the scene and grouping of the figures in the back-ground, with the despair of Lelia and the menaces of Satan, in the front, forms a fine and most dramatic contrast. In the next act we find the apostasy of Helios completed; he shares the throne of Olympia, and, surrounded by the wanton pleasures and magnificence of the East, his former love and his Christianity seem equally forgotten.

* * * * * *

"In the mean time, the licentiousness of the city and its rulers is calling down upon it the wrath of Heaven, and the unheeding revelers are warned of their impending fate by a kind of male Cassandra, Magnus by name, whose admonitions are scoffed at by the Queen and her people. At length the fatal hour arrives: Vesuvius roars with the coming tempest, and Satan, quick to add to the elements of evil, spreads the horrors of insurrection through the distracted land. Terror seizes every heart. Helios implores and obtains the pardon of his outraged Lelia, and is by her borne to the skies, while the terrible volcano pours its burning lava upon the doomed city. The Queen and her adherents appear on a lofty terrace yet free from the fiery torrent; Satan 'smiles in the tumult and enjoys the storm,' while the destructive flame is advancing from column to column and enveloping temple after temple. The whole stage is now turned into a representation of one of Martin's magnificent biblical pictures representing the destruction of Nineveh, and a more imposing sight it is difficult to imagine."

If not in Turin, enjoying ourselves by these blazing fagots, we might be just now delighting our eyes with that wondrous, fiery spectacle of Vesuvius. Yonder across the square, beyond the shadow of the old palace, a street band is just now playing some favorite national air; there is a burst of loyalty in it; we see the windows open; do we hear the click of coins upon the pavement?

And is that a fire yonder, or only the red reflection of a just-rising moon on the old palace tower, on the roofs, and far away on the jagged line of the white-topped mountains?

Back now to *Galignani*, where there meets our eye this little cutting from *Punch*, being an actual advertisement in a horticultural journal of England:

WANTED, as Gardener, by a Clergyman in Yorkshire, a respectable middle-aged man to look after two Cows, Pigs, and Poultry, and to make himself useful; a single man preferred; to board with the servants

and sleep over the stables. Wages, 8*s.* ($1 80) per week, or to a Man with a Bass Voice, able to practice in the week with the singers, and to lead the church singers, 10*s.* ($2 25). Must be a member of the Church of England, and his character must bear strict inquiry. He must be a good Kitchen Gardener, and be able to attend to a small Greenhouse.—Rev. C. T., etc.

It sounds queerly, this little paragraph from free England, as we read it by the light of our Piedmontese fagot fire. Let us look after our street musicians again. We can just catch an echo of their strain. They, or English gardeners (with bass voices)—which are happiest?

Back to our *Galignani* again, from which we will read you a little argument for the mustache (out of the *Medical Times*):

"Hair not only keeps off the rays of the sun in the tropics, but it keeps in the natural warmth of the body in the Arctic regions; catarrh, bronchitis, herpes labialis, maxillary neuralgias, sore throats—to all these it is antagonistic—antagonistic, indeed, to most of those influences which have the credit for being exciters of pulmonary disorders. 'The Naval Brigade in the Crimea was most remarkable for freedom from diseases of the respiratory organs. One officer shaved off his mustache, a thick and bushy one, on rejoining his ship. The immediate result was an attack of pulmonary inflammation, which well-nigh cost him his life.' And then the cruelty of the operation itself! Let each of us landsmen reflect how tenderly we treat our chins—the careful appliances we demand to get comfortably through the daily business of shaving; and then reflect upon poor Jack's condition and appliances as reported by the naval doctor: 1, blunt razor; 2, cold water, and little of it; 3, darkness, or something like it; 4, bit of broken looking-glass; 5, rolling ship; 6, cold, stiff features from the morning watch to operate upon; 7, rage at being forced to torture himself."

And after this, mention of the arrival of the Neapolitan captives at Cork—Poerio and others—you know the story of it all; but observe, Shaftesbury and other men of kindred faith are raising sums to bestow upon them—are giving them kind and glad welcome, as they should. But Derby and Disraeli, through their accredited minister, will next week be ample and fulsome in expressions of the distinguished consideration they entertain for the tyrant who, for ten long years (without any show of reason), has held these captives in bondage. The Shaftesbury demonstration is private and exceptional, and the Disraeli demonstration official and public.

How long shall an earnest humanity be only private, and the miserable apologies for tyranny be accepted, and public, and effective?

Our fire is out.

What if we wander on in the month to come through Lombardy, kindling other fires (if need be) in Mantua, Verona, and Padua?

Editor's Drawer.

SOMEBODY says, and somebody says a very good thing when he says, that "fun should be cultivated as a fine art, for it is altogether a fine thing. Who ever knew a funny man to be a bad one? On the contrary, is not he, nine times out of ten, generous, humane, social, and good? To be sure he is. Fun is a great thing. It smoothes the rough places of life, makes the disposition fresh and rosy, scatters sunshine and flowers wherever we go, gives the world a round, jolly countenance, makes all the girls as pretty as May roses, and mankind one of the best families out."

And the devout Puritan, Fuller—a glorious old saint he was, too—said that "an ounce of cheerfulness is worth a pound of sadness to serve God with."

Or to serve man with either. Be cheerful always. Oh, be joyful! Laugh and grow fat. Be just, and fear not. Read the Drawer, and you will love and laugh; and a man who laughs and loves, and loves to laugh, will be a good neighbor and a trusty friend.

WE are nine years old to-day. This number completes another year of the Magazine, and the TENTH will begin with the number for June. Short and merry years to the Drawer they have been. The publishers say they have been years of plenty to them; but, like the Drawer, they are always asking for more. Let us begin the new year by giving them a lift. Send them on the names of all the friends you have, with the rags that are taken in pay, and so make the readers of the Drawer two millions or more, and that right speedily. The Harpers are fond of clubs. Strike them hard with one from every corner of the country. And the Drawer, always full and running over, is wide awake for something new. If any body hath any thing funny let him tell it quick, and tell it so that the Drawer can hear it. The more the merrier.

OLD Uncle John Johnson lives out in Chicago. He came from the land of steady habits long time ago, and would be right glad to see the friends he had left behind. But it was a long way to go, and he was old and stiff in the joints. He sent his son Tom to visit and bring him a full report of all the folks he once knew. Tom was right glad to make the trip, and when he got to Norwich he soon found the girls so agreeable that he forgot all about the old cronies his father wanted him to hunt up, and went back, after a month's visit. His father asked him about his old neighbor Perkins, but Tom didn't recollect the name.

"Well, how is Deacon Huntington?" But Tom hadn't seen the Deacon.

"Did you see Mr. Rockwell?"

"No." Tom had missed seeing him. And so the old man went on with his questions till he saw that Tom had been fooling him; and to try him once more, he asked,

"Did you see old Parson Noyes?"

Tom thought it was about time to have seen somebody, and answered, promptly,

"Oh yes; he's first-rate—sent lots of love—wants to see you badly."

"Oh, murder!" gasped the old man. "You little pesky fool, Parson Noyes has been dead these forty years!!"

Thomas subsided.

"ALL men think all men mortal but themselves," and drunken men think all men but themselves drunk. Jenkins was foreman of the Grand Jury in Jones County, and at the close of a week's session complained of one Mr. Nelson, a juryman, that he had been drunk every day. The Judge fined the man twenty dollars; but the jury protested that Mr. Nelson was the most temperate man among them, and for himself, he said he had not drank a drop of liquor in ten years. The Judge relaxed, and remitted the fine, and the jury then intimated to the Court that the foreman was himself the drunken man; and on inquiry, the truth came out that Jenkins had

been drunk all the week and quite unconscious the while, but imagining that sober Mr. Nelson was quite out of the way.

MAJOR JOHN WOOD was highly incensed when he heard that his neighbor, Reily, had slandered his spotless reputation. He resolved to prosecute him for slander, and recover damages if he could. But he took advice first of a *judicious* friend, who gave him his opinion in these few words:

"My rule is to fight for character and law for money."

JIM WILSON was one of the best pilots on the Mississippi, but proud of his place, and cranky. He had the misfortune to run his boat smack up against the bank, one morning in a dense fog, and could see only a little nigger sitting on a stump, munching a bit of corn bread.

"Whose place is this?" cried the pilot.

"Massa's," said the nigger.

"Well, who's your master?"

"Why de gemman what owns de place," answered the little fellow.

"You rascal," roared the pilot, "I'd crop your ears off if I had you here."

"Yes, but you ain't got me dar," shouted little nig, as the pilot backed out and escaped from the shore and the wit of the boy.

"JOHN TAYLOR, in the 'Records of My Life,' a very entertaining book, relates an anecdote of one Humphrey, an indigent London wit, who lived upon his friends, but, in return, was profuse of *invitations*—never, of course, accepted—to dine with him, and always on the same dish—'a beef-steak and *mackerel*.' A waggish friend, who had often received this invitation, in declining it on one occasion when mackerel had been long out of season, advised him: '*My dear Humphrey, change your fish!*'

"In reading this, not long since, I was reminded of a circumstance I heard Governor C. A. Wickliffe—years ago, when I was a boy—relate of Governor Letcher, both of the good old State of Kentucky, and Members of Congress together for several years. One session, on the adjournment of the House, the members were daily besieged by a little, pale, sickly beggar girl, on the steps of the Capitol, with the same plaintive petition—'Please give me a picayune to buy my mother a loaf of bread!' Perhaps no member so frequently gave her the pittance asked as Governor Letcher. One day the party to which he belonged (the good old Whigs) had suffered some parliamentary disaster, and Governor L., then one of its most efficient leaders, came out in an exceeding ill humor. The pitiable little girl was at her post, imploring the members as usual; and seeing the benevolent Kentuckian, she made up to him. 'Mister, please give me a picayune to buy my mother a loaf of bread!' The Governor was discussing the event of the day in a very excited manner, but hurriedly running his hand into his pocket, and finding a dollar, he handed it to her: '*My little girl*,' said he, '*ask your mother, as a very great favor to me, to change her diet!*' and resumed the former topic."

THE anecdote in the March number of *Harper* about the law, posted on a court-house, in regard to persons coming from the city of Charleston, recalls another in Tennessee. The southern part of the State was visited by the small-pox, and nearly all the towns passed laws prohibiting persons from infected regions from coming within their corporate limits. But the resolution passed by the town authorities of —— capped the climax:

"*Resolved*—That no person or persons coming from any locality in which the small-pox is now prevalent shall be allowed to stop, for any length of time whatever, *within thirty miles* of the town of ——, under penalty of a fine of $500, and being removed beyond the said limits!"

A WELL-KNOWN writer in the Pelican State writes us a good thing from one of his little folks:

"Wife and I were looking at some pictures in which little naked angels were quite conspicuous. She called the attention of our wee daughter to them, and remarked,

"'Lizzy, dear, if you are a good girl, and go to heaven, you will be like those angels.'

"Lizzy looked up, with a lip that told at once she didn't appreciate the promise, and said,

"'I want to be better dressed than that when I go to heaven!'"

AND a Missouri friend says: "I have a boy, and want to put him into *Harper* immortality. Well, little Joe was taught to pray at three years old—as all children ought to be—by his mother. (I have no skill in that line, and prudently left that task to the other half of myself—which is full two-thirds, by-the-by.) Little Joe had had a real burst with my boy Dick, a lad of fourteen; and when bed-time came, and with it Joe's prayer-time, the little fellow got down to the pious duty in good earnest. He prayed through his rhymes; then, 'God bless papa, mamma, and every body—*but not Dick!*' Human nature, pure!

"Again: The little logician had lost a toy, and Dick had lost a dime. They talked about rewards for finding. 'But,' said little one, 'if I find your dime, Dick, the finder gets half; but if you find my pretty harp, *you find what wasn't lost!*' Nature again!"

"How often are we 'grown-up children' put to the blush by the pure thoughts of those whom Christ has 'set in our midst!' It was not many months ago when I heard 'a mother' say 'that her dear little daughter begged her for a story one night as she was putting her to bed; and, as it was near Easter, she recounted to her daughter the story of our Saviour's sufferings, death, and glorious ascension: "And the vail of the temple was rent in twain, the dead arose from their graves, and the sun went out, and it was quite dark."'

"'No wonder, mamma; it went out to light Christ back to heaven, I reckon.'"

A BROOKLYN physician has a little daughter now in her fourth year. Her father is in the habit of using the word *instanter*. One day last week he asked her what *instanter* meant. After thinking a moment, she replied, "*Hurry up the cakes!*"

"A LADY promised her little daughter a new doll baby. As the lady passed out of the door the daughter ran after her, crying, 'Ma, oh ma! I don't want a doll baby; I'm tired of doll babies; bring me a little tiny *sure enough baby!*'"

THIS is certainly a very pretty conceit for a child:

"My little niece Bettie is subject to what is called 'stitches in the side.' This morning she stood in the

door watching the lightning which, now and then, flashed from a retreating thunder-cloud. After attentively observing it for some time, she turned to her mother, and gravely asked:

"'Ma, ain't the lightning the *pains of heaven?*'

"'Why, my daughter, what makes you ask?' said her mother.

"'Because it comes *quick;* just like those pains I have here sometimes,' laying her hand upon her side.

"On another occasion, while a shower was falling, she asked if the rain were not the *angels' tears?* I, for one, think that child will be a poet if she lives."

CHARLIE is four years old. One day his elder brother "squared off" before him, and said, "Come on, C.; let's have a fight!" C. drew himself up his full number of inches, and, with as much dignity as if he felt the full force of his position, answered, "No, *bror* Z. [brother G.], I'm not a *fighting character;* I am a *church member!*"

AN OLD ENIGMA.

THE noblest object in the works of Art,
The brightest gem that nature can impart,
The point essential in the lawyer's case,
The well-known signal in the time of peace,
The farmer's prompter when he drives the plow,
The soldier's duty and the lover's vow,
The planet seen between the earth and sun,
The prize that merit never yet has won,
The miser's treasure and the badge of Jews,
The wife's ambition and the parson's dues.
Now if your noble spirit can divine
A corresponding word for every line,
By the first letters quickly will be shown
An ancient city of no small renown.

WHEN old Squire Crane was first elevated to the dignity of Justice of the Peace, down in South-western Missouri, he knew less of law and legal forms than he did about killing "bars." It was my fortune to be a witness of the first marriage ceremony the old fellow ever undertook. The young couple stood up in the Squire's office, and the happy bridegroom desired the functionary to "propel"—to which impatient request the Justice acceded, by inquiring,

"Miss Susan Roots, do you love that 'ar man?"

"Nothin' shorter!" responded Miss Roots, with a subdued laugh.

"And you, John Kennon, do you allow to take Sue for better and worser?"

"Sartin as shootin', Squire!" earnestly responded the enamored John, "chucking" Sue under the chin.

"Then you both, individually and collectively, do promise to love, honor, and obey each other, world without end?"

A satisfactory reply was given.

"If that 'ar be the case," continued the magistrate, "know all men by these presents, that this 'ere twain aforesaid is hereby made bone of one bone, and flesh of one flesh; and, furthermore, *may the Lord have mercy upon their souls!* Amen!"

I left the office with the conviction strongly impressed upon my mind that the Squire, although not particularly posted up in the marriage ritual, had a very good *general* idea of legal forms and ceremonies.

SOME months ago you published in the Drawer certain verses said to be fragments of an unpublished poem by *Thomas Hood;* but which, I beg leave to assure you, were never *seen* by him, nor written until years after he was cold in death. In 1848 the writer of this projected a versified essay on punning, with verbal illustrations. During his moments of leisure, as certain punning ideas arose in his mind, he would commit them to verse in such form as he imagined he could use them in his essay. The writer was young and inexperienced; and, not unlike older and wiser men, would sometimes be unable to discriminate between ideas originating with himself and those received from his desultory reading. Further than two or three unintentional plagiarisms arising from this cause, the verses alluded to were original with the writer of this. The only manner in which he can explain their appearing in the Drawer is by supposing some one of the many to whom I loaned my Commonplace-Book took the liberty of transcribing them, and of forwarding them to you. You also expressed a desire to have further fragments of the same poem; and as I have "all there is in the market," I herewith send them to you. The essay was never completed, the writer having outgrown his incipient attack of poesy before he had the opportunity to perpetrate any more bad puns. The verses, as I find them in my Commonplace-Book, stand in the following miscellaneous order, or rather disorder:

Although we find most words to mean
The same by sound as sight,
Some mean according to their mien,
So mind and write them right.

Thus plains are never planes, 'tis plain,
No more than hares are hairs;
And belles are never bells we know,
And fares are never fairs.

A sea-horse is a sea-horse when
We see him in the sea;
But when we see him in the bay,
A bay-horse then is he.

Of course a race-course is not coarse;
A fine is far from fine;
And though a mine a mine must be,
It is not therefore mine.

Although a night is not a day,
And differs from it quite;
Yet still it happens, odd enough,
A dey's sometimes a knight.

A river, when its current moves
With rapid speed along,
Is said most properly to be
A stream both fast and strong;

But when with thick-ribbed ice 'tis bound,
And speeds along no longer,
Its waters then, though motionless,
Are faster still, and stronger.

Some words if spelled out by their sound
Would seem but duplicates
Of sundry letters strung in rows,
At random, by the Fates;

Others again, like fabled books
On the enchanter's shelves,
Contain, in simple potency,
A spell within themselves.

Thus X T C, and N T T,
And L E G we view,
Are spelled in this quite simple way,
And X L N C too.

In others, not a letter has
The sound it ought to have;
And seem mixed up as if to look
Like Chance's autograph.

And thus in eccentricity
We see some several *c*'s;
Also in coefficiency;
But not one *c* in seas.

Nor are there *i*'s in human eyes,
But *e*'s there are in ease;
And in hubbubbubbubberous
The *b*'s are thick as bees.

Some cabalistic words have power
To bind one's foes in fetters;
No wonder there's a charm in words,
When there's a spell in letters.

A pun's a word that's played upon,
And has a double sense;
But when I say a double sense,
I don't mean double cents.

As thus: A bat about a room
Not long ago I knew
To fly; he caught a fly, and then
Flew up the chimney flue.

But such a scene was never seen
(I feel quite sure of that)
As when, with bats, all hands essayed
To hit the bat a bat.

To make a pair two pears it takes;
If ciphered out with care,
You'll find each pair, though worth two cents,
Is but a cent a pear.

If one were ridden o'er a lot,
He might his lot bewail;
If on a rail, most likely he
Would rail against the rail.

A certain knight whene'er it rained
Gave to his horse the reins,
And rode at random on the road,
Heedless of neck or brains.

The captain gave the mate a rope,
To carry up aloft;
And though he took it up aloft,
It was not up a loft.

Another one was sent aloft,
A certain rope to bend;
And then, because he missed the rope,
They gave him the rope's-end.

* * * * * *

'Tis *pun*ishment for me to pun,
'Tis trifling, void of worth;
So let it pass away, just like
The dew that's due to earth.

Not Tom Hood.

These are the verses, Mr. Editor; and if any other person can produce them from any other source—either Thomas Hood's or any other person's published or unpublished poems—he can take one of Genin's best from your humble servant, provided he can discover who he is.

A very pleasant correspondent says:

"There is an incident connected with the life of our great statesman, Daniel Webster, which I never have seen reported, but, as I know it to be true, and it illustrates one phase in his character not often presented to the world, I will tell the story as it occurred.

"The year 1850 I passed in Plymouth, Massachusetts, making my home at the 'Samoset,' the house for a cool breeze, a social chat, and a quiet home. Parker and Tribou were the proprietors. I can almost hear 'Jim' trotting through the hall, his tireless tongue keeping time to his flying feet. He is in the 'Astor' now.

"Mr. Webster's residence, at Marshfield, was about ten miles distant, but here he often came to meet his personal and political friends, and in the summer months it was his favorite resort, and often we had him for days together, an ever-welcome guest. Here he seemed at home. Here we forgot that he was the statesman, but we can never forget that he was a social and agreeable gentleman. His table-talk, his twilight conversations, will ever be remembered by those who were fortunate enough to enjoy them.

"Fishing along a beautiful brook, winding through the forest of scrubby pines that covers the country a short distance from the bay, was his morning recreation. Dressed in his never-failing blue coat, with gilt buttons, his memorable straw-hat, and his long rubber boots, he presented to a stranger the appearance of any thing but the godlike.

"The stream he loved so well was famous for trout, and he was famous for *not* catching them. Often he would sit for hours on a moss-covered stone in a retired nook, his line dangling in and above the water, but never a bite; and if there had been, the fish was safe, for he was entirely unconscious of all around and about him. One warm and sultry morning in July, while thus absorbed, he was aroused by hearing from over the stream,

"'Hullo, there! hullo, I say! How are ye? Nice morning this! Got any fish? have any bites? How d'ye get over there? I've been fishing two hours; nary bite. I see you have long boots on; what'll you take to carry me over? don't want to get my feet wet. I'll pay you well; what'll ye take?'

"Here he paused long enough for Mr. Webster, who had all this time been surveying the speaker (a slight-built, dandified youth), to ask,

"'What will you give?'

"'Well, a quarter; that's 'nough, ain't it?'

"'Well, yes; I suppose it is.'

"So, quietly laying down his rod, he took his way to our Boston boy, Joe D——, who, by-the-way, was as good a fellow as ever sold tape; he was now on a three days' furlough and bound to crowd all the fishing, sea-bathing, and sight-seeing of a season into the allotted three days' time, and one was rapidly passing away. Mr. Webster seated himself on the bank; Joe mounted his shoulders, and, like Cæsar whom Cassius from the raging Tiber bore, so Joe upon the godlike shoulders safely crossed the stream. The quarter quickly changed hands. Mr. Webster quietly settled into his accustomed seat, while Joe, on further pleasure bent, hastened up the stream. Tired and hungry, he returned rather late for dinner and passed into the dining-hall, where the guests were engaged in the last act of the drama.

"Our Bostonian, however, fell-to with an appetite sharpened by his morning exercise, and with a full determination to make up with speed what he had lost in time. So intent upon his own affairs was he, that he took no notice of those around the table until some one requested Mr. Webster to relate his morning adventures.

"Joe looked up, and following with his own the direction of all other eyes, he beheld his morning *Æneas*. Turning to his nearest neighbor, he asked,

"'Who is that?'

"'That! why that's Daniel Webster.'

"He found no further use for his knife and fork, and was silently leaving the table, when Mr. Webster saw and recognized him; with a look or a nod (Joe could never tell which) detained him, and requested him to take wine. He took the wine with a trembling hand, and, with a look of earnest entreaty, begged Mr. Webster not to relate the circumstances which occurred in the morning.

"Mr. Webster replied, 'You should not be ashamed of the adventure, since there is no young man in the the country, however lofty his aspirations, that will

be likely to attain the position you this morning occupied.'

"Joe left the table, the house, and on the first train left town, satisfied that he had done enough for one season. In the evening Mr. Webster related the whole affair to the assembled guests, and to this day Joe enjoys the sobriquet of 'Dan.'"

"JUDGE J——S, formerly of East Tennessee, but more recently a resident of Mississippi, was an eccentric man, of very marked and peculiar character. A man of pretty good education, he had filled many public stations. A giant in stature and symmetrical in form, his personal appearance was really striking. *Egotism* was the prominent frailty of the Judge; and he had contracted a notorious habit of shooting 'the long bow,' especially in all narratives concerning his personal strength and his individual exploits. As a specimen of his habit in this respect, I write for the Drawer (almost in the words of the distinguished gentleman) the following singular story, which the writer has heard him relate more than once. Addressing a group of rustic auditors, the Judge said:

"'I do suppose, gentlemen, when I was young, I was by far the strongest man in all Tennessee. When I was twenty-five years old I went to a Company muster one day, at an old ruined mill site. Lying on the green sward was one of the largest mill-stones, partly embedded in the earth, which the eyes of man ever rested upon. After the training was over, the men were experimenting to see whether any two of them could raise this mill-stone. They made many efforts without moving it. The stone was such a huge one that a man could scarcely grasp the diameter by extending both arms to the full extent. At length a young man, a neighbor of mine, who had some knowledge of my amazing strength, bet ten dollars that there was a *single man* on the ground who could raise the stone clear of the earth by his own unaided strength. *I* knew who the young man meant when the proposition was first made, but I said nothing until the bet was arranged. When I was indicated as the person who was to perform this astonishing feat not a soul would believe its accomplishment was possible. Bet upon bet was made, five to one, that I would fail. I pulled off my coat, rolled up my sleeves, and calmly waited until the bets were all set and the stakes put up. The men formed a circle. I confidently advanced, well knowing my great power. Reaching across the stone with difficulty, I "grabbled" the earth away until I got my fingers well fastened to the under side of the stone. Then, planting myself in proper position, and extending my legs, and exerting *almost* all the astonishing powers Nature gave me, I pledge you my word, gentlemen, that the mighty mass was elevated a foot above the surface of the ground, to the great surprise of the multitude!'

"'And you really lifted it clear of the ground without assistance?' inquired a 'doubting Thomas.'

"'Yes, *Sir!*' emphatically replied the Judge; 'but I am free to confess that *the effort sunk me up to my knees in the solid earth, and I saw five millions of stars!*'"

"IN 1844, under the Provisional Government of Oregon, when all that portion of Uncle Sam's dominions west of the Rocky Mountains composed one judicial district, and 'Hez' was Judge and your humble servant Sheriff thereof, his Honor had occasion one day to fine a party litigant ten dollars for contempt of court. Now, as none of us had seen such a thing as a 'mint-drop' since we left the white settlements on the other side of the mountains, and as beaver-skins and wheat were, at the time, the legal tender of the country, we all considered the fine a mere matter of form—a proceeding on the part of his Honor to keep up appearances, and to sustain the dignity of his court. Very much to our surprise, however, the party aforesaid deliberately walked up to the clerk's table, and after unfolding divers and sundry pieces of buckskin, brought down on the table a bright glittering eagle with a slam that made it dance and ring again.

"The dignity of the Judge evaporated in a broad grin, the clerk was evidently taken by surprise, and the by-standers, one after another, subjected the coin to all sorts of tests—such as ringing, tasting, feeling, clipping, etc.—to satisfy themselves that it was a *bona fide* piece of money.

"In the evening a consultation was held among the officers of the court and the members of the bar as to the proper disposition to be made of the fine. The statutes of Iowa—then the supreme law of the land—were consulted, but to no purpose. The clerk insisted that he had a right to retain possession of the money; the attorneys argued with much warmth that it ought to be divided equally among the members of the bar; I modestly hinted that I thought the sheriff was the proper person to take charge of all fines until some provision was made by law for their disposition. The matter, however, was finally disposed of by his Honor, who decided that, in the absence of any law upon the subject, he would *appropriate five dollars of the money to buy a pair of pantaloons for the Judge, and with the remaining five dollars he would purchase a blanket for the Court!*"

STALE jokes, but well preserved, are served up by a correspondent who insists that wit, like wine, improves with age. He cites the following examples:

"Counselor Garrow, during his cross-examination of a prevaricating *old female witness*, by whom it was essential to prove that a *tender* of money had been *made*, had a scrap of paper thrown to him by a counsel on the other side, and on it was written:

"'Garrow, submit; that tough old jade
Can never prove—a *tender made!*'

"MANNERS, first Earl of Rutland, soon after his creation, told Sir Thomas *More*, when that great man was made Chancellor, that he was too much elated with his preferment; and verified the old proverb, '*Honores mutant* MORES.'

"'No, my lord,' said Sir Thomas; 'the pun will do much better in English—"Honors change *manners.*"'

"A PAINTER was employed in painting a West Indiaman in the Thames, on a stage suspended under her stern. The captain, who had just got into the boat alongside to go ashore, ordered the cabin-boy to let go the *painter* (the rope that held the boat). The boy instantly went aft and let go the rope by which the painter's stage was held. The captain, angry at the boy's delay, cried out, 'Confound you for a lazy dog! why don't you let go the painter?' 'He's gone, Sir,' replied the boy, '*pots and all!*'"

A FRIEND in Chicago, Illinois, sends us the following: "As many good things are got off in Indiana Street, Chicago, as in most avenues of its length and breadth, and our friend Howe is responsible for his full share of them. However, at the close of an

evening recently, during which he had been unusually taciturn, as he took up his hat to leave, a rising young lawyer from Virginia remarked to Howe that he had said nothing new during the whole evening.

"The only reply was a bow to the party, and the words, 'Good-night!'

"'Well,' said the lawyer, 'that is nothing new. I dare say that Adam said "Good-night" to Eve.'

"'No,' rejoined Howe; 'he said, "Good Eve."'

"Young Virginia acknowledged the corn, and took back his compliment."

This is true to the letter, and as natural as life: A constant reader of the Drawer writes of one of the boys, who came home after having a glorious time in the puddles—his face all aglow, and his rubber-boots full of water. The punishment of staying in the house for the remainder of the day did not seem very great at first; but as his little heart warmed with the recollection of the triumphs of the morning, when he had waded deeper than any of his playmates dared to, he could bear the restraint no longer, and went to his mother, saying, "Please, mother, whip me and let me go out again!"

It has been a disputed question with moralists and philosophers in all ages as to whether a truly happy man could be found—one perfectly contented with his lot, and what it takes to make a happy man. These questions have been solved at last by "Billy K——," of the City of G——, in the Scioto Valley. "Billy" has been for a long time a resident of G——, and by economy and moderate industry has acquired property worth about seven thousand dollars. Billy is ready at all times to enter into a discussion on the subject of philosophy, law, history, or theology; and on all these questions he can give "an opinion as is an opinion." While conversing on the subject of riches and poverty, he remarked "that he considered great wealth as a curse; it made a man proud and overbearing in his demeanor, and forgetful of his duties to society, and his wealth would most probably be an injury to his family. On the other hand, extreme poverty was by no means desirable; a man might lose his health, and become a charge on the charity of his friends. In fact, he had thought much on the subject, and had come to the conclusion that the happiest man in the world was one who was worth about seven thousand dollars!"

His auditors smiled risibly; and when Billy was gone they agreed that he was certainly a happy man, and that self-conceit could go no farther.

An episode in the professional career of an eminent jurist of Pennsylvania, late a Judge of the Supreme Court, deserves to be rescued from oblivion. Soon after his admission to the bar he had occasion to go to Williamsport to argue his first case. As he was pacing the deck of the canal-boat on which he was journeying, he encountered a group of three substantial, rustic-looking persons, who were deeply engaged in discussing the merits of an important lawsuit which had recently been tried. Fresh from the study of Blackstone, and believing himself to be the embodiment of legal learning and the incarnation of juridical science, he joined the group, and straightway proceeded to enlighten the party as to the law bearing on the case. The opinions which had been advanced he dogmatically pronounced to be erroneous, and contrary to law, reason, and precedent. His auditors listened with profound attention until he had finished his harangue, when one of them quietly informed the speaker that, from his discourse, it was evident he was ignorant of every principle of law—civil, common, and statute, written or unwritten. A second added that he knew nothing of the rules of logic, as was apparent from his defective style of reasoning. The third listener stated it as his conviction that the intruder was also destitute of common sense. Exasperated by such uncomplimentary remarks, the legal aspirant abruptly left the group, and resumed his promenade on the deck of the boat. Chancing to meet the skipper, he inquired if he knew those three old chaps who were talking together; adding, with considerable asperity, that they were the most stupid set of blockheads that ever lived.

"Those three old chaps, Mr. K——," responded the ancient mariner, "are the Judges of the Supreme Court, on their way to Williamsport, where the court opens to-morrow!"

Mr. K—— did not make his *début* in the Supreme Court at that session, but postponed his appearance to a more convenient season.

The specimens of native American literature that sometimes find their way into the Drawer are amusing, if not creditable to our national reputation for the general diffusion of knowledge. A Southern correspondent writes that an adventurer from parts unknown recently made his appearance in the village and posted the following advertisement. He sends us the original copy:

CONSORT TO BE HELD

in the room ladely ocupied by mr brigler in frankling October the 19th 1858 there will be a choice celection of music played on the german C flute the music consists of lilley dale Washington grand merch O come come a way Hail Columbia Happy day the girl i left behind me with a celection of sacred music thare will be vocal music also the music will be sweet and impresive with great Melody thare will be a lecture on schriptural obsurvevations with a sketch of the early History of genny Lind performance to commence at early candle light

Admitance 12½ *Cents*

By Proff H Beaver

A Baltimore correspondent writes to the Drawer:

"The following epitaph, written by 'Poor Jerry' himself, many years ago—alas! I knew him well—I now copy from a 'country church-yard:'

"'Here lies poor Jerry,
Who always seemed merry,
But happiness needed.
He tried all he could
To be something good,
But never succeeded.
He married two wives:
The first good, but somewhat quaint;
The second very good—like a saint:
In peace may they rest.
And when they come to heaven,
May they all be forgiven
For marrying such a pest.'"

In one of the Baltimore schools the boys were reading from one of their class-books a story of noble revenge. It told of two lads, Philip and Robert, of very opposite characters. The first was kind and forgiving, while the other was irritable and selfish. Philip was walking out one day, carrying in his hand a cane, a present from his father, which accidentally falling from his hand, fell upon a pitcher filled with water belonging to Robert, who, not list-

ening to Philip's apology, seized the cane and broke it in pieces. Little Philip, instead of resenting the injury, passed on. Some time after this Philip found Robert lying beneath a heavy log which, by some means, had fallen on him. Young Philip very kindly lifted the log from his old enemy, and assisted him up; thus returning good for evil.

"Now," said the teacher, "see, boys, what a noble little fellow Philip must have been! What would you do, Johnnie," asked the teacher of a bright-eyed little fellow who seemed interested in the story, "were you to have your cane thus broken by another boy?"

Little Johnnie arose from his seat and doubled his fists, while his eyes flashed, and said, "*I would lam him so bad he couldn't stand!*"

Human nature in its worst variety.

DURING the Presidential campaign of 1856 General A——, of Tennessee, who had all his life been a warm and zealous Whig, and was noted for his eloquent appeals in behalf of his party when upon the hustings, found himself very suddenly turned into the ranks of his old enemies, the Democrats—like many other old-line Whigs—and fighting the "new order." Upon one occasion, at a Democratic mass meeting in the City of Nashville, being called upon for a speech, he related the following anecdote, by way of illustrating his position and how he came to be a Democrat:

"He had a neighbor, Joe Stetson—a wild, rollicking fellow, who spent most of his time in drinking and spreeing, while his wife, Polly, was left at home to do the chores. Upon a certain occasion Joe left home, to be back, as he said, that night. Night came, but Joe did not. The next day passed; and, about sunset, Joe came up, in the worst condition imaginable—his clothes dirty and torn, one eye in deep mourning, and his face presenting more the appearance of a piece of raw beef than any thing else. Polly met him at the door, and, noticing his appearance, exclaimed,

"'Why, Joe, what in the world is the matter?'

"'Polly,' said Joe, 'do you know long Jim Andrews? Well, him and me had a fight.'

"'Who whipped, Joe?' asked Polly.

"'Polly, we had the hardest fight you ever did see. I hit him, and he hit me; and then we clinched. Polly, ain't supper most ready? I ain't had nothin' to eat since yesterday morning.'

"'But tell me, who whipped, Joe?' continued Polly.

"'Polly,' replied Joe, 'I tell you you never did see sich a fight as me and him had. When he clinched me I jerked loose from him, and then gin him three or four the most sufficientest licks you ever hearn. Polly, ain't supper ready? I'm nearly starved.'

"'Do tell me who whipped, will you?' continued Polly.

"'Polly,' said Joe, 'you don't know nothin' 'bout fitin'. I tell you we fout like tigers; we rolled and we tumbled—first him on top, then me on top—and then the boys would pat me on the shoulder, and holler "Oh my! Stetson!" We gouged, and bit, and tore up the dirt in Seth Runnells's grocery yard worse nor two wild bulls. Polly, *ain't* supper ready? I'm monstrous hungry.'

"'Joe Stetson!' said Polly, in a tone bristling with anger, 'will you tell me who whipped?'

"'Polly,' said Joe, drawing a long sigh, '*I hollered!*'

"I have been fighting the Democrats a long time, and we have fought hard," continued General A——; "and—'*I hollered!*'"

PARSON J——, of southern Berkshire, is reputed to have been a man of a strong body and a strong mind. The leader of the choir in his church, perceiving that he invariably gave out a very long hymn near the close of the exercises of Sabbath, took upon himself the liberty of saying to the choir, "Sing only four verses."

The old Parson noticing this innovation, one day, after giving out a long hymn, as usual, watched for the signal from the chorister and said, with a grum, drawling, dictating voice and manner,

"Sing it all, while I rest!"

A HARD-SHELL preacher has not been allowed a chance to be seen or heard in the Drawer for many a month. A correspondent in Mississippi reports the following as a veritable passage in a discourse which he heard with his own ears, and we give it a place as a specimen of Hard Shell learning and religion. Here it is:

"'My Deer Breethren, you may find my tex in the 13th chapter of Mark, 8th and part of 9th verse. It reads somewhat thus: "For nation shall rise up against nation, and kingdom against kingdom; and there shall be earthquakes in *divine* places, and there shall be famines and troubles; these are the beginnings of sorrows. But take *heel* to yourselves."

"'And now my heerers, as the last part of the tex is the most important, I shall confine myself principally to that portion, and as it means the same to say "Take to your heels," as to say "Take heel to yourselves," and as that manner of sayin' is more easily understood, I shall take the liberty (although I am not in favor of a new Bible), of transposin' it thus: "Take to your heels," for it is certainly meant to flee away, and nothin' else.

"'And in the first place, my deer congregation, I would not have you to act like cowards and run away for every little trifle when there is no danger. No, I would have you stand firm, like bold soldiers. But, my deer friends, there are some things that we should be afeerd of; and when we see them we should not stand like fools and be destroyed. No, "But take to your heels!"

"'And, my heerers, the wars and famines and earthquakes are not the only things that you should be afeerd of. No, my deer friends, there is the wicked, the hypercrite, and a great many of these hollerin' and money preachers, and sich like. From such, my heerers, "Take to your heels!"

"'But, my breethren, before you know who to be afeerd of, and when to obey the tex, you must be able to tell a ginnywine Christian from a hypercrite. And let me tell you how I tell them. I tell them by the way they take their dram. You see, my hearers, when a hypercrite goes to take his dram he slips around and enters the backdoor of the grocery, but when the true ginnywine Christian goes to take his dram he walks boldly in at the front door and calls for what he wants like a mand, and he don't put both hands to the glass to keep t'other folkes from seein' how big a dram he takes. No, my friends; but if one glass ain't enough he takes another, jest like he didn't care if all the world seed him. Mark it, my heerers, whenever you see a perfesser do that, he is a ginnywine Christian; but when you see him a slippin' around to the backdoor jest like he was agwine to steal somethin', you may know that man's a hypercrite; and I tell you, my breethren, as you

love your deer souls, not to go about him, "But take to your heels!"

"'And my deer young people, there is another set of folkes that I would charge you particularly to watch and be afeerd of. Yes, my deer, tender young ladies and gentlemen, if any of you should ever so far forget the teachings of your parents and your poor old preacher as to go to any of these big summer meetin's, and heer the Methodist preachers begin to shout and holler, and makin' Christians of you by rollin' you in the straw and mud, oh! let me warn you not to stay there, "But take to your heels!"

"'Ah, yes, my deer Christians, it pains my heart to think that after I have been a preacher to you so long, there is great danger of your children agwine off after these new-fashioned churches. Oh! my deer congregation, in conclusion, let me exhort you to read my tex every day, both for you and your children; so that whenever any of you are likely to be led off by any of these new doctrines it may ever come up to your minds in thunder-tones, "Take to your heels!"'"

"Does the Drawer know what a '*Non-bailable Ca. Re.*' meant? I dare say its legal contributors will remember enough of the old Common Law forms to make the following story intelligible. It may be relied on as what actually took place. It is such a refreshing instance of legal innocence that it seems worthy of print:

"When I was a student in the law-office of Mr. M——, some fifteen years ago, a fellow-countryman of his own came a long way from one of the back townships to consult him about the recovery of a money demand against Mac——, a neighbor and fellow-countryman of the client. The county town, where the sheriff (whose duty it would be to serve the process) resided, was a long way from the township of E——, where the defendant lived; and as the amount was small, the parties poor, and mileage an unprofitable item in a bill of costs, Mr. M—— wished to save the expense of service by the sheriff. For this purpose he directed one of his clerks to give the 'Ca. Re.' to a big lad, a son of the plaintiff's, who accompanied him, with instructions to serve it. The instructions surely can not have been very lucidly given. The father and son, plodding their way home in an ox-sleigh in which they had brought some produce to market, fell in with the defendant on the road. The papers were produced, and the question was, What was to be done with them? That, of course, was to be best ascertained by reading them. The three took part in this operation, and the result was that they came to the unanimous conclusion that the defendant must be taken on that ox-sleigh to P——, the county town, there to be handed over to the sheriff. Did not the writ command the sheriff to 'take the body' of Mac——, 'and have him there ready with that writ?' How could that be done without bringing him to jail? This reading was immediately reduced to practice. Mac—— was taken on the sleigh, and at length the party reached P——, a distance of thirty miles from their residences. Unfeigned was the astonishment of the three when the sheriff would have nothing to do with them. His attempt to *convince* them that the paper did not mean what was printed in it was not very successful, at least so far as regarded the plaintiff, who wrote back to Mr. M—— a long account of what had been done—and done to no purpose, as he complained, on account of the sheriff's conduct in refusing to put the defendant in jail."

"More than seventy years ago I read the following verses, which have remained in my memory ever since, though I was unconscious of it for many a year. I forward them, as a literary curiosity, to the editor of *Harper's Magazine*, who has given a different version:

"To Cato, one morning, in haste came a friend,
Affrighted, to know what this sign might portend:
That his shoe by the rats had been gnawed in the night,
And left by the vermin in terrible plight.
Said Cato, 'My friend, your best spirits recall—
This story is nothing surprising at all;
Had the shoe eat the rat, I should then have agreed
That the omen had surely been fatal indeed.'"

"I find it easier," writes a new correspondent, "to tell a story by word of mouth than with the point of a pen; and an art I have yet to learn is to get the joke in the right place, and stop when the tale comes off." But if our friend tells a story as neatly as he writes a note, he may venture to try his hand as soon as he likes.

We are indebted to a Cincinnati correspondent for this anecdote of Captain Birch, who is one of the most popular Western steamboat men, a general favorite with the traveling public, and who can both practice and appreciate a good joke.

"Passing near the pantry of his boat, he heard one of the cabin-boys indulging quite freely in animadversions on the officers and crew. Captain Birch turned a *very severe* countenance upon him and said,

"'Young man, hereafter when you have any thing to say about any one on the boat, please except the Captain!'

"A few days after, the Captain happening to be on deck, the same cabin-boy carried past him a dish prepared for the table, when a pet hog, running between the boy's extremities, completely upset him, effectually disbursing the prepared food. Picking himself up with a most rueful countenance, the boy commenced berating the hog. 'You are the miserablest hog I ever seen,' when, catching a view of the 'old man,' and remembering his injunction, he added, 'except the Captain.'

"That boy has had a secure berth on Captain Birch's boats ever since."

It is not often that we receive a contribution from Rhode Island. The following "sharp practice" is recorded for our benefit by a correspondent in that State:

"Tim Collins, a shrewd specimen of the Yankee, called on one of our prominent merchants, a Mr. Jones, to obtain permission to occupy the cellar under his store. Jones informed him that he was on the point of selling out to a Mr. Bell, but that, until then, Tim might have the use of it. Of this offer he availed himself; and on Bell's coming into possession he requested that he might continue to occupy the cellar on the same terms as he had had the same of Jones. Bell, presuming that Jones had made a good bargain with Tim, deemed it best to let him continue in possession. A twelvemonth passed, and our merchant called on his tenant for the rent.

"'Squire Bell,' said Tim, 'you agreed to let

me have the cellar on the same terms that I had it of Jones, didn't you?'

"'Yes,' replied the other, 'I believe that was the bargain.'

"'That's fair, Squire, any how.'

"'Well,' continued Bell, getting slightly impatient, 'how much rent did you pay him?'

"'Squire,' said Tim, with a wink at the bystanders, 'I was to pay Jones *nothing* for rent, and I'll pay you the same.'"

The Rev. James Danielly, of South Carolina, was an old Methodist minister, with a wooden leg, noted far and near for his eccentricities, bluntness, and unparalleled powers of wit and sarcasm. A Georgia friend writes to the Drawer:

"On one occasion, at a camp-meeting in Georgia, it was thought that the old gentleman was rather more pointed in his remarks than was wholesome. A council was holden, and it was decided that Brother Danielly should receive a very delicate hint that he had better not be quite so harsh in his remarks. But the same difficulty which beset the rats when they had concluded to bell the cat occurred to the consulting brethren. Who was to bestow the gentle admonition upon Brother Danielly? That was the question: and, as every one feared the old gentleman's battle-axe, it was a question of no small moment. At last another preacher, about the age of the great satirist, ventured to think that he might give Brother Danielly a hint at which he would not take offense. So he went off and commenced his attack with the utmost degree of caution. He began by speaking of himself, saying that he had often to regret that he had been harsh in remarks made in the pulpit; that he did not think any thing but gentleness of manner was ever productive of good in the sacred desk; and wished to know of Brother Danielly if he did not coincide with him in opinion. Brother Danielly had taken the hint from the beginning, and very patiently heard his lecturer through. When questioned as to his opinion of harshness in the pulpit, he made the following pointed and palpable hit:

"'Brother B——, you think I don't understand the drift of your remarks; but I do. You are *talking at me*, and whipping my back while you *pretend* to be lashing your own shoulders. Now how do you know any thing about my sermon? You were asleep to-day during the whole time of the delivery; and you thought you would fool me and your Maker by waking up every now and then and saying *Amen!* and groaning loud enough to wake up all your fellow-sleepers, *if you had any!* Now, Brother B——, if you will promise me not to sleep any more during service, I will promise you not to be so harsh again until the next time I preach.'

"As I have said, this was a dead shot. Brother B—— had really gotten in the habit of sleeping during sermon, and waking up occasionally with a loud *Amen!* so as to try to make it appear that he had not been sleeping. The young folks had observed this, and had enjoyed a very sly laugh over it. But who would have imagined that Brother Danielly had found out Brother B—— in so short a time—the time in which it took him to deliver one sermon? The blow to Brother B—— was like a clap of thunder from a cloudless sky.

"But almost all such characters as Brother Danielly occasionally meet their match. The old man was in the habit of rebuking any body and any thing which he saw in the congregation not in accordance with his notions of propriety. There was a wild wag of a fellow, by the name of Thornton, who one day got up during service and walked out of church, making rather a prominent display of a gold-headed cane. Brother Danielly immediately pounced upon him in this wise: 'Pull that cane from under your arm, my young friend, and throw it away. There are no gold-headed canes in heaven.'

"Whereupon Thornton, turning around, quickly replied: 'Pull that stick of wood out of your pants, my old friend, and throw it away. *There are no wooden legs in heaven.*'

"The old man was completely nonplused, his thunders silenced, and his gun spiked for that day. He was vulnerable in the same region in which Achilles was.

"These are a few of the many anecdotes I have heard of this remarkable character, now dead. The fund from which these are drawn is as inexhaustible as that which holds the unwritten wit of Judge Dooly, of Georgia."

A Memphis correspondent gives the following passage on a debate between Andy Johnson, a candidate for gubernatorial honors, and Gustavus Henry, generally known as Gus, the Eagle Orator. The debate was severe, and excited much interest. Andy closed his speech with this annihilating declamation:

"We met this Eagle, and I can say, with an honest heart, that he has none of my flesh on his talons—none of my blood on his beak."

This was good, and would have been a stumper, but the undismayed Gus immediately rose to his feet and replied:

"'Tis true the honorable gentleman has met the Eagle, and bears no traces of having left flesh on his talons or blood upon his beak. And 'tis not strange, my friends; for those of you who know the habits of our national bird know full well that he never feeds upon carrion!"

Such a shout and such a discomfiture made Andy quake, but didn't defeat him for Governor.

The Justices of the Peace have no peace in the Drawer, unless it is a *piece* of fun.

Squire Hill, of Kansas, deals out justice to the contentious portion of the citizens of Olatha. He also deals in dry goods, groceries, etc., the etc. including every thing in the shape of "suthin' to take."

A short time since a couple of citizens got at "loggerheads," and soon found themselves engaged in a lawsuit in Squire Hill's Court. The counsel for defendant staved off the trial until the Court refused to further postpone. Finding the case making against him, he finally made a proposition to treat the *crowd* (a score or more), if the Court would only adjourn until one o'clock P.M. This proved a clincher. The Court surveyed the crowd in the room, and anticipated the number of dimes that would find their way into his pocket in case of adjournment, and remarked that "it was not necessary for the Court to adhere strictly to the law in cases of the present kind, and, taking *all things* into consideration, it was best to adjourn until one o'clock P.M." Thereupon the Court adjourned, and when deponent left, the counsel for defendant was paying for some twenty drinks of the Court's best brandy.

"Captain Brown was one of our most respected citizens of a former generation. In his family lived Sim Chappel, a sort of half-witted, good-for-nothing fellow, such as may sometimes be seen in our old farmers' kitchens, and whose principal business appears to be to do chores and drink cider. Sim was not exactly a 'natural,' but sufficiently shallow, with a very slight touch of shrewdness, to be quite amusing at times.

"On one occasion Sim got dreadfully mad at something or somebody, and declared positively that he would drown himself, and made off for the river, some quarter of a mile distant, apparently for that purpose. Not knowing what the fellow might do, Captain Brown told one of the boys to follow him and watch his motions. The lad took a circuit and arrived on the bank of the river soon after Sim did, and concealed himself among some bushes where he could observe him unperceived. Sim stripped and waded in until the water was up to his chin, when under he went. After holding his breath as long as he well could, up he popped, puffing and blowing like a porpoise. But he was not to give it up so; he made three several and determined efforts, but it was no go. His temper had probably by this time cooled down considerably, and he made for the bank and commenced dressing. The youngster who had been watching his manœuvres, ready to split with laughter at his comical attempts to drown, now made his appearance, and with as much gravity as he could command, said:

"'Sim, why did you not keep your head under and drown yourself?'

"'*W-why*,' said Sim, his teeth chattering with cold, '*I couldn't breathe!*'"

"Captain Brown was a man of good sense, and plain-spoken to friend or foe. That was a good rebuke which he administered to one of his former neighbors. Mr. C——, who we believe was not one of the most peaceable men in the world, moved 'up country,' which then meant somewhere in the State of New York. After a while he came back to visit his old friends, and called on Captain Brown. Of course the Captain asked him how he liked the country, etc. 'Oh,' said Mr. C——, 'great country, good land, every thing right except the neighbors, which I don't like.' After a year or two he came down again, and, as before, called on the Captain.

"'Well,' said Captain B., 'I understand you have moved again since you were down before; how do you like your new location?'

"But it was the same old story. 'The fact is,' said Mr. C——, 'I like it first-rate except one thing: I have got into a dreadful bad neighborhood, and I am afraid I shall have to move again.'

"The Captain gave him a significant look, and said: 'Friend C——, when you move, don't you take one of the neighbors along with you!'"

"Speaking of underwitted people (who, by-the-by, have hardly received their share of attention in the Drawer), I am reminded of an anecdote of one of the same sort with Sim Chappel, who, though not so bright, was a great glutton. On one occasion Truman was at a meeting where the son of the man with whom he had formerly lived was the preacher. It was said that this man did not always give Truman enough to eat to satisfy his enormous appetite. The preacher, in exhorting all to come and partake of the heavenly bounty, made use of the expression, 'There is bread enough in my Father's house, and to spare,' and, as he made a slight pause, Truman jumped up, and said: 'I am glad to hear that, for I never had half enough when I lived there.'"

"I used to know an attorney who was hard on witnesses, but he met his match in, and received an addition to his name from, a testy young lady whom he was cross-examining. She had answered his questions in a way any thing but satisfactory to him, and finally, his wrath being up, the following short dialogue took place by way of episode:

"Attorney. 'Young woman, there's *brass* enough in your face to make a five-gallon kettle.'

"Witness. 'And *sap* enough in your head to fill it, Mr. L——.'

"Though a wiser if not a sadder man after this, he could not be 'in his own country' any thing but 'Sap-head L——;' and while he lived was a living contradiction of the saying 'There's nothing in a name.'"

The Academy of Music was so thronged on Sunday evening last that old Mr. Slowtoes, who was late and could not get in, said, as he went away in a pet: "If every body don't go an hour before any body else does there can't nobody get in!" Mr. Slowtoes says that he is going to try again next Sunday.

Miss Jones has been a very faithful teacher in one of the schools, and endeared herself to the pupils, who wept much when she told them that she had accepted an offer to go off to the poor heathen as a missionary. She then added that she was much distressed by the thought of her unfaithfulness to them, and how much they might suffer when she and they came to give account. At these words she burst into tears herself; when one of the girls came to her relief, exclaiming, "Oh, Miss Jones, don't cry! I won't tell of you; and there won't any of the girls tell of you!—don't cry, Miss Jones!"

Passing along the street a few days ago, we observed in the window of a partially vacant house the following notice: "*The upper part* of this House to Let, containing 3 rooms, *a cellar, kitchen, and a back-yard!*"

Old Dr. Cook, of Albany, in a flaming advertisement, speaking of the extent of his fame and his powers, says: "There is no part of this country *where people do not reside* whom he has not cured."

Colonel Thompson was a candidate for Congress. The Colonel was like Zaccheus, who climbed a tree his Lord to see; he was short of stature, though broad enough to make up for loss of lengthitude. He asked a neighbor, who had always been on the other side of politics, to vote for him.

"Not a bit of it!" said Jenks, in a towering passion. "Do you suppose I'm going to vote for a Syphax?"

"A Syphax!" gasped the Colonel; "pray, Mr. Jenks, what is a Syphax?"

"Syphax, you icknorameous fool," roared Mr. Jenks, "is a thing too big for a monkey, and not big enough for a man!"

The farmers in Gloucester County, New Jersey, wishing to improve their breed of cattle, clubbed

together to buy an imported bull bearing the name of Napoleon Bonaparte. The treasurer of the Company was Mr. John Bedford, a large farmer but a small scholar; very full of wind, and little wit. One of his neighbors paid him his share, and Mr. Bedford gave his receipt as follows:

"Received of James Smith fifty dollars for his share of the bull John Bedford."

Mr. Smith suggested that the receipt ought to include the name of the bull; whereupon Mr. Bedford said he would fix it, and taking the pen added the name, so as to make it read:

"Received of James Smith fifty dollars for his share of the bull John Bedford.

"Napoleon Bonaparte."

Bob Pine was fond of drink, and often sat it out to a late hour with his boon companions in the bar-room. One night it was agreed that each man should make a rhyme or treat the company. Bob had no money left, and never had any wit; to rhyme or to treat was therefore out of the question, and Bob suddenly remembered that he must go home. Home he went; and as he entered the door his loving spouse exclaimed,

"Here comes Bob Pine,
As drunk as a swine!"

"Just the thing! thank'ee, dear!" said Bob; and, returning with all haste, he burst in upon the guzzlers, crying out,

"Here comes Bob Pine,
As drunk as a *pig*!"

And that was as near to a rhyme as Bob could make it. He went back again to get his wife to help him out; but she preferred to help him in, and keep him there.

An English parish church clerk gives the following Notice, "That no person is to be *buried* in this church-yard except those *living* in the parish; and those who *wish* to be *buried* are desired to apply to the parish-clerk!"

Verily it is hardly fair to doubt that Balaam's ass spoke like a man, when so many men speak like asses.

Johnny, that smart little Philadelphia boy, was walking down Chestnut Street with his father, and seeing a strange sort of machine at the door of a store, inquired of his father,

"What is that for?"

"I am sure I don't kr - w."

"I guess I do," said Johnny.

"Well, what do you think it is for?" asked his father.

"Why," said Master Johnny, "I guess it's for *sale!*"

"Our Jim was only three years old. A colored barber was sent for to shave Jim's uncle, who was sick. Jim hated *niggers*, as he called them. We knew that our poor colored brother would have rather a hard time if we did not give some wise and wholesome advice to our little three-year-old previous to his coming; so, taking him aside, we said:

"'Georgie, there is a *colored gentleman* coming to shave Uncle William to-day, and you may go and see him if you will not call him a *nigger*, for he isn't; *he* is a *colored gentleman*. Now, you won't call him a nigger, will you?'

"'*No, Marm!*'

"Thus our fears were at an end; and in the course of the morning our worthy friend came. Georgie watched him very closely, and seemed evidently to be in something of a 'brown study.' At length, going up quite near him, he gave *one* very scrutinizing glance, and said:

"'*Look here! you ain't a nigger, are you? you are a colored gentleman;* but you *look like* a nigger, *pretitely!*'

"This was too much for black or white to endure, and our colored friend seemed to enjoy the joke as much as any of us.

"Coming home from school a few days since, he says, 'Well, mother, I cain't study, it's no use to try; for the girls keep looking at me all the time.' His mother says, 'You shouldn't look at them, then they won't trouble you.' 'Ah!' said he, '*but how can a fellow help it?*'"

Mr. Wilkins was lost in New York. He had walked from his hotel into the city, and had forgotten the name of the house at which he stopped. In his distress he stopped a citizen and made known his trouble.

"Can't you recall the name of the landlord, or some one about the house?"

"Oh yes!" said he, "now you speak of it; it's Nichols—S. T. Nichols—I saw the name over the door!"

The good citizen sent him back to the "St. Nicholas."

"Father," said a young lisper of some three or four summers, "when wath the Flood?"

"Oh, my son," replied the parent, "that happened a long time ago."

"Wath we alive then?" persisted the anxious inquirer.

"No, dear," was the reply; "the Flood we read of in the Bible happened many thousand years ago."

"Well, now," rejoined the boy, in great disgust, "Thath's too bad! I thought Tom Madigan [another youngster of the same age] wath fibbin'. He thaid to me thith mornin' that he wath there then, *and waded through!*"

The Rev. Mr. A—— was more eminent in his day for the brilliancy of his imagination than the force of his logic. At one time he was preaching on "the Ministry of Angels," and in the peroration he suddenly observed, "I hear a whisper!" The change of tone started the deacon, who sat below, from a drowsy mood, and, springing to his feet, he spoke: "*I guess it is the boys in the gallery!*"

A clerk in a country store sends a verbatim copy of an order received by him:

"one pair of 3 inch Buts that opens in the senter sow that the dore can Bee un hung without taking the schroose out."

A copy of a notice found stuck up on a tree in Gonzales County, Texas:

"NOTAS.

"Took upe buy the untersin on dentin Creake. six mils est of heer, a ba mar and coult. mar abut six yers ole. with both hine lages whit upe to the hox. one for lage whit to the nee. sum whit on the writ syed. whit on the four hed extens done the knows. and whit spottes on the lions."

Mr. Jones writes to a friend, and closes by saying: "I am glad to be able to say that my wife is recovering slowly."

Fashions for May.

Furnished by Mr. G. Brodie, 300 *Canal Street, New York, and drawn by* Voigt *from actual articles of Costume.*

Figure 1.—Promenade Dress.

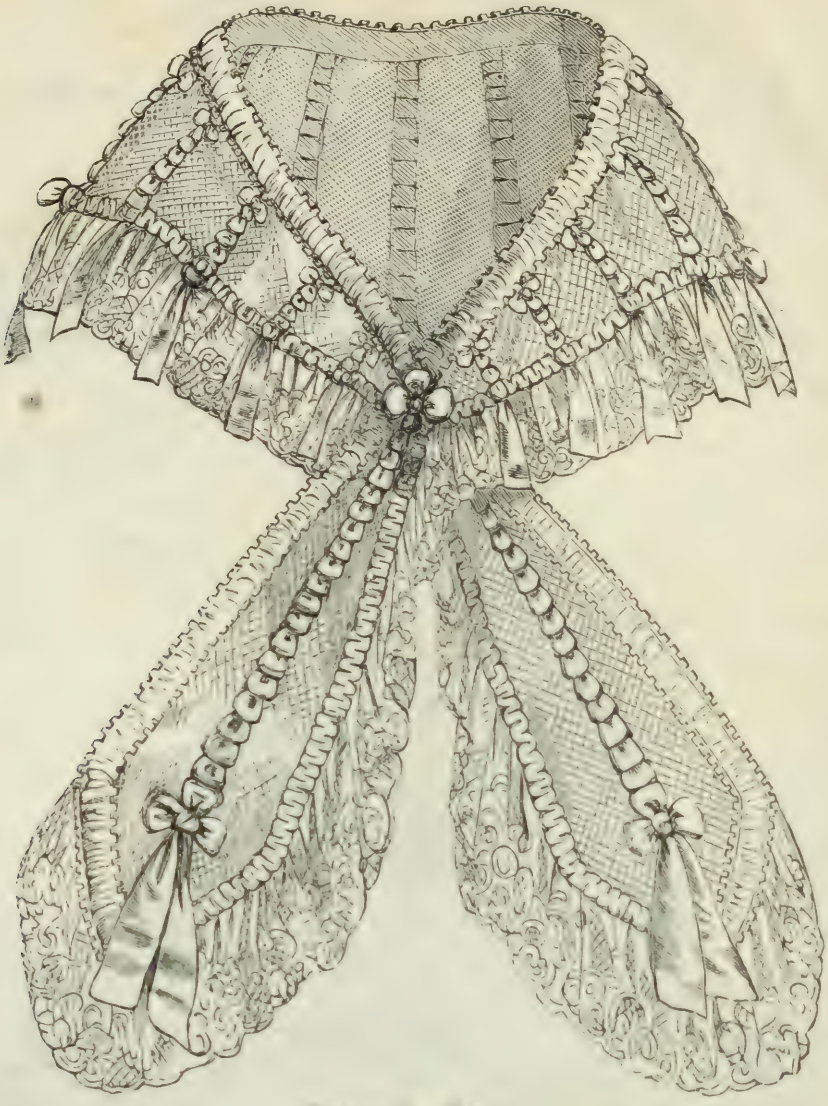

FIGURE 2.—FICHU.

THE season requires that special attention should be given to out-door costumes. From among many novelties adapted for the carriage or the promenade we select one for illustration, the gracefulness of which will commend it to general favor. The PARDESSUS is composed of black taffeta and lace, trimmed with rich *passamenterie* and tassels. It has a hood, which is fringed, as is also the bottom of the garment. Another novelty is composed of *appliqué* lace, with two lace flounces, the lower one being nearly as deep as the one which we have illustrated. —The DRESS is of organdie, with half-high corsage, cut square in the neck, and round waist; double skirt, *Odalisque* sleeves, and puffed under-sleeves.— The BONNET is represented on a larger scale in the engraving opposite. Our *modistes* would seem to have tasked their inventive genius to produce the almost infinite varieties of Bonnets which they present for the admiration of their patrons—and, we fear—the consternation of husbands and fathers. We can hardly hope that in the opposite engraving we have been able to do more than give a hint of the gossamer-like structures reared by the art of the milliner.

The FICHU at the head of this page is an exceedingly tasteful combination of lace and ribbon. The heading of the lace is a rose-colored reversed box-plaiting; the border of the fichu is of pink transparent. It has a series of *nœuds* of rose-colored ribbon, ending in floats, which traverse the body.

FIGURE 3.—BONNET.
